Quaker Hill (R. I.), BATTLE AT. In the summer of 1778 there were 6000 British troops on Rhode Island, commanded by General Pigot. His headquarters were at Newport. They had held the island since late in 1776. An attempt had been made, by a force under General Spen-

can army could be made ready to move against the foe. Greene and Lafayette had both been sent to aid Sullivan, and success was confidently expected. On Aug. 10 the Americans crossed over the narrow strait at the north end of the island in two divisions, commanded respectively by Greene and Lafayette, where they expected to be joined by the 4000 French troops of the fleet, according to arrangement. But at that time Howe had appeared off Newport with his fleet, and D'Estaing went out to meet him, taking the troops with him. A stiff wind was then rising from the northeast, and before the two fleets were ready for attack it had increased to a furious gale, and scattered both armaments. The wind blew the spray from the ocean over Newport, and the windows were incrustated with salt. The French fleet, much shattered, went to Boston for repairs, and the storm, which ended on the 14th, had spoiled much of the ammunition

QUAKER HILL, FROM THE PORT ON BUTTE'S HILL.

cer, of Connecticut, the year before, to expel them from the island, but it failed, and that officer resigned his commission and shortly after entered Congress. General Sullivan was his successor, and he had been directed to call upon the New England States for 5000 militia. The call was promptly obeyed. John Hancock, as general, led the Massachusetts militia in person. There was much enthusiasm. The French fleet, under D'Estaing, occupied Narraganset Bay, and opened communication with the American army, then near, and 10,000 strong. The French fleet even entered Newport Harbor, and compelled the British to burn or sink six frigates that lay there. There was a delay of a week before the Ameri-

can army, and damaged their provisions. Expecting D'Estaing's speedy return, the Americans had marched towards Newport, and when Sullivan found he had gone to Boston, he sent Lafayette to urge him to return. The militia began to desert, and Sullivan's army was reduced to 6000 men. He felt compelled to retreat, and began that movement on the night of the 28th, pursued by the British. The Americans made a stand at Butte's Hill, and, turning, drove the pursuers back to Quaker Hill, where they had strong intrenchments. There a severe engagement occurred (Aug. 29, 1778), and the British were pushed farther back. It was a hot and sultry day, and many perished by the heat.

QUAKERS EXECUTED IN BOSTON 1165 QUAKERS, FIRST PERSECUTION OF

The action ended at three o'clock P.M., but a sluggish cannonade was kept up until sunset. On the night of the 30th Sullivan's army withdrew to the main. They had lost about 200 men, and the British 260. Sullivan made bit-

Kemphthorn, sailed into Boston Harbor, with Mary Fisher and Ann Austin, two members of the Society of Friends, on board, brought from Barbadoes. At a council held July 11, 1656, it was ordered that the two women should be

SCENE OF THE ENGAGEMENT ON RHODE ISLAND, AUG. 29, 1778. (From a print in the *Gentleman's Magazine*, 1778.)

ter complaints against D'Estaing, but Congress soothed his wounded spirit by commending his course. The day after Sullivan withdrew, the British on Rhode Island were reinforced by 4000 men from New York, led by General Clinton in person.

searched; that all their books should be destroyed by the common hangman; that the women should be kept in prison, without communication with any one, except by permission of the authorities, to "prevent the spreading of their corrupt opinions," until they should be put

VIEW NORTHWARD FROM BUTTE'S HILL.

Quakers Executed in Boston. On Oct. 27, 1659, Marmaduke Stephenson and William Robinson, of England, and Mary Dyer, of Newport, R. I., widow of William Dyer, late Recorder of Providence Plantation, were conducted to the scaffold in Boston, because they had violated a law which imposed the penalty of death upon Quakers who should return to the province after having been banished. On the earnest petition of her son, Mary Dyer, after seeing her two companions executed, was relieved on the scaffold, on condition that she should leave the colony in forty-eight hours. Impelled "by the Spirit," as she alleged, Mary Dyer soon afterwards returned to Boston, where she was promptly hanged, June 1, 1660. Several other returned Quakers were sentenced to suffer death, but only one (William Leddra) was hanged, March 14, 1661.

Quakers, FIRST, IN NEW ENGLAND, appeared in July, 1656, and were banished from the colony. There were twelve of them.

Quakers, FIRST LAW AGAINST, IN NEW ENGLAND. In 1656, the *Swallow*, of Boston, Captain

on board some vessel to be transported out of the country; and that the captain of the *Swallow* should transport them speedily to Barbadoes, he being compelled to pay all charges for their imprisonment. Laws against heretics were already in force in New England, but this was the first legislation directed exclusively against the Quakers. The root of their heresy was the assertion of the rights of individual conscience and of private interpretation of the Scriptures.

Quakers, FIRST PERSECUTION OF, IN NEW ENGLAND. Ann Austin and Mary Fisher, on their arrival in Boston, in 1656, were committed to jail to await the sailing of the vessel in which they came, in which they were to be sent out of the colony. (See *Quakers, First Law against, in New England*.) The windows of the jail were boarded up. They were stripped, and were searched to find the conventional "witch-marks," which were, fortunately, not found. The religious books they brought with them were burned by the common hangman, and their jailer and the citizens were forbidden to give them any food. A benevolent citizen named

Upshall furnished the jailer with money to buy food for the prisoners. For this offence he was fined \$100, imprisoned four days, and, notwithstanding he was in feeble health, was ordered to leave the colony in thirty days. He was fined, in addition, \$15 for each absence from public worship during the thirty days. The exile was not permitted, by the Governor of Plymouth Colony, to settle there, and he went to the wilderness, where he experienced the loving-kindness of the barbarians. "What a God have those English," exclaimed a chief, "who deal so with one another about their God!"

Quakers in Maryland. Because the Friends refused to perform military duty or take an oath in Maryland (as elsewhere), they were subject to fines and imprisonment, but were not persecuted there on account of their religious views. When, in 1676, George Fox, the founder of the sect, was in Maryland, his preaching was not hindered. He might be seen on the shores of the Chesapeake, preaching at the evening twilight, when the labors of the day were over, to a multitude of people, comprising members of the Legislature and other distinguished men of the province, yeomen, and large groups of Indians, with chiefs and sachems, their wives and children, all led by their emperor.

Quakers in New Amsterdam. Governor Stuyvesant was a strict Churchman, and guarded, as far as possible, the purity of the ritual and doctrines of the Reformed Dutch Church in New Netherland. He compelled the Lutherans to conform, and did not allow other sects to take root there. In 1657 a ship arrived at New Amsterdam, having on board several of "the accursed sect called Quakers." They had been banished from Boston, and were on their way from Barbadoes to Rhode Island, "where all kinds of scum dwell," wrote Dominie Megapolenses, "for it is nothing else than a sink of New England." Among the Friends were Dorothy Waugh and Mary Witherhead. They went from street to street in New Amsterdam, preaching their new doctrine to the gathered people. Stuyvesant ordered the women to be seized and cast into prison, where, for eight days, they were imprisoned in dirty, vermin-infested cells, with their hands tied behind them, when they were sent on board the ship in which they came, to be transported to Rhode Island. Robert Hodgson, who determined to remain in New Netherland, took up his abode at Hempstead, where a few Quakers were quietly settled. There he held a meeting, and Stuyvesant ordered him to his prison at New Amsterdam. Tied to the tail of a cart wherein sat two young women, offenders like himself, he was driven by a band of soldiers during the night through the woods to the city, where he was imprisoned in "a filthy jail," under sentence of such confinement for two years, to pay a heavy fine, and to have his days spent in hard labor, chained to a wheelbarrow with a negro, who lashed him with a heavy tarred rope. He was subjected to other cruel treatment at the hands of the governor, until the Dutch people, as well as the English,

cried "Shame!" There were no other persecutions of the Friends after Hodgson's release.

Quakers in North Carolina. There were a few Friends, or Quakers, on the Chowan River, in North Carolina, among the early settlers, and these George Fox visited in 1672. His preaching there increased their numbers by conversions to his doctrines.

Quakers, LAWS AGAINST. After Massachusetts had suspended its laws against Quakers, in 1661, Parliament made a law (1662) which provided that every five of them, meeting for religious worship, should be fined, for the first offence, \$25; for the second offence, \$50; and for the third offence to abjure the realm on oath, or be transported to the American colonies. Many refused to take the oath, and were transported. By an act of the Virginia Legislature, passed in 1662, every master of a vessel who should import a Quaker, unless such as had been shipped from England under the above act, was subjected to a fine of five thousand pounds of tobacco for the first offence. Severe laws against other sectaries were passed in Virginia, and many of the non-conformists in that colony, while Berkeley ruled, fled deep into the wilderness to avoid persecution.

Quakers, MANDAMUS RESPECTING. In 1661 Charles II. sent a letter to the government of New England (see *New England Confederacy*), signifying his pleasure that there should be no further persecution of the Quakers who were condemned to suffer death or other corporal punishment, but that they (those in the provinces) should be sent to England for trial; whereupon the General Court ordered "that the execution of the laws against Quakers, as such, so far as they respect corporal punishment or death, be suspended until the Court take further order." The twenty-eight imprisoned Quakers were released, and sent out of the jurisdiction of Massachusetts.

Quakers not Persecuted in Rhode Island. In September, 1656, the authorities of Massachusetts addressed to President Arnold, of Rhode Island, an urgent letter, protesting against the toleration of Quakers allowed there, and intimating that, unless it was discontinued, it would be resented by total non-intercourse. There was then very little sympathy felt for the Quakers in Rhode Island, but the authorities refused to persecute them, and Coddington and others afterwards joined them.

Quakers, PERSECUTION OF THE. The sect of "Friends," who were called Quakers in derision, was founded at about the middle of the 17th century. At first they were called "Professors (or Children) of the Light," because of their fundamental principle that the light of Christ within was God's gift of salvation—that "Light which lighteth every man that cometh into the world." It is said that George Fox, the real founder of the sect, when brought before magistrates at Derby, England, in 1650, told them to "quake before the Lord," when one of them (Gervase Bennet) caught up the word

"quake," and was the first who called the sect "Quakers." They were generally known by that name afterwards. (See *Fox, George*.) They spread rapidly in England, and were severely persecuted by the Church and State. At one time there were four thousand of them in loathsome prisons in England. The most prominent of Fox's disciples was William Penn, who did much to alleviate their sufferings. Many died in prison or from the effects of imprisonment. Grievous fines were imposed, a large portion of which went to informers. They were insulted by the lower classes; their women and children were dragged by the hair along the streets; their meeting-houses were robbed of their windows; and, by order of King Charles and the Archbishop of Canterbury, in 1670, their meeting-houses were pulled down; and when they gathered for worship beside the ruins they were beaten over the head by soldiers and dispersed. In this way many were killed outright or disabled for life. Constables and informers broke into their houses. The value of their property destroyed before the accession of William and Mary (1689) was estimated at \$5,000,000. Besides this, they were fined to the amount of over \$80,000, and their goods were continually seized because they refused to pay tithes, bear arms, or enroll themselves in the military force of the country. "The purity of their lives, the patience with which they endured insult and persecution (never returning evil for evil), their zeal, their devotedness, and their love for each other often compelled the admiration even of magistrates whose orders oppressed them." To escape persecution, many of them emigrated to the Continent, and some to the West Indies and North America. In the latter-named countries they found persecutors. Those who first appeared in New England and endured persecution there were fanatical and aggressive, and were not true representatives of the sect in England. They were among the earliest of the disciples of Fox, whose enthusiasm led their judgment; and some of them were absolutely lunatics and utterly unlike the sober-minded, mild-mannered members of that society to-day. They ran into the wildest extravagances of speech; openly reviling magistrates and ministers of the Gospel with intemperate language; overriding the rights of all others in maintaining their own; making the most exalted pretensions to the exclusive possession of the gifts of the Holy Spirit; scorned all respect for human laws; mocked the institutions of the country; and two or three fanatical young women outraged decency by appearing without clothing in the churches and in the streets, as emblems of the "unclothed souls of the people;" while others, with loud voices, proclaimed that the wrath of the Almighty was about to fall like destructive lightning upon Boston and Salem. This conduct, and these indecencies, caused the passage of some cruel laws in Massachusetts against the Quakers. The first of the sect who appeared there were Mary Fisher and Ann Austin, who arrived at Boston from Barbadoes in September (N. S.), 1656. Their

trunks were searched, and their books were burned by the common hangman before they were allowed to land. Cast into prison, their persons were stripped in a search for body-marks of witches. None were found, and they, being mild-mannered women, and innocent, were soon released and expelled from Massachusetts as "heretics." Nine other men and women who came from London were similarly treated. Others "sought martyrdom" in New England and found it. Some reviled, scolded, and denounced the authorities in Church and State, railing at the functionaries from windows as they passed by. More and more severe were the laws passed against the Quakers. They were banished on pain of death. Three of them who returned were led to the scaffold—two young men and Mary Dyer, widow of the Secretary of State of Rhode Island. The young men were hanged; Mary was reprieved and sent back to Rhode Island. The next spring she returned to Boston, defied the laws, and was hanged. The severity of the laws caused a revulsion in public feeling. True Friends who came stoutly maintained their course with prudence, and were regarded by thoughtful persons as real martyrs for conscience' sake. A demand for the repeal of the bloody enactments caused their repeal in 1661, when the fanaticism of both parties subsided and a more Christian spirit prevailed. In Virginia, laws almost as severe as those in Massachusetts were enacted against the Quakers. In Maryland, also, where religious toleration was professed, they were punished as "vagabonds" who persuaded people not to perform required public duties. In Rhode Island they were not interfered with, and those who sought martyrdom did not go there. Some of them who did so disgusted Roger Williams that he tried to argue them out of the colony.

Quakers, POLITICAL RULE OF THE, IN PENNSYLVANIA. From the founding of the government of Pennsylvania the rule of the colony was held by the Quakers, they being more numerous than others. When wars with the French and Indians afflicted the colonies their peace principles made the members of the Assembly of that sect oppose appropriations of men and money for war purposes. When, in 1755, the frontiers of Pennsylvania were seriously threatened, the Quakers, though still a majority in the Assembly, could no longer resist the loud cry "To arms" in Philadelphia and echoed from the frontiers. The hostile Indians were among the Juniata settlements. The proprietary party successfully stirred up the people. After a sharp struggle, the Assembly, in consideration of a voluntary subscription of £5000 by the proprietaries, consented to levy a tax of £50,000, from which the estates of the latter were exempted. The expenditure of the amount was intrusted to a committee of seven, of whom a majority were members of the Assembly; and these became the managers of the war, now formally declared, against the Delawares and Shawnoese. So the golden chain of friendship which bound the barbarians to Will-

ism Penn was first broken. This was the first time the Quakers were driven into an open participation in war. Some of the more conscientious resigned their seats in the Assembly, and others declined a re-election. So it was that, in 1755, the rule of the Quakers in the administration of public affairs in Pennsylvania came to an end.

Quarrel with America fairly stated :

"Rudely forced to drink tea, Massachusetts, in anger,
Spills the tea on John Bull. John falls on to bang her.
Massachusetts, enraged, calls her neighbors to aid
And give Master John a severe bastinado.
Now, good men of the law, who is at fault,
The one who begins or resists the assault?"
Anderson's Constitutional Gazette (1775).

Quartering Act. A clause inserted in the mutiny act in 1765 authorized the quartering of troops upon the English-American colonies.

city occupied a strong position for defence against attack. It consisted of an upper and a lower town on a point of land at the confluence of the St. Lawrence and its tributary the St. Charles. The lower town was built on a narrow beach at the water's edge of both rivers; the upper town occupied a high rocky cape, rising at one point three hundred feet above the river, and extending back some distance in a lofty plateau, called the Plains of Abraham. The upper town was surrounded by a fortified wall. At the mouth of the St. Charles the French had moored several floating batteries, and, apprised of the expedition, had taken vigorous measures to strengthen the port. Beyond the St. Charles, and between it and the Montmorency, a river which enters the St. Lawrence a few miles below Quebec, lay

MONTCALM'S HEADQUARTERS.

By a special enactment known as the "Quartering Act," the colonies in which they were stationed were required to find quarters, firewood, bedding, drink, soap, and candles.

Quebec Act. Evidently anticipating rebellion in America, and distrustful of the newly acquired colony of Quebec, a bill was passed in the spring of 1774 which guaranteed to the Roman Catholic Church in that province the possession of its ample property, amounting to a fourth part or more of the old French grants, with full freedom of worship. The calling of an assembly was indefinitely postponed, the legislative authority, except for taxation, being committed to a council nominated by the crown. The boundaries of the province were extended to the Mississippi River on the west and the Ohio on the south, so as to include, besides the present Canada, the territory embraced in the five states north of the Ohio.

Quebec, CAPTURE OF (1759). The expedition for the capture of Quebec, fitted out in the spring of 1759, was placed under the command of General James Wolfe, then only thirty-three years of age. He left Louisburg with 8000 troops, in transports, under a convoy of twenty-two line-of-battle ships and as many frigates and smaller armed vessels, commanded by Admirals Holmes and Saunders. On the 27th of June he landed his troops on the Isle of Orleans, about three miles below Quebec. That

Montcalm's army, almost equal in numbers to that of Wolfe, but composed largely of Canadians and Indians. This camp was strongly intrenched, and, overhanging the St. Lawrence, and extending a great distance above Quebec, the Heights, almost perpendicular on the riverfront, seemed to present an almost impregnable barrier of defence. Wolfe found a great advantage in his naval superiority, which gave him full command of the river. On the south side of the St. Lawrence, opposite Quebec, was Point Levi, occupied by some French troops. This post Wolfe seized (July 30) without much opposition, on which he erected batteries. From there he hurled hot shot upon the city, which destroyed the cathedral and did much damage to the lower town, but which had very little effect upon the strong fortifications of the upper town. Wolfe then determined to land below the mouth of the Montmorency and bring Montcalm into action. For this purpose he caused a large force to be landed, under Generals Townshend and Murray (July 10), who were to force the passage of the Montmorency. But the French were so strongly posted that such action was deferred. Finally General Monckton, with grenadiers, crossed the river from Point Levi and landed upon the beach at the foot of the high bank, just above the Montmorency. Murray and Townshend were ordered to cross that stream above the great falls and co-operate with Monckton, but the latter was too eager for

attack to await their coming. He unwisely rushed forward, but was soon repulsed and compelled to take shelter behind a block-house near the beach, just as a thunder-storm, which had

MONTMORENCY FALLS

been gathering for some time, burst in fury upon the combatants. Before it ceased night came on, and the roar of the rising tide warned the English to take to their boats. In the battle and the flood 500 of the English perished. Various devices were conceived for destroying the French shipping, to draw out the garrison, and to produce alarm. A magazine and many houses were fired and burned, but it was impossible to cut out the French shipping. Two mouths passed away; very little progress had been made towards conquest; and no other

intelligence had been received from Amherst (see *Ticonderoga*, 1759) than a report by the enemy that he had retreated. The season for action was rapidly passing. The prospect was discouraging; yet Wolfe, though prostrated by sickness, was full of hope. He called a council of officers at his bedside, and, on the suggestion of General Townshend, it was resolved to scale the Heights of Abraham from the St. Lawrence and assault the town. A plan was instantly matured, and, feeble as Wolfe was from the effects of fever, he resolved to lead the assault in person. The camp below the Montmorency was broken up (Sept. 8), and the attention of Montcalm was diverted from the real designs of the English by seeming preparations to attack his lines. Even De Bourgainville, whom Montcalm had sent up the river with 1500 men to guard against an attack above the town, had no suspicions of their intentions, so secretly and skillfully had the affair been managed. The troops had been withdrawn from the Isle of Orleans and placed on shipboard, and on the evening of Sept. 12 the vessels moved up the stream several miles above the intended landing-place, which was at a cove at the foot of a narrow ravine, a short distance above the town, that led up to

the Plains of Abraham. At midnight the troops left the ships, and in flat-bottomed boats, with muffled oars, went down to the designated landing-place, where they disembarked. At dawn (Sept. 13) Lieutenant-colonel Howe (afterwards General Sir William Howe, of our Revolutionary period) led the van up the tangled ravine in the face of a sharp fire from the guard above. After a brief struggle they reached the plain, drove off a small force there, and covered the ascent

WOLFE'S RAVINE.

of the main body. In early morning the whole British force was upon the Plains of Abraham, ready to attack the city at its weakest points. It was an apparition unexpected to the vigilant Montcalm. He instantly put his troops in motion to meet the impending peril of the city. He crossed the St. Charles, and between nine and ten o'clock in the morning the English were confronted by the French army on the plains. A general fierce and sanguinary battle quickly ensued. Eight or ten 6-pounders, dragged up the heights by sailors, were brought into play after the action began. The French had only two small field-pieces. The contending generals were respectively stationed on the right of the English and the left of the French, opposite each other, and there the battle raged fiercest. Wolfe, though twice wounded, continued to give orders. His grenadiers were pressing the French back, when, a third time, he was wounded, and mortally. English bayonets and the broadswords of the Scotch Highlanders at length began to make the French line waver. At that moment Montcalm fell, mortally wounded, and the whole French line broke into disorder and fled. Moukton, who had taken the command, was severely wounded. Townshend continued the battle until the victory was won. Of the French, 500 were killed, and 1000 (including the wounded) were made prisoners. The English lost 600 killed and wounded. General Townshend now prepared to besiege the city. Threatened famine within aided him, and five days after the death of Wolfe (Sept. 18, 1759) Quebec, with its fortifications, shipping, stores, and people, was surrendered to the English, when 5000 troops, led by General Murray, took possession of the whole. The English fleet,

with the sick and French prisoners, sailed for Halifax. Many years ago a truncated column of granite was erected on the spot where Wolfe

WOLFE'S FIRST MONUMENT.

fell. Relic-seekers broke it into an unattractive mass, and it was removed for a more stately structure. (See *Wolfe, James*.)

Quebec, EXPEDITION AGAINST (1690). The New England colonies and New York formed a bold design, in 1690, to subject Canada to the crown of England. (See *Colonial Congress, Early*.) An armament was fitted out for operations by sea and land. The naval arm of the service was placed under the command of Sir William Phipps, who, without charts or pilots, crawled cautiously along the shores around Acadia and up the St. Lawrence, consuming nine weeks on the passage. A swift Indian runner had carried news of the expedition from Pemaquid to Frontenac, at Montreal, in time to allow him to hasten to Quebec and strengthen the fortifications there. Phipps did not arrive until the 5th of October. Immediate operations were necessary on account of the lateness of the season. He sent a flag demanding the instant surrender of the city and fortifications. His summons was treated with disdain. After being prevented from landing near the city by a gale, he debarked a large body of his troops at the Isle of Orleans, about three miles below the town, where they were attacked by the French and Indians. There the English remained until the 11th, when a deserter gave them such an account of the strength of Quebec that Phipps abandoned the enterprise, hastily re-embarked his troops, and crawled back to Boston with his whole fleet, after it had been dispersed by a tempest.

Quebec, EXPEDITION AGAINST (1711). After the reduction of Port Royal, Colonel Nicholson went again to England to solicit an expedition against Canada. The ministry acceded to his proposal, and a sufficient armament was ordered for the grand enterprise. Nicholson hastened back, gave notice to the colonies, and prepared for the invasion of Canada by sea and land. (See *Queen Anne's War*.) Admiral Walker commanded the fleet of sixty-eight vessels of war and transports, bearing about seven thousand men. When the ships arrived at the mouth of the St. Lawrence, after loitering by the way, they were overtaken by a storm and thick fog.

They were in a perilous place among rocks and shoals. His New England pilots, familiar with the coast, told him so; but he haughtily rejected their information, and relied wholly on French pilots, who were interested in deceiving him. On the night of Sept. 2 his fleet was driving on the shore. Just as the admiral was going to bed, the captain of his flag-ship came down to him and said, "Land is in sight; we are in great danger." He did not believe it. Presently a Provincial captain rushed down and exclaimed, "For the Lord's sake, come on deck, or we shall be lost!" Leisurely putting on his gown and slippers, the admiral ascended to the deck and saw the imminent peril. His orders given to secure safety were too late. The vessels were driven on the rocks, and eight of them were lost. In the disaster almost a thousand men perished. At a council of war held a few days afterwards, it was determined to abandon the expedition, and Nicholson, with his ships, returned to England, while the troops were sent to Boston. The arrogant Walker actually claimed credit for himself in retreating, falsely charging the disaster to the New England pilots, and saying: "Had we arrived safe at Quebec, ten or twelve thousand men must have been left to perish with cold and hunger; by the loss of a part, Providence saved all the rest." His government did not reward him for helping Providence. Governor Vaudreuil, at Montreal, advised of the movement, had sent out Jesuit missionaries and other agents to gather Indian allies, and, hastening to Quebec, strengthened the fortifications there. So enthusiastic were the people in preparing for defence that women worked on the forts.

Quebec, REJOICINGS AT (1776). During the early summer of 1776 the American troops were drawn out of Canada, and an attempt to seize that province by the patriots was frustrated. On the anniversary of the repulse of the British at Quebec, the day was set apart as one for thanksgiving for the deliverance of Canada. In the churches the *Te Deum* was chanted, and in the evening the provincial militia gave a grand ball. When Governor Carleton entered, the assembly broke out into loud cheers, followed by a song in English in his praise.

Quebec, SIEGE OF (1775). On the day (Nov. 13, 1775) after Montgomery entered Montreal in triumph, Colonel Benedict Arnold, with 750 half-naked men, having not more than 400 muskets and no artillery, stood before the walls of Quebec. He boldly demanded its surrender. He had reached Point Levi four days before, at the end of a terrible march through the wilderness. (See *Arnold's Expedition to Quebec*.) Veiled in falling snow, they had appeared like a supernatural apparition—a spectral army—on the bleak shore. The man who carried the news of their advent into Quebec created great consternation there. He said, in French, that they were *vêtus en toile*—clothed in linen cloth—referring to Morgan's riflemen in their linen frocks. The last word was mistaken for *ôle*—iron plate—and the message created a panic. Detained by the storm, Arnold

crossed the river on the night of the 13th with 550 men in bark canoes, landed at Wolfe's Cove (where Wolfe landed in 1759), ascended to the Plains of Abraham, marched towards the two gates of the city opening on the plain, and ordered his men to give three cheers to bring out the regulars to attack him, when he hoped to rush in through the open gates, and by the assistance of friends within the walls to seize the city. The commander there paid little attention to him, and after making a ridiculous display of arrogance and folly for a few days by issuing proclamations and demanding the surrender of the city, he was startled by news of the descent of the St. Lawrence by Carleton, and that the garrison were about to sally out and attack him with field-pieces. He had been joined by the 200 troops he had left at Point Levi, but his num-

men, exposed to tempest and cold on the bleak plain. He made an ice-redoubt and planted upon it six 12-pound cannons and two howitzers brought by Colonel Lamb. From four or five mortars placed in the lower town he sent bomb-shells into the city, and set a few buildings on fire. Some round-shot from the citadel shattered Lamb's ice-battery and compelled him to withdraw. Then Montgomery waited a fortnight for expected reinforcements, but in vain. The terms of the enlistments of some of his men had almost expired, and the deadly small-pox appeared among them. Quarrels between Arnold and several of his officers alienated some of the troops, and it appeared at one time as if a dissolution of the little invading army was imminent. On Christmas Montgomery determined to try and carry the city by assault at two points

VIEW OF POINT LEVI, FROM DURHAM TERRACE, QUEBEC.

bers were still so few and without cannons, that he prudently fled up the river to Point Aux Trembles, and there awaited instructions from Montgomery. The latter had left troops in charge of General Wooster, at Montreal, and with a few soldiers who had agreed to follow him he went towards Quebec. He met Arnold's shivering soldiers on the 3d of December, and took command of the combined troops. With woollen clothing which he took with him he clothed Arnold's men, and with the combined force, less than 1000 strong, and 200 Canadian volunteers under Colonel James Livingston, he pressed forward, and stood before Quebec on the evening of the 5th of December. On the following morning he demanded the surrender of the city and garrison of Governor Carleton, when the flag which he sent was fired upon. Montgomery sent a letter to Carleton, but the latter refused to have any communication with a "rebel general." The latter prepared to assail the walled town with his handful of ill-supplied

simultaneously, one division to be under his own command, the other to be led by Arnold. It was determined to undertake the task on the next stormy night, Arnold to attack the lower town in the gloom, setting fire to the suburb of St. Roque, while the main body under Montgomery should make the attack on the St. Lawrence side of the town. A snow-storm began (Dec. 30, 1775), and, notwithstanding sickness and desertion had reduced the invading army to 750 effective men, movements for the assault were immediately made. While Colonel Arnold led 350 men to assault the city on the St. Charles side, Colonel Livingston made a feigned attack on the St. Louis Gate, and Major Brown men-

aced Cape Diamond Bastion. At the same time Montgomery descended to the edge of the St. Lawrence with the remainder of the army, and made his way along the narrow shore at the foot of Cape Diamond. The plan was for the troops of Montgomery and Arnold to meet and assail Prescott Gate on the St. Lawrence side, and, carrying it by storm, enter the city. The whole plan had been revealed to Carleton by a Canadian deserter, and the garrison was prepared. A battery was placed at a narrow pass on the St. Charles side, and a block-house with masked cannons occupied the narrow way at the foot of Cape Diamond. Montgomery found that pass blocked with ice, and blinding snow was falling fast. He pressed forward, and after passing a deserted barrier approached the block-house. All was silent there. Believing the garrison not to be on the alert, Montgomery shouted to the companies of Captains Mott and Cheeseman near him, "Men of New York, you will not fear to follow where your general leads; push on, my brave boys, and Quebec is ours!" Through the thick snow-veil forty men in the block-house watched for the appearance of the invaders just

FOOT OF CAPE DIAMOND.

cannons, and Montgomery, his aid (Captain McPherson), Captain Cheeseman, and ten others were slain. The remainder fell back under the command of Lieutenant-colonel Campbell. Meanwhile, Arnold was making his way through the snow-drifts on the other side of the town, in which there was great uproar — bells ringing and drums beating. The storm was raging violently, and Arnold's troops were compelled to march in single file through heavy snow-drifts. Lamb had to leave his artillery behind and join the fighters with small-arms. At a narrow pass Arnold was wounded in the leg and carried back to the hospital. Morgan took the command. A party of the Americans near Palace Gate were captured. The remainder fought desperately until ten o'clock, when Morgan, having lost full a hundred men, was compelled to surrender. A reserve force of Arnold's division had retreated, and these were soon joined by the forces of Lieutenant-colonel Campbell. So ended the siege of Quebec. The whole loss of the Americans in the assault, killed, wounded, and prisoners, was about 400; that of the British was only about 20 killed. Arnold retired with the remnant of his troops to Sillery, three miles up the river, and, with breastworks covered with snow, he kept up the blockade of Quebec during the winter.

Quebec, SYMPATHY OF, WITH BOSTON. While the English-American colonies were assisting Boston because of its distress when its port was closed (see *Boston Port Bill*), the French inhabitants of Quebec, joining with those of English origin, shipped 1040 bushels of wheat for the use of Boston sufferers.

Queen Aliquippa was an Indian sovereign who dwelt at the confluence of the Monongahela and Youghiogheny, in the southeastern part of Alleghany County, Penn., at the time of Washington's expedition to Fort Le Boeuf (1753). She had complained of his neglect in not calling on her on his outward journey, so he visited her in returning. With an apology, he gave the queen a coat and a bottle of rum. "The latter," Washington wrote, "was thought the much better present of the two," and harmony of feeling was soon restored. Aliquippa was a woman of great muscular and mental strength, and had performed such brave deeds that she was held in

PLACE WHERE ARNOLD WAS WOUNDED.

at dawn. Montgomery's shout was answered by a deadly storm of grape-shot from the masked

reverence by the barbarians of western Pennsylvania.

Queen Anne's War. The Treaty of Ryswick produced only a lull in the inter-colonial war in America. It was very brief. James II. died in France in September, 1701, and Louis XIV., who had sheltered him, acknowledged his son, Prince James (commonly known as The Pretender), to be the lawful heir to the English throne. This naturally offended the English, for Louis had acknowledged William as king in the Ryswick treaty. The British Parliament had also settled the crown on Anne, second daughter of James, so as to secure a Protestant succession. The English were also offended because Louis had placed his grandson, Philip of Aragon, on the Spanish throne, and thus extended the influence of France among the dynasties of Europe. On the death of William III. (March 8, 1702) Anne ascended the throne, and on the same day the triple alliance between England, Holland, and the German Empire against France was renewed. Soon afterwards, chiefly because of the movements of Louis above mentioned, England declared war against France, and their respective colonies in America took up arms against each other. The war, which lasted eleven years, was known in Europe as the War of the Spanish Succession, in America as Queen Anne's War. Fortunately, the Five Nations had made a treaty of neutrality (Aug. 4, 1701) with the French in Canada, and thus became an impassable barrier against the savages from the St. Lawrence. The tribes from the Merrimac to the Penobscot had made a treaty of peace with New England (July, 1703), but the French induced them to violate it; and before the close of that summer a furious Indian raid occurred along the whole frontier from Casco to Wells. So indiscriminate was the slaughter that even Quakers were massacred. The immediate cause of this outbreak seems to have been an attack upon and plunder of the trading-post of the young Baron de Castine (see *Castine, Vincent, Baron de*) at the mouth of the Penobscot. In March, 1704, a party of French and Indians attacked Deerfield, on the Connecticut River, killed forty of the inhabitants, burned the village, and carried away 112 captives. Similar scenes occurred elsewhere. Remote settlements were abandoned, and fields were cultivated only by armed parties united for common defence. This state of things became insupportable, and in the spring of 1707 Massachusetts, Rhode Island, and New Hampshire prepared to chastise the barbarians in the east. Rhode Island had not suffered, for Massachusetts sheltered that colony, but the inhabitants humanely helped their afflicted neighbors. Connecticut, though threatened from the north, refused to join in the enterprise. Early in June (1707), 1000 men under Colonel Marsh sailed from Nantucket for Port Royal, Acadia, convoyed by an English man-of-war. The French were prepared for them, and only the destruction of property outside the fort there was accomplished. The war continued, with occasional distressing episodes. In September, 1710, an armament of ships and troops left Bos-

ton and sailed for Port Royal, in connection with a fleet from England with troops under Colonel Nicholson. They captured Port Royal and altered the name to Annapolis, in compliment to the queen. Acadia was annexed to England, under the old title of Nova Scotia, or New Scotland. The following year an expedition moved against Quebec. Sir Hovenden Walker arrived at Boston (June 25, 1711) with an English fleet and army, which were joined by New England forces; and on Aug. 15, fifteen men-of-war and forty transports, bearing about 7000 men, departed for the St. Lawrence. Meanwhile, Nicholson had proceeded to Albany, where a force of about 4000 men were gathered, a portion of them Iroquois Indians. These forces commenced their march towards Canada, Aug. 28. Walker, like Braddock nearly fifty years later, haughtily refused to listen to experienced subordinates, and lost eight ships and about 1000 men on the rocks at the mouth of the St. Lawrence on the night of Sept. 2. Disheartened by this calamity, Walker returned to England with the remainder of the fleet, and the colonial troops went back to Boston. On hearing of this failure, the land force marching to attack Montreal retraced their steps. Hostilities were now suspended, and peace was concluded by the treaty at Utrecht, April 11, 1713. The eastern Indians sued for peace, and at Portsmouth the governors of Massachusetts and New Hampshire made a covenant of peace (July 24) with the chiefs of the hostile tribes. A peace of thirty years ensued.

Queen Elizabeth and Raleigh, Smoking. Sir Walter Raleigh was the recipient of the first tobacco taken to England by Philip Amidas, and Elizabeth, the maiden queen of the realm, became his apt pupil in learning to smoke it. One day while she and the courtier and some others were indulging in the habit, Raleigh offered a wager that he would ascertain the weight of the smoke that should issue from the queen's lips in a given time. Elizabeth accepted the challenge. Raleigh weighed the tobacco that was put into her pipe, and then weighed the ashes that remained in it; the difference in the weight he assigned as the weight of the smoke. The queen, laughing, acknowledged that he had won the wager, and said he was the first alchemist she had ever heard of who had succeeded in turning smoke into gold.

Queen Victoria's Proclamation (1861). While the Queen of England personally sympathized with the government of the United States in its trouble with the malcontents in 1861, she was induced by her ministers, who were practically unfriendly towards the Republic of the West, to issue a proclamation (May 13) by which a Confederate government then existing was acknowledged as regular and legitimate, and belligerent rights were accorded to the insurgents. At the beginning of May a motion was made in the British Parliament with a view to the recognition of the independence of the so-called Confederate States of America, and in reply to a question of the mover, Lord John Russell, Minister for Foreign Affairs, replied, "The attorney-

and solicitor-general and the queen's advocate and the government have come to the opinion that the Southern Confederacy of America, according to those principles which seem to them to be just principles, must be treated as a belligerent." This was the first official announcement of the intentions of the British government in the matter. It was made before Mr. Adams, the minister of the new administration, reached England. This unseemly haste indicated the unfriendliness of the British ministry. In a note to Lord John Russell (May 20) Mr. Adams spoke of the action of the government as "precipitate and unprecedented." But while belligerent rights were accorded to the Confederates, one of which was that of privateering, by an order in council (which see) on June 1, 1861, they were deprived of the chief advantages of that right by the prohibition of the disposal of prizes in British ports.

Queen's (now Rutgers) College, an institution for higher education, established in the English-American colonies, was founded under the auspices of the Reformed Dutch Church. A royal charter was obtained in 1770, with the title of Queen's College, and it was a theological seminary until 1865, when it became a partially independent literary college, on condition that the president and three fourths of its trustees should be in full communion with the Reformed Dutch Church. It received the name of Rutgers College in 1825, when Colonel Henry Rutgers gave it \$5000. Its operations had been three

bell, an energetic worker, was called to the presidential chair in 1863. Under his administration several hundred thousand dollars were added to the endowment; fine buildings have been erected, and in 1875 the number of students increased from sixty to more than two hundred. In 1866 the State College of Agriculture and the Mechanic Arts (see *Agricultural Colleges*) was opened as a department of Rutgers College, with a farm of one hundred acres. Its library numbered, in 1875, between seven and eight thousand volumes, and provision had been made for largely increasing it. The same year the college had, also, a grammar-school of nearly two hundred pupils.

Queenstown, BATTLE AT (1812). The unfortunate armistice signed by Dearborn so delayed preparations for war on the Niagara frontier that General Van Rensselaer found himself in command of only 700 men there on the 1st of September, 1812. His headquarters were at Lewiston, opposite Queenstown. He had been promised 5000 men at that time, and was charged with the double duty of defending that frontier and invading Canada. After the armistice (which see) was ended, regulars and militia began to gather on that frontier, and towards the middle of October Van Rensselaer had 6000 men scattered along the river from Lewiston to Buffalo. Feeling strong enough, he marched to invade Canada from Lewiston, on the night of the 12th. It was intensely dark. A storm had just ceased, and the air was laden with vapor. At three

QUEENSTOWN IN 1812.

times suspended previous to that time—once by the Revolution and twice by financial embarrassment. Its first president was Rev. Dr. J. R. Hardenburg. Its small endowments and the disturbances of the Civil War threatened it with a fourth suspension, when Rev. Dr. W. H. Camp-

o'clock in the morning (Oct. 13) Colonel Solomon Van Rensselaer, in command of 600 men, was on the shore at Lewiston, prepared to cross the river in the gloom, but, for want of a sufficient number of boats, he crossed with less than half his force. The British, on the alert, had

discovered the movement of the Americans, and when the latter landed, at the foot of the high, rocky bank of the Niagara River, they were assailed with musketry and a small field-piece. To this attack a battery on Lewiston Heights responded, when the British fled towards the village of Queenstown. They were followed by regulars, under Captain John E. Wool, who pushed gallantly up the hill, pressed the British back to the plateau on which Queenstown stands, and finally gained possession of Queenstown Heights. Colonel Van Rensselaer had followed with militia, but was so severely wounded that he was compelled to relinquish the command and return to Lewiston. A bullet had passed through the fleshy part of both Wool's thighs, but, unmindful of his wounds, he would neither leave the field nor relinquish his command until the arrival of his senior officer, Lieutenant-colonel Chrystie, at about nine o'clock. General Sir Isaac Brock was at Fort George, seven miles below Queenstown, when the firing began. He hastened to the scene of action with his staff and pressed up the Heights to a redan battery, where they dismounted, when suddenly Wool and his men came upon them. Brock and his staff fled in haste, and in a few minutes the American flag was waving over that little work. Brock placed himself at the head of some troops to drive Wool from the Heights, and at first the Americans were pressed back by overwhelming numbers to the verge of the precipice, which rises two hundred feet above the river, when, inspired by Wool's words and acts, they turned so furiously upon the British that they broke and fled down the hill. They were rallied by Brock, and were about to ascend the Heights, when their commander was mortally wounded at the foot of the hill. Wool was left master of the Heights until the arrival of General Wadsworth, of the New York militia, who took the chief command. General Sheaffe, who succeeded Brock, again rallied the troops. Lieutenant-colonel Scott had crossed the river, and joined the Americans on the Heights as a volunteer, and at the request of General Wadsworth he took active command. Early in the afternoon a crowd of Indians, led by John Brandt, son of the great Mohawk chief, fell upon the American pickets with a horrid war-whoop. The militia were about to flee, when the towering form and trumpet-toned voice of Scott arrested their attention. He inspired the troops, now about 600 strong, to fall upon the barbarians, who turned and fled in terror to the woods. General Van Rensselaer, who had come over from Lewiston, hastened back to send over more militia. About 1000 had come over in the morning, but few had engaged in the contest. The others refused to go, pleading that they were not compelled to leave the soil of their country, and they stood idly at Lewiston while their comrades were being slaughtered. Overwhelming numbers had pressed forward under General Sheaffe, and compelled the Americans to surrender. The loss of the Americans, in killed and wounded, was about 190; the number made prisoners was 900. The loss of the British, in killed, wounded, and pris-

oners—the latter taken in the morning—was about 130. The prisoners were marched to New-ark, opposite Fort Niagara. The American militia, officers and privates, were paroled and sent across the river, but those of the regular army were detained, prisoners of war, for exchange, sent to Quebec, and thence by a cartel-ship to Boston.

Quincy, JOSIAH, JR., was born in Boston, Feb. 23, 1744; died April 26, 1775. He graduated at Harvard University in 1763, and soon rose to distinction as a lawyer. He was fervent and influential as a speaker and writer. In 1770 he, with John Adams, defended Captain Preston. (See *Boston Massacre*.) Ill-health compelled him to abandon all business. He made a voyage to Charleston in February, 1773, which gave him much benefit, but his constitution was permanently impaired. He took part in public affairs, speaking against British oppression fervidly and eloquently, until September, 1774, when he made a voyage to England. In London he labored incessantly in behalf of the American cause, but his health soon gave way, and on a voyage homeward he died when he was in sight of his native land, at the early age of thirty-one years.

Quincy, JOSIAH, LL.D., son of Josiah Quincy, Jr., was born in Boston, Feb. 4, 1772; died at Quincy, Mass., July 1, 1864. He graduated at Harvard University in 1790, and entered upon the practice of law in Boston in 1793. In 1804 he was State

JOSIAH QUINCY.

Senator, and was a member of Congress from 1805 to 1813, in which, as a Federalist, he opposed the measures of the administration—especially with regard to the admission of Louisiana as a state and the War of 1812–15—with great ability and vigor. He was ready, fervid, earnest, witty, and keenly satirical in speech, and was a constant annoyance to Presidents Jefferson and Madison. After the war he was again State Senator (1815–20), member of the State Constitutional Conven-

tion, Speaker of the Massachusetts Assembly in 1820-21, Mayor of Boston from 1823 to 1829, and President of Harvard University from 1829 to 1845. He was Judge of the Boston Municipal Court in 1822, and he first laid down the rule that the publication of the truth with good intentions, and for a justifiable motive, was not libellous. Mr. Quincy was a life-long opposer of the system of slave labor, not only as morally wrong, but injurious to the country; and at the age of ninety-one years he made a public patriotic

speech in support of the efforts of the government to suppress the great insurrection in 1861-65. Mr. Quincy's career in Congress was memorable. It was at a time of great political agitation and international commotion. He was an able debater, and was sometimes almost fierce in

his denunciations of his opponents, especially when topics connected with the war of 1812 was a theme for debate. He was patriotic, and most sincerely opposed the war; but when it was begun he never omitted to give his aid to his distressed country in the conflict. He was a leader among the Federalists, and was cordially hated by his Democratic opponents. They lampooned him, they abused him, they caricatured him. In a caricature before me he is called "Josiah the First," and has upon his breast, as the decoration of an order, crossed codfishes, in allusion to his persistent defence of the New England fisheries. He is called "King" because of his political domination in New England. In the caricature his coat is scarlet, his waistcoat brown, his breeches light green, and his stockings white silk. In a space near his head, in the original, are the words, "I, Josiah the First, do, by this royal proclamation, announce myself King of New England, Nova Scotia, and Passamaquoddy, Grand Master of the noble Order of the Two Codfishes."

Quitman, JOHN ANTHONY, LL.D., was born at Rhinebeck, N. Y., Sept. 1, 1799; died at Natchez, Miss., July 17, 1858. He became a lawyer, and settled in Natchez in 1823, where he engaged in cotton-planting and the practice of law, in which profession he soon became distinguished. From 1826 to 1831 he was Chancellor of the Supreme Court of Mississippi, and again from 1832 to 1834. Quitman served in both branches of the State Legislature, and was governor *pro tem.* in 1835. In the struggle of Texas for independence he was distinguished. In 1839 he became Judge of the State High Court of Errors and Appeals, and in 1846 the President of the United States appointed him brigadier-general of volunteers. He served with distinction through the war against Mexico, and was appointed by General Scott military governor of the city of Mexico. In 1850 he was elected Governor of Mississippi, and was in Congress from 1856 to 1858, at the head of the Military Committee. General Quitman was a devoted disciple of Calhoun in his political creed.

R.

Race for Washington, THE THIRD. The corps of Howard and Slocum were detached from the Army of the Potomac, and sent, under Hooker, to reinforce the Army of the Cumberland, in southern Tennessee and northern Georgia. Hearing of this reduction of Meade's force, General Lee resolved to make an attempt to flank the Nationals, and make a rapid march on Washington. He had gone some distance in that movement (Oct. 13, 1863) before Meade discovered it, when he immediately fell back, and the third race for the capital, over nearly the same course pursued on former occasions, seemed for a day or two like a friendly march in parallel lines; but soon it became very exciting, Lee aiming to strike Meade's line of retreat, and the latter foiling him. It was a race marked by

the most stirring incidents, for there was much scouting and skirmishing on the way. It was won by the Army of the Potomac. It ended at Bristow's Station (which see), where a severe engagement ensued between the corps of Generals Warren and Hill. On the morning of Oct. 18 the National army stood in Lee's way on the Heights of Centreville. Lee, after pushing a thin line to Bull's Run, to mask his designs, effectually destroyed the railway from Bristow's Station to the Rappahannock, and then began a retreat (Oct. 18) with his whole army, followed the next day by Meade. In this movement each army lost about eight hundred men in killed and wounded.

Race towards Richmond (1863). Three days after General Lee escaped into Virginia

(July 17-18, 1863), General Meade crossed the Potomac to follow his flying antagonist. The Nationals marched rapidly along the eastern base of the Blue Ridge, while the Confederates went rapidly up the Shenandoah valley, after trying to check Meade by threatening to re-enter Maryland. Failing in this, Lee hastened to oppose a movement that menaced his front and flank, and threatened to cut off his retreat to Richmond. During that exciting race, there were several skirmishes in the mountain-passes. Finally Lee, by a quick and skilful movement, while Meade was detained at Manassas Gap by a heavy skirmish, dashed through Chester Gap, and, crossing the Rappahannock, took a position between that stream and the Rapid Anna. For a while the opposing armies rested. Meade advanced cautiously, and at the middle of September he crossed the Rappahannock, and drove Lee beyond the Rapid Anna, where the latter took a strong defensive position. Here ended the race towards Richmond. Meanwhile the cavalry of Buford and Kilpatrick had been active between the two rivers, and had frequent skirmishes with Stuart's mounted force. Troops had been drawn from each army and sent to other fields of service, and Lee was compelled to take a defensive position. His defences were too strong for a prudent commander to assail directly.

Radford, WILLIAM, is a native of Virginia, and entered the navy as midshipman in March, 1825; served well on the Mexican coast, as lieutenant, in the war against Mexico, and was in command of the *Cumberland* when sunk by the *Merrimac* in Hampton Roads, in March, 1861. (See *Monitor and Merrimac*.) In the attacks of Porter's squadron on Fort Fisher (which see), Radford commanded the *New Ironsides*, and in 1869-70 commanded the European squadron.

Raids and Skirmishes in Tennessee (1863). After the battle at Stone's River, or Murfreesborough, the armies of Rosecrans and Bragg lay confronting each other, the former at the scene of the battle and the latter below the Duck River. Bragg's main base of supplies was at Chattanooga. In that relative position the two armies continued from January until June. Meanwhile detached parties were very active in various parts of Tennessee. At the beginning of February (1863), General Wheeler, Bragg's chief of artillery, with 4500 mounted men, with Brigadiers Forrest and Wharton, attempted to recapture Fort Donelson. The chief object of the Confederates there was to interrupt the navigation of the Cumberland River, and thus interfere with the transportation of supplies for Rosecrans's army. The Confederates failed to capture Fort Donelson, for it was well defended by a little garrison of 600 men under Colonel A. C. Harding assisted by gunboats. There was a severe engagement (Feb. 3), and at eight o'clock in the evening the Confederates fled with a loss of nearly 600 men. Harding lost 156, of whom fifty were made prisoners. Late in January, General J. C. Davis swept over a considerable space in thirteen days, and captured 141 of Wheeler's

men. Later, General Earl Van Dorn, with a large mounted force, was hovering near Franklin, below Nashville. Sheridan at Murfreesborough and Colonel Colburn at Franklin marched simultaneously to confront him. Van Dorn was accompanied by Forrest. Colburn with 2700 men moved against Van Dorn at Spring Hill, but failed to form a junction with Sheridan. After a sharp encounter he was forced to surrender (March 5) about 1300 of his infantry. The remainder, with the cavalry, escaped. Sheridan, with about 1800 cavalry, skirmished in several places with the Confederates, and finally at Thompson's Station, after a sharp engagement, captured some of his antagonists and drove Van Dorn beyond the Duck River. He returned to Murfreesborough with nearly a hundred prisoners, with a loss of ten men killed and wounded. On March 18, Colonel A. S. Hall with 1400 men was attacked by Morgan the guerilla and 2000 men at Milton, twelve miles from Murfreesborough. With the aid of Harris's battery, in a three hours' struggle Hall repulsed Morgan, who lost three or four hundred men killed and wounded. Early in April, General Gordon Granger was in command at Franklin, building a fort near. He had about 5000 troops. Van Dorn attacked him there (April 10) with 9000 Confederates. The latter intended if successful to push on and seize Nashville, but he was repulsed with a loss of about 300 men. Rosecrans sent Colonel Streight on an extensive raid in Alabama and Georgia in April and May, which resulted in the capture of the leader and his men. (See *Streight's Raid*.)

Raids by Dana, Davidson, and Grierson (1864). There were National forces on the Lower Mississippi to prevent the concentration of forces west of Georgia against Sherman during his march to the sea. (See *Atlanta to the Sea and Savannah*.) These made swift excursions, striking at assembling troops. A troop of mounted men under General Dana went out from Vicksburg and fought and vanquished (Nov. 25, 1864) Confederates on the Big Black River. They destroyed several miles of the railway connecting New Orleans and Tennessee, with the bridges and rolling-stock, much cotton, and valuable stores. Another expedition under General Davidson went out from Baton Rouge, La., and struck the same railway (Nov. 30) at Tangipahla, laying waste its track and other property. Then he pushed on almost to Mobile, creating great alarm. On Dec. 21 (1864), General Grierson went out from Memphis, Tenn., with 3500 mounted men to operate on the Ohio and Mobile Railway. (See *Grierson's Raid*.) They struck that road at Tupelo and destroyed it to Okolona. They destroyed near Verona, on the way (Dec. 25), ordnance and supplies destined for Hood's army. Much of these was loaded in 200 wagons which Forrest had captured from Sturgis in June. At Okolona Grierson had a severe struggle with Confederate troops and defeated them. He captured a train of cars and about 500 prisoners. Grierson now moved southward and struck the Mississippi Central Railway at Wiona Station, and tore up the track several miles

each way. The raiders soon afterwards defeated Confederate cavalry under Colonel Wood at Benton, and then hastened to Vicksburg with the trophies of 500 prisoners, 800 beeves, and 1000 liberated slaves. It had been a destructive and alarming raid, during which Grierson's men destroyed 95 railway cars, 300 wagons, 30 full warehouses, and liberated, by taking therefrom, 100 Union soldiers who had been famishing in Confederate prisons.

Railroads in the United States. The steam-carriage was dimly shadowed by Evans's "Orator Amphibolis" (See *Evans, Oliver*.) It suggested the locomotive. His drawings and specifications, sent to England in 1787 and 1794-95, were copied there, and became the basis of all subsequent inventions of that nature. In 1804 Evans said, "The time will come when a steam-carriage will set out from Washington in the morning, the passengers will breakfast at Baltimore, dine at Philadelphia, and sup in New York." The prophecy is fulfilled. The first railroad charter granted in America was given by the Legislature of New York to the Mohawk and Hudson Railroad Company in 1825. The road was completed in the fall of 1831. The next charter was given by the Legislature of Maryland (1827) to the Baltimore and Ohio Railroad Company. The same year Horatio Allen, yet (1880) living, was sent to England by the Delaware and Hudson Canal Company to buy for them locomotives and iron for a railway which they built in 1828 from Honesdale to the coal-mines. Allen, in the latter part of 1829, put the first locomotive on an American railway. The first locomotive built in the United States was by Peter Cooper, yet (1880) living, at his iron-works near Baltimore in 1830. It was a small machine, and drew an open car on the Baltimore and Ohio Railroad, filled with directors, from Baltimore to Ellicott's Mills at the rate of eighteen miles an hour. The multiplication of railways in our country has kept pace with the marvellous increase in population, wealth, and inland commerce, until now (1880) the mileage is greater than that of all other railway systems in the world combined. In 1830 there were in the country 23 miles of passenger railways; in 1876 there were about 73,000 miles of railway. The capital stock of all the roads was over \$1,991,000,000; the funded and other debt was \$2,230,000,000, making a total capital account of about \$4,222,000,000. The total receipts that year were about \$520,000,000, of which amount \$141,000,000 were from passengers. The dividends paid amounted to over \$67,000,000.

Rains, GABRIEL JAMES, a native of North Carolina, graduated at West Point in 1827. He served with distinction in the Seminole War (which see), in which he was severely wounded, and was breveted major for gallantry. In 1855 he was brigadier-general of volunteers in Washington Territory, and was lieutenant-colonel in the National army in the summer of 1861, when he resigned and became a brigadier-general of the Confederate army. In the battle of Wilson's Creek (which see) he led the advance di-

vision. He also commanded a division in the battles at Shiloh and Perryville.

Rains, JAMES EDWARD, was born at Nashville, Tenn., April 10, 1833; died Dec. 31, 1862. He was a staunch Union man and a prominent lawyer before the war, and, at one time, edited the *Daily Republican Banner*, at Nashville. He was also attorney-general of the state, but resigned, joined the Confederate army, and was for a time in command at Cumberland Gap. He was a brigadier-general; acted with bravery in the battles of Shiloh and Perryville, and was killed in the battle of Stone's River.

Rale, SEBASTIAN, a Jesuit missionary to the Indians, was born in France in 1658; killed at Norridgewock, Me., Aug. 12, 1724. In the fall of 1689 he came to Quebec, and was first stationed as a missionary among the Abenakes, near the Falls of the Chaudière. Then he was sent to the Illinois country, and as early as 1695 he established a mission among the Abenakes at Norridgewock, on the Kennebec River. He acquired great influence over the barbarians, accompanying them on their hunting and fishing excursions. The English accused him of instigating savage forays on the New England frontiers, and a price was set upon his head. They burned his mission church in 1705. It was rebuilt, and in 1722 Rale's cabin and church were plundered by New England soldiers, who carried away his "Dictionary of the Abenake Language," which is preserved in MS. in the library of Harvard University. It has been printed (1833) by the Academy of Arts and Sciences. In 1724 Father Rale was shot at the mission cross by some New-Englanders with a number of Indians. (See *Norridgewock, Expedition to*.) In August, 1833, Bishop Fenwick (R. C.) erected a monument to his memory.

Raleigh, SIR WALTER, connected with American colonization, was born at Hayes, Devonshire, England, in 1552, educated at Oxford, and at the age of seventeen went as a soldier to France to assist the Huguenots. He afterwards fought in the Netherlands, and returning to England he found that his half-brother, Sir Humphrey Gilbert, had just obtained a patent for establishing a plantation in America. Raleigh joined him,

FORM OF RALEIGH'S SHIP.

and they sailed for the Western continent in 1579, but were turned back by the loss of one ship and the crippling of the others in a fight with Spanish cruisers. After serving in the suppression of a rebellion in Ireland, he was admitted to the court of Queen Elizabeth, who conferred honors upon him. These favors were won by his gallantry in spreading his scarlet cloak over a miry place for the queen to walk upon. Through his influence he obtained another patent for Gilbert, and they again proposed to sail for America. Accident kept Raleigh at home, but Gil-

bert sailed from Plymouth with five ships in 1583, and landing in Newfoundland he took possession of the island in the name of the queen. Off the coast of Maine the squadron was dispersed, and the vessel in which Gilbert sailed was lost in a storm with all on board. Afterwards Raleigh obtained for himself a patent as lord proprietor of the country extending from Delaware Bay to the mouth of the Santee River, to plant a colony there; and in 1584 he sent two ships thither under the respective commands of Philip Amidas and Arthur Barlow. (See *Amidas, Philip*.) They entered Ocracoke Inlet, off the coast of North Carolina, in July; explored Pamlico and Albemarle sounds; discovered Roanoke Island, and, waving over its soil the banner of England, took possession of it in the name of the queen. On their return to England in the autumn they gave glowing accounts of the country they had discovered, and as a memorial of her unmarried state, it is said, the queen gave to the domain the name of Virginia. She knighted Raleigh, and gave him lucrative privileges that enriched him. Raleigh now took measures for sending out a colony to settle in Virginia, and on the 9th of April, 1585, seven of his vessels sailed from Plymouth with 180 colonists and a full complement of seamen. Sir Richard Grenville (see *Grenville, Sir Richard*) commanded the expedition, accompanied by Sir Ralph Lane (see *Lane, Sir Ralph*) as governor of the colony, Philip Amidas as admiral of the fleet, Thomas Cavendish, who the next year followed the path of Drake around the world, Thomas Harriott (see *Harriott, Thomas*), as historian of the expedition, and John With, a competent painter, to delineate men and things in America. The expedition reached the American coast late in June, and the vessels being nearly wrecked on a point of land, they named it Cape Fear. Entering Ocracoke Inlet, they landed on Roanoke Island. There Grenville left the colonists and returned to England with the ships. The next year Raleigh sent reinforcements and supplies to the colony, but the settlement was abandoned. The settlers had gone home in one of Drake's ships. (See *Drake, Sir Francis*.) In 1587 Raleigh sent out a colony of farmers and mechanics to settle on the shores of Chesapeake Bay, with John White as governor. He gave them a charter and a municipal government to found the "City of Raleigh." White landed on Roanoke Island and went back to England for reinforcements and supplies. Two of Raleigh's supply-ships were captured by French cruisers. His funds were exhausted, having spent \$200,000 in his colonization schemes, and the colonists were left to perish or become incorporated with the Indian tribes. (See *Dare, Virginia*.) Raleigh was a lieutenant-general in command of the forces in Cornwall in 1588, and behaved gallantly in fighting the Spanish Armada. The next year he formed under his patents a company of "Merchants and Adventurers" to carry on his colonization schemes in America, but it was a failure. With Drake he went to restore Dom Antonio to the throne of Portugal in 1589; brought the poet Edmund Spenser from Ireland to the British court;

lost favor there himself by bad conduct; planned an expedition to Guiana, S. A., and went there with five ships in 1595, and published a highly colored account of the country on his return. Regaining a portion of the royal favor, he was in public employment and received large grants from the crown, but the death of Elizabeth in 1603 was a fatal blow to his fortunes. On the accession of James he was stripped of his preferences, and soon after was arrested on a charge of conspiring to dethrone the king, found guilty, and sentenced to be beheaded. He was reprieved and imprisoned in the Tower thirteen years, during six of which his wife bore him company. During that period Raleigh wrote his *History of the World*. Released in 1615 (not pardoned), he was commanding admiral of the fleet, and was sent by James with fourteen ships to Guiana in search of treasures. One of Raleigh's commanders was sent up the Orinoco with 250 men in boats, landed at the Spanish settlement of St. Thomas, and, in defiance of the peaceable instructions of the king, killed the governor and set fire to the town. Raleigh's eldest son was killed in the action. Unable either to advance or to maintain their position, they retreated in haste to the ships, a Spanish fleet, which had been informed of their movements, hovering near. The expedition was a failure, several of the ships were lost, and he returned in 1618 ruined in health and reputation. Disappointed in his avaricious desires, the infamous king consented to Raleigh's recommendation to the Tower and his execution (Oct. 29, 1618) under the sentence of 1603. Lane, Raleigh's governor in Virginia, first introduced tobacco into England. He had learned to smoke it, and taught Raleigh.

RALEIGH ENJOYING HIS PIPE.

When the servant of the latter first saw his master enveloped in tobacco-smoke, supposing him to be on fire, he dashed a pail of water over him. Raleigh taught the queen to smoke.

Raleigh Tavern, THE, at Williamsburg, Va., was, with its Apollo Room (which see), the cradle of liberty in Virginia, as Faneuil Hall was in Massachusetts. It was there that the patriots of the Virginia House of Burgesses met when Governor Dunmore dissolved that House in 1774;

appointed delegates to the first Continental Congress; devised schemes for local self-government, and defied the power of the royal representative. The old tavern was yet standing when the late

RALEIGH TAVERN.

Civil War broke out. In 1850, over the door of the main entrance to the building was a wooden bust of Sir Walter Raleigh.

Rall, a Hessian officer killed at Trenton, led a regiment of the Germans hired by the British government to fight the Americans. (See *German Mercenaries*.) His troops were of the contingent furnished by the Elector of Hesse-Cassel. He landed at Staten Island in June, 1776; took part in the battle of White Plains and the capture of Fort Washington, and was killed in the battle of Trenton (which see), of which post he was in command.

Rambouillet Decree. Professing to be indignant at what seemed to be partiality shown to England by the Americans in their restrictive acts, Napoleon caused the seizure and confiscation of many American vessels and their cargoes. Armstrong remonstrated, and when he learned that several vessels were to be sold, he offered to the French government a vigorous protest, in which he recapitulated the many aggressions which American commerce had suffered from French cruisers. This just remonstrance was ungenerously answered by a decree framed at Rambouillet March 23, 1810, but not issued until May 1, that ordered the sale of 132 American vessels which had been seized, worth, with their cargoes, \$8,000,000, the proceeds to be placed in the French military chest. It also ordered that "all American vessels which should enter French ports, or ports occupied by French troops, should be seized and sequestered."

Ramsay, DAVID, M.D., historian, was born at Lancaster, Penn., April 2, 1749; died at Charleston, S. C., May 8, 1815. In 1773 he began the practice of medicine in Charleston, where he ardently espoused the cause of the patriots, became active in the Provisional Free Government, Council of Safety, etc., and when the war broke out he became a surgeon in the military service. He was among the prisoners captured at Charleston in 1780, and was closely confined in the castle (now Fort Marion—see following page) at St. Augustine. (See *Siege of Charleston*.) Dr. Ramsay was a member of Congress from 1782 to 1786,

and was president of that body for a year. His *History of the Revolution in South Carolina* was published in 1785, and in 1789 his *History of the American Revolution*. Both were translated into the French language and published in France.

DAVID RAMSAY.

In 1801 he published a *Life of Washington*, and in 1809 a *History of the United States* to the close of the colonial period. He also published some minor works. On one occasion Dr. Ramsay was shot and wounded in the street in Charleston by a lunatic to whose insanity the doctor had testified.

Ramsay, ALEXANDER, was born near Harrisburg, Penn., September, 1815. He was clerk of the House of Representatives of Pennsylvania in 1841, and was a member of Congress four years—1843–47. President Taylor appointed him first governor of the Territory of Minnesota in 1849, when it contained a civilized population of nearly 5000 white people and half-breed Indians. He remained in that office until 1853, and made treaties with the Indians by which

ALEXANDER RAMSAY.

cessions of large tracts of land were made to the national government. He was chosen the first mayor of St. Paul, the capital, in 1855. He was governor of the state when the Civil War broke out; and was one of the most active of the war governors in giving assistance to the national government.

PORT MARION, ST. AUGUSTINE. (See Ramsay, Daoul.)

Randolph, EDMUND, was born in Virginia, Aug. 10, 1753; died in Frederick County, Va., Sept. 12, 1813. He was a son of John Randolph, Attorney-general of Virginia, who left the province with Lord Dunmore in 1775. Educated a lawyer, he had entered upon its practice while the storm of the Revolution was brewing. He was a warm patriot—opposed to his father—and in August, 1775, became aid to Washington. He was a delegate to the Virginia convention held at Williamsburg in May, 1776, and in July became the attorney-general of the state. From 1779 to 1782 he occupied a seat in Congress, and from 1786 to 1788 was Governor of Virginia.

EDMUND RANDOLPH.

He took a leading part in the convention that framed the national Constitution, in which he introduced the "Virginia plan." He voted against and refused to sign the Constitution, but urged its acceptance by the Virginia Ratification Convention. Washington appointed him Attorney-general in 1789, and in January, 1794, he succeeded Jefferson as Secretary of State. Having been disinherited by his father for refusing to join the royal cause, he was in moderate circumstances. Having lost the confidence of the administration in consequence of an alleged intrigue with the French minister (see *Randolph and Fouchet*), he resigned his office in August, 1795, and retired to private life, when he wrote and published an unsatisfactory "vindication."

then James Fen-
Cooper

Randolph (EDMUND) and Fouchet.

Edmund Randolph, of Virginia, succeeded Mr. Jefferson as Secretary of State in January, 1794, and, becoming involved in an intrigue with Fouchet, the French minister, lost the confidence of the administration and resigned in 1795. Fouchet, in a private despatch to his government concerning the Whiskey Insurrection (which see), written some time in August, 1794, said that as soon as the disturbance in western Pennsylvania was known Randolph came to his lodgings and requested a private conversation. He stated that civil war was imminent; that four

influential men might save it; but these being debtors of English merchants, would be deprived of their liberty if they should take the smallest step. He asked Fouchet if he could lend them funds immediately to shelter them from English persecution. In his despatch in October following, Fouchet returned to the subject. He gave a sketch of the rise of opposing parties in the United States, in which he represented that the disturbances had grown out of political hostility to Hamilton, and Hamilton himself as taking the advantage which they afforded to make the President regard as a blow to the Constitution what, in fact, was only a protest against the Secretary of the Treasury. He says Randolph informed him that the persistence in enforcing the excise (see *Whiskey Insurrection*) was a scheme of Hamilton's to mislead the President into unpopular courses and to introduce absolute power—in other words, a monarchy—under pretext of giving energy to the government. Such, according to Fouchet, was the origin of the expedition into the western counties of Pennsylvania. He then freely commented upon the characters of several leading men in the government, and made it appear that venality—a thirst for riches—was a strong motive of action among the politicians of the United States, especially of those of the Federal party. This opinion appears to have been formed from information given him by Randolph, who, two or three days before Washington's proclamation to the insurgents was issued, came to him to borrow money. This despatch, which revealed the inimical relations of the Secretary of State to the government he was serving, was intercepted on its way to France by a British cruiser, and, through Lord Grenville, was transmitted to Mr. Hammond, the British minister at Philadelphia. That functionary, ascribing the delay in ratifying Jay's treaty to Randolph, communicated Fouchet's despatch to Wolcott, as going to show what intrigues the Secretary of State had carried on with the late French minister. Wolcott consulted with other friends of the government, and a message was sent to the President, at Mount Vernon, requesting his immediate return to Philadelphia. On his arrival the despatch was presented to him (Aug. 12, 1795). A cabinet council was held the next day, when the question was propounded, "What shall be

done with the treaty (Jay's)?" Randolph opposed the ratification vehemently. The other members were in favor of it, and on the 18th of August the President signed it. When copies of the treaty had been signed by Randolph as Secretary of State, Washington presented to him the intercepted despatch of Fouchet in the presence of the other members, with a request to read it and to make such explanations as he might think fit. After reading it, he commenced commenting upon it. He could not tell, he said, what Fouchet referred to when he spoke of Randolph as asking for money for himself and some brother patriots. Perceiving that his explanations were unsatisfactory, he proposed to put the remainder of his observations in writing, and immediately tendered his resignation. He requested that the despatch might be kept secret till he should be able to prepare his explanations, for which purpose he proposed to visit Fouchet, who was at Newport, R. I., and about to sail for France. Fouchet gave to Randolph an explanatory letter that was very unsatisfactory. Randolph published a "vindication," but it, too, was very unsatisfactory, and he retired from office under the shadow of a cloud. He was greatly embarrassed in his pecuniary circumstances, and left office a defaulter to the government.

Randolph (EDWARD) and Massachusetts. Randolph was a persistent disturber of the peace in Massachusetts. He first appeared there in June, 1676, as bearer of an order from the Privy Council citing Massachusetts to defend her title to Maine. He reappeared in 1678 as a messenger from the Privy Council with a new oath of allegiance and to inquire concerning the non-observance of the navigation laws. In July, 1680, he came again, with the returning agents sent to England by Massachusetts, bearing a commission as collector of the royal customs for New England and inspector for enforcing the acts of trade. He presented his commission to the General Court. They took no notice of it. He posted a notice of his appointment at the public exchange, but it was torn down by order of the magistrates. The General Court erected a naval office, at which all vessels were required to enter and clear, and so superseded Randolph's authority. But Randolph seized vessels for the violation of the acts of trade. The whole population were against him, and he was cast in an overwhelming number of lawsuits. In 1682 he obtained leave to go to England, but soon returned with a royal letter complaining of these obstructions to law and demanding the immediate appointment of agents empowered to consent to a modification of the colonial charter. Disobedience was no longer safe. The king threatened a writ of *quo warranto*, and agents were sent to England. Randolph's commission was ordered to be enrolled, and the General Court assumed a submissive attitude. The theocratic party, with Increase Sather at their head, held out, but could not resist the tempest. Randolph was again in England, when he filed articles of high misdemeanor against Massachusetts. A writ of *quo*

warranto was issued, and the indefatigable enemy of Massachusetts again crossed the ocean, this time in a royal frigate, and himself served the writ on the magistrates (November, 1683). There was delay, and before action was taken a default was recorded. Judgment was entered (November, 1684) pronouncing the charter void. Massachusetts became a royal province. The reign of theocracy was ended. Randolph was a member of the Council during the administration of Andros, and in 1689 was imprisoned as a traitor. Released, he went to the West Indies, where he died.

Randolph, JOHN, was born in Chesterfield County, Va., June 3, 1773; died in Philadelphia, May 24, 1833. He was a descendant of Pocahontas. Delicate in health at his birth, he was so all through life. He studied both at Princeton College, New Jersey, and at Columbia College, New York. In 1799 he entered Congress as a delegate from the Charlotte district, which he represented until 1829 (a period of thirty years), excepting four years while holding a seat in the United States Senate—1825 to 1827. He was an adherent of the state supremacy doc-

JOHN RANDOLPH.

trine, and in Congress often stood alone, for he opposed measures of the Democratic party, to which he belonged. He was sarcastic in debate, and often eloquent. He frequently indulged in the grossest insults of his opponents, and fought a duel with Henry Clay in 1826. He supported Jackson for the Presidency, and in 1831 was sent to Russia as American minister at the Muscovite court. He soon returned home in feeble health, and expressed his sympathy with the South Carolina nullifiers. When about to depart for Europe again, he died. In politics and social life, Mr. Randolph was like an Ishmaelite—"his hand against every man's, and every man's hand against him."

Randolph, PEYTON, President of the First

Continental Congress, was born in Virginia in 1723; died in Philadelphia Oct. 22, 1775. Educated at the College of William and Mary, he went to England, and there studied law at the

PEYTON RANDOLPH.

Temple. Afterwards (1748) he was made King's Attorney for Virginia, and was elected to a seat in the House of Burgesses, wherein he was at the head of a committee to revise the laws of the colony. He was the author of an address of the House to the king, in opposition to the Stamp Act, and in April, 1766, was chosen speaker, when he resigned the office of Attorney-general. Early espousing the cause of the colonists, he was a leader in patriotic movements in Virginia, and was made chairman of the Committee of Correspondence in 1773. Appointed President of the First Continental Congress, he presided with great dignity. In March, 1775, he was president of a convention of delegates at Richmond to select delegates for the Second Continental Congress. For a short time he acted as Speaker of the House, and on the 10th of May resumed his seat in Congress, and was re-elected its President. A stroke of apoplexy prostrated him in death in the autumn.

Randolph Silenced in Congress. John Randolph, of Virginia, was a member of the Committee on Foreign Relations early in 1812, when it had been determined to declare war against Great Britain. He was opposed to the measure, and, made aware that a war message was coming from Madison, and knowing that debates upon it would be with doors closed against the public, attempted to anticipate matters by a speech in the House. He arose (May 29, 1812), but when he approached the theme of war he was called to order, as no question was before the House. Henry Clay, the speaker, decided that a motion could be preceded by a speech, and he was allowed to go on. He was again stopped by Calhoun, who insisted upon his putting his motion in writing, and obtain for it a second, before he should be allowed to speak. This the speaker sustained, when Randolph made a motion, in writing, that it was not expedient to go to war with Great Britain. Then he was cut short by the objection that, pre-

vious to any discussion, the House must agree to consider the motion. The House refused to consider it, and Randolph, long accustomed to untrammelled license with his tongue, was effectually silenced. Through the press he complained of this suppression of the freedom of debate.

Ransom, THOMAS EDWARD GREENFIELD, was born at Norwich, Conn., Nov. 29, 1834; died at Rome, Ga., Oct. 29, 1864. He was taught engineering in early life, and was a land-agent and civil engineer in Illinois when the Civil War broke out, when he became a major of volunteers. He led his regiment, as lieutenant-colonel, in the attack on Fort Donelson (which see), where he was severely wounded. He was promoted to colonel, and was wounded in the head at the battle of Shiloh. In June following (1862) he became chief of General McClelland's staff and inspector-general of the Army of the Tennessee. In November he was made brigadier-general of volunteers, and the next year he was distinguished at Vicksburg. Ransom was conspicuous for his skill and bravery in Banks's Red River expedition, and was severely wounded in the battle at Sabine Cross-roads (which see). He was finally promoted to the command of the Seventeenth Corps.

Rappahannock Station, BATTLE AT. In the pursuit of Lee, in his retreat towards Richmond from the vicinity of Bull's Run (October, 1863), the Sixth Corps, under General Sedgwick, found the Confederates strongly intrenched in works cast up by the Nationals on the north side of the Rappahannock, at Rappahannock Station. They were about two thousand in number. Sedgwick advanced (Nov. 7, 1863) upon each flank of the works, with the division of General D. A. Russell marching upon the centre. The first brigade, under Colonel P. C. Ellmaker, was in the van of Russell's division, and just before sunset, in two columns, stormed the works with fixed bayonets. The van of the stormers rushed through a thick tempest of canister-shot and bullets, followed by the remainder of the brigade, and after a struggle of a few moments the strongest redoubt was carried. In that charge the slaughter of the Unionists was fearful. At the same time two regiments of Upton's brigade charged the rifle-pits, drove the Confederates from them, and, sweeping down to the pontoon-bridge, cut off the retreat of the garrison. The National loss was about three hundred killed and wounded. The fruits of victory were over sixteen hundred prisoners, four guns, eight battle-flags, two thousand small-arms, and the pontoon-bridge.

Ratification of the Acts of the First Continental Congress. The Assembly of Pennsylvania, composed of a majority of Friends, or Quakers, or of those who were friendly to those interests, was the first legislative body that ratified unanimously the acts of the General Congress. They not only approved of its acts, but appointed members to represent Pennsylvania in the new Congress, proposed to be held on the 10th of May following, and adopted sundry

measures to put the province in a state of defence.

Ratification of the Treaties with France. On May 4, 1778, the Continental Congress unanimously ratified the treaties with France, and expressed their grateful acknowledgments to its king for his "magnanimous and disinterested conduct." This treaty and this ratification "buried the hatchet" that had so long been active between the French and the English colonies in America. The latter regarded all Frenchmen as their friends, and proclaimed Louis XVI. the "protector of the rights of mankind."

Rawdon (LORD), FRANCIS, Marquis of Hastings, was born Dec. 9, 1754; died Nov. 28, 1826. He was a son of the Earl of Moira. He entered the army in 1771, and in 1775 embarked for America as a lieutenant of infantry. After the

FRANCIS RAWDON. (From an English print.)

battle of Bunker's Hill he became aid to Sir Henry Clinton, and was distinguished in several battles near New York in 1776. In 1778 he was made adjutant-general of the army under Clinton, and raised a corps called the Volunteers of Ireland. He was distinguished for bravery in the battle at Monmouth, and was afterwards, when Charleston fell before Clinton, placed in command of one of the divisions of the army to subjugate South Carolina. He bravely defended Camden against Greene, and relieved Fort Ninety-six from siege by that officer. Soon afterwards he went to Charleston, and sailed for England. While on a return voyage, he was captured by a French cruiser. On March 5, 1783, Rawdon was created a baron, and made aide-de-camp to the king, and in 1789 he succeeded to the title of his uncle, the Earl of Huntingdon. In 1793 he became Earl of Moira and a major-general, and the next year he served under the Duke of York in the Netherlands. In 1812 he was intrusted with the formation of a ministry, and received the Order of the Garter and the governor-generalship of India, which he held nine years. In 1824 he was made governor and commander-in-chief of Malta, but failing health compelled him to leave. He died on his voyage homeward.

Rawdon, RETREAT OF. After the battle at Hobkirk's Hill (which see) and the passage of

the Wateree by Greene the two armies were about equal in strength. Greene's was increasing, for patriots were gathering around his standard from every part. Perceiving this, Rawdon, for the safety of his posts in the lower country, set fire to Camden and retreated (May 10, 1781) to Nelson's Ferry, on the Santee. He had ordered the commander at Fort Ninety-six (Lientenant-colonel Cruger) to abandon that post and join the garrison at Augusta; and also directed Maxwell to leave Fort Granby, near (present) Columbia, and retire to Orangeburg, on the North Edisto River. These orders were issued too late to be effective.

Rawlins, JOHN A., was born at Guilford, Ill., Feb. 13, 1831; died in Washington, D. C., Sept. 6, 1869. Until 1854 he was a farmer and charcoal-burner, but, studying law, he was admitted to the bar at Galena in 1855. He sympathized with the Secessionists until Sumter fell, when he gave his zealous support to his government, going on the staff of General Grant in September, 1861, as assistant adjutant-general, with the rank of captain. He remained on that general's staff throughout the war; was made brigadier-general in August, 1863; and major-general in March, 1865. President Grant called Rawlins to his cabinet in the spring of 1869 as Secretary of War, which position he held until a few days before his death.

Raymond, BATTLE OF. General W. T. Sherman was called from operations in the Yazoo region (see *Haines's Bluff*) by General Grant. He marched down the western side of the Mississippi River, crossed at Hard Times, and on the following day (May 8, 1863) joined Grant on the Big Black River. Grant had intended to send down troops to assist Banks in an attack upon Port Hudson, but circumstances compelled him to move forward from Grand Gulf and Port Gibson. He made for the important railway that connects Jackson, the capital of Mississippi, with Vicksburg. His army moved in parallel lines on the eastern side of the river. These were led respectively by Generals McClelland and McPherson, and each was followed by portions of Sherman's corps. When, on the morning of April 12, the van of each column was approaching the railway, near Raymond, the capital of Hinds County, the advance of McPherson's corps, under Logan, was attacked by about 6000 Confederates under Generals Gregg and Walker. It was then about ten o'clock. Logan received the first blow and bore the brunt of the battle. Annoyed by Michigan guns, the Confederates dashed forward to capture them and were repulsed. McPherson ordered an advance upon their new position, and a very severe conflict ensued, in which the Nationals lost heavily. The Confederates maintained an unbroken front until Colonel Sturgis, with an Illinois regiment, charged with fixed bayonets and broke their line into fragments, driving the insurgents in wild disorder. They rallied and retreated in fair order through Raymond towards Jackson, cautiously followed by Logan. The National loss was 442,

of whom 69 were killed. The Confederate loss was 825, of whom 103 were killed.

Raynal, ABBÉ, FLIGHT OF, FROM FRANCE. The philosophic and political history of the two Indies, by the Abbé Raynal, appeared in Paris in 1781, with the name of the author on its title-page. It was an indictment of royalty, while it praised the people of the United States of America as models of heroism such as antiquity boasted of, and spoke of New England in particular as a land that knew how to be happy "without kings and without priests." He spoke of philosophy as wishing to see "all peoples happy," and said, "If the love of justice had decided the Court of Versailles to the alliance of a monarchy with a people defending its liberty, the first article of its treaty with the United States should have been that all oppressed peoples have the right to rise against their oppressors." Raynal was indicted, and fled through Brussels to Holland, leaving his books to be burned by the common hangman. He subsequently came to the United States. His book found a welcome in many a library in France, for the younger men, even among the nobility, shared its lofty sentiments. It became a text-book of the early French revolutionists.

Read, GEORGE, a signer of the Declaration of Independence, was born in Cecil County, Md., Sept. 18, 1733; died at New Castle, Del., Sept. 21, 1793. At the age of nineteen he was admitted to the bar, and began practice in 1754. He became Attorney-general of Delaware (see *Delaware, Colony and State of*) in 1763, and held the office until 1774. From 1774 to 1777 he was a member of the Continental Congress, and one of its first Naval Committee (1775). In 1777 he became Vice-President of Delaware, and afterwards acting President. He was the author of the first constitution of Delaware, and a delegate to the convention that framed the national Constitution. In 1782 he was appointed Judge of the Court of Appeals in admiralty cases. He was United States Senator from 1789 to 1793, and from 1793 until his death Chief-justice of Delaware.

Read, GEORGE CAMPBELL, was born in Ireland; died in Philadelphia, Aug. 22, 1862. He entered the United States Navy as midshipman in April, 1804. His gallantry was conspicuous in the battle between the *Constitution* and *Guerrière* (which see), and he was appointed to receive the surrendered sword of Captain Dacres. He was also in the action between the *United States* and *Macedonian* (which see). Read had been made lieutenant in 1810; in 1816 he was promoted to commander; and in 1825 to captain. At the time of his death he was Superintendent of the Philadelphia Naval Asylum. In July, 1862, he was made rear-admiral.

Reagan, JOHN H., Postmaster-general of the Southern Confederacy, was born in Sevier County, Tenn., Oct. 8, 1818. He held several local offices in Texas, and was Judge of the District Court in Texas, to which state he had emigrated after its independence. From 1857 to 1861 he was in Congress, and, joining in the secession

movement, he was appointed Confederate Postmaster-general. He was a prisoner in Fort Warren for a time.

Reams's Station, BATTLE AT. When Warren proceeded to strike the Weldon Road (which see), Hancock, who had been called from the north side of the James, followed close in his rear, and on Aug. 21, 1864, struck the railway north of Reams's Station and destroyed the track for several miles. He formed an intrenched camp at Reams's, and his cavalry kept up a vigilant scout in the direction of the Confederate army. On the 25th Hancock was struck by Hill. The latter was repulsed. Hill struck again, and was again repulsed with heavy loss. Hill then ordered Heth to carry the National works at all hazards, upon which a concentrated fire of artillery was opened. This was followed by a desperate charge, which broke the National line. Three National batteries were captured. A fierce struggle for the possession of the works and guns ensued. In this the Nationals were partly successful. The Nationals were finally defeated, and withdrew. Hancock had lost 2400 of his 8000 men and five guns. Of the men, 1700 were made prisoners. Hill's loss was not much less; and he, too, withdrew from Reams's Station.

Reaping-machines. Efforts to supersede the sickle and "cradle" in harvesting cereals were made early. Pliny speaks of reaping-machines—a sort of van on wheels, drawn by oxen—being used in Gaul in his day. A reaper was invented in England before 1785, and one was patented there in 1799. Rev. Patrick Bell, of Scotland, patented one which was used with success for many years. One was imported into this country by John B. Yates in 1834, but was soon lost sight of. It was composed of a series of blades operating like tailors' shears. A patent was granted to French & Hawkins, of New Jersey, in 1803 for a reaping-machine, but it did not succeed. In 1833 Mr. Hussey, of Cincinnati, obtained a patent for a reaper, which was successful from the first. In 1834 Mr. McCormick, of Virginia, obtained a patent for a reaper which he had used since 1831. Others made improvements, and in 1845 McCormick took out another patent, when there were no less than fifteen rivals in the field. At the World's Fair in London American reapers were first introduced to the notice of Europeans. At the International Exhibition at Paris in 1855 American reapers were brought into competition with others, each machine being allowed to cut an acre of standing oats near Paris. The American reaper did its work in 22 minutes, the English in 60, and an Algerian in 72. American reaping-machines are now used all over Europe where cereals abound. A machine for saving the wastage of grain in harvesting is now greatly needed.

Rebel Americans. Lord North had scruples concerning harsh American measures which the king did not possess, and, wearied with the dispute with the Americans, showed symptoms of a disposition to make concessions. The majority of the cabinet were as mad as the king, and

when they found North wavering they plotted to have him displaced to make room for a more thorough supporter of British authority. On Jan. 12, 1775, at a cabinet council, he found the current of opinion so much against him that, ambitious of place and power, he yielded. His colleagues declared there was nothing in the proceedings of Congress that afforded any basis for an honorable reconciliation. It was therefore resolved to break off all commerce with the Americans; to protect the loyalists in the colonies; and to declare all others to be traitors and rebels. The vote was designed only to divide the colonies. It united them and kindled a war.

Rebellion Planned in 1856. The formidable proportions of the Republican party at its organization in 1856 alarmed the friends of the slave system in the South, and plans were devised for open resistance to the government of the United States in the event of the election of the Republican candidate for the Presidency—John C. Frémont. In response to an invitation from Henry A. Wise (then Governor of Virginia), a convention of governors of slave-labor states was secretly held at Raleigh, N. C., of which Jefferson Davis (then Secretary of War in President Pierce's cabinet) was fully informed at the time. The object was to devise a scheme of rebellion at that time in case of the contingency just mentioned. Senator James M. Mason, author of the Fugitive Slave Law (which see), wrote to Jefferson Davis on the 30th of September, 1856, "I have a letter from Wise of the 27th, full of spirit. He says the governments of North Carolina, South Carolina, and Louisiana have already agreed to the rendezvous at Raleigh, and others will—this in your most private ear. He says, further, that he had officially requested you to exchange with Virginia, on fair terms of difference, percussion for flint muskets. I don't know the usage or power of the department in such cases, but if it can be done, even by liberal construction, I hope you will accede. Was there not an appropriation at the last session for converting flint into percussion arms? If so, would it not furnish good reason for extending such facilities to the states? Virginia, probably, has more arms than the other Southern States, and would divide in case of need. In a letter yesterday to a committee in South Carolina, I gave it as my judgment, in the event of Frémont's election, the South should not pause, but proceed at once to 'immediate, absolute, and eternal separation.' So I am a candidate for the first halter." The defeat of Frémont postponed the rebellion until the election of Lincoln. Wise afterwards boasted that, had Frémont been elected, he should have marched to Washington at the head of twenty thousand men, taken possession of the Capitol, and prevented the inauguration of the Republican President. (See *Ruling Class in the South*.)

Recall of British Seamen. On the failure of negotiations between the United States and Great Britain on the subject of impressments, measures were taken to call for the return of

all British seamen to the service of their native country, commanding them forthwith to leave the service of foreign nations, whether on board merchant vessels or in ships of war. A royal proclamation to this effect was issued Oct. 17, 1807. All commanders of British ships of war were authorized by the proclamation to seize and bring away from on board foreign merchant vessels all British mariners. A demand was also made for all British mariners serving on board foreign ships of war to leave that service and return to the royal navy immediately. This proclamation seemed to shut the door to further negotiations on the subject of impressments.

Reception of Harrison and Perry at Erie.

After Harrison's victory at the Thames (which see), where Perry was his volunteer aid, the two commanders sailed to Erie in the *Ariel*, accompanied by Commodore Barclay, the vanquished English commander, who had been admitted to his parole. The American officers were received (Oct. 22, 1813) with the booming of cannons, the shouts of the people, and the kindly greetings of every loyal heart. They and the British commodore dined together at a tavern where Perry had his quarters before the battle, corner of

PERRY'S QUARTERS—APPEARANCE IN 1860.

Third and French Streets. The town was illuminated in the evening, and the streets were enlivened by a torchlight procession, bearing properly inscribed transparencies.

Reconciliation with America. There was a strong minority in the British Parliament who were anxious for reconciliation between Great Britain and her American colonies from the beginning of the dispute. In the House of Commons, Edmund Burke introduced a bill (Nov. 16, 1775) repealing all the offensive acts and granting an amnesty as to the past, thus waving the points in dispute. Burke supported the bill with one of his ablest speeches, but it was rejected by a vote of two to one. On the contrary, a bill was carried by the ministry (Dec. 21) prohibiting all trade with the thirteen colonies, and declaring their ships and goods,

and those of all persons trafficking with them, lawful prize. The act also authorized the impressment for service in the royal navy of the crews of all captured colonial vessels; also the appointment of commissioners by the crown, with authority to grant pardon and exemption from the penalties of the act to such colonies or individuals as might, by speedy submission, seem to merit that favor. So the door of honorable reconciliation was closed.

Records of the Federal Convention. The injunction of secrecy as to the proceedings of the Federal Convention in 1787 was never removed. At the final adjournment the journal, in accordance with a previous vote, was intrusted to the custody of Washington, by whom it was afterwards deposited in the Department of State. It was first printed, by order of Congress, in 1818. Robert Yates, one of the members from New York, took brief notes of the earlier debates. These were published in 1821, after Mr. Yates's death. Mr. Madison took more perfect notes of the whole convention, which were published in 1840; and a representation to the Legislature of Maryland, by Luther Martin, furnished nearly all the material for the history of the national Constitution.

Recruits for the Army. Early in 1814 the most serious business of Congress was to provide for recruiting the army. The enlistment of twelve-months men, it was found, stood in the way of more permanent engagements, and the fourteen regiments of that character then existing were to be replaced by men to serve five years. Nor were any volunteers to be retained except for a like period. Three additional rifle regiments were to be raised; two regiments of light dragoons were consolidated, and three regiments of artillery were reorganized into twelve battalions. Could the ranks be filled under this organization there would be an army of sixty thousand regulars. To fill these ranks the money bounty was raised to \$124—\$50 when mustered in and the remainder when discharged, the latter sum, in case of death, to go to the soldier's representatives. To anybody who should bring in a recruit, \$8 were allowed. In the debate on this subject Daniel Webster made his first speech in Congress, in which he declared that the difficulty of raising troops grew out of the unpopularity of the war, and not from political opposition to it. The enormous bounties offered proved that. And he advised giving over all ideas of invasion, and also all restrictive war waged against commerce by embargoes and non-importation acts. "If war must be continued, go to the ocean," he said, "and then, if the contention was seriously for maritime rights, the united wishes and exertions of the nation would go with the administration." Little was done towards increasing the force of the navy, excepting an appropriation of \$500,000 for the construction of a steam-frigate or floating battery, for which Fulton offered a plan, and the authorizing the purchase, for \$225,000, of the vessels captured on Lake Erie. At a cost of about \$2,000,000 in

bounties, fourteen thousand recruits were obtained, of whom the New England States furnished more than all the rest of the states put together.

Redemption of Continental Paper-currency. When the Continental Congress issued bills of credit, in the summer of 1775, to the amount of \$2,000,000, they pledged, by resolution and on the face of each bill issued, the faith of the several colonies for their redemption at a certain time. (See *Continental Paper-money*.) On the 29th of July (1775) they apportioned the amount required by this pledge among the several colonies to the amount of \$3,000,000, in the following ratio:

New Hampshire....	\$124,069½	Pennsylvania....	\$372,208½
Massachusetts.....	434,244	Delaware.....	37,219½
Rhode Island.....	71,959½	Maryland.....	310,174½
Connecticut.....	248,139	Virginia.....	496,278
New York.....	248,139	North Carolina...	248,139
New Jersey.....	161,290½	South Carolina...	248,139
\$3,000,000			

Redemptioners. From the beginning of the English colonies in America the importation of indentured white servants was carried on. Sometimes immigrants came as such and were sold, for a term of years, to pay the expenses of their transportation. This arrangement was voluntarily entered into by the parties and was legitimate. The limits of the time of servitude were fixed, seldom exceeding seven years, except in cases of very young persons. In all the colonies were rigorous laws to prevent them from running away, and the statutes put them on the level with the slave for the time. This class of servants came to be known as "redemptioners" in distinction from slaves; and at the end of their terms of service they were merged into the mass of the white population without any special taint of servitude. Even so late as within the nineteenth century a law still remained in force in Connecticut by which debtors, unable to meet claims against them, might be sold into temporary servitude for the benefit of their creditors.

Redfield, WILLIAM C., was born at Middletown, Conn., March 26, 1789; died in New York city, Feb. 12, 1857. Engaging in steambont navigation, he removed to New York in 1825. He thoroughly investigated the whole range of the subject of steam navigation, its adaptation to national defence, and methods of safety in its uses. He was the originator of the "safety barges," or "tow-boats," on the Hudson River, and first suggested (1828) the importance of a railway system between the Hudson River and the Mississippi. Mr. Redfield was a skilful meteorologist, and first put forth the circular theory of storms. He published sixty-two pamphlets during his life, of which forty were on the subject of meteorology.

Red-Jacket (So-go-yo-wat-ha), a Seneca chief, was born near the site of Buffalo about 1750. He was swift-footed, fluent-tongued, and always held great influence over his people. During the Revolution he fought for the British king with his eloquence in arousing his people, but seems not to have been very active

as a soldier on the war-path. Brant spoke of him as a coward and not always honest. He first appears conspicuous in history at the treaty at Fort Stanwix in 1784. It was on that oc-

RED-JACKET.

casion that Red-Jacket's fame as an orator was established. In all the dealings with white people concerning the lands in western New York, Red-Jacket was always the defender of the rights of his people. His paganism never yielded to the influences of Christianity, and he was the most inveterate enemy of the missionaries sent to his nation. It was under his leadership that the Senecas became the allies of the Americans against the British in the War of 1812-15, and in the battle of Chippewa (which

six of the leading men among the Senecas. He died on the 20th of January, 1830, at the age of about eighty years. The name of Red-Jacket was given him from the circumstance that towards the close of the Revolution a British officer gave the young chief a richly embroidered scarlet jacket, which he wore with satisfaction. In 1792 President Washington, on the conclusion of a treaty of peace and amity between the United States and the Six Nations, gave Red-Jacket a medal of solid silver, with a heavy rim, the form of which, with the devices, is seen in the engraving. The medal is seven inches in length and five inches in breadth. I saw it in the possession of Brigadier-general Parker, of General Grant's staff, in 1867, when he was chief sachem of the Six Nations.

Red River Expedition. At the beginning of 1864 another attempt was made to repossess Texas by an invasion by way of the Red River and Shreveport. General Banks was directed to organize an expedition for that purpose at New Orleans, and General Sherman was ordered to send troops to aid him. Admiral Porter was also directed to place a fleet of gunboats on the Red River to assist in the enterprise, and General Steele, at Little Rock, Ark. (which see), was ordered to co-operate with the expedition. Banks's column, led by General Franklin, moved from Brashear City, La. (March 13, 1864), by way of Opelousas, and reached Alexandria, on the Red River, on the 26th. Detachments from Sherman's army, under General A. J. Smith, had already gone up the Red River on transports, captured Fort de Russy on the way, and taken possession of Alexandria (March 10). They were followed by Porter's fleet of gunboats. From that point Banks moved forward with his whole force, and on April 3 was at Natchitoches, near the river, eighty miles above Alexandria, by land. At that point Porter's vessels were embarrassed by low water, and his larger ones could proceed no farther than Grand Ecore. A

depot of supplies was established at Alexandria, with a wagon-train to transport them around the rapids there, if necessary. The Confederates had continually retreated before the Nationals as the latter advanced from Alexandria, frequently stopping to skirmish with the vanguard. From Grand Ecore Banks pushed on towards Shreveport, one hundred miles beyond Natchitoches, and Porter's lighter vessels proceeded up the river with a body of troops under General T. Kilby Smith. At that time the Confederates from Texas and Arkansas under Generals Taylor, Price, Green, and others were gathering in front of the Nationals to the number of about 25,000, with more than sev-

RED-JACKET'S MEDAL.

enty cannons. So outnumbered, Banks would have been justified in proceeding no farther, but he and Smith, anxious to secure the object of the expedition, pressed forward. The Confederates

see) he behaved well as a soldier. For many years he was the head of the Seneca nation. He became so intemperate late in life that he was deposed by an act, in writing, signed by twenty-

fell back until they reached Sabine Cross Roads, fifty-four miles from Grand Ecore, where they made a stand. It was now evident that the further advance of the Nationals was to be obstinately contested. The Trans-Mississippi army, under E. Kirby Smith, was there 20,000 strong. A fierce battle occurred (April 8), which resulted in disaster to the Nationals. (See *Sabine Cross Roads, Battle at*.) The shattered columns of Franklin's advance fell back three miles, to Pleasant Grove, where they were received by the fine corps of General Emory, who was advancing, and who now formed a battle line to oppose the pursuers. There another severe battle was fought, which ended in victory for the Nationals. (See *Pleasant Grove, Battle at*.) Although victorious, Banks thought it prudent to continue his retreat to Pleasant Hill, fifteen miles farther in the rear, for the Confederates were within reach of reinforcements, while he was not certain that Smith, then moving forward, would arrive in time to aid him. He did arrive on the evening of the 8th. The Confederates, in strong force, had followed Banks, and another heavy battle was fought (April 9) at Pleasant Hill, which resulted in a complete victory for the Nationals. (See *Pleasant Hill, Battle at*.) Then, strengthened in numbers and encouraged by victory, Banks gave orders for an advance on Shreveport; but this was countermanded. In the meanwhile the gunboats, with T. Kilby Smith's troops, had proceeded as far as Loggy Bayou, when they were ordered back to Grand Ecore. In that descent they were exposed to the murderous fire of sharpshooters on the banks. With these the Nationals continually fought on the way. There was a very sharp engagement at Pleasant Hill Landing on the evening of the 12th. The Confederates were repulsed, and General Thomas Green, the Confederate commander, was killed. Meantime, Banks and all the land-troops had returned to Grand Ecore, for a council of officers had decided that it was more prudent to retreat than to advance. The army was now again upon the Red River. The water was falling. With difficulty the fleet passed the bar at Grand Ecore (April 17). From that point the army moved on the 21st, and encountered 8000 Confederates, on the 22d, with sixteen guns, under General Bee, strongly posted on Monet's Bluff, at Cane River Ferry. On the morning of the 23d the van of the Nationals drove the Confederates across the stream, and after a severe struggle during the day, General Birge, with a force of Nationals, drove the Confederates from the ferry, and the National army crossed. Its retreat to Alexandria was covered by the troops under T. Kilby Smith, who skirmished at several points on the way—severely at Clouterville, on the Cane River, for about three hours. The whole army arrived at Alexandria on April 27. At that place the water was so low that the gunboats could not pass down the rapids. It had been determined to abandon the expedition against Shreveport and return to the Mississippi. To get the fleet below the rapids was now urgent business. It was proposed to dam the

river above and send the fleet through a sluice in the manner of "running" logs by lumbermen. Porter did not believe in the feasibility of the project; but Lieutenant-colonel Bailey, of a Michigan regiment, performed the service successfully. The whole expedition then proceeded towards the Mississippi, where Porter resumed the service of patrolling that stream. The forces of Banks were placed under the charge of General E. R. S. Canby, on the Atchafalaya, and General A. J. Smith's troops returned to Mississippi. A strong confronting force of Confederates had kept Steele from co-operating with the expedition. He had moved from Little Rock with 8000 men, pushed back the Confederates, and on April 15 had captured the important post at Camden, on the Wachita River. But after a severe battle at Jenkinson's Ferry, on the Sabine River, he had abandoned Camden and returned to Little Rock. So ended the disastrous Red River campaign.

Reed, JAMES, was born at Woburn, Mass., in 1724; died at Fitchburg, Mass., Feb. 13, 1807. He served in the French and Indian War under Abercrombie and Amherst. In 1765 he settled in New Hampshire and was an original proprietor and founder of the town of Fitzwilliam. He commanded the Second New Hampshire Regiment at Cambridge in May, 1775, and fought with it at Bunker's (Breed's) Hill. Early in 1776 he joined the army in Canada, where he suffered from small-pox, by which he ultimately lost his sight. In August, 1776, he was made a brigadier-general, but was incapacitated for further service.

Reed, JOSEPH, was born at Trenton, N. J., Aug. 27, 1741; died in Philadelphia, March 5, 1785. He graduated at Princeton in 1757; studied law in London; began its practice at Trenton in 1765, and in 1767 became Secretary of the

JOSEPH REED.

Province of New Jersey. He was an active patriot, a member of the Committee of Correspondence, and, having settled in Philadelphia in 1770, was made president of the first Pennsylvania Convention in January, 1775. He was a delegate to the second Congress (May, 1775), and went with Washington to Cambridge, in July, as his secretary and aide-de-camp. He was ad-

jutant-general during the campaign of 1776, and was appointed Chief-justice of Pennsylvania and also brigadier-general, in 1777, but declined both offices. Reed was a volunteer in the battles of Brandywine, Germantown, and Monmouth, and in 1778, as a member of Congress, signed the Articles of Confederation. He was president of Pennsylvania from 1778 to 1781, and was chiefly instrumental in the detection of the ill-practices of General Arnold and in bringing him to trial. Mr. Reed aided in founding the University of Pennsylvania, and was an advocate for the gradual abolition of slavery. Charges of wavering in his support of the American cause created much bitter controversy a few years ago, but a recent accidental discovery by General Stryker, of New Jersey, proved the utter groundlessness of the accusation.

Reeder, ANDREW H., was born near Trenton, N. J., about 1808; died at Easton, Penn., July 5, 1864. He was a practitioner of the law at Easton, where he spent the most of his life. In 1854 he accepted the office of (first) Governor of Kansas from President Pierce, where he endeavored in vain to prevent the election frauds in that territory in 1855. He would not countenance the illegal proceedings of Missourians there, and (July, 1855) the President removed him from office. The anti-slavery people immediately elected him a delegate to Congress for Kansas; and afterwards, under the legal constitution, he was chosen United States Senator. Congress did not ratify that constitution, and he never took his seat. His patriotic course won for him the respect of all law-abiding citizens. He was one of the first to be appointed a brigadier-general at the outbreak of the Civil War, but declined the honor. Three of his sons served in the army.

Reformed Episcopal Church. In 1872 a schism occurred in the Protestant Episcopal Church in America, under the lead of the Right Rev. George David Cummins, D.D., assistant bishop of the diocese of Kentucky. He and several presbyters and laymen withdrew from the Church, believing that in some of its teachings there was a tendency towards erroneous doctrines and practices, such as—1. That the Church of Christ exists only in one order or form of ecclesiastical polity; 2. That Christian ministers are "priests" in another sense than that in which all believers are a "royal priesthood;" 3. That the Lord's table is an altar on which the oblation of the body and blood of Christ is offered anew to the Father; 4. That the presence of Christ in the Lord's supper is a presence in the elements of bread and wine, and, 5. That regeneration is inseparably connected with baptism. Rejecting these views, they formed a new Church organization, called the "Reformed Episcopal Church," and held a first general council in New York, Dec. 2, 1873, at which Bishop Cummins presided. He addressed the council, setting forth the causes which impelled to the movement, reviewing the history of the Church from 1785, and said: "We are not schismatic (no man can be schismatic who does

not deny the faith); we are not disorganizers; we are restorers of the old, repairers of the breaches, reformers." The council elected standing committees, adopted provisional rules, and chose the Rev. Charles Edward Cheney, D.D., missionary bishop for the Northwest. They also adopted a "Declaration of Principles," which were reaffirmed May 18, 1874, at which time a constitution and canons of the "Reformed Episcopal Church" were also adopted. The bishop of the diocese of Kentucky having been informed that Bishop Cummins had abandoned the communion of the Protestant Episcopal Church, gave him notice, on Nov. 22, 1873, that unless he should, within six months, make declaration that the statement was untrue, he should be deposed from the ministry of the church. Bishop Cummins did not respond, and on the 24th day of June, 1874, he was formally deposed by Bishop Smith, of Kentucky, the senior bishop of the church, with the consent of thirty-five bishops.

Refugee Loyalists. The last proceedings in the negotiation of a preliminary treaty of peace, in 1782, was in relation to the refugee American loyalists. The American Commissioners consented to a compromise. They agreed that there should be no future confiscations nor prosecutions of loyalists, that all pending prosecutions should be discontinued, and that Congress should recommend to the several states and their legislatures, on behalf of the refugees, amnesty and the restitution of their confiscated property.

Regency Bill (1765). In the early years of his reign, George III. had symptoms of insanity. In April, 1765, his illness was publicly announced, but its nature was kept a secret. The heir to the throne was then an infant only two years of age, and the subject of a regency in the event of the king's disability or death occupied the thoughts of the ministry for a time, to the exclusion of schemes for taxing the Americans. As soon as the king had sufficiently recovered, he gave orders to four of his ministers to prepare a bill for a regency. It was done; and by it the king was allowed the nomination of a regent, provided it should be restricted to the queen and royal family. The presentation of the bill by the Earl of Halifax to the House of Lords excited much debate in that body, especially on the question, "Who are the royal family?" The matter led to family heart-burnings and political complications and a change of ministry, and Pitt was brought again into the office of Premier of England. It did more—it made the stubborn young king submit to the ministry; and, in the pride of power, they perfected schemes for oppressing the American colonies. They had become a powerful oligarchy.

Regicides, THE. The judges who tried, condemned, and signed the death-warrant of Charles I. were called by the royalists "regicides." The same ship which brought to New England the news of the restoration of monarchy in Old England bore, also, Generals Edward Whalley and William Goffe, high officers in Cromwell's army. Many of the "regicides" were arrested

and executed. Whalley and his son-in-law (Goffe), with Colonel John Dixwell, another "regicide," fled to America to save their lives. Whalley was descended from an ancient family, and was a cousin of Cromwell and Hampden. He had been the custodian of the royal prisoner, and he and Goffe had signed the king's death-warrant. They arrived in Boston in July, 1660, and made their abode at Cambridge. They were speedily followed by a proclamation of Charles II. offering a liberal reward for their arrest. The king also sent officers to arrest them and take them back to England. Feeling insecure at Cambridge, the "regicides" fled to New Haven, where the Rev. Mr. Davenport and the citizens generally did what they could to protect them. Learning that their pursuers were near, they hid in caves, in clefts of rocks, in mills, and other obscure places, where their friends supplied their wants. Finally, in 1664, they went to Hadley, Mass., where they remained, in absolute seclusion, in the house of Rev. Mr. Russell, for about fifteen years. Dixwell was with Whalley and Goffe most of the time until they died—the former in 1678, and the latter in 1679—and were buried at New Haven, where the colonel lived the latter part of his life under an assumed name. He, too, died, and was buried at New Haven. In the burying-ground in the rear of the Central Church small stones, with brief inscriptions, mark the graves of the three "regicides."

Regulating Act. On the 6th of August, 1774, General Gage received a copy of the Regulating Act—an act for the subversion of the charter of Massachusetts—the principle of which was, the concentration of the executive power, including the courts of justice, in the hands of the royal governor. It took from Massachusetts, without notice and without a hearing, by the arbitrary will of Parliament and the king, rights and liberties which the people had enjoyed from the foundation of the colony, excepting in the reign of James II. It utterly uprooted the town-meeting, the dearest institution in the political scheme of Massachusetts. Surrounded by an army, and Boston sitting in grief, Gage prepared to put the Regulating Act into operation. The people of Massachusetts, in convention, decided that the act was unconstitutional, and firmly declared that all officers appointed under it, who should accept, would be considered "usurpers of power and enemies to the province," even though they bore the commission of the king. A provisional Congress was proposed, with large executive powers. Gage became alarmed, stayed his hand, and the Regulating Act became a nullity. Courts convened, but the judges were compelled to renounce their office under the new law. Jurors refused to serve under the new judges. The army was too small to enforce the new laws, and the people agreed, if Gage should send troops to Worcester to sustain the judges there, they should be resisted by twenty thousand men from Hampshire County and Connecticut. Gage's Council, summoned to meet at Salem in August, dared not appear, and the authority of the new government vanished.

Regulators in North Carolina. To feed the rapacity of rulers, the people of North Carolina were very heavily taxed; and, to comply with the extortions of public officers, they were burdened beyond endurance, particularly in the interior counties. They finally formed an association to resist this taxation and extortion, and, borrowing the name of Regulators from the South Carolinians (see *Regulators in South Carolina*), they soon became too formidable to be controlled by local magistrates. They assumed to control public affairs generally, and became actual insurgents, against whom Governor Tryon led a considerable force of volunteers from the seaboard. The opposing parties met and fought a sanguinary battle (May 16, 1771) near the Allamance Creek, in Allamance County, when nearly forty men were killed. The Regulators were beaten and dispersed, but not subdued, and many of them were among the most earnest soldiers in the war for independence. Indeed, the skirmish on the Allamance is regarded by some as the first battle in the war. Tryon marched back in triumph to New Berne, after hanging six of the Regulators for treason (June 19). These events caused fierce hatred of British rule in the region below the Roanoke.

Regulators in South Carolina. After the close of the Cherokee War, the western districts of South Carolina were rapidly settled by people of various nationalities, but mostly by Scotch-Irish, Germans, and immigrants from the Northern provinces. Among these was a lawless class, for the summary punishment of which the better sort of people associated themselves under the name of Regulators. This "vigilance committee," or "Lynch" law, was strongly protested against, for abuses followed its exercise. The people claimed the just right of trial by jury. Governor Montague sent a commissioner (1766) to investigate the matter, who arrested some of the Regulators and sent them to Charleston. Two parties were formed, and nearly came to blows. They were pacified by the establishment of district courts, but ill-feeling continued, and the opponents of the Regulators, taking sides with Parliament in the rising disputes, formed the basis of the Tory party in South Carolina.

Reid, SAMUEL CHESTER, was born at Norwich, Conn., August 25, 1783; died in New York city, Jan. 28, 1861. He went to sea when only eleven years of age, and was captured by a French privateer and kept a prisoner six months. Acting midshipman under Commodore Truxtun, he became enamored of the naval service, and when the War of 1812-15 broke out, he began privateering. He commanded the *General Armstrong* in 1814, and with her fought one of the most remarkable of recorded battles, at Fayal. (See *General Armstrong, The Privateer*.) Captain Reid was appointed sailing-master in the navy, and held that office till his death. He was also warden of the port of New York. Captain Reid was the inventor of the signal telegraph that communicated with Sandy Hook from the Narrows, and it was he who de-

signed the present form of the United States flag (which see).

SAMUEL CHESTER REID.

Reinforcement of Greene's Army (1781).

The invasion of Virginia by Phillips and Cornwallis did not have the intended effect of drawing troops from Greene in South Carolina immediately, but it did in the fall, while the siege of Yorktown was going on. Greene's troops of the Virginia line, who were levies for a limited period, left him, at the end of the term of their enlistments, in spite of his earnest remonstrances, and not a single Virginia soldier remained in his army in October. They had hastened home to assist in driving Cornwallis from the state. Washington desired, after the surrender of Cornwallis, to join Greene in an attack on Charleston, but De Grasse refused to co-operate, because he wished to return to the West Indies before the autumn gales should occur. After that surrender, General Wayne, with two thousand Pennsylvania regulars, marched southward to reinforce Greene.

Relations, COMMITTEE ON FOREIGN, REPORT OF. On Jan. 13, 1813, Mr. Calhoun, Chairman of the Committee on Foreign Relations, made an able report, in which the subject of impressment was a conspicuous topic. A week after the declaration of war, the President proposed an immediate armistice, on conditions just and honorable to both nations. The British rejected it in terms of peculiar reproach and insult, and when the Orders in Council were repealed conditionally, the practice of impressment was defended. So matters stood when the report of the committee was made. After alluding to the above facts, the committee said: "The impressment of our seamen being deservedly considered a principal cause of the war, the war ought to be prosecuted until that cause is removed. To appeal to arms in defence of a right, and to lay them down without securing it, or a

satisfactory evidence of a good disposition in the opposite party to secure it, would be considered in no other light than a relinquishment of it." They spoke of the impressment of American seamen as "an evil which ought not, which cannot, be longer tolerated. Without dwelling on the sufferings of its victims," they continued, "or on the wide scene of distress which it spreads among their relatives through the country, the practice is in itself in the highest degree degrading to the United States as a nation. It is incompatible with their sovereignty; it is subversive of the main pillar of their independence. The forbearance of the United States under it has been mistaken for pusillanimity." To effect a change in the British policy respecting impressments, the committee recommended the passage of an act providing that, after the close of the war, the employment, in public or private vessels of the United States, of any persons except American citizens should be prohibited, this prohibition to extend only to the subjects or citizens of such states as should make reciprocal regulations. An act to that effect was passed, and became a law, March 3, 1813. The war party strongly opposed it, because it seemed like a humiliating concession. Only four days before that report was made, the Prince Regent of Great Britain, from the palace at Westminster, issued a manifesto, in which the practice of impressment was justified. (See *Manifesto of the Prince Regent*.) That document reached the United States about the time of the passage of the act above alluded to.

Relations with the Indians. From the very beginning the United States established unjust and most unfortunate relations with the Indians. After the peace with Great Britain, treaties had been negotiated with most of the barbarians who had taken part against the United States during the war—namely, with the Six Nations, at Fort Stanwix, Oct. 27, 1784; with the Wyandots, Delawares, Chippewas, and Ottawas, at Fort McIntosh, Jan. 21, 1785; and with the Cherokees at Hopewell, Nov. 28, 1785. Acting upon the erroneous supposition that, by the cession of Great Britain, the United States had acquired an absolute title to all the territory within their nominal limits, the American negotiators with the Indians, in all those treaties, had arbitrarily undertaken to assign boundaries to the Indian possessions, without giving them any consideration for the lands they were thus required to relinquish. This was a departure from the uniform usage of the colonies and the established practice of the British agents. It gave great dissatisfaction to the Indians, and led to an Indian war. (See *Harrison's Military Movements*.) Similar treatment of the Indians concerning the disposition of their lands, their reservations, etc., have kept alive the ill-feeling of the barbarians towards the government and people of the United States to this day. Treaties are forced upon them, and frequently violated.

Relief for Soldiers (1780). In the year 1780 the distress of the Continental army became very great on account of the want of clothing

and adequate means possessed by the Commissary Department to afford a supply. The generous sympathies of the women of Philadelphia were aroused, and they formed an association for the purpose of affording relief to the suffering troops. The wife of General Joseph Reed was placed at the head of the society. Mrs. Sarah Bache, daughter of Dr. Franklin, was a conspicuous actor in the generous effort. All classes became interested, and the result was a great success. All ranks of society seemed to have joined in the liberal effort, from Phyllis the colored woman, with her humble contribution, to the Marchioness de Lafayette, who contributed one hundred guineas in specie. This was given, in her name, by the marquis. The French minister, Luzerne, gave \$6000 in Continental money—equivalent to nearly \$100 in specie. Those who had no money to give plied the needle in the good cause, and in almost every house the good work went on. It was not stimulated by the excitements of a day—fancy fairs—but it was the outpouring of generous hearts. American women saw the necessity that asked for interposition, and they relieved it. The Marquis de Chastellux says Mrs. Bache took him into a room filled with finished work—a large quantity of shirts for the soldiers. "On each shirt was the name of the married or unmarried lady who made it, and they amounted to two thousand two hundred." The aggregate amount of contributions in the city and county of Philadelphia was estimated at \$7500 in specie—a large sum at that time. To this was added a princely donation by Robert Morris—the contents of a ship fully laden with military stores and clothing, which had unexpectedly arrived.

Relief for Soldiers (1814). The women of the city of New York, in 1814, formed an association for the relief of soldiers in the field, by providing them with garments and other necessities. The managers were Mrs. General Morgan Lewis, Mrs. William Few, Mrs. David Gelston, Mrs. Philip Livingston, Mrs. Colonel Laight, Mrs. Thomas Morris, Mrs. Marinus Willett, Mrs. William Ross, Mrs. Nathan Sanford, Mrs. Daniel Smith, Mrs. L. Bradish, Miss M. Bleecker, Miss H. Lewis, and Miss H. E. G. Bradish.

Relief of Fort Sumter Attempted. On the day on which Mr. Lincoln was inaugurated (March 4, 1861), a letter was received at the War Department from Major Anderson, dated Feb. 28, in which he expressed an opinion that reinforcements could not be thrown into Fort Sumter within the time specified for his relief, and rendered necessary by the limited supply of provisions, and with a view of holding possession of the same, except with "a force of not less than 2000 good and well-disciplined men." This letter was laid before the cabinet March 5. General Scott was called in. The letter was considered, and Scott concurred in the opinion of Anderson. No sufficient force was at hand under the control of the government, nor could they be raised and taken to Charleston harbor before Anderson's supplies would be exhausted. Mr. Lincoln, aux-

ious for peace, was in favor of abandoning the fort, as there seemed to be no power in the government to save it. Nearly every member of the cabinet agreed with him. Mr. G. V. Fox, who had been a lieutenant in the navy, and had already through Secretary Holt presented (Jan. 7, 1861) to President Buchanan a plan for provisioning and reinforcing Sumter, was sent for. The plan was to have supplies put up in portable packages; to have vessels appear with them and troops off Charleston bar in a large ocean steamer; to have three or four men-of-war as a protecting force; to have this vessel accompanied by three fast New York tug-boats, and, during a dark night, to send in supplies and troops in these tugs or in launches, as should seem best after arrival and examination. Fox convinced the President of the feasibility of this plan. The President believed, if there seemed even a small chance of success, that it would be better to attempt sending aid to Anderson whether it should succeed or not. He thought that to abandon the position, under the circumstances, would be ruinous. Fox was sent to visit Charleston harbor. With Captain Hartstene of the navy, who had joined the insurgents, he visited Fort Sumter, March 21, by permission of Governor Pickens, and ascertained that Anderson had supplies that would last him until April 15. On his return, Fox reported to the President that any attempt to reinforce Anderson must be made before April 15. The President yearned for peace. He sent for a professed Union man in the Virginia Convention then in session, and told him that if the Convention would adjourn, instead of staying in session menacing the government, he would immediately order the evacuation of Fort Sumter. Instead of showing a willingness to preserve peace, the professed Unionist said to the President, "The United States must instantly evacuate Fort Sumter and Fort Pickens, and give assurances that no attempts shall be made to collect revenues in Southern ports." This demand for the national government to recognize the League at Montgomery as a sovereign power decided Mr. Lincoln that all temporizing must end. He had said at Trenton, on his way to Washington, "It may be necessary to put the foot down firmly." He did so at once. Overruling the persistent objections of General Scott and other military authorities, he verbally authorized Mr. Fox to fit out an expedition according to his former plan for the relief of Fort Sumter. A written order to that effect was given to Fox April 4. In order that faith might be kept "as to Sumter," the President notified Governor Pickens that he was about to send a supply of provisions only to the garrison, and that if these provisions were allowed to enter, no more troops should be sent there. This must be done peaceably if possible; if not, by force, as the governor might choose. In spite of all official hinderances, Fox, with wonderful energy and skill, fitted out the expedition at New York, and sailed with it for Charleston harbor on the 9th in the steamship *Baltic* with 200 recruits. The entire relief squadron was composed of the United States ships *Pawnee*, *Powhatan*, *Pocahontas*, and *Harriet*

Lane, and three tugs. The *Powhatan* was the flag-ship of the expedition. While passing down New York Bay, the *Powhatan* was boarded by Lieutenant (afterwards Admiral) Porter, and by order of the President went directly to Fort Pickens, then, like Sumter, threatened by the insurgents. A terrible storm on the way deprived the expedition of all the tugs, and only the *Baltic*, *Pawnee*, and *Harriet Lane* arrived in a heavy storm off Charleston bar. Before the storm abated it was too late to relieve Fort Sumter. (See *Full of Fort Sumter*.) The judgment and energy displayed by Mr. Fox on this occasion caused him to be appointed Assistant Secretary of the Navy, and as such he performed important services during the war.

Relief of Santo Domingo. M. de Ternay, who superseded the Count de Moustier as French minister in the United States, at once applied to the government for money, arms, and ammunition for the relief of the island of Santo Domingo, then rent by civil discord. The influence of the Revolution in America had produced much commotion in France, and the first terrible throes of the French Revolution were felt in 1791. The vacillating and conflicting decrees of the French National Assembly on the subject of citizenship had given rise in Santo Domingo to a warm controversy as to the political rights of the free mulattoes. They were a class considerable in numbers and property, and the controversy was attended with some bloodshed. The slaves in the neighborhood of Cape François, the northern district of the island, who were ten times more numerous than the white people and mulattoes united, had suddenly risen in insurrection, destroying all the sugar-plantations on the rich plain of the cape and threatening the city with destruction. Fugitives from this terrible scene fled to the United States, and thus gave emphasis to Ternay's request. The supplies he asked for towards the suppression of this rebellion were readily granted by the United States, in accordance with the spirit of the treaty with France in 1778 (which see).

Religious Opinions, FREEDOM OF. The provisions of the first constitutions of the states betrayed a struggle between ancient bigotry and growing liberality. When the Revolution broke out, Congregationalism constituted the established religion in Massachusetts, New Hampshire, and Connecticut. The Church of England enjoyed a similar civil support in all the Southern colonies, and partially so in New York and New Jersey. Only in Rhode Island, Pennsylvania, and Delaware the equality of all Protestant sects was acknowledged, caused by the lasting impressions given by Roger Williams and William Penn. In the last two colonies this equality was extended to the Roman Catholic Church. The constitution of Massachusetts seemed to guarantee entire freedom of religious opinions and the equality of all sects, yet the Legislature was expressly authorized and implicitly required to provide for the support of ministers, and to compel attendance on their services—a clause against which the people of Boston protested

and struggled in vain. The Legislature was quick to avail itself of the constitutional requirement and permission. They passed laws subjecting to heavy penalties any who might question received notions as to the nature, attributes, and functions of the Deity, or the divine inspiration of any book of the Old or New Testament, reviving, in part, the old colonial laws against blasphemy. Similar laws remained in force in Connecticut (under the charter) and were re-enacted in New Hampshire. In those three states Congregationalism continued to enjoy the prerogatives of an Established Church, and to be supported by taxes from which it was not easy for dissenters to escape, nor possible except by contributing to the support of some other Church which they regularly attended. The ministers, once chosen, held their places for life, and had a legal claim for their stipulated salaries, unless dismissed for cause deemed sufficient by a council mutually chosen from among the ministers and members of the neighboring churches. A great majority of the members of the Church of England were loyalists during the Revolution, and the Church lost the establishment it had possessed in the Southern colonies. In South Carolina the second constitution declared the "Christian Protestant religion" to be the established religion of the state. All persons acknowledging one God and a future state of rewards and punishments were to be freely tolerated; and if in addition they held Christianity to be the true religion, and the Old and New Testaments to be inspired, they might form churches of their own entitled to be admitted as a part of the establishment. In Maryland a "general and equal tax" was authorized for the support of the Christian religion, but no Assembly ever exercised the power to lay such tax. The constitutions of New Jersey, Pennsylvania, Delaware, North Carolina, South Carolina, and Georgia expressly repudiated the compulsory system in religious matters, and in the constitution of Virginia no mention was made of the matter. By act, in 1785, all religious tests in Virginia were abrogated. This act was framed by the earnest efforts of Jefferson and Madison, seconded by the Baptists, Presbyterians, and other dissenters. It was to prevent an effort, favored by Washington, Patrick Henry, and others, to pass a law in conformity to the ecclesiastical system in New England, compelling all to contribute to the support of some minister. By the constitutions of New York, Delaware, and Maryland, priests or ministers of religion were disqualified from holding any political office whatever. In Georgia they could not be members of the Assembly. All gifts for pious uses were prohibited by the constitution of Maryland, except grants of land not exceeding two acres each, as sites for churches and church-yards. In several of the states religious tests were maintained. The old prejudices against the Roman Catholic Church could not be easily laid aside. In New Hampshire, New Jersey, North and South Carolina, and Georgia the chief officers of state were required to be Protestants. In Massachusetts and Maryland all officers must declare their belief

in the Christian religion; in South Carolina they must believe in a future state of punishments and rewards; in North Carolina and Pennsylvania they were required to acknowledge the inspiration of the Old and New Testaments, and in Delaware to believe in the doctrine of the Trinity. In 1784 Rhode Island repealed a law so repugnant to its charter, by which Roman Catholics were prohibited from becoming voters. The old colonial laws for the observance of Sunday as a day of rest continued in force in all the colonies. The national Constitution (Article VI., clause 3) declared that "no religious test shall ever be required as a qualification to any office or public trust under the United States." At the first session of the First Congress, held March 4, 1789, many amendments to the Constitution were offered, and ten of them were adopted and ratified by the required number of state legislatures in December, 1791. The first amendment was as follows: "Congress shall pass no law respecting an establishment of religion, or prohibiting the free exercise thereof." This was a direct blow at the clauses dictated by bigotry in several of the state constitutions, and was effectual in time.

Religious Societies. At the foundation of our Republic the chief religious societies were Baptists, Congregationalists, Dutch Reformed, Episcopalians, Methodists, Presbyterians, Lutherans, Roman Catholics, Moravians, and Friends. Since then other denominations have arisen, and there were in 1876 twenty-seven distinct religious sects in the United States. In 1870 these bodies had an aggregate of 72,459 organizations; 63,082 edifices; 21,685,082 sittings, or about one sitting for every two of the population, and property valued at \$354,485,581.

Remarkable Coincidence. On the 4th of July, 1826, Thomas Jefferson and John Adams died, almost at the same hour. They were both members of the committee that framed the Declaration of Independence; both signed it; both had been American ministers at European courts; both had been Vice-Presidents and Presidents of the United States, and both had lived to a great age. Adams died at Quincy, Mass., at the age of almost ninety-one years; Jefferson died at Monticello, Va., at the age of almost eighty-four years. They died exactly fifty years (almost to an hour) after they had cast their votes in favor of the Declaration of Independence.

Remonstrance of the Legislature of Pennsylvania on the State of the Army (1777). Howe had full possession of Philadelphia and of the Delaware below, and Pennsylvania was divided among its people and in its Legislature by political factions. General uneasiness prevailed; and when Washington with a small and wretchedly furnished army that crimsoned the snow on its march from bleeding bare feet sought refuge in winter-quarters at Valley Forge, the Pennsylvania Legislature adopted a remonstrance against that measure. To this cruel missive Washington replied, after censuring the quartermaster-general (Mifflin), a Pennsylvanian, for neglect of duty: "For the want of a two days'

supply of provisions, an opportunity scarcely ever offered of taking an advantage of the enemy that has not been either totally obstructed or greatly impeded. Men are confined in hospitals or in farmers' houses for want of shoes. We have this day [Dec. 23] no less than 2873 men in camp unfit for duty because they are barefooted and otherwise naked. Our whole strength in Continental troops amounts to no more than 8200 in camp fit for duty. Since the 4th inst., our numbers fit for duty, from hardships and exposures, have decreased nearly 2000 men. Numbers are still obliged to sit all night by fires. Gentlemen reprobate going into winter-quarters as much as if they thought the soldiers were made of sticks or stones. I can assure those gentlemen that it is a much easier and less distressing thing to draw remonstrances in a comfortable room by a good fireside than to occupy a cold, bleak hill, and sleep under frost and snow without clothes or blankets. However, although they seem to have little feeling for the naked and distressed soldiers, I feel superabundantly for them; and from my soul I pity those miseries which it is neither in my power to relieve or prevent."

Removal of the Seat of Government to Washington. This was effected in the summer of 1800. It seemed like transferring it to a wilderness. Only the north wing of the Capitol was finished, and that was fitted up to accommodate both Houses of Congress. The President's house was finished externally, but much had to be done on the inside. There was only one good tavern, and that was insufficient to accommodate half the Congressmen. There was only a path through an alder swamp along the line of Pennsylvania Avenue from the President's house to the Capitol. Mrs. Adams wrote concerning the President's house that it was superb in design, but then dreary beyond endurance. "I could content myself almost anywhere for three months," she said, "but, surrounded with forests, can you believe that wood is not to be had, because people cannot be found to cut and cart it! . . . We have, indeed, come into a new country." The public offices had hardly been established in the city when the War-office, a wooden structure, took fire and was burned with many valuable papers.

Rensselaerwyck, the seat of Patroon Van Rensselaer (see *Patroons*), equalled in population in 1638 the rest of the province of New Netherland. It did not include Fort Orange (Albany), which was under the direct control of the Dutch West Indian Company through the director at Fort Amsterdam. The government was vested in two commissaries, one of whom acted as president, and two councillors, assisted by a secretary, schout-fiscal, and marshal. The commissaries and councillors composed a court for the trial of all cases, civil and criminal, from which, however, an appeal lay to the director and council at Fort Amsterdam. The code was the Roman-Dutch law as administered in Holland. The population consisted principally of farmers, who emigrated at their own expense, other husband-

men sent out by the patroon to establish and cultivate boweries, or farms, on shares or by rent, and farm-servants indentured for a term of years. From the very foundation of the "Colonie," as it was called, there were disputes between the patroon and his tenants. (See *Anti-Rentism*.) For a long time there was a clashing of authority between the director of the Province and the commissary of the "Colonie."

Reorganization of Civil Government (1781).

After much discussion, the Congress determined, early in 1781, to abandon the old system of carrying on the various departments of the government by boards and committees, and to put foreign affairs, war, marine, and finance under a single head in each. The first of these offices was filled (June, 1781) by Robert Morris, the chief financier of the nation, under the title of Superintendent of Finance. A foreign bureau was established equivalent to our present department of state, at the head of which was placed Robert R. Livingston, who was styled Secretary of Foreign Affairs. General Alexander McDougall was made Secretary of the Marine, and Richard Peters Secretary of War. Mr. Livingston had two under-secretaries—Louis R. Morris and Peter S. Duponceau—and two clerks. Rev. Mr. Tetart, of Philadelphia, was made translator of the department.

Reorganization of the Continental Army

(1775). During the campaign which resulted in the loss of New York, a retreat before a superior force across New Jersey, and the encampment of the shattered fugitive American army on Pennsylvania soil, Washington had been in constant correspondence with the Congress on the subject of a reorganization of the troops in the field. He had represented in the strongest terms the wastefulness, as well as the dangerous uncertainty, of the system of short enlistments and militia drafts, and its total incompatibility with system, order, and discipline. Numbers had not been wanting. Already there had been 47,000 Continentals and 27,000 militia in the field, but this vast army presented a series of dissolving views. There was neither order nor discipline, and consequently there was dangerous weakness. "The government of the army," Washington wrote to Congress, to be effective, "must be a perfect despotism." To that the militia would not submit, and when they were with regulars, their insubordination was communicated to the latter, whose annual term of service expired almost before they had learned the duties of a soldier. In the Congress, in the state legislatures, and among the people there prevailed an abhorrence of a standing army, and there was a general disinclination to enlist for long periods. Yet the important fact was recognized, that to continue the war a standing army must be created. A committee of Congress, who had conferred with Washington on Harlem Heights, had matured a plan in accordance with his views, and it was adopted by Congress. All the scattered troops were to compose one grand army, to consist of eighty battalions of 750 men each, to be raised in the sev-

eral states in proportion to their assumed population and ability, as follows: Massachusetts and Virginia, each 15 battalions; Pennsylvania, 12; North Carolina, 9; Connecticut, 8; South Carolina, 6; New York and New Jersey, 4 each; New Hampshire and Maryland, 3 each; Rhode Island, 2; and Delaware and Georgia, 1 each. The men were to be enlisted for the war, and to be entitled at the end of their service to a land-bounty of 100 acres. Colonels were to have 500 acres, and inferior officers an intermediate quantity according to their rank. A bounty of twenty dollars was to be given to each recruit. A regiment raised by Colonel Hazen in Canada was to be kept up, to be recruited in any of the states, and hence known as "Congress's Own." It was soon found to be difficult to get recruits "for the war," and an option was allowed to recruit for three years and not receive any land-bounty. The states were to enlist their respective quotas, and to provide them with arms and clothing; but the expense of these operations, as well as the pay of the soldiers in the field, was to be finally a common charge. Colonels and all inferior officers were to be appointed by the respective states, but to be commissioned by Congress. National foundries and laboratories for the manufacture of arms and military stores were speedily set up at Carlisle, Penn., and Springfield, Mass. To promote enlistments, several of the states offered large additional bounties, but Washington and the Congress protested against the practice as injurious. The latter, however, offered eight dollars to every person who should obtain a recruit. Even this apparently large army, if promptly recruited, did not seem sufficient to Washington, and the Congress authorized him (Dec. 27) to enlist and officer an additional force. (See *Dictatorship Conferred on Washington*.)

Reorganization of the Union (1865). Several of the state governments had been paralyzed and disorganized by the terrible convulsions produced by the Civil War. A hoary and deep-seated social system had been overthrown, and in a number of the states business of every kind, public and private, had become deranged. It was necessary for the national government to put forth its powers for the reorganization of the Union politically, as a preliminary measure for its peaceful and healthful progress. There was nothing to reconstruct, for nothing had been destroyed. No state had been severed from the body of the Republic. At the end of the war each state, geographically and politically, remained as it was before, and only needed its vitality to be resuscitated to cause it to go on with vigor as an equal component of the Union. President Johnson took a preliminary step towards the reorganization by proclaiming (April 29, 1865) the removal of restrictions upon commercial intercourse among all the states. A month later (May 29) he issued a proclamation stating the terms by which the people of the disorganized states, with specified exceptions, might receive full amnesty and pardon, and be reinvested with the right to exercise the functions of citizenship supposed to have been de-

destroyed by participation in the insurrection. This was soon followed by the appointment by the President of provisional governors for the seven states which originally formed the league known as the "Confederate States of America" (which see). These governors he clothed with authority to assemble citizens in convention who had taken the amnesty oath, with power to reorganize state governments and secure the election of representatives in the national Congress. The President's plan was to restore to the states named their former position in the Union without any provision for securing to the emancipated slaves the right to the exercise of citizenship which an amendment to the national Constitution (see *Thirteenth Amendment, The*), then before the state legislatures for consideration, would entitle them to. The President's provisional governors were active in carrying out his plan of reorganization before the meeting of Congress, fearing that body might interfere with it. Meanwhile the requisite number of states ratified the Thirteenth Amendment. Late in June the order for a blockade of Southern ports was rescinded; most of the restrictions upon inter-state commerce were removed in August; state prisoners were paroled in October; and the first act of Congress after its meeting in December, 1865, was the repealing of the act authorizing the suspension of the privilege of the writ of *habeas corpus*. Five of the disorganized states had then ratified the Thirteenth Amendment, caused the formation of state constitutions, and elected representatives thereunder; and the President had directed the newly elected governors (some of whom had been active participants in the insurrection) to take the place of the provisional governors. These events had greatly disturbed the loyal people. It seemed evident that the President, in violation of his solemn pledges to the freedmen and the nation, was preparing to place the public affairs of the United States under the control of those who had sought to destroy the Union. Within six months after his accidental elevation to the presidential chair he was at open war with the party whose suffrages had given him his high honors. He had usurped powers which the Constitution conferred exclusively upon Congress. That body clearly perceived the usurpation, and their first business of moment was to take up the subject of reorganization. On the first day of the session (Dec. 4, 1865) Congress appointed what was called a "Reconstruction Committee." It should have been called a *Reorganization Committee*. It was composed of nine members of the House and six of the Senate. Their duties were to "inquire into the condition of the states which formed the so-called Confederate States of America, and report whether they, or any of them, were entitled to be represented in Congress." It was resolved that until such report should be made, representatives from those states should not take seats in Congress. This was a virtual condemnation of the President's unlawful acts. The angry chief magistrate resented it, and denounced by name members of Congress who op-

posed his will. He uniformly vetoed acts passed by Congress, but his vetoes were impotent for mischief, for the bills were passed over them by very large majorities. His conduct so disgusted his cabinet ministers that they all resigned in March, 1866, excepting the Secretary of War (Mr. Stanton), who retained his position at that critical time for the public good. Congress pressed forward the work of reorganization in spite of the President's factions opposition. Late in July Tennessee was reorganized, and took its place in the councils of the nation. The President's high-handed acts finally caused his impeachment, when, after a trial, he was acquitted by one vote. He was succeeded in office by General Grant, March 4, 1869. Finally, the disorganized states, having complied with the requirements of Congress, the Union was fully restored in May, 1872. On the 23d of that month every seat in Congress was filled for the first time since the winter of 1860-61 (a period of more than eleven years), when members from several of the slave-labor states abandoned them. (See *Civil Rights Bill; Freedmen's Bureau; Tenure of Office Act*.)

Representative Government, FIRST, IN MASSACHUSETTS. The government of Massachusetts colony, in its popular branch, was purely democratic until 1634. The freemen, dissatisfied by the passage of obnoxious laws by the magistrates and clergy, sent a delegation, composed of two representatives from each town, to request a sight of the charter. Its inspection satisfied them that to the freemen, and not to the magistrates, belonged the legislative power. They asked the governor's opinion. He replied that the freemen were now too many (not over three hundred) to meet as a legislature, and also gave an opinion that the "commons" were not yet furnished with a body of men fit to make laws. He proposed that a certain number of freemen should be appointed yearly, not to make laws, but to prefer grievances to the Court of Assistants, whose consent might also be required to all assessments of money or grants of lands. They insisted upon less restricted power; and when the General Court, composed of freemen, met, that body claimed for itself all the powers which the charter clearly granted them. The magistrates were compelled to yield; and it was arranged that while all the freemen should assemble annually for the choice of officers, they should be represented by delegates elected by the people in the other three sessions of the court (see *Massachusetts, First Royal Charter for*), to "deal on their behalf in the public affairs of the commonwealth," and for that purpose "to have devised to them the full voice and power of all the said freemen." By this political revolution representative government was first established in Massachusetts. The first representative Legislature, composed of three delegates from each of the eight principal plantations, met with the magistrates in May, 1634. This was the second government of the kind established in America.

Representative Government in New York. Its germs were planted in New Netherland, when,

in 1641, Governor Kieft summoned all the masters and heads of families to meet at Fort Amsterdam to bear with him the responsibility of making an unrighteous war on the Indians. (See *Kieft, William*.) When they met, Kieft submitted the question whether a murder lately committed by a savage on a Hollander, for a murder committed by a Hollander on a savage many years before, ought not to be avenged; and, in case the Indians would not give up the murderer, whether it would not be just to destroy the whole village to which he belonged? The people chose twelve of their number to represent them. These were Jacques Bertyn, Maryn Adriaensen, Jan Jansen Dam, Hendrick Jansen, David Pietersen de Vries, Jacob Stoffelsen, Abram Molenaar, Frederick Lubbertsen, Jochem Pietersen Kuyter, Gerrit Dircksen, George Rapelje, and Abraham Planck—all Hollanders. The action of the twelve was contrary to Kieft's wishes, and he afterwards dissolved this first representative assembly and forbade the assembling of another. An appalling crisis in 1643 caused Kieft to call for popular counsellors, and the people chose eight men to represent them. This second representative assembly consisted of Jochem Pietersen Kuyter, Jan Jansen Dam, Barent Dircksen, Abraham Pietersen, Isaac Allerton (a Puritan who came over in the *Mayflower*, and was then a merchant in New Amsterdam), Thomas Hall (another Englishman), Gerrit Wolfertsen, and Cornelius Meylyn, the patroon of Staten Island. On the arrival of Stuyvesant as governor of New Netherland, he organized a council of nine men, who in a degree represented the people. A circumstance now favored the growth of republicanism in the colony. The finances were in such a low state that taxation was absolutely necessary. The principle that "taxation without representation is tyranny" had prevailed in Holland since 1477. Stuyvesant was compelled to respect it, for he feared the States-General; so he called a convention of citizens (1647), and directed them to choose eighteen of their best men from whom he might select nine as representatives of the tax-payers. He hedged this representative assembly as tightly as possible with restrictions. The first nine were to choose their successors, so that he need not go to the people again. They nourished the prolific seed of democracy then planted. Stuyvesant tried to stifle its growth; persecution promoted it. Settlers from New England were now many among the Dutch, and imbibed their republican sentiments. Finally, late in the autumn of 1653, nineteen delegates, who represented eight villages or communities, assembled at the City Hall in New Amsterdam, without the governor's consent, to take measures for the public good. They demanded that "no new laws shall be enacted but with the consent of the people, that none shall be appointed to office but with the approbation of the people, and that obscure and obsolete laws shall never be revived." Stuyvesant, angered by what he called their impertinence, ordered them to disperse on pain of punishment, saying: "We derive our authority from

God and the Company, not from a few ignorant subjects." The deputies paid very little attention to the wishes or commands of the irate governor, who was an honest despot. When they adjourned they invited the governor to a collation, but he would not sanction their proceedings by his presence. They bluntly told him there would be another convention soon, and he might prevent it if he could. He stormed, but prudently yielded to the demands of the people for another convention, and issued a call. The delegates met (Dec. 10, 1653) in New Amsterdam. Of the eight districts represented, four were Dutch and four English. Of the nineteen delegates, ten were Dutch and nine English. Baxter, English secretary of the colony, led the English delegates. He drew up a remonstrance against the tyrannous rule of the governor. Stuyvesant met the severe document with his usual pluck, denouncing it and the assembly, every member of which signed it; and until the end of his administration (1664) he was at "swords' points" with the representatives of the people, who more and more acquired legislative functions under Dutch and English rule until the beginning of the last century, when the Assembly was the most powerful branch of the colonial government.

Reprisal. In 1646, while Captain Dobson, in a vessel of eighty tons fitted out at Boston, was trading with the natives at Cape Sable, N. S., D'Aulnay, the French governor, sent twenty men from Port Royal, who captured the vessel and took it to the latter port, where ship and cargo were confiscated and the men sent home. Vessel and cargo were valued at \$5000. (See *La Tour in Acadia*.)

Reprisal, LETTERS OF, in national law, the authorization of the capture of property belonging to the subjects of a foreign power in satisfaction of losses sustained by a citizen of the capturing state. (See *Letter of Marque and Reprisal*.)

Reprisal, THE PRIVATEER. The ship that carried Franklin to France, having replenished in the port of Nantes, cruised off the French coast and captured several prizes from the English. The American privateers were permitted to enter French ports in cases of extreme emergency, and there to receive supplies only sufficient for a voyage to their own ports; but the *Reprisal* continued to cruise off the French coast after leaving port, and captured the English royal packet between Falmouth and Lisbon. With this and five other prizes, she entered the harbor of L'Orient, the captain saying he intended to send them to America. Stormont, the English ambassador at Paris, hurried to Vergennes to demand that the captain, with his crews, cargoes, and ships, should be given up. "You have come too late," said the minister; "orders have already been sent that the American ship and her prizes must immediately put to sea." The *Reprisal* continued to cruise in European waters until captured in the summer of 1777.

Republican Army, THE, abandoned Canada in 1776. General John Thomas was sent to take the command of the patriot troops in Can-

ada. He arrived at Quebec May 1, 1776, and found nineteen hundred soldiers, one half of whom were sick with small-pox and other diseases. Some of them were also clamorous for a discharge, for their term of enlistment had expired. He was about to retreat up the St. Lawrence, when reinforcements for Carleton arrived, and the garrison of Quebec sallied out and attacked the Americans, who in their weakness fled far up the river to the mouth of the Sorel. There General Thomas died of the small-pox (June 2), when the command devolved on General Sullivan. After meeting with disaster at Three Rivers, the latter was compelled to fly up the Sorel before an approaching force under Burgoyne, and he pressed on by Chambly to St. John. Arnold, at Montreal, seeing approaching danger, had abandoned that city and joined Sullivan at Chambly; and on the 17th of June all the American troops in Canada were at that post. They were in a most pitiable plight. Nearly one half of them were sick; all were half-clad, and were scantily fed with salted meat and hard bread. The force was too weak to make a stand at St. John against the slowly pursuing army of Burgoyne, and they continued their flight to Crown Point in open boats, without awnings, exposing the sick to the fiery sun and drenching rain. Terrible were their sufferings at Crown Point. Every spot and every thing seemed infected with disease. For a short time the troops were poorly housed, half-naked, and inadequately fed, their daily rations being raw salted pork, hard bread, and unbaked flour. During two months the Northern Army lost, by sickness and desertion, full five thousand men, and five thousand were left, and were at Crown Point in June, 1778. So ended, in disaster, this remarkable invasion.

Republican Government First Proposed. After the proclamation of King George III. (which see) in 1775, Joseph Hawley, one of the staunch patriots of New England, wrote from Watertown to Samuel Adams in Congress: "The eyes of all the continent are on your body to see whether you act with firmness and intrepidity—with the spirit and despatch which our situation calls for. It is time for your body to fix on periodical annual elections—nay, to form into a parliament of two houses." This was the first proposition for the establishment of an independent national government for the colonies.

Republican Party, MODERN, BIRTH OF THE. The place of the birth of the Republican party, like that of Homer, is claimed by several communities. It is a matter of date to be settled. Michigan claims that it was at a state convention assembled at Jackson July 6, 1854, a call for which was signed by more than ten thousand persons. The "platform" of the convention was drawn up by Hon. Jacob M. Howard (afterwards United States Senator), in which the extension of slavery was opposed and its abolition in the District of Columbia agitated. The name of "Republican" was adopted by the convention as that of the opposition party.

Conventions that took a similar course were held as follows: Ohio, Wisconsin, and Vermont, July 13, and Massachusetts, July 19, 1854.

Republican Party, THE, IN 1856. For some time previous to the canvass for a new President of the United States in 1856 there were very apparent signs of the formation of a new party. The anti-slavery element in all political parties began more than a year before to crystallize into a party opposed to the further extension of slavery into the territories of the Union. It rapidly gathered force and bulk as the election approached. It assumed giant proportions in the fall of 1856, and was called the "Republican party." That party had nominated John C. Frémont, of California, for President. He was defeated by James Buchanan; but the party still increased in power, and in 1860 elected its candidate—Abraham Lincoln. It continued to be the dominant party in the councils of the nation until during the administration of President Hayes, who was elected in 1876.

Republicans. The Anti-Federalists (see *Federalists*) formed the basis of the Republican party after Jefferson entered the cabinet of President Washington. During the discussion on the national Constitution before it was adopted the difference of opinion became more and more decidedly marked, until, at the time when the ratification was consummated, the views of the supporters and opposers of the Constitution, called Federalists and Anti-Federalists, gradually crystallized into strongly opposing creeds. Jefferson came from France to take his seat in the cabinet, filled with the radical sentiments of the best of the French revolutionists, who had begun the work which afterwards assumed the horrid aspect of revolution and the Reign of Terror. He came home glowing with the animus of French democracy, and was shocked by the apparent indifference of Washington, Hamilton, Adams, and others to the claims of the struggling French people to the sympathy of the Americans. He sympathized with the ultra-republicans of France, and was an enthusiastic admirer of a nation of enthusiasts. His suspicious nature caused him to suspect those who differed with him in his political views as enemies of republicanism; and he had scarcely taken his seat in Washington's cabinet before he declared his belief that some of his colleagues held monarchical views, and that there was a party in the United States secretly and openly in favor of the overthrow of the Republic. He did not hesitate to designate Hamilton as a leader among them, and Washington was soon alarmed and mortified to find that he had personal and political enemies in his cabinet. These two men soon became the acknowledged leaders of opposing parties in the nation—Federalists and Anti-Federalists—Hamilton of the first, Jefferson of the second. As more dignified, the latter party took the title of Republicans, or Democrats. They called their opponents the "British party." The latter retorted by calling the Republicans the "French party."

REQUISITION ON STATES FOR TROOPS 1200 RESIGNATION OF CIVIL OFFICERS

In the presidential contest in 1800 the Republicans defeated the Federalists, and, after a struggle for about twenty years for political supremacy, the Federal party disappeared. *Fenno's Gazette* was considered Hamilton's organ, and an opposition journal, called the *National Gazette*, was started, with Philip Freneau, a poet and translating-clerk in the office of Mr. Jefferson, at its head. The Republican members of Congress were mostly from the Southern States, and the Federalists from the Northern and Eastern.

Requisition on the States for Troops (1861). Simultaneously with the President's proclamation for troops (April 15, 1861), the Secretary of War (Simon Cameron) issued a telegraphic despatch to the governors of all the states of the Union, excepting those in which ordinances of secession had been adopted (see *Secession Ordinances*), requesting each of them to cause to be immediately detailed from the militia of his state a designated quota, as follows, the number of regiments indicated by the numerals:

Maine..... 1	Pennsylvania.. 16	Missouri..... 4
New Hampshire. 1	Delaware..... 1	Ohio..... 13
Vermont..... 1	Tennessee..... 2	Indiana..... 6
Massachusetts.. 2	Maryland..... 4	Illinois..... 6
Rhode Island... 1	Virginia..... 3	Michigan..... 1
Connecticut.... 1	North Carolina. 2	Iowa..... 1
New York..... 17	Kentucky..... 4	Minnesota..... 1
New Jersey..... 6	Arkansas..... 1	Wisconsin..... 1

Resaca, BATTLE OF (1864). General Sherman, instead of attacking General Johnston at Dalton (see *Sherman's Campaign in Georgia*), flanked him and caused him to leave Dalton and take post at Resaca, on the Oostenaula River, where the railway between Chattanooga and Atlanta crosses that stream. In so doing, General Thomas had quite a smart engagement at Buzzard's Roost Gap on May 7. Meanwhile the Army of the Ohio (Schofield) pressed heavily on Johnston's right, and the Army of the Tennessee (McPherson) approached suddenly before the Confederate works at Resaca. These works were so strong that McPherson fell back to Snake Creek Valley to await the arrival of the main army. On May 11 the whole army was marching westward of Rocky-face Ridge for Snake Creek Gap and Resaca. Johnston, closely pursued by Howard, had taken position behind a line of intrenchments at Resaca. From the Gap, McPherson, preceded by Kilpatrick's cavalry, pushed towards the same place. The latter was wounded in a skirmish. McPherson drove in the Confederate pickets, and took post on a ridge of bald hills, with his right on the Oostenaula River and his left abreast the village. Very soon the Confederate intrenchments were confronted by other National troops. On the 14th Sherman ordered a pontoon-bridge to be laid across the Oostenaula at Lay's Ferry, and directed Sweeny's division to cross and threaten Calhoun, farther south. At the same time Garrard's cavalry moved towards Rome. Meanwhile Sherman was severely pressing Johnston at all points, and there was a general battle at Resaca during the afternoon and evening of May 15, in which Thomas, Hooker, and Schofield took a principal part. Hooker drove the

Confederates from several strong positions and captured four guns and many prisoners. That night Johnston abandoned Resaca, fled across the Oostenaula, firing the bridges behind him, and leaving as spoils a 4-gun battery and a considerable amount of stores. The Nationals, after taking possession of Resaca, pushed on in pursuit. After briefly resting at two or three places, Johnston took a strong position at Allatoona Pass.

Resaca de la Palma (Dry River of Palma), BATTLE OF. At two o'clock on the morning of May 9, 1846, the little army of General Taylor, which had fought the Mexicans the day before at Palo Alto (which see), were awakened from their slumbers on the battle-field to resume their march for Fort Brown. The cautious leader prepared for attack on the way, for the smitten foe had rallied. He saw no traces of them until towards evening, when, as the Americans emerged from a dense thicket, the Mexicans were discovered strongly posted in battle order in a broad ravine about four feet deep and two hundred feet wide, the dry bed of a series of pools, skirted with palmetto-trees, and called "Resaca de la Palma." Within that natural trench the Mexicans had planted a battery that swept the road over which the Americans were approaching. Taylor pressed forward, and, after some severe skirmishing, in which a part of his army was engaged, he ordered Captain May, leader of dragoons, to charge upon the battery. Rising in his stirrups, May called out to his troops, "Remember your regiment! Men, follow!" and, dashing forward in the face of a shower of balls from the battery, he made his powerful black horse leap the parapet. He was followed by a few of his men, whose steeds made the fearful leap. They killed the gunners, and General La Vega, who was about to apply a match to one of the pieces, and 100 men were made prisoners by the troops and borne in triumph within the American lines. The battle grew fiercer every moment. The chaparral, an almost impenetrable thicket near, was swarming with Mexicans and blazing with the fire of their muskets. Finally, after a fearful struggle, the camp and headquarters of General Arista were captured and the Mexicans completely routed. Arista fled, a solitary fugitive, and escaped across the Rio Grande. So sudden had been his discomfiture that his plate and correspondence, with arms, equipments, and ammunition for several thousand men, besides 2000 horses, fell into the hands of the victors. La Vega and some other captive officers were sent to New Orleans on parole. The Mexicans having been reinforced during the night of the 8th, it was estimated that they had 7000 men on the battle-field; the Americans less than 2000. The former lost, in killed, wounded, and prisoners, about 1000; the latter, 110. The Mexican army was broken up. (See *Mexico, War with*.)

Resignation of Civil Officers in South Carolina. When South Carolina was proclaimed a "sovereign independent nation" by its governor, its civil officers resigned their places under

the government of the United States. Judge McGrath, of the United States District Court at Charleston, said to the grand-jurors in his court, "For the last time, I have, as a judge of the United States, administered the laws of the United States within the limits of South Carolina. So far as I am concerned, the temple of justice raised under the Constitution of the United States is now closed." Then, with solemn gravity, he laid aside his gown and retired. At the same time the United States District-attorney, the Collector of the Port of Charleston, and the National Sub-treasurer resigned, and were followed by all the civil officers of the state. Similar action was taken by the civil officers in other states where conventions had passed ordinances of secession. Those of South Carolina were in such haste to get out of the Union that their resignations took place on Nov. 7, 1860, several weeks before the South Carolina Ordinance of Secession was adopted.

Resistance to Search. On June 25, 1798, Congress passed an act authorizing all merchant vessels to defend themselves against any search, seizure, or restraint on the part of any vessel under French colors; and to subdue and capture as good prize any vessel attempting such search or seizure; and to retake any vessel seized by the French, with benefit of salvage.

Resolution for Independence. The resolution for independence offered in Congress on June 7, 1776, was taken up for consideration on July 2. The mover (Richard Henry Lee) had been called home on account of the illness of his wife, and was not present. John Adams, who had seconded it, was present, and made an unprepared, sudden, and impetuous speech in favor of the resolution. John Dickinson had prepared a speech not so much in opposition as vindictory of himself. It was elaborate, able, and complete as embodying arguments against independence. His colleague—James Wilson—could no longer agree with him. The authority of the conference of committees (see *Pennsylvania for Independence*) swayed his action, for it was the voice of the people. Others spoke, mostly in favor of the resolution, but no record of the names of the speakers or of the speeches was made. The resolution for independence was sustained by nine colonies. The South Carolina delegates voted unanimously against it; so, also, did a majority of those of Pennsylvania. Delaware was divided. Just before Congress adjourned a letter from Washington reached that body, conveying the news that forty-five ships had arrived at Sandy Hook, laden with troops, and more were expected in a day or two. The determination of the vote had, upon the request of Edward Rutledge, of South Carolina, been postponed until the next day. On the morning of the 2d there were fifty members in Congress. Caesar Rodney had arrived from Delaware, and, by the absence of some of the Pennsylvania delegates, the vote of that colony was secured. When, on that day, the vote on the resolution for independence was taken, twelve of the thirteen colonies recorded

the votes of their delegates for it. New York was ready to make the vote unanimous, but her delegates had to wait until the 9th for positive instructions. The great event towards which the thoughts of a continent had been for months turned had been consummated. "The greatest question," wrote John Adams, "which ever was debated in America was decided; and a greater, perhaps, never was nor ever will be decided among men. . . . The 2d day of July, 1776, will be the most memorable epoch in the history of America—to be celebrated by succeeding generations as the great anniversary festival, commemorated as the day of deliverance by solemn acts of devotion to God Almighty from one end of the continent to the other from this time forward forevermore." The 2d, and not the 4th, of July, it has been thought, should be the date of the great national anniversary. The resolution for independence was adopted on the 2d; the reasons, only, for the resolution were declared on the 4th. But that declaration asserted the principles upon which the nation was founded, and the 4th is, therefore, the real birthday of the nation.

Resolutions of '98. The famous "Kentucky Resolutions" and "Virginia Resolutions" of 1798 afforded ground for the doctrine of state supremacy down to the breaking-out of the Civil War in 1861. The organization of a provisional army to fight France, and the passage of the Alien and Sedition Laws of the summer of 1798, brought forward into prominence bold men, leaders in communities, who were ready to support secession and nullification schemes. Among these was John Taylor, of Caroline, a Virginia statesman, who boldly put forth his advanced views. Mr. Jefferson finally sympathized with him, and at a conference held at Monticello, towards the close of October, 1798, between the latter and George and Wilson C. Nicholas, they determined to engage Kentucky to join Virginia in an "energetic protestation against the constitutionality of those laws." Mr. Jefferson was urged to sketch resolutions accordingly, which W. C. Nicholas, then a resident of Kentucky, agreed to present to the Legislature. Having obtained the solemn assurance of the Nicholas brothers that it should not be known from whence the resolutions came, Jefferson drafted them. The first declared that the national Constitution is a compact between the states, as states, by which is created a general government for special purposes, each state reserving to itself the residuary mass of power and right, and "that, as in other cases of compact between parties having no common judge, each party has an equal right to judge for itself, as well of infractions as of the mode and measure of redress." Then followed five resolutions practically applying to three acts of Congress—one to punish counterfeiters of bills of the United States Bank, and one to the Alien and Sedition Laws. For various reasons assigned, these acts were pronounced "not law, but altogether void, and of no force." Another asserted the right of the states to judge of infractions and their remedy, not merely as matter of opinion, but official-

ly and constitutionally, as parties of the compact, and as the foundation of important legislation. The seventh resolution postponed "to a time of greater tranquillity" the "revisal and correction" of sundry other acts of Congress alleged to have been founded upon an unconstitutional interpretation of the right to impose taxes and excise, and to provide for the common defence. The eighth resolution directed the appointment of a committee of correspondence, to communicate the resolutions to the several states, and to inform them that the State of Kentucky, with all her esteem for her "co-states" and for the Union, was determined "to submit to undelegated, and, consequently, unlimited powers, in no man or body of men on earth; that in the case of an abuse of the delegated powers, the members of the general government being chosen by the people, a change by the people would be the constitutional remedy; but when powers are assumed which have not been delegated, a nullification of the act is the right remedy; and that every state has a natural right, in cases not within the compact, to nullify, of their own authority, all assumptions of power by others within their limits." The resolution authorized and instructed the Committee of Correspondence to call upon the "co-states," "to concur in declaring those acts void and of no force, and each to take measures of its own for providing that neither these acts, nor any other of the general government, not plainly and intentionally authorized by the Constitution, shall be exercised within their respective territories." The first resolution teaches the doctrine that the Constitution, instead of being a form of government, as it purports to be, is simply a compact or treaty; and, secondly, that the parties to it are not, as the Constitution itself expressly declares, "the people of the United States," but only the states as political corporations. The logical effect of this doctrine, practically, would be to destroy the Union, and relegate it to the barren desert of the Articles of Confederation, or anarchy under the name of government. These resolutions—the last two modified by Nicholas—passed the Kentucky Legislature (Nov. 14, 1798) with only two or three dissenting votes. These nullification doctrines were echoed by the Virginia Legislature (Dec. 24) in a series of resolutions drafted by Madison, and offered by John Taylor, of Caroline, who, a few months before, had suggested the idea of a separate confederacy, to be composed of Virginia and North Carolina. Madison's resolutions were more general in their terms, and allowed latitude in their interpretation. They were passed, after a warm debate, by a vote of one hundred to sixty-three in the House of Delegates, and fourteen to three in the Senate. They were sent to the other states, accompanied by an address, drawn, probably, by Madison, to which an answer was soon put forth, signed by fifty-eight of the minority. Neither the Senators nor Representatives in Congress from Kentucky ventured to lay the nullifying resolutions before their respective Houses; nor did the resolutions of Kentucky or Virginia find favor with the other legislatures. They served

as a basis of action by the Nullifiers of South Carolina (1832) and the Secessionists of 1860-61.

Resources and Payments of the National Government, from its origin, March 4, 1789, down to the close of the fiscal year (June 30) 1861, when the enormous expenses of the Civil War had begun, were as follows:

Customs revenue	\$1,575,152,579 92
Land, proceeds of sales of	175,817,961 00
Taxes and other receipts	96,305,322 56
Total ordinary revenue	1,846,275,863 48
Total ordinary expenditures	1,453,790,786 00
Total excess of revenue	392,485,077 48

By this statement it will be seen that by far the greater portion of all the expenses of the government during its existence from March 4, 1789, to June 30, 1861, including war expenses, purchase of territories, indemnity to Mexico, taxes, etc., were discharged by the customs revenue.

Responses to the President's Call for Troops (1861). The President's proclamation for troops, and the requisition of the Secretary of War, issued April 15, 1861, were received with universal favor and unbounded enthusiasm in the free-labor states, while in all the slave-labor states included in the call, excepting two, they were treated by the authorities with words of scorn and defiance. The exceptions were Delaware and Maryland. In the other states disloyal governors held the reins of power. "I have only to say," replied Governor Letcher, of Virginia, "that the militia of this state will not be furnished to the powers at Washington for any such use or purpose as they have in view. Your object is to subjugate the Southern States, and a requisition made upon me for such an object—in my judgment not within the province of the Constitution or the Act of 1795—will not be complied with. You have chosen to inaugurate civil war, and, having done so, we will meet it in a spirit as determined as the administration has exhibited towards the South." Governor Ellis, of North Carolina, answered: "Your despatch is received, and, if genuine—which its extraordinary character leads me to doubt—I have to say, in reply, that I regard the levy of troops made by the administration for the purpose of subjugating the states of the South as a violation of the Constitution and a usurpation of power. I can be no party to this wicked violation of the laws of my country and to this war upon the liberties of a free people. You can get no troops from North Carolina." Governor Magoffin, of Kentucky, replied: "Your despatch is received. I say, emphatically, that Kentucky will furnish no troops for the wicked purpose of subduing her sister Southern States." Governor Harris, of Tennessee, said: "Tennessee will not furnish a single man for coercion, but fifty thousand, if necessary, for the defence of our rights or those of our Southern brethren." Governor Reitor, of Arkansas, replied: "In answer to your requisition for troops from Arkansas to subjugate the Southern States, I have to say that none will be furnished. The demand is only adding insult to injury. The people of this commonwealth are freemen, not slaves, and will defend, to the last extremity, their honor,

their lives, and their property against Northern mendacity and usurpation." Governor Jackson, of Missouri, responded: "There can be, I apprehend, no doubt that these men are intended to make war upon the seceded states. Your requisition, in my judgment, is illegal, unconstitutional, and revolutionary in its objects, inhuman and diabolical, and cannot be complied with. Not one man will the State of Missouri furnish to carry on such an unholy crusade." There is such a coincidence of language and sentiment in all these answers, that it seems evident that they were inspired by the head of the "Confederacy" at Montgomery. Governor Hicks, of Maryland, hastened to assure the people that no troops would be sent from that state unless it might be to defend the national capital, and told them that they would, in a short time, "have the opportunity afforded them, in a special election for members of the Congress of the United States, to express their devotion to the Union or their desire to see it broken up." Governor Burton, of Delaware, made no response until the 26th, when he informed the President that he had no authority to comply with his request; at the same time he recommended the formation of volunteer companies, not for the preservation of the Union, but for the protection of the citizens and property of the state. This would give the governor the control of a large body of militia, to be used as he might think best.

Responses to Washington's Farewell Address. The respect and reverence of the great mass of the people for Washington was not diminished by the violent party zeal manifested against him. Nearly all the State Legislatures, when they met, expressed the confidence and affection of the people, and several of them ordered his Address to be placed at length on their journals. Nearly all, including Virginia, passed resolutions unanimously expressing their respect for the President's person, their high sense of his exalted services, and their regret at his approaching retirement from office.

Restraining Acts. Alarmed by the proceedings of the Continental Congress, late in 1774, and the movements in New England, the British ministry, early in 1775, took vigorous measures to assert its power in coercing the English-American colonies into submission. Lord North, the premier, introduced into Parliament a bill to restrain the trade and commerce of the New England provinces to Great Britain, Ireland, and the British West Indies, and to prohibit them from carrying on any fishery on the banks of Newfoundland and other places, under certain conditions and for a limited time. The bill was adopted by a large majority. Soon afterwards, on being assured that the rest of the colonies upheld the New-Englanders in their rebellious proceedings, a second bill was passed, similar to the first, for restraining all the other provinces, excepting three, in their trade and commerce. The three exempted colonies, regarding the exception as a bribe to induce them to oppose the measures of the other colonies, spurned the prof-

fered favor, and submitted to the restraints imposed upon their neighbors. The excepted colonies were New York, Delaware, and North Carolina. The ministers were disappointed in their calculations on the moderation of New York, for at that time its Assembly were preparing to assert the rights of the colony in the matter of taxation.

Resumption of Specie Payments (1879). On Jan. 7, 1875, Congress passed a bill fixing the time for the government and banks of the United States to resume specie payment at Jan. 1, 1879. The resumption took place on that day with great ease, the United States Treasury and the banks of the country generally receiving more gold on deposit than they paid out for circulation. With that resumption began a rapid improvement in the business affairs of the country. It marked the end of the commercial depression consequent upon the revulsion and panic of 1873. The prophecies of evil to the country made by unwise men utterly failed of fulfillment.

Resumption, PREPARING FOR. Late in July, 1876, Congress passed an act as an initial step towards the resumption of specie payments, authorizing the issue from the United States Mint of \$10,000,000 of silver coin, to take the place of the same amount of fractional paper-currency. The consequence was, that within a year nearly every vestige of the fractional paper-currency disappeared from circulation, and silver coin became exceedingly plentiful.

Retaliation and L'Insurgente. Lieutenant Bainbridge, in the *Retaliation*, was cruising off Guadeloupe, W. I., late in 1798, when he fell in with a French squadron, which he took to be British vessels. When he discovered his mistake it was too late to avoid trouble, and two French frigates (*Volontaire* and *L'Insurgente*) attacked and captured the *Retaliation*. The *Insurgente* was one of the swiftest vessels on the ocean. She immediately made chase after two American ships. Bainbridge was a prisoner on the *Volontaire*. "What are the armaments of the two vessels?" asked the French commander, as he and Bainbridge were watching the *Insurgente* gaining on the Americans. He quickly replied, "Twenty-eight 12's and twenty 9's." This was double the force, and startled the commander, who was senior captain of the *Insurgente*. He immediately signalled his vessel to give up the chase, and the Americans escaped. Bainbridge's deceptive reply cost him only a few curses. The *Retaliation* was the first vessel captured during the war.

Retreat from Long Island (1776). During the passing events of the battle on Long Island (which see), Washington did not sleep for forty-eight hours. When it was ended, Howe, instead of instantly attacking the American camp at Brooklyn, into which the fugitives had gathered, prepared for a regular siege. He might easily have captured the American army and its munitions of war on the morning of the 28th. The attempt was not made. Rain fell copiously. General Mifflin came with a thousand troops

for Washington from the north end of Manhattan Island, but even with these the Americans were too weak to cope with the British, and Washington determined to attempt a retreat. Boats were procured from various points, and in these, managed by General Glover's brigade of Massachusetts fishermen, the American army crossed the East River, in detachments, on the night of Aug. 29-30, shrouded in a dense fog. The movement was unsuspected by the British leaders on land and water until it was too late to pursue. A Tory woman living near the ferry sent her negro servant to inform the British of the retreat. He encountered a German sentinels, who could not understand a word he said, and would not let him pass. Before six o'clock (Aug. 30, 1776) nine thousand American soldiers, with their baggage and munitions of war, excepting some heavy artillery, had crossed the East River from Long Island to Manhattan, or New York, Island. When Howe perceived this, he "swore a big oath," took possession of the deserted camp, moved his army eastward, its advance being at Flushing, and prepared to seize the city of New York with the American troops in it.

Retrocession of Louisiana to France.

While the negotiations of the Treaty of Amiens, in 1802, were in progress, a rumor went abroad that Spain, by secret treaty, had retroceded, or would retrocede, to France all of Louisiana in her possession, and possibly Florida, and thus give to that now rising, ambitious, and aggressive power the entire control of the navigation of the Mississippi River. This rumor gave the government and people of the United States much uneasiness, for France might, by this possession, exercise more influence over the political affairs of the Republic than ever before. The American ministers in London, Paris, and Madrid were to endeavor to defeat the measure. It was too late. The act of cession was accompanied by a secret treaty, and led to the purchase of Louisiana from France soon afterwards. Jefferson at once perceived the necessity of such a purchase, because of the danger to be feared from the occupation by the French of the mouths of the Mississippi. "There is on the globe," he said, "one single spot, the possessor of which is our natural and habitual enemy. It is New Orleans—through which the produce of three eighths of our territory must pass to market; and by its fertility, it [the valley of the Mississippi] will, ere long, yield more than half of our whole produce, and contain more than half of our inhabitants. France, placing herself in that door, assumes to us the attitude of defiance."

Revenue Officers Extraordinary. In 1764 the increase of smuggling had become so prejudicial to the British revenue that the government made a regulation requiring the commanders of vessels stationed on the coasts of England, and even those ships destined for the English-American colonies, to perform the functions of revenue officers, and to conform themselves to the rules established for the protection of the customs. The oppressions practised under this law called forth loud complaints in all

the colonies. In the execution of it naval commanders seized and confiscated the cargoes prohibited and those that were not, indiscriminately. The law soon destroyed a lucrative and honest commerce between the English, Spanish, and French colonies. When the English colonies felt the disastrous effects of the law, they resolved not to purchase, in future, any English stuffs with which they had been accustomed to clothe themselves, and, as far as possible, to use only domestic manufactures. So faithfully was this resolution adhered to in Boston that the consumption of British merchandise was diminished, in the year 1764, more than \$50,000.

Revenue System. The all-important subject of a public revenue to replenish the empty treasury of the United States was acted upon by the First Congress, before the inauguration of Washington. On April 8, 1789, Mr. Madison offered a resolution for laying specific duties on imported rum and other spirituous liquors, wines, tea, coffee, sugar, molasses, and pepper, the amount being left blank; and imposing *ad valorem* duties on all other articles imported, and a tonnage duty on all vessels, with a discrimination in favor of all vessels owned wholly in the United States, and an additional discrimination between foreign vessels, favorable to those countries having commercial treaties with the United States. The debates on this question revealed much information concerning the industries of the Americans; and the tariff which grew out of it still lies at the bottom of our existing revenue system. At that time, however, the idea of levying duties for the protection of American industry was not put forth; it was simply for revenue. The question of the ability of the United States to coerce foreign nations by means of commercial restrictions, as in the case of non-importation agreements (which see), before the Revolution, was earnestly discussed at this time.

Revenue to the Crown in Virginia. In March, 1662, the royalist Legislature of Virginia, for the purpose of giving a liberal salary to the king's officers, established a perpetual revenue by a permanent impost on all exported tobacco, and so these officers were made independent of the Legislature of the colony for their pay. They depended on the colony neither for their appointment nor their salary, and the country was governed by obsequious creatures of the crown.

Revere, PAUL, a leading patriot in the war for independence, was born in Boston, Jan. 1, 1735; died there, May 10, 1818. He was descended from the Huguenots, and was educated in his father's trade of goldsmith. In the French and Indian War he was at Fort Edward, on the Upper Hudson, as a lieutenant of artillery (1756), and on his return he established himself as a goldsmith, and, without instruction, became a copper-plate engraver. He was one of four engravers in America when the Revolutionary War broke out. He had engraved, in 1766, a print emblematic of the repeal of the Stamp Act, and in 1767, another called "The Seventeen

Rescindere." (See *Rescindere*.) He published a print of the Boston Massacre, in 1770, and from that time he became one of the most active opponents of the acts of Parliament. Revere engraved the plates, made the press, and printed the bills of credit, or paper-money, of Massachusetts, issued in 1775; he also engraved the plates for the "Continental money." He had been sent by the Sons of Liberty, of Boston, to confer with their brethren in New York and Philadelphia. Early in 1775 the Provincial Congress sent him to Philadelphia to learn the art of making powder, and on his return he set up a mill. The President of the Congress (Joseph Warren) chose Revere as one of his trusted messengers to warn the people of Lexington and Concord of the expedition sent thither by Gage (April 18, 1775), and to tell Adams and Hancock of their danger. (See *Adams and Hancock*.) He was made a prisoner while on his way from Lexington towards Concord, but was soon released. He served in the military corps for the defence of his state, and after the war he cast church-bells and cannons; and he founded the copper-works at Canton, Mass., now carried on by the Revere Copper Company.

Revocation of British "Orders" and French "Decrees" sought. In March, 1810, information reached the President that the French Minister for Foreign Affairs, in a letter to Minister Armstrong, had said that if England would revoke her blockade against France, the latter would revoke her Berlin Decree (which see). Minister Pickney, in London, approached the British minister on the subject, and, to aid in the peaceful negotiations, Congress repealed the non-intercourse and non-importation laws on May 1, 1810. For these they substituted a law excluding both British and French armed vessels from the waters of the United States. The law provided that, in case either Great Britain or France should revoke or so modify their acts before the 3d of March, 1811, as not to violate the neutral commerce of the United States, and if the other nation should not, within three months thereafter, in like manner revoke or modify its edicts, the provisions of the non-intercourse and non-importation acts should, at the expiration of the three months, be revived against the nation so neglecting or refusing to comply. The French minister thereupon, on the 5th of August following, officially declared that the Berlin and Milan decrees had been revoked, and would be inoperative after Nov. 1, it being understood that, in consequence of that revocation, the English should revoke the Orders in Council. Having faith in these declarations, the President issued a proclamation on Nov. 2, announcing this revocation of the French decrees and declaring the discontinuance, on the part of the United States, of all commercial restrictions in relation to France. But the French were playing false, and England suspected it, for she had many reasons for doubting Gallic faith. So had the Americans, but still they were willing to trust France once again. They were deceived; the decrees were not revoked, and a later one, issued at Rambouillet, was only sus-

pending. The English refused to rescind on the faith of only a letter by the French minister; and this attempt on the part of Americans to secure peace and justice was futile.

Revocation of the Orders in Council. The British Orders in Council, issued in 1807 and 1810, to meet the effects of the French decrees (Berlin and Milan, which see), had remained in force, and bore heavily upon American commerce until after the declaration of war in 1812. Joel Barlow, who had been appointed American ambassador to France in 1811, had urged the French government to revoke the decrees as to the Americans. This was done (April 28, 1811), and a decree was issued directing that, in consideration of the resistance of the United States to the Orders in Council, the Berlin and Milan decrees were to be considered as not having existed, as to American vessels, since Nov. 1, 1810. Barlow forwarded this decree to Russell, American minister at the British court. It arrived there just in time to second the efforts of the British manufacturers, who were pressing the government for a revocation of the Orders in Council. A new ministry, lately seated, being in danger of a desertion of a portion of their supporters, yielded, and on June 23, 1812, they revoked the orders of 1807 and 1810, with a proviso, however, for their renewal in case the United States government, after due notice, should still persist in its non-importation and other hostile acts. Efforts were immediately made by both governments for a settlement of existing difficulties, but failed. The British minister (Lord Castlereagh) declined to make any stipulation, formal or informal, concerning impressments. The war finally proceeded on the matter of impressments alone.

Revolt in the City of Mexico (1520). Cortez departed from the city of Mexico to oppose Narvaez (which see), leaving one hundred and forty Spanish soldiers and the Tlascalcan allies, under Alvarado, to hold the city. The latter, fearing an attack from the Mexicans, determined to strike them with terror. While the Mexicans were dancing at a festival in honor of their gods, Alvarado and his soldiers fell upon them and a sharp battle ensued. Cortez returned, when his haughty deportment towards the royal captive and his people so irritated the Mexicans that they attacked the Spaniards in their quarters and in the street. The next morning the whole Spanish force marched out and were met by a multitude of Mexicans; the former were beaten back to their quarters (June, 1520), after a desperate battle. Again the Spaniards sallied out, and fought their way to the summit of a teocalli temple, where an engagement ensued which lasted three hours, and forty-six Spaniards were left dead on the spot. Cortez managed to set the temple on fire. The hostility of the Mexicans was now fiercer than ever, and when, at the bidding of Cortez, Montezuma attempted, by words, to appease them, they assailed him with arrows and other missiles, from which he was protected by the Spanish shields. At length he was hit, and died a

few days afterwards. Alarmed by the intensity of the revolt, the Spaniards fled from the city in the night, pursued by the enraged Mexicans, with whom they and their allies fought a desperate battle near the confines of Tlascala. The Spaniards there obtained a decisive victory. Unexpectedly receiving supplies of arms and men, Cortez marched back towards the city of Mexico and took possession (Dec. 31, 1520) of Tezcuco, the next largest city in the empire. There he prepared for a final conquest of Mexico.

Revolt of New Jersey Troops. On the 18th of January, 1781, a portion of the New Jersey line, stationed at Pompton, followed the example of the Pennsylvanians, at Morristown, in refusing to serve longer unless their reasonable demands on Congress were attended to. Washington, fearing the revolt, if so mildly dealt with as it had been by Wayne, would become fatally infectious and cause the army to melt away, took harsher measures to suppress it. He sent General Robert Howe, with five hundred men, to restore order at Pompton. They surrounded the camp and compelled the troops to parade without arms. Two of the ringleaders were tried, condemned, and immediately executed, when the remainder quietly submitted. These events had a salutary effect, for they aroused the Congress and the people to the necessity of more efficient measures for the support of the army, their only reliance in the struggle. Taxes were more cheerfully paid; sectional jealousies were quelled; a special agent (John Laurens) sent abroad to obtain loans was quite successful, and a national bank was established in Philadelphia and put in charge of Robert Morris, the Superintendent of the Treasury.

Revolt of the Pennsylvania Line (1781). As the year 1780 drew to a close there were warm disputes in the Pennsylvania regiments as to the terms on which the men had been enlisted. The officers maintained that at least a quarter part of the soldiers had enlisted for three years and the war. This seems to have been the fact; but the soldiers, distressed and disgusted for want of pay and clothing, and seeing the large bounties paid to those who re-enlisted, declared that the enlistment was for three years or the war. As the three years had now expired, they demanded their discharges. It was refused, and on Jan. 1, 1781, the whole line, thirteen hundred in number, broke out into open revolt. An officer attempting to restrain them was killed and several others were wounded. Under the leadership of a board of sergeants the men marched towards Princeton, with the avowed purpose of going to Philadelphia to demand of the Congress a fulfilment of their many promises. General Wayne was in command of these troops, and was much beloved by them. By threats and persuasions he tried to bring them back to duty until their real grievances should be redressed. They would not listen to him; and when he cocked his pistol, in a menacing manner, they presented their bayonets to his breast, saying, "We respect and love you; you have often led us into the field of battle; but we are

no longer under your command; we warn you to be on your guard; if you fire your pistol, or attempt to enforce your commands, we shall put you instantly to death." Wayne appealed to their patriotism; they pointed to the broken promises of the Congress. He reminded them of the strength their conduct would give to the enemy; they pointed to their tattered garments and emaciated forms. They avowed their willingness to support the cause of independence—for freedom was dear to their hearts—if adequate provision could be made for their comfort; and they boldly reiterated their determination to march to Philadelphia, at all hazards, to demand from Congress a redress of their grievances. Finding he could not move them, Wayne determined to accompany them to Philadelphia. At Princeton they presented the general with a written list of their demands. These demands appeared so reasonable that he had them laid before Congress. That body appointed a committee to confer with the insurgents. The result was a compliance with their just demands, and the disbanding of a large part of the Pennsylvania line, whose places were filled by new recruits in the spring.

Revolution in Boston (1688). Before the news of the revolution in England which placed William and Mary on the throne had arrived at Boston, a daring one was effected in New England. The colonists had borne the tyranny of Andros about three years. Their patience was now exhausted. A rumor was started that the governor's guards were about to massacre some of the leading people of Boston. The people flew to arms, and on the 18th of April, when the rumor had gone out of the town, the people flocked in with guns and other weapons to the assistance of their brethren. They did not wait for the governor's troops to move, but instantly seized Andros, such of his council as had been most active in oppressing them, with other prisoners to the number of about fifty, confined them, and reinstated the old magistrates. The rumor of the massacre found readier belief because of a military order which was given out on the reception of the declaration of the Prince of Orange in England. The order charged all officers and people to be in readiness to hinder the landing of the troops which the prince might send to New England. The people first imprisoned Captain George, of the *Rose* frigate, and some hours afterwards Sir Edmund Andros was taken at the fort on Fort Hill, around which 1500 people had assembled. The people took the castle on Castle Island the next day. The sails of the frigate were brought on shore. A Council of Safety was chosen, with Simon Bradstreet as president, and on May 2 the council recommended that an assembly composed of delegations from the several towns in the colony should meet on the 9th of the same month. Sixty-six persons met, and having confirmed the new government, another convention of representatives was called to meet in Boston on the 22d. On that day fifty-four towns were represented, when it was determined "to resume the government according to charter rights." The governor

(Bradstreet) and magistrates chosen in 1686 resumed the government (May 24, 1688) under the old charter, and on the 29th King William and Queen Mary were proclaimed in Boston with great ceremony. (See *English Revolution, The, and Andros, Sir Edmund.*)

Revolution in Maryland. In 1684 Lord Baltimore went to England, leaving the Province of Maryland under the nominal government of his infant son, administered by several deputies. He acquiesced in the result of the revolution in England in 1688 which placed William and Mary on the throne, but because of his tardiness in proclaiming them in his province a restless spirit named Coode, a man of low morals and blasphemous in speech, excited the people by the cry of "A Popish Plot!" He started a report that the local magistrates in Maryland and the Roman Catholics had leagued with the Indians for the destruction of the Protestants. The old feud burned intensely. The Protestants formed an armed association. Led by Coode, they marched to St. Mary, in May, took possession of the records, and assumed the functions of a provisional government in 1689. In August they met in convention and sent to the new sovereigns absurd charges against Lord Baltimore, requesting them to depose him by making Maryland a royal province, and taking it under the protection of the crown. The sovereigns complied with the request of the convention, and Coode was commanded to administer the government in the name of the king. He ruled with the spirit of a petty tyrant, and so disgusted the whole people that in 1692 he was displaced by Sir Lionel Copley. The new governor abolished religious toleration and established the order of the Church of England as the supreme religious establishment of the colony, to be supported by a tax on the whole colony. This was the first Church establishment in Maryland sustained by law and fed by general taxation. Lord Baltimore never recovered his proprietary rights. They were restored to a young scion of his house in 1715.

Revolution Organized in Washington (1860-61). The harmony of action in the seven states which first adopted ordinances of secession seemed marvellous. It was explained in a communication published in the *National Intelligencer*, written by a "distinguished citizen of the South, who formerly represented his state in the popular branch of Congress," and was then temporarily residing in Washington. He said a caucus of the senators of seven cotton-producing states (naming them) had been held on the preceding Saturday night, in that city, at which it was resolved, in effect, to assume to themselves political power at the South, and to control all political and military operations for the time; that they telegraphed directions to complete the seizures of forts, arsenals, custom-houses, and all other public property, and advised conventions then in session, or soon to assemble, to pass ordinances for immediate secession. They agreed that it would be proper for the representatives of "seceded states" to re-

main in Congress, in order to prevent the adoption of measures by the national government for its own security. They also advised, ordered, or directed the assembling of a convention at Montgomery, Ala., on Feb. 15. "This can," said the writer, "of course, only be done by the revolutionary conventions usurping the power of the people, and sending delegates over whom they will lose all control in the establishment of a provisional government, which is the plan of the dictators." This was actually done within thirty days afterwards. They resolved, he said, to use every means in their power to force the legislatures of Tennessee, Kentucky, Missouri, Arkansas, Texas, Virginia, and Maryland into the adoption of revolutionary measures. They had already possessed themselves of the telegraph, the press, and wide control of the postmasters in the South; and they relied upon a general defection of the Southern-born members of the army and navy. "The spectacle here presented," said the writer, "is startling to contemplate. Senators, intrusted with the representative sovereignty of states, and sworn to support the Constitution of the United States, while yet acting as the privy-councillors of the President, and anxiously looked to by their constituents to effect some practical plan of adjustment, deliberately conceive a conspiracy for the overthrow of the government through the military organizations, the dangerous secret order of the Knights of the Golden Circle [which see], committees of safety, Southern leagues, and other agencies at their command. They have instituted as thorough a military and civil despotism as ever cursed a maddened country." The senators engaged in this revolutionary scheme, it was asserted, were Benjamin Fitzpatrick and Clement C. Clay, Jr., of Alabama; R. W. Johnson and William K. Sebastian, of Arkansas; Robert Toombs and Alfred Iverson, of Georgia; Judah P. Benjamin and John Slidell, of Louisiana; Jefferson Davis and Albert G. Brown, of Mississippi; John Hemphill and Louis T. Wigfall, of Texas, and David L. Yulee and Stephen R. Mallory, of Florida. On the morning after the caucus a telegraphic report, confirmatory of the above communication, was sent to the *Charleston Mercury*, and published in that journal Jan. 7, 1861. A committee consisting of Davis, Slidell, and Mallory were appointed to carry out the scheme approved by the caucus. A part of the plan was "to make Senator Hunter, of Virginia, provisional president of the projected Confederacy, and Jefferson Davis commander-in-chief of the army of defence."

Reynolds, JOHN FULTON, was born at Lancaster, Penn., in 1820; killed at Gettysburg, July 1, 1863. He graduated at West Point in 1841; served in the war against Mexico, and against the Indians in Oregon in 1856. In May, 1861, he was lieutenant-colonel of volunteers, and was made brigadier-general in August. He was active in western Virginia during the summer and autumn, and in the Peninsular campaign of 1862. Made prisoner at Glendale (which see), he was soon released, and was in command of the First Army Corps in the battle of Fredericksburg, hav-

ing been made major-general of volunteers in November, 1862. With 8000 men, comprising the right wing of Meade's army, he brought on the battle of Gettysburg and was slain.

Reynolds, JOSEPH JONES, was born in Kentucky, and graduated at West Point in 1843, where he was assistant professor from 1846 to 1855. He entered the service in the Civil War as colonel of Indiana volunteers, and was made a brigadier-general in May, 1861. He was at first active in western Virginia, and then in the Army of the Cumberland, 1862-63. He was Rosecrans's chief-of-staff in the battle of Chickamanga, and in the summer of 1864 commanded the Nineteenth Corps, and organized a force for the capture of forts Morgan and Gaines, near Mobile. Late in 1864 he was placed in command of the Department of Arkansas, where he remained until April, 1866. In March, 1867, he was brevetted major-general in the United States army, and in December, 1870, was transferred to the Third Cavalry.

Rhett, ROBERT BARNWELL, was born at Beaufort, S. C., Dec. 24, 1800. He was a son of James and Mariana Smith. He adopted the name of Rhett in 1837. Receiving a liberal education, he chose the law as a profession. In 1826 he was a member of the South Carolina Legislature, and was attorney-general of the state in 1832, acting at that time with the most ultra wing of the Nullification or State Supremacy party. From 1838 to 1849 he was a member of Congress, and United States Senator in 1850-51. It is said that he was the first man who advocated on the floor of Congress the dissolution of the Union. Rhett took a leading part in the secession movements in 1860-61, and was chairman of the committee in the convention at Montgomery by whom the constitution of "The Confederate States of America" was reported. He owned the *Charleston Mercury*, of which his son was the editor.

Rhett's Prophecy. Robert Barnwell Rhett, who has been called the "Father of South Carolina Secession," was a most vehement speaker in favor of disunion in 1860. His son was the editor of the organ of the disunionists—the *Charleston Mercury*. He led the radical politicians of his state. In a speech in Institute Hall, Charleston (Nov. 12, 1860), he declared that the Union was already dissolved, and that the sovereign State of South Carolina would thereafter enjoy peace and prosperity. Alluding to the people of the North, he said: "Swollen with insolence and steeped in ignorance, selfishness, and fanaticism, they will never understand their dependence on the South until the Union is dissolved and they are left, naked, to their own resources. Then, and not till then, will they realize what a blessing the Almighty conferred upon them when he placed them in union with the South; and they will curse, in the bitterness of penitence and suffering, the dark day on which they compelled us to dissolve it with them. Upon a dissolution of the Union, their whole system of commerce and manufactures will be paralyzed or overthrown; their

banks will suspend specie payments; their real estate and stocks will fall in price, and confusion and distress will pervade the North. Bread processions will walk the streets of the great cities; mobs will break into their palaces, and society will then be resolved into its original chaos." He said there would be great difficulty in limiting the Southern Confederacy, so eager would many of the free-labor states be to join it. Such was the vision and the prophecy of a leading statesman of South Carolina, on whom the people leaned for wisdom.

Rhode Island an Independent Republic.

On May 4, 1776, the Legislature of Rhode Island passed an act releasing the inhabitants of that colony from allegiance to Great Britain. It was carried in the Upper House by unanimous vote, and in the House of Deputies with only six dissenting voices out of sixty. This act was tantamount to a declaration of independence and the establishment of a self-constituted republic.

Rhode Island, COLONY OF, one of the original thirteen states of the Union, is supposed to have been the theatre of the attempt to plant a settlement in America by the Northmen at the beginning of the eleventh century. (See *Northmen in America*.) It is believed to be the "Vineland" mentioned by them. It is supposed that Verazani entered Narraganset Bay, and had an interview with the natives there in 1524. Block, the Dutch navigator, explored it in 1614 (see *New York, Colony of*), and the Dutch traders afterwards, seeing the marshy estuaries red with cranberries, called it Roode Eylandt—"red island," corrupted to Rhode Island. The Dutch carried on a profitable fur-trade with the Indians there, and even as far east as Buzzard's Bay, and they claimed a monopoly of the traffic to the latter point. The Pilgrims at Plymouth became annoyed by the New-Netherlanders when they claimed jurisdiction as far east as Narraganset Bay, and westward from a line of longitude from that bay to Canada. (See *Dutch, The, at New Plymouth*.) That claim was made at about the time when Roger Williams, a Welsh Puritan minister, who was educated in England and was pastor of a church at Salem, in New England, was banished from the colony of Massachusetts, fled to the head of Narraganset Bay, and there, with a few followers, planted the seed of the commonwealth of Rhode Island in 1636. (See *Williams, Roger*.) The spot where Williams began a settlement he called Providence, in acknowledgment of the goodness of God towards him. The government he there established was a pure democracy, and in accordance with his tolerant views of the rights of conscience. Every settler then and afterwards was required to sign an agreement to give active or passive obedience to all ordinances that should be made by a majority of the inhabitants—heads of families—for the public good. For some time the government was administered by means of town-meetings. In 1638 William Coddington and others, driven from Massachusetts by persecution, bought of the Indians the island of Aquidnay or Aquitneck (Rhode Island), and made settlements

on the site of Newport and Portsmouth. A third settlement was formed at Warwick, on the mainland, in 1643, by a party of whom John Greene and Samuel Gorton were leaders. The same year Williams went to England, and in 1644 brought back a charter which united the settlements at Providence and on Rhode Island under one government, called the Rhode Island and Providence Plantations. Then the commonwealth of Rhode Island was established, though the new

England Confederacy (1643-1686), but it always bore a share of the burden of defending the New England provinces. (See *New England Confederacy*.) Its history is identified with that of New England in general from the commencement of King William's War, for that colony took an active part in the struggle between Great Britain and France for empire in America, furnishing troops and seamen. The colony had fifty privateer vessels at sea in 1756, manned by

1500 seamen, which cruised along the American shores and among the West India Islands. The people of Rhode Island were conspicuous for their patriotism in the stirring events preliminary to the breaking-out of the old war for independence, and were very active during that war. The first commander-in-chief of the Continental Navy was a native of Rhode Island (Esek Hopkins), and the first naval squadron sent against the enemy at the beginning of the Revolution sailed from Providence. Rhode Island assumed the functions of an independent state under the charter given by Charles II.

Rhode Island, FIRST GENERAL ASSEMBLY OF, consisting of the collective freemen of the several plantations of the colony, met at Portsmouth May 19, 1646, established a code of laws,

RESIDENCE OF GOVERNOR CODDINGTON.

government did not go into operation until 1647, when the first General Assembly, composed of the collective freemen of the several plantations, met at Portsmouth (May 19) and established a code of laws for carrying on civil government. The legislative power was vested in a court of commissioners consisting of six persons chosen by each of the four towns—Providence, Newport, Portsmouth, and Warwick. The charter was confirmed by Cromwell (1655), and a new one was obtained from Charles II. (1663), under which the commonwealth of Rhode Island was governed one hundred and eighty years. In the war with King Philip (1676) the inhabitants of Rhode Island suffered fearfully. Towns and farm-houses were burned and the people murdered. Providence was laid in ashes. The decisive battle that ended the war was fought on Rhode Island soil. (See *King Philip's War*.) When Sir Edmund Andros, made governor of New England (see *Andros, Sir Edmund*), was instructed to take away the colonial charters (1687), he seized that of Rhode Island, but it was returned on the accession of William and Mary (1689), and the people redopted the seal—an anchor for a device and “Hope” for a motto. Rhode Island was excluded from the New

and erected an institution of civil government. The legislative power was vested in a court of commissioners consisting of six persons chosen by each of the four towns of Providence, Portsmouth, Newport, and Warwick. The acts were to be in force unless repealed by a vote of a majority of the freemen of the colony, to be collected at their several town-meetings appointed for the purpose. The executive power was vested in a president and four assistants, chosen from the freemen by their several towns, and constituting the Supreme Court for the administration of justice. Every township forming within itself a corporation, elected a council of six for the management of its peculiar affairs, and the Town Court had the trial of small cases subject to an appeal to the court of the president and associates. (See *Rhode Island, Colony of*.)

Rhode Island, INDEPENDENCE PROCLAIMED IN. The Declaration of Independence was announced successively at Newport, East Greenwich, and Providence. At the latter place it was read to the assembled people from the balcony of a tavern, and was greeted with loud huzzas for “free trade with all the world, American manufactures, and the diffusion of liberty o’er and o’er the globe!”

Rhode Island Loyalists Suppressed. The exposed condition of Rhode Island and the presence of a British squadron in Narraganset Bay encouraged the active loyalists of that province and made the timid passive, and the authorities there were constrained to take vigorous measures to suppress the Tories. General Charles Lee was sent to Newport to confer with the Legislature about casting up fortifications there. He called before him the chief persons of the disaffected inhabitants, and compelled them to take "a tremendous oath" to support the authority of Congress. Soon afterwards the Assembly passed an act (Nov. 6, 1775) subjecting to death and confiscation of property all who should hold communication with or assist the British ships. A stated supply, however, had to be allowed these vessels to insure Newport from destruction.

Rhode Island Plantations Founded. In 1638 John Clark and others, of Boston, went to Providence in search of an asylum where they might find liberty of conscience. By the advice of Roger Williams they purchased the island on the east side of Narraganset Bay of the Indians, and soon afterwards the Indians agreed to move on receiving ten coats and twenty hoes. The adventurers (eighteen in number) incorporated themselves into a body politic (March 7), and chose William Coddington to be their chief magistrate. (See *Rhode Island, Colony of*.)

Rhode Island Slaves in the Army. Early in 1778 there was an urgent call for drafts from the militia of each state. General Varnum, of Rhode Island, proposed the emancipation of the able-bodied slaves there on condition of their enlisting in the army for the war. Washington approved the scheme, and it was adopted. Every able-bodied slave in Rhode Island received by law liberty to enlist. On passing muster he became free, and was entitled to all the wages and encouragements given by Congress to any soldier. The state made some compensation to their masters.

Rhode Island, STATE OF. When the various colonies were forming new state constitutions (1776-79), Rhode Island went forward in its independent course under its old charter from Charles II.; and it was the last of the thirteen states to ratify the national Constitution, its assent not being given until May 29, 1790, or more than a year after the national government went into operation. Under the charter of Charles II. the lower house of the Legislature consisted of six deputies from Newport, four each from Providence, Portsmouth, and Warwick, and two from each of the other towns. The right of suffrage was restricted to owners of a freehold worth \$134, or renting for \$7 a year, and to their eldest sons. These restrictions, as they became more and more obnoxious, finally produced open discontent. The inequality of representation was the chief cause of complaint. It appeared that in 1840, when Newport had only 8333 inhabitants, it was entitled to six representatives; while Providence, then containing 23,171 inhabitants, had only

four representatives. Attempts to obtain reform by the action of the Legislature having failed, "suffrage associations" were formed in various parts of the state late in 1840 and early in 1841. They assembled in mass convention at Providence July 5, 1841, and authorized their state committee to call a convention to frame a constitution. That convention assembled at Providence Oct. 4, and framed a constitution,

STATE SEAL OF RHODE ISLAND.

which was submitted to the people Dec. 27, 28, and 29, when it was claimed that a vote equal to a majority of the adult male citizens of the state was given for its adoption. It was also claimed that a majority of those entitled to vote under the charter had voted in favor of the constitution. Under this constitution state officers were chosen April 18, 1842, with Thomas W. Dorr as governor. The new government attempted to organize at Providence on May 3. They were resisted by what was called the legal state government, chosen under the charter, at the head of which was Governor Samuel W. King. On the 18th a portion of the "Suffrage party" assembled under arms at Providence and attempted to seize the arsenal, but retired on the approach of Governor King with a military force. On June 25 they again assembled, several hundred strong, at Chepocket, ten miles from Providence, but they again dispersed on the approach of state troops. Governor Dorr was arrested, tried for high-treason, convicted, and sentenced to imprisonment for life, but was released in 1847, under a general act of amnesty. (See *Dorr, Thomas W.*) Meanwhile the Legislature (Feb. 6, 1841) called a convention to frame a new constitution. In February, 1842, the convention agreed upon a constitution, which was submitted to the people in March and rejected. Another constitution was framed by another convention, which was ratified by the people almost unanimously, and went into effect in May, 1843. In 1861 a controversy between Rhode Island and Massachusetts about boundary, which began in colonial times, was settled by mutual concessions, the former ceding to the latter that portion of the township of Tiverton containing the village of Fall River in exchange for the town of Pawtucket and a part of Seekonk, now known as East Providence. Rhode Island was among the earliest of the states to respond to the President's call for troops (which see), and during the Civil

War that little state, with a population of only 175,000, furnished to the national army 23,711 soldiers.

Rhode Island, THE BRITISH TAKE POSSESSION OF. On Dec. 26, 1776, the squadron of Sir Peter Parker, bearing between eight and ten thousand men, British and Hessians, commanded by General Clinton and Earl Percy, entered Narraganset Bay. The troops landed and took possession of the island of Rhode Island. Two American frigates and some privateers, in the harbor of Newport, fled up the bay to Providence, whence they escaped to sea, eluding the vigilance of the blockading squadron. The British soldiers were billeted on the inhabitants, and a system of general plunder of the people was organized. This was an important acquisition for the British.

Ribault, JEAN, was born at Dieppe, France, and died in Florida in 1565. He first appears in history as commander of Coligni's expedition to America in 1562. Returning for supplies, he was detained by civil war until the spring of 1565, when Coligni sent him with five ships to Florida, where he succeeded Laudonnière as commander-in-chief. He had just arrived, when five Spanish vessels appeared, under Don Pedro Menendez de Aviles, whose name and object were demanded. "I am Menendez," he said, and declared he was sent to destroy all Protestants he could find. Ribault had been advised of the expedition of Menendez before his departure from France. Just as he was departing from Dieppe he was handed a letter from Coligni, in which the admiral had written a postscript, saying, "While closing this letter I have received certain advice that Don Pedro Menendez is about to depart from Spain to the coast of Florida. You will take care not to suffer him to encroach upon us, any more than he would that we should encroach upon him." The cables of the French fleet were instantly cut, and they went to sea, followed by the Spanish squadron, which, failing to overtake the fugitives, returned to the shore farther south. Ribault returned to the St. John, when, contrary to the advice of Laudonnière, he determined to try to drive the Spaniards away from the coast. When he reached the open sea he was struck by a fierce tempest that wrecked his vessels not far from Cape Canaveral, on the central coast of Florida. With his 150 men, Ribault started by land for Fort Carolina (built on the St. John by the Frenchmen), ignorant of the fact that its garrison had been destroyed. Ribault divided his force of full 500 men, about 200 of them taking the advance in the march, the remainder, with Ribault, following soon afterwards. The latter were betrayed by a sailor, and fell into the hands of Menendez, who put them all to death excepting a dozen who professed to be Roman Catholics. (See *Huguenots in America*.)

Ribault's Followers, MASSACRE OF. Ribault (which see) was wrecked on the coast of Florida, intelligence of which event was carried by Indians to Menendez. The latter sought the

Frenchmen with fifty soldiers. Ribault had divided his force. Menendez found one party, told them who he was, and that Fort Carolina, which they were seeking, was destroyed, with the inmates. They pleaded for mercy. He asked, "Are you Catholics or Lutherans?" They answered, "We are all of the reformed religion." He told them he was ordered to exterminate all of that faith. They offered him fifty thousand ducats if he would spare their lives. "Give up your arms and place yourselves under my mercy," he said. A small stream divided the Frenchmen from the Spaniards. Menendez ordered the former to be brought over in companies of ten. Out of sight of their companions left behind, they were bound with their hands behind them. When all were gathered in this plight they were marched to a spot a short distance off, when they were again asked, "Are you Catholics or Lutherans?" A dozen who professed to be Catholics, and four others who were mechanics, useful to the Spaniards, were led aside. The remainder, helpless, were butchered without mercy. Very soon after this treacherous massacre Ribault, with the rest of his followers, reached the spot where their companions had been betrayed a few hours before. Menendez hurried back, and by the same treacherous method disarmed Ribault and his friends. Ribault was shown the pile of unburied corpses of his men. A ransom of one hundred thousand ducats was offered for the lives of Ribault and his friends. As before, they were betrayed, and Ribault and all but six or eight of his companions were murdered. "They were put to the sword," Menendez wrote to his king, "judging this to be expedient for the service of God our Lord and of your majesty."

Rice Introduced into Carolina. In 1695 a brigantine from Madagascar came to anchor off Sullivan's Island, in Charleston harbor. The governor went on board the ship by invitation of the captain, and received from the latter a bag of rice-seed, with information of the methods of its cultivation in Eastern countries, and of its suitability for food. The governor divided the grain among his friends, who made experiments with it in different soils. From this small beginning arose the cultivation of this staple of South Carolina and Georgia.

Richardson, ISRAEL B., was born at Burlington, Vt., in 1819; died at Sharpsburg, Md., Nov. 3, 1862. He graduated at West Point in 1841; served in the Seminole War and in the war against Mexico; and became colonel of Michigan volunteers when the Civil War broke out. He took a prominent part in the battle at Blackburn's Ford (which see) and Bull's Run, at both of which he commanded a brigade. He was made a brigadier-general, and in the Peninsular campaign he commanded a division in Sumner's corps. On July 4, 1862, he was made major-general. He was in the battle of South Mountain (which see), and in the battle of Antietam (which see) he received a wound, of which he died.

Richmond (Ky.), BATTLE AT. General E. Kirby Smith led the van in Bragg's invasion of Kentucky (which see). He entered the state from East Tennessee, and was making his way rapidly towards the "Blue Grass" region, when he was met by a force organized by General Lew. Wallace, but then commanded by General M. D. Manson. It was part of a force under the direction of General William Nelson. Manson's troops were mostly raw. A collision occurred when approaching Richmond and not far from Rogersville (Aug. 30, 1862). A severe battle was fought for three hours, when Manson was driven back. At this juncture Nelson arrived and took command. Half an hour later his troops were utterly routed and scattered in all directions. Nelson was wounded. Manson resumed command, but the day was lost. Smith's cavalry had gained the rear of the Nationals, and stood in the way of their wild flight. Manson and his men were made prisoners. The estimated loss was about equal, that of the Nationals having been about five thousand killed, wounded, and prisoners.

Richmond, BURNING OF (1865). The night when the Confederate government fled from Richmond was a fearful one for the inhabitants of that city. All day after the receipt of Lee's despatch—"My lines are broken in three places; Richmond must be evacuated to-night"—the people were kept in the most painful suspense by the reticence of the government, then making preparations to fly for personal safety. That body employed every vehicle for this use, and the people who prepared to leave the city found it difficult to get any conveyance. For these as much as \$100 in gold was given for service from a dwelling to the railway-station. It was revealed to the people early in the evening that the Confederate Congress had ordered all the cotton, tobacco, and other property which the owners could not carry away, and which was stored in four great warehouses, to be burned to prevent it falling into the hands of the Nationals. There was a fresh breeze from the south, and the burning of these warehouses would imperil the whole city. General Ewell, in command there, vainly remonstrated against the execution of the order. A committee of the Common Council went to Jefferson Davis before he left to remonstrate against it, to which he replied that their statement that the burning of the warehouses would endanger the city was "a cowardly pretext on the part of the citizens, trumped up to endeavor to save their property for the Yankees." A similar answer was given at the War Department. The humane Ewell was compelled to obey, for the order from the War Department was imperative. The City Council took the precaution, for the public safety, to order the destruction of all liquors that might be accessible to lawless men. This was done, and by midnight hundreds of barrels of spirituous liquors were flowing in the gutters, where stragglers from the retreating army and rough citizens gathered it in vessels, and so produced the calamity the authorities endeavored to avert. The torch was ap-

plied, and at daybreak the warehouses were in flames. The city was already on fire in several places. The intoxicated soldiers, joined with many of the dangerous class of both sexes, formed a marauding mob of fearful proportions, who broke open and pillaged stores and committed excesses of every kind. From midnight until dawn the city was a pandemonium. The roaring mob released the prisoners from the jail and burned it. They set fire to the arsenal, and tried to destroy the Tredegar Iron-works. Conflagrations spread rapidly, for the fire department was powerless, and by the middle of the forenoon (April 3) a greater portion of the principal business part of Richmond was a blazing furnace. Between midnight and dawn the Confederate troops made their way across the bridges to the south side of the James. At three o'clock the magazine near the almshouse was fired and blown up with a concussion that shook the city to its foundations. It was followed by the explosion of the Confederate "ram" *Virginia*, below the city. When, at seven o'clock in the morning, the troops were all across the river, the bridges were burned behind them. A number of other vessels in the river were destroyed. The bursting of shells in the arsenal when the fire reached them added to the horrors of the scene. At noon about seven hundred buildings in the business part of the city, including a Presbyterian church, were in ruins. While Richmond was in flames National troops under Weitzel entered the city, and, by great exertions, subdued the fire and saved Richmond from utter destruction. Many million dollars' worth of property had been annihilated. The city was surrendered by the civil authorities. (See *Richmond, Surrender of*.)

Richmond, FIRST SKIRMISHES BEFORE (1862). The first collisions between the two great armies on the borders of the Chickahominy River occurred on May 23 and 24, 1862—one near New Bridge, not far from Cool Arbor, between Michigan cavalry and a Louisiana regiment, when thirty-seven of the latter were captured. The other was at and near Mechanicsville, seven or eight miles from Richmond, where a part of McClellan's right wing was advancing towards the Chickahominy. There was a sharp skirmish at Ellison's Mill (May 23), a mile from Mechanicsville. To this place the Confederates fell back, and the next morning were driven across the Chickahominy. On the same morning General McClellan issued a stirring order for an immediate advance on Richmond; but the over-cautious commander hesitated to move until the golden opportunity had passed. President Lincoln telegraphed to the general, "I think the time is near when you must either attack Richmond or give up the job and come to the defence of Washington."

Richmond, GRANT'S AND LEE'S RACE FOR. The National and Confederate armies had three times run a race for Washington. After the battle at Spottsylvania Court-house, they entered upon a race for Richmond, then the Confederate capital. Grant determined to transfer

his army to the south side of the James River, cut off the chief sources of supply for the Confederate army from the south, and attempt the capture of Richmond from that direction. He disencumbered his army of about twenty thousand sick and wounded, who were sent to the hospitals at Washington and elsewhere, and

march southward parallel with Hancock. Warren followed Hancock, and Ewell followed Longstreet's troops. On May 21 the race was fairly begun, the Confederates having the more direct or shorter route. Lee outstripped his antagonist, and when the Nationals approached the South Anna River the Confederates were already

FORTIFICATIONS AROUND RICHMOND.

with twenty-five thousand veteran recruits, amply supplied, and thirty thousand volunteers for one hundred days joining his army, he began another flank movement on the night of May 20-21, 1864, Hancock's corps leading. Lee had kept a vigilant watch of the movements of the Nationals, and sent Longstreet's corps to

strongly posted there on the south side of the river, where Lee had evidently determined to make a stand. Grant proceeded to attempt to dislodge him. In attempts to force passages across the stream, very sharp engagements ensued. Having partly crossed the North Anna, the Army of the Potomac was in great peril.

Its two strong wings were on one side of the stream, and its weak centre on the other. Perceiving this peril, Grant secretly recrossed the river with his troops, and resumed his march on Richmond by a flank movement far to the eastward of the Confederate army. The flanking column was led by Sheridan, with two divisions of cavalry. On the 28th the whole army was south of the Pamunkey, and in communication with its new base at the White House (which see). This movement compelled Lee to abandon his strong position at the North Anna, but, having a shorter route, he was in another good position before the Nationals crossed the Pamunkey. He was at a point where he could cover the railways and highways leading to Richmond. The Nationals were now within fifteen miles of Richmond. Their only direct pathway to that capital was across the Chickahominy. There was much skirmishing, and Grant was satisfied that he would be compelled to force the passage of the Chickahominy on Lee's flank, and he prepared for that movement by sending Sheridan to seize a point near Cool Arbor, where roads leading into Richmond diverged. After a fight with Fitzhugh Lee's cavalry, it was secured, and on the same night (May 30) Wright's corps pressed forward to the same point. A large body of troops, under General W. F. Smith, called from the Army of the James, were approaching Cool Arbor at the same time. These took position on Wright's right wing. There a terrible battle occurred (June 1, 1864), in which both armies suffered immense loss. (See *Cool Arbor, Battle of*.) It was now perceived that the fortifications around Richmond were too formidable to warrant a direct attack upon them with a hope of success, so Grant proceeded to throw his army across to the south side of the James River, and to operate against the Confederate capital on the right of that stream. It was near the middle of June before the whole National force had crossed the Chickahominy and moved to the James by way of Charles City Court-house. There they crossed the river in boats and over pontoon-bridges; and on June 16th, when the entire army was on the south side, General Grant made his headquarters at City Point, at the junction of the Appomattox and the James. A portion of the Army of the James, under General Butler, had made an unsuccessful attempt to capture Petersburg, where the Confederates had constructed strong works. Before them the Army of the Potomac appeared on the evening of June 16th, and in that vicinity the two armies struggled for the mastery until April the next year, or about ten months.

Richmond, SURRENDER OF. General Godfrey Weitzel had been left, with a portion of the Army of the James, on the north side of that river, to menace Richmond, and he kept up a continual show of great numbers, which had deceived Longstreet, standing in defence of the Confederate capital. At past midnight (April 3, 1865) a great light in Richmond, the sound of explosions, and other events, revealed to Weitzel the fact that the Confederates were evacuating the city. At daylight he put Draper's ne-

gro brigade in motion towards Richmond. The place of every terra-torpedo in front of the Confederate works was marked by a small flag, for the safety of their own men, and in their hasty departure they forgot to remove them. Cannons on the deserted works were left unharmed. Early in the morning the whole of Weitzel's force were in the suburbs of the town. A demand was made for its surrender, and at seven o'clock Joseph Mayo, the mayor, handed the keys of the public buildings to the messenger of the summons. Weitzel and his staff rode in at eight o'clock, at the head of Ripley's brigade of negro troops, when Lieutenant J. Livingston Deppeyter, of Weitzel's staff, ascended to the roof of the Virginia State-house with a national flag, and, with the assistance of Captain Langdon, Weitzel's chief of artillery, unfurled it over that building, and in its Senate-chamber the office of headquarters was established. Weitzel occupied the sumptuously furnished dwelling of Jefferson Davis, and General Shepley was appointed military governor. The troops were set at work to extinguish the flames.

Richmond Theatre Burned. On the night of Dec. 6, 1811, the theatre in Richmond, Va., was crowded by an audience of about six hundred persons. When the curtain rose on the second part of a pantomime, the orchestra was in full chorns, and a performer had come before the foot-lights, sparks were seen falling on the back part of the stage. A cry of *Fire!* was instantly raised, and the whole audience was seized with panic. All fled from their seats and crowded towards the doors. Cries and shrieks filled the house. Many persons were trodden under foot; the stairways were blocked; and several persons were thrown back from the windows whence they had attempted to escape. Yet many did leap from the windows of the first story and were saved, and some from the second story. Within ten minutes after the discovery of the fire the building was all in flames. Nearly seventy persons perished in the fire, and many afterwards died in consequence of injuries received. The *élite* of Richmond society were in the building, and many of them perished. Among the victims were George W. Smith, lately entered upon his duties as Governor of Virginia, and Abraham B. Venable, President of the Bank of Virginia. By order of the City Council of Richmond, the remains of those who perished in the flames were gathered, and on Sunday, Dec. 30, they were interred in the centre of the spot where the "pit" stood. 'On the site of the theatre the Episcopalians built a church edifice, called the Monumental Church, because directly in front of it stands a modest monument inscribed with the names of those who perished in the fire.

Richmond, WASHINGTON'S STATUE AT. The Legislature of Virginia employed Houdou (which see) to make a statue of Washington. Charles Wilson Peale was employed to paint a full-length portrait of the patriot, life-size, and exact measurements of his person were made. The latter were sent to the sculptor; but he preferred to see

the original, and came to America. He spent some time at Mount Vernon, and after making a plaster cast from Washington's face, he modelled the remainder of the head and bust from life, and returned to Paris. Gouverneur Morris, in Paris in 1789, stood for the figure of Washington, and Houdon executed a fine statue in marble, which still adorns the rotunda of the Capitol at Richmond. The original model of the bust is at Mount Vernon, on the Potomac.

Rich Mountain, BATTLE OF. The insurgents attempted to permanently occupy the country south of the Baltimore and Ohio Railway in Virginia. They were placed under the command of R. S. Garnett, a meritorious soldier, who was in the war with Mexico, and was brevetted for gallantry at Buena Vista (which see). He made his headquarters at Beverly, in Randolph County, and prepared to prevent the National troops from pushing through the mountain-gaps into the Shenandoah valley. The roads through these gaps were fortified. At the same time ex-Governor H. A. Wise, with the commission of a brigadier, was organizing a brigade in the Great Kanawha valley, beyond the Greenbrier Mountains, to hold in subjection the loyal inhabitants in that fertile region. He was ordered to cross the intervening mountains, and co-operate with Garnett. General McClellan took command of his troops in Western Virginia, at Grafton, towards the close of May (1861), and the entire force of Ohio, Indiana, and Virginia troops under his control numbered full 20,000 men. With these he advanced against the insurgents. He sent General J. D. Cox with a detachment to keep Wise in check, while with his main body, about 10,000 strong, he moved to attack Garnett at Laurel Hill, near Beverly. At the same time a detachment 4000 strong, under General Morris, moved towards Beverly by way of Philippi, while another body, led by General Hill, was sent to West Union, to prevent the escape of the insurgents by that way over the Alleghany Mountains, to join Johnston at Winchester. Garnett was then strongly entrenched at Laurel Hill, with about 8000 Virginians, Georgians, Tennesseans, and Carolinians. To this camp Morris nearly penetrated, but not to attack it—only to make feints to divert Garnett while McClellan should gain his rear. There was almost daily heavy skirmishing, chiefly by Colonels Dumont and Milroy, on the part of the Nationals. So industrious and bold had been the scouts, that when McClellan appeared they gave him full information of the region and the insurgents. During a few days, so daring had been the conduct of the Nationals that they were regarded almost with awe by the insurgents. They called the Ninth Indiana—whose exploits were particularly notable—"Swamp Devils." While on the road towards Beverly, McClellan ascertained that about 1500 insurgents, under Colonel John Pegram, were occupying a heavily entrenched position in the rear of Garnett, in the Rich Mountain Gap, and commanding the road over the mountain to Staunton, the chief highway to southern Virginia. Pegram boasted that his position could not be

turned; but it was turned by Ohio and Indiana regiments and some cavalry, all under the command of Colonel Rosecrans, accompanied by Colonel Lauder, who was with Dumont at Philippi (which see). They made a détour (July 11, 1861), in a heavy rain-storm, over most perilous ways among the mountains for about eight miles, and at noon were on the summit of Rich Mountain, high above Pegram's camp, and a mile from it. Rosecrans thought his movement was unknown to the insurgents. Pegram was informed of it, and sent out 900 men, with two cannons, up the mountain-road, to meet the Nationals, and just as they struck the Staunton road the latter were fiercely assailed. Rosecrans was without cannons. He sent forward his skirmishers; and while these were engaged in fighting, his main body was concealed. Finally Pegram's men came out from their works and charged across the road, when the Indians sprang to their feet, fired, and, with a wild shout, sprang upon the foe with fixed bayonets. A sharp conflict ensued, when the insurgents gave way, and fled in great confusion down the declivities of the mountain to Pegram's camp. The battle lasted about an hour and a half. The number of Union troops engaged was about 1800, and those of the insurgents half that number. The Nationals lost 18 killed and about 40 wounded; the insurgents, 140 killed and a large number wounded and made prisoners. Their entire loss was about 400. For his gallantry on this occasion, Rosecrans was made a brigadier-general. Garnett was a prey to the Nationals. In light marching order he pushed on towards Beverly, hoping to escape over the mountains towards Staunton. He was too late, for McClellan moved rapidly to Beverly. Garnett then turned back, and, taking a road through a gap at Leesville, plunged into the wild mountain regions of the Cheat Range, taking with him only one cannon. His reserves at Beverly fled over the mountains. Meanwhile Rosecrans had entered Pegram's deserted camp, while the latter, dispirited and weary, with about six hundred followers, was trying to escape. He surrendered to McClellan July 14. As soon as McClellan discovered that Garnett had fled, he ordered a hot pursuit. Forces under General Morris and Captain H. W. Benham started eagerly after the fugitives, who had about twelve hours the start of them. The fugitives, in order to escape, left everything but their arms and ammunition behind them. They discovered the rear-guard of Garnett's force on the 13th, and finally overtook them. After a running fight for about four miles, Garnett crossed a branch of the Cheat River at a place known as Carrick's Ford, where the banks were high and steep. There Garnett made a stand, after crossing the stream, and Colonel Steedman, with a part of the Ohio Fourteenth, received a volley of musket-balls and shot from a single cannon. (See *Carricksford, Battle at.*)

Ricketts, JAMES BREWERTON, was born in New York city, and graduated at West Point in 1839. He served in the war against Mexico, and when the Civil War began he was placed in

command of the First Battery of rifled guns. He distinguished himself in the battle of Bull's Run, where he was severely wounded, taken prisoner, and confined eight months in Richmond, when he was exchanged. He was made brigadier-general of volunteers; was in the battle of Groveton (which see), or second battle of Bull's Run, in which he commanded a division of the Army of Virginia, and was wounded; and in the battle of Antietam he commanded General Hooker's corps after that officer was wounded. He was engaged in the campaign against Richmond from March until July, 1864, and in the Shenandoah campaign from July until October, 1864. General Ricketts retired from the army, as major-general, in January, 1867.

Ridgefield, SKIRMISH AT. (See *Danbury, Destruction of.*)

Riedesel (Baron), **FREDERICK ADOLPH**, was born at Lauterbach, Rhinehesse, June 3, 1738; died at Brunswick, Jan. 6, 1800. Leaving the College of Marburg, he entered the English army as ensign, and served in the Seven Years' War under Prince Ferdinand. In 1760 he became captain of the Hessian Hussars, and was made lieutenant-colonel of the Black Hussars in 1762, adjutant-general of the Brunswick army in 1767, colonel of carabineers in 1772, and early in 1776 a major-general, with the command of a division of four thousand Brunswickers, hired by the British court to fight British subjects in America. (See *German Mercenaries.*) Riedesel arrived at Quebec June 1, 1776; aided in the capture of Ticonderoga (July 6), and in dispersing the American troops at Hubbardton, and was made a prisoner with Burgoyne; was exchanged in the fall of 1780; returned home in August, 1783, and in 1787 was made lieutenant-general, in command of troops serving in Holland. He became commander-in-chief of the military of Brunswick. His *Memoirs, Letters, and Journals in America*, edited by Max Von Eelking, were translated by William L. Stone. His wife, Fredericka Charlotte Louisa, accompanied him to America, and wrote charming letters and a journal, which were published in Boston in 1799, of which a new translation was recently made by Mr. Stone. She was a daughter of the Prussian minister, Massow. She died in Berlin, March 29, 1808, aged forty-two years.

Rifled Cannons and Conical Balls. Ichabod Price, who died in New York city in March, 1862, at the age of eighty-one years, was a sergeant of a New York State artillery corps, as a volunteer, in the War of 1812. He suggested to the War Department both rifled cannons and conical balls, which now perform destructive work at long distances; but he was not listened to. President Madison was so well satisfied of the genius of the sergeant that he was commissioned a lieutenant in the regular army of the United States.

Riflemen in 1775. Among the companies which joined the American camp at Cambridge, in the summer of 1775, were some riflemen—the "sharpshooters" of that period—from Mary-

land, Virginia, and western Pennsylvania, who had been enlisted under the orders of Congress. The most conspicuous leaders among them were Daniel Morgan and Otho H. Williams.

Rights of Americans to Independence. Francis Hutcheson, a very eminent British writer on ethics, who died in 1747, clearly perceived the coming independence of the English-American colonies. "When," he inquired, "have colonies a right to be released from the dominion of the parent state?" He answered his own question, saying, "Whenever they are so increased in numbers and strength as to be sufficient by themselves for all the good ends of a political union." At the beginning of the French and Indian War the American colonies were in that happy condition, and the proposition for a colonial union, made in convention at Albany, in 1754 (see *Albany, Fourth Colonial Convention at*), excited the apprehension that independence was the primary aim of the Americans. Governor Shirley tried to allay the apprehension by declaring that the various governments of the colonies had such different constitutions that it would be impossible for them to confederate in an attempt to throw off the British yoke. "At all events," he said, "they could not maintain such an independency without a strong naval force, which it must forever be in the power of Great Britain to hinder them from having."

Rights of Man. In 1791 Thomas Paine published the first part of his famous reply to Edmund Burke's *Reflections on the French Revolution*. It was issued in England, and had an immense sale. It was translated into French, and won for the author a seat in the French National Assembly. Jefferson, then Secretary of State in Washington's administration, had come from France filled with the radical ideas of the French Revolutionists, and thought he saw, in the coolness of the President and others, a sign of decaying republicanism in America. The essays of Adams, entitled *Discourses on Davila*, disgusted him, and he believed that Adams, Hamilton, Jay, and others were plotting for the establishment of a monarchy in the United States. To thwart these fancied designs, and to inculcate the doctrines of the French Revolution, Jefferson hastily printed in America, and circulated, Paine's *Rights of Man*, which had just been received from England. It was originally dedicated "to the President of the United States." It inculcated principles consonant with the feelings and opinions of the great body of the American people. The author sent fifty copies to Washington, who distributed them among his friends, but his official position admonished him to be prudently silent about the work, for it bore hard upon the British government. The American edition, issued from a Philadelphia press, contained a commendatory note from Mr. Jefferson, which had been privately written, and not intended for publication. In it he had aimed some severe observations against the author of the *Discourses on Davila*. This created much bitterness of feeling. Warm discussions arose. John Quincy Adams, son of the Vice-President, wrote a

series of articles in reply to the *Rights of Man*, over the signature of "Publico." They were published in the *Boston Centinel*, and reprinted in pamphlet form, with the name of John Adams on the title-page, as it was supposed they were written by him. Several writers answered them. "A host of champions entered the arena immediately in your defence," Jefferson wrote to Paine. The *Rights of Man* is the ablest paper that ever came from the brain and hand of Paine.

"Rights of the British Colonies Asserted and Proved." This was the title of a powerfully written pamphlet in opposition to the scheme of the British ministry for taxing the English-American colonists. It was written by James Otis, of Boston, and produced a profound sensation in America and in Great Britain. Its boldness, its logic, its eloquence, combined to make it a sort of oriflamme for the patriots. In it Mr. Otis, while he contended for the charter privileges of the colonists, did not admit that the loss of their charters would deprive them of their rights. He said: "Two or three innocent colony charters have been threatened with destruction one hundred and forty years past. . . . A set of men in America, without honor or love for their country, have been long grasping at powers which they think unattainable while these charters stand in the way. But they will meet with insurmountable obstacles to their project for enslaving the British colonies, should those arising from provincial charters be removed. . . . Our forefathers were soon worn away in the toils of hard labor on their little plantations and in war with the savages. They thought they were earning a sure inheritance for their posterity. Could they imagine it would ever be thought just to deprive them or theirs of these charter privileges? Should this ever be the case, there are, thank God, natural, inherent, and inseparable rights, as men and citizens, that would remain after the so-much-wished-for catastrophe, and which, whatever became of charters, can never be abolished, *de jure* or *de facto*, till the general conflagration."

Ringgold, BATTLE OF. The Confederates retreated from Missionaries' Ridge (which see) towards Ringgold, destroying the bridges behind them. Early the next morning (Nov. 26, 1863) Sherman, Palmer, and Hooker were sent in pursuit. Both Sherman and Palmer struck a rear-guard of the fugitives late on the same day, and the latter had captured three guns from them. At Greysville Sherman halted and sent Howard to destroy a large section of the railway which connected Dalton with Cleveland, and thus severed the communication between Bragg and Burnside. Hooker, meanwhile, had pushed on to Ringgold, Osterhaus leading, Geary following, and Cruft in the rear, making numerous prisoners of stragglers. At a deep gorge General Cleburne (the "Stonewall Jackson" of the West), covering Bragg's retreat, made a stand, with guns well posted. Hooker's guns had not yet come up, and his impatient troops were permitted to attack the Confederates with small-arms only. A severe struggle

ensued, and in the afternoon, when some of Hooker's guns were in position and the Confederates were flanked, the latter retreated. The Nationals lost 432 men, of whom sixty-five were killed. The Confederates left 133 killed and wounded on the field.

Ringgold, CADWALADER, was born in Maryland in 1802; died in New York city, April 29, 1867. He entered the United States navy as midshipman in 1819, and was made captain in 1856. At the breaking-out of the Civil War he was ordered to the command of the *Sabine* and engaged in blockading Southern ports and in operations against some of them. He retired from the service a rear-admiral in December, 1864.

Riot in Boston (1768). The commissioners of customs had arrived in Boston in May, 1768 (see *Commissioners of Customs*), and began their duties with diligence. The sloop *Liberty*, belonging to John Hancock, arrived in Boston harbor June 10 with a cargo of wine from Madeira. It had been determined by leading merchants and citizens to resist these custom-house officers as illegal tax-gatherers, and when the tide-waiter, as usual, went on board the *Liberty*, on her arrival, just at sunset, to await the landing of dutiable goods on the dock, he was politely received and invited into the cabin to drink punch. At about nine o'clock he was confined below, while the wine was landed without entering it at the custom-house or observing any other formula. Then the tide-waiter was sent on shore. In the morning the commissioners of customs ordered the seizure of the sloop, and Harrison, the collector, and Hallowell, the comptroller, were directed to perform the duty. The vessel was duly marked, cut from her moorings, and placed under the guns of the *Romney*, a British ship-of-war, in the harbor. The people were greatly excited by this act, and the assembled citizens soon became a mob. A large party of the lower class, headed by Malcolm, a bold smuggler, pelted Harrison with stones, attacked the office of the commissioners, and, dragging a custom-house boat through the streets, burned it upon the Common. The frightened commissioners fled for safety on board the *Romney*, and thence to Castle William, in the harbor. The Sons of Liberty, at a meeting at Faneuil Hall (June 13), prepared a petition, asking the governor to remove the war-ship from the harbor. The Council condemned the mob, but the Assembly took no notice of the matter.

Riot in Philadelphia (1779). The rapid depreciation of the Continental paper-money and the continued rise in prices, which some chose to ascribe to monopoly and extortion, finally produced a riot at the seat of the general government. A committee of citizens of Philadelphia had attempted to regulate the prices of leading articles of consumption, to which Robert Morris and other prominent merchants refused to conform. Among the non-conformists was James Wilson, a signer of the Declaration of Independence. He had already become obnoxious by his defence of the accused Quakers.

He now took an active part against so regulating trade. He was denounced as a defender of the Tories, and it was proposed to seize him and others and to banish them to New York. The threatened persons, with their friends (among whom was General Mifflin), assembled (Oct. 4, 1779) at Wilson's house. A mob approached, with drums beating, and dragging two pieces of cannon. They opened a fire of musketry on the house. One of the inmates was killed and two wounded. The mob was about to force open the barred doors, when the President of Pennsylvania (Joseph Reed) arrived, soon followed by some of the city cavalry. The latter attacked the mob, when a man and boy were killed and several were severely wounded. It was several days before order was restored.

Riots in Boston (1765). Symptoms of violent ferment in the public mind appeared in several places before the arrival of the stamps in America. In Boston was a great elm, under which the "Sons of Liberty" held meetings, and it was known as "Liberty Tree." On its branches the effigies of leaders among the supporters of the British ministers were hung. The house of Secretary Oliver, who had been appointed stamp-distributor, was attacked by a mob (Aug. 15, 1765), who broke his windows and furniture, pulled down a small building which they supposed he was about to use as a stamp-office, and frightened him into speedy resignation. At that time Jonathan Mahew, an eloquent and patriotic preacher in Boston, declared against the Stamp Act from the pulpit, from the text, "I would they were even cut off which trouble you." The riots were renewed on Monday evening after this sermon was preached. The house of Story, registrar of the admiralty, was attacked (Aug. 26) and the public records and his private papers were destroyed; the house of the comptroller of customs was plundered; and the rioters, maddened by spirituous liquors, proceeded to the mansion of Lieutenant-governor Hutchinson, on North Square, carried everything out of it, and burned the contents in the public square. Among his furniture and papers perished many valuable manuscripts relating to the history of Massachusetts, which he had been thirty years collecting, and which could not be replaced. The better part of the community expressed their abhorrence of the acts, yet the rioters went unpunished, an indication that they had powerful sympathizers. Indemnification for losses by the officers of the crown was demanded by the British government and agreed to by Massachusetts. Hutchinson received \$12,000; Oliver, \$645; Story, \$255; Hallowell, \$1446.

Riots in New York (1765). Opposition to the Stamp Act assumed the form of riot in New York city late in October, 1765. A general meeting of citizens was held on the evening of Oct. 31, when two hundred merchants signed their names to resolutions condemnatory of the act. A committee of correspondence was appointed, and measures were taken to compel

James McEvers, who had been made stamp-distributor for New York, to resign. Alarmed by the aspect of the public temper, he had placed the stamps he had received in the hands of acting governor Colden, who resided within Fort George, protected by a strong garrison under General Gage. Colden had strengthened the fort and replenished the magazine. The people construed this act as a menace, and were highly exasperated. Armed ships were in the harbor, and troops were prepared to enslave them. But the people did not hesitate to assemble in great numbers before the fort (Nov. 1) and demand the delivery of the stamps to their appointed leader. A refusal was answered by defiant shouts, and the populace assumed the character of a mob. They hung Governor Colden in effigy in "the Fields" (now City Hall Park), marched back to the fort, dragged his fine coach to the open space in front of it, tore down the wooden fence around Bowling Green, and, after making a pile of the wood, cast the coach and effigy upon it, and set fire to the whole. The mob then proceeded to the beautiful residence of Major James, of the Royal Artillery, a little way out of town, where they destroyed his fine library, works of art, and furniture, and desolated his choice garden. Isaac Sears and other leaders of the assembled citizens tried to restrain them, but could not. After parading the streets with the Stamp Act, printed upon large sheets and raised upon poles, headed "England's Folly and America's Ruin," they quietly dispersed. The governor gave up the stamps (Nov. 5) to the mayor and the corporation of the city of New York, and they were deposited in the City Hall. The losers by the riots were indemnified by the Colonial Assembly.

Ripley, ELEAZAR WHEELOCK, was born at Hanover, N. H., April 15, 1782; died at West Feliciana, La., March 2, 1839. He was a nephew of President Wheelock, of Dartmouth College. He studied and practised law at Portland; was in the Legislature of Massachusetts, and was chosen speaker of the Assembly in 1812. He was also State Senator. In March, 1813, he was appointed colonel of the Twenty-first Infantry. He was active on the Northern frontier until appointed brigadier-general in the spring of 1814, when he took part in the events on the Niagara frontier. For his services during that campaign he received from Congress the brevet of major-general and a gold medal. General Ripley left the army in 1820; practised law in Louisiana; was a member of the State Senate, and in 1835 was a member of Congress, which position he held at the time of his death. He was wounded in the battle at York, and in the sortie at Fort Erie (which see) he was shot through the neck.

Ripley, GEORGE, LL.D., was born at Greenfield, Mass., Oct. 3, 1802; died in New York, July 4, 1880. He was an able writer and a most industrious man of letters, having edited, translated, and written numerous works on a great variety of subjects, and gained a wide reputation as a scholar, editor, and journalist. Mr.

Ripley graduated at Harvard University in 1823, and Cambridge Divinity School in 1826. He became pastor of the Thirteenth Congregational (Unitarian) Church in Boston. He was prominent in the Brooke Farm enterprise at Roxbury, where an experiment of practical socialism was tried. In 1840-41 he was associate editor with Ralph Waldo Emerson and Margaret Fuller of the *Dial*, the organ of the New England Transcendentalists; and with Charles A. Dana, Parke Godwin, and J. S. Dwight, of the *Harbinger*, an advocate of socialism as propounded by Fourier. From 1849 until his death Mr. Ripley was the literary editor of the *New York Tribune*. In conjunction with C. A. Dana, Dr. Ripley edited Appleton's *New American Cyclopædia*, sixteen volumes, completed in 1863, and a new and illustrated edition, completed in 1876.

Rittenhouse, DAVID, LL.D., was born near Germantown, Penn., April 8, 1732; died in Philadelphia, June 26, 1796. He was of German descent. His great-grandfather, a German, established at Germantown, in 1690, the first paper-mill in America. Accidentally falling in with instruments and mathematical books of a de-

DAVID RITTENHOUSE.

ceased uncle while working on his father's farm, he had mastered Newton's *Principia* and independently discovered the methods of fluxions before he was nineteen years of age. He early became a skilful mechanic, and, at the age of twenty-three, he planned and constructed an orrery, which was purchased by the college at Princeton. He afterwards constructed a larger and more perfect one for the University of Pennsylvania. In 1763 he was employed in determining "Mason and Dixon's Line" (which see), and afterwards fixed other state boundaries. In 1769 the American Philosophical Society appointed him to observe the transit of Venus at Philadelphia. He erected a temporary observatory for the purpose on the Walnut-street front of the State-house (now in Independence Square), from the platform of which, it is said, John Nixon read the Declaration of Independence on the 8th of July, 1776, to a vast multitude of people gathered from the city and the surrounding country. It is said that the emotion of Rittenhouse was so great at the apparent contact at

the time of the transit that he fainted. In Philadelphia Rittenhouse continued his manufacture of clocks and mathematical instruments several years. From 1777 to 1779 he was treasurer of Pennsylvania; succeeded Franklin (1791) as

WALNUT-STREET FRONT OF THE STATE-HOUSE IN 1776.
(From an old Print of the Period.)

president of the American Philosophical Society, and was director of the United States Mint from 1792 to 1795. He was a member of the Academy of Arts and Sciences of Boston.

Rival Colonies, THE EXTENT AND POPULATION OF. At the important epoch of the beginning of the French and Indian War (which see), the extent of the territorial possessions of England and France in America was well defined on maps published by Evans and Mitchell—that of the latter (a new edition) in 1754. The British North American colonies stretched coastwise along the Atlantic about one thousand miles, but inland their extent was very limited. New France, as the French settlers called their claimed territory in America, extended over a vastly wider space, from Cape Breton, in a sort of crescent, to the mouth of the Mississippi River, but the population was mainly collected on the St. Lawrence, between Quebec and Montreal. The English colonies in America at that time had a population of 1,485,634, of whom 292,738 were negroes. The French were scarcely 100,000 in number, but were strong in Indian allies, who, stretching along the whole interior frontier of the English colonies, and disgusted with constant encroachments upon their territories, as well as ill-treatment by the English, were always ripe and ready for cruel warfare.

Rives, WILLIAM CABELL, was born in Nelson County, Va., May 4, 1793; died near Charlottesville, Va., April 26, 1868. He was educated at Hampden-Sidney and William and Mary colleges; studied law under the direction of Jefferson; was a member of the State Constitutional Convention in 1816; of the State Legislature from 1817 to 1819 and 1822, and member of Congress from 1823 to 1829. Mr. Rives was minister at the French court from 1829 to 1832, and United States Senator from 1832 until 1845. He was again minister to France from 1849 to 1853. He sympathized with the secession movements in 1860-61, and in February, 1861, was a member

of the Peace Congress (which see). After Virginia had joined the Confederacy, he became a member of the Confederate Congress.

Rivington, JAMES, was born in London about 1724; died in New York in July, 1802. He was engaged in bookselling in London, and failing, came to America in 1760, and established a bookstore in Philadelphia the same year. In 1761 he

JAMES RIVINGTON.

opened one near the foot of Wall Street, New York, where his *New York Gazetteer*, a weekly newspaper, was established in April, 1773. It was soon devoted to the royal cause, and his trenchant paragraphs against the "rebels" made him detested by the Whigs. To sarcasm he added good-natured ridicule. Isaac Sears, a leader of the Sons of Liberty, was so irritated by him that, with a company of light-horsemen from Connecticut, he destroyed Rivington's printing establishment in November, 1775, after which the latter went to England. Appointed king's printer at New York, he returned late in 1776 with new printing materials, and in 1777 resumed the publication of his paper under the title of *Rivington's New York Loyal Gazette*. Late in the year he changed it to *Royal Gazette*. Shrewd and unscrupulous, after the defeat of Cornwallis (1781) he perceived the hopelessness of the royal cause and endeavored to make his peace with the Whigs by secretly sending information to Washington concerning public affairs in the city. This treason was practised until the evacuation of the city by the British. When the loyalists fled and the American army entered the city (1783), Rivington remained unharmed, to the astonishment of those not in the secret. He changed the title of his paper to *Rivington's New York Gazette and Universal Advertiser*. But his business declined, as he had lost the confidence of both Whigs and Tories, and he lived in comparative poverty until the seventy-eighth year of his age.

Rivington's Printing-office, DESTRUCTION OF. The unstinted abuse of the Whigs and their cause lavished upon them by Rivington in his *New York Gazetteer*, irritated them beyond endurance. Isaac Sears, a leader of the Sons of Liberty, was a particular target for his keen shafts of wit and vulgar abuse. Fired by personal insult and patriotic zeal, Sears came from

Connecticut, where he had been consulting Whigs upon public matters, and at noonday (Nov. 23, 1775), followed by about one hundred light-horsemen, entered the city, proceeded to Rivington's publishing establishment at the foot of Wall Street, placed a guard with fixed bayonets around it, put all his type into bags, destroyed his press and other apparatus, and, in the same order as they came, left the city amid the shouts of the populace and to the tune of "Yankee Doodle," carrying away his type, of which bullets were afterwards made. Rivington then went to England, but returned after the British took possession of New York, with new printing materials, as "king's printer."

Roanoke Island was discovered by Amidas and Barlow (see *Raleigh, Sir Walter*) in July, 1584, and taken possession of in the name of Queen Elizabeth. These navigators spent several weeks in explorations of that island and Pamlico and Albemarle sounds, and in trafficking with the natives. "The people," wrote the mariners, "were most gentle, loving, and faithful, void of all guile and treason, and such as lived after the manner of the Golden Age." They were hospitably entertained by the mother of Wingina, King of Roanoke, who was absent. When they left they took with them Manteo and Wanchese, two dusky lords of the woods from the neighboring main. Raleigh sent a squadron under Sir Richard Grenville in 1585 to Roanoke Island (see *Grenville, Sir Richard*), who took back the native chiefs. Grenville sent Manteo to the mainland to announce the coming of the English, and for eight days Sir Richard explored the country in search of precious metals, and by his conduct made the natives his enemies. Ralph Lane, who went with Grenville as governor of the country, was delighted with it, as being one of the most fertile regions he had ever beheld; but he contented himself with searching for gold. (See *Lane, Sir Ralph*.) His colony, half starved, and afraid of the offended Indians, deserted Roanoke Island in one of Drake's ships. Other attempts to settle there failed. (See *Grenville, Sir Richard*, and *Dare, Virginia*.) In the Civil War in America (1861-65), Roanoke Island became historically conspicuous. (See *Roanoke Island, Capture of*.)

Roanoke Island, CAPTURE OF. Early in 1862 an expedition was fitted out at Hampton Roads for operations against Roanoke Island, on the North Carolina coast. It was composed of over one hundred war-vessels and transports, commanded by Commodore L. M. Goldsborough, and bearing 16,000 land-troops under General Ambrose E. Burnside, of Rhode Island. The armament left the Roads on Sunday, Jan. 11, 1862, with its destination unknown excepting to certain officers. The land-force was divided into three brigades, commanded respectively by Generals J. G. Foster, J. L. Renb, and J. G. Parke. The fleet was divided into two columns for action, intrusted respectively to the care of Commanders S. F. Hazard and S. C. Rowan. Its destination was Pamlico Sound, through Hatteras Inlet, and its chief object was the capture of

Roanoke Island, which the Confederates had strongly fortified with batteries which commanded the sounds on each side of it. There was also a fortified camp that extended across a narrow part of the island. These fortifications were garrisoned by North Carolina troops under Colonel H. M. Shaw, and mounted forty guns. Above the island, in Croatan Sound, was a Confederate flotilla of small gunboats, commanded by Lieutenant W. F. Lynch, late of the United States Navy. Goldsborough drew up his fleet in Croatan Sound and opened a bombardment (Feb. 7, 1862) upon the works on Roanoke Island. Four of his transports, one gunboat, and a floating battery had been smitten by a storm off Hatteras before entering the still waters of the inlet and wrecked. Goldsborough had moved his gunboats towards the island to open fire in columns, the first being led by the *Stars and Stripes*, Lieutenant Werden; the second by the *Louisiana*, Commander A. Murray; and the third by the *Hetzel*, Lieutenant H. R. Davenport. The *Southfield* was the flag-ship. The first attack was upon Fort Bartow, on Pork Point, towards the northern end of the island, and in twenty-one minutes a general engagement took place between the gunboats and the batteries in Croatan Sound, in which the little flotilla participated. These vessels disposed of, Goldsborough concentrated his fire on Fort Bartow, three fourths of a mile distant. Burnside's headquarters were on the *S. R. Spaulding*. As Fort Bartow began to give way the transports were brought up, and at midnight, while a cold storm of wind and rain was sweeping over land and water, about 11,000 troops were landed, many of them wading ashore. These were New England, New York, and New Jersey troops. They were without shelter. At dawn, led by General Foster, they moved to attack the line of intrenchments that spanned the island. The Confederates, much inferior in numbers, made a gallant defence, going from redoubt to redoubt as one after another fell into the hands of the Nationals. They made a vigorous stand in a well-situated redoubt that was approached by a causeway. There was to be the last struggle in defence of the line. At the head of Hawkins's Zouaves, Major Kimball, a veteran of the war with Mexico, undertook to take it by storm. Colonel Hawkins was then leading a flank movement with a part of his command. Seeing the major pushing forward, the colonel joined him, when the whole battalion shouted, "Zou! Zou! Zou!" and pressed to the redoubt. The Confederates fled and were pursued about six miles, when they surrendered, and Roanoke Island passed into the possession of the National forces. The Confederate flotilla fled up Albemarle Sound, pursued by National gunboats under Commander Rowan. Near Elizabeth, not far from the Dismal Swamp, Rowan attacked the flotilla and some land-batteries, driving the Confederates from both, while Lynch and his followers retired into the interior. Then the United States flag was placed upon a shore-battery, and this was the first portion of the North Carolina main that was repossessed by the government. The

loss of Roanoke Island was a severe one for the Confederates. The National loss in the capture of the island was about 50 killed and 222 wounded. That of the Confederates was 23 killed, 58 wounded, and 62 missing.

Roberts, BENJAMIN STONE, was born at Manchester, Vt., in 1811; graduated at West Point in 1835, and entered the dragoons. He resigned in 1839 and engaged in engineering, and in 1841 was assistant geologist of the State of New York. In 1842 he went to Russia to assist Colonel Whistler in building railroads there. Returning, he was admitted to the bar and began its practice in Iowa in 1843, and when the war with Mexico broke out he re-entered the army as first-lieutenant of mounted rifles, and served under General Lane. In 1861 he was major of the Third Cavalry on duty in New Mexico, and afterwards being in command of the Southern District, under General Canby, he defended Fort Craig against Texan forces under Sibley. (See *Valverde*.) He was ordered to Washington, made brigadier-general (July 16, 1862), and was assigned to duty in the Army of Virginia (which see) under Pope, as chief of cavalry. He commanded a division of the Nineteenth Corps in Louisiana in the summer of 1864, and from October, 1864, to Jan. 24, 1865, was chief of cavalry in the Department of the Gulf. In the summer of 1865 he was in command in West Tennessee.

Robertson, JAMES, a British general, was born in Fifeshire, Scotland; died in England, March 4, 1788. He was deputy-quartermaster under General Abercrombie in 1758, was at the capture of Louisburg, and accompanied Amherst to Lake Champlain in 1759. He took part in the expedition against Martinique in 1762, and was afterwards stationed in New York. At Boston in 1775 he was made major-general (Jan. 1, 1776), and at the evacuation of that city he shared in the plunder. (See *Evacuation of Boston*.) He was in the battle of Long Island (which see); was military governor of New York until his return to England, and, coming back, was commissioned military governor of the city of New York in May, 1779, and remained such until April, 1783, when he again returned to England.

Robertson, JAMES, who has justly been called the Father of Tennessee, was born in Brunswick County, Va., June 28, 1742. He emigrated to the rich regions beyond the mountains about the year 1760, and on the banks of the Watanga, a branch of the Tennessee, he made a settlement and lived there several years. He was often called upon to contest for life with the savages of the forest. In 1776 he was chosen to command a fort built near the mouth of the Watanga. In 1779 Captain Robertson was at the head of a party emigrating to the still richer country of the Cumberland, and upon Christmas-eve of that year they arrived upon the spot where Nashville now stands. Others joined them, and in the following summer they numbered about two hundred. A settlement was established, and Robertson founded the city of Nashville. The Cherokee Indians attempted to destroy the settlement, but, through the skill and energy of

Robertson and a few companions, that calamity was averted. They built a log fort on the high bank of the Cumberland, and in that the settlers were defended against full seven hundred Indi-

JAMES ROBERTSON.

ans in 1781. The settlement was erected into a county of North Carolina, and Robertson was its first representative in the State Legislature. In 1790 the "Territory South of the Ohio River" was formed, and Washington appointed Robertson brigadier-general and commander of the militia in it. In that capacity he was very active in defence of the settlements against the savages. At the same time he practised the most exact justice towards the Indians, and when these children of the forest were no longer hostile, his kindness towards the oppressed among them made him very popular. At length, when the emissaries, white and red, from the British in the North began to sow the seeds of discontent among them at the breaking-out of the war in 1812, the government wisely appointed General Robertson agent to the Chickasaw tribe. He was ever watchful of the national interest. As early as March, 1813, he wrote, "The Chickasaws are in a high strain for war against the enemies of the country. They have declared war against all passing Creeks who attempt to go through their nation. They have declared, if the United States will take a campaign against the Creeks [because of some murders committed by them near the mouth of the Ohio], that they are ready to give them aid." A little later he suggested the employment of companies of Chickasaws and Choctaws to defend the frontiers and to protect travellers, and he was seconded by Pitchlyn, an active and faithful Indian. During the war General Robertson remained at his post among the Indians, and invited his aged wife to share his privations by quaintly saying to her by a messenger, "If you shall come this way, the very best chance for rest and sleep

which my bed affords shall be given you, provided, always, that I shall retain a part of the same." He was then seventy-one, and she sixty-three years of age. She went to him, and was at his side when he died at his post in the Indian country the year following. His death occurred on the 1st of September, 1814, and on the 2d his remains were buried at the Agency. In 1825 they were removed to Nashville, and, in the presence of a large concourse of citizens, were reinterred in the cemetery there. A plain tomb covers the spot. The remains of his wife rest by his side, and the observer may there read the following inscriptions: "General James Robertson, the founder of Nashville, was born in Virginia, 28th June, 1742. Died 1st September, 1814." "Charlotte R., wife of James Robertson, was born in North Carolina, 2d January, 1751. Died 11th June, 1843." Their son, Dr. Felix Robertson, who was born in the fort, and the first white child whose birth was in West Tennessee, died at Nashville in 1864.

Roberval in Canada. In prosecution of his design of planting a colony in Canada (see *Cartier, Jacques*), Roberval finally sailed from France with three ships and two hundred persons, and in the harbor of St. John, N. F., met Cartier, who was on his return to Europe. He commended the country of Canada to Roberval as rich and fruitful. The latter commanded Cartier to return to the St. Lawrence with him, but the navigator eluded the viceroy in the night and sailed for France. Roberval sailed up the St. Lawrence some distance above the site of Quebec, built a fort, and remained there through the winter (1542-43). In the spring he explored the country above, but appears to have abandoned the enterprise soon afterwards. The colony was broken up, and for half a century the French made no further attempts to colonize Canada. In 1549 Roberval, accompanied by his brothers and a numerous train of adventurers, embarked again for the River St. Lawrence, but they were never heard of afterwards.

Robinson, BEVERLY, loyalist, was born in Virginia in 1734; died at Thornbury, England, in

BEVERLY ROBINSON.

1792. He was a major under Wolfe at Quebec, and afterwards married a daughter of Frederick

Phillipsee, owner of the Phillipsee Manor, on the Hudson. He opposed the measures of the British government up to the Declaration of Independence, when he took sides with that government; moved his family into the city of New York; raised the "Loyal American Regiment," of which he was colonel, and was concerned in some degree as a sort of go-between with the treason of Arnold, who occupied Robinson's country-house, opposite West Point, at the time

THE ROBINSON HOUSE.

of that transaction. At the end of the war Robinson went to England with a portion of his family, and his property was confiscated. His house, from which Arnold fled on the discovery of his treason, has been preserved in much the same condition as it was at that time (1780). It is a frame building, and stands back from the river about half a mile, upon a fertile plateau at the western foot of the lofty hills on which redoubts were planted by the Americans during the Revolution.

Robinson, EDWARD, D.D., LL.D., a Biblical scholar, was born at Southington, Conn., April 10, 1794; died in New York, Jan. 27, 1863. He graduated at Hamilton College in 1816, and married a daughter of Samuel Kirkland, the missionary, who died in 1819. He became an assistant instructor in Andover Theological Seminary. Four years (1826-30) he travelled in Europe, where he married Thérèse, daughter of Professor Jakob, of Halle, a woman of fine literary attainments. From 1830 to 1833 he was Professor of Sacred Literature and Librarian at Andover, and from 1837 until his death he was Professor of Biblical Literature in the Union Theological Seminary in New York city. Professor Robinson visited Palestine in 1838, and, with Rev. Eli Smith, made a minute survey of it, an account of which was published in Halle, London, and Boston in 1841. He made a second visit in 1852, the result of which was published in 1856. Doctor Robinson's researches in Palestine are regarded by Biblical scholars as of the first importance. At the time of his death he was engaged upon a physical and historical geography of the Holy Land. He was an active member of geographical, oriental, and ethnological societies, and was the author or translator of Greek and Hebrew lexicons.

Robinson, JOHN, was born in England in 1575; died at Leyden, Holland, March 1, 1625. He was educated at Cambridge, and in 1602 became pastor of a dissenting congregation at Norwich. The church was persecuted, and in 1607 the members attempted to leave England and seek an asylum in Holland, but were prevented by officers of the law, who kept the whole company under arrest for some time. In 1608 most of them made their escape in small

parties and joined each other at Amsterdam. The next year they went to Leyden, where they organized a church, and remained eleven years. In 1617 another removal was contemplated, and the pastor favored emigration to America. Agents went to England and made arrangements for such emigration, and late in 1620 a portion of the Leyden congregation, under the spiritual leadership of Elder William Brewster, reached the New England coast. (See *Brewster, William*.) Robinson intended to follow with the remainder of the congregation, but he died before the consent of the English merchants who controlled the enterprise could be obtained. (See *Pilgrims*.) Not long afterwards the remainder of his congregation

and his two sons followed the passengers in the *Mayflower*. Mr. Robinson was an acute controversialist. In 1613 he had a controversy on "Free-will" with Episcopius's successor, a professor in the University of Leyden; his published works make, with a memoir, three volumes.

Robinson, JOHN CLEVELAND, was born at Binghamton, N. Y., April 10, 1817. He took a partial course of study at West Point, leaving it to study law. He served in the war against Mexico, and at the beginning of the Civil War was in command at Fort McHenry, Baltimore. As brigadier-general he took command of a division in Heintzelman's corps in the battle before Richmond in 1862. He was also in the principal battles in Virginia and Pennsylvania in 1863, and retired as major-general in 1869.

Robinson, SIR FREDERICK PHILLIPSE, son of Beverly, the Loyalist, was born in the Hudson Highlands in September, 1763; died at Brighton, England, Jan. 1, 1852. In 1777, though only fourteen years of age, he was made ensign of his father's regiment of American loyalists. He was wounded and made prisoner at the capture of Stony Point. He left the United States with his father in 1783, and served in the West Indies, Spain, and Canada, rising to the rank of full general in 1841. He commanded a brigade at the battle of Vittoria, Spain; was wounded at the siege of St. Sebastian; and at the close of the Peninsular War went to Canada as commander-in-chief of the forces there, and was engaged in the events of the War of 1812-15. General Robinson was Governor of Upper Canada in 1815-16, and in the former year was knighted. He received the Grand Cross in 1838.

Rochambeau, JEAN BAPTISTE DONATIEU DE

VIMEUR, Count de, was born at Vendôme, France, July 1, 1725; died in May, 1807. He entered the army at the age of sixteen years, and in 1745 he became aid to Louis Philippe, Duke of Orleans. He afterwards commanded a regiment, and was

COUNT DE ROCHAMBEAU.

wounded at the battle of Lafeldt. He was distinguished in several battles, especially at Minden. When it was resolved by the French monarch to send a military force to America, Rochambeau was created a lieutenant-general and placed in command of it. He arrived at Newport, R. I., in July, 1780, and joined the American army under Washington, on the Hudson, a few miles above New York. He led his army to the Virginia peninsula, and assisted in the capture of Cornwallis at Yorktown Oct. 19, 1781, when he was presented with one of the captured cannons. In 1783 he received the decoration of Saint Esprit, and in 1791 was made a marshal of France. Early in 1792 he was placed in command of the Army of the North, and narrowly escaped the guillotine when the Jacobins wielded supreme power in Paris. Bonaparte (First Consul) gave him a pension in 1804, and the Cross of Grand Officer of the Legion of Honor. His *Memoirs* were published in two volumes in 1809.

Roche, MARQUIS DE LA, Lord of Roberval, a wealthy French nobleman, commissioned by Henry IV., gathered a company from the prisons of France, and in the spring of

1598 sailed for the Western Continent to make conquests and a settlement. He landed forty of his convict followers on Sable Island, in the Atlantic Ocean, ninety miles southeast from Nova Scotia, and then proceeded to the latter region, where De Monts arrived soon afterwards. (See *De Monts, Sieur*.) After exploring that country, De la Roche returned to France without attempting to make a settlement, leaving the forty men on Sable Island. There they remained seven

years, when the king, hearing of their fate, sent Chetodel, De la Roche's pilot, to take them away. But only twelve were left alive, who were clad in seal-skins. They were taken to France, and were pardoned by the king, who gave each of them fifty crowns.

Rockingham Ministry, THE. Lord North resigned the Premiership of England on March 28, 1782, and was succeeded by the Marquis of Rockingham as Prime-minister. The avowed principle of Rockingham and his colleagues was to acknowledge the independence of the United States and treat with them accordingly. Lord Shelburne still hoped for a reconciliation and the restoration of the American colonies as a part of the British empire. John Adams was at the Hague, negotiating a treaty of commerce, and overtures were made to him, as well as to Franklin at Paris, to ascertain whether the United States would not agree to a separate peace, and to something less than entire independence. With this object, the ministry appointed Sir Guy Carleton to supersede General Clinton in command of the British army in America, and commissioned him, along with Admiral Digby, to treat for peace. Their powers to treat were made known to Congress, but that body declined to negotiate, except in conjunction with France, in fulfilment of the agreement of the Treaty of Alliance (which see) at Paris. While these matters were under consideration Lord Rockingham died (July 1, 1782), and was succeeded by Shelburne.

Rocky Mount, SKIRMISH AT (1780). When Gates was marching on Camden (see *Sanders's Creek, Battle at*), Colonel Thomas Sumter first appeared in power on the borders of the Catawba River. He had gathered a considerable force, and on July 30 he left Major Davie's camp, crossed to the right bank of the Catawba, and proceeded cautiously but swiftly to attack a British post at Rocky Mount. The British

VIEW AT ROCKY MOUNT.

commander, warned of his approach by a Tory, was prepared. A sharp skirmish ensued, and Sumter was repulsed. The site of this battle is near the right bank of the Catawba River. The view in the picture is in a northeasterly direction, looking towards Lancaster district.

Rodgers, JOHN, was born in Harford County, Md., in 1771; died in Philadelphia, Aug. 1, 1838. He entered the navy as lieutenant in 1798, and was executive officer of the frigate *Constellation*,

Commodore Truxton, which captured *L'Insurgente* (which see). He did good service in the Mediterranean from 1802 to 1806, commanding the squadron of Commodore Barron in 1804. In

JOHN RODGERS.

the spring of 1811 he was in command of the *President*, and in May had a combat with the *Little Belt*. (See *President and Little Belt*.) His services during the War of 1812-15 were very important (see *Rodgers's Long Cruise*), and from 1815 to 1824 he was President of the Board of Naval Commissioners, acting as Secretary of the Navy a while in the latter part of 1823. On his return from a cruise in the Mediterranean (1824-27) he was again in the Board of Naval Commissioners, which position he relinquished in 1837.—His son, Rear-admiral JOHN RODGERS, was born in Maryland, Aug. 8, 1811, and entered the navy in 1828. He was made captain in July, 1862. He commanded the *Hancock* in an exploring expedition to the North Pacific and China Seas (1853-56), and in 1862 he superintended the construction of iron-clad gunboats on the Western waters. He commanded an expedition of gunboats up the James River in 1862; and in June, 1863, in the "monitor" *Weehawken*, he captured the powerful Confederate "ram" *Atlanta* in Wassaw Sound. In the "monitor" *Monadnoc*, he made the passage around Cape Horn to San Francisco in 1867; and in 1871 he captured the Korean forts, with the Asiatic fleet.

Rodgers's Long Cruise (1813). While Commodore Porter was on his extended cruise in the Pacific Ocean (see *Essex, Cruise of the*), Commodore Rodgers was on a long cruise in the North Atlantic in his favorite frigate, the *President*, 44 guns. He left Boston on April 27, 1813, in company with the *Congress*, 38, and, after a cruise of one hundred and forty-eight days, arrived at Newport, R. I., having captured eleven

merchant vessels and the British armed schooner *Highflyer*. Rodgers sailed northeastward, in the direction of the southern edge of the Gulf Stream, until May 8, when the *President* and *Congress* separated, near the Azores. For weeks Rodgers was singularly unsuccessful, not meeting with a vessel of any kind. When his presence in British waters became known, it produced great excitement among the English shipping. Many cruisers were sent out to capture or destroy the *President*. Rodgers's supplies finally began to fail in the Northern seas, and he put into North Bergen, Norway, for the purpose of replenishment. In this, too, he was disappointed. An alarming scarcity of food prevailed all over the country, and he could only get water. He cruised about in those high latitudes, hoping to fall in with a fleet of English merchantmen that were to sail from Archangel; but, instead of these, he suddenly fell in with two British ships-of-war. Unable to contend with them, the *President* fled, hotly pursued. Owing to the perpetual daylight there, they were enabled to chase her for full eighty hours. She finally escaped. Rodgers had got some supplies from two merchantmen which he had captured just before meeting the warriors, and he turned westward to intercept such vessels coming out of the Irish Channel. He soon afterwards met and captured these (July and August), and, after making a complete circuit of Ireland, he steered for the Banks of Newfoundland. Towards evening, Sept. 23, the *President* fell in with the British armed schooner *Highflyer*, the tender to Admiral Warren's flag-ship *St. Domingo*. She was a staunch vessel and fast sailer, and was commanded by Lieutenant Hutchinson, one of Cockburn's subalterns when he plundered and burned Havre-de-Grace (which see), the home of Rodgers. By stratagem, the latter decoyed the *Highflyer* alongside the *President*. Rodgers had obtained some British signal-books before leaving Boston, and he had caused some signal-flags to be made on his ship. When he came in sight of the *Highflyer*, he raised a British ensign, which was responded to, and a signal was also displayed at the mast-head of the *Highflyer*. Rodgers was delighted to find he possessed its complement. He signalled that his vessel was the *Sea Horse*, one of the largest of the British vessels of its class in American waters. The *Highflyer* bore down and hove to close to the *President*, and received one of Rodgers's lieutenants on board, who was dressed in British naval uniform. He bore an order from Rodgers, under an assumed name, to send his signal-books on board the *Sea Horse* to be altered, as the Yankees, it was alleged (and truly), had obtained possession of some of them. Hutchinson obeyed, and Rodgers was put in possession of the whole signal correspondence of the British navy. Hutchinson soon followed his signal-books, putting into Rodgers's hands a bundle of despatches for Admiral Warren. He told the commodore that the chief object of the admiral then was to capture the *President*, which had spread alarm in British waters. "What kind

of a man is Rodgers?" asked the commodore. The unsuspecting lieutenant replied, "I have never seen him, but I am told he is an odd fish, and hard to catch." "Sir!" said Rodgers, with emphasis that startled Hutchinson, "do you know what vessel you are on board of?" The lieutenant answered, "Why, yes, sir, his majesty's ship *Sea Horse*." "Then, sir," said Rodgers, "you labor under a mistake; you are on board the *President*, and I am Commodore Rodgers." At that moment the band struck up "Yaukee Doodle" on the *President's* quarter-deck, the American ensign was displayed, and the uniforms of the marines were suddenly changed from red to blue. The lieutenant was astonished and utterly overwhelmed with shame, for the sword at his side had been taken from Rodgers's house at Havre de Grace. He had been instructed not to fall into the hands of Rodgers, for, it was alleged, the commodore would hang him to the yard-arm. But Rodgers treated him with great courtesy, and soon afterwards released him on parole. This transaction occurred off the New England coast, and three days afterwards Rodgers entered Newport harbor with his prize. In December he cruised southward with some success, and finally he dashed through the British blockading squadron off Sandy Hook (Feb. 14, 1814) and sailed into New York harbor. He was entertained at a banquet in New York, at which he gave the following toast: "Peace—if it can be obtained without the sacrifice of national honor or the abandonment of maritime rights; otherwise war until peace shall be secured without the sacrifice of either."

Rodman, THOMAS J., inventor of the Rodman gun, was born in Indiana in 1821; died at Rock Island, Ill., June 7, 1871. He graduated at West Point in 1841, entering the Ordnance Department. He was breveted brigadier-general in 1865.

Rodney and De Grasse. When, late in 1781, De Grasse, with his fleet, left the coast of the United States, and, going to the West Indies, gave France the naval ascendancy there, St. Eustatius (which see) was recaptured and restored to the Dutch, and St. Christopher, Nevis, and Montserrat were successively taken by the French forces. Late in February, 1781, Rodney reappeared at Barbadoes, and soon afterwards effected a junction with the squadron of Sir Samuel Hood, to the leeward of Antigua. He closely watched De Grasse from St. Lucia. After various manœuvres, Rodney and De Grasse fought a famous battle (April 12, 1782) on the waters that lie between the islands of Gadeloupe, the Saintes, and Marie Galante. Rodney had thirty-six ships; De Grasse had a less number, but greater weight of metal. The battle began at seven in the morning and continued for eleven hours. Rodney, at about the middle of the engagement, cut the French line, and the battle was continued in detail. The British were successful, but the colors of the *Ville de Paris*, De Grasse's flag-ship, were not struck until she was on the point of foundering and had only three men left unhurt upon her upper

deck. Four other French ships were captured. The British lost 1000 men; the French 3000, for their vessels were crowded with land-troops. The feeling which England experienced on hearing of this victory reconciled her ministers and the king, somewhat, to the loss of the colonies, for it assured her that she had regained the dominion of the sea.

Rodney, CÆSAR, a signer of the Declaration of Independence, was born at Dover, Del., about 1730; died early in 1783. At the age of twenty-eight he was appointed sheriff of Kent County, Del., and afterwards was a judge. He represented his district in the Legislature, and was sent to the Stamp Act Congress (which see) in 1765. For several years he was Speaker of the Delaware Assembly; was a member of the Committee of Correspondence, and of Congress in 1774 and afterwards. (See *Declaration of Independence*.) Made a brigadier-general, he was active in supplying Delaware troops to the army under Washington, and, early in 1777, was in command of the Delaware line in New Jersey. From 1778 to 1782 he was president of his state.

Rogers, ROBERT, was a famous partisan ranger in the French and Indian War. He was born at Dunbarton, N. H., about 1730, and died in England about 1800. His father was an Irish settler in New Hampshire. Raising a corps of rangers, he was commissioned a major, and he and his men became renowned for their exploits during that war. In 1759 he destroyed the Indian village of St. Francis (see *Crown Point*); and in 1760 he was sent by General Amherst to take possession of Detroit and other Western posts ceded to the English by the French. Going to England, he there published his journal, which he presented to the king, who, in 1765, made him governor of Michilimackinac (Mackinaw); but he was shortly afterwards sent to Montreal, in irons, to be tried on a charge of a design to plunder the fort and join the French. He was acquitted, went to England, was presented to the king, and was soon afterwards imprisoned for debt. Released, he went to Algiers and fought in two battles for the Dey. Returning to America, he joined the royalists on the breaking-out of the war for independence, and raised the famous corps known as the "Queen's Rangers." Rogers published two works on the French and Indian War, as well as two or three other books.

Rogersville, SURPRISE AT (1863). Colonel Garrard, of General Shackleford's command (see *Blue Springs, Battle at*), with two regiments and a battery, was posted at Rogersville, in East Tennessee, and there was suddenly attacked (Nov. 6, 1863) by Confederates under General W. E. Jones, about 2000 in number. It was a surprise. The Nationals were routed, with a loss of 750 men, four guns, and thirty-six wagons. This disaster created great alarm. Shackleford's troops at Jonesborough and Greenville fled in haste back to Bull's Gap, and the Confederates, not doubting Shackleford's horsemen would be after them in great force, fled as hastily towards Virginia, in the opposite direction.

There was now a wide space of country between the belligerents.

Roman Catholic Church in the United States. Soon after the treaty of peace in 1783 the pope's nuncio at Paris made overtures to Franklin on the subject of appointing a bishop, or vicar-apostolic, for the Roman Catholic Church in the United States. Franklin laid the matter before Congress, and that body replied that the subject, being purely spiritual, did not fall under their control. As there was no ruling hierarchy in the United States, this answer was construed as a tacit consent, and soon afterwards the pope appointed John Carroll, of Maryland, his vicar-apostolic. Carroll was soon afterwards consecrated bishop of Baltimore, and, finally, archbishop. (See *Carroll, John*.)

Romans, BERNARD, engineer, was born in Holland, and died about 1784. He was employed as an engineer in America by the British government, some time before the Revolution. While in government employ as a botanist, in New York, and engaged in the publication of a *Natural History of Florida*, the Committee of Safety of that city offered him the position of military engineer. He accepted the service, and was afterwards employed by Congress to fortify the Highlands east of West Point. At or near the close of the war he was captured at sea, on his way to Charleston, taken to England, and in 1784 embarked for America. It is supposed he was murdered on the passage. He published a *Map of the Seat of Civil War in America, 1775*; also *Annals of the Troubles in the Netherlands, from the Accession of Charles V.*, which was dedicated to Governor Trumbull.

Romney, SKIRMISH AT. One of the most important of the earlier military operations of the late Civil War, in its moral effect, was performed under the direction of Colonel (afterwards Major-general) Lew. Wallace, with his regiment of Zouaves, the Eleventh Indiana, raised by himself, and presented with its colors by the women of Indiana. It was at first sent to Evansville, in southern Indiana, on the Ohio River, to prevent supplies of any kind being sent to the South. There, as a police force, it chafed with impatience for more active service, and on June 6 it was ordered to proceed to Cumberland, Md., and join General Patterson, then moving from Pennsylvania towards Harper's Ferry, where the Confederate general Joseph E. Johnston was with a strong force. Travelling by railway, the regiment reached Grafton, Va., very soon, and on the night of the 9th was near Cumberland. At Romney, Va., only a day's march south from Cumberland, there was then an insurgent force, about 1200 strong. Wallace resolved to attack it at once, and so put the insurgents in that region on the defensive. Led by faithful guides along an unguarded mountain road, at night, Wallace, with 800 of his men (having left the others at New Creek), made a perilous journey, and got near Romney at eight o'clock on the evening of June 11. In a narrow pass, half a mile from the

bridge that spanned the south branch of the Potomac at Romney, the advance of the Zouaves was fired upon by insurgent pickets. The camp of the latter was on a bluff near the village, where they had planted two cannons. The ludianians pressed forward, drove the insurgents before them, and, pushing directly up the hill, captured the battery. After a slight skirmish, the insurgents fled in terror to the forest, leaving only women and children (excepting negroes) in the village. Having no cavalry with which to pursue the fugitives, Wallace at once retraced his steps and returned to Cumberland. In the space of twenty-four hours he and his men had travelled eighty-seven miles without rest (forty-six of them on foot), engaged in a brisk skirmish, "and, what is more," reported the gallant colonel, "my men are ready to repeat it to-morrow." The indomitable energy, skill, and spirit displayed in this dash on Romney had a salutary effect, and made the insurgents in all that region more cautious and circumspect. According to the Richmond papers, it so alarmed Johnston by its boldness and its menace of his line of communication with Richmond and Manassas (for he supposed them to be the advance of a much larger force near), that he immediately evacuated Harper's Ferry and moved up the Shenandoah valley to Winchester.

Rosecrans, WILLIAM STARKE, was born at Kingston, O., Dec. 6, 1819, and graduated at West Point in 1842, entering the engineer corps. He was assistant professor in the military academy from 1843 to 1847, and resigned on account

WILLIAM STARKE ROSECRANS.

of ill-health in 1854. When the Civil War broke out he became volunteer aid to General McClellan, and in May, 1861, was made a brigadier-general of the United States Army, doing excellent service in western Virginia during the ensuing summer and fall. He commanded a division at the siege of Corinth in May, 1862; commanded the Army of the Mississippi until October, defeating Price at Iuka (see *Iuka Springs, Battle near*), and Van Dorn and Price at Corinth in October. Then he was made commander of the Army of the Cumberland, and in December

(1862) won a victory in the battle at Stone's River. In June, 1863, he drove Bragg into Georgia, and in September fought and lost the battle of Chickamauga, when he was relieved of his command. In 1864 he commanded the Department of Missouri, and defeated the object of Price's raid. (See *Missouri, Last Invasion of*.) He had been made major-general of volunteers in March, 1862, and in March, 1865, was breveted major-general of the United States Army. He resigned in March, 1867, and was appointed minister to Mexico, but was soon recalled.

Ross, GEORGE, a signer of the Declaration of Independence, was born at New Castle, Del., in 1730; died at Lancaster, Penn., July, 1779. He became a lawyer at Lancaster in 1751; was a representative in the Pennsylvania Assembly from 1768 to 1770, and in 1774 was elected to the first Continental Congress. He was a ready writer and a most skilful committeeman. A few months after he signed the Declaration of Independence ill-health compelled him to leave Congress (January, 1777). After the dissolution of the proprietary government in Pennsylvania a convention appointed him to draw up a "Declaration of Rights;" and a short time before his death he was made judge of the Court of Admiralty.

Ross, JOHN (Koo-wes-koo-we), a Cherokee chief, was born in Georgia in 1790; died in Washington, D. C., Aug. 1, 1866. He was a quarter-breed Indian, and was well educated. In 1828 he became principal chief of the Cherokee na-

JOHN ROSS.

tion, and from the beginning was an efficient champion of their rights against the encroachments and cupidity of the white race. About six hundred of the nation, led by John Ridge, concluded a treaty with the United States, agreeing to surrender the lands of the Cherokees and go west of the Mississippi River. Against this treaty Ross and about fifteen thousand Cherokees protested, but the United States government, having a preponderance of brute force, sent General Scott with troops to compel the Indians to abide by a treaty made by a small minority. They went sadly to their new home, with Ross at their head, a moderate allowance being made them for their losses.

When the Civil War broke out the Cherokees were seduced from their allegiance to the government and joined the Confederacy. Ross, who was a loyal man, protested, but was compelled to yield, and made a treaty with the Confederate government. At the time of his death Ross was urging the claims of his nation to remuneration for losses incurred during the war.

Ross, ROBERT, a British general, was born at Ross Trevor, Devonshire, Eng.; killed near North Point, Md., Sept. 12, 1814. He had served as an officer of foot in Holland and in Egypt; was in the campaign in Spain under Sir John Moore, and commanded a brigade in the battles of Vittoria and the Pyrenees. He commanded the troops sent against Washington in August, 1814, and was successful; but attempting to co-operate with the British fleet in an attack on Baltimore, in September, he was slain while riding towards that city, chatting gayly with an aide-de-camp.

Ross, SIR JOHN, Arctic explorer, was born in Scotland, June 24, 1777; died in London, Aug. 30, 1856. He entered the royal navy when nine years of age, and became a rear-admiral in 1851. He began Arctic voyages in 1828, with Captain Parry as his lieutenant, and in 1850 went in search of Sir John Franklin, in a vessel of ninety tons. In the naval service he was wounded thirteen times.

Rousseau, LOVELL HARRISON, was born in Lincoln County, Ky., Aug. 4, 1818; died in New Orleans, Jan. 8, 1869. In early life, having very little education, he worked at road-making, but finally studied law and was admitted to the bar at Bloomfield, Ind., in 1841. He served in the Indiana Legislature and in the war against Mexico. Settling at Louisville in 1849, he soon took a high place in his profession as a criminal lawyer. He was a member of the Kentucky Senate in 1860, and took a decided stand for the government against the Secessionists and against the quasi-neutrality of that state. (See

LOVELL HARRISON ROUSSEAU.

Kentucky Neutrality.) At the outbreak of the Civil War he raised two regiments, but was obliged to encamp on the Ohio side of the river,

where he established Camp Joe Holt. In September (1861) he crossed the river to protect Louisville, and in October was made brigadier-general of volunteers. With a part of Buell's army he fought at Shiloh (which see), and took a conspicuous part in the battle of Perryville (which see), for which he was promoted to major-general. He was also conspicuous in the battle at Stone's River (which see); was in the campaign in northern Georgia, in 1863, and fought at Chickamanga (which see); commanded the District of Tennessee in 1864, and made a famous raid into Alabama. From 1865 to 1867 he was in Congress. In the latter year he was made a brigadier-general in the United States Army and assigned to duty in Alaska. He afterwards commanded in New Orleans. General Rousseau was a supporter of the policy of President Johnson.

Rowan, STEPHEN C., was born in Ireland, Dec. 25, 1808, and entered the United States Navy as midshipman in February, 1826. He served on the Pacific coast in the war against Mexico, and early in the Civil War commanded the sloop-of-war *Patuxet* in action at Aquia Creek (which see). He was also a participant in the capture of the Confederate forts at Hatteras. He commanded the naval flotilla in the attack on Roanoke Island (which see), and performed good service in the sounds on the coast of North Carolina; also in the attacks on Forts Wagner, Gregg, and Sumter, in Charleston harbor. In 1868-69 he commanded the Asiatic squadron. In July, 1866, he was made rear-admiral, and in September, 1870, vice-admiral.

Royal Authority, END OF, IN SOUTH CAROLINA. (See *Campbell, Lord William*.)

Royal Colonial Commission, FIRST (1634). Morton of Merry Mount made serious charges against the people of Massachusetts before the Privy Council. (See *Merry Mount*.) That body summoned the Council for New England before them to answer the charges. They denied having had anything to do with matters complained of, and added new and serious charges of their own, declaring themselves unable to redress their grievances. They referred the whole matter to the Privy Council. A commission of twelve persons was appointed, with Laud, Archbishop of Canterbury, at its head, to whom full power was given to revise the laws, to regulate the Church, and to revoke charters. The members of the Massachusetts Company in England were called upon to give up their patent, and Governor Cradock wrote for it to be sent over. Morton wrote to one of the old planters that a governor-general had been appointed. Orders were also issued to the seaport towns of England to have all vessels intended for America stopped. The colonists were alarmed. The magistrates and clergy met on an island at the entrance to the inner harbor of Boston, and, resolving to resist the commissioners, agreed to erect a fort on the island, and to advance the means for the purpose themselves until the meeting of the General Court. They sent letters of remonstrance to England, and refused to

send over the charter before the meeting of the court. When that body met, in May, active measures for defence were adopted. They ordered a fort to be built in Boston. Military preparations were ordered, and three commissioners were appointed to conduct "any war that might befall for the space of a year next ensuing." The English government threatened, but did nothing. In September, 1635, a writ of *quo warranto* was issued against the Massachusetts Company; but everything went on in the colony as if no serious threats were impending. The political disorders in England were safeguards to the infant colony. It was after the appointment of this commission that Endicott cut the cross from the standard at Salem. (See *Mutilation of the British Standard*.)

Royal Colonial Commission, SECOND (1664).

Territorial claims, rights of jurisdiction, boundaries, and other matters had created controversies in New England, which were continually referred to the crown, and in 1664 the king signified his intention to appoint a commission for hearing and determining all matters in dispute. This occasioned alarm in Massachusetts, which had been a narrow oppressor of other colonies, especially of Rhode Island, and against which serious complaints had been made. A large comet appearing at that time increased the general alarm, for it was regarded as portentous of evil, and a fast was ordered. Fearing a design to seize their charter might be contemplated, it was intrusted to a committee for safe-keeping. The commission was appointed, consisting of Sir Richard Nicolls, Sir Robert Carr, Sir George Cartwright, and Samuel Maverick, of Massachusetts. They came with an armament to take possession of New Netherland. Touching at Boston, the commissioners asked for additional soldiers, but the request was coldly received. The magistrates said they could not grant it without the authority of the General Court. That body soon met and voted two hundred soldiers. In Connecticut the commissioners were cordially received, and Governor Winthrop accompanied the expedition against New Netherland. After the conquest, they proceeded to settle the boundary between New York and Connecticut. (See *New Netherland, Conquest of, by the English, and New York, Colony of*.) Leaving Nicolls at New York as governor, the other commissioners proceeded to Boston. Meanwhile the authorities of Massachusetts had sent a remonstrance to England against the appointment of the commissioners. It was unheeded. The Massachusetts authorities were unyielding, the commissioners were haughty and overbearing, and a bitter mutual dislike finally made their correspondence mere bickerings. The commissioners proceeded to settle the boundary between Plymouth and Rhode Island. More difficult was the settlement of the boundary between Rhode Island and Connecticut, because of opposing claims to jurisdiction over the Pequod country. The commissioners finally directed that the region in dispute should constitute a separate district, under the title of the "King's Province" (which see). Neither party was satis-

fied, and the boundary dispute continued fifty years longer. The commissioners now proposed to sit as a court to hear complaints against Massachusetts, of which there were thirty. The General Court, by public proclamation, forbade such a proceeding, and the commissioners went to New Hampshire and Maine, when they decided in favor of claims of the heirs of Mason and Gorges. In the latter province they organized a new government; and on their return to Boston the authorities complained that the commissioners had disturbed the peace of Maine, and asked for an interview. It was denied by the commissioners, who denounced the magistrates as traitors because they opposed the king's orders. The commissioners having violated a local law by a carousal at a tavern, a constable was sent to break up the party, when one of the commissioners and his servant beat the officer. Another constable was sent to arrest the commissioners. They had gone to the house of a merchant. The officer went there and reproved them, saying, "It is well you have changed quarters, or I would have arrested you." "What," exclaimed Carr, "arrest the king's commissioners?" "Yes, and the king himself, if he had been here." "Treason! treason!" cried Maverick. "Knave, you shall hang for this!" The commissioners sent an account of their proceedings to the king, and soon afterwards they were recalled (1666). Their acts were approved, and those of all the colonies except Massachusetts, which was ordered to "appoint five able and meet persons to make answer for refusing the jurisdiction of the king's commissioners." Although this order produced considerable alarm, the sturdy magistrates of Massachusetts maintained their position with much adroitness, and the country being engaged in a foreign war, the nation left his majesty to fight alone for the maintenance of the royal prerogative. Massachusetts was victorious, and soon after the departure of the commissioners a force was sent to re-establish the authority of that colony over Maine.

Royal Governor, FIRST PETITION FOR THE RECALL OF A. In 1768 the Massachusetts Assembly, after declaring they would not rescind their Circular Letter (which see), adopted a petition to the king asking for the recall of Francis Bernard, the provincial governor, "that one more worthy to represent so great and good a king might be sent to preside over the province." This was the first instance of the recall of a royal governor having been asked for.

Royal Greens, JOHNSON'S. Sir John Johnson, son of Sir William, was commissioned a colonel in the British army soon after the outbreak of the Revolution, and raised two battalions, composed of Tories and his own Scotch retainers, in number about one thousand. This corps he called "The Royal Greens," because of their green uniforms. They were a formidable corps in connection with Indian allies, and carried destruction and distress throughout large portions of the Mohawk region.

Royal Jurisdiction in Virginia. While

Charles II., son of the beheaded king, was banished from England he exercised jurisdiction in Virginia. In June, 1650, he sent from Breda, his place of exile, a commission to Governor Berkeley, declaring his intention of ruling and ordering the colony of Virginia according to the laws and statutes of England, which were to be established there. The authority of the crown was acknowledged in Virginia, and at one time Charles thought of going to that colony to rule in person. The acknowledgment of royal authority in Virginia, Barbadoes, Bermuda, and Antigua caused the British Parliament to prohibit trade with these provinces. (See *Old Dominion*.)

Royal Orders to Employ Indians. In the summer of 1775 Stuart, the Indian Agent for the Southern Department, received royal orders, through General Gage, to employ the Indians against the "rebels." He was at Charleston, and one of the latest acts of Gage was to write to him from Boston, saying, "The people of Carolina, in turning rebels to their king, have lost all faith. Improve a correspondence with the Indians to the greatest advantage, and, when opportunity offers, even make them take arms against his majesty's enemies, and distress them all in their power; for no terms are now to be kept with them. They have brought down all the savages they could against us here, who, with their riflemen, are continually firing upon our advanced sentries. In short, no time should be lost to distress a set of people so wantonly rebellious. Supply the Indians with what they want, be the expense what it will, as every exertion must now be made on the part of the government." Concerning the employment of Indians by the Americans before Boston, see *Stockbridge Indians*.

Royal Prerogative (THE) and New York. The Board of Trade and Plantations, with the sanction of the king and Privy Council (which see), attempted to bring the province of New York to submission to the royal will. The Assembly had shown much independence of spirit in their dealings with the unpopular Governor Clinton. Sir Danvers Osborn, brother-in-law of the Earl of Halifax, was appointed to succeed Clinton. He was almost crazed by grief at the recent loss of his wife, and on the voyage brooded over the bereavement. His instructions for subduing the New-Yorkers were imperative. On his arrival he was received with acclamations by the people, while they hooted at the retiring Clinton. "I expect like treatment before I leave the government," he said, moodily, to Clinton. On the same day he was alarmed and made very nervous by an address from the council, who declared they would "not brook any infringement of their inestimable liberties, civil and religious." On the following day he communicated to the council his instructions, which required the Assembly "to recede from all encroachments on the prerogative," and "to consider, without delay, of a proper law for a permanent revenue, solid, definite, and without limitations." With distress marked on his

countenance, and with a plaintive voice, Osborn inquired whether these instructions would be obeyed. He was given to understand that they would not. With a sigh, he leaned against the window-frame and said, "Then why am I come here?" Honest, conscientious, and truthful, Osborn despaired. He spent the night in arranging his private affairs, and before the dawn hanged himself to a post of his garden fence.

Royal Rule, END OF, IN NORTH CAROLINA. (See *Martin, Governor Josiah, Flight of.*)

Royal Rule, END OF, IN VIRGINIA. Governor Dunmore called a meeting of the Virginia Assembly to consider a conciliatory proposition made by Lord North. They rejected it, and in his anger he fulminated proclamations against Henry and the committees of vigilance which were formed in every county in Virginia. He declared that, should one of his officers be molested in the performance of his duty, he would raise the royal standard, proclaim freedom to the slaves, and arm them against their masters. He sent his family (May 4, 1775) on board the British man-of-war *Fowey*, in the York River, fortified his "palace," and secretly placed powder under the magazine at Williamsburg, with the evident intention of blowing it up should occasion seem to require it. The discovery of this "gunpowder plot" greatly irritated the people. A rumor came (June 7) that armed marines were on their way from the *Fowey* to assist Dunmore to enforce the laws. The people flew to arms, and the governor, alarmed, took refuge on the man-of-war. He was the first of the royal governors who abdicated government at the beginning of the Revolution. From the *Fowey* Dunmore sent messages, addresses, and letters to the Burgesses in session at Williamsburg, and received communications from them in return. When all bills passed were ready for the governor's signature, he was invited to his Capitol to sign them. He declined, and demanded that they should present the papers at his residence on ship-board. Instead of this, the Burgesses delegated their powers to a permanent committee and adjourned. So ended royal rule in Virginia.

Royal Troops in Virginia, FIRST. (See *Berkeley, Sir William.*)

Royalist Colonies. The English colonists in the West Indies, as well as in Virginia and Maryland, adhered to Charles II., then in exile. In October, 1650, the victorious Parliament authorized the Council of State to send a land and naval force to bring these colonies into subjection, and all trade with these colonies was prohibited, and the capture of all vessels employed in it was authorized. Sir George Ayscue was sent with a fleet against Barbadoes, and another expedition, under the direction of five commissioners, was sent against the Virginians in September, 1651. Ships for this purpose were furnished by merchants trading with Virginia; and they bore seven hundred and fifty soldiers and one hundred and fifty Scotch prisoners taken at the battle of Worcester, sent

over to be sold in Virginia as servants. This expedition went by way of the West Indies, where it joined Ayscue, and assisted him in capturing Barbadoes, which he had not been able to do alone. The expedition reached the Chesapeake in March, 1652. There were several Dutch ships lying in the James River, whose crews agreed to assist in the defence of the province against the parliamentary forces. But a negotiation ensued, which resulted in a capitulation. Two sets of articles were signed—one with the Assembly, which was favorably inclined towards Parliament; the other with Governor Berkeley and his council, who were to be allowed a year to settle up their affairs, without being required to take new oaths. They were guaranteed the right to sell their property and go where they pleased. The Assembly was dealt fairly and honorably with. Those who did not choose to relinquish the use of the Book of Common Prayer, or to subscribe to a promise "to be true and faithful to the Commonwealth of England," as was then established, "without king or House of Lords," were allowed a year for making sale of their property and departing. The Dutch vessels were provided for. Berkeley's commission was declared void. A new assembly was called, when Richard Bennett, who accompanied the expedition, was elected Governor of Virginia, and Clayborne, who also came with the expedition, was chosen Secretary. (See *Clayborne, William.*)

Ruger, THOMAS H., was born in New York in 1833, and graduated at West Point in 1854, but resigned the next year and became a lawyer in Janesville, Wis. (1856-61). In 1861-62 he served in the Shenandoah valley as colonel of Wisconsin volunteers, and was in the battles of Antietam in 1862 and Chancellorsville in 1863. At Gettysburg he commanded a division, having been made brigadier-general in November, 1862. He commanded a brigade in the Atlanta campaign in 1864, and a division in operations in North Carolina until the surrender of Johnston (which see). He was breveted brigadier-general of the United States Army in 1867. He was afterwards superintendent of the Military Academy at West Point.

Ruggles, TIMOTHY, loyalist, was born at Rochester, Mass., Oct. 11, 1711; died at Wilmot, N. S., Aug. 4, 1795. He was at the battle of Lake George (which see) at the head of a brigade, and was second in command. The next year (1756) he was made a judge of the Court of Common Pleas, and was chief-justice of that court from 1762 until the Revolution. In 1762 he was Speaker of the Assembly, and for many years an active member of that body. He was a delegate to the Stamp Act Congress (which see), and was made its president, but refused to concur in its measures. For this act the Legislature reprimanded him. On account of his Toryism he took refuge in Boston, where, in 1775, he tried without success to raise a corps of loyalists. When the British evacuated Boston (March, 1776) he went with the troops to Halifax, and

became one of the proprietors of the town of Digby, N. S. General Ruggles was a man of great ability and learning, and fluent in speech.

Rule of 1756. When in 1756 war between Great Britain and France was formally declared, the former power announced as a principle of national law that "no other trade should be allowed to neutrals with the colonies of a belligerent in time of war than what is allowed by the parent state in time of peace." This was in direct opposition to the law of nations promulgated by Frederick the Great—namely, "The goods of an enemy cannot be taken from on board the ships of a friend;" and also in direct violation of a treaty between England and Holland, in which it was stipulated expressly that "free ships make free goods"—that the neutral should enter safely and unmolested all the harbors of the belligerents, unless they were blockaded or besieged. This dictation of law to other nations for merely selfish purposes drew upon Great Britain the dislike of all. Then it was aimed directly at France, the weaker naval power.

Ruling Class, THE, IN THE SOUTH. Of the 11,000,000 inhabitants in the slave-labor states at the beginning of the Civil War, the ruling class in the South—those in whom resided in a remarkable degree the political power of those states—numbered about 1,000,000. Of these the large land and slave holders, whose influence in the body of 1,000,000 was almost supreme, numbered less than 200,000. In all the Southern States in 1850, less than 170,000 held 2,800,000 out of 3,300,000 slaves. The production of the great staple, cotton, which was regarded as king of kings, in an earthly sense, was in the hands of less than 100,000 men. The 11,000,000 inhabitants in the slave-labor states in 1860 consisted of 6,000,000 small slaveholders, and non-slaveholders, mechanics, and laboring-men; 4,000,000 negro slaves, and 1,000,000 known in those regions by the common name of "poor white trash," a degraded population scattered over the whole surface of those states. These figures are round numbers, proximately exact according to published statistics. There had been for many years a very strong desire among the "ruling class" in the South for a thoroughly aristocratic, if not a monarchical, government; and this strong desire stimulated efforts to dissolve the Union, and so get rid of political and social union with the democratic society of the free-labor states. Their determination to control or ruin the Republic was evinced about fifty years before the breaking-out of the Civil War. In the winter of 1812, John C. Calhoun said to Captain (late Admiral) Stewart, "That we are essentially aristocratic I cannot deny, but we can and do yield much to democracy. This is our sectional policy. We are, from necessity, thrown upon and solemnly wedded to that party, however it may occasionally clash with our feelings, for the conservation of our interests. It is through our affiliation with that party in the Middle and Western States that we hold power. But when we cease thus to control this nation, through a dis-

jointed democracy, or any material obstacle in that party shall tend to throw us out of the rule and control, we shall resort to a dissolution of the Union."—*Letter of Stewart to G. W. Childs, De Bow's Review*, the organ of the "ruling class," continually uttered sentiments like the following: "The right to govern resides in a very small minority; the duty to obey is inherent in the great mass of mankind. The real civilization of a country is in its aristocracy. The masses are moulded into soldiers and artisans by intellect, just as matter and the elements of Nature are made into telegraphs and engines. The poor who labor all day are too tired at night to study books. If you make them learned they soon forget all that is necessary in the common transactions of life. To make an aristocrat in the future, we must sacrifice a thousand paupers. Yet we would by all means make them—make them permanent, too, by laws of entail and primogeniture. An aristocracy is patriarchal, parental, and representative. The feudal barons of England were, next to the Fathers, the most perfect representative government. The king and barons represented everybody, because everybody belonged to them." And when the Civil War broke out the utterances of the Southern press, especially in South Carolina, showed a desire to sever a bond that placed the "ruling class" on a level with the Northern masses. "It is a gross mistake," wrote George Fitzhugh, a Virginian, "to suppose that 'Abolition' is the cause of dissolution between the North and the South. The Cavaliers, Jacobites, and the Huguenots of the South naturally hate, condemn, and despise the Puritans who settled the North. The former are master races, the latter a slave race, the descendants of the Saxon serfs." The *Charleston Mercury*, a violent secession paper, scorned the assertion that "Abolition twaddle" had caused any sectional feeling. It declared that it was an abiding consciousness of the degradation of the "chivalric Southrons" being placed on an equality in government with "the boors of the North" that made "Southern gentlemen" desire disunion. That paper, edited by the son of a leading disunionist, said, haughtily, "We are the most aristocratic people in the world. Pride of caste and color and privilege make every man an aristocrat in feeling." It was by men of this cast of mind that "Southern Rights" associations—organizations having the destruction of the Union in view—were formed and fostered for nearly thirty years before the war. This small class of deluded men, feeling themselves superior to all others on the continent as patrons of refinement, courtly manners, and every grace of chivalry, had for many years yearned for separation from the vulgar North. William H. Trescott, Assistant Secretary of State under Buchanan, and one of the most active members of the "Southern Rights Association" of South Carolina, said in an address before the South Carolina Historical Society in 1859, "More than once has the calm self-respect of old Carolina breeding been caricatured by the consequential insolence of vulgar imitation." Dr. Russell, the correspondent of the *London Times* in the

early period of our Civil War, wrote from South Carolina at the close of April, 1861, "There is a prevailing voice that says, 'If we could only get one of the royal race of England to rule over us we should be content.' That sentiment," he wrote, "varied a hundred ways, has been repeated to me over and over again." (See *Dissolution of the Union long Contemplated*.)

Rumford (Benjamin Thompson), COUNT, was born at Woburn, Mass., March 26, 1753; died at Auteuil, France, Aug. 21, 1814. In early youth he manifested much love for the study of science while engaged in a store in Boston at the time

COUNT RUMFORD.

of the Boston Massacre (which see). Then he taught school in Rumford (now Concord), N. H., and in 1762 he married a wealthy widow of that place, and he was appointed major of militia over several older officers. This offended them, and led to much annoyance for young Thompson. He was a conservative patriot, and tried to get a commission in the Continental Army, but his opponents frustrated him. He was charged with disaffection, and finally persecution drove him to take sides with the crown. He was driven from his home, and in October, 1775, he took refuge within the British lines in Boston. When Howe left for Halifax, he sent Thompson to England with despatches, where the Secretary of State gave him employment, and in 1780 he became Under-Secretary. In that year he returned to America, raised a loyalist corps called "The King's American Dragoons," and was made lieutenant-colonel, serving a short time in South Carolina. On returning to England at the close of the war, he was knighted, and in 1784 entered the service of the Elector of Bavaria as aide-de-camp and chamberlain. To that prince he was of infinite service in reorganizing the army and introducing many needed reforms. He greatly beautified Munich by converting an old hunting-ground into a handsome garden or park, and the grateful citizens afterwards erected a fine monument to his honor. Thompson had been successively raised to the rank of major-general in the army, member of the Council of State, lieutenant-general, commander-in-chief of the general staff, minister of war, and count of the Holy

Roman Empire. On the latter occasion he chose for his title, "Rumford," the name of the place where he had married his wife. In 1795 he again visited England, and returning to Bavaria in 1796, when that country was threatened by the war between France and Germany, he was appointed head of the Council of Regency during the absence of the elector, and maintained the neutrality of Munich. For this service honors were bestowed upon him, and he was made superintendent of the police of the electorate. At the end of two years he went back to England. The Bavarian government wished him to be its minister, but the English government, acting on the rule of inalienable allegiance, could not receive him as such. Count Rumford gave up his citizenship in Bavaria and settled in Paris. There he married for his second wife the widow of Lavoisier, and with her retired to the villa of Auteuil, where he spent the remainder of his life in philosophical pursuits, and contributed a great number of essays to scientific journals. He made many experiments and discoveries in the matter of heat and light. He instituted prizes for discoveries in regard to light and heat, to be awarded by the Royal Society of London and the American Academy of Sciences; and he bequeathed to Harvard University the funds by which was founded the Rumford Professorship of the Physical and Mathematical Sciences as Applied to the Useful Arts. It was established in October, 1816. He left a daughter by his first wife, who bore the title of Countess of Rumford, and who died at Concord in 1852.

Rumsey, JAMES, inventor, was born in Cecil County, Md., in 1743; died in London, Dec. 23, 1792. As early as 1784 he propelled a boat on the Potomac by machinery, and in 1786 he propelled one by steam on the same river, and obtained a patent for his discovery and invention from Virginia in 1787. A Rumsey Society, of which Franklin was a member, was formed in Philadelphia to aid him. He went to London, where a similar association was formed, and a boat and machinery were built for him. He obtained patents in Great Britain, France, and Holland. He made a successful experiment on the Thames in 1792, but before he could complete his invention he died. His agency in "giving to the world the benefit of the steamboat" was acknowledged and appreciated by the Kentucky Legislature, which, in 1839, presented a gold medal to his son in token of such acknowledgment.

Running the Gantlet. Leslie Combs, a captain of spies under General Green Clay, was made a prisoner with several companions at Dudley's defeat, opposite Fort Meigs. They were marched down to old Fort Miami. On the way the Indians were allowed by the British officers to rob the prisoners of their money, watches, and even clothing. Combs showed his wounds as a plea for consideration, but he, too, was stripped; and passing on they came to two lines of Indians near some scalped dead men, close by a ditch in front of the old gate of the fort. They extended nearly fifty feet. Between these the

prisoners were compelled to run for their lives, and in that race many were killed or maimed by pistols, war-clubs, scalping-knives, and tomahawks. The number of prisoners thus slaughtered, without Proctor's attempt at interference, was estimated at a number nearly equal to those slain in battle. When the prisoners were all inside the fort the Indians prepared to renew the slaughter. No British officer interfered, but Tecumtha, hearing of the affair, had hastened to the fort with all the speed his horse could command. He arrived in time to prevent the second massacre. General Combs yet (1880) lives to tell the tale. (See *Dustin, Hannah, Bravery of; also Combs, Leslie.*)

Rush, BENJAMIN, one of the signers of the Declaration of Independence, was born near Philadelphia, Dec. 24, 1745; died in Philadelphia, April 19, 1813. He studied medicine in Edinburgh, London, and Paris, as well as in Philadelphia, and became one of the most eminent physicians of his time, and filled professorial chairs. He was also a patriot, and took an active part in the great questions at the kindling of the war for independence. He urged in the Convention of Pennsylvania the expediency of a declaration of independence, and was elected to Congress in time to vote for it. He was made surgeon-general of the Middle Department in April, 1777, and in July physician-general. He resigned these positions early in 1778. About 1785 he proposed in Philadelphia the establishment of the first dispensary in the United States. Dr. Rush was a firm supporter of the national Constitution. During the prevalence of yellow fever in Philadelphia (1793), only Dr. Rush treated it successfully. It was estimated that he saved from death no fewer than six thousand people in Philadelphia. In one day he treated one hundred patients. He received marks of esteem for his medical skill from foreign potentates, and his writings upon medical subjects are numerous and valuable.

Rush, RICHARD, diplomatist, a son of the eminent physician Dr. Benjamin Rush, was born in Philadelphia, Aug. 29, 1780; died there, July 30, 1859. He graduated at Princeton in 1797; became a lawyer in 1800; attorney-general of Pennsylvania in 1811, and in November of that year comptroller of the United States Treasury. From 1814 to 1817 he was Attorney-general of the United States; was temporary Secretary of State under Monroe in 1817, and was minister at the British court from 1817 to 1825, where he negotiated several important treaties, especially that of 1818 respecting the fisheries. President Adams recalled him and made him Secretary of the Treasury in 1825. In 1829 he negotiated an advantageous loan for the corporations of Washington, Georgetown, and Alexandria. He assisted in adjusting a boundary dispute between Ohio and Michigan in 1835, and in 1836 the President of the United States appointed him commissioner to obtain the Smithsonian legacy, and he returned in August with the entire amount. (See *Smithsonian Institute.*) Mr. Rush was a vigorous writer, and in the newspapers of the day he pub-

lished many essays in favor of the war with England (1812-15); also in 1833 many able letters against the rechartering of the United States Bank (which see). In 1815 he compiled an edition of the laws of the United States.

Russell, BENJAMIN, journalist, was born Sept. 13, 1761; died Jan. 4, 1845. He learned the printer's art of Isaiah Thomas, served in the army of the Revolution, and was the army correspondent of Thomas's newspaper, the *Massachusetts Spy*, published at Worcester, Mass. In 1784 he began the publication, in Boston, of the *Columbian Centinel*, a semi-weekly, which soon became the leading newspaper in the country, containing contributions from men like Ames, Pickering, and other able men of the Federal school in politics. Mr. Russell was twenty-four years a representative of Boston in the Massachusetts Assembly, and was for several years in the State Senate and the Executive Council. He was the originator of the word "Gerrymander" (which see).

Russell, DAVID ALLEN, was born at Salem, N. Y., Dec. 10, 1820; died in battle at Oppquan, Va., Sept. 19, 1864. He graduated at West Point in 1845; served in the war against Mexico; was made captain of infantry in 1854; was lieutenant-colonel of the Seventh Massachusetts Volunteers in April, 1861, and brigadier-general in November, 1862. In the battle of Fredericksburg he led the advance; was distinguished in the battle of Gettysburg, and also in the campaign against Richmond, in 1864. His coolness and bravery saved the Sixth Corps from destruction on the second day of the battle in the Wilderness. On the 9th of May he was put in command of a division of that corps, and was severely wounded at the battle of Cool Arbor. He was afterwards transferred to the Army of the Shenandoah. (See *Winchester, Battle of.*)

Russell, JONATHAN, LL.D., was born at Providence, R. I., in 1771; died at Milton, Mass., Feb. 16, 1832. He graduated at Brown University in 1791; studied law, but became a merchant, and his taste led him into political life, though he never sought office. Mr. Russell was one of the commissioners who negotiated the treaty at Ghent, in 1814; and after that he was United States Minister-plenipotentiary at Stockholm, Sweden, for several years. On his return to the United States, he settled at Mendon, Mass., of which district he was a member of Congress from 1821 to 1823. Although he was a forcible and elegant writer, little is known of his literary productions excepting an oration delivered at Providence on July 4, 1800, and his published correspondence while in Europe.

Russell, WILLIAM, was born in Virginia, in 1758; died in Fayette County, Ky., July 3, 1825. He entered the army of the Revolution at sixteen years of age; was a lieutenant in Campbell's regiment in the battle of King's Mountain (which see); rose to the rank of captain in that war, and in 1793 commanded Kentucky mounted volunteers, under Wayne, with the rank of lieutenant-colonel. He was also in the War of 1812-15, and served, altogether, in about twenty

campaigns. He was a representative in the Legislature of both Virginia and Kentucky.

Russia Offers her Mediation. John Quincy Adams was the American minister to the Russian court in 1812. He was on intimate terms with the emperor, and when intelligence of the declaration of war reached the czar, the monarch expressed his regret. He was then on friendly terms with Great Britain, and his prime-minister suggested to Mr. Adams the expediency of tendering the mediation of Russia for the purpose of effecting a reconciliation between the United States and Great Britain. Mr. Adams favored it. After the defeat of Napoleon at Moscow, the czar sent instructions to M. Daschkoff, his representative at Washington, to offer to the United States his friendly services in bringing about a peace. This was done March 8, 1813. The President, always anxious for peace, immediately accepted the friendly offer, and nominated Albert Gallatin and James A. Bayard commissioners to act jointly with Mr. Adams to negotiate a treaty of peace with Great Britain. The Thirteenth Congress assembled on May 24, 1813, and, with his message, the President sent in a letter from the czar, offering his mediation. He also announced that the offer had been accepted; that commissioners had been appointed to conclude a treaty of peace with British commissioners, and that Gallatin and Bayard had departed for Russia, there to meet Mr. Adams. The Senate refused to confirm the nomination of Gallatin, because he still held the position of Secretary of the Treasury. The attempt at mediation by Russia was a failure.

Russian Troops for America. When King George, in council, determined to hire mercenary troops to assist in subduing his subjects in America, he first turned to the Empress of Russia, Catharine II., a woman of rare ability, and ambitious of glory and empire. Her minister, Prince Potemkin, had boasted that she had troops enough to spare to trample the Americans under foot. The king wrote an autograph letter to the empress, and it was believed that she would instantly comply with his request. But Catharine sent a flat refusal to enter into such nefarious business, saying (through her minister): "I should not be able to prevent myself from reflecting on the consequences which would result for our dignity, for that of the two monarchies and the two nations, from this junction of our forces simply to calm a rebellion which is not supported by any foreign power." This stinging rebuke of the British policy in this case nettled the king, and he was surprised and offended by what he called her want of politeness in not answering his gracious autograph letter with her own hand. He thus sputtered out his indignation in his rapid manner: "She has not had the civility to answer me with her own hand, and has thrown out expressions that may be civil to a Russian ear, but certainly not to more civilized ones." So he turned from the empress of "barbarians" to the needy ruler of a people out of whom had come his own dynasty,

and procured his mercenaries. (See *German Mercenaries* and *English Ambassador at Moscow*.)

Rutherford, GRIFFITH, was born in Ireland; died in Tennessee, towards the close of the last century. A resident of western North Carolina, he represented Rowan County in the Convention at New Berne in 1775. He led a force against the Cherokees in 1776, and was appointed by the Provincial Congress a brigadier-general in April of that year. He commanded a brigade at the battle near Camden (see *Sanders's Creek, Battle at*), and was made a prisoner, and afterwards commanded at Wilmington, when the British evacuated. He was State Senator in 1784, and soon afterwards emigrated to Tennessee, where, in 1794, he was a member of the Council.

Rutledge, EDWARD, a signer of the Declaration of Independence, was born at Charleston, S. C., Nov. 23, 1749; died Jan. 23, 1800. His father (Dr. John Rutledge) came from Ireland. He completed his law studies in England, and began practice in Charleston in 1773. He was a member of the First Continental Congress, and continued there until 1777. He was distinguished as a debater; was a member of the first Board of War (which see), and was on the committee to confer with Lord Howe, in 1776. (See *Peace Commissioners*.) In 1780 he was made a prisoner at Charleston, and sent to St. Augustine (see *Siege of Charleston*), and did not return until 1782. In the South Carolina Legislature he drew up (1791) the law abolishing primogeniture, and was an ardent advocate of the national Constitution. Mr. Rutledge was Governor of South Carolina from 1798 until his death.

Rutledge, JOHN, of Irish parentage, was born at Charleston, S. C., in 1739; died there, July 23, 1800. He studied law in London, returned to Charleston in 1761, and soon afterwards rose to great eminence in his profession. In 1765 he

JOHN RUTLEDGE.

was a member of the Stamp Act Congress that met in New York city; of the South Carolina Convention of patriots in 1774; and of the First

Continental Congress, at Philadelphia, the same year. Mr. Rutledge was also in Congress in 1775, and was chairman of the convention that framed the state constitution of South Carolina in 1776. By his vigilance and activity he saved Fort Moultrie from the effects of an order by General Lee to evacuate it when attacked by the British; and he was elected president of the state under the new constitution. In 1779 he was chosen governor, and the Legislature made him a temporary dictator when Charleston was threatened with siege. On the fall of Charleston (May, 1780), Rutledge went to North Carolina, and accompanied the Southern army until 1782, when he was elected to Congress. He was chosen Chancellor of South Carolina in 1784; was a member of the convention that framed the national Constitution (1787); appointed Associ-

ate-justice of the Supreme Court of the United States (1789), and elected Chief-justice of South Carolina in 1791. In 1795 he was appointed Chief-justice of the United States, but the Senate, for political reasons, did not confirm him.

Ryswick, PEACE OF. In 1697 a treaty of peace was concluded at Ryswick, two miles from the Hague, by France on one side and the German empire, England, Spain, and Holland on the other, that terminated a long war begun in 1686. By that treaty the King of France, who had espoused the cause of James II., acknowledged William of Orange King of Great Britain and Ireland, and provinces were restored to Spain and Germany, but Alsace and Lorraine were retained by France. They were won back by Germany in 1871. This treaty ended the inter-colonial war in America.

S.

Sabine Cross-roads, BATTLE AT. The Confederates had made a stand at Sabine Cross-roads. (See *Red River Expedition*.) Franklin's troops had moved forward, with General Lee's cavalry in the van, followed by two thin divisions under General Ransom. General Emory followed Ransom. Among his troops was a brigade of colored soldiers. Lee had been ordered to attack the Confederates wherever he should find them, but not to bring on a general engagement. Franklin had advanced to Pleasant Hill (which see), where Banks had joined him. Near Sabine Cross-roads, Lee found the trans-Mississippi army, full 20,000 strong, under several Confederate leaders. Waiting for the main army to come up, Lee and Ransom were attacked (April 8, 1864) by the Confederates.

ron, arrived at five o'clock, but the overwhelming number of the Confederates turned the National flank and struck their centre heavily. This assault, like the first, was stubbornly resisted, but, finding the Confederates gaining their rear, the Nationals fell back, and were received by General Emory, who was advancing. Ransom lost ten guns and 1000 men captured, and Lee 156 wagons filled with supplies.

Sackett's Harbor, FIRST ATTACK UPON (1812). Early in July (1812) a wild rumor spread that the *Oneida* (which see) had been captured by the British, and that a squadron of British vessels were on their way from Kingston to recapture the *Lord Nelson*, lying at Sackett's Harbor. General Brown, with a militia force, immediately took post at the harbor. The story was not

SACKETT'S HARBOR IN 1812

At a little past noon, General Banks arrived at the front, and found the skirmishers hotly engaged. Orders were sent to Franklin to hurry forward, but he did not arrive in time to give needed assistance, for at four o'clock 8000 footmen and 12,000 horsemen had fallen upon the Nationals along their whole line, and drove them back. Franklin, with a division under General Came-

true, but a squadron made an attack on the harbor eighteen days afterwards. The squadron, built at Kingston, consisted of the *Royal George*, 24; *Prince Regent*, 22; *Earl of Moira*, 20; *Simcoe*, 12; and *Seneca*, 4, under the command of Commodore Earle, a Canadian. Earle sent word to Colonel Bellinger, in command of the militiamen at Sackett's Harbor, that all he

wanted was the *Oneida* and the *Lord Nelson*, at the same time warning the inhabitants that in case of resistance the village would be destroyed. The *Oneida* weighed anchor and attempted to escape to the lake. She failed, and returned. She was moored just outside of Navy Point, in position to have her broadside of nine guns brought to bear upon approaching vessels. The remainder of her guns were taken out to be placed in battery on the land. An iron 32-pounder, which had been lying in the mud near the shore, and from that circumstance was called the "Old Sow," was placed in battery on a bluff with three other heavy guns; and a company of artillery had four heavy guns. With this force the Americans were prepared to receive the invaders. The squadron slowly entered the harbor (July 29, 1812), and when the *Royal George* and *Prince Regent* were near enough, Captain William Vaughan, a sailing-master, in charge of the "Old Sow" and her companions, opened fire upon them, but without effect. The people on the shore plainly heard derisive laughter on board the *Royal George*. Shots came from the two British vessels, which were returned, and a brisk cannonading was kept up for about two hours, the squadron standing off and on out of the range of the smaller guns. One of the enemy's shot (a 32-pounder) came over the bluff, struck the ground, and ploughed a furrow. Sergeant Spier caught it up, and ran with it to Vaughan, exclaiming, "I have been playing ball with the redcoats and have caught 'em out. See if the British can catch it back again." The *Royal George* was at that moment nearing to give a broadside. Vaughan's great gun immediately sent back the ball with such force and precision that it went crashing through the stern of the British vessel, raked her decks, sent splinters as high as her mizzen topsail, killed fourteen men, and wounded eighteen. The *Royal George* had already received a shot between wind and water, and been pierced by another, and she now showed a signal for retreat. The squadron put about and sailed out of the harbor, while the band on shore played "Yankee Doodle." The Americans received no injury.

Sackett's Harbor, SECOND ATTACK UPON (1813). When the British authorities heard of the depletion of the military force at Sackett's Harbor when Chauncey and Dearborn sailed for York (see *York, Capture of*), they resolved to attempt its capture. It was the chief place of deposit

for the naval and military stores of the Americans on the northern frontier, and its possession would give to the holder the command of the lake. The fall of York made the British hesitate; but when it was known that Chauncey and Dearborn had gone to the Niagara River, an armament proceeded from Kingston to assail the harbor. On the evening of May 27, 1813, word reached that place that a British squadron, under Sir James Yeo, had sailed from Kingston. Colonel Backus was in command of the troops at Sackett's Harbor. General Jacob Brown was at his home, a few miles from Watertown, and he had promised to take chief command in case of invasion. He was summoned, and before the dawn of the 28th inst. he was in Backus's camp. Thence he sent expresses in all directions to summon the militia to the field, and fired alarm guns to arouse the inhabitants. As fast as the militia came in they were armed and

LIGHT-HOUSE ON HORSE ISLAND.

sent to Horse Island, where the Sackett's Harbor light-house now stands. It was connected with the main by an isthmus covered with water of fordable depth, and there it was expected the invaders would attempt to land. At noon (May 28, 1813) six British vessels and forty bateaux appeared off Sackett's Harbor, having over one thousand land-troops, under the command of Governor-general Sir George Prevost. The troops were embarked in the bateaux, but were soon ordered back, when the whole squadron went out on the open lake. The appearance of a flotilla of American gunboats approaching from the westward had alarmed him. They were conveying part of a regiment from Oswego to join the garrison at Sackett's Harbor. As soon as their real weakness was discovered the squadron returned to the harbor, and on the morning of the 29th a considerable force, armed with cannons and muskets, landed on Horse Island. The militia had been withdrawn from the island, and placed behind a gravel ridge on the main. These fled almost at the first fire of

the invaders. This disgraceful conduct astonished General Brown, and he attempted to rally the fugitives. Colonel Backus, with his regulars and Albany volunteers, were disputing the advance inch by inch, and a heavy gun at Fort Tompkins, in the front, was playing upon the British, when a dense smoke was seen rising in the rear of the Americans. The storehouses, in which an immense amount of materials had been gathered, and a ship on the stocks, had been fired by the officers in charge, under the impression, when the militia fled, that the fort would be captured. For a moment it was believed the British were the incendiaries, and the sight was disheartening; but when Brown found it was an unwise friend, he felt a relief, and redoubled his exertions to rally the militia. He succeeded, and so turned the fortunes of the day in favor of his country. Sir George Prevost, moving cautiously with his troops, mounted a high stump, and, with his field-glass, saw the rallying militia on his flank and rear. Believing them to be reinforcements of American regulars, he sounded a retreat, and that movement soon became a disorderly flight, as they hurried to reach their boats, leaving their dead and wounded behind them. At noon the whole armament left the harbor, and the menaced place was saved. So, also, was the ship on the stocks; not so the stores, for half a million dollars' worth was destroyed. Sackett's Harbor was never again molested, and it remained the chief place of deposit for supplies of the army on the northern frontiers during the war. For his conduct in the defence of Sackett's Harbor, Brown was made a brigadier in the United States Army.

Saco Bay, SETTLEMENT AT. In 1616, Sir Ferdinando Gorges sent out, at his own expense, Richard Vines to make a settlement in New England. On Saco Bay he spent the winter of 1616-17, at a place called Winter Harbor. During that period, the pestilence that almost depopulated the country from the Penobscot to Narraganset Bay (see *Plymouth, New*) raged there, and Vines, being a physician, attended the sick Indians with great kindness, which won their gratitude. He and his companions dwelt and slept among the sick in their cabins, but were never touched by the pestilential fever. He made the whole coast a more hospitable place for Englishmen afterwards. He restrained traders from debauching the barbarians with rum, and he was the first Englishman who described the White Mountains, for he went to the source of the Saco River in a canoe. In 1630 the Plymouth Company gave Richard Vines and John Oldham each a tract of land on the Saco River, four miles wide on the sea, and extending eight miles inland.

Sacramento (Mexico), BATTLE OF THE. After the battle of Braceti (which see), Colonel Doniphan entered El Paso without opposition, and sent a messenger to hurry up artillery which he had sent for to Santa Fé. It arrived on the 1st of February, 1847, and on the 11th he set out for Chihuahua in search of General Wool. After marching one hundred and forty-five

miles he learned that Wool was not at Chihuahua. He pressed forward, however, and halted near the Sacramento River, about eighteen miles from the city of Chihuahua, of the state of the same name. There he was confronted (Feb. 28) by about four thousand Mexican horse, foot, and artillery. After a contest of about three hours, the Mexicans were routed by the one thousand men under Doniphan. Twelve of their cannons were captured, with ammunition and other munitions of war. The loss of the Mexicans was about six hundred men; of the Americans, eighteen. Doniphan then pressed forward, and entered Chihuahua, a city of forty thousand inhabitants, without opposition, and planted the American flag upon its citadel. He took formal possession of the province in the name of the United States. After resting there six weeks, Doniphan pushed forward and joined Wool at Saltillo (May 22). (See *Mexico, War with*.)

Sacs (or SAUKS) and Foxes. These are associate families of the Algonquin nation. They were seated on the Detroit River and Saginaw Bay when the French discovered them, but were driven beyond Lake Michigan by the Iroquois. Settling near Green Bay, they took in the Foxes, and they have been intimately associated ever since, especially in wars. Roving and restless, they were continually at war with the fiery Sioux, and were allies of the French against the latter. In the conspiracy of Pontiac (see *Pontiac*), the Sacs were his confederates, but the Foxes were not; and in the wars of the Revolution and 1812 they were friends of the British. They were divided into a large number of classes distinguished by *totems* of different animals. They remained faithful to treaties with the United States until Black Hawk made war in 1832, when Keokuk, a great warrior and diplomat, remained faithful. In 1822 the united Sacs and Foxes numbered about 8000; in 1874 there were only 1135, in scattered bands in Iowa, Kansas, Nebraska, and the Indian Territory. The Foxes proper were first known as Outagamies (English "foxes"). They were visited in their place of exile with the Sacs by the Jesuit missionary Allouez, in 1667, when they numbered five hundred warriors. The missionaries could make very little impression upon them. When De Nouville made his campaign against the Five Nations, the united Sacs and Foxes joined him, as they had De la Barre in 1684, but they soon became friendly to the Iroquois, and proposed to join their confederacy. In 1712 they attacked Detroit, and hostilities were carried on for almost forty years, when they joined the French in their final struggle to hold Canada. The Foxes befriended the white people in Pontiac's War (which see), and were with the English in the wars of the Revolution and 1812, as we have observed. Since then the history of the Sacs and Foxes is nearly the same.

Sag Harbor, EXPEDITION TO. The British had gathered much forage at Sag Harbor, at the eastern end of Long Island, protected by an armed schooner and a company of infantry.

General Parsons, in command in Connecticut, sent Lieutenant-colonel Meigs with one hundred and seventy men in thirty whale-boats to capture or destroy their forage. They landed near Southold, carried their boats across to a bay, about fifteen miles, and, re-embarking, landed before daylight about four miles from Sag Harbor. They took the place by surprise, killing six of the enemy and capturing ninety. They burned the forage and twelve vessels, and returned to Guilford without the loss of a man.

Sahaptins. This family is regarded as a distinct nation of Indians within the domains of the United States. (See *Indians*.) It is one of the nine Columbian families in the State of Oregon and Washington Territory. Their country extends from the Dalles of the Columbia River to the Bitter Root Mountains on both sides of the Columbia, and on the forks of the Lewis and the Snake and Sahaptin rivers. The nation includes the Nez Perces ("pierced noses") or Sahaptins proper, the Wallawallas, and five other clans of less importance. On their northern border are the Salish family, chiefly in the British possessions, and on the southern the Shoshones. They are of medium stature; the men are brave and muscular, and dignified in appearance; the women plump and generally handsome; and some of the tribes, especially the Nez Perces, are neat in their personal appearance. With the exception of the latter, none of the Sahaptin nation have figured in the history of the Republic. (See *Nez Perces*.)

St. Augustine, a city in Florida, was founded by Menendez in 1565. When that commander gave up the chase of the Frenchmen under Ribault (see *Huguenots in America*), he turned back towards the Florida coast, entered an estuary in a boat manned by six oarsmen, leaving his large flag-ship at anchor outside, and, accompanied by his chaplain, Mendoza, and followed by other boats filled with "gentlemen" and ecclesiastics, he went ashore, while trumpets sounded, drums beat, cannons thundered, and flags waved. The chaplain walked before, bearing a large cross and chanting a hymn. Menendez followed with his train, and carrying in his own hand the standard of Spain unfurled. Mendoza, arrayed in rich sacerdotal garments, kissed the cross, and then planted it in the sand by the side of the staff that upheld the royal standard, and against which leaned a shield bearing the arms of Spain. Then, after all had done homage to the priest, Menendez took formal possession of the country in the name of Philip of Spain. With such consecration he laid the foundation of the city of St. Augustine. From that spot he marched to the destruction of the Huguenots on the St. John (see *Huguenots in America*), and there the unfortunate Ribault and his followers were slain. (See *Ribault, Jean*.) They were led out in groups of ten, with their hands tied behind them, when, at a line drawn in the sand with a cane by Menendez, they were butchered because they were Protestants, as Mendoza afterwards declared. Such was the human sacrifice at the founding of St. Augustine, now the oldest town in the United

States. It contains a fortress (San Marco, now Fort Marion), which was finished in 1756, a hundred years after it was begun.

St. Augustine, AMERICAN PRISONERS AT. In violation of the capitulation at Charleston (see *Siege of Charleston*), many of the patriotic citizens were torn from their families, taken to St. Augustine, and imprisoned, when they were required a second time to give their parole to keep within certain limits as the price of their release from close confinement. Among the prisoners was the sturdy patriot Colonel Christopher Gadsden. He had been treacherously taken from his bed at night, and conveyed on board a prison-ship. Gadsden was required by the commanding officer at St. Augustine to give his parole. He refused, saying he had already given his parole and kept it inviolate, that his rights as a paroled prisoner had been violated, and that he would not trust his persecutors again. The commander haughtily said he would hear no arguments, and demanded an explicit answer whether Gadsden would or would not give his parole. "I will not," answered Gadsden, firmly. "In God I put my trust, and fear no consequences." He was instantly hurried to the castle, where, in a loathsome prison, he was confined, apart from his fellow-patriots, until exchanged, in July, 1781, nearly eleven months after the surrender at Charleston. While in the castle, the prisoners were denied the privilege of meeting for public worship by themselves, but forced to attend divine service at the regular place of worship—a service highly distasteful to them. Notwithstanding their intense sufferings, they all remained true to their convictions.

St. Augustine, ATTACK UPON, BY SOUTH CAROLINIANS. Soon after the beginning of Queen Anne's War, Governor Moore, of South Carolina, proposed an expedition against the Spaniards at St. Augustine. (See *Queen Anne's War*.) The Assembly appropriated \$10,000 for the service. An army of twelve hundred men (one half Indians) was raised, and proceeded in two divisions to the attack. The governor, with the main division, went by sea to blockade the harbor, and the remainder, under Colonel Daniels, proceeded along the coast. The latter arrived first and plundered the town, the Spaniards retiring within their fortress with provisions for four months. Their position was impregnable, for the Carolinians had no artillery. Daniels went to Jamaica to procure battery cannons, but before his return two Spanish war-vessels appeared. Governor Moore raised the blockade and fled. This expedition burdened the colony with a debt of more than \$26,000, for the payment of which bills of credit were issued—the first emission of paper-money in South Carolina.

St. Augustine, OGLETHORPE'S EXPEDITION AGAINST. (See *Florida, Invasion of*.) Oglethorpe, having been joined by a South Carolina regiment and a company of Highlanders, marched with his whole force, about two thousand strong, to Fort Moosa, within two miles of St. Augustine, in May, 1740. The Spanish garrison evacuated the fort and fled into the town. Oglethorpe pro-

ceeded to reconnoitre the town and castle, and, finding they had more than a thousand defenders, determined to turn the siege into a blockade with some ships lying at anchor near the bar. Having disposed troops so as to hold important points, Oglethorpe, with the remainder, went to the island of Anastasia, lying opposite, from which he might bombard the castle. After planting batteries there he summoned the Spanish governor to surrender; but, secure in his stronghold, he sent word to Oglethorpe that he should be glad to shake hands with him in his castle. Indignant at this reply, the general opened his batteries against the castle, and, at the same time, threw a number of bombshells into the town. The fire was returned with spirit from the castle and armed ships, but the distance was so great that very little damage was done. Meanwhile, a party of Spaniards went out and attacked the Georgian garrison at Fort Moosa and cut it in pieces. The Chickasaw warriors with Oglethorpe, offended at some incautious expression of his, deserted him, and the Spaniards by some means received a reinforcement of seven hundred men. All prospects of success began to fade. The Carolina troops, enfeebled by the heat of the climate and dispirited by much sickness, marched away in considerable numbers; and the naval commanders thought it imprudent to remain longer on the coast, for the season of hurricanes was nigh. The enterprise was abandoned in July.

St. Augustine Sacked and Plundered. In 1665 John Davis, a bold buccaneer (see *Buccaneers*), with a fleet of seven or eight vessels, made a descent on the coast of Florida and plundered St. Augustine. The Spaniards there made no resistance.

St. Clair, ARTHUR, born at Thurso, Caithness, Scotland, in 1734; died at Greensburg, Penn., Aug. 31, 1818. He was a grandson of the Earl of Roslyn, and was educated at the University

ARTHUR ST. CLAIR.

of Edinburgh. He studied medicine under the celebrated Hunter, of London, but inheriting a large sum of money from his mother, he purchased an ensigncy in a regiment of foot (May

13, 1757) and came in Boscawen's fleet to America in 1758. He was with Amherst at the capture of Louisburg, and, raised to lieutenant in April, 1759, he distinguished himself, under Wolfe, at Quebec. In May, 1760, he married, at Boston, a half-sister of Governor Bowdoin; resigned his commission in 1762, and in 1764 settled in Ligonier valley, Penn., where he established mills and built a fine dwelling-house. Having held, by appointment, several civil offices of trust, he became a colonel of militia in 1775, and in the fall of that year accompanied Pennsylvania commissioners to treat with the Western Indians at Fort Pitt. As colonel of the Second Pennsylvania Regiment, he was ordered to Canada in February, 1776, and in the early summer aided Sullivan in saving his army from capture. In August he was made a brigadier-general, and joined Washington in November. St. Clair was actively engaged in New Jersey until April, 1777, when he took command of Ticonderoga, which he was compelled to evacuate (July 4-5, 1777) by the presence of Burgoyne in overwhelming force. After that he was a member of Washington's military family, acting as his aid at the battle near the Brandywine (which see). He was with Sullivan in the Seneca country in 1779. St. Clair commanded the light infantry in the absence of Lafayette, and was a member of the court that condemned Major André. He was in command at West Point from Oct. 1, 1780, and aided in suppressing the mutiny of the Pennsylvania line in January, 1781. Joining Washington in October, he participated in the capture of Cornwallis, and afterwards led a body of troops to join Greene in South Carolina, driving the British from Wilmington on the way. He was afterwards a delegate in Congress; president of that body (February to November, 1787); appointed governor of the Northwestern Territory (February, 1788); fixed the seat of government at Cincinnati, and, in honor of the Cincinnati Society, gave the place that name. Made commander-in-chief of the army (March 4, 1791), he moved against the Indians on the Wabash, while so lame from gout that he was carried on a litter. A defeat followed. Out of nearly 1800 men he lost over 800. Blamed severely, a committee of Congress vindicated him; but he resigned his generalship (March 5, 1792), and in November, 1802, Jefferson removed him from the governorship in the Northwest. He was then broken in health, spirits, and fortune, and, retiring to a log house on the summit of Chestnut Ridge, among the Alleghany Mountains, he there passed the remainder of his days in poverty, while he had unsettled righteous claims against the government. Five years before his death the Legislature of Pennsylvania granted him an annuity of \$400, and, a short time before his death, a pension from the government of \$60 a month was awarded him. He published a narrative of his unfortunate campaign against the Indians.

St. Clair's Campaign (1791). The Indians, encouraged by the defeat of Harmar (October, 1790), spread terror over the frontier settle-

ments in the Northwestern Territory. In May, 1791, General Charles Scott, of Kentucky, led 800 men, and penetrated to the Wabash country, almost to the present site of Lafayette, Ind., and destroyed several Indian villages. At the beginning of August General Wilkison, with more than 500 men, pushed into the same region to Tippecanoe and the surrounding prairies, destroyed some villages of Kickapoos, and made his way to the Falls of the Ohio, opposite Louisville. These forays caused the Indians to fight more desperately for their country. Congress now prepared to plant forts in the Northwestern Territory, and in September, 1791, there were 2000 troops at Fort Washington, under the immediate command of General Richard Butler. With General St. Clair as chief, these troops marched northward. They built Fort Hamilton, on the Miami River, twenty miles from Fort Washington, and garrisoned it. Forty-two miles farther on they built Fort Jefferson, and, when moving from that post, late in October, there were evidences that barbarian scouts were hovering on their flanks. The invaders halted and encamped on a tributary of the Wabash, in Darke County, O., one hundred miles north from Fort Washington (now Cincinnati). There the wearied soldiers slept (Nov. 3, 1791), without suspicion of danger near. During the night the sentinels gave warning of prowling Indians, and early in the morning (Nov. 4), while the army were preparing for breakfast, they were furiously attacked by the barbarians. The slaughter among the troops was dreadful. General Butler was killed, and most of the other officers were slain or wounded. The army fled in confusion, and it was with great difficulty that St. Clair, suffering with gout, escaped on a pack-horse, after having three horses killed under him. Among the fugitives were a hundred women, wives of soldiers, most of whom escaped. St. Clair lost nearly half of his army—over 800 men killed and wounded. The remainder made their way back to Fort Washington.

St. Eustatius, CAPTURE OF, BY THE ENGLISH. While negotiations between the Dutch and English were going on at the Hague, British cruisers pounced upon Dutch merchantmen, capturing two hundred ships of the republic of Holland, worth, with their cargoes, 15,000,000 guild-

ment and Great Britain, surrendered the post and its dependencies, at the same time invoking clemency for the town. The island was a rich prize, for it was a free port for all nations and was "one continued store of French, Dutch, American, and English property." All the magazines and storehouses were filled, and even the beach was covered with tobacco and sugar. The value of merchandise found there was estimated at \$15,000,000. There were taken in the bay a Dutch frigate, five smaller vessels of war, and one hundred and fifty merchant-ships. Thirty richly laden Dutch ships which had just left the island were overtaken by a detachment from Rodney's fleet and captured, together with their convoy, a 60-gun Dutch ship. Keeping the Dutch flag flying on the island, no less than seventeen Dutch ships were decoyed into port and seized.

St. Francis Indians, EXPEDITION AGAINST. These Indians, inhabiting a village on the edge of Canada, had long been a terror to the frontier settlers of New England. Enriched by plunder and the ransoms paid for their captives, they possessed a handsome chapel (they were Roman Catholics), with plate and ornaments. In their village might be seen, stretched on hoops, many scalps of both sexes displayed as trophies of their valor in smiting the English. Against these Indians General Amherst, while at Crown Point, in 1759, sent Major Robert Rogers, a distinguished partisan officer, at the head of a corps of New Hampshire rangers. With two hundred of his rangers, Rogers traversed the forest so stealthily that he surprised the village (October, 1759), slew a large part of the warriors, and plundered and burned the town. Attempting to return by way of Lake Memphremagog and the Connecticut River, the rangers suffered terribly. Their provisions gave out, and some perished for want of food; others were killed by pursuing Indians, but the greater part reached Crown Point in safety.

St. John, SIEGE OF. Because of the illness of General Schuyler, General Montgomery was placed in active command of the army invading Canada. On the 10th of September, 1775, Montgomery left Isle aux Noix and landed 1000 troops near St. John, the first military post with-

MILITARY ESTABLISHMENT AT ST. JOHN'S, 1860.

era. Swift cutters were sent to Admiral Rodney at Barbadoes to seize the Dutch island of St. Eustatius, in the West Indies. Suddenly, on Feb. 3, 1781, the British West India fleet and army, after making a feint on the coast of Martinique, appeared off the doomed island and demanded of Governor De Graat its surrender within an hour. The surprised and astonished inhabitants, unable to offer any resistance, and ignorant of war between their home govern-

ment and Great Britain, surrendered the post and its dependencies, at the same time invoking clemency for the town. The island was a rich prize, for it was a free port for all nations and was "one continued store of French, Dutch, American, and English property." All the magazines and storehouses were filled, and even the beach was covered with tobacco and sugar. The value of merchandise found there was estimated at \$15,000,000. There were taken in the bay a Dutch frigate, five smaller vessels of war, and one hundred and fifty merchant-ships. Thirty richly laden Dutch ships which had just left the island were overtaken by a detachment from Rodney's fleet and captured, together with their convoy, a 60-gun Dutch ship. Keeping the Dutch flag flying on the island, no less than seventeen Dutch ships were decoyed into port and seized.

Preston, was well supplied with provisions and ammunition. This circumstance, the disaster to Ethan Allen near Montreal (see *Allen, Ethan, Capture of*), and the insubordination and mutinous spirit displayed by the Connecticut and New York troops, prolonged the siege. It lasted fifty-five days. On the evening of the 21d of November, when Preston heard of the defeat of a considerable force under Carleton, on their way to relieve him, and was notified of the fall of Chambly, he determined to surrender the fort unless relief speedily came. Montgomery demanded an immediate surrender. Preston asked a delay of four days. His request was denied, and the garrison became prisoners of war on the 3d, marching out of the fort with the honors of war. There were 500 regulars and 100 Canadian volunteers. The spoils were forty-eight pieces of artillery, 800 small-arms, some naval stores, and a quantity of lead and shot.

St. John's Parish (Ga). The royal governor (Sir James Wright) of Georgia was so influential there that he prevented that colony choosing delegates to the First and Second Continental Congresses, or adopting the American Association (which see). The liberty-loving people of St. John's Parish (now Liberty County), led by Lyman Hall, a native of Connecticut and a physician, took independent action. They subscribed to the American Association, and at a Provincial Convention held in Savannah (Jan. 18, 1775) their delegates tried to get others of the province to imitate their act. They did not succeed. Dissatisfied with the action of the convention, the St. John's people asked to become allies of the Committee of Correspondence at Charleston, S. C. A kindly answer was given, but no alliance could be formed, and the patriotic Georgians found themselves cut off from trade and commerce with every other colony, as theirs had not joined the Association. Necessity compelled them to trade with their own, and they resolved to do so, under the following regulations: 1. That none of them, directly or indirectly, would purchase slaves imported at Savannah till the sense of the Congress (to whom they had applied for relief) should be made known to them; 2. That they would not trade with any merchant of Savannah or elsewhere that would not join the Association, otherwise than under the inspection of a committee for that purpose appointed, for such things as they should judge necessary, and when they should think there were necessary reasons for so doing. Finally, they resolved to send a delegate to the Continental Congress, and they elected (March 21, 1775) Dr. Lyman Hall to that position. When he took his seat a question arose as to whether the Parish of St. John's should be considered as representing the Colony of Georgia. Hall expressed a wish to hear and participate in the debates, as a representative of a part of Georgia, and not to vote when the balloting was by colonies. A Provincial Congress of Georgia met July 4, 1775, acceded to the American Association, and elected Lyman Hall and others to represent the colony in the Continental Congress. So the persistent

patriotism of the people of St. John's Parish placed Georgia in the Continental Union, and the name of their domain was changed to "Liberty County," in honor of their zeal in the cause.

St. Joseph, FORT, CAPTURED. On the morning of May 25, 1763, a party of Potawatomie Indians appeared before the English post at the mouth of the St. Joseph's River, on Lake Michigan. That post had been established where the Jesuit missionaries had maintained a missionary station almost sixty years. The fort was garrisoned by an ensign and fourteen men. With friendly greetings, the Potawatomies were permitted to enter the fort, and in "two minutes" they had massacred the whole garrison. (See *Pontiac's War*.)

St. Lawrence, FIRST WARLIKE MOVEMENT ON THE (1812). When news of the declaration of war (June, 1812) reached Ogdensburg, on the St. Lawrence, eight American schooners—trading vessels—lay in the harbor. They endeavored to escape into Lake Ontario, bearing away affrighted families and their effects. An active Canadian partisan named Jones had raised a company of men to capture them. He gave chase in boats, overtook the unarmed flotilla at the foot of the Thousand Islands, captured two of the schooners, and emptied and burned them (June 29). A wild rumor went abroad that the British were erecting fortifications among the Thousand Islands, and that expeditions of armed men were to be sent across the St. Lawrence to devastate American settlements on its borders. General Brown and Commander Woolsey (of the *Oneida* [which see]) were vested with ample power to provide for the defence of that frontier. Colonel Benedict, of St. Lawrence County, was ordered to guard the region from Ogdensburg to St. Regis with a competent force, and militia were gathered at Ogdensburg and St. Vincent.

St. Leger, BARRY, a British officer, who entered the army as ensign in 1749, came to America with his regiment in 1757, and was with Wolfe at Quebec. He was appointed lieutenant-colonel in 1772; and in 1775 was sent to Canada, where he took charge of an unsuccessful expedition to the Mohawk valley, by way of Lake Ontario, in 1777, to assist Burgoyne in his invasion. (See *Fort Schuyler, Siege of*.) He died in 1789.

St. Michael, DEFENCE OF. On the eastern shore of Chesapeake Bay is the little town of St. Michael, in Talbot County, Md., founded by ship-builders, and famous as the place where most of the swift-sailing privateers, called "Baltimore clippers," were built. Seven of these were on the stocks there in August, 1814, when Cockburn, the marauder, appeared, with the intention of destroying them and the village. The veteran General Derry Benson, commander of the militia of Talbot County, prepared to receive the invaders. He constructed two redoubts, and the militia from the adjacent country were called to the defence of the place. Benson had, in the aggregate, about three hundred men. Between midnight and dawn on Aug. 11 the invaders proceeded to the attack in eleven

barges, each armed with a 6-pound field-piece. The night was intensely dark, and the first intimation of their presence was the booming of their cannons. The Marylanders, though a little surprised, made a gallant resistance from the batteries. Under cover of their guns, the invaders landed in a compact body to storm the batteries, when a 9-pounder in one of them opened and cut a wide swath through the line of the British, killing nineteen and wounding many. The Americans, outnumbered, fell back to the other battery, and continued the contest until daylight, when the invaders, after spiking the guns of the lower battery, fled, discomfited, to their vessels. St. Michael and its ship-yards were saved.

St. Philip, FORT, ATTACK UPON. While the armies were burying their dead on the field of strife near New Orleans after the battle there (Jan. 8, 1815), some of the British troops sought to secure the free navigation of the Mississippi for themselves by capturing Fort St. Philip, at a bend of the stream, seventy or eighty miles below New Orleans in a direct line. It was regarded as the key to Louisiana. It was garrisoned by three hundred and sixty-six men, under Major Overton, of the Rifle Corps, and the crew of a gunboat which had been warped into a bayou at its side. A British squadron of five vessels appeared near the fort on the morning of Jan. 9 and anchored, out of range of the heavy guns of the fort, two bomb-vessels with their broadsides to the fort. These opened fire in the afternoon, and continued a bombardment and cannonade, with little interruption, until daybreak on the 18th—nine days. During that time the Americans were much exposed to rain and cold. The British cast more than one thousand shells, besides many round and grape shot, upon the fort, the product of which was two Americans killed and seven wounded. They had expended twenty thousand pounds of powder, and withdrew without gaining the fort, spoils, or glory.

St. Regis, SKIRMISH AT. On each side of the boundary-line between the United States and Canada is the Indian village of St. Regis; at the mouth of the St. Regis River. In that village Captain McDonell was placed, with some armed Canadian *royageurs*, in September, 1812. Major G. D. Young, stationed at French Mills (now Fort Covington), left that post on the night of Oct. 21, with about two hundred men, crossed the St. Regis in a boat, a canoe, and on a hastily constructed raft, and before dawn was within half a mile of St. Regis. There they were rested and refreshed, and soon afterwards pushed forward and surrounded the town. Assailing the block-house, a sharp skirmish ensued, in which the British lost seven men killed, while not an American was hurt. The spoils of victory were forty prisoners (exclusive of the commander and the Roman Catholic priest), with their arms and accoutrements, thirty-eight muskets, two bateaux, a flag, and a quantity of baggage, including eight hundred blankets. The flag which waved over the block-house was

captured by Lieutenant William L. Marcy, afterwards Governor of the State of New York.

St. Sacrament Lake (or Lake George), the name given to the beautiful sheet of water lying west of the upper end of Lake Champlain by Father Jogues, a Jesuit missionary who visited it about the middle of the 17th century. This lake was the theatre of important military events in the French and Indian War (which see) and the old war for independence. At the head of the lake General William Johnson was encamped early in September, 1755, with a body of provincial troops and a party of Indians under the Mohawk chief Hendrick. There he was attacked (Sept. 8) by the French under Dieskau, and would have been defeated but for the energy and skill of General Phineas Lyman. The assailants were repulsed, and their leader (Dieskau) was badly wounded, made prisoner, sent to New York, and paroled. He died of his wounds not long afterwards. Johnson was knighted, and gave the name of Lake George to the sheet of water, in honor of his sovereign, by which name it is still known. At its head Fort William Henry was built, and suffered siege and capture by the French and Indians in 1757. (See *William Henry, Fort*.) The next year it was the scene of a vast armament upon its bosom going to the attack of Ticonderoga (which see); and some stirring events occurred there during the Revolution.

St. Simon, CLAUDE ANNE, Marquis de, was born at the Castle of La Faye, Spain, in 1743; died Jan. 3, 1819. He learned the art of gunnery and fortifications at Strasburg; distinguished himself in Flanders, and was chief of the

CLAUDE ANNE ST. SIMON.

body-guard of the Polish king in 1758. After various services in Europe, he came to America with De Grasse, at the head of French troops, and assisted in the siege of Yorktown (which see) in 1781. In 1789 he was a deputy in the States-General. Being a native of Spain, he returned to the service of that country, and assisted in the defence of Madrid in 1808. He was made prisoner and condemned to death, but the sentence was commuted to exile. After Ferdinand VII. was re-established on the throne (1814), St. Simon returned to Spain, and was made captain-general and grandee.

Salaberry, CHARLES MICHEL, D'IRAMBERRY,

Seigneur of Chambly, a French Canadian, was born at Beauport, Canada, Nov. 19, 1778; died at Chambly, Feb. 26, 1829. He served in the British army eleven years in the West Indies; was aide-de-camp to General De Rottenburg; was in Canada in 1812, where he organized the Voltigeurs, and repulsed Americans under Dearborn at La Salle in that year. On Oct. 28, 1813, he gained a decisive victory over General Wade Hampton at Chateaugay (which see), for which service he was presented with a gold medal, the Order of the Bath, and the thanks of the Canadian Legislature. He was afterwards senator, and entered the legislative council as Mousseigneur Plessis.

Salaries of Government Officers. During the last session of the Forty-third Congress, which closed March 4, 1873, a bill was passed fixing the pay of certain officers of government and of members of Congress. The salary of the President, was raised from \$25,000 to \$50,000 a year, payable in monthly instalments. The salary of the Vice-President was fixed at \$10,000; of the Chief-justice of the Supreme Court at \$10,500, and of the associate justices at \$10,000 each; of the heads of the several departments, and of the Attorney-general, at \$10,000; of the Speaker of the House of Representatives at \$10,000; and of senators and representatives at \$7500 each a year. No allowance was made for travelling expenses, the "mileage" system having been abolished.

Salem. After the abandonment of Cape Ann there was a revival of zeal for colonization at Naumkeag (Salem), and John Endicott was chosen, by a new company of adventurers, to lead emigrants thither and be chief manager of the colony. A grant of land, its ocean line extending from three miles north of the Merrimac River to three miles south of the Charles River, and westward to the Pacific Ocean, was obtained from the Council of New England March 19, 1628 (see *Massachusetts, Colony of*), and in June John Endicott, one of the six patentees, sailed for Naumkeag, with a small party, as governor of the new settlement. Those who were there—the remains of Conant's settlers—were disposed to question the claims of the new-comers. An amicable settlement was made, and in commemoration of this adjustment Endicott named the place Salem, the Hebrew word for peaceful. The colony then comprised about sixty persons. Previous to this emigration about thirty persons, under Captain Wollaston, had set up an independent plantation at a place which they named Mount Wollaston (now Quincy, Mass.), which soon fell under the control of a "pettifogger of Furnival's Inn," named Morton, who, being a convivial and licentious character, changed the name to Merry Mount, and conducted himself in a most shameless manner. He sold powder and shot to the Indians; gave refuge to runaway servants; and, setting up a May-pole, he and his companions danced around it, sang ribald and obscene songs, broached a cask of wine and a hogshead of ale, and held a great revel and carousal there, to the great

scandal of all the Puritan settlers. Morton was in England when Endicott came. The rigid Puritan, finding Merry Mount to be within the domain of the Massachusetts charter, proceeded to cut down the May-pole, and called the place Mount Dagou. He rebuked the settlers there, lectured them severely on the "folly of amusements," and warned them to "look there should be better walking." Morton was angry on his return, and defied the stout Puritan sentiments of his neighbors. Plymouth was called to interfere, and Captain Standish seized the bacchanalian ruler of Merry Mount, and he was sent a prisoner to England. (See *Witchcraft, Salem.*)

Salem (Mass.), ASSEMBLY AT. Pursuant to the provisions of the Boston Port Bill (which see), General Gage adjourned the Massachusetts Assembly (May 31, 1774) to Salem, June 7. Anticipating this, they appointed Samuel Adams and James Warren to act in the interim. They held private conferences with others, and arranged plans for future action. They made arrangements for a Continental Congress; provided funds and munitions of war; prepared an address to other colonies inviting their co-operation in the measures of a general congress; and drew up a non-importation agreement. When the Assembly met on the 7th these various bold propositions were laid before it. The few partisans of the crown in the House were astonished and alarmed. Gage sent his secretary to dissolve the Assembly by proclamation, but the patriots were too vigilant for him. The hall doors were closed, and the key was in Samuel Adams's pocket. The reading of the proclamation on the stairs was unheeded by the patriots within. They adopted and signed a non-importation league, and copies of this and their proposition for a general congress, at a time and place appointed, were sent to the other colonies. They chose Thomas Cushing (their Speaker), and James Bowdoin, Samuel Adams, John Adams, and Robert Treat Paine as their delegates to the Continental Congress. This was the last session of the Massachusetts Assembly under a royal governor.

Salem, BRITISH TROOPS CONFRONTED NEAR. Gage heard that some cannons had been deposited at Salem by the patriots, and on Sunday, Feb. 26, 1775, he sent Colonel Leslie, with one hundred and forty regular troops, in a vessel from Castle William to seize them. They landed at Marblehead and marched to Salem, but, not finding the cannons there, they moved on towards Danvers. Reaching a drawbridge over a stream between the two towns, they found a large number of people assembled there, and on the opposite side forty militia under Colonel Timothy Pickering. The bridge was drawn up. Leslie ordered it to be let down, but Pickering refused, declaring it to be private property. Leslie determined to ferry a few troops over in a gondola that lay near. Perceiving this, some of the militia instantly scuttled the vessel. The minister at Salem (Mr. Barnard), fearing instant hostilities, interfered, and succeeded in moder-

ating the zeal of both parties. Leslie finally promised that if he might cross, he would go only a few rods beyond. The bridge was let down, the troops marched over and beyond a short distance, and then returned to their vessel at Marblehead without firing the cannons.

Salt Lake City is one of the wonders of our history. It is in mid-continent, where, only a few years ago, there was not a white man's dwelling within many hundred miles. It was founded by the Mormons, after their exodus from the Mississippi region. It is at the western base of the Wasatch range of mountains, four thousand three hundred and twenty feet above the sea, and near a great salt lake. Its streets are regularly laid out, one hundred and twenty-five feet in width, and the city covers a vast space in proportion to the number of its inhabitants. It originally had two hundred and sixty blocks, each an eighth of a mile square, and containing ten acres. Each block was divided into eight lots, ten by twenty rods, and contained an acre and a quarter. Since the city was laid out, several of the blocks have been intersected by new streets. The city is divided into twenty wards, in nearly every one of which is a public square. Shade and fruit trees abound in the city, for almost every lot has its orchard of various fruits. The population in 1875 was twenty thousand. There the Mormons have built a "Tabernacle," capable of seating about fifteen thousand persons, covered by a self-supporting roof. They have also a spacious theatre. The temple, in course of construction, it is estimated will cost \$10,000,000, if it shall ever be finished. There are about thirty churches, of which all but six are Mormon. Their houses are built chiefly of adobe, with separate entrances when the owners have several wives. There are ten banks, three daily and five weekly newspapers, and two monthly periodicals. There are many private schools (none public), and a good public library. About one third of the population are now (1876) "Gentiles" or apostate Mormons. Gas has been introduced, and street-railroads. The first cabin was built on the site of Salt Lake City in 1847.

Salt Springs of Onondaga, DISCOVERY OF. The prolific salt deposits near and under Onondaga Lake, in the vicinity of Syracuse, N. Y., were discovered by Father Le Moyne, a Jesuit priest, in 1654. Le Moyne afterwards visited New Amsterdam, and in a conversation with Rev. Mr. Megapolenses, told him of a spring, at the source of a little lake in the wilderness, of the waters of which the Indians durst not drink, because, they said, the devil was at the bottom of it. The Jesuit had tasted it, and found it as salt as the water of the sea. This conversation Megapolenses repeated, in a letter to the Classis in Amsterdam, adding, "Whether it be true, or whether it be a Jesuit lie, I do not determine."

Saltontall, SIR RICHARD, was one of the founders of the colony of Massachusetts Bay. He was born at Halifax, Eng., in 1586; died in 1658. His father was Lord Mayor of London in 1597. Richard came to America in 1630, and was one of the earlier settlers of Watertown.

In 1631 he returned to England, and was ever afterwards a fast friend of the colony. Liberal in his feelings, he lamented and condemned the persecutions in New England.

Samoset at New Plymouth. In March, 1621, a naked Indian, who had learned a few words of English from the fishermen at Pemaquid, suddenly appeared in the streets of Plymouth, and startled the Pilgrims by the exclamation, "Welcome, Englishmen! welcome, Englishmen!" Samoset gave them much information. He told them of the plague that had swept off the Indians about four years before (see *Saco Bay, Settlement at*), and that the place where they were seated was called Patuxet. He told them of Massasoit (which see). He brought to the settlement some of the friendly Indians, among them Squanto, whom Weymouth had kidnapped and given to Gorges. (See *Weymouth, Captain George, Voyage of*.) Squanto taught them how to plant maize, to catch a certain fish wherewith to manure their lands, and late in the season he guided ambassadors from Plymouth to the court of Massasoit at Pokanoket, now Warren, R. I.

Sanders's Creek, S. C., BATTLE AT (1780). Before Washington heard of the surrender of Charleston (see *Siege of Charleston*), he sent a detachment of Delaware and Maryland regiments, under the Baron de Kalb, for service in the South. They marched from Petersburg, Va., for the Carolinas. After leaving the southern borders of Virginia, they marched slowly through a poor, thinly inhabited country, without provision for a supply of food, the commissaries without credit, and compelled to get their supplies from day to day by impressment. With De Kalb's forces were two North Carolina regiments, under the respective commands of Colonels Rutherford and Caswell, who were chiefly employed in repressing the North Carolina Tories. The governor of that state (Nash) had recently been authorized by the Legislature to send eight thousand men to the relief of South Carolina. To raise and equip them was not easy at that gloomy juncture. The Virginia regiment of Porterfield was at Salisbury. These rallied to the standard of De Kalb, whose slow march became a halt at Deep River, a tributary of the Cape Fear. There De Kalb was overtaken by General Gates (July 25), who had been appointed to the command of the Southern Department. Gates pressed forward towards Camden, through a barren and generally disaffected country. The approach of "the conqueror of Burgoyne" greatly inspired the patriots of South Carolina, and such active partisans as Sumter, Marion, Pickens, and Clarke immediately summoned their followers in South Carolina and Georgia to the field, and they seemed to have prepared the way for Gates to make a complete conquest of the state. Clinton had left the command of the forces in the south to Cornwallis, and he had intrusted the leadership of the troops on the Santee and its upper waters to Lord Rawdon, an active officer. The latter was at Camden when Gates approached. Cornwallis, seeing the peril of the troops under him, because

of the uprising of the patriots in all directions, hastened to the assistance of Rawdon, and reached that village on the same day (Aug. 14, 1780) that Gates arrived at Clermont, north of Camden, and was joined by seven hundred more Virginia militia, under General Stevens. Then, in his pride, Gates committed the fatal blunder of not preparing for a retreat or rendezvous, being confident of victory. He also weakened his army by sending a detachment to Sumter, to aid him in intercepting a convoy of supplies for Rawdon. On the evening of the 15th Gates marched to attack Rawdon with little more than three thousand men. Spurning the advice of his officers, he marched before he had made any disposition of his baggage in the rear. Cornwallis had left Camden to meet Gates at about the same time. Foot-falls could not be heard in the sandy road. As the vanguard of the British were ascending a gentle slope after crossing Sanders's Creek, that traversed a swamp, nearly

Maryland Continentals, who fought gallantly until they were outflanked, when they, also, gave way. They were twice rallied, but finally retreated, when the brunt of the battle fell upon the Maryland and Delaware troops, led by De Kalb, assisted by General Gist, Colonel Howard, and Captain Kirkwood. They had almost won the victory, when Cornwallis sent some fresh troops that turned the tide. In this sharp battle De Kalb was mortally wounded. Gates's whole army was utterly routed and dispersed. For many miles the roads were strewn with dead militia, killed in their flight by Tories; and, having made no provision for retreat, Gates was the most expert fugitive in running away. He abandoned his army, and, in an ignoble flight to Hillsborough, he rode about two hundred miles in three days and a half. He had lost about one thousand men in killed, wounded, and prisoners; the loss of the British was less than five hundred. The Americans lost all their artillery and ammunition, and a greater part of their baggage and stores.

Sanda, BENJAMIN F., was born in Maryland Feb. 11, 1812, and entered the United States Navy, as midshipman, April 1, 1828. He was attached to the coast survey before and after the war against Mexico (in which he participated), and, while engaged in the blockading service (1861-65), was in both attacks on Fort Fisher (which see). In May, 1867, he was made Superintendent of the Naval Observatory. He was made rear-admiral in 1871.

Sanda, JOSHUA R., was born in New York, and became a midshipman in 1812, serving under Chauncey on Lake Ontario. He was made commodore on the retired list in 1862, and rear-admiral in 1866. He served on the Mexican coast in 1847-48, and was, at different times, commander of the East India, Mediterranean, and Brazilian squadrons.

Sandusky, CAPTURE OF. On May 16, 1763, a party of Indians appeared at the gate of Fort Sandusky. The commander, Ensign Paulli, admitted seven of them as friends and acquaintances. They smoked awhile, when, at a preconcerted signal, they seized the ensign and carried him out of the room, where he saw the dead body of his sentry and of others of the garrison. All had been massacred by the treacherous Indians. They also killed the traders, seized their stores, and carried the ensign to Detroit as a trophy. (See *Pontiac's War*.)

Sandusky, EXPEDITION AGAINST (1782). Flushed with success against the Christian Indians on the Muskingum (see *Christian Indians*), four hundred and eighty men marched, under Colonels Williamson and Crawford, to complete their destruction by assailing them at Sandusky, on the southern borders of Lake Erie. They designed, at the same time, to strike a blow at the Wyandot town. They fell into an Indian ambush near Sandusky, and, attacked by an overwhelming force, were compelled to retreat. Many stragglers were killed, and, while Will-

VIEW AT SANDERS'S CREEK.

eight miles from Camden, they met the vanguard of the Americans, at a little after two o'clock in the morning (Aug. 16). It was a mutual surprise, and both began firing at the same time. Colonel Armand's troops, who led the van, fell back upon the First Maryland brigade, and broke its line. The whole army, filled with consternation, would have fled, but for the wisdom and skill of Porterfield, who, in rallying them, was mortally wounded. The British had the advantage, having crossed the creek, and were protected on flank and rear by an impenetrable swamp. Both parties halted, and waited anxiously for the dawn. The right of the British line was commanded by Lieutenant-colonel Webster, and the left by Lord Rawdon. De Kalb commanded the American right, and General Stevens the left, and the centre was composed of North Carolinians, under Colonel Caswell. A second line was formed by the First Maryland brigade, led by General Smallwood. The American artillery opened the battle. This cannonade was followed by an attack by volunteers, under Colonel Otho H. Williams, and Stevens's militia. The latter were mostly raw recruits, to whom bayonets had been given only the day before, and they did not know how to use them. The veterans, led by Webster, fell upon these raw troops with crushing force, and they threw down their muskets and fled to the woods for shelter. Then Webster attacked the

iamson escaped, Crawford and others were made prisoners. The colonel and his son-in-law were tortured and burned at the stake, in revenge for the cold-blooded murder on the Muskingum.

Sandwich Islands, ANNEXATION OF THE, TO THE UNITED STATES. In 1853 King Kamehameha, of the Sandwich Islands, expressed an earnest desire to have his domain attached to the United States. This was a matter of great moment, for these islands were to become of much importance in the commercial operations in the Pacific Ocean. A large majority of the white people there were Americans by birth, and the government, in all essential operations, was controlled by Americans, notwithstanding the ostensible ruler was a native sovereign. The consuls of England and France there, when they perceived a disposition on the part of the reigning monarch to have his kingdom annexed to the United States, charged the scheme to certain American missionaries, and officially protested against their alleged conduct. They declared that France and England would not remain indifferent spectators of such a transaction. The missionaries and the United States commissioners

anxiety felt, in the spring of 1814, to have the *Superior*, ship of war, built at Sackett's Harbor, made ready for sea, as Sir James L. Yeo would roam over Lake Ontario the unrestricted lord of the waters. Heavy guns and cables destined for her were yet at Oswego. The roads were almost impassable, and the blockade of Sackett's Harbor made a voyage thither by water a perilous one. The gallant master-commander, M. T. Woolsey, declared his willingness to attempt carrying the ordnance and naval stores to Stony Creek, three miles from Sackett's Harbor, where they might reach Commodore Chauncey in safety. On May 19 Woolsey was at Oswego with nineteen boats, heavily laden with canuons and naval stores. The flotilla went out of the harbor at twilight, bearing Major Appling, with one hundred and thirty riflemen. About the same number of Oneida Indians agreed to meet the flotilla at the mouth of Big Salmon River, and traverse the shore abreast the vessels, to assist in repelling any attack. Woolsey found it unsafe to attempt to reach Stony Creek, for the blockaders were vigilant, so he ran into Big Sandy Creek, a few miles from the harbor,

PLACE OF BATTLE AT SANDY CREEK.

there disclaimed any tampering with the native authorities. At the same time the latter, in a published reply to the protest, denied the right of any foreign government to interfere in the matter, if the transaction should be mutually agreeable to the king and the government of the United States. Preliminary negotiations were commenced, and a treaty was actually agreed upon, when the king died (Dec. 15, 1854). His son and successor, Prince Alexander Liholiho, immediately on his accession to the throne, ordered the discontinuance of the negotiations with the United States for annexation. The subject was not revived until the visit of Emma, queen of the islands, to the United States and England, in 1866. Nothing has yet (1880) been accomplished.

Sandy Creek, BATTLE AT. There was great

under cover of a very dark night, and landed the precious treasure there. The British heard of the movement, and, ignorant of the presence of Major Appling and the Indians, proceeded to attempt to capture the flotilla on the Big Sandy. That stream winds through a marshy plain about two miles, and at that time was fringed with trees and shrubs. Among these Major Appling ambushed his riflemen and the Indians. Near Woolsey's boats were stationed some cavalry, artillery, and infantry, with field-pieces, which had been sent there from Sackett's Harbor. The confident and jolly Britons, sure of success, pushed up the sinuous creek with their vessels, and strong flanking-parties were thrown out on each shore. The guns of the vessels sent solid shot upon the American flotilla and grape and canister among the bushes. These dispersed the cow-

ardly Indians, but young Appling's sharpshooters were undisturbed. When the invaders were within rifle-range the riflemen opened destructive volleys upon them, and at the same time the artillery on shore opened a furious cannonade. So sharp and unexpected was the assault, in front, flank, and rear, that the British surrendered within ten minutes after the first gun was fired in response to their own. They had lost a midshipman and seventeen men killed, and at least fifty wounded. The Americans had one rifleman and one Indian warrior wounded, but lost no life. They captured the British squadron, with about one hundred and seventy officers and men as prisoners of war. A ponderous cable for the *Superior*, twenty-two inches in circumference, and weighing nine thousand six hundred pounds, was borne to the harbor in a day and a half, on the shoulders of two hundred militiamen, carrying it a mile at a time without resting.

Sandya, EDWIN, was born at Worcester, Eng., in 1561; died at Northbourne, Kent, in 1629. He was a son of the Bishop of York, was the pupil of Richard Hooker at Oxford, travelled much in Europe, and, on the accession of King James, was knighted. He became an influential member of the London Company, in which he introduced reforms; and in 1619, being treasurer of the company, he was chiefly instrumental in introducing representative government in Virginia, under Yearly. (See *Virginia, Colony of*.) The fickle king forbade his re-election in 1620; but he had served the interest of the colony and of humanity by proposing to send young maidens to Virginia to become wives of the planters. (See *Women in Virginia*.)

Sandya, GEORGE, brother of Edwin, was an English poet; was born at Bishopthorpe, Eng., in 1577; died at Boxley Abbey, Kent, in March, 1644. He, too, was educated at Oxford. He was appointed Treasurer of Virginia, and was an earnest worker for the good of the colony, building the first water-mill there. He promoted the establishment of iron-works, and introduced ship-building. He had published a book of travels; also a translation of the first five books of Ovid's *Metamorphoses*, before he left England for Virginia. To these Drayton, in a rhyming letter, thus alludes:

"And, worthy George, by industry and use,
Let's see what lines Virginia will produce.
Go on with Ovid, as you have begun
With the first five books; let y'r numbers run
Glib as the former; so shall it live long,
And do much honor to the English tongue."

In Virginia he translated the other ten books, and the whole translation was published in London in folio, with full-page engravings, in 1626. Sandys wrote several other poetical works.

Santa Aña, ANTONIO LOPEZ DE, was born at Jalapa, Mexico, Feb. 21, 1798; died in the city of Mexico in the spring of 1876. His life was an eventful one. He began his military career in 1821 in the revolution by which Mexico achieved its independence of Spain. Imperious, disobedient, and revengeful, he was dismissed from the service. A keen intriguer, he secured the over-

throw of the existing government in Mexico in 1828. He was a brave and rather successful military leader, and led insurrection after insurrection, until in March, 1833, he obtained his election to the presidency of the republic of Mexico. He was a favorite with the army, but unpopular with the natives. There were repeated insurrections during his administration, and, finally, discontents in Texas broke out into revolution. Santa Aña took the field in person against the revolutionists, but was finally defeated at San Jacinto and taken prisoner (see *Texas*), when he was deposed from the presidency. In taking part in defending Vera Cruz against the French in 1837 he was wounded, and lost a leg by amputation. In the long contest between the Federalists and Centralists, taking part with the former, he was virtually dictator of Mexico from Oct. 10, 1841, to June 4, 1844, under the title of provisional president. He was made constitutional president from June 4 to Sept. 20, 1844, when he was deposed by a new revolution, taken prisoner near Tlacoalpa, Jan. 15, 1845, and banished for ten years. He took up his residence in Cuba, where he secretly negotiated for the betrayal of his country to the United States. He was allowed to pass through Commodore Conner's fleet into Mexico, where he was appointed generalissimo of the army, and in December was elected provisional president of the republic. With an army of 20,000 men he lost the battle of Buena Vista (which see). He was afterwards defeated in battle at Cerro Gordo, and about the middle of September, 1847, was driven with near 2000 followers from the city of Mexico. He was deposed, and in April, 1848, he fled from the country to Jamaica, W. I. He returned to Mexico in 1853, where he was received with great enthusiasm and appointed president for one year, after which time he was to call a constitutional Congress; but he fomented a new revolution by which he was declared president for life, with power to appoint his successor. He began to rule despotically, and was soon confronted by a revolution led by General Alvarez. After a struggle of two years, he signed his unconditional abdication, and sailed for Cuba Aug. 16, 1855. He afterwards spent two years in Venezuela, and thence went to St. Thomas. During the French military occupation of Mexico he reappeared there and pledged himself to take no part in public affairs. But Santa Aña's passion for intrigue could not be repressed, and having issued a manifesto calculated to raise a disturbance in his favor, General Bazaine ordered him to quit the country forever in May, 1864. Some time afterwards, the Emperor Maximilian made him grand-marshal of the empire; but in 1865, having been implicated in a conspiracy against the emperor, he fled to St. Thomas. In 1867 he again made an attempt to gain ascendancy in Mexico, but was taken prisoner at Vera Cruz and condemned to be shot. President Juarez pardoned him on condition of his quitting Mexico forever. He came to the United States. After the death of Juarez he was permitted to return to his native country, and was living in seclusion in the city of Mexico when he died.

Santa Aña, EFFORTS OF, TO REGAIN POWER. When Santa Aña fled from the capital (Sept. 14-15, 1847), he knew his political career in Mexico was ended, and he resigned the presidency which he had held for months by fraud and tyranny, and made a last effort to regain his lost reputation. He besieged the city of Puebla (September and October, 1847), garrisoned by a small number of troops under Colonel Childs, who was encumbered with 1800 sick. He summoned Childs to surrender, but was refused, and the garrison sustained themselves nobly under great privations. Rumors of the siege having reached Vera Cruz late in September, General Lane was despatched with a considerable force to relieve Childs. Hearing of this, Santa Aña marched to oppose Lane, who finally arrived at Puebla, and the Mexicans were driven away discomfited. The siege had continued forty days. Santa Aña was afterwards driven from Huamantla by General Lane, and fled towards the Gulf coast. Having received permission from the American commander-in-chief in Mexico, he sailed for Jamaica April 5, 1848. (See *Santa Aña*, Antonio Lopez de.)

Santa Aña's Perfidy. After the victory at Churubusco (which see) and the flight of the Mexicans from the city, General Scott advanced to Tacuba (Aug. 21, 1847), a few miles from the capital. He was met on the way by a proposition from Santa Aña for an armistice, preparatory to negotiations for peace. It was acceded to, and Nicholas P. Trist, whom the government had sent as a diplomatic agent to treat for peace, went into the city on the 24th for that purpose. Scott had made his headquarters at the palace of the Archbishop of Tacuba, where he waited several days for the return of Mr. Trist. He came back on the 5th of September with the information that his proposition for peace had not only been rejected, but that President Santa Aña had violated the armistice by strengthening the defences of the city. Scott was indignant, and immediately prepared to move on the city; and about a week later he entered the ancient capital of Mexico in triumph. (See *Mexico, War with*.)

Santa Rosa Island, BATTLE ON. Fort Pickens stands on Santa Rosa Island, off the harbor of Pensacola. In June, 1861, the New York Sixth (Zouave) Regiment, Colonel W. Wilson, arrived there as a part of the defenders of the fort. There was also a small blockading squadron near. On the night of September 2 (1861), a party from Fort Pickens under Lieutenant Shepley burned the dry-dock at the navy-yard at Warrington, and on the night of the 13th about one hundred men under Lieutenant J. H. Russell, of Commodore Merwin's flag-ship *Colorado*, crossed over to the navy-yard and burned the *Judah*, then fitting out for a privateer. There were then near the navy-yard about 1000 Confederate soldiers. These daring feats aroused the Confederates, and they became aggressive. Early in October they made an attempt to surprise and capture Wilson's Zouaves on Santa Rosa Island. About 1400 picked men, commanded by General Anderson, crossed over from Pensacola in several

steamboats, and at two o'clock in the morning (Oct. 9, 1861) landed four or five miles eastward of the Zouave camp. They marched upon the camp in three columns, drove in the pickets, and completely surprised the Zouaves. The war-cry of the Confederates was, "Death to Wilson! no quarter!" The Zouaves fought desperately in the intense darkness while being driven back to the shelter of the batteries, 400 yards from Fort Pickens. There were only 133 effective men. While falling back they were met by Major Vogdes with two companies, which were followed by two other companies, when the combined force charged upon the Confederates, who, having plundered and burned the Zouave camp, were in a disorganized state. They were driven in confusion to their vessels, and were assailed by volleys of bullets as they moved off. One of the vessels was so riddled by bullets that it sank. In this affair the Nationals lost in killed, wounded, and prisoners, sixty-four men. Among the latter was Major Vogdes. The Confederates lost about 150, including those who were drowned.

Santee Canal. In the year 1800, the canal connecting the Cooper River with the Santee River, S. C., twenty-two miles in length, was completed, and boats passed through it. It cost \$600,000, a sum, it was said, seven times greater than the amount the province had sold for seventy-two years before.

Santo Domingo, one of the larger of the West India islands. The natives called it Hayti, the Spaniards Hispaniola, and afterwards by its present name. (It was so called by Bartholomew Columbus for the double reason, 1. That it was discovered by his brother on Sunday—the Lord's-day—and he spoke of it as *Domius*; and, 2. *Dominica* was the name of their father; so Bartholomew gave it the title of *Santo Domingo*.) It was discovered by Columbus in December, 1492 (see *Columbus, Christopher*), and at Isabella, on the north shore, was founded the first Spanish colony in the Western Hemisphere. The town of Santo Domingo was founded Aug. 4, 1496. The natives were kind and friendly towards the discoverers. "So loving and tractable and peaceable are these people," Columbus wrote to Isabella, "that I declare to your majesties that there is not in this world a better nation or a better land. They love their neighbors as themselves. Their discourse is ever sweet and gentle, and accompanied with a smile." The Spaniards soon extirpated the natives by their cruel treatment of them, making them slaves to work in the mines, without any distinction of sex. For nearly half a century the Spanish settlements there were prosperous, and then for a while they were nearly desolated because of the drain of men from there to settle discovered regions in adjacent islands and the continent. In 1509 Diego Columbus (see *Columbus, Diego*), who had married a daughter of the great Duke of Alba, and obtained a decree in confirmation of his title to the offices of his father, sailed from Spain as governor, or viceroy, of Hispaniola, or Santo Domingo, succeeding Ovando. He was accompanied by a numerous retinue of men and

women of some of the first families in Spain, and with pomp and ceremony the young Columbus, with his "vice-regal queen," held a court which spread a halo of romance around that West Indian empire. From Santo Domingo were sent out expeditions to conquer Cuba and other islands, as well as points on the neighboring continent, and until the middle of the sixteenth century it was the heart of Spanish dominion in America. At that time the native inhabitants of Santo Domingo, who numbered 100,000 when the Spaniards came, had been reduced by cruel treatment to 60,000.

Santo Domingo and Guadeloupe. Toussaint l'Ouverture, an able negro, became a trusted military leader in Hayti, or Santo Domingo, in 1791. When the English invaded the island in 1793, Toussaint, who had resisted the claims of the French to the island, perceiving that the best hopes of his race then centred in France, whose Assembly had proclaimed the freedom of the slaves, declared his fealty to the republic. He and his followers subdued both the English and Spaniards, and, in 1796, he was made commander-in-chief of the forces of the island. He was rapidly advancing the prosperity of his people by wise and energetic measures, when a civil war broke out. Toussaint restored order, and, in January, 1801, the whole island became subject to his sway, and he assumed the government. A constitution was drawn up by which he was named president for life. Toussaint sent it to Bonaparte, who angrily exclaimed, "He is a revolted slave, whom we must punish; the honor of France is outraged." He sent out General Leclerc, his sister Pauline's husband, with 30,000 men and sixty-six war-vessels, to subdue the "usurper." He arrived in January, 1802. Toussaint regarded this armament as an instrument of enslavement for himself and his people, and a new war ensued, in which the French army was completely decimated by the sword and the more destructive yellow-fever. Of Leclerc's troops, 20,000 perished, and 60,000 white people were massacred by the infuriated negroes. Peace was restored, and Toussaint was treacherously seized, taken to France, and starved to death in prison.—Meanwhile, the black and mulatto population of Guadeloupe arose in insurrection, seized the French governor sent out by Bonaparte, declared the freedom of the slaves, and established a provisional government in October, 1801. They were subdued, and Bonaparte re-established slavery in the island and authorized the re-opening of the slave-trade.

Santo Domingo and the United States (1817). Hayti, or Santo Domingo, was divided among several chiefs after the assassination of Dessalines, a self-constituted emperor, in 1806. The principal of these black chiefs was Henri Christophe in the northwest, and Pétion in the southwest. The eastern portion of the island was repossessed by Spain. Christophe assumed the functions of a monarch in 1811, with the title of King Henri I., and had the office made hereditary in his family. Wishing to establish commercial relations with Santo Domingo, the

President of the United States sent an agent to Christophe in the summer of 1817. The latter and Pétion had lately established friendly relations between themselves in order to present a better front against the claims of the restored French monarchy. Instead of ordinary letters of credence as between independent states, this agent bore only a simple certificate of his appointment. Christophe expressed a desire for friendly relations with the United States, but, standing upon his dignity, he declined to enter into any diplomatic relations not based on the usual formalities between independent nations. The United States government hesitated to recognize the independence of Hayti. The idea of acknowledging as a nation a community of colored people was distasteful to the representatives of the slave-labor states, and the mission of the agent was a failure.

Santo Domingo and the United States (1869). The possession of territory by the United States among the West India islands had been considered desirable for a long time, and in 1869 the governments of the United States and Hayti conferred on the subject of the annexation of the island of Santo Domingo to the domain of the Republic. In November (1869) a treaty to that effect was made, but the United States Senate refused to ratify it. More information was needed. The President appointed a commission to visit the island and obtain it. Their report in the spring of 1872 did not lead to a ratification, and the subject was dropped as a national measure. The government of Santo Domingo ceded to a private company (1873) a large portion of the island, with valuable privileges and franchises. All the public lands on the peninsula of Samana and the waters of Samana Bay, were ceded to the Samana Bay Company.

Santo Domingo, FINAL SUBJUGATION OF THE NATIVES OF. The natives had made several attempts to recover their liberties from the Spanish invaders. In 1505 Ovando (which see) summoned the Spaniards to arms to subjugate the whole population of the island. In violation of a treaty, he seized the eastern portion of the island and hanged the cacique. A female cacique governed the western province of the island. She had been uniformly kind towards the Spaniards, and was beloved by her people. She was falsely accused of a design to exterminate the intruders. With this pretext as an excuse, Ovando, under the pretence of making her a friendly visit, marched towards her province with three hundred foot and seventy horsemen. The queen received him with every token of honor, and feasted him for several days. At a preconcerted signal the Spaniards drew their swords, rushed on the defenceless Indians, bound them hand and foot, seized their beloved ruler, and setting fire to the building in which all the guests had assembled, left the bound victims to perish in the flames. Anacaona, the queen, was carried in chains to the Spanish capital, and there, without trial, was hanged. This terrible affair broke the spirit of the nation, and they

never made further resistance to their Spanish masters. The inhabitants of the island, supposed to have numbered 100,000 when Columbus discovered it thirteen years before, were now reduced to 60,000. The natives of the Lucayo Islands, once numbering 120,000, had been so wasted in the mines of Santo Domingo and Cuba, under the lash of the Spaniards and by sickness and famine, that they had become extinct.

Saratoga, ATTACK UPON. Late in the fall of 1745, an expedition consisting of more than 500 French and Indians and a few disaffected warriors of the Six Nations, led by M. Marin, an active French officer, invaded the upper valley of the Hudson, and by their doings spread alarm as far south as the Hudson Highlands. They came down from Montreal, and reached Crown Point on the 28th of November, intending to penetrate the valley of the Connecticut. At the suggestion of Father Piquet, the French *Préfet Apostolique* to Canada, who met the expedition at Crown Point, Marin determined to lead his party towards Albany and cut off the advancing English settlements. They passed up Lake Champlain, crossed over to the Hudson River, destroyed a lumber-yard on the site of Fort Edward, and approached the thriving settlement of Saratoga, at the junction of Fish Creek and the Hudson. It was a scattered little village, composed mostly of the tenants of Philip Schnyler, who owned mills and a large landed estate there. Accompanied by Father Piquet, Marin, having laid waste nearly fifty miles of English settlements, fell upon the sleeping villagers at Saratoga at midnight (Nov. 23), plundered everything of value, murdered Mr. Schnyler, burned a small ungarrisoned fort near by and most of the dwellings, and made one hundred and nine men, women, and children captives. The next morning, after chanting the *Te Deum* in the midst of the desolation, the marauders turned their faces towards Canada with their prisoners. The fort was rebuilt, garrisoned, and called Fort Clinton; but late in 1747, unable to defend it against the French and Indians, it was burned by the English.

Sargent, WINTHROP, was born at Gloucester, Mass., May 1, 1753; died on a voyage from Natchez to Philadelphia, June 3, 1820. He graduated at Harvard University in 1771. He entered the military service in 1775, and was captain of Knox's artillery regiment in March, 1776, serving in that branch during the war, and engaging in the principal battles in the North, attaining the rank of major. Connected with the Ohio Company (which see), in 1786 Congress appointed him Surveyor of the Northwest Territory, and he was made its first secretary. He was St. Clair's adjutant-general at the time of his defeat in 1791, when he was wounded; and was adjutant-general and inspector of Wayne's troops in 1794-95. He was made Governor of the Northwest Territory in 1798. Mr. Sargent was a member of the Academy of Arts and Sciences, and of the Philosophical Society, Philadelphia.

Savage's Station, BATTLE AT (1862). Before

dawn of June 28, 1862, McClellan's army was marching for Turkey Bend, on the James River, in its transfer from the Chickahominy to the James. General Keyes led the way through White Oak Swamp, followed by Porter's shattered corps. (See *Gaines's Mills, Battle of*.) Then came a train of 5000 wagons laden with ammunition, stores, and baggage, and a drove of 2500 beef-cattle. This movement was so well masked that Lee, who suspected McClellan was about to give battle on the northern side of the Chickahominy in defence of his stores at the White House, or was preparing to retreat down the Peninsula, was completely deceived; and it was late in the night of the 28th of June when the astounding fact was announced to him that the Army of the Potomac was far on its way towards a new position on the James River; that a large portion of the stores at the White House had been removed; and that the remainder, together with the mansion (his wife's property), were in flames. He immediately put in operation measures to overtake and destroy the retreating army. McClellan's rear-guard, composed of the divisions of Sedgwick, Richardson, Heintzelman, and Smith, of Franklin's corps, were at Savage's Station, under the general command of Sumner. There they were assailed by a Confederate force under Magruder, who first attacked Sedgwick at about nine o'clock on the morning of June 29. He was easily repulsed. Supposing the Nationals to be advancing, he sent to Huger for aid; but finding they were only a covering party, these troops did not join him. By a misconception of an order the National line had been weakened, and at four o'clock in the afternoon Magruder fell upon the Unionists with much violence. He was again repulsed by the brigades of Burns, Brooke, and Hancock. The Sixty-ninth New York and the batteries of Pettit, Osborn, and Bramhall then took an effective part in the action, and the battle raged furiously until eight or nine o'clock in the evening, when Magruder recoiled. He had expected aid from Jackson, but was disappointed. Darkness put an end to the battle of Savage's Station. Covered by French's brigade, the National troops fell back to White Oak Swamp, and by five o'clock in the morning (June 30) they were beyond the creek, and the bridge, over which nearly the whole Army of the Potomac had passed, was destroyed behind them. 2500 wounded men had been left at Savage's Station.

Savannah, CAPTURE OF (1778). Late in 1778 Sir Henry Clinton despatched Lieutenant-colonel Campbell with about 2000 men to invade Georgia. He sailed from New York on Nov. 27, under convoy of a portion of Commodore Hyde Parker's fleet. They arrived at the mouth of the Savannah on Dec. 23, and, after much hindrance, made their way towards Savannah, opposed by General Robert Howe with about 600 Continentals and a few hundred militia. Howe was defeated, and fled, pursued by the invaders. Savannah passed into the hands of the British, with 453 prisoners, 43 cannons, 23 mortars, the fort (with its ammunition and stores), the ship-

ping in the river, and a large quantity of provisions. The Americans lost, in killed or drowned, about 100 men; the British, about 26 killed and wounded. Howe, with the survivors, retreated into South Carolina.

Savannah, EVACUATION OF. On the 11th of July, 1782, the British troops evacuated Savannah, after an occupation of three years and a half. In consideration of the services of General James Jackson, Wayne, who was in command of the Continentals in Georgia, appointed him to "receive the keys of Savannah from a committee of British officers." He did so, and on the same day the American army entered Savannah, when royal power ceased in Georgia forever. Governor Martin called a special meeting, in Savannah (Aug. 1), of the Georgia Legislature, at the house of General McIntosh. Very soon the free and independent State of Georgia began its career.

Savannah, SIEGE OF (1779). In August, 1779, Count d'Estaing appeared off the Southern coasts with twenty-two ships-of-the-line. General Lincoln, in command of the Southern army, was at Charleston, when a French frigate came there to announce the arrival of the fleet and the admiral's willingness to assist the republican army in the reduction of Savannah, provided he should not be detained too long on that dangerous coast, for he could find neither roadstead nor offing for his great ships of war. His entire fleet consisted of thirty-three vessels, bearing a large number of heavy guns. On the appearance of the fleet General Prevost summoned the troops from all his outposts to the defence of Savannah, and three hundred negroes from the neighboring plantations were pressed into the service in strengthening the fortifications around the town. Very soon, under the direction of Major Moutcrief, thirteen redoubts and fifteen batteries, with connecting lines of intrenchments, were completed, on which seventy-six cannons were mounted. Before them a strong abatis was laid. Meanwhile Lincoln had marched from Charleston, and reached the Savannah River on Sept. 12; and on the same day French troops landed below Savannah and marched up to within three miles of the town. Lincoln approached, and on Sept. 23 the combined armies commenced a siege. D'Estaing had demanded a surrender of the post on the 16th, when Prevost, hourly expecting reinforcements of eight hundred men from Beaufort, asked for a truce, which was unwisely granted. The reinforcements came, and then Prevost gave a defiant refusal. The siege, begun on Sept. 23, lasted until Oct. 8, with varying success. During the last five days a heavy cannonade and bombardment had been kept up on the British works with very little effect. D'Estaing, impatient of delay, then proposed to take the place by storm. Lincoln reluctantly agreed to the proposal, for there seemed a certainty of final victory if the siege should continue. A plan of attack was revealed to Prevost by a citizen of Charleston—a sergeant in Lincoln's army—and gave the British a great advantage. The as-

sault was made before dawn on Oct. 9 by the combined forces, 4500 strong, in three columns, led respectively by D'Estaing, Count Dillon, and Huger (of Charleston). They were shrouded in a dense fog and covered by the French batteries. After five hours of fierce conflict there was a truce for the purpose of burying the dead. Already one thousand of the Americans and Frenchmen had been killed or wounded. Among the latter was D'Estaing, who was carried to his camp. Count Pulaski, at the head of his legion, was mortally wounded by a grape-shot. During the truce D'Estaing and Lincoln held a consultation. The former, having lost many men, wished to abandon the siege; the latter, confident of final success, wished to continue it. D'Estaing positively refused to remain any longer, and on the evening of Oct. 18 the allies withdrew, the French to their ships, and the Americans to Zubley's Ferry, on the Savannah. Lincoln retreated to Charleston, and the French fleet sailed for France at the beginning of November. The allied armies lost over one thousand men, the British only one hundred and twenty. Thus closed the campaign of 1779.

Savannah, THE PRIVATEER. The most notable of the Confederate privateers at the beginning of our Civil War (1861) was the *Savannah*, Captain T. H. Baker, of Charleston, S. C. She was a little schooner which had done duty in Charleston harbor as a pilot-boat, only fifty-four tons' burden. She sailed out of Charleston harbor at the close of May, 1861, captured a Maine merchant brig, and proceeded in search of other prizes. On June 3 she fell in with the National brig *Perry*, which she mistook for a merchant-vessel, but, discovering her mistake, attempted to escape. After a sharp fight the *Savannah* was captured and sent to New York. She was the first vessel captured bearing the Confederate flag. Her captain and crew were tried for piracy in New York, under the proclamation of President Lincoln of April 19, 1861. (See *Confederate Privateers*.) President Davis, in a letter to President Lincoln, threatened to deal with prisoners in his hands precisely as the captain and crew of the *Savannah* should be dealt with. He held Colonel Michael Corcoran, of the Sixty-ninth New York (Irish) Regiment, and others as hostages, to suffer death in case that penalty should be inflicted on the prisoners of the *Savannah*. The case attracted much attention at home and abroad, and in the British Parliament it was argued that, as the Confederates possessed belligerent rights (see *Queen Victoria's Proclamation*), the prisoners were privateers, not pirates. Judge C. P. Daly, of New York, argued that they were on the same level in the grade of guilt with every Confederate soldier, and that if one must suffer death for piracy, the other must suffer death for treason; and the government having so far conceded belligerent rights to the Confederates as to exchange prisoners of war, it could not consistently make a distinction between prisoners taken on land and on the sea. He recommended, as a measure of expediency, that the Presi-

dent should treat the prisoners as "privateersmen" and prisoners of war. This recommendation was followed.

Savings-banks. The first regular institution of this kind was established at Hamburg in 1778. The next was at Berne, Switzerland, in 1787. The oldest savings-bank in the world, still in existence, was founded at Zurich, Switzerland, in 1803. The first savings-bank in the United States was established in Philadelphia in 1816, and yet (1880) exists as a flourishing institution. It was called the "Philadelphia Savings Fund Society." It held on deposit on Jan. 1, 1875, \$10,275,752. The second savings-bank was established in Boston the same year, and the third in New York in 1819. The banks are regulated by state laws, and the average rate of interest paid by them is five per cent. A careful estimate placed the number of depositors in the now numerous savings-banks in the United States in 1875 at 2,164,263, and the aggregate amount of deposits at \$810,096,745. The largest number of depositors in one state, and the largest amount deposited, were in the State of New York, the former being 872,408, and the latter \$304,000,000.

Saxton, RUFUS, was born at Deerfield, Mass., Oct. 19, 1824, and graduated at West Point in 1849. In 1853 he led a surveying-party across the Rocky Mountains, and afterwards was employed in the Coast Survey. He was with Captain Lyon at St. Louis when the Civil War broke out, and was prominent in breaking up "Camp Jackson" (which see). He was with McClellan in western Virginia, and then with General Sherman in the South as quartermaster-general. He was in command at Harper's Ferry a while, and, as brigadier-general (April 15, 1862), he was made Military Governor of the Department of the South, serving in that capacity from 1862 to 1865. In March, 1865, he was breveted brigadier-general United States Army.

Saybrook (CONN.), ATTACK UPON (1814). Early in April, 1814, a number of British barges, supposed to contain about two hundred and twenty men, entered the Connecticut River, passed up seven or eight miles, and landed at a place called Pettipaug (a part of Saybrook), where the invaders destroyed about twenty-five vessels. This disaster caused the Governor of Connecticut (Smith) to call out the militia for the defence of the sea-coast of the state.

Say-Brook, FORT. On his arrival at Boston in 1635, John Winthrop, son of the Governor of Massachusetts, bearing a commission from Lord Say and Seal and Lord Brook to begin a settlement on the Connecticut River and to be governor there, sent a bark of thirty tons, with twenty men, to take possession of the mouth of the river and begin a fortification there. He brought with him from England men, ordnance, ammunition, and \$10,000 for the purpose. A few days after the arrival of the English at the mouth of the river, a Dutch vessel sent from Manhattan (which see) appeared, with the design of taking possession of the same spot. The English, having two pieces of cannon already

mounted, would not allow the Dutch to land. The fort erected by the English was called Say-Brook, in honor of the proprietors of the land.

Saybrook Platform. A colonial synod was held at Saybrook, Sept. 9, 1703, by legislative command, to frame an ecclesiastical constitution. That synod agreed that the confession of faith assented to by the synod in Boston in 1680 be recommended to the General Assembly, at the next session, for their public testimony to it as the faith of the churches of the Connecticut colony; and that the heads of agreement assented to by the united ministers, formerly called Presbyterian and Congregational, be observed throughout the colony. It also agreed on articles for the administration of church discipline. This was called the "Saybrook Platform." In October the Legislature of Connecticut passed an act adopting the platform then constructed as the ecclesiastical constitution of the colony. This system, so closely Presbyterian, was favored by the Latitudinarians (which see), because it diminished the influence of unrestrained and bigoted church members and gave the more intelligent members greater weight in church affairs.

Scale of Prices for Army Supplies. There was so much embarrassment and dissatisfaction in the purchase of army supplies, owing to the depreciation of Continental paper-money, that Washington's recommendations to Congress on the subject were acted upon by that body. They recommended a convention of delegates from eight Northern States. They met at New Haven (Jan. 8, 1778), and agreed upon a scale of prices, according to which provisions and clothing were to be paid for by the army commissaries. Some of the states attempted to enforce the New Haven scale of prices on everything, but, like former efforts, these failed. (See *New England Convention*.)

Scammel, ALEXANDER, was born at Mendon, Mass., March 24, 1747; died at Williamsburg, Va., Oct. 6, 1781. He graduated at Harvard University in 1769. He taught school, practised surveying, and became proprietor of the town of Shapleigh, Me. In 1775 he was studying law with General Sullivan, when he left his books and joined the army at Cambridge as Sullivan's brigade-major. He was with him in the battle of Long Island (which see), and of Trenton and Princeton; was especially distinguished at Saratoga; and from 1778 to 1781 was adjutant-general of the army. He commanded a regiment of light infantry in the siege of Yorktown, where he was surprised, and surrendered, but was so badly wounded that he died a few days afterwards.

Schenck, JAMES F., was born in Ohio, June 19, 1807. He entered the United States Navy in 1825; served on the Pacific coast with Stockton during the Mexican War; and commanded the East India squadron in 1860-61. He was afterwards engaged in the blockading service, and was in command of a division in Porter's fleet in the attacks on Fort Fisher. He was made rear-admiral on the retired list in July, 1870.

Schenck, ROBERT CUMMING, brother of Admiral Schenck, was born at Franklin, Warren Co., O., Oct. 4, 1809. He graduated at Miami University in 1827; was admitted to the bar in 1831, and settled in Dayton. In 1840 he was in the Ohio Legislature; and from 1843 to 1851 he was a member of Congress, when he went as American Minister to Brazil, where he took part in the negotiation of several treaties in South America. In 1861 he entered the field as brigadier-general of volunteers (May 17), and had his first encounter with the insurgents near Vienna, Va. (which see). He was engaged in the battle of Bull's Run; then served in western Virginia; and after the battle at Cross Keys (which see) Frémont placed him in command of a division. In the battle of Groveton, or second battle of Bull's Run (which see), he had his right arm shattered by a ball. In September, 1862, he was promoted to major-general, and a little later was in command at Baltimore. From 1863 to 1871 he was a member of Congress, and in the latter year was appointed minister to England, which post he held until 1876.

Schenectady, DESTRUCTION OF. Count Frontenac arrived in Canada as governor by reappointment in October, 1689. He brought with him troops and supplies and a plan for the invasion and occupation of New York. Invasions by the Iroquois had reduced Canada to great distress, and his arrival was timely relief. Frontenac was about seventy years of age, but possessed the vigor and buoyancy of a young man. (See *Frontenac, Louis de Buade*.) He set to work with energy to carry the war into the British colonies by land and sea. His first organized war-party was composed chiefly of Mohawks converted by the Jesuit missionaries, who were settled near Montreal. They were acquainted with the settlements about Albany. These Mohawks, with a number of Frenchmen, were sent to attack these settlements. They traversed the wooded wilderness southward among deep snows, and, after a march of twenty days, approached Schenectady, a Dutch village in the Mohawk valley, and the outpost of the settlements at Albany. There were about forty houses enclosed in a palisade, but, unaware of danger, the gates were left open, and the people were sleeping soundly, when, on the night of Feb. 8, 1690, the invaders entered the village silently, separated into several bands. The horrid signal of the war-whoop was given, and the attack began. Doors were broken open, indiscriminate slaughter ensued, and the houses were set on fire. Sixty men, women, and children were slain, twenty-seven were taken prisoners, and the remainder fled, half-naked, through a driving snow-storm, to Albany, sixteen miles distant. The cold was so intense that many lost their limbs by frost. This raid created intense alarm.

Schofield, JOHN MCALLISTER, was born in Chautauqua County, N. Y., Sept. 29, 1831, and graduated at West Point in 1853, where he was instructor in natural philosophy for five years. Under leave of absence he was filling a like po-

sition in the Washington University, Mo., when the Civil War broke out. He was chief of Lyon's staff at Wilson's Creek (which see), and in November, 1861, was made brigadier-general of

JOHN MCALLISTER SCHOFIELD.

volunteers, commanding the Missouri militia. In April, 1862, he commanded the District of Missouri, and in October the Army of the Frontier, with which he drove the organized Confederate forces into Arkansas. In November, 1862, he was made major-general of volunteers. In the Atlanta campaign, in 1864, he was conspicuous; also in the campaign against Hood in Tennessee (see *Franklin, Battle of*), until the battle of Nashville (which see), when he was transferred to North Carolina, taking possession of Wilmington, and was active until the surrender of Johnston (which see). He was breveted major-general United States Army in March, 1865, and assigned to the command of the First Military District in 1867. He was Secretary of War *ad interim* on the resignation of General Grant in 1868, and was confirmed in May. He resigned in 1869, and was assigned to the Department of Missouri.

School District Libraries were first established in the State of New York in 1837, when the Legislature appropriated for the purpose \$200,000 annually for three years, and has since, for the support of these free district libraries, annually appropriated \$55,000. Each district is authorized to levy a small tax annually for the same purpose. The number of volumes in these libraries in 1876 was about a million. Other states have followed the example of New York.

School of Fine Arts, FIRST, PROJECTED IN AMERICA. In 1622 Edward Palmer, a native of Gloucestershire, Eng., obtained from the London Company a grant of land in Virginia, and from the Plymouth Company a tract in New England. Mr. Palmer died late in 1624. Just before his death he made provision in a will for the establishment, conditionally, of a "university" in Virginia, with which was to be connected a school of fine arts. His will, dated Nov. 22 (O. S.), 1624, provided for the descent of his lands in Virginia and New England to his sons and nephews, saying: "But if all issue fails,

then all said land is to remain for the founding and maintenance of a university and such schools in Virginia as shall there be erected (see *Henrico College*), and the university shall be called 'Academia Virginiensis Oxoniensis.'" After providing for scholarships in the university for the male descendants of his grandfather, Mr. Palmer's will provided "that the scholars of the said university, for the avoiding of idleness, shall have two painters, the one for oil-colors and the other for water-colors, who shall be admitted fellows of the same college, to the end and intent that the said scholars shall or may learn the art of painting; and further, my will and mind is that two grinders, the one for oil-colors and the other for water-colors, and also oil and gum-waters, shall be furnished, from time to time, at the cost and charges of the said college." Mr. Palmer purchased a picturesque island in the Susquehanna, opposite the present village of Havre-de-Grace, Md., which was originally called Palmer's Island. It is now Watson's Island. There Mr. Palmer expected the university and school of fine arts to be established. The family of Edward Palmer had been identified with Warwickshire from the time of William the Conqueror. He was married to a relative of the same name. Of this marriage Thomas Fuller, author of *Worthies of England*, wrote:

"Palmero Palmera nubit; sic nubilis annis
Auctor adjunctis nobilitatis aquis—"

"A Palmer maiden is wedded to a Palmer; as a full river is enlarged by the added waters of excellence." Edward Palmer's sister was the mother of the unfortunate poet Thomas Overbury, who was poisoned (1613) at the instigation of the vile Countess of Essex, afterwards Lady Somerset. During the later years of his life Palmer resided in London, and his collection of rarities and ancient Greek and Roman coins was well known among literary men. Fuller says: "His plentiful estate afforded him opportunity to put forward the ingenuity implanted by nature for the public good, resolving to erect an academy in Virginia. In order whereunto he purchased an island, called Palmer's Island to this day [1662]." This school of fine arts in America was projected years before Dean Berkeley projected his college in the Bermudas (see *Berkeley, George*) and brought John Smybert with him to cultivate art therein. (See *Smybert, John*.)

Schoolcraft, HENRY ROWE, LL.D., was born at Watervliet, N. Y., March 28, 1793; died in Washington, D. C., Dec. 10, 1864. His ancestor who first settled in America was a school-teacher named Calcraft, and he was popularly named Schoolcraft. Henry studied chemistry and mineralogy in Union College in 1807-8. In 1817-18 he took a scientific tour in the West, and made a fine mineralogical and geological collection, publishing, in 1819, *A View of the Lead Mines of Missouri*, which was enlarged and published (1853) under the title of *Scenes and Adventures in the Semi-Alpine Regions of the Ozark Mountains of Missouri and Arkansas*. In 1820 he was geologist of an exploring expedition, under General Cass,

to the Lake Superior copper region. He was also on a commission to treat with the Indians at Chicago. In 1823 he was made Indian agent at the Falls of St. Mary, and afterwards at Mackinaw, where he married an accomplished young woman, a granddaughter of an Indian chief. He founded the Historical Society of Michigan in 1828; the Algic Society, at Detroit, in 1831, before which he delivered two lectures on the grammatical construction of the Indian languages. These, translated into French by Duponceau and presented to the French Institute, procured for Schoolcraft a gold medal from that institution. He published several works on Indian literature, as well as fiction, and in 1832 he led a second government expedition to discover the real chief source of the Mississippi River, which was found to be Lake Itasca. In a treaty with the Indians on the Upper Lakes in 1836 he procured the cession of sixteen million acres of land to the United States, and he was appointed Chief Disbursing Agent for the Northern Department. After visiting Europe, he was employed by the State of New York in making a census and collecting statistics of the Six Nations (which see), and in 1847 he was employed by authority of Congress in the preparation of a work, of which six volumes have appeared, entitled, *Historical and Statistical Information Respecting the History, Condition, and Prospects of the Indian Tribes of the United States*. He wrote *Personal Memoirs of a Residence of Thirty Years with the Indian Tribes on the American Frontiers* (1863), and several other works on the red race. *The Indian Fairy Book*, compiled from his manuscripts, was published in 1868.

Schurz, CARL, was born near Cologne, Germany, March 2, 1829. He studied at the gymnasium at Cologne and at the University of Bonn. With other students he engaged in the revolutionary movements in 1848; joined Gottfried Kinkel in publishing a liberal newspaper, and, after the failure of an attempt at insurrection at Bonn (1849), both were compelled to fly. Schurz afterwards made his way to Switzerland. Finally, on the night of Nov. 6, 1850, he rescued Kinkel from the fortress of Spandau, escaped to the sea, and took passage in a schooner for Leith. Thence Schurz went to Paris; thence to London, in 1851, where he was a teacher until the summer of 1852, when he came to America, landing at Philadelphia. There he remained three years, and then settled at Madison, Wis. In the presidential campaign of 1856 he became a noted German orator, and in 1858 he began to make public speeches in English. He soon afterwards became a lawyer at Milwaukee, and, in the winter of 1859-60, he was recognized as one of the most popular lecturers. He took a leading part in the Republican National Convention in 1860, when Mr. Lincoln was nominated for President, and made effective speeches during the campaign. After his inauguration (March, 1861), Mr. Lincoln appointed him minister to Spain, but he returned to the United States in December, resigned the office of minister, became a brigadier-general of volunteers, in April, 1862, and major-general in March, 1863.

He was in command of a division in the battle of Groveton, or second battle of Bull's Run, and at Chancellorsville, and was temporarily in command of the Eleventh Corps at the battle of Gettysburg, afterwards taking part in the battle of Chattanooga (which see). After the war General Schurz resumed the practice of law in Washington, and was for some time the Washington correspondent of the *New York Tribune*. In 1866 he was sent to the South as a commissioner to examine and report on the condition of the Southern States, especially upon the condition of the Freedmen's Bureau. His report was submitted to Congress. In the same year he founded the *Detroit Post*, and in 1867 he became editor of a German paper published in St. Louis. He labored earnestly for the nomination and election of General Grant for the Presidency of the United States, and, in January, 1869, he was chosen United States Senator from Missouri for the term ending in 1875. In that body he opposed some of the leading measures of President Grant's administration, and took a prominent part in the organization known as "Liberal Republicans," which nominated Mr. Greeley for President. General Schurz visited Europe in 1873 and 1875. In March, 1877, he was called to the cabinet of President Hayes as Secretary of the Interior.

Schuyler and a Council of Officers. When Willett reached Schuyler's camp with Gansevoort's call for relief (see *Fort Schuyler, Siege of*), the general called a council of officers and proposed to send a detachment up the Mohawk valley. The officers opposed the measure, because the army was then too weak to successfully oppose Burgoyne. The general persisted in his opinion of the wisdom and humanity of the measure, and, while walking the floor with great anxiety, he heard one of the officers say, in a half-whisper, "He means to weaken the army." This charge of implied treason aroused his anger so fiercely that, unconsciously biting a clay-pipe he was smoking into several pieces, he exclaimed, in a tone that awed the whole company into silence, "Gentlemen, I shall take the responsibility upon myself. Where is the brigadier who will take command of the relief? I shall beat up for volunteers to-morrow." General Arnold immediately stepped forward, and before noon the following day eight hundred volunteers were on the march. The fort was relieved, and Burgoyne thereby received a deadly blow.

Schuyler and Gates. Gates, piqued by the omission of the Continental Congress to appoint him one of the major-generals in the army (June, 1775), but only adjutant-general, with rank of brigadier, indulged in unworthy intrigues for promotion. He was a favorite with some of the leading men in Congress from New England, and very soon a Gates faction appeared in that body. When disaster overwhelmed the republican army in Canada he was sent thither, by order of Congress, to take command of it, and, because his power was independent while the troops were in Canada, he assumed that his command would be independent in any part of the

Northern Department. When the troops were out of Canada he assumed that independence. Schuyler questioned his powers, and Congress was compelled to tell Gates that he was subordinate to Schuyler. Late in the year (1776) he repaired to the Congress at Baltimore and renewed his intrigues so successfully that, on account of false charges against Schuyler, he was appointed his successor in the command of the Northern Department in the spring of 1777. The report of a committee of inquiry caused Schuyler's reinstatement a few weeks afterwards. Gates was angry, and wrote impertinent letters to his superiors. He refused to serve under Schuyler, who had always treated him with the most generous courtesy, but hastened to the Congress, then again in Philadelphia, and, by the misrepresentation of one of his faction, was admitted to the floor of that body, where he so conducted himself as to receive rebuke. A conspiracy for the removal of Schuyler and the appointment of Gates in his place, soon ripened into action. The evacuation of Ticonderoga early in July (1777) was charged to Schuyler's inefficiency, and he was even charged, indirectly, with treason. So great became the clamor against him, especially from the constituents of Gates's friends in Congress from New England, that, early in August, those friends procured Schuyler's removal and the appointment of Gates to his place. The patriotic Schuyler, unmoved in his sense of duty by this rank injustice, received Gates kindly and offered his services to the new commander, who treated the general with the greatest coolness. The victories over Burgoyne soon ensued, the whole preparation for which had been made by Schuyler. (See *Bemis's Heights, First Battle of*.)

Schuyler, ATTEMPTED ABDUCTION OF. In the summer of 1781 General Schuyler, withdrawn from military service, was at his home, just on the southern verge of the city of Albany. Plans had been matured for seizing Schuyler, Governor Clinton, and other leading republicans of the state. In August, 1781, an attempt was made to abduct Schuyler by Walter Meyer, a Tory, who had eaten bread at the general's table. The object of these seizures was to have notable prisoners to exchange for British captives. Meyer, at the head of a band of Tories, Canadians, and Indians, repaired to the neighborhood of

SCHUYLER'S MANSION IN ALBANY.

Albany, where he seized a Dutch laborer and learned from him the precise condition of affairs at Schuyler's house. He was allowed to depart after taking an oath of secrecy, but, with a men-

tal reservation, he warned the general, and Schuyler and his family were on the alert. Just at twilight of a sultry August evening, a servant told the general that a stranger at the back gate desired to speak to him. He comprehended the errand. The doors of the house were immediately closed and barred, the family went to the second story, and the general hastened to his room for his fire-arms. From the window he

Oswego, N. Y., where she died in August, 1857) in the cradle below. She was about to rush to the rescue of her child, when the general restrained her. Her life was of more value than that of the infant. Her little daughter Margaret (afterwards the wife of General Stephen Van Rensselaer, the "patroon") ran down the stairs, snatched the baby from the cradle, and bore it up in safety. As she was ascending an In-

dian threw his tomahawk at her. It went near the baby's head, through her dress, and stuck in the stair-railing, the mark of which may yet be seen. At the same moment one of the miscreants, supposing her to be a servant, called out, "Wench! wench! where is your master?" With quick presence of mind, she replied, "Gone to alarm the town." The Tories were then in the dining-room, engaged in plunder. The general threw up his window and called out, loudly, as to a multitude, "Come on, my brave fellows; surround the house and secure the villains who are plundering." The marauders retreated in haste, carrying away with them a quantity of silver-plate. Three of the guards fought lustily, but were overpowered and carried away prisoners. When they were exchanged the generous and grateful Schuyler gave each of them a farm in Saratoga County.

CATHARINE V. R. COCHRANE.

perceived that the house was surrounded by armed men. They were Meyer and his gang. To arouse his guard (three of whom were asleep on the grass), and, perchance, to alarm the town, he fired a pistol from his window. At the same moment Indians burst open the doors below. All these movements occurred in the space of a few minutes. Mrs. Schuyler perceived that in the confusion in going up-stairs she had left her infant (afterwards Mrs. C. V. R. Cochrane, of

Schuyler, COLONEL PETER, AND INDIANS IN ENGLAND. In 1710 the Legislature of New York sent a memorial to Queen Anne on the subject of French encroachments, by the hand of Colonel Peter Schuyler, of Albany. He took with him a sachem of each of the Five Nations. In London these dusky "kings," as they were called, attracted a great deal of attention. Multitudes followed them wherever they appeared, and the print-shops soon exhibited engravings of their portraits. They were entertained at sumptuous banquets by the principal nobility of the realm, and shown the glory of the kingdom, to impress them with the power of the English nation. They saw reviews of troops, and visited royal ships-of-the-line. They were conveyed to court in state carriages, drawn by six horses each, and held an audience with the queen. These barbarian monarchs returned to America with Schuyler in the ship *Dragon*, arriving at Boston early in the summer of 1711. They then expressed their readiness to aid the English in the conquest of Canada.

Schuyler, GENERAL PHILIP, SENDS TROOPS TO WASHINGTON. Always on the alert to send help where it was most needed, General Schuyler ordered (November, 1776) from the Northern Army seven Continental regiments of New England, whose term of service would expire on the 1st of January, to march to the Delaware to rein-

force Washington. With these Generals Gates and Sullivan arrived at Washington's headquarters at Newtown, near the Delaware, in Pennsylvania, and proved to be a timely reinforcement for his army, for at that moment he was preparing to strike the Hessians at Trenton. (See *Trenton, Battle at*.)

Schuyler, GENERAL PHILIP, TRIAL OF. The enemies of General Schuyler held him responsible for the loss of Ticonderoga (July, 1777), and these clamors and the influence of a faction in Congress caused him to be superseded in the command of the Northern Department, in August following, by Gates. He demanded a court of inquiry, but it was delayed until October, 1778, when he was tried by a court-martial, at the house of Reed Ferris, at Pawling, Dutchess Co., N. Y., of which General Lincoln was president and John Laurens was Judge Advocate. The charge was neglect of duty. The trial lasted thirty-five days, and he was acquitted, as the court said, "with the highest honor." The verdict was confirmed by Congress (Dec. 3, 1778), and Schuyler soon afterwards took his seat in that body, to which he had been elected before the verdict was known.

Schuyler on the Oswego River. Colonel John Bradstreet was sent by Shirley, in 1756, to provision the garrison at Oswego. With 200 provincial troops and forty companies of boatmen, he crossed the country from Albany, by way of the Mohawk River, Wood Creek, Oneida Lake, and the Oswego River, and placed in the fort provision for 5000 troops for six months. He was accompanied by Captain (afterwards General) Philip Schuyler, as chief commissary. His descent of the Oswego River had been observed by the French scouts, and when he had ascended that stream about nine miles he was attacked by a strong party of French, Canadians, and Indians. These were driven from an island in the river, and there Bradstreet made a defensive stand. One of the Canadians, too severely wounded to fly with his companions, remained, and a boatman was about to despatch him, when young Commissary Schuyler saved his life. When, soon afterwards, Bradstreet abandoned the island, only one bateau was left. It was scarcely large enough to carry the colonel and his little band of followers. The wounded Canadian begged to be taken in, but was refused. "Then throw me into the river," he cried, "and not leave me here to perish with hunger and thirst." The heart of Captain Schuyler was touched by the poor fellow's appeals, and, handing his weapons and coat to a companion-in-arms, he bore the wounded man to the water, swam with him across the deep channel, and placed him in the hands of a surgeon. The soldier survived; and nineteen years afterwards, when Schuyler, at the head of the Northern Army of the Revolution, sent a proclamation in the French language into Canada, that soldier, living near Chambly, enlisted under the banner of Ethan Allen (see *Allen, Ethan, Capture of*), that he might see and thank the preserver of his life. He went to Schuyler's tent, on the

Ile aux Noix, and kissed the general's hand in token of his gratitude.

Schuyler, PETER, second son of Philip Pieterse van Schnyler, the first of the name in this country, was born at Albany, N. Y., about 1654. Able and active, he entered public life when quite young, and enjoyed the confidence of his fellow-citizens. When, in 1686, Albany was incorporated a city, young Schuyler and Robert Livingston went to New York for the charter, and Schnyler was appointed the first mayor under it, which office he held eight years. In 1688 he was appointed major of the militia, and towards the close of the following year he was put in command of the fort at Albany. It was at about that time that Milborne attempted to take possession of the fort. (See *Leister, Jacob*.) He was successfully resisted by Schuyler and some Mohawk Indians. In 1691 Schuyler led an expedition that penetrated to Laprairie, near Montreal. After several skirmishes, in which he lost nineteen white men and Indians, and killed about two hundred Frenchmen and Indians, he returned to Albany. He was a member of the New York Assembly from 1701 until 1713. In 1710 he went to England with five chiefs of the Five Nations, at his own expense, for the purpose of—1. Impressing them with the greatness of the English nation, and so detaching them from the French; and, 2. To arouse the government to the necessity of assisting the Americans in expelling the French from Canada, then becoming more hostile and powerful every day. After the accession of George I. (1714) he became a member of the King's Council in New York. At one time he was its president, and in 1719 was acting governor. From 1701 to 1730 he was Commissioner of Indian Affairs, and acquired almost unbounded influence over the Five Nations.

Schuyler, PETER, Mayor of Albany, acquired a great and salutary influence over the Indians, especially the Five Nations (which see). In 1710 he took five chiefs of that confederacy (see *Iroquois Confederacy, The*) to England, at his own expense, in order to stimulate the government to vigorous measures against the French in Canada. As the oldest member of the Council in New York, in 1719, the chief command devolved upon him. He was very watchful, and often gave the other colonies timely warning of French and Indian incursions.

Schuyler, PHILIP, was born at Albany, Nov. 22, 1733; died there, Nov. 18, 1804. By the laws of primogeniture, he inherited the whole of his father's estate, but he generously divided it equally with his brothers and sisters. He inherited from Colonel Philip Schuyler the Saratoga estate, which he afterwards occupied. Schuyler was a captain of provincial troops at Fort Edward and Lake George in 1755, became a commissary in the army the same year, and held the position until 1763. An influential member of the New York Assembly, he was chiefly instrumental in stimulating early resistance to British encroachments on the rights of the colonists. In the Continental Congress, in 1775, he, with

Washington, drew up the regulations for the army, and he was appointed one of the first major-generals. Assigned to the command of the Northern Army, he was charged with planning and executing an invasion of Canada. An attack of his inherited disease (the gout) prevented his conducting the campaign in person in the field, and after going with the army to the foot of Lake Champlain, he relinquished the command to General Richard Montgomery, his lieutenant, and returned to Albany. On his recovery, he entered with zeal upon his various duties as commander-in-chief of his department

PHILIP SCHUYLER.

and principal Indian commissioner. Annoyed by the insubordination and loose discipline of some of his troops—with interference with his authority and wicked slanders of men intriguing to put General Gates in his place—he offered his resignation; but the Congress, knowing his great worth, begged him to remain. He conducted the campaign against Burgoyne with great skill until intriguers procured his place for Gates, and he was superseded by that officer; but he patriotically used his most earnest efforts to enable Gates to capture the British army. Without command, his vigilance was of the utmost importance to the cause, and he was called “the eye of the Northern Department.” His influence in keeping the Indians neutral was of incalculable importance to the American cause at that time. Schuyler resigned his commission in April, 1779. As a member of Congress (1778–81), he was very efficient in military affairs, and was appointed to confer with Washington concerning the campaign of 1780, especially in the Southern Department. He was one of the New York State Senators, and one of the principal contributors to the code of laws adopted by that state. He was United States Senator from 1789 to 1791, and again in 1797. General Schuyler was an earnest advocate of internal improvements for the development of the resources of the country, and he is justly called the “father of the canal system of the United States.” He was a man of large wealth. He owned a fine mansion in the then southern suburbs of Albany (yet standing, but now within the city), and a plain one on his large estate at Saratoga. The

latter, with his mills and other property, valued at \$50,000, was destroyed by the British at the time of Burgoyne's invasion.

SCHUYLER'S MANSION AT SARATOGA.

Schuyler's Address to the Canadians. The command of the Northern Department was given to General Philip Schuyler, assisted by General Richard Montgomery. It was believed that a formidable invasion of New York from Canada was in preparation, and an expedition into that province was planned and put into operation. Schuyler addressed the inhabitants in a circular letter, written in French, informing them that “the only views of Congress were to restore to them their rights, which every subject of the British empire, of whatever religious sentiments he may be, is entitled to; and that, in the execution of these trusts, he had received the most positive orders to cherish every Canadian and every friend to the cause of liberty, and sacredly to guard their property.” The wise purposes of this circular were frustrated by the bigotry of General Wooster, who saw no good in Roman Catholics, and the dishonesty of Colonel Arnold, who cheated them.

Science in America and Asia. It is, at least, a curious coincidence, that among the Algonquin tribes of the Atlantic and of the Mississippi valley the North Star was called the *Bear*, as it was universally called by the astronomers of Asia. Another curious fact, which has led to speculation, is, that the seemingly indigenous inhabitants of Mexico had a nearly exact knowledge of the length of the year, and, at the end of one hundred and four years, made their intercalation more accurately than the Greeks, Romans, or Egyptians.

Scioto Company. Soon after the settlement of Marietta was commenced (see *Ohio Company*), an association was formed called “The Scioto Land Company.” The history of that company is involved in some obscurity. Colonel William Dner, of New York, was an active member. It was founded in the East. They, at first, purchased lands of the Ohio Company, and made Joel Barlow their agent in Europe to make sales of them. Barlow had been sent to England by the Ohio Company for the same purpose. He distributed proposals in Paris in 1789, and sales were effected to companies and individuals in France. On Feb. 19, 1790, two hundred and eighteen emigrants sailed from

Havre to settle on these lands. They arrived at Alexandria, Va., on the 3d of May, crossed over to the Ohio River, and went down to Marietta, where about fifty of them settled, and the remainder went to another point below, opposite the mouth of the Great Kanawha, where they formed a settlement called Gallipolis (town of the French). These emigrants were to be furnished with supplies for a specified time, but the company failed to keep their promises. They suffered much. They failed, also, in getting clear titles to their lands, and the company has been charged with swindling operations. The settlers, through the good offices of Peter S. Duponceau, of Philadelphia, obtained a grant from Congress of twenty-five thousand acres opposite the Little Sandy. It was ever afterwards known as "The French Grant." Each inhabitant had two hundred and seventeen acres. The aims of the Scioto Company seem to have been simply land speculation, not founding actual settlements. "It comprised," Dr. Cutter says, "some of the first characters in America." They undoubtedly expected to purchase public securities at their then greatly depreciated values, and with them pay for the lands bought of the government; but the adoption of the national Constitution caused a sudden rise in the value of these securities, and blasted the hopes of the company. Colonel Duer, who seems to have been the originator of the scheme, suffered the unjust imputation of being a swindler, because the company did not (for it could not) meet its obligations.

Sclopis, PAUL FREDERICK DE SALERNO, an Italian count, was born in Turin, in 1798, and died March 8, 1878. He studied law at the University of Turin, took his legal degrees in 1818, and soon rose to eminence as a lawyer and jurist. He was also distinguished as an historian, and gave his first historical lecture before the Turin Academy of Science, in 1827. This was followed, in 1833, by a *History of Ancient Legislation in Piedmont* and the *History of Italian Legislation*. His fame as a jurist was enhanced by his drawing up with great ability the civil code of Sardinia, in 1837. In 1845 Count Sclopis became a corresponding member of the Institute of France, and a foreign member in 1869. He was created Minister of Justice and Ecclesiastical Affairs in Piedmont in March, 1848, after having held the office of President of the Superior Commune of Censorship. At the close of 1849 Count Sclopis entered the Piedmontese Senate, of which he was president until that principality was merged into the kingdom of Italy, in 1861, when he held the same office in the Italian Senate. At about that time he became President of the Turin Academy of Sciences; and in 1868 his king, Victor Emanuel, bestowed upon him the order of Annunziata, the highest of the kingdom. When, in 1871, Victor Emanuel was asked to appoint an arbitrator for the tribunal, at Geneva, to decide upon the claims growing out of the devastations committed by the cruiser *Alabama* (see *Tribunal of Arbitration*), he selected Count Sclopis, and he was chosen by his colleagues president of the tribunal. For his ser-

vices on that occasion, the United States government presented to him a service of silver plate.

Scotch Emigration to East Jersey. In 1685 the persecution of Scotch Presbyterians caused many of them to look towards East Jersey, where the kind Quaker Barclay ruled, as the only asylum in his majesty's dominions where, by law, toleration was allowed. Terrible was the persecution inflicted in Scotland—allowed, if not ordered, by James II. Every day fugitives, seeking safety, were caught by soldiers and executed in clusters on the highways. Women were fastened to stakes at low-water mark, and left to be drowned by the rising tide. Foul dungeons were crowded, and among large numbers transported to America by order of government women were often burned in the cheek and men marked by lopping off their ears. Scotch Presbyterians of education, and full of the love of liberty, at the same time flocked to East Jersey in such numbers that this rising community was quite suddenly well populated by a virtuous and thriving people. They found there a country much like their own in many respects. In a few years they adopted the New England system of free schools. "In all its borders," wrote a Scotch Quaker merchant, "there is not a poor body, or one that wants." Covenanters, Quakers, and Puritans gave a mixed population to New Jersey, which formed admirable materials for a state.

Scotch-Irish. Many persons distinguished in the annals of the United States were and are of Scotch-Irish descent—a hardy people, formed by an intermixture of Scotch, English, and Irish families, more than two hundred and fifty years ago. Queen Elizabeth found her subjects in Ireland so uncontrollable that she determined to try the experiment of transplanting to that island the reformed religion, with some of her English and Scotch subjects. It was a difficult and dangerous experiment, for the Irish regarded it simply in the light (and really the true one) of a measure for their complete subjugation. Elizabeth did not meet with much success, but her successor, James I., did. He determined to introduce whole English and Scotch colonies into Ireland, that by so disseminating the reformed faith he might promote the loyalty of the people. These were sent chiefly to the northerly portions of Ireland; first, to six counties in Ulster, which were divided into unequal proportions—some of two thousand acres, some of fifteen hundred, and some of one thousand. These were allotted to different kinds of persons—first, British undertakers, who voluntarily engaged in the enterprise; second, servants of the crown, consisting of civil and military officers; and, third, natives, whom the king hoped to render loyal subjects. The occupants of the largest portion of lands were bound, within four years, to build a castle and bawn (a walled enclosure for cattle), and to settle on their estates forty-eight able-bodied men, eighteen years old or upwards, of English or Scotch descent. The second class were also required to put up suitable buildings, and to plant English

or Scotch families on their possessions within two years. These colonists from Scotland and England intermarried with the natives, and from this union sprang the race of law-loving, law-abiding, loyal, enterprising freemen from whom came many of the best settlers in Pennsylvania, Virginia, and North Carolina.

Scotch Settlers in Georgia. An additional grant of \$130,000 having been made to the trustees of Georgia, they took steps for occupying the frontiers towards Florida. A party of Scotch Highlanders from the Glen of Strathdean, with Rev. John McLeod, of the Isle of Skye, for their minister, came over in 1736, and founded New Inverness (now Darien), on the Altamaha River, in McIntosh County.

Scotch Spy, A. Early in April, 1782, Marion was watching the movements of the British between the Cooper and Ashley rivers. A Scotchman, pretending to be a deserter, came out from Charleston, visited the camp of Marion, and passed on unsuspected to the Scotch settlements on the Pedee. He was a spy, and by false representations of the power of the British and the weakness of the Americans soon stirred up an insurrection there, led by Major Gainey, for the third time. Marion fell upon them, when more than five hundred loyalists laid down their arms, and Gainey joined the ranks of the conqueror. Among these insurgents was a notorious and bloodthirsty Tory named David Fanning, of North Carolina. He was in command of about one thousand desperate marauders like himself, and became a terror to the inhabitants of central North Carolina. He and some of his associates suddenly entered Hillsborough, and carried off to the British fort at Wilmington Governor Thomas Burke. He escaped capture at the time of the insurrection on the Pedee above recorded, fled to Charleston, and went to Nova Scotia with the refugee Tories, where he died in 1825. (See *Model North Carolina Tory, A.*)

Scott, CHARLES, was born in Cumberland County, Va., in 1733; died Oct. 22, 1820. He was corporal of a Virginia company in the battle of the Monongahela (which see), where Braddock was defeated in 1755. When the old war for independence first broke out, he raised and commanded the first company organized south of the James River for the Continental service. On Aug. 12, 1776, he was appointed colonel, and was distinguished at Trenton and in the battle of Princeton; and just a year later he was promoted to brigadier-general. He was the last officer to leave the field at Monmouth in 1778. He was conspicuous in the storming of Stony Point, under Wayne, in 1779, and the next year was with Lincoln, at Charleston, where he was made prisoner. He was closely confined for a while, to the injury of his health. He was released on his parole near the close of the war, when he was exchanged. In 1785 General Scott settled in Woodford, Ky., and in 1791, as brigadier-general of the Kentucky levies, he led an expedition into the Ohio country, and participated in the events of St. Clair's defeat. He was afterwards successful in an expedition

against the Indians on the Wabash, and commanded a portion of Wayne's troops in the battle of Fallen Timbers (which see) in 1794. Scott was elected Governor of Kentucky in 1808, and in 1812 he retired from that office into private life. General Scott was possessed of great moral force. His education was limited, he was blunt in manners, and was decidedly eccentric. Many amusing stories are related of him.

Scott, JOHN MORIN, an active Son of Liberty, was born in New York in 1730; died Sept. 14, 1784. He graduated at Yale College in 1746, became a lawyer, and was one of the early opponents of the obnoxious laws of Parliament in New York. He and William Livingston, and one or two others, boldly advised in their writings extreme measures. Scott was one of the most active members of the General Committee (see *Committee of One Hundred*) in 1775, and was also a member of the Provincial Congress that year. In June, 1776, he was appointed a brigadier, and commanded a brigade in the battle of Long Island (which see). After the organization of the State of New York, he was appointed its secretary, and was a member of Congress from 1780 to 1783. (See *Sons of Liberty.*)

Scott, WINFIELD, was born in Petersburg, Va., June 13, 1786; died at West Point, N. Y., May 29, 1866. He graduated at the College of William and Mary in 1804. He had been left an orphan while yet a boy. In 1806 he was ad-

GENERAL WINFIELD SCOTT IN 1860.

mitted to the bar, but entered the army as captain of artillery in 1808. He became lieutenant-colonel of artillery in 1812, and adjutant-general, with the rank of colonel, in March, 1813. At the battle of Queenstown (which see), he was made prisoner, but was soon afterwards exchanged, and, under General Dearborn, commanded the advance in the attack on Fort George (which see), May 27, 1813, where he was badly burned by the explosion of the magazine.

In the fall he commanded the advance of Wilkinson's army in its descent of the St. Lawrence to attack Montreal. In the spring of 1814 he was made a brigadier-general, established a camp of instruction at Buffalo, and early in July gained a victory over the British at Chippewa. (See *Chippewa, Battle of*.) Later in the month he fought successfully in the battle of Lundy's Lane (which see), where he was seriously wounded in the shoulder, which left one of his arms partially disabled. For his services in that battle he received the thanks of Congress and a gold medal. At the close of the war he was promoted to major-general, with the thanks of Congress and a gold medal for his services,

taking the chief command, and he retired from the service (Nov. 1, 1861), retaining his rank, pay, and allowances. In 1864 he made a brief visit to Europe. He published a *Life of General Scott*, prepared by himself.

Scott's Boldness and Humanity. Lieutenant-colonel (afterwards lieutenant-general) Winfield Scott was among the prisoners captured at Queenstown Heights, and sent to Quebec, with other prisoners of the regular army. There the captives were all paroled excepting twenty-three, who were claimed as British subjects. All the prisoners had been placed on a cartel-ship to be sent to Boston. A party of British officers came on board, mustered the

GOLD MEDAL AWARDED TO GENERAL SCOTT.

and was sent to Europe in a military and diplomatic capacity. He remained in the army, devoting a part of his time to the elaboration of military manuals. In 1832 he was in command of the United States forces at Charleston harbor, during the nullification (which see) troubles, and his discretion did much to avert civil war. He was afterwards engaged in the war with the Seminoles and the Creeks, and in 1838 he was efficient in accomplishing the peaceful removal of the Cherokees from Georgia (which see). His discreet conduct on the northern and eastern frontiers of the United States in 1839 did much to allay public irritation on both sides. (See *Canadian Rebellion* and *Northeastern Boundary*.) On the death of General Macomb in 1841, Scott became general-in-chief of the armies of the United States, and in 1847 he went to Mexico as chief commander of the American armies there. In a campaign of about six months he became the conqueror of that country, and in the Mexican capital he proclaimed the fact in September, 1847. (See *Mexico, War with*.) Scott was the unsuccessful candidate of the Whig party for President of the United States, and in 1859 he, as United States commissioner, successfully settled a dispute arising about the boundary-line between the United States and British America through the Strait of Fuca, on the Pacific coast. When the Civil War broke out, his age and infirmities incapacitated him for

captives, and began separating from the rest those who, by their accent, were found to be Irishmen. These they intended to send to England to be tried for treason. Scott, who was below, hearing a commotion on deck, and informed of the cause, coming up, entered a vehement protest against the proceedings. He ordered his soldiers to be absolutely silent, that their voices might not betray them. He was frequently ordered to go below. He refused, and his soldiers obeyed him. The twenty-three already detected were taken away. Scott assured the officers that if the British government dared to touch a hair of their heads his own government would retaliate in kind and avenge the outrage. He defied the menacing officers. When he was exchanged in January, 1813, he laid the matter before the Secretary of War. He pressed the subject upon the attention of Congress. The President was already vested with power to retaliate, but he never had occasion to do so.

Scott's Plan for Peace. There were many eminent men anxious for peace, and who preferred a dissolution of the Union (which they hoped would be temporary) to war. Lieutenant-general Winfield Scott, the commander-in-chief of the Army of the United States, who knew from experience what were the horrors of war, seems to have contemplated this alternative with dread. In a letter addressed to Governor

Seward on the day preceding Lincoln's inauguration (March 3, 1861), he suggested the limitation of the President's field of action in the premises to four measures—namely, 1. To adopt the Crittenden Compromise (which see); 2. To collect duties outside the ports of seceding states or blockade them; 3. To conquer those states at the end of a long, expensive, and desolating war, and to no good purpose; and, 4. To say to the seceded states, "Wayward sisters, depart in peace!"

Screw-making. The earliest machine used for making screws of which we have any record was invented by David Wilkinson, of Rhode Island, for which he obtained a patent in 1794. Abel Stowell, of Worcester, Mass., obtained a patent for making screws in 1809, and since then patents for various machines have been issued. The most important invention in screw-making is the gimlet-point for wood-screws. The American Screw Company, of Providence, R. I., has the monopoly of screw-making in this country, having purchased about fifty patents. There were in 1870 in the United States eighteen establishments engaged in manufacturing screws.

Sea Adventurer, WRECK OF THE. Under the new charter of the London Company given in 1609 (see *London Company, Second Charter of the*), Sir Thomas Gates, Lieutenant-governor of Virginia, Sir George Somers, Admiral, and Captain Newport, Vice-admiral, sailed in the *Sea Adventurer* with eight other vessels, bearing about five hundred emigrants to Virginia. The fleet was dispersed in a storm, and the *Sea Adventurer* was wrecked on one of the Bermuda islands—the "still vexed Bermoothes" of Shakespeare. William Strachy was with them, who wrote a vivid account of the wreck. "Such was the tumult of the elements," wrote Strachy, "that the sea swelled above the clouds, and gave battle unto heaven. It could not be said to rain: the waters like whole rivers did flood in the air." For three days and four nights they were beaten by this storm, while the ship was leaking fearfully. The *Sea Adventurer* outlived the storm, and when it ceased she lay fairly fixed between two rocks on the Bermuda shore. It is believed that Strachy's account of this storm and shipwreck inspired Shakespeare to write his *Tempest*.

Seabury, SAMUEL, first Protestant bishop in the United States, was born at Groton, Conn., Nov. 30, 1729; died Feb. 25, 1796. He graduated at Yale College in 1748. Going to Scotland to study medicine, his attention was turned to theology. Although the son of a Congregational minister, he received ordination as a minister of the Church of England in London in 1743. On his return to America he first settled as a minister in New Brunswick, N. J., then at Jamaica, L. I. (1756-66), and finally in Westchester County, N. Y., where he remained until the beginning of the war for independence. He was a loyalist, and at one time was chaplain of the King's American Regiment. Becoming obnoxious to the pa-

triot as the suspected author of some Tory pamphlets, the Connecticut Light-horsemen, under Sears, seized him and took him to Connecticut, where he was imprisoned for a time. (See *Rivington's Printing-office, Destruction of.*) The authorship was not proven, and he was released, and spent most of the time in New York while the British held possession of that city. Going to England after the Revolution, he obtained consecration as bishop by the Scotch prelates at Aberdeen, Nov. 14, 1784, and afterwards fulfilled the episcopal office at New London until his death. Bishop Seabury assisted Bishop White in the revision of the Book of Common Prayer, and in framing the constitution of the Church which was adopted in 1789. Bishop Seabury was buried in a church-yard at New London, and over his grave was placed a plain monument

BISHOP SEABURY'S MONUMENT.

of marble, upon the recumbent slab of which, after the usual obituary record, are the following laudatory words: "Ingenuous without pride, learned without pedantry, good without severity, he was duly qualified to discharge the duties of the Christian and the bishop. In the pulpit he enforced religion; in his conduct he exemplified it. The poor he assisted with his charity; the ignorant he blessed with his instruction. The friend of men, he ever designed their good; the enemy of vice, he ever opposed it. Christian! dost thou aspire to happiness? Seabury has shown the way that leads to it."

Sea-guard, A BRITISH. The British navy was employed to enforce the Navigation Act in the American colonies in 1763. Admiral Colville, commanding the naval forces on the American coast from the St. Lawrence to the capes of Florida, became the head of a new corps of revenue officers. Each captain of his squadron was furnished with a Custom-house commission and instructions from the Lords of the Admiralty, and was empowered to enter harbors, after taking the usual oaths to do the office of Custom-house officers, and to seize persons suspected of being engaged in illicit trade. This measure aroused the most violent opposition in the colonies. (See *Writs of Assistance.*)

Seal of Massachusetts Bay Colony, THE, was elliptical in form, having as a device an almost nude Indian holding a bow in one hand and an arrow in the other, and a small shrub on each side of him. Around the border were the words, "SIGILLVM : GVB : ET : SOCIET : DE : MATTACHVSETS : BAY : IN : NOVA : ANGLIA."

Seal of the President of the Continental Congress.

SEAL OF THE PRESIDENT OF CONGRESS.

At about the time of the adoption of the great seal of the United States, the Continental Congress ordered a small one for the official use of their president for the time being. It was elliptical in shape. Within a raised border was a circlet of clouds with a clear space within, in which were seen thirteen stars. At a point in the clouds was the national motto—"E PLURIBUS UNUM"—"Many in one."

Seal of Virginia. On the 20th of October, 1619, the London Company appointed a committee to devise a coat-of-arms and a seal for Virginia. They met at the house of Sir Edwin Sandys, agreed upon a device, and on the 16th of November submitted it for inspection. It was presented to the king, when his majesty, perceiving on the reverse the figure of St. George slaying the dragon, with the motto, "FAS ALIUM SUPERARE DRACONEM," referring to the heathenism of the Indians, he ordered that the motto should not be used. The face of the seal was

free and independent states, they appointed a committee to report a device for a seal—the emblem of sovereignty. That committee and others, from time to time, presented unsatisfactory devices. Finally, in the spring of 1782, Charles Thomson, the secretary of Congress, gave to that body a device largely suggested to John Adams, then United States minister to the court of Great Britain, by Sir John Prestwich, an eminent English antiquary. This suggestion was made the basis of a design adopted by Congress June 20, 1782, and which is still the device of the great seal of our Republic. It is composed of a spread-eagle, the emblem of strength, bearing on its breast an escutcheon with thirteen stripes, alternate red and white, like the national flag. (See *Flag, National*.) In its right talon the eagle holds an olive-branch, the emblem of peace, and in its left thirteen arrows, emblems of the thirteen states ready for war should it be necessary. In its beak is a ribbon bearing the legend "E PLURIBUS UNUM"—"Many in one"—many states making one nation, a motto doubtless suggested by its appearance on the title-page of the London *Gentleman's Magazine*. Over the head of the eagle is a golden light breaking through a cloud surrounding thirteen stars,

FIRST GREAT SEAL OF THE UNITED STATES.*

an escutcheon quartered with the arms of England, France, Scotland, and Ireland. The crest was a maiden queen (Elizabeth) with flowing hair and an Oriental crown upon her head. The supporters were two armed men with halberds, and the motto, "EN DAT VIRGINIA QUINTAM." When Virginia became a state (1776), a new seal was adopted. The device on the face was a figure of Liberty with a Phrygian cap treading upon a prostrate monarch, whose crown has fallen from his head, and broken manacles lie across one arm. Liberty holds a halberd or spear in one hand, and a short sword in the other. Over her head is the word "VIRGINIA," and beneath, the motto "SIC SEMPER TYRANNIS."

Seal, THE GREAT, OF THE UNITED STATES. When, on July 4, 1776, the Continental Congress declared the English-American colonies to be

forming a constellation on a blue field. On the reverse is an unfinished pyramid, emblematic of the unfinished republic, the building of which—the increase of states and territories—is still going on. In the zenith is an all-seeing eye surrounded by light, and over this eye the words "ANNUIT CŒPTIS"—"God favors the undertaking." On the base of the pyramid, in Roman numerals, is the date 1776, and below, the words "NOVUS ORDO SECLORUM"—"A new order of ages." This was for a pendent seal, now not used; the recumbent seal, the obverse above described, being always used.

* This is the size of the recumbent seal of the United States, which has been in use ever since the date of its adoption in 1782. Only the side containing the national arms is used. For a more minute history of the seal, with numerous illustrations, see a paper in *Harper's Magazine*, vol. xlii, p. 178, written by the author of this work.

Sears, ISAAC, was born at Norwalk, Conn., in 1729; died in Canton, China, Oct. 23, 1786. His ancestors were from Colchester, England, and were among the earlier emigrants to Massachusetts, landing at Plymouth in 1630. Isaac Sears was one of the most earnest, active, and pugnacious of the "Sons of Liberty" in New York. He was a successful merchant there, engaged in the European and West India trade, when political matters arrested his attention. He had commanded a privateer (1758-61), and was commonly known as Captain Sears. He lost his vessel in 1761, and then became a merchant. After the passage of the Stamp Act he became a prominent leader of the opposition to that measure. He was thoroughly hated by the government and the Tory party, and was in custody on a charge of treason when the news of the affair at Lexington reached New York. Because of his leadership, his enemies called him "King Sears." He was maligned, caricatured, satirized, and made the object of Tory squibs and epigrams like the following, which was published when the Committee of Fifty-one (which see) refused to recommend a revival of the Non-impatriation League:

"And so, my good masters, I find it no joke,
For York has stepped forward and thrown off the yoke
Of Congress, Committees, and even King Sears,
Who shows you good-nature by showing his ears."

Rivington abused him in his newspaper without stint. Sears retaliated by entering the city one day (Nov. 23, 1775) at the head of some Connecticut horsemen and destroying that publisher's printing establishment. In the spring of 1776 he was General Charles Lee's adjutant. When the war ended his business and fortune were gone. In 1785 we find him on the ocean as supercargo bound for Canton, China. He was very ill on his arrival there, and died soon afterwards. He was buried on French Island, and his companions placed a slab at his grave with a suitable inscription.

Seat of the National Government. From time to time there have been movements in favor of removing the seat of government from Washington city. The first movement of this kind was in 1808. The really miserable situation and condition of the city of Washington at that time rendered a removal desirable to most of the members of Congress, and the city of Philadelphia, anxious to win it back to the banks of the Delaware, offered to furnish every accommodation to Congress and the public offices at its own expense. The new Hall of Representatives, by its ill adaptation, whether for speakers or hearers, occasioned great dissatisfaction. A motion for removal occasioned much discussion in Congress and great excitement in the District of Columbia, especially among landowners. The Southern members objected to Philadelphia because they would there be continually pestered by anti-slavery politicians and other annoyances connected with the subject. A resolution for removal came within a very few votes of passing. It is believed that it would have been carried but for the opposition of the Southern men to Philadelphia.

Seceders' Convention at Baltimore. The old and new seceders of the Democratic Convention at Charleston (April, 1860) and Baltimore (June, 1860) assembled on Saturday, June 23, in the Maryland Institute Hall, a room (with a gallery) capable of seating 5000 people. It was almost full when the convention was permanently organized by the appointment of Mr. Cushing as chairman. On taking the chair he declared that the body there assembled formed the true National Democratic Convention, composed of representatives of more than twenty states. They resolved that the delegates from the convention at Richmond should be invited to unite with them, and they took seats accordingly. The majority report offered at the convention at Charleston (see *Democratic Convention at Charleston*) was adopted without dissent as the principles of the party — principles which declared that there was no legislative power, state or national, that could interfere with slavery, and that it was, virtually, a national institution. George B. Loring, of Massachusetts, nominated John C. Breckinridge, of Kentucky, for President, and he was chosen by a vote of eighty-one against twenty-four. Joseph Lane, of Oregon, was nominated for the Vice-Presidency. After a session of a few hours the business of the convention was ended and it adjourned. The South Carolina delegates left at Richmond formally assembled at Metropolitan Hall on June 21, and adopted the platform and candidates of the Seceders' Convention at Baltimore.

Seceders' Convention at Richmond. The seceders from the Democratic Convention at Charleston (which see), held in April, 1860, re-assembled at Richmond, June 11, 1860. Robert Toombs and other Southern Congressmen had issued an address from Washington, urging the Richmond Convention to refrain from all important action there, but to adjourn to Baltimore and there re-enter the convention from which they had seceded, and, if possible, defeat the nomination of Mr. Douglas. This extraordinary measure was resorted to; and when the Richmond Convention adjourned, most of the delegates hastened to Baltimore and claimed the right to re-enter the regular convention. The South Carolina delegates remained in Richmond to watch the course of events and manage the scheme. (See *Baltimore Convention*.)

Secession in New England. In 1747 the towns of Suffield, Somers, Enfield, and Woodstock, originally settled under Massachusetts grants, and assigned to that province in 1713, finding taxation there enhanced by its military operations, applied for annexation to Connecticut. They seemed to be clearly within the Connecticut charter. They asked permission of Massachusetts to withdraw. The request was refused. They then withdrew without the consent of Massachusetts, were annexed to Connecticut, and still remain part of that state. Massachusetts threatened an appeal to the king and council, but fearing she might, as in her controversy with New Hampshire, not only lose these towns, but other territory, nothing further was done.

Secession of States, RIGHT OF, ASSERTED. In 1810 a proposition was made to erect the Orleans Territory into a state. It was warmly opposed, especially by the Federalists of New England. Early in 1811 a bill for that purpose was introduced into Congress, when Josiah Quincy, of Massachusetts, in a speech of much power, expressed his deliberate opinion that such a measure would be a flagrant disregard of the Constitution, and would be a virtual dissolution of the bonds of the Union, freeing the states composing it from their moral obligation of adhesion to each other, and making it the right of all, as it would become the duty of some, to prepare definitely for separation—"amicably if they might, forcibly if they must!" This declaration—the first announcement on the floor of Congress of the doctrine of secession—produced a call to order from a delegate from Mississippi (Poindexter), who said no member of the House ought to be allowed to stimulate any portion of the people to insurrection and a dissolution of the Union. The Speaker (Varnum) decided that the suggestion of the right to dissolve the Union was out of order. The decision was reversed. Jealousy of the new states to be formed in the West, and the results of the census for 1810, which threatened the curtailment of the political weight of New England, was a powerful stimulant to the opposition to the erection of a new state on the Mississippi.

Secession of the City of New York Proposed. Fernando Wood was mayor of the city of New York at the beginning of 1861, and sympathized with the Southern Secessionists in their war upon the Union. On Jan. 7, 1861, Wood sent a message to the Common Council of New York city in which he proposed the secession of that city, and the establishment of a free and independent government of its own. This proposition was in the form of suggestive questions. "Why should not New York city," he asked, "instead of supporting by her contributions in revenues two thirds of the expenses of the United States, become, also, equally independent? As a free city, with but a nominal duty on imports, her local government could be supported without taxation upon her people. Thus we could live free from taxes, and have cheap goods nearly duty free. In this we should have the whole and united support of the Southern States, as well as of all other states, to whose interests and rights under the Constitution she has always been true. . . . New York, as a free city, may shed the only light and hope for a future reconstruction of our beloved Confederacy." A favorite writer for *De Bow's Review*, the most stately and pretentious organ of the slaveholders, pronounced this proposition of Mayor Wood "the most brilliant that these times have given birth to." Wood seems to have been startled by his own proposition, for he immediately added, "Yet I am not prepared to recommend the violence implied in these views." The Board of Aldermen, a majority of whom were Wood's political friends, ordered the printing of 3000 copies of this message in document form.

Second War for Independence, THE. This is an appropriate title for the conflict commonly known as "The War of 1812." Blessed with prosperity and dreading war, the people of the United States submitted to many acts of tyranny and insult from Great Britain and France, rather than become involved in armed conflicts with them. Consequently, the government of the United States was only nominally independent. Socially and commercially, the United States tacitly acknowledged their dependence on Europe, and especially upon England; and the latter was rapidly acquiring a dangerous political interest and influence in American affairs when the war broke out. The war begun in 1775 was really only the first great step towards independence; the war begun in 1812 first thoroughly accomplished the independence of the United States. Franklin once heard a person speaking of the Revolution as the war of independence, and reproved him, saying, "Sir, you mean the *Revolution*; the war of *independence* is yet to come. It was a war *for* independence, but not *of* independence."

Secret Committee of Correspondence. On Nov. 29, 1775, the Congress resolved, "That a committee of five be appointed for the sole purpose of corresponding with our friends in Great Britain, Ireland, and other parts of the world, and that they lay their correspondence before Congress when directed, and that all expenses that might arise by carrying on such correspondence, and for the payment of such agents as the committee might send on this service, should be defrayed by the Congress." This was the germ of our State Department, and the initial step in our foreign diplomacy. The members chosen were Benjamin Harrison, Dr. Franklin, Thomas Johnson, John Dickinson and John Jay. A correspondence was immediately opened with Arthur Lee, in London, and C. W. Dumas (a Swiss gentleman), residing in Holland.

Secret History of the First Continental Congress. In that first general Congress, which was only a large committee of conference, there was much diversity of opinion, which led to many debates and sometimes considerable feeling. John Adams wrote to his wife: "Every man in this assembly is a great man, an orator, a critic, a statesman, and, therefore, every man, upon every question, must show his oratory, his criticism, and his political abilities. The consequence is, that business is spun out to an immeasurable length." Suspicious and jealousies, owing to varied sectional interests, soon appeared. There was a similar state of feeling among the people. Many intelligent men, who had joined in protesting against the usurpation of power by the British Parliament, were not inclined to hasten a rupture with Great Britain. Joseph Galloway, who afterwards openly espoused the cause of the crown, anxious for reconciliation, proposed a union of the colonies, with a grand council authorized to regulate colonial affairs jointly with the British Parliament, each to have a negative on the other.

At first the plan was favorably considered, and, after a long debate, was rejected by only a majority of one of the colonies. The general feeling of the Congress was that matters might be and ought to be accommodated without an open rupture. The New England delegation were generally in favor of bold and decisive measures, and the Adameses, John and Samuel, were looked upon as desperate men having nothing to lose, and as having been too long engaged in a warm political struggle in Massachusetts with the officers of the crown to be safe guides to follow. But their zeal was overmatched by the impetuous and outspoken southern patriot Christopher Gadsden, who proposed to attack Governor Gage at Boston, and expel him from the town before he could be reinforced. But the Congress did not venture to assume any direct political authority. Even the "American Association" (which see), the nearest approach to it, was warmly opposed by Galloway of Pennsylvania and Duane of New York. All of the South Carolina delegation, excepting Gadsden, opposed it, chiefly because it would interfere with a portion of their planting interest. At the last moment that association was agreed to by Gadsden's colleagues when a concession had been made to their interests. As the sessions of Congress were held in secret, their proceedings went out to the world with the weight of apparent unanimity. The signing of the *Association* was the real beginning of the American Union.

Sectarian Influence (1775). The Episcopalian members of the Church of England had, through natural affection for the mother Church, an aversion to a severance, in any particular, from Great Britain; and a large number of these, especially of the clergy, took sides with the crown in the conflict that ensued. The other denominations, excepting the Friends, or Quakers, were generally among the friends of the colonists. The Congregational ministers of New England and their flocks were almost without exception Whigs, and the larger part of the Presbyterians, who derived their origin from the dissenting section of the Scotch Church, were in political sympathy with the Congregationalists. Both had opposed the scheme of the Anglican Church, through the Society for the Propagation of the Gospel in Foreign Parts, to establish an Episcopacy in the colonies. These two branches of the English dissenting body cherished a traditionary opposition to British control, political or ecclesiastical, and the Congregationalists had just passed through a bitter controversy on the subject of the introduction of bishops into America. (See *Episcopacy in America*.) Witherspoon, who was at the head of the Presbyterian College of New Jersey, was sent as a delegate to the Continental Congress, and was very active in that body. The native-born Presbyterians were nearly all Whigs, while the Scotch Presbyterian emigrants, who were mostly in the Southern colonies, adhered to the crown. Such was the case of that class in the interior of New York, under the influence of the Johnson family in the Mohawk region. In Vir-

ginia, where Episcopacy was the established and prevailing form of religious organization and mode of worship, sectarian zeal had not been excited, and sectarianism had very little influence on political questions. Even the scheme for an American bishop was denounced by the Virginia Assembly as "the pernicious project of a few mistaken clergymen." The Friends, who, governed by their "peace principles," had, while having control of the Legislature of Pennsylvania, opposed all measures for the public defence of the province that seemed to involve the necessity for the use of weapons of war, now deprecated the action of the Whigs for the same reason, and they were almost universally Tories, though generally of the passive kind; yet there were many noble exceptions among them, who did what they could to promote the independence of the colonies. While the Provincial Convention of Pennsylvania was in session early in 1775, and after it had passed a resolution that, "if the British administration should determine to effect by force a submission to the late acts of Parliament, in such a situation we hold it an indispensable duty to resist, by force, and at every hazard to defend the rights and liberties of America"—a position strongly sustained by Thomas Mifflin, a Quaker member of the Convention—the Friends, in a yearly meeting assembled, put forth a testimony, in which the members of the society were called upon "to unite in abhorrence of every measure and writing tending to break off the happy connection of the colonies with the mother country, or to interrupt their just subordination to the king." They were not always passive Tories. This "testimony," which gave great offence to many Friends who were patriots, led to the arrest of several leaders and their banishment from the province, and the execution of two of them for active participation with the British. (See *Execution of Quakers in Philadelphia*.)

Sedgwick, JOHN, was born at Cornwall, Conn., Sept. 13, 1813; killed in battle near Spottsylvania Court-house, May 9, 1864. He graduated at West Point in 1837; served in the Seminole War and the war against Mexico, where he became highly distinguished. He had also served in war with the Indians. He was made brigadier-general of volunteers in August, 1861. In May, 1862, he was promoted to major-general, and led a division in Sumner's corps in the Peninsula campaign immediately afterwards. At the battle of Antietam he was seriously wounded, and in December he was put in command of the Ninth Army Corps. In February, 1863, he took command of the Sixth Corps, and in the Chancellorsville campaign, in May, he made a brave attack upon the Heights of Fredericksburg, and carried them, but was compelled to retire. During the Gettysburg campaign he commanded the left wing of the army; and in November following, near the Rapid Anna in Virginia, he captured a whole Confederate division. He entered earnestly upon the Richmond campaign in the spring of 1864, and performed signal service in the battle of the Wilderness (which see). Afterwards, while super-

intending the planting of a battery, he was shot by a sharpshooter and instantly killed.

Sedgwick, ROBERT, was born in England; died in Jamaica, May 24, 1656. He was one of the first settlers of Charlestown, Mass. (1635); an enterprising merchant, and for many years a deputy in the General Assembly. Having been a member of an artillery company in London, he was one of the founders of the Ancient and Honorable Artillery (which see) in 1638, and was its captain in 1640. In 1652 he was promoted to the highest military rank in the colony. In 1643 he was associated with John Winthrop, Jr., in the establishment of the first furnace and iron-works in America. In 1654, being in England, he was employed by Cromwell to expel the French from the Penobscot; and was engaged in the expedition of the English which took Jamaica from the Spaniards. He was soon afterwards promoted to major-general.

Sedgwick, THEODORE, LL.D., was born at Hartford, Conn., in May, 1746; died in Boston, Jan. 24, 1813. He entered Yale College, and left it without graduating in 1765. Abandoning the study of divinity for law, he was admitted to the bar in 1766. An earnest patriot, he entered the military service and served as aid to General Thomas in the expedition to Canada in 1776, and was afterwards active in procuring supplies for the army. Before and after the Revolution he was a representative in the Massachusetts Legislature, and in 1785-86 he was a delegate in the Continental Congress, also of the national Congress from 1789 to 1797. Mr. Sedgwick performed efficient service in putting down Shays's insurrection; and he was one of the most influential advocates of the national Constitution, in the convention in Massachusetts, in 1788. He was United States Senator from 1796 to 1799, and from 1802 until his death was a judge of the Supreme Court of Massachusetts.

Seminole War, THE FIRST. Towards the close of 1817 a motley host, composed chiefly of Seminole Indians, Creeks dissatisfied with the treaty of 1814 (see *Creek Confederacy*), and runaway negroes, began murderous depredations upon the frontier settlements of Georgia and the Alabama Territory. These Indians resided chiefly south of the Flint River and within the Spanish territory of Florida. General E. P. Gaines, then in command of the garrison at Fort Scott, on the north bank of the Flint, was ordered to suppress these outrages. He demanded of the Indians on the opposite bank the surrender of certain alleged murderers; but they refused to give them up, on the ground that the Georgians had been the first aggressors. Under authority from the War Department to expel these Indians from the lately ceded Creek lands north of the Florida line, Gaines attacked an Indian village, a few miles below Fort Scott, in the night. Three or four of the inhabitants were killed or captured, the rest escaping into the woods. In another skirmish soon afterwards two or three were killed on both sides. This movement of Gaines aroused the fiercest anger of the Indians, who, it was ascertained, were

incited by British subjects protected by the Spanish authorities in Florida. The Indians revenged the attacks of Gaines by waylaying a boat ascending the Appalachicola with supplies for Fort Scott. Of forty men and a number of women and children on board, all were killed except six men and one woman. Gaines was in a perilous position. He received orders to carry the war into Florida if necessary, with directions, however, that if the Indians took refuge under any Spanish fort, not to attack it, but report to the War Department. For his own protection he called out a body of Georgia militia; and when news of the disaster on the Appalachicola reached the government, General Jackson, who commanded in the Southern Department, was ordered (January, 1818) to take the field in person. With one thousand Tennessee mounted volunteers, Jackson hastened to the aid of Gaines, and reached Fort Scott March 9, after a march of four hundred miles. These, with a body of Georgia militia and one thousand regulars at Fort Scott, made a force sufficient to invade Florida if necessary. The Secretary of War (Mr. Calhoun) had directed him to conduct the campaign according to his best judgment. He was joined by friendly Creeks, under their chief—McIntosh—who held the commission of a brigadier-general in the United States Army. So short were supplies in that region that Jackson had to depend upon provision-boats ascending the Appalachicola from New Orleans, and, as a depot for these supplies, he built a new fort on the site of the late Negro Fort (which see), and called it Fort Gadsden. On March 26 he marched eastward against the Seminole villages in the vicinity of the (present) town of Tallahassee, being joined on the way by a fresh body of friendly Creeks (April 1) and a few more Tennessee volunteers. The Seminoles made but slight resistance. Their villages were burned, and a considerable spoil in corn and cattle was obtained. Unrestrained by such orders as Gaines had received, and satisfied that the Seminoles were continually encouraged to make war by the British and Spaniards, he proceeded to the Spanish post of St. Mark's, the only one in that region, and its surrender being refused on his demand, he took it by force, though without bloodshed. There he found Alexander Arbuthnot, a Scotch trader with the Seminoles, whom he suspected of mischief, and held him a prisoner. An American armed vessel on the coast having hoisted the British flag, two refugee Creek chiefs were enticed on board, one of whom, the Prophet Francis, had lately visited England and excited some sympathy there. These chiefs Jackson hanged. From St. Mark's Jackson marched against an Indian town on the Suwannee River and burned it. The Indians and negroes there were led in its defence by Robert Ambrister, connected with Arbuthnot in trading enterprises, and he, too, was made prisoner. Returning to St. Mark's, Arbuthnot and Ambrister were tried (April 26) by a court-martial. Both were found guilty of stirring up the Indians to war, and were hanged. Meanwhile one or two other Indian towns were de-

stroyed by Georgians; and a rumor reaching Jackson of encouragement being given by the Spanish governor at Pensacola to Indian raids into Alabama, the general marched for that place. He was met on the way by a protest from the governor against the invasion of Florida, and his determination to resist it by force. But Jackson pressed on, and entered Pensacola the next day (May 24), with only a show of resistance. The governor fled to the fort at the Barrancas, which Jackson assailed with cannon, when the alarmed magistrate thought it prudent to surrender (May 27). The Spanish authorities and troops were sent to Havana. When Jackson's proceedings in Florida were made known in Washington the Spanish minister (Don Onís) protested against this invasion of Spanish territory. Jackson had ended the Seminole War, and the object of the government being accomplished, the President offered to restore Pensacola at once, and St. Mark's whenever Spain should have a force there competent to control the neighboring Indians. The Secretary of State (J. Q. Adams) justified Jackson's conduct, showing that the war with the Seminoles had originated entirely in the instigations of Arbuthnot and Ambrister, with the encouragement of the Spanish authorities.

Seminole War, THE SECOND. Towards the close of 1835 the Seminole Indians in Florida, guided by their head sachem, Micanopy, and led by their most active chief, Osceola, began a distressing warfare upon the frontier settlements of Florida. The cause of the outbreak was an attempt to remove them to the wilderness beyond the Mississippi. In his annual message in December, 1830, President Jackson recommended the devotion of a large tract of land west of that river to the use of the Indian tribes yet remaining east of it. Congress passed laws in accordance with this recommendation, and in May, 1832, some of the chiefs of the Creeks and Seminoles, in council, agreed to remove. Other chiefs and the great body of the nation refused to comply with the terms of the treaty, and trouble ensued. (See *Seminole War, the First*.) In 1834 the President sent General Wiley Thomson to Florida to make a forcible removal of the Seminoles if necessary. Osceola stirred up the nation to resistance. One day his insolent bearing and offensive words in Thomson's presence caused that general to put the chief in irons, and in a prison, for a day. Osceola's wounded pride called for vengeance, and it was fearfully wrought during a war that lasted about seven years. By bravery, skill, strategy, and treachery, he overmatched United States troops sent against him and commanded by some of the best officers in the service; but he was secured and subdued finally by an act of seemingly necessary perfidy on the part of a United States officer. The first blow was struck in December, 1835. Osceola, with all the cunning of a Tecumtha and the heroism of a Philip, began the war by an act of perfidy. He had agreed to fulfil treaty stipulations, and to send some horses and cattle to General Thomson; but at the very time he was to do so the barbarian was, with a

small war-party, murdering the unsuspecting white inhabitants on the borders of the everglades, which was a region mostly covered with water and grass, and affording a secure hiding-place for the Indians. At that time General Clinch was occupying Fort Drane with a small body of troops. That post was in the interior of Florida, forty miles eastward of the mouth of the Withlacoochee River, and the garrison was now exposed to much danger from the hostilities of the Indians. Major Dade, with more than one hundred soldiers, was sent from Fort Brooke, at the head of Tampa Bay, to the relief of Clinch, and, falling into an ambuscade (Dec. 28, 1835), he and his followers were all massacred excepting four men, who afterwards died from the effects of the encounter. That event occurred near Wahoo Swamp, on the upper waters of the Withlacoochee. On the same day Osceola and a small war-party, unobserved, stole up to a store a few yards from Fort King (about sixty miles southwest of St. Augustine), where General Thomson and five of his friends were dining, and murdered them. Osceola killed and scalped the general with his own hands, and so he enjoyed the revenge he had sought. Three days afterwards General Clinch had a sharp fight with the Seminoles on the Withlacoochee, and on the last day of February, 1836, General Gaines was assailed at the same place. The Creeks helped their Florida brethren by attacking white settlers within their domain in the spring of 1836. Being successful, they extended their forays into Georgia and parts of Alabama, attacking mail-carriers on horseback, stage-coaches on the land, and steamboats on the rivers; and finally they assailed villages, and thousands of men, women, and children were compelled to fly from their homes and seek places of safety from the tomahawk, the bullet, and the scalping-knife. General Winfield Scott, in chief command in the South, now prosecuted the war against the barbarians with so much vigor that the Creeks were speedily subdued, and during the summer of 1836 thousands of them were removed to lands west of the Mississippi. At about the middle of October Governor Call, of Florida, led about two thousand militia and volunteers from that state against the Seminoles. Near the place of the massacre of Dade and his command a detachment of them, about five hundred in number, had a severe battle with the savages on Nov. 25, but, like all other encounters with these Indians in their swamp fastnesses, it was not decisive. In that region the United States troops suffered dreadfully from miasmatic fevers, the bites of venomous serpents, and the stings of insects, and the year 1836 closed with no prospect of peace. The war continued all winter in that mild region. Finally, in March, 1837, several chiefs appeared before General Jesup (then in chief command in Florida), at his quarters at Fort Dade, and signed a treaty which was intended to secure an immediate peace and the instant departure of the Seminoles to the new home prepared for them beyond the great river. The wily Osceola caused this treaty to

be violated, and the war was renewed; and it continued all the summer of 1837, during which many troops perished in the swamps while pursuing the savages. At length Osceola, several chiefs, and seventy warriors appeared in Jesup's camp (Oct. 21), under the protection of a flag, with friendly pretensions. Jesup determined not to trust the treacherous Osceola any more. The conference was held in a grove of magnolias in a dark swamp. As the chief arose to speak Jesup gave a signal, when two or three of his soldiers rushed forward and seized and bound Osceola with strong cords. He made no resistance, but several of his excited followers drew their gleaming hatchets from their belts. They were restrained by the arms of Jesup's troops, and were dismissed without their leader. Osceola was sent to Charleston and confined in Fort Moultrie, where he died of fever Jan. 31, 1839. A small monument marks the place of his grave, near the main entrance to the fort. Jesup was severely censured for this violation of the sanctity of a flag of truce; but his plea in justification was that it was the only way to stop the distressing war, for Osceola could not be held by the most solemn obligations of a treaty. The "distressing war" had been created by the avarice and greed of the white people, who were seeking, by legal pretences or the unjust violence of the military arm, to drive an ancient nation from their rightful soil. Although the capture of Osceola was a severe blow to the Seminoles, they continued to fight for their country under other leaders, notwithstanding almost nine thousand United States troops were in their territory at the close of 1837. Their fastnesses in the everglades could not be penetrated by the troops, and they defied them, even after they had received severe chastisement from six hundred national troops under Colonel (afterwards President) Zachary Taylor, who had succeeded General Jesup in command. This chastisement was given them in a battle fought on Christmas-day (1837) on the northern border of Lake Macaco. After that, for more than two years, Taylor and his men endured great hardships in Florida in attempts to bring the war to a close. A treaty for the purpose was concluded in May, 1839; but so lightly did its obligations bind the Indians that they carried on their depredations whenever opportunity offered. It was not until 1842 that peace was permanently secured. This war, carried on almost seven years, cost the United States scores of valuable lives and millions of treasure.

Seminole. A tribe of Florida Indians, made up of two bands of the Creeks (see *Creek Confederacy*) who withdrew from the main body in 1750 and remnants of tribes who had come in contact with the Spaniards. The Seminoles were hostile to the Americans during the Revolution and afterwards. The Creeks claimed them as a part of their nation, and included them in a treaty with the United States in 1790; but the Seminoles repudiated it and made war upon the Americans, and affiliated with the Spaniards in 1793. They were also enemies of the

United States in the War of 1812, when they were under Spanish rule. At that time they were divided into seven clans, and were rich in live-stock and negro slaves. The Creek war led to trouble between the Seminoles and the Georgians, and in 1817 they began hostilities. Thoroughly scourged by United States troops, they became subject and obedient to the laws of the United States after the purchase of Florida in 1819, when they numbered nearly 4000, with 800 negro slaves. By a treaty made in 1823, the Seminoles gave up nearly all their territory for a consideration; but some refused to accede, and were allowed to remain on small reserves, with the understanding that they were to hunt and deliver fugitive slaves. Dissatisfaction followed, and the Georgians clamored for their removal. An attempt to remove them by force caused the kindling of a fierce war in 1835, which cost the United States 1466 lives and \$10,000,000. (See *Seminole War, The Second*.) Then the Seminoles were removed to the Indian Territory, and only about 300 were in Florida in 1842. The negroes were taken from the Seminoles in their new home in such numbers that a large body of them went to Mexico. About half of those in Florida emigrated to the Indian Territory in 1858, and when joined by those in Mexico they numbered 2256. The tribe was divided on the breaking-out of the Civil War, and a large portion of them were seduced, by great promises, to become allies of the Confederates. The movement was disastrous to them. Finally, in 1866, they went upon a new reservation purchased by the United States of the Creeks, where, steady, sober, and industrious, they rank next to the Cherokees in their progress in civilization. There are yet some Seminoles and negroes in Mexico, and about 150 in the everglades of Florida.

Semmes, RAPHAEL, was born in Maryland in 1810. He entered the United States Navy as midshipman in 1826; commanded the Coast Survey steamer *Poinsett* in 1843, and the brig

RAPHAEL SEMMES.

Porpoise in 1846. In the war against Mexico, he was volunteer aid to General Worth, and was Secretary to the Light-house Board from 1859 to 1861. He accepted the command in the Con-

federate navy of the steamer *Sumter*, with which he depredated upon American commerce. In England the fast-sailing vessel *Alabama* (which see) was built, furnished, and chiefly manned for him, in which he put to sea in August, 1863, and made a destructive cruise against American vessels and American commerce. She was sunk by the *Kearsarge* off Cherbourg, June 19, 1864. Afterwards Semmes was appointed Professor of Moral Philosophy in the State Seminary of Louisiana, at Alexandria. He wrote a history of *The Cruise of the Alabama*.

Senate, OPEN SESSIONS OF THE. The proceedings of the Senate of the United States had been held in secret until the session of 1793, when discussions as to Albert Gallatin's right to a seat therein were had with open doors. The opposition had urged this publicity from the beginning. The argument in favor of the custom was the due enforcement of the responsibility of the Senate and its individual members to the people, which secret debates tended to diminish; the prevention of those jealousies naturally aroused by secret legislation; and the greater confidence which publicity would inspire. A resolution was also passed that, after the termination of the present session, and so soon as suitable galleries should be provided, these galleries, except on special occasions requiring secrecy, should remain open while the Senate was engaged in legislative business.

Senecas. These formed the fifth nation of the Iroquois Confederacy (which see), and inhabited the country in New York west of Sodus Bay and Seneca Lake to the Niagara River. They called themselves Tsennundawano, or "dwellers in the open country." Tradition says that at the formation of the great confederacy Hiawatha said to them, "You, Senecas, a people who live in the 'open country,' and possess much wisdom, shall be the fifth nation, because you understand better the art of raising corn and beans and making cabins." (See *Hiawatha*.) The Dutch called them Sinnekaas, which the English spelled Senecas, and they were denominated the Western Door of the Long House—the confederacy. They were divided into five clans—viz., the Turtle, Snipe, Hawk, Bear, and Wolf, and were represented in the great council or congress by seven sachems. There was a small family on the borders of the Niagara River, called Neuters, whose domain formed the western boundary of the Seneca territory; also the Erikses, or Eries, south of Lake Erie. On the east they joined the Senecas. By the conquest of the Hurons, most of the Neuters, the Eries, and Andastes (or Susquehannas) were incorporated with the Senecas. The French Jesuits began a mission among them in 1657; and afterwards the Senecas permitted La Salle to erect a block-house on the site of Fort Niagara. They also allowed the French to build a fort on the same spot in 1712. The Senecas alone of the Six Nations (which see) joined Pontiac in his conspiracy in 1763. They destroyed Venango, attacked Fort Niagara, and cut off an army train on that frontier.

In the old war for independence they sided with the British, and their country was devastated by General Sullivan in 1779. After the war they made peace, by treaty, at Fort Stanwix (Fort Schuyler), on the site of Rome; and their land passed, by sale and cession, into the possession of the white people, excepting the reservations of Alleghany, Cattaraugus, and Tonawanda—sixty-six thousand acres—which the remnant of the nation still holds. They were the friends of the Americans in the War of 1812, and furnished men for the armies. A part of them, settled on Stony Creek, in Canada, and at Sandusky, O., joined the hostile tribes in the West, but made peace in 1815. These removed to the Indian Territory (which see), on the Neosho, in 1831. In 1870 the Senecas in New York numbered about three thousand, and those in the Indian Territory two hundred. Protestant missions have been in operation among them since the beginning of this century, and the Society of Friends has done much to aid and protect them. (See *Friendly Association*.)

Separation of Delaware and Pennsylvania. Under the clause of the Charter of Privileges given by William Penn, the separation of Delaware and Pennsylvania was made complete in 1702. (See *Delaware, The Colony and State of*.) An attempt was made for a reunion, but failed. Delaware even sent an agent to England to represent that Penn had no rights of jurisdiction over its territory, and to ask for a royal governor.

Servile Insurrection in South Carolina. In 1738, in consequence of liberty and protection being offered to the slaves of South Carolina by the Spaniards of St. Augustine, and the influence of Spanish emissaries among them, who persuaded them to take measures for securing their freedom, and to fly from slavery to Florida, an insurrection broke out in the heart of the province. A number of the negroes assembled at Stono, killed two men at a warehouse, and seized guns and ammunition. They chose a captain, and, with flag and drum, began a march towards the southwest, burning every house and killing every white person on their way. They compelled the negroes to join them. Governor Bull, returned to Charleston from the southward, hastened out of their way and spread the alarm. It reached a large congregation of Presbyterians at Walton, engaged in divine worship. They were all armed, as usual then. Leaving the women in the meeting-house, the men started in quest of the armed negroes, who had already spread desolation over a space of twelve miles in length. They attacked the negroes in an open field, killed some, and dispersed the rest. Most of the fugitives were captured. Those who had been compelled to join the insurgents were pardoned; the leaders and original insurgents were hanged. There were at that time about forty thousand negro slaves in South Carolina. The object of the Spanish interference was not to give the slaves freedom, but to destroy the English colony there.

Servile Insurrection Threatened. When

Admiral Cockburn began his marauding expedition on the American coast in the spring of 1813, he held out a promise of freedom to all slaves who should join his standard. Many were seduced on board his vessels, but found themselves wretchedly deceived. Intelligence of these movements reached the plantations farther south, and, in the summer of 1813, secret organizations were formed among the slaves to receive and co-operate with Cockburn's army of liberation, as they supposed it to be. One of these secret organizations met regularly on St. John's Island, near Charleston. Their leader was a man of great sagacity and influence, and their meetings were opened and closed by singing a hymn composed by that leader—a sort of parody of "Hail Columbia" (which see). They held meetings every night, and had arranged a plan for the rising of all the slaves in Charleston when the British should appear. At one of the meetings the question, "What shall be done with the white people?" was warmly discussed. Some advocated their indiscriminate slaughter as the only security for liberty, and this seemed to be the prevailing opinion, when the leader and the author of the hymn came in and said: "Brethren, you know me. You know that I am ready to gain your liberty and mine. But not one needless drop of blood must be shed. I have a master whom I love, and the man who takes his life must pass over my dead body." Had Cockburn been faithful to his promises to the negroes, and landed and declared freedom to the slaves of South Carolina, no doubt many thousand colored people would have flocked to his standard. But he was content to fill his pockets by plundering and carrying on a petty slave-trade for his private gain. The following is the last of the three stanzas of the hymn above alluded to:

Repeat. { "Arise! arise! shake off your chains!
Your cause is just, so Heaven ordains;
To you shall freedom be proclaimed!
Raise your arms and bare your breasts,
Almighty God will do the rest.
Blow the clarion's warlike blast;
Call every negro from his task;
Wrest the scourge from Buckra's hand,
And drive each tyrant from the land!"

CHORUS—Firm, united let us be.
Resolved on death or liberty!
As a band of patriots joined,
Peace and plenty we shall find."

Seton, ELIZA ANN, founder of the Sisters of Charity in the United States, was born in New York, Aug. 28, 1774; died at Emmettsburg, Md., Jan. 4, 1821. She was the daughter of Dr. Richard Bayley, and, at the age of twenty, married William Seton, who died at Leghorn in 1803, when she returned to America. She was soon afterwards received into the Roman Catholic Church, and, removing to Baltimore with her three children, she opened a school. In 1809 a gentleman named Cooper made an ample endowment, which enabled her to open a semi-conventual establishment at Emmettsburg. The first charge of the sisters outside of their own convent was that of an orphan-asylum in Philadelphia, to which three members were sent in 1814. An act of incorporation of this sisterhood

was passed in 1817 by the Legislature of Maryland.

Settlement, FIRST, IN KENTUCKY. In 1767 John Finley, an Indian trader, explored the country beyond the mountains westward of North Carolina. In 1769 he returned to North Carolina and gave glowing accounts of the fertile country he had left. He persuaded Daniel Boone, a native of Pennsylvania, settled on the Yadkin, and four others, to go with him to explore it. Boone had become a great hunter and expert in woodcraft. They reached the headwaters of the Kentucky, and, from lofty hills, beheld a grand vision of a magnificent valley, covered with forests, stretching towards the Ohio, and abounding in game of the woods and waters of every kind. They fought Indians—some of the tribes who roamed over Kentucky as a common hunting-ground. Boone was made a prisoner, but escaped. He determined to settle in the beautiful country between the upper Kentucky and Tennessee rivers, and, after remaining for a while the sole white man in that region, he returned for his wife and children in 1771. Two years later he started with his own and five other families for the paradise in the wilderness. Driven back upon settlements on the Clinch, he was detained a year and a half longer. He penetrated to the Kentucky, and, on the 14th of June, 1775, completed a log fort on the site of the present Boonesborough. He soon brought his family there, and planted the first permanent settlement in Kentucky. Mrs. Boone and her daughters were the first white women who ever stood on the banks of the Kentucky River.

Settlement, FIRST, IN TENNESSEE. Immigrants from North Carolina, led by James Robinson, settled on the Watauga River, one of the head streams of the Tennessee, in 1768. It was on lands of the Cherokees, from whom the settlers obtained an eight-year lease in 1771. They there organized themselves into a body politic, and adopted a code of laws signed by each adult individual of the colony. Others soon joined them and extended settlements down the valley of the Holston, and over intervening ridges to the Clinch and one or two other streams, while others penetrated Powell valley and began a settlement in the southwest corner of Virginia.

Settlements within the borders of the original thirteen United States were made, as productive germs of colonies, in the following order of time: St. Augustine, Fla., was settled by Spaniards, under Menendez, in 1565, and is the oldest settlement by Europeans within the domain of the United States. It was permanently occupied by the Spaniards, excepting for a few years, until Florida passed from their control. (See *Florida* and *St. Augustine*.) Virginia was first settled by the English temporarily. (See *Raleigh*, *Sir Walter*.) The first permanent settlement was made by them in 1607, under the auspices of London merchants, who that year sent five ships, with a colony, to settle on Roanoke Island. Storms drove them into the entrance to Chesapeake Bay, when they ascended

the Powhatan River fifty miles, landed, and built a hamlet, which they called Jamestown. The stream they named James River—both in compliment to their king. After various vicissitudes, the settlement flourished, and, in 1619, the first representative Assembly in Virginia was held at Jamestown. Then were laid the foundations of the State of Virginia. (See *Virginia, Colony of*.) Manhattan Island (now New York Island) was discovered by Henry Hudson in 1609, while employed by the Dutch East India Company. Dutch traders were soon afterwards seated there and on the site of Albany, one hundred and fifty miles up the Hudson River. The government of Holland granted exclusive privilege to Amsterdam merchants to traffic with the Indians on the Hudson, and the country was called New Netherland. The Dutch West India Company was formed in 1621, with unrestricted control over New Netherland. They bought Manhattan Island of the Indians for about \$24, paid chiefly in cheap trinkets, and in 1623 thirty families from Holland landed there and began a settlement. Then were laid the foundations of the State of New York, as New Netherland was called after it passed into the possession of the English. (See *New York, Colony of*.) Late in 1620 a company of English Puritans (see *Puritans*) who had fled from persecution to Holland, crossed the Atlantic and landed on the shores of Massachusetts, by permission of the Plymouth Company. (See *Plymouth Company*.) They built a town and called it New Plymouth; they organized a civil government and called themselves "Pilgrims." Others came to the shores of Massachusetts soon afterwards, and the present foundations of the State of Massachusetts were laid at Plymouth in 1620. (See *Pilgrims*.) In 1622 the Plymouth Company granted to Mason and Gorges a tract of land bounded by the rivers Merrimac and Kennebec, the ocean, and the St. Lawrence River, and fishermen settled there soon afterwards. Mason and Gorges dissolved their partnership in 1629, when the former obtained a grant for the whole tract, and laid the foundations for the commonwealth of New Hampshire. (See *New Hampshire, Colony of*.) King James of England persecuted the Roman Catholics in his dominions, and George Calvert, who was a zealous royalist, sought a refuge for his brethren in America. King James favored his project, but died before anything of much consequence was accomplished. His son Charles I. granted a domain between North and South Virginia to Calvert (then created Lord Baltimore). Before the charter was completed Lord Baltimore died, but his son Cecil received it in 1632. The domain was called Maryland, and Cecil sent his brother Leonard, with colonists, to settle it. (See *Calvert, George*.) They arrived in the spring of 1634, and, at a place called St. Mary, they laid the foundations of the commonwealth of Maryland. (See *Maryland, Colony of*.) The Dutch navigator Block (see *New York, Colony of*), sailing east from Manhattan, explored a river some distance inland, which the Indians called Quon-eh-ti-out, and in the valley watered by that river a number of Puritans from Plymouth

began a settlement in 1633. The first permanent settlement made in the valley of the Connecticut was planted by Puritans from Massachusetts (near Boston), in 1636, on the site of Hartford. In 1638 another company from Massachusetts settled on the site of New Haven. The two settlements were afterwards politically united, and laid the foundations of the commonwealth of Connecticut in 1639. (See *Connecticut, Colony of*.) Meanwhile, elements were at work for the formation of a new settlement between Connecticut and Plymouth. Roger Williams, an eccentric minister, was banished from Massachusetts in 1636. He went into the Indian country at the head of Narraganset Bay, where he was joined by a few sympathizers, and they seated themselves at a place which they called Providence. Others (men and women) joined them, and they formed a purely democratic government. Others, persecuted at Boston, fled to the Island of Aquidag, or Aquitneck (now Rhode Island), in 1638, and formed a settlement there. The two settlements were consolidated under one government, called the Providence and Rhode Island Plantation, for which a charter was given in 1644. So the commonwealth of Rhode Island was founded. (See *Rhode Island, Colony of*.) A small colony from Sweden made a settlement on the site of New Castle, Del., and called the country New Sweden. The Dutch claimed the territory as a part of New Netherland, and the governor of the latter proceeded against the Swedes in the summer of 1655, and brought them under subjection. It is difficult to draw the line of demarcation between the first settlements in Delaware, New Jersey, and Pennsylvania, owing to their early political situation. The (present) State of Delaware remained in possession of the Dutch, and afterwards of the English, until it was purchased by William Penn, in 1682, and annexed to Pennsylvania. So it remained until the Revolution as "the Territories," when it became the State of Delaware. (See *Delaware, The Colony and State of*.) The first permanent settlement in New Jersey was made at Elizabethtown in 1644. (See *New Jersey, Colony of*.) A province lying between New Jersey and Maryland was granted to William Penn, in 1681, for an asylum for his persecuted brethren, the Quakers, and settlements were immediately begun there, in addition to some already made by the Swedes within the domain. (See *Pennsylvania, Colony of*.) Unsuccessful attempts to settle in the region of the Carolinas had been made before the English landed on the shores of the James River. Some settlers went into North Carolina from Jamestown, between the years 1640 and 1650, and in 1663 a settlement in the northern part of North Carolina had an organized government, and the country was named Carolina, in honor of Charles II., of England. In 1668 the foundations of the commonwealth of North Carolina were laid at Edenton. (See *North Carolina, Colony of*.) In 1670 some people from Barbadoes sailed into the harbor of Charleston and settled on the Ashley and Cooper rivers. (See *South Carolina, Colony of*.) The benevolent general Oglethorpe, commiserating the condition of the

prisoners for debt, in England, conceived the idea of founding a colony in America with them. The government approved the project, and, in 1732, he landed, with emigrants, on the site of the city of Savannah, and there planted the germ of the commonwealth of Georgia. (See *Georgia, Colony of*.) The following table shows the date of settlement, where first settled, by whom, and the date of admission of each state into the Union to 1876:

Settlements on Indian Lands Forbidden.

In 1783 the Continental Congress, in conformity to the ninth article of the Articles of Confederation (which see), vesting Congress with the sole and exclusive right and power of regulating the trade and managing all affairs with the Indians not members of any of the states, issued a proclamation at Princeton in September prohibiting all persons from making settlements on lands inhabited or claimed by Indians, without the limits or jurisdiction of any particular state; and from purchasing or receiving any gift or cession of such lands or claims, without the express authority and directions of the representatives of the United States in Congress assembled.

Seven Pines, or Fair Oaks, BATTLE AT. General Fitz-John Porter was sent by General McClellan with a considerable force to keep the way open for McDowell's army to join him, which he persistently demanded, in order to venture on a battle for Richmond. Porter had some sharp skirmishes near Hanover Court-house, and cut all railway connections with Richmond, excepting that from Fredericksburg. Meanwhile General McClellan telegraphed to the Secretary of War that Washington was in no danger, and that it was the duty and policy of the

government to send him "all the well-drilled troops available." When these raids on the Confederate communications had been effected, Porter rejoined the main army on the Chickahominy, and McClellan telegraphed again to the Secretary, "I will do all that quick movements can accomplish, but you must send me all the troops you can, and leave me full latitude as to choice of commanders." Three days afterwards General Johnston, perceiving McClellan's apparent timidity and the real peril of the National army, then divided by the Chickahominy, marched boldly out of his intrenchments and fell with great vigor upon the National advance, under General Silas Casey, lying upon each side of the road to Williamsburg, half a mile beyond a point known as the Seven Pines, and six miles from Richmond. General Couch's division was at Seven Pines, his right resting at Fair Oaks Station. Kearney's division of Heintzelman's corps was near Savage's Station, and Hooker's division of the latter corps was guarding the approaches to the White Oak Swamp. General Longstreet led the Confederate advance, and fell suddenly upon Casey at a little past noon, when a most sanguinary battle ensued (May 31, 1862). Very soon the Confederates gained a position on Casey's flanks, when they were driven back to the woods by a spirited bayonet charge by Pennsylvania, New York, and Maine troops, led by General Naglee. Out of the woods immediately the Confederates swarmed in great numbers, and the battle raged more fiercely than ever. The Nationals fell back to the second line, with a loss of six guns and many men; yet, notwithstanding the overwhelming numbers of the Confederates, and exposed to sharp enflading fires, Casey's men brought off full three fourths of their artillery. Keyes sent troops to aid Casey, but they could not withstand the pressure, and the whole body of Nationals were pushed back to Fair Oaks Station, on the Richmond and York railway. Reinforcements were sent by Heintzelman and Kearney, but these were met by fresh Confederates, and the victory seemed about to be given to the latter, when General Sumner appeared with the divisions of Sedgwick and Richardson. Sumner had seen the peril, and, without waiting for orders from McClellan, had moved rapidly to the scene of action in time to check the Confederate advance. The battle continued to rage fiercely. General Johnston was severely wounded, and borne from the field; and early in the evening a bayonet charge by the Nationals broke the Confederate line and it fell back in confusion. The fighting then ceased for the night, but was resumed in the morning (June 1), when General Hooker and his troops took a conspicuous part in the struggle, which lasted several hours. Finally the Confederates, foiled, withdrew to Richmond, and the Nationals remained masters of the field at Seven Pines, or Fair Oaks. The losses in this heavy battle were about the same on both sides—seven thousand men each. It was nearly one half of both combatants, for not more than fifteen thousand men on each side were engaged. In this battle General O. O. Howard

lost his right arm. Casey's division, that withstood the first shock of the battle, lost one third of its number.

Sevier, JOHN (Xavier), was born in the Shenandoah valley, Va., in 1745; died near Fort Decatur, Ga., Sept. 23, 1815. He went to the Holston River, East Tennessee, with an exploring party, in 1769, and built Fort Watanga. He was in the battle of Point Pleasant (which see); settled in North Carolina; was a member of its Legislature in 1777; fought the Indians on the frontiers, and was one of the leaders (as colonel) in the battle at King's Mountain (which see). For his services there he was rewarded by North Carolina with public thanks and a sword. He was afterwards attached to Marion's command, and was a brigadier-general at the close of the war. Sevier was active among the secessionists of western North Carolina, who formed the independent state of Franklin, or Frankland, over which he was elected governor in 1784. When Tennessee was organized, in 1788, he was made governor until 1801. He was again governor from 1803 to 1809, and in 1811 he was a member of Congress. In 1815 he accepted a mission to the Creek Indians, and died while in performance of it.

Sewall, Adams, and Ruggles. The American Association brought matters to a crisis in the colonies. Men were compelled to take sides. Jonathan Sewall, Attorney-general of Massachusetts and Judge of Admiralty, in a series of articles in a Boston paper, made a vigorous effort to convince his countrymen of the folly and danger of further resistance. To these articles John Adams promptly and effectually replied. Timothy Ruggles, who had presided at the Stamp Act Congress in New York (which see), got up a counter-association, and persuaded a few persons to sign it; but the act made them so obnoxious to the public that it became necessary for the military to protect them from personal violence.

Sewall, JONATHAN, LL.D. (loyalist), was born in Boston, Aug. 24, 1728; died at St. Johns, N. B., Sept. 26, 1796. He graduated at Harvard University in 1748, and in early life was the intimate associate and friend of John Adams. Like Adams, he was a school-teacher; became a lawyer in 1767; and was appointed Attorney-general of Massachusetts. In 1769 he began a suit for the freedom of a negro-slave, and was successful, two years before the settlement of the case of the negro Somerset, which Blackstone commended so highly, and Cowper commemorated in poetry. He and Adams finally differed in politics, Sewall taking sides with the crown. When the war broke out, in 1775, he was residing in the house, at Cambridge, which Washington afterwards occupied as his headquarters, for Sewall went to England, and was among the proscribed in Massachusetts in 1779. In 1788 Sewall went to New Brunswick, where he was Judge of the Admiralty Court until his death.

Sewall, SAMUEL, was born at Bishopstoke, Eng., March 28, 1652; died Jan. 1, 1730. He graduated at Harvard University in 1671. His

father (Henry) began the settlement at Newbury in 1634; returned to England, and finally settled permanently at Newbury in 1651. Samuel studied divinity, preached awhile, came into the possession of great wealth by marrying the daughter of a Boston goldsmith, became an Assistant (which see) in 1684, and was annually chosen a member of the Council from 1692 until 1725. He was a judge from 1712 until 1718, when he became Chief-justice of Massachusetts, resigning in 1728, in consequence of age and infirmities. Judge Sewall shared in the general belief in witches and witchcraft, and concurred in the condemnation of many of the accused persons (see *Witchcraft, Salem*), but afterwards publicly acknowledged his error. He seems to have been the first outspoken "Abolitionist" in our country, having written a tract against slavery, in which he gave it as his opinion that there would "be no progress in gospelling" until slavery should be abolished.

Seward, SECRETARY, ATTEMPTED MURDER OF. According to a proclamation (May 2, 1865) of Andrew Johnson, President Lincoln's official successor, there was "evidence in the Bureau of Military Justice that there had been a conspiracy formed by Jefferson Davis, Jacob Thompson, Clement C. Clay, Beverly Tucker, George N. Saunders, William C. Cleary, and other rebels and traitors, against the government of the United States, harbored in Canada," to assassinate the President and the Secretary of State. Circumstances seemed to warrant a suspicion that the same fate was intended for other officers of the government, also for General Grant and leading Republicans; hoping, in some way, that the Confederate leaders, in the confusion of the trying moment, might seize the reins of the national government. On the same evening when Mr. Lincoln was mortally hurt by a pistol-bullet (April 14, 1865), Lewis Payne Powell, a Confederate soldier of Florida, went to the house of Secretary Seward, who was then severely ill, with the pretence that he was a messenger from the minister's physician. Refused admission by the porter, he rushed in, and up two flights of stairs, to Mr. Seward's chamber, at the door of which he was met by his son, Frederick Seward, who resisted him. The assassin felled the younger Seward to the floor with the handle of a pistol, fracturing his skull and making him insensible. Miss Seward, the Secretary's daughter, was attracted to the room-door, when the ruffian rushed past her, sprang upon Mr. Seward's bed, and inflicted three severe wounds with a dagger upon the Secretary's neck and face. Mr. Robinson, an invalid soldier attending as nurse, seized the assassin, and while they were struggling Miss Seward shouted murder from the open window, and the porter cried for help from the street. Finding his position perilous, the miscreant escaped from Robinson, ran down-stairs, and sped away on a horse he had in readiness. Other persons were accused of complicity with Booth and Lewis Payne Powell in their murderous raid upon men high in office. The assassin was soon arrested; also suspected accomplices of Booth. Three of these (with Pow-

all) were found guilty and hanged. Their names were David E. Herrold, George A. Atzerott, and Mary E. Surratt. The house of the latter was proved to have been a place of resort for Booth and his accomplices. Three others were sentenced to imprisonment, at hard labor, for life, and one for six months. President Johnson offered \$100,000 reward for the arrest of Jefferson Davis; \$25,000 apiece for the arrest of Jacob Thompson, C. C. Clay, G. N. Saunders, and Beverly Tucker; and \$10,000 for the arrest of W. C. Cleary, late a clerk of C. C. Clay.

Seward, WILLIAM HENRY, LL.D., was born at Florida, Orange Co., N. Y., May 16, 1801; died at Auburn, N. Y., Oct. 10, 1872. He graduated at Union College in 1820; became a lawyer; began practice at Auburn in 1823, and soon ac-

WILLIAM HENRY SEWARD.

quired a high reputation, especially in the criminal practice. He first appeared conspicuously in politics as president of a state convention of young men who favored the re-election of John Quincy Adams as President of the United States. From 1830 to 1834 he was a member of the State Senate, and became a leader of the Whig party, opposed to the administration of Jackson. In 1838 Mr. Seward was elected Governor of New York, and again in 1840. In 1842 he resumed the practice of his profession, and gained an extensive business, chiefly in United States courts. In 1849 he was elected United States Senator, which position he held until 1861, when he was called to the cabinet of President Lincoln as Secretary of State. In that position he conducted, with great wisdom and sagacity, the foreign affairs of our government, through all the critical period of the Civil War, and continued in Johnson's cabinet, filling the same office, until 1869. He was a conspicuous opposer of slavery for many years, in and out of Congress. He opposed the Compromise Acts (see *Omnibus Bill, The*) of 1850, the Kansas-Nebraska bill of 1854, and was one of the founders of the Republican party. The two most important subjects of his diplomacy during the Civil War were the liberation of Mason and Slidell and the French invasion of Mexico. Early in April, 1865, he was confined to his bed by an accident, when an as-

sassin forced his way into his house and attacked him with murderous intent. (See *Seward, Secretary, Attempted Murder of*.) He was severely wounded, but as soon as he recovered sufficiently he resumed the duties of Secretary of State. He never recovered fully from the shock of the accident and the assassin's attack. Retiring from public life in March, 1869, he made an extended tour through California and Oregon to Alaska (which see); and in August, 1870, accompanied by some of his family, he set out upon a tour around the world, returning to Auburn in October, 1871. He had been everywhere received with marks of high consideration. His recorded observations were edited by his adopted daughter, and published. Mr. Seward's *Works*, in four volumes, contain his speeches in legislative debates, eulogies in the Senate of several of his colleagues, occasional addresses, orations, etc.

Seward's Circular Letter. Seward, believing, after the battle of Gettysburg (which see), that the war for the Union would soon cease and the republic be spared, sent (Aug. 12, 1863) a cheering circular letter to the United States diplomatic agents abroad, in which he recited the most important events of the war to that time. He declared that "the country showed no signs of exhaustion of money, material, or men;" that the national loan was "purchased at par by our citizens at the average of \$1,200,000 daily," and that gold was selling at twenty-three to twenty-eight per cent. premium, while in the insurrectionary region it commanded twelve hundred per cent.

Seward's (Secretary) Instructions. So early as March, 1861, when it was known that the head of the Southern League had sent emissaries abroad to seek recognition and aid for their cause, Mr. Seward, President Lincoln's Secretary of State, addressed the American ministers in Europe, conjuring them to use all diligence to "prevent the designs of those who would invoke foreign intervention to embarrass and overthrow the Republic." President Lincoln had appointed Charles Francis Adams minister to the British court, and on April 10, 1861, Secretary Seward instructed him concerning the manner in which he should oppose the agents of the Confederates. He directed him to stand up manfully as the representative of his *whole* country, and that as a powerful nation, asking no favors of others. "You will, in no case," said Mr. Seward, "listen to any suggestions of compromise by this government, under foreign auspices, with its discontented citizens. If—as the President does not at all apprehend—you shall unhappily find her majesty's government tolerating the application of the so-called Seceding States, or wavering about it, you will not leave them to suppose for a moment that they can grant that application and remain the friends of the United States. You may even assure them promptly, in that case, that if they determine to recognize they may at the same time prepare to enter into an alliance with the enemies of the Republic. You, alone, will represent your coun-

try at London, and you will represent the whole of it there. When you are asked to divide that duty with others, diplomatic relations between the government of Great Britain and this government will be suspended, and will remain so, until it shall be seen which of the two is most strongly intrenched in the confidence of the respective nations and of mankind." The high position taken in the name of his government in that letter of instruction was, doubtless, one of the most efficient causes, together with the friendly attitude afterwards assumed by Russia towards the United States, of the fortunate delay of Great Britain in the matter of recognizing the independence of the Confederates.

Sewell's Point. At Sewell's Point, at the mouth of the Elizabeth River, Virginia, the insurgents had erected a redoubt, with three heavy rifled cannons, in the middle of May, 1861, for the purpose of sweeping Hampton Roads. The battery was masked by a sand-hill, but it was discovered by Captain Henry Eagle, of the National armed schooner *Star*, who sent several shot among the workmen on the Point on May 19. The fire was returned; five shots struck the *Star*, and she was compelled to withdraw. That night about two thousand insurgent troops were sent down to the Point from Norfolk, and these were there on the morning of the 20th, when the *Frederick*, Captain Ward, opened her guns upon them. The battery was soon silenced, and the insurgents driven away. This was the first offensive operation against the insurgents in the Civil War.

Sewing-machines. Unsuccessful efforts were made in England, in the latter half of the last century, to relieve sewers from the drudgery of the needle. In 1830 Barthelmy Thimonier, a Frenchman, patented a sewing-machine, and eighty of them, in operation in Paris, were destroyed by a mob, composed chiefly of women. In 1848 he constructed improved machines, which made two hundred stitches a minute, and these were also destroyed by a mob, he barely escaping with his life. So early as 1834 Walter Hunt, of New York, invented a sewing-machine that made what is called a "lock-stitch." He neglected to pursue it to perfection, and lost a grand chance for fame and fortune; and when, in 1854, he applied for a patent, it was essentially covered by a patent obtained by Elias Howe, Jr., eight years before (September, 1846). Mr. Howe amassed a large fortune by his royalty on machines manufactured by others using his invention. Many improvements have been made by American inventors. In 1870 there were forty-nine establishments in the United States for the manufacture of sewing-machines, employing a capital of about \$8,000,000. The total annual product of the sewing-machine business in the United States, in 1870, was probably not less in value than \$20,000,000. The aggregate product of thirteen of the principal establishments for the same year was a little more than three hundred and sixty-two thousand machines, valued at more than \$14,000,000.

Seymour, TRUMAN, was born at Burlington,

Vt., Sept. 24, 1824, and graduated at West Point in 1846. He served in the war against Mexico, and also in the last Florida war (1856-58), and became captain of artillery in 1860. He was in Fort Sumter during the siege in the spring of 1861; joined the Army of the Potomac in March, 1862, and was made chief of artillery of McCall's division. Late in April of that year he was made brigadier-general, and commanded a brigade in the Peninsular campaign. He led a brigade in the battles at Groveton, South Mountain, and Antietam, and commanded a division in the assault on Fort Wagner, where he was severely wounded (July 18, 1863). In February, 1864, he commanded an expedition to Florida, and fought a battle at Olustee (which see). He commanded divisions at the beginning of the Richmond campaign of 1864, and in the Shenandoah valley the same year. He was in the Richmond campaign from December, 1864, to the surrender of Lee at Appomattox (which see), and was breveted major-general of the United States Army "for services during the Rebellion."

Shaftesbury, EARL OF. Anthony Ashley Cooper, first Earl of Shaftesbury, was born at Wimborne (St. Giles's House), Dorsetshire, England, July 22, 1621; died in Amsterdam, Jan. 22, 1683. He represented Tewkesbury in the Short Parliament in 1640. He first supported Charles I. in the civil war, but in 1644 joined the Parliament troops, acted with vigor, served in Cromwell's parliaments, and was one of the Councilors of State. He retired in 1654, and in Parliament was a leader of the opposition to Cromwell's measures. Active in the overthrow of the Second Protectorate, he was one of the commissioners who went to Breda to invite Charles II. to come to England. The grateful king made him Governor of the Isle of Wight, Chancellor of the Exchequer, and one of the Privy Council. In 1661 he was created Baron Ashley, and was one of the commission for the trial of the regicides (see *Regicides*, *The*), whom he zealously prosecuted. Charles had granted to him and several other favorites the vast domain of Carolina (1663), and he was employed with Locke in framing a scheme of government for the domain. He was created Earl of Shaftesbury in 1672, and made Lord-chancellor of the Realm, for which he was unfitted. Opposing the government, the king dismissed him (1673). Accused of treason, he fled to Holland in 1682, where he died.

Shaler, ALEXANDER, was major of the famous New York Seventh Regiment before the breaking-out of the Civil War, and became lieutenant-colonel of the Sixty-fifth New York Volunteers in June, 1861. He served in the Peninsular campaign, and under Pope in Virginia and McClellan in Maryland as colonel. In May, 1863, he was made a brigadier-general, and commanded a brigade in the battle of Fredericksburg (which see). In the battle of the Wilderness (which see) he was taken prisoner, and was confined at Charleston, S. C. Exchanged in August (1864), he afterwards commanded a division in Arkansas (January, 1865). He was breveted major-general, and in January, 1867, he was made ma-

jor-general of a division of the National Guard of the State of New York.

Shawmut, a peninsula with three hills which caused it to be called "Tri-mountain," on which Boston was built, was discovered by the Pilgrims in 1621. A boat with ten men was sent to explore Massachusetts Bay. Towards the south they saw the blue hills from which the Indian name Massachusetts was derived. Two or three rivers entered the bay, and peninsulas jutted into it; and so attractive were its shores that the Pilgrims regretted they had not seated themselves there. When Winthrop and a large colony came (1630), they landed at Salem, and some of them settled at Charlestown. Sickness prevailed among them. Observing a fine spring of water on Shawmut, and believing its high ground to be more healthy than at Charlestown, Winthrop settled there and founded Boston. (See *Boston, First Settlement of*.)

Shawnoese, or Shawnees. This was a once powerful family of the Algonquin nation, supposed to have been originally of the Kickapoo tribe, a larger portion of whom moved eastward, and a part removed in 1648 to the Fox River country, in Wisconsin. The Iroquois drove them back from the point of emigration south of Lake Erie, when they took a stand in the basin of the Cumberland River, where they established their great council-house and held sway over a vast domain. Some of them went south to the region of the Carolinas and Florida, where those in the latter region held friendly relations with the Spaniards for a while, when they joined the English in the Carolinas, and were known as Yamasees and Savaunaha. At about the time when the English settled at Jamestown (1607), some southern tribes drove the Shawnoese from the Cumberland region, when some of them crossed the Ohio and settled on the Scioto River, at and near the present Chillicothe. Others wandered into Pennsylvania, where, late in the seventeenth century, and also in 1701, they made treaties with William Penn. They also made treaties with the Iroquois after joining the Eries and Andastes in war against the Five Nations in 1672, when the Shawnoese were defeated and fled to the land of the Catawbas in South Carolina, but from which they were soon expelled, taking refuge with the Creeks. Finally, they joined their kindred in Ohio when those in Pennsylvania went thither. The Iroquois, who claimed sovereignty over them, drove them farther westward, where they joined the French and were active in the events of the French and Indian War. (See *French and Indian War*.) They continued hostile to the English after the conquest of Canada, and were of Pontiac's confederacy (see *Pontiac*). Afterwards they made war on the Virginia frontier in connection with other western tribes. In 1774 they had a severe battle with the Virginia militia at Point Pleasant. Under English influences they took part with the Miamis in the war from 1790 until 1795, and participated in the treaty at Greenville in 1795. (See *Greenville, Treaty at*.) At that time the main body of the Shawnoese were on the

Scioto River, but some passed into Missouri and received land from the Spaniards. Tecumtha and his brother, the Prophet, were Shawnoese, and attempted to confederate western tribes against the white people in 1811, but most of his people in Ohio remained loyal to the United States then and in the War of 1812. Those in Missouri ceded their lands to the United States in 1825, and those in Ohio did the same in 1831. The Shawnoese proper now number less than one thousand, on a large reservation in the Indian Territory.

Shawomet (R. I.), WAR AT. Gorton, the restless disturber of the peace in New England, had been whipped from colony to colony, and was settled at Shawomet (Warwick), R. I., on land ceded to him and a few followers by Miantonomoh. The settlement consisted of twelve men and their wives and children. Two Indian chiefs, claiming to be independent, protested against the cession, and appealed to the authorities at Boston. These were seconded by Benedict Arnold, who appears to have been moved by personal animosity. He entered complaints against the Shawomet settlers. Massachusetts assumed authority over that portion of Rhode Island. They summoned Miantonomoh to Boston, and on incompetent testimony it was adjudged that he had no right to sell the land. Then the Gorton colony were summoned to Boston. They replied that they were not responsible to Massachusetts, but to the government of England. A second summons was sent, with the same result. Commissioners were appointed to go to Shawomet. They were warned by Gorton that if they should come to exercise force they would be met by force. "We strictly charge you," he wrote, "that you set not a foot upon our lands in any hostile way, but upon your peril; and that if any blood be shed, upon your own heads shall it be." The commissioners went with a minister, a band of soldiers, and some Indians. On their approach, alarm spread through the hamlet. The men prepared themselves for fight; the women, with their children, for flight. The latter, when the Boston party came, ran—some to the woods, and others to the water to a friendly boat. The men took refuge in a fortified log cabin. The commissioners demanded an instant surrender. It was refused; for, as the besieged said, they owed no allegiance to Massachusetts. They proposed to submit the case to arbitration, and a truce was agreed upon until word could be received from Boston. The truce was delusive. Before the messenger sent to Boston could return, the houses of Gorton's people were broken open and plundered. Even the women and children returning from the woods were fired upon. The Bostonians besieged the Gortonians for several days. At length it was proposed to Gorton that he and his fellow-defenders should go to Boston, not as prisoners, but as "free men and neighbors." As soon as the besiegers entered the house, Gorton and his friends were disarmed and marched off to Boston as prisoners. Their property was left behind, a prey to plundering Indians, and their wives and children were scattered, and some of them died. On the way to Boston,

clergymen in villages called the people to prayers on the street, to give thanks for the victory of the Bostonians. In Boston the troops were drawn up in front of Governor Winthrop's house. The commissioners made their report, and the governor came out to welcome back the valiant troops who had gained a victory over twelve men, whose most heinous offence was disagreement in opinion with the Church and State of Massachusetts. Their trial was a sort of theological tilt. The ministers and magistrates wished to hang the prisoners, but sensible representatives of the people consented only to the punishment of being put at hard labor, each with "irons upon one leg," and commanded that they should not "by word or writing maintain any of their blasphemous or wicked errors upon pain of death." The Narragansets, under the lead of Miantonomoh, took up the quarrel in their way, and it proved the ruin of that chief. (See *Miantonomoh*.)

Shays, DANIEL, made famous by rebellion, was born at Hopkinton, Mass., in 1747; died at Sparta, N. Y., Sept. 29, 1825. He was an ensign in Woodbridge's regiment at the battle of Bunker's Hill, and became a captain in the Continental army. His place in history was obtained by his leadership of an insurrection in Massachusetts in 1786-87. He fled to New Hampshire, and thence to Vermont, where he remained about a year. His petition for pardon was granted, when he removed to Sparta, N. Y. He received a pension for his services in the Revolution.

Shays's Rebellion. In other portions of the Union, discontents like those which produced the State of Frankland (which see) caused revolutionary movements. A convention of the people of Maine, sitting at Portland (September, 1786), considered the expediency of erecting themselves into an independent state, but nothing came of it. In Massachusetts a more formidable movement took place. The General Court had voted customs and excise duties to produce a revenue sufficient to meet the interest on the state debt. Besides this burden laid upon them, the people were suffering from private indebtedness. There were taxes to meet the instalments to be paid on the principal of the state debt, and, also, responses had to be made to requisitions of Congress for the proportion of money required from Massachusetts for carrying on the general government. The taxes of the state amounted annually to \$1,000,000. Many of the farmers had fallen behind in their payments. A multitude of lawsuits were pending in the courts. Conventions were called, especially in the southern and western counties, to consider their grievances, and these were sometimes followed by armed mobs which prevented the courts from sitting. The poverty and exhaustion of the country in consequence of the war was complete. Artful demagogues stirred up the people of one class against those of another. The working-men were arrayed against the capitalists. The government of Massachusetts was held responsible for every evil; and these demagogues, seeking notoriety,

so inflamed the people that large masses were ready to take up arms for the overthrow of the commonwealth. In this disturbed state of the public mind, the governor of Massachusetts (Bowdoin) called (September, 1786) a special session of the Legislature. Unsuccessful attempts were made to pacify the malcontents, when the governor called out the militia to protect the courts in the southwestern counties. The Congress, fearing the dissatisfied people might seize the government armory at Springfield, voted to enlist 1300 men (October, 1786) under pretext of acting against Indians in the northwest; but before these troops could be raised, an insurrection had already broken out. Daniel Shays, who had been a captain in the Continental army, at the head of 1000 men or more, took possession of Worcester (Dec. 5, 1786) and prevented a session of the Supreme Court in that town. He repeated this act at Springfield (Dec. 25). The insurrection soon became so formidable that Governor Bowdoin was compelled to call out several thousand militia, under General Lincoln, to suppress it. They assembled at Boston (Jan. 17, 1787) in the depth of winter, and marched for Worcester and Springfield. Two other bodies of insurgents were then in the field under the respective commands of Luke Day and Eli Parsons. United, they numbered about 2000. Shays demanded the surrender (Jan. 25) of the arsenal at Springfield, and approached to take it. Colonel Shepherd, in command there, first fired cannons over their heads. When the pieces were pointed at the insurgents, they cried "Murder!" and fled in confusion. Upon Lincoln's approach (Jan. 27) the insurgents retreated. Finally, he captured 150 of them at Petersham; the rest were dispersed and fled into New Hampshire. Lincoln then marched into the districts west of the Connecticut River, where the insurgents were numerous. Their power was speedily broken. A free pardon was finally offered to all persons who had engaged in the insurrection. Several of the leaders were tried and sentenced to death, but none were executed; for it was perceived that the great mass of the people sympathized with them. So ended Shays's Rebellion.

Sheaffe, SIR ROGER HALE, was born in Boston, July 15, 1763; died in Edinburgh, July 17, 1851. Earl Percy made his headquarters at the house of the mother of young Sheaffe, and he provided for the lad a military education and a commission in a regiment of foot in 1773. Sheaffe performed various military services in Europe, and in 1812 came to Canada with the rank of major-general. After the fall of Brock at Queenstown (which see), Sheaffe took command of the forces and gained a victory there. For this service he was knighted (Jan. 16, 1813). In April of the same year he defended York (which see), and was made a full general in 1828.

Shelburne (Lord) and the Americans. Lord Shelburne, an old and valued friend of Dr. Franklin, had always been an supporter of the Americans during the long and, at last, sanguinary conflict, and yet his personal worth was so great that the

king highly esteemed him, and leaned upon him for advice. On the downfall of North's administration and the accession of that of the Marquis of Rockingham, Shelburne, as his own choice, took that position in the cabinet which made him specially cognizant of American affairs, and to him were intrusted the arrangements for establishing peace. The humane Sir Guy Carleton was put in command of the army in America in place of Sir Henry Clinton, and Oswald was sent to Paris to talk about peace with Dr. Franklin. (See *Preliminary Treaty of Peace*.) On the death of Rockingham (July 1, 1782) he became prime-minister.

Shelby, EVAN, EXPEDITION OF. About one thousand Southern Indians had assembled at Chickamauga and Chattanooga, in upper Georgia, to join the Northern Indians in Hamilton's conspiracy. (See *Hamilton, Governor, at Detroit*.) To restrain their ravages, the governments of North Carolina and Virginia appointed Evan Shelby to the command of one thousand men, called into service chiefly from the region west of the mountains. These were joined by a regiment of twelve-month men who had been enlisted to reinforce Clark in Illinois. In the middle of April, 1779, they went down the Tennessee River in canoes and pirogues so rapidly that the savages were surprised, and fled to the hills and woods, pursued by the white troops. Forty of the barbarians were killed. Their towns were burned, their cultivated fields were laid waste, and their cattle were driven away. For the rest of the year there was peace among

leader in the defeat of Ferguson at King's Mountain (which see), and was in other engagements, serving under Marion in 1781, and subsequently joining Greene with five hundred mounted vol-

ISAAC SHELBY.

nunteers. He received from the Legislature of North Carolina a vote of thanks and a sword (delivered to him in 1813) for the victory at King's Mountain. In 1788 he settled at "Traveller's Rest," where he died. Shelby was governor of Kentucky from 1792 to 1796, and again from 1812 to 1816. At the head of four thousand troops, he joined General Harrison in an invasion of Canada in 1813, and fought at the battle of the Thames. For his conduct there Congress gave him a gold medal. He declined the offer

THE SHELBY MEDAL.

the Western settlements, and a stream of emigrants flowed through the mountains into Kentucky, increasing the number of settlements.

Shelby, ISAAC, was born near Hagerstown, Md., Dec. 11, 1750; died in Lincoln County, Ky., July 18, 1826. He was of Welsh lineage, and in early life became a surveyor in western Virginia. His father, Evan, was a captain in the battle at Point Pleasant (which see) in 1774, and Isaac was a private in his company. He became a captain in 1776, and commissary in 1777, rising to the rank of colonel in 1780. He was a chief

of a seat in Monroe's cabinet as Secretary of War on account of his age. His last public act was serving as a commissioner with General Jackson in forming a treaty with the Chickasaw Indians.

Shepley, GEORGE FOSTER, son of Chief-justice Shepley, of Maine, was born at Saco, Me., Jan. 1, 1819. He graduated at Dartmouth College in 1837; studied at the Harvard Law School and at Portland; and began the practice of law at Bangor. President Polk appointed him United States District-attorney, which position he

held until 1861, when he became colonel of a Maine regiment, and took part in General Butler's expedition against New Orleans. On the surrender of that city he was made its commandant. In July he became a brigadier-general, and was military governor of Louisiana from July 2, 1862, until 1864. On the surrender of Richmond (April, 1865), he was made military governor of that city. He resigned in July, and resumed the practice of law in Portland. In 1871 he was appointed United States Circuit Judge of the First Circuit.

Sheridan, PHILIP HENRY, was born at Somerset, Perry Co., O., March 6, 1831, and graduated at West Point in 1853. He served with much credit in Texas and Oregon, doing good service in the latter region, and settling difficulties

PHILIP HENRY SHERIDAN.

with the Indians. He was made captain in May, 1861, and during the summer he was president of a military commission to audit claims in Missouri. In December he was made chief commissary of the Army of the Southwest, and was on the staff of General Halleck at Corinth, performing the same duties. In May, 1862, he was made colonel of a Michigan regiment of cavalry; defeated Forrest's cavalry on June 6; and on July 1 repulsed and defeated a superior Confederate force under Chalmers at Booneville, Miss. He was then at the head of a brigade of cavalry, and was made brigadier-general. In August he defeated Faulkner's cavalry in Mississippi. Late in September he took command of a division in the Army of the Ohio, and led another division at the battle of Perryville (which see). He also commanded a division with great efficiency in the battle at Stone's River (which see), and for his services there he was made (Dec. 31) major-general of volunteers. He afterwards rendered signal service in the battles of Chickamauga and Missionaries' Ridge, when he was transferred to the Army of the Potomac (April, 1864) as chief of cavalry. In the campaign against Richmond until August, 1864, he did signal service in making destructive raids on Lee's communications. On Aug. 1 he was detached to the valley of the Shenan-

doah, where he defeated the Confederates in several engagements (see *Winchester, Fisher's Hill, and Cedar Creek, Battles of*); and finally, in 1865, he contributed largely to the success of the campaign against Petersburg and Richmond by his services in the final events which culminated in the surrender of Lee at Appomattox Courthouse. After the war he was in command in Louisiana and Texas, and enforced the "reconstruction" acts there, for which he was removed by President Johnson in August, 1867. He was made Lieutenant-general of the United States Army March 4, 1869.

Sheridan's Raid (1864). When the National army emerged from the Wilderness (which see), General Sheridan was sent to cut Lee's communications with Richmond. This was the first of the great raids of that leader in Virginia, and was a short but destructive one. He took with him a greater portion of the cavalry led by Merritt, Gregg, and Wilson, crossed the North Anna on May 9, and struck the Virginia Central Railroad, capturing Beaver Dam Station. He destroyed ten miles of the railway, its rolling-stock, one million and a half of rations, and released four hundred Union prisoners on their way to Richmond. There he was attacked by Stuart and his cavalry, but was not much impeded thereby. He pushed forward, and on the morning of the 11th captured Ashland Station, on the Fredericksburg road, a few miles from Richmond, where he destroyed the railroad for six miles and a large quantity of stores. He was charged with menacing Richmond and communicating with the Army of the James, under General Butler. A few miles from Richmond he had another sharp contest with Stuart, and drove him and his cavalry towards Ashland. Stuart was killed, and General Gordon was mortally wounded. Sheridan still pressed on, and made a dash upon the outer works at Richmond. Custer's brigade carried them at that point and made one hundred prisoners. The inner works were too strong for cavalry. The Confederates gathered, and in a fight Sheridan was repulsed. He led his command across the Chickahominy, fighting a Confederate force at Meadow Bridge; destroyed a railway bridge; rested three days at Haxhall's Landing, on the James, and procured supplies; and then, by way of the White House, leisurely returned to the Army of the Potomac.

Sheridan's Raid (1865). (See *Petersburg, Final Struggle at*.) General Sheridan left Winchester on Feb. 27, 1865, with about 10,000 men, composed of the divisions of cavalry of Merritt and Custer. To the latter division was added a brigade of West Virginia troops under Colonel Capeheart. Sheridan's troops were all mounted. They moved rapidly up the Shenandoah valley towards Staunton. On the way they met Rosser, with 400 men, who was disposed to dispute the passage of a fork of the Shenandoah; but he was soon chased away, and the column moved on to Staunton and Rockfish Gap. Early, with 2500 men behind strong intrenchments, was at Waynesborough to dispute

their passage. Custer soon routed him, capturing 1600 of his men, with 11 guns, 17 battle-flags, and 200 loaded wagons. Custer lost less than a dozen men. This finished Early as a military leader. The raiders destroyed Confederate property in the vicinity valued at \$1,000,000. During that night Sheridan went over the Blue Ridge in a drenching rain, and entered Charlottesville late the next day, where he waited for his pontoons and ammunition to come over the mountains. In the meantime his troops destroyed bridges, factories, depots, and the railway in the direction of Lynchburg for about eight miles. Satisfied that the latter place was too strong for him, he divided his force and pushed for the James River. Rain had so swollen the river that his pontoons would not span it. Proceeding eastward, he destroyed the James River Canal (then the chief channel of supplies for Richmond) and numerous bridges. This produced the greatest consternation in Richmond. The Confederate government prepared to fly, and the families of officials "packed" for a journey. The Congress, made nervous, wanted to adjourn and depart, but they were persuaded to remain. From Columbia, where Sheridan rested a day, he dashed off to the Virginia Central Railway, which they destroyed for the distance of fifteen miles. Then Custer in one direction, and Devin in another, made complete destruction of railways and bridges, as well as supplies, in Lee's rear, inflicting a more serious blow to the Confederate cause than any victory during the last campaign. Then Sheridan swept around by the White House, and joined the army before Petersburg on March 26. He had disabled fully two hundred miles of railway, destroyed a vast number of bridges, and property to the value of several million dollars.

Sherman, JOHN, statesman, brother of General William T., was born at Lancaster, O., May 10, 1823, and was admitted to the bar in 1844. He was elected to Congress in 1854, and served therein until 1861, when he became United States Senator. He was a leading member of the Finance Committee of the Senate during the Civil War, and was for some time its chairman. He and Thaddeus Stevens were the framers of the bill passed in 1866-67 for the reorganization of the so-called "seceded states." He was also the author of a bill providing for the resumption of specie payments on Jan. 1, 1879; and on March 4, 1877, President Hayes called him to his cabinet as Secretary of the Treasury.

Sherman, ROGER, a signer of the Declaration of Independence, was born at Newton, Mass., April 19, 1721; died at New Haven, Conn., July 23, 1793. In early life he was a shoemaker, and after the death of his father (1741) he supported his mother and several younger children by his industry, at the same time employing all his leisure time in acquiring knowledge, especially of mathematics. In 1743 he joined an elder brother in keeping a small store in New Milford, Conn., and the next year was appointed county surveyor of lands. For several years

(1748-60) he furnished the astronomical calculations for an almanac published in New York. Meanwhile he had studied law, and was admitted to the bar in 1754. He was elected to the Connecticut Assembly several times, and in 1759 became a judge of the Court of Common Pleas. Removing to New Haven in 1761, he became a judge of the same court there in 1765, holding the office until 1789. He was also chosen an assistant in 1766, and held the office nineteen years. In 1774 he was chosen a delegate to the First Continental Congress. He continued in Congress until his death, nineteen years afterwards, at which time he was in the United States Senate. Mr. Sherman was one of the committee appointed to draft the Declaration of Independence; served on the most important committees during the war; from 1784 until his death was Mayor of New Haven; and was chiefly instrumental in securing the ratification of the national Constitution by Connecticut. Roger Sherman was one of the most useful men of his time. Jefferson declared that he "never said a foolish thing in his life."

Sherman, THOMAS W., was born at Newport, R. I., March 26, 1813; died there, March 16, 1879. He graduated at West Point in 1836; served with General Taylor in the war against Mexico, in command of a battery; and was breveted major. He commanded a division in the battle of Bull's Run, and led the land forces in the Port Royal expedition (which see), landing at Hilton Head Nov. 7, 1861. In March, 1862, he was superseded by General Hunter, and joined the army under Halleck at Corinth. He did excellent service in the region of the Lower Mississippi in 1862-63, commanding a division in the siege of Port Hudson, and receiving (March 13, 1865) the brevet of major-general United States Army for services there and during the war.

Sherman, WILLIAM TECUMSEH, LL.D., was born at Mansfield, O., Feb. 8, 1820, and graduated at West Point in 1840. His father died in

WILLIAM TECUMSEH SHERMAN.

1829, when he was adopted by Thomas Ewing, whose daughter Ellen he married in 1850. He

served in the Seminole War, and in September, 1850, was made commissary, with the rank of captain. In 1853 he resigned, became a broker in California, and, practising law for a while in Kansas, was made superintendent of a new military academy established by the State of Louisiana. When the convention of that state passed the Ordinance of Secession, Captain Sherman resigned; was made colonel of United States infantry in May, 1861; and commanded a brigade at the battle of Bull's Run, having been made brigadier-general of volunteers in May. In October, 1861, he succeeded General Anderson in the command of the Department of Kentucky. The Secretary of War asked him how many men he should require. He answered, "Sixty thousand to drive the enemy from Kentucky, and two hundred thousand to finish the war in this section." This estimate seemed so wild that he was reputed to be insane, and was relieved of his command; but events proved that he was more sane than most other people. After the capture of Fort Donelson (which see) he was placed in command of a division of Grant's Army of the Tennessee, and performed signal service in the battle of Shiloh (which see). "To his individual efforts," said Grant, "I am indebted for the success of that battle." There he was slightly wounded, and had three horses shot under him, and in May was made major-general. From July to November, 1862, he commanded at Memphis; and throughout the campaign against Vicksburg (December, 1862, to July, 1863) his services were most conspicuous and valuable. He commanded one of the three corps in that siege. After the fall of Vicksburg he operated successfully against General J. E. Johnston. In October, 1863, he was made commander of the Department of the Tennessee, and joined Grant at Chattanooga in the middle of November; was in the battle of Missionaries' Ridge (Nov. 25); and then moved to the relief of Burnside in East Tennessee. Early in 1864 he made a destructive march eastward from Vicksburg. In March he was appointed to command the expedition against Atlanta, which he led with great skill and success, from Chattanooga (May 6) to the capture of Atlanta in September. He commanded in that campaign the armies of the Cumberland, the Tennessee, and the Ohio, numbering nearly one hundred thousand men, with two hundred and fifty-four cannons. He chased General Hood (who had succeeded Johnston in command) into northern Alabama, and, returning to Atlanta, marched to the sea, taking possession of Savannah late in December. Then he pushed northward through the Carolinas, encountering Confederate forces here and there under Johnston, and in April, 1865, received the surrender of that leader and his army at Durham Station. (See *Columbia, Capture of*; *Bentonville, Battle of*; and *Averasborough, Battle of*.) General Sherman had been made Major-general United States Army in August, 1864, and was promoted to Lieutenant-general in July, 1866. On March 4, 1869, he succeeded General Grant as General-in-chief of the Armies of the United States.

Sherman's Campaign in Georgia. Lieutenant-general Grant arranged two grand campaigns for the year 1864. One, under his own immediate direction, was for the seizure of Richmond, the Confederate capital; the other was for the seizure of Atlanta, Ga., the focus of several converging railways. The latter expedition was led by General W. T. Sherman. His army numbered nearly one hundred thousand men. Sherman had succeeded Grant in command of the military division of the Mississippi. His force was composed of the Army of the Cumberland, led by General George H. Thomas; the Army of the Tennessee, commanded by General J. B. McPherson; and the Army of the Ohio, led by General J. M. Schofield. When, on May 6, 1864, Sherman began to move southward from the vicinity of Chattanooga, his army was confronted by a Confederate force of fifty-five thousand men, led by General Joseph E. Johnston, and arranged in three corps, commanded respectively by Generals Hardee, Hood, and Polk. This army then lay at Dalton, at the parting of the ways—one leading into East Tennessee, and the other into West Tennessee. To strike that position in front was, at least, perilous; so Sherman began a series of successful flanking movements. When he flanked the Confederates at Dalton, they fell back to Resaca Station, on the Oostenaule River, on the line of the railway between Chattanooga and Atlanta. There a sharp battle was fought on May 15. Johnston took his next position at Allatoona Pass, and Sherman massed his troops at Dallas, westward of that post, where a severe battle was fought May 25. Johnston finally pressed on to Marietta and Atlanta, where, towards the middle of July, he was succeeded by Hood. The latter city was captured by Sherman, who entered it Sept. 2, 1864. Late in October Sherman prepared for a march through Georgia from Atlanta to Savannah. He moved from Atlanta Nov. 14, and, marching eastward with very little opposition, reached Savannah and entered it Dec. 21.

Sherman's March to the Sea. (See *Atlanta to the Sea*.)

Sherman's Raid in Mississippi. When General Sherman was called to Chattanooga, he left General J. B. McPherson in command at Vicksburg; but soon after Bragg was driven southward from Chattanooga Sherman suddenly reappeared in Mississippi. At the head of 20,000 troops, he made a most destructive raid (February, 1864) from Jackson to the intersection of important railways at Meridian, in that state. His object was to inflict as much injury on the Confederate cause and its physical strength as possible. He believed in the righteousness and efficacy of making such a war terrible, and the line of his march eastward presented a black path of desolation. No public property of the Confederates was spared. The station-houses and rolling-stock of the railways were burned. The track was torn up, and the rails, heated by the burning ties cast into heaps, were twisted and ruined. Sherman intended

to push on to Montgomery, Ala., and then, if circumstances appeared favorable, to go southward and attack Mobile. He waited at Meridian for General W. S. Smith to join him with a considerable force of cavalry, but that officer was held back by the Confederate forces under Forrest and others. After waiting in vain for a week, Sherman laid Meridian in ashes, and returned to Vicksburg with 500 prisoners and 5000 liberated slaves. This raid created great consternation, for General Polk, with his 15,000 men, made but a feeble resistance. Sherman's loss was 171 men.

Sherman's Visit to General Grant. After his long march from the Chattahoochee to the sea, and from the Savannah to the Neuse, General Sherman proceeded by water from Morehead City to visit Grant at the junction of the Appomattox and the James. He left the chief command of the army during his absence to General Schofield. At City Point he met several of the leading officers of the Army of the Potomac and of the James, and President Lincoln. After consultation about the future and learning the "general state of the military world," he returned to Goldsborough on March 30.

Shields, JAMES, was born in Tyrone County, Ireland, in 1810; died at Ottumwa, Iowa, June 1, 1879. He emigrated to America about 1826, and began the practice of law about 1833, at Kaskaskia, Ill. He held a seat in the Legislature in 1836; was State Auditor in 1839; and Judge of the Supreme Court in 1843. In 1845 he was Commissioner of the General Land-office; and when the war with Mexico began President Polk commissioned him a brigadier-general of the United States Army (1847). In two battles he was severely wounded. He was appointed Governor of Oregon Territory in 1848. This office he soon resigned, and from 1849 to 1855 he represented Illinois in the United States Senate. He afterwards resided in Minnesota, and was United States Senator from that state from 1858 to 1860, and then went to California. In August, 1861, he was made brigadier-general of volunteers, and performed gallant services in the Shenandoah valley, receiving a severe wound in the battle of Kernstown (which see).

Shiloh, BATTLE AT. After the capture of Fort Donelson (which see), General Grant had prepared to push towards Corinth, an important position at the intersection of the Charleston and Memphis and Ohio railways. Possession of that point would give the National troops control of the great railway communications between the Mississippi and the East, and the border slave-labor states and the Gulf of Mexico. Passing up the Tennessee River, the main body of Grant's troops were encamped, at the beginning of April, between Pittsburgh Landing, on that stream, and Shiloh Meeting-house, in the forest, two miles from the river. Beauregard, who left Island No. Ten (which see) with troops for Corinth, was straining every nerve to resist this movement. He now confronted the Nationals near Shiloh Meet-

ing-house, with General A. S. Johnston as his lieutenant, and assisted by Generals Polk, Hardee, Bragg, and Breckinridge. With these expert leaders the Confederates had come up from Corinth in a heavy rain-storm, in separate columns, and so stealthily that they were within four miles of the National camp before they were discovered by Grant's sentinels. There they halted (April 6, 1862) to await the arrival of Van Dorn and Price, who were approaching Memphis with a large force from Central Arkansas. The Confederate army now numbered about 40,000 men. Grant had made his headquarters at Savannah, on the Tennessee, and he there continued until the first week in April, having very little apprehension of an attack from the Confederates. General Sherman's division was just behind Shiloh Meeting-house. General Prentiss was encamped across the road to Corinth, with General McClelland's division behind his right. Their three divisions formed the advanced line. In the rear, near the river, lay General Hurlbut's division and that of General Smith, under the command of General W. H. L. Wallace, of Illinois. General Stuart's brigade, of Sherman's division, lay on the Hamburg road, and the division of General Lew. Wallace was at Crump's Landing, below Pittsburgh Landing. Such was the disposition of the National army on Sunday morning, April 6. Buell had been marching very tardily across Tennessee in the direction of Corinth. Hearing of his approach, Beauregard resolved not to wait for Van Dorn and Price, but to strike the Nationals before Buell's arrival. At a council of war (April 5) that made this decision, Beauregard said: "Gentlemen, we sleep in the enemy's camp to-morrow night." Almost the first intimation of the near presence of the Confederates was the wild cry of pickets, flying into camp, and the sharp attack upon Sherman's troops by Hardee's division, before daylight had fairly appeared on Sunday morning, April 6. It was a surprise. Screaming shells dashed through the forest, and bullets whistled among the tents. The Confederates had rushed into the camp, driving half-dressed, half-armed soldiers before them, dealing death and terror in every direction. Prentiss's division was next attacked; his column was shattered, and he, with a large portion of his followers, were made prisoners, his camp being occupied by the Confederates. The struggle soon became general, and for ten hours the battle raged with varying fortune on both sides. General W. H. L. Wallace, of the Nationals, and General A. S. Johnston, of the Confederates, had been killed. On both sides the slaughter was severe, and the National army was pushed back to the river, then bristling with a spring flood. The day was fairly lost to the Union troops. All the Union camps were occupied by the Confederates but one—that of General Wallace, of which General McArthur was now in command. In the rear of this the smitten army had gathered at twilight, in a space not more than four hundred acres in extent, on the verge of the river. They could be pushed back no farther. Beauregard telegraphed to

Richmond a shout of victory. The Nationals were in a most perilous position. A single vigorous blow then given would have justified this shout. Beauregard gave feeble ones that were parried by two gunboats on the river, which had just arrived, and by a hastily formed battery on the shore. That evening the van of Buell's army also appeared on the opposite side of the river; and at midnight, General Lew. Wallace, who had been detained by misinformation, arrived. In the morning twilight (April 7) Wallace's troops opened the battle anew on the Confederate left, where Beauregard commanded in person. Others soon joined in the battle, and it became general all along the line. The Confederates fought gallantly, but were speedily pushed back by a superior force. When they perceived that all was lost, they fled in the direction of Corinth, in a blinding storm of rain and sleet, and halted on the heights of Monterey, covered in their retreat by a rear-guard of 12,000 men, led by General Breckinridge. The Confederates had lost over 10,000 men in the engagement and retreat. Fully 3000 died during the flight to the heights of Monterey. The National loss in killed, wounded, and prisoners was about 15,000. The slain on the battle-field were buried; the dead horses were burned. The hospital vessels sent down the Tennessee were crowded with the sick and wounded. Beauregard's shattered army fell back to Corinth, and Grant was about to pursue and capture it, when General Halleck, his superior in rank, came up and took the chief command, and caused the army to loiter until the Confederates, recuperated, were ready for another battle.

Ship-building and Commerce in New England was begun at Salem about 1640, when Hugh Peters was active in getting up a company to engage in the fisheries on the Eastern coasts, which had been hitherto carried on extensively by the people of Old England. The General Court made an order that all property engaged in that business should be free from taxation for seven years. Peters was active in promoting the building of vessels; and in the course of two years six large vessels were built, in which voyages were undertaken to Madeira, the Canaries, and soon afterwards to Spain, with cargoes of staves and fish, which found a ready market. These vessels brought back wines, sugar, and dried fruit. So began the career of navigation and commerce which has specially distinguished the New England States.

Ship-building in the United States began at the dawn of American commerce, but the restrictions placed upon the commerce of the American colonies (see *Navigation Acts*) by Great Britain almost stifled this industry at its birth. The commerce of the colonies, if left free, would have fostered an extensive business in ship-building. An English author, in 1670, wrote: "Our American plantations employ nearly two thirds of our English shipping, and thereby give constant subsistence to, it may be, 200,000 persons here at home." Notwithstanding these restrictions, there were built, in the aggre-

gate, in 1771, in the thirteen colonies, 128 square-rigged vessels and 241 sloops and schooners, with an aggregate tonnage of 24,068. Ship-building had become a very extensive industry in our country when the Civil War (1861-65) broke out. The Anglo-Confederate cruisers drove much of our carrying-trade into foreign bottoms, and ship-building in our country has since been a much-depressed business. The total number of merchant-vessels of the United States afloat at the close of June, 1875, was 32,576, of which 4000 were steam-vessels.

Shippen, WILLIAM, M.D., was born in Philadelphia in 1735; died at Germantown, July 11, 1808. He graduated at Princeton in 1754; studied medicine in London and Edinburgh, and began its practice in Philadelphia in 1762. In the autumn of that year he began the first course of anatomical lectures ever given in this country. In 1765 he was chosen professor of anatomy and surgery in a Philadelphia medical school, of which he was the founder. In 1776 he entered the medical department of the army, and, from April, 1777, to January, 1781, was its director-general. He withdrew from the practice of his profession in 1798.

Shirley, WILLIAM, colonial governor of Massachusetts, was born in Sussex, Eng., in 1693; died at Roxbury, Mass., March 24, 1771. Bred a lawyer, he came to Boston in 1734, where he practised his profession. At the time he was

WILLIAM SHIRLEY.

appointed governor (1741) he was a commissioner for the settlement of the boundary between Massachusetts and Rhode Island. As governor he was superior to his contemporaries in the same office in America. He planned the expedition against Louisburg in 1745; and was appointed one of the commissioners at Paris (1750) for settling the limits of Acadia, or Nova Scotia, and other controverted rights of the English and French in America. In 1754 he made a treaty with the Eastern Indians and explored the Kennebec, erecting some forts upon its banks. In 1755 he was appointed commander-in-chief of the British forces in North America. The expedition against Fort Niagara was planned by him, and led as far as Oswego. In 1759 he was commissioned a lieu-

tenant-general. He was governor of one of the Bahama islands afterwards, but returned to Massachusetts in 1770 and built a spacious mansion at Roxbury, which he never occupied, dying early the next year after his arrival there.

Short, WILLIAM, diplomatist, was born at Spring Garden, Va., Sept. 30, 1759; died in Philadelphia, Dec. 5, 1849. He was educated at the College of William and Mary. He became a member of the Virginia Executive Council while very young, and in 1784 he accompanied Jefferson to France as secretary of legation. In 1789 Washington appointed him *Chargé d'Affaires* to the French Republic on the retirement of Jefferson from his post in France. This was the first commission signed by President Washington, and Short had the honor of being the first public officer appointed under the national Constitution. He was successively minister-resident at the Hague and minister to Spain. Mr. Short was a faithful and very able diplomatist.

Shoshones, or Snakes. These, it is believed, formed a distinct nation of North American Indians, inhabiting a portion of the country west of and among the Rocky Mountains. They embrace a number of warlike tribes, among whom the Comanches (which see), who are east of these mountains, are best known in our history. According to their traditions, they came from the South. When Lewis and Clarke saw them, in 1805, they had been driven beyond the Rocky Mountains. They are wide-spread, and were generally very peaceful until within twenty years. The bands of Shoshones have gone by various names. The overland emigrants to California met them in the Great Salt Lake region, on the Humboldt River, and at other places. Soon after that emigration began, these bands assumed a hostile attitude towards the white people, and in 1849 some of them were engaged in open war. Short periods of peace were obtained by treaties, and, finally, in 1864, some of the Shoshones ceded their lands to the United States. The non-fulfilment of the agreement on the part of the latter caused the Indians to begin hostilities again. In 1867 a treaty was made at Fort Bridger, after which the United States government attempted to gather the scattered Shoshone bands on reservations, and partially succeeded. One reservation (Fort Hall) in Idaho contained at one time 1200 of the tribe; and 800 were on a reservation in Wyoming Territory, exposed to attacks from the Sioux. The Northwestern Shoshones, in Nevada, numbered about 2500 in 1872. At the reservation in Wyoming the Episcopalians have a mission, and other denominations are endeavoring to enlighten other bands.

Shubrick, WILLIAM BRANFORD, was born Oct. 31, 1790; died in Washington, D. C., May 27, 1874. He entered the navy as midshipman in 1806; was made lieutenant in January, 1813, and in June assisted, by managing a small battery on Craney Island, in repulsing the British. (See *Craney Island, Repulse of the British at.*) Shubrick was lieutenant of the *Constitution* in her action with the *Cyane* and *Lerant* (which see). He commanded a squadron in the Pacific in

1847, and captured some ports from the Mexicans. In 1859 he was in command of the Brazil squadron and the Paraguay Expedition, and from 1830 to 1870 was chairman of the Light-

WILLIAM BRANFORD SHUBRICK.

house Board. He was made rear-admiral on the retired list in July, 1862.

Siamese Twins, THE. Chang and Eng were born in a small village on the coast of Siam in 1811. Their mother bore seventeen children; once she had three at a birth, and never less than two. These two children were the only deformed ones among them. They were united by a strong band of flesh, three or four inches in diameter, at the anterior part of the chest. Their parents lived by fishing, and the boys sold shell-fish until they were eighteen years of age, when they were brought to the United States and exhibited as curiosities. They were shown in different cities of the Union, and also went to England and France, where they attracted the attention of scientific men. They were very agile, and so accommodated themselves to their situation that they could run, leap, and, when crossing the ocean, climb to the masthead as quickly as any sailor. The twins finally settled in North Carolina, where they purchased an estate. Each was married (their wives were sisters) and had several children, none of whom were deformed. They died within a few hours of each other, Jan. 17, 1874, at the age of 63 years.

Sibley, HENRY H., was born in Louisiana in 1815, and graduated at West Point in 1838, entering the dragoons and serving in the Seminole War (which see). He served in the war against Mexico. In February, 1861, he was made major of dragoons, and was serving against Indians in New Mexico; but in May he joined the insurgents, accepted the commission of brigadier-general in the Confederate army, and led a force from Texas for the conquest of New Mexico. At

Fort Craig (see *Valverde*) he was repulsed (June 5, 1862) and was driven over the mountains into Texas. In 1870 he entered the service of the ruler of Egypt as brigadier-general.

Sickles, DANIEL EPHRAIM, was born in New York city Oct. 20, 1822, and was admitted to the bar in 1844. In 1847 he became a member of the Legislature, and was soon a prominent leader in the Democratic party. He went to England with

DANIEL EPHRAIM SICKLES.

Minister Buchanan as secretary of legation. In 1855 he was elected State Senator, and the next year he was a member of Congress. He shot Philip Barton Key (Feb. 27, 1859), in Washington city, for alleged unlawful intimacy with his wife; was tried for murder, but acquitted, and was re-elected to Congress in 1866. When the Civil War broke out, he raised the Excelsior (New York) Brigade; was made colonel, and was commissioned brigadier-general, his commission dating September, 1861. He commanded a brigade on the Peninsula, took command of General Hooker's troops when that officer was placed at the head of an army corps, and had a division at Antietam and Fredricksburg. At Chancellorsville (which see) he commanded an army corps; also at Gettysburg (which see), where he lost a leg. He was made major-general of volunteers Nov. 29, 1862; relieved from the military service in April, 1869, he was soon afterwards sent as minister to Spain, which office he resigned in 1874. He married a Spanish lady as his second wife.

Siege of Boston. With the efficient aid of General Gates, adjutant-general of the Continental army, order was soon brought out of great confusion among the forces at Cambridge. Washington determined to prepare for a regular siege of Boston, and to confine the British troops to that peninsula or drive them out to sea. The siege continued from June, 1775, until March, 1776. Fortifications were built, a thorough organization of the army was effected, and all that industry and skill could do, with the materials in hand, to strike an effectual blow was done. All through the remainder of the summer and the autumn of 1775 these preparations went on,

and late in the year the American army around Boston, 14,000 strong, extended from Roxbury, on the right, to Prospect Hill, two miles northwest of Breed's Hill, on the left. The right was commanded by General Artemas Ward, and the left by General Charles Lee. The centre, at Cambridge, was under the immediate command of Washington. The enlistments of many of the troops would expire with the year. Many refused to re-enlist. The Connecticut troops demanded a bounty; and when it was refused, because the Congress had not authorized it, they resolved to leave camp in a body. Many did go, and never came back. But at that dark hour new and patriotic efforts were made to keep up the army, and at the close of the year nearly all the regiments were full, and 10,000 minute-men in New England stood ready to swell the ranks. On the 1st of January (1776) the new army was organized, and consisted of about 10,000 men. The British troops in Boston numbered about 8000, exclusive of marines on the ships-of-war. They were well supplied with provisions, and, having been promised ample reinforcements in the spring, they were prepared to sit quietly in Boston and wait for them. They converted the old South Meeting-house into a riding-school, and Faneuil Hall into a theatre, while Washington, yet wanting ammunition to begin a vigorous attack, was chafing with impatience to "break up the nest." He waited for the ice in the rivers to become strong enough to allow his troops and artillery to cross over on it and assail the enemy; but the winter was mild, and no opportunity of that kind offered until February, when a council of officers decided that the undertaking would be too hazardous. Finally Colonel Knox, who had been sent to Ticonderoga to bring away cannons and mortars from that place, returned with more than fifty great guns. Powder began to increase. Ten militia regiments came in to increase the strength of the besiegers. Heavy cannons were placed in battery before Boston. Secretly Dorchester Heights were occupied by the Americans, and fortified in a single night. Howe saw, for the first time, that he was in real danger, for the cannons at Dorchester commanded the town. First he tried to dislodge the provincials. He failed. A council of war determined that the only method of securing safety for the British army was to fly to the ocean. He offered to evacuate the town and harbor if Washington would allow him to do so quietly. The boon was granted, and on Sunday, March 17, 1776, the British fleet and army, accompanied by more than 1000 loyalists, who dare not brave the anger of the patriots, whom they had oppressed, left the city and harbor, never to return in force. The event gave great joy to the American people, and the Continental Congress caused a medal of gold to be struck, with appropriate devices, and presented to Washington, with the thanks of the nation.

Siege of Boston, DISTRESS OF INHABITANTS DURING THE. When the British rear-guard left Boston, March 17, 1776, the vanguard of the American army marched in, and were received

by the inhabitants with demonstrations of great joy. They had endured dreadful sufferings for more than sixteen months—hunger, thirst, cold, privations of every kind, and the outrages and insults of insolent soldiers, who treated them as rebels, without rights which the British were bound to respect. The most necessary articles of food had risen to enormous prices, and horse-flesh was welcomed, when it could be procured, as a savory dish. For a supply of fuel, the pews and benches of churches and the partitions and counters of warehouses were used, and even some of the meaner uninhabited dwellings were demolished for the same purpose.

Siege of Charleston (1780). Sir Henry Clinton sailed from New York on Christmas-day, 1779, for the purpose of invading South Carolina. He took with him the main body of his army, leaving General Knyphausen in command in New York. The troops were borne by a British fleet, commanded by Admiral Arbuthnot, who had two thousand marines. They encountered heavy storms off Cape Hatteras, which scattered the fleet. One vessel, laden with heavy battery-cannons, went to the bottom. Another, bearing Hessian troops, was driven across the Atlantic, and dashed on the shore of England. The troops landed on islands below Charleston, and it was late in February before the scattered British forces appeared on John's Island, in sight of the wealthy city, containing a population of fifteen thousand inhabitants, white and black. The city was then defended by less than two thousand effective troops, under General Lincoln, who had cast up intrenchments across Charleston Neck. Commodore Whipple had sunk some of his armed vessels in the channels of the harbor, after transferring the cannons and seamen to the land fortifications. Fort Moultrie was well garrisoned. The invading troops appeared before the defences of Charleston March 29, and the fleet entered the harbor, unmolested, April 9. On the following day Clinton and Arbuthnot demanded the surrender of the city, which was promptly refused, and a siege began. On the 13th Lincoln and a council of officers considered the propriety of evacuating the city to save it from destruction, for the American troops were too few to hope for a successful defence. It was then too late, for cavalry, sent out to keep open communications with the country, had been dispersed by the British troopers. The arrival of Cornwallis (April 19) with three thousand fresh troops rendered an evacuation impossible. The siege continued about a month. Fort Moultrie surrendered on May 6, when a third demand for the surrender of the city was made and refused. Late on the succeeding evening a severe cannonade was opened upon it from land and water. All night long the thunder of two hundred heavy guns shook the city, and fiery bombshells were rained upon it, setting the town on fire in different places. At two o'clock on the morning of the 12th Lincoln proposed to yield, and on that day the city and garrison were surrendered, and the latter, as well as the adult citizens, became prisoners of war. The latter were paroled; and by this extraor-

dinary proceeding Clinton could boast of over five thousand captives. The city was given up to pillage by the British and Hessian troops. When the whole amount of plunder was appraised for distribution, it aggregated in value \$1,500,000. Clinton and his major-generals each received about \$20,000. Houses were rifled of plate, and slaves were seized, driven on board the ships, and sent to the West Indies to sell, so as to swell the money-gains of the conquerors. Over two thousand men and women, without regard to the separation of families, were sent at one embarkation; and only upon the promise of unconditional loyalty to the crown was British protection offered to citizens. In utter violation of the terms of surrender, a large number of the leading men of Charleston were taken from their beds (August) by armed men, and thrust on board filthy prison-ships, under the false accusation of being concerned in a conspiracy to burn the town and murder the loyal inhabitants.

Siege of Fort Erie. Lieutenant-colonel Drummond, with about five thousand men, began a siege of Fort Erie Aug. 4, 1814. The fort was an indifferent affair, small and weak, standing upon a plain twelve or fifteen feet above the waters of Lake Erie, at its foot. A battery nearer the water, and various earthworks, had been thrown up by the Americans since its capture in July. Redoubts, traverses, and abatis had been constructed. At the southwestern extremity of the line of works a sort of bastion, twenty feet high, had been erected, on which five heavy guns were mounted. It was called Towson's Battery. In the lake, near by it, were three armed schooners—*Porcupine*, *Somers*, and *Ohio*. Drummond perceived the importance of capturing the American batteries at Black Rock and seizing or destroying the armed schooners in the lake. A force twelve hundred strong, that went over to Black Rock, were repulsed by riflemen, militia, and volunteers, under Major Morgan. Meanwhile Drummond had opened fire on Fort Erie with some 24-pounders. From the 7th to the 14th of August (1814) the cannonade and bombardment was almost incessant. General Gaines had arrived on the 5th, and taken the chief command as Brown's lieutenant. On the morning of the 7th the British hurled a fearful storm of round-shot upon the American works from five of their heavy cannons. Day by day the siege went steadily on. On the 13th Drummond, having completed the mounting of all his heavy ordnance, began a cannonade, bombardment, and rocketeering, which continued through the day, and were renewed on the morning of the 14th. When the attack ceased that night, very little impression had been made on the American works. Satisfied that Drummond intended to storm the works, Gaines made disposition accordingly. At midnight an ominous silence prevailed in both camps. It was soon broken by a tremendous uproar. At two o'clock in the morning (Aug. 15) the British, fifteen hundred strong, under Lieutenant-colonel Fischer, made a furious attack upon Towson's battery and the abatis, on the extreme left, between

that work and the shore. They expected to find the Americans slumbering, but were mistaken. At a signal, Towson's artillerists sent forth such a continuous stream of flame from his tall battery that the British called it the "Yankee Light-house." While one assailing

ty-four wounded, and one hundred and eighty-six prisoners. The loss of the Americans was seventy killed, fifty-six wounded, and eleven missing. Both parties immediately prepared for another struggle.

Sigel, FRANZ, was born at Zinsheim, Baden,

REINS OF FORT ERIE, 1860.

column, by the use of ladders, was endeavoring to capture the battery, the other, failing to penetrate the abatis, because Miller and his brave men were behind it, attempted to gain the rear of the defenders. Both columns failed. Five times they made a gallant attack, when, after fearful loss, they abandoned the enterprise. Meanwhile another British column made a desperate attack on the fort, when the exasperated Drummond ordered his men to "give the Yankees no quarter" if the fort should be taken, and had actually stationed some Indians near to assist in the execution of the savage order. He obtained partial possession of the weak fort, and ordered his men to attack the garrison with pike and bayonet. Most of the officers and many of the men received deadly wounds. No quarter was given; but very soon the officer who gave the order was killed by the side of Lieutenant Macdonough, who had asked him for quarter, but was shot dead by him. The battle raged furiously a while longer. The British held the main bastion of the fort in spite of all efforts to dislodge them. Finally, just as the Americans were about to make a more furious attack, the bastion blew up with tremendous force. A column of flame, with fragments of timber, earth, stones, and the bodies of men, rose to the height of nearly two hundred feet in the air, and fell in a shower of ruins to a great distance around. This appalling explosion was followed by a galling cannonade, when the British fled to their intrenchments, leaving on the field two hundred and twenty-one killed, one hundred and seven-

Nov. 8, 1824. Graduated at the Military School of Carlsruhe; entered the Baden service, but resigned in 1848, when he became a champion of German unity and republicanism. The Revolutionary government appointed him Secretary of War. At the head of a beaten and dispirited force, after a defeat by the Prince of Prussia, he made a skilful retreat within the walls of the fortress of Rastadt. Upon the flight of the provisional government, in July, Sigel withdrew to

FRANZ SIGEL.

Switzerland, and, being expelled by the Swiss government, he came to New York in 1850; taught mathematics, interested himself in the state militia, became major of a regiment, and

in September, 1868, he removed to St. Louis, and became teacher in a college there. When the Civil War broke out he became colonel of a regiment of Missouri volunteers, assisted Lyon in the capture of Camp Jackson (which see), and afterwards did signal service in southwestern Missouri, at Carthage (which see), Wilson's Creek, and Springfield (which see). Made a brigadier-general, he commanded a division in Frémont's army. In command of a division, early in 1862, he bore a conspicuous part in the battle of Pea Ridge (which see). Made a major-general, he was placed in command at Harper's Ferry in June, 1862, and late in that month he succeeded to the command of Frémont's army corps, and served through the campaign in Virginia under Pope. In September he was placed at the head of the Eleventh Army Corps. Early in 1864 he was put in command of the Department of West Virginia. Defeated by Breckinridge at New Market (which see), he was relieved of command by General Hunter. He performed some other military service on the Upper Potomac. In 1871 he was elected Register of the City and County of New York.

Signals were used in the navies of Greece and Carthage, and were not unlike those used in our present military and naval service. A regular code of day and night signals was arranged by Admirals Howe and Kempenfelt about 1790, and

SIGNAL-BOOK.

in 1812 Captain Rodgers, of the United States Navy, arranged an admirable signal system for its use. This consisted of flags of various forms and colors, to be displayed in different positions, so as to indicate words or sentences to be transmitted long distances. The signal-officers at each terminus have a key which interprets the message. That key is a "signal-book," which, when in actual service, is covered with canvas, in which is a plate of lead on each side, of sufficient weight to sink the book in case a vessel is about to strike her colors. As each nation has its peculiar "signal-books," this precaution is necessary, so as not to have the secret of one revealed to the other. Certain flags indicate certain numbers, from 1 to 9; and these numerals, by combination, indicate sentences which are given in the key by corresponding numbers. The pennants represent *duplicate*. In the engraving here given (No. 1) are nine different flags, with their numbers, and four pennants. With these

flags and pennants about 100,000 different signals may be given. A frequent change in the arrangement of signal-flags is necessary for obvious reasons. The code of signals used in the United States Navy just previous to the late Civil War was proposed by a board of naval officers, and adopted by the Navy

SIGNALS.—No. 1.

Department in 1857. Another board, in 1859 tested and approved a system of night-signals invented by B. F. Coston, of the United States Navy; and in October, 1861, these signals were adopted in the United States Army. A new system of signals, for both the army and navy, was invented by Major (afterwards General) Albert J. Myer, which was in use in both branches of the service, night and day, on land and on water, during the Civil War. It is so simple and flexible that it may be used through the medium of sounds, forms, colors, and motions, all of which are regulated and understood by a code. The engraving below (No. 2) shows the method of signalling with flags by day, and with torches by night, by motions, each motion indicating words or sentences. The arrows show the direction of the motion. The position of figure 1 (flag-signals) indicates "make ready;" figure 4, the numeral "3;" figure 3, the numeral "2;" and figure 2, the numeral "1." These, combined, make the number 321. Its corresponding number in the key gives a sentence—for example, "The brigade has moved;" or, "Two steamers

DAY SIGNALS BY FLAGS.—No. 2.

are in sight." During the Civil War signal-towers were erected for temporary use. The one delineated on the next page was at Point of Rocks, on the Appomattox, and was one hundred and twenty-five feet in height. From its top the writer (in 1864) saw the spires of

Richmond, nearly twenty miles distant. It was built of pine timber.

SIGNAL-TOWER.

Signers of the Declaration of Independence. New Hampshire—Josiah Bartlett, William Whipple, Matthew Thornton; Massachusetts—John Hancock, John Adams, Samuel Adams, Robert Treat Paine, Elbridge Gerry; Rhode Island—Stephen Hopkins, William Ellery; Connecticut—Roger Sherman, Samuel Huntington, William Williams, Oliver Wolcott; New York—William Floyd, Philip Livingston, Francis Lewis, Lewis Morris; New Jersey—Richard Stockton, John Witherspoon, Francis Hopkinson, John Hart, Abraham Clark; Pennsylvania—Robert Morris, Benjamin Rush, Benjamin Franklin, John Morton, George Clymer, James Smith, George Taylor, James Wilson, George Ross; Delaware—Caesar Rodney, George Read, Thomas McKean; Maryland—Samuel Chase, Thomas Stone, William Paca, Charles Carroll of Carrollton; Virginia—George Wythe, Richard Henry Lee, Thomas Jefferson, Benjamin Harrison, Thomas Nelson, Jr., Francis Lightfoot Lee, Carter Braxton; North Carolina—William Hooper, Joseph Hewes, John Penn; South Carolina—Edward Rutledge, Thomas Heyward, Jr., Thomas Lynch, Jr., Arthur Middleton; Georgia—Button Gwinnett, Lyman Hall, George Walton. In the group of portraits on page 1292 are included all of whom any portrait has been obtainable. The name of each will be found attached, excepting those included in the wreath, in the centre. They are the members of the committee appointed to draft the Declaration. On the right hand is Franklin; next to him is Jefferson; then Sherman, then Adams, and behind is seen Robert R. Livingston. These are from Trumbull's pictures, and show them all as younger men than they are usually represented

in portraits. The fac-similes of the signatures given on pages 1293 and 1294 were carefully copied from the original document.

Signers of the National Constitution. George Washington (President), of Virginia; John Langdon and Nicholas Gilman, of New Hampshire; Nathaniel Gorham and Rufus King, of Massachusetts; William Samuel Johnson and Roger Sherman, of Connecticut; Alexander Hamilton, of New York; William Livingston, David Brearley, William Paterson, and Jonathan Dayton, of New Jersey; Benjamin Franklin, Thomas Mifflin, Robert Morris, George Clymer, Thomas Fitzsimons, Jared Ingersoll, James Wilson, and Gouverneur Morris, of Pennsylvania; George Read, Gunning Bedford, Jr., John Dickinson, Richard Bassett, and Jacob Broom, of Delaware; James McHenry, Daniel of St. Thomas Jenifer, and Daniel Carroll, of Maryland; John Blair and James Madison, of Virginia; William Blount, Richard Dobbs Spaight, and Hugh Williamson, of North Carolina; John Rutledge, Charles Cotesworth Pinckney, Charles Pinckney, and Pierce Butler, of South Carolina; William Few and Abraham Baldwin, of Georgia. Only Edmund Randolph and George Mason, of Virginia, and Elbridge Gerry, of Massachusetts, refused to sign. (See *Federal Convention*, and page 472 for fac-similes of their signatures.)

Silk-culture and Manufactures. James I. tried to establish the silk-culture in the American colonies, but failed. He sent silk-worms to Virginia and offered a bounty for silk cloth manufactured there; but the planters found the cultivation of tobacco more profitable. Some silk fabric was sent to Charles II. in 1668. Early in the last century it was introduced into Louisiana, and the industry was also undertaken in Georgia. In 1734 Oglethorpe took eight pounds of cocoons with him to England. Sir Thomas Lombe manufactured it into organzine, of which Queen Caroline had a gown made in which she appeared at a court levee on her husband's birthday. The business became considerable, but finally declined, and the last lot of Georgia silk offered for sale was in 1790. Before the Revolution, silk was grown and manufactured in New England. Governor Law, of Connecticut, wore a silk coat and stockings of New England production in 1747, and three years afterwards his daughter wore the first silk dress of New England manufacture. A silk-manufacture was established at Mansfield, Conn., in 1776, where the manufacture is yet carried on. The Legislature incorporated a silk-manufacturing company in 1788, and the same year President Stiles, of Yale College, appeared at "commencement" in a gown woven from Connecticut silk. After that the silk-culture and silk-manufacture were carried on in different parts of the Northern and Eastern States, and were fostered by legislative action. About 1836 to 1839 there was a mania for the cultivation of silk and of the *Morus multicaulis*, or mulberry-tree, on which the caterpillar feeds. As high as \$100 were paid for a single plant. The bubble soon burst, but the silk

culture and manufacture have gone on moderately ever since. There were in 1876 in the United States 147 silk-manufacturing establishments, and the value of the annual product was over \$25,000,000.

Sillery, BATTLE NEAR. After the fall of Quebec (September, 1759) the French army repaired to Montreal. M. de Levi, who succeeded Montcalm, resolved to attempt the recovery of Quebec in the spring of 1760. He went down the St. Lawrence in April with a large force marching by land, and artillery, military stores, and baggage in boats, under convoy of six frigates, and rested at Pointe au Trembles, a few miles above Quebec. At the latter place General Murray had been left with 5000 troops to maintain the conquest of Canada, but sickness and priva-

tion had reduced the effective force of the garrison to about 3000. With this force he went out (April 28, 1760) to meet the approaching foe. Near Sillery, about three miles above Quebec, he attacked the French with great impetuosity. After a severe struggle, finding himself outflanked and in danger of being surrounded by superior numbers, he retreated to the city. In that encounter the English lost 1000 men, the French still more. Then the English were besieged by the French. At about the middle of May a British fleet arrived at Quebec, and M. de Levi was compelled to abandon the siege and fly in haste back to Montreal.

Silliman, BENJAMIN, LL.D., was born at North Stratford, Conn., Aug. 8, 1779; died in New Haven, Nov. 24, 1864. He graduated at Yale Col-

lege in 1796, and was a tutor there from 1799 to 1804. He studied law and was admitted to practice in 1802, but in that year he was appointed professor of chemistry in Yale, then a science in its infancy, comparatively, in the United States. After studying the science with Dr. Woodhouse for the next two years, he gave, in the winter of 1804-5, his first full course of lectures, and soon afterwards went to England, visiting the mining districts there and attending lectures in London and Edinburgh. He also visited Holland, and published an account of his European experiences. He made a partial geological survey of Connecticut after his return, which is believed to be the first of such explorations made in the United States. In 1813 he published an account of his experiments with the oxyhydrogen blow-pipe of Dr. Hare, by which he (Silliman) had greatly extended the list of bodies known to be fusible. He founded the *American Journal of Science and Art* in 1810, of which for twenty-eight years he was an editor, and twenty years of that time sole editor. His son, Benjamin Silliman, Jr., became associate editor in 1838, and in 1846 the editorship was transferred to Professors J. D. Dana and Benjamin Silliman, Jr. Besides giving lectures on chemistry and geology in most of the large cities of the Union, Professor Silliman published scientific essays, a text-book on chemistry, and books of travel. In 1820 his *Account of a Journey between Hartford and Quebec* attracted much attention. In 1853 he resigned his professorship in Yale and was made Professor Emeritus.

Silliman, BENJAMIN, JR., M.D., son of the preceding, was born in New Haven, Conn., Dec. 4, 1816, and graduated at Yale College in 1837. From 1838 to 1847 he was instructor in that institution in chemistry, mineralogy, and geology. In 1846 he was appointed professor of chemistry applied to the arts, in the scientific school of the college. For about five years (1849-54) he was professor of medical chemistry and toxicology in the University of Louisville, Ky. In 1854 he succeeded his father in the chair of chemistry at Yale, and still (1880) holds it. The younger Silliman bears well the mantle of his father in all departments of learning.

Silver Dollar, THE. Among the coins to be struck at the United States Mint (which see) under the provisions of the act approved April 2, 1792, was a silver dollar of the weight of 416 grains. It was enacted that all silver coins of the United States should be 1485 parts fine to 179 parts alloy; the former to be of pure silver and the latter of pure copper. The silver dollar was not coined until 1794. It was adorned with a beautiful head of Liberty, which, in its execution, has never been surpassed. These dollars continued to be coined at the Mint until the close of the year 1803, when their coinage was stopped, it is said, by President Jefferson, because it stimulated the exportation of silver from the country. Yet during the years 1804-5 there were issued from the Mint silver dollars of the coinage of former years to the amount of \$19,891. The dies had been prepared for issuing

the dollar of 1804, but not more than twenty pieces were struck. These are held in the most sacred reverence by the few fortunate collectors of coins who possess them. Because of the cessation in the coinage of the silver dollar, there was a steady increase in the coinage of the half-dollar and other fractions of the dollar until 1834, when \$3,260,000 in halves were coined and issued. And yet the public demand for a metallic currency so continually increased that Congress passed an act (Jan. 25, 1834) making the dollars of Mexico, Peru, Chili, and Central America, of a given weight and certain fineness, a legal tender in payment of debts. The object was, as we were not then silver-producers, to economize the importation and use of the silver of other countries. The act approved June 28, 1834, left the silver dollar at its original weight and fineness; but in 1837 there was a radical change made by act approved Jan. 18, 1837. The change was in the fineness of both the gold and the silver coins. By increasing the fineness, a corresponding decrease in the weight of each piece was effected. The standard thus established in both the gold and the silver coins was to make each to consist of 1000 parts, of which 900 parts were to be pure gold or silver and 100 parts pure copper alloy. Under this act the silver dollar was reduced from 416 grains to 412½ grains. The decreased weight in the dollar of 1837 was caused by decreasing the weight of the copper alloy. For more than a year the authorities of the Mint were preparing dies for the new dollar, and a few pattern-dollars were struck. Several devices were abandoned, and a sitting figure of Liberty was adopted, the same as we have now. In 1840 the Mint coined 61,000 of the new design of the silver dollar. There was no popular demand for this coin; but the dollar was issued from the Mint from time to time until April 1, 1873, when the dollar of 1792 and 1837 ceased to have a place in our national coinage, the issue having been discontinued by act of Congress passed Feb. 12, 1873; the trade-dollar, weighing 420 grains, and 900 fine, being issued in its place, containing 7½ grains more than the dollar of 1837. By the coinage act of 1873 a radical change was made. The trade-dollar took the place of the old dollar, and increased the weight of the subsidiary silver coins one half per cent. It was the intention of the framers to omit the silver dollar, half-dime, and three-cent silver piece altogether from our coinage. So little was the silver dollar used by the people that no one objected to the omission of that coin from our Mint issues, because it demonetized the piece. The object of issuing the trade-dollar of 420 grains was to compete, if possible, in China and Japan with the dollars of Mexico and Old Spain, and to encourage the shipment of our silver to the East Indies, for we had suddenly become a silver-producing people. The unpopularity of the silver dollar is made manifest by the fact that of the total silver coinage of \$145,141,884 issued between 1794 and 1873, only \$8,045,838 were in dollar pieces. A large portion of these were issued for manufacturers.

Simcoe, JOHN GRAVES, was born near Exeter, England, Feb. 25, 1752; died at Torbay, Oct. 26, 1806. He entered the army in 1770; came to America with a company of foot, with which he fought in the battles of Brandywine and Monmouth (which see). He raised a battalion which he called "The Queen's Rangers," disciplined them for light and active service, and with them performed important services, especially in the South. In June, 1779, Clinton gave him the local rank of lieutenant-colonel. His light corps was always in advance of the army and engaged in gallant exploits. His corps was disbanded after the war, and its officers were placed on half-pay. Simcoe was governor of Canada (1791-94). He was made major-general in 1794, and lieutenant-general in 1798. He was governor and commander-in-chief of Santo Domingo in 1796-97.

Simmons, FRANKLIN, American sculptor, was born in the State of Maine in 1841, and passed his boyhood on the banks of the Kennebec. Early in life he showed a passionate love for art, and during his college career spent much time in drawing and modelling. It was not until he had made his first visit to Boston that he saw a statue or had any idea of the art of sculpture, there being, at that time, few examples in New England. On leaving college, having made some portrait-busts with success, he decided to devote himself to sculpture. The Civil War now burst upon the country, and Mr. Simmons sought the field of operations, not as a soldier, but as a commemorator of the leading soldiers and statesmen of the day. During several years spent in Philadelphia and Washington, some thirty generals and statesmen sat to him for their busts, among them Lincoln, Grant, Sheridan, Meade, Seward, and Chase, which gave great satisfaction. Having received a commission from the State of Rhode Island to make a statue of Roger Williams for the Capitol at Washington, he went to Rome, where he has since resided. He has also made for the national Capitol a statue of William King, of Maine; a second statue of Williams for a monument in the city of Providence, R. I.; an ideal statue of the Mother of Moses; Abdiel, the Israelite Woman; Viewing the Promised Land; the Hymn of Praise, and others.

Simpson, JAMES H., was born in New Jersey, about 1812, and graduated at West Point in 1832, entering the artillery corps. He was aid to General Eustis in the Seminole War, and in 1838 became a lieutenant in the corps of topographical engineers. He was colonel of a New Jersey volunteer regiment in the Pensacola campaign, and was afterwards chief engineer of the Department of the Ohio. In March, 1865, he was breveted brigadier-general in the United States Army. Having been on surveying expeditions in the West, he published a *Journal of a Military Reconnaissance from Santa Fé to the Navajo Country*, and a *Report on the Union Pacific Railroad and its Branches*.

Sinking-fund, THE FIRST NATIONAL. Everything was done by the first Congress that could be to raise and sustain the public credit. For

this purpose a sinking-fund for the reduction of the public debt was provided for. The Funding Act (see *Hamilton's Report on the Finances*) required the interest on the public debt to be converted into capital. This left a considerable unappropriated sum to accumulate in the national Treasury. Congress provided that all the surplus in the Treasury on the last day of December (1790), after payment of the appropriations of the current session, should be applied to the reduction of the public debt. This sum, with \$2,000,000 more which the President was authorized to borrow, was made to constitute a fund to be employed under the management of a board composed of the Chief-justice, the President of the Senate, the Secretary of the Treasury, and the Attorney-general, in the purchase of the securities of the United States at their market value, if not above par. The securities so purchased were to be vested in the board, and the interest thereon, by the provisions of a subsequent act, was to be applied to the purchase of further securities, with a reserve, however, towards the discharge of the borrowed \$2,000,000, principal and interest. This measure was intended to raise the stock market so as to prevent the transfer of securities to Europe at depreciated rates.

Sioux. (See *Dakotas, or Sioux*.)

Sitting Bull, WAR WITH THE SIOUX UNDER.

A region known as the "Black Hills," in portions of Dakota and Wyoming territories, had been set apart by the government as a reservation for the use of the powerful and warlike Sioux Indians, who could muster ten thousand warriors if their entire strength should be put forth. The region had been reported as one of great attraction in floral beauty and wealth in the precious metals. The cupidity of the white people was excited, and very soon prospecting miners appeared in that domain. Taught by experience, the Indians beheld these intruders as harbingers of dispossession, and the jealousy of the barbarians was aroused. Their suspicions were well founded, for at the close of 1874 a bill was introduced into Congress which provided for the extinguishment of the Indian title to so much of the Black Hills reservation as lay within the Territory of Dakota. Six companies of cavalry and two of infantry escorted a surveying-party to that region. The Indians prepared for war to defend their rightful domain. So threatening was the aspect of affairs there that at the beginning of 1876 a strong military force was sent into the region of the Yellowstone, in Montana Territory and the adjoining regions, to watch the movements of the armed barbarians. A campaign was organized against them a little later, under the command of General Alfred H. Terry. It moved in three columns, under the immediate command of Generals Terry, Crook, and Gibbon. General George A. Custer was sent across the country from the Missouri to the Yellowstone to drive the Indians towards Gibbon's column, while Crook was to scout the Black Hills and drive out any hostile Sioux that might be found there. After some skir-

ishing at different points, Custer discovered an immense Indian camp on a plain. In his eagerness he attacked them without waiting for other forces to come up, according to positive orders. A terrible struggle ensued (June 25, 1876) between Custer's three hundred men (the rest of his command was at another point) and five times as many Indians commanded by Sitting Bull, an educated, bold, and skilful chief. Custer and almost his entire command were slain. Of the three hundred white troops, two hundred and sixty-one were killed. Custer's body was recovered, taken to West-Point-on-the-Hudson, and there buried with military honors. With Custer perished two of his brothers, a brother-in-law, and other gallant officers. Sitting Bull and his followers withdrew to the British Possessions.

Six Nations. The Five Nations—Mohawks, Oneidas, Onondagas, Cayugas, and Senecas—were joined by their Southern brethren, the Tuscaroras, after the latter were signally defeated by the Carolinians in 1712. They came North in 1714, and after that the confederacy was known as the Six Nations. (See *Iroquois Confederacy*.)

Six Nations, DEPREDATIONS OF THE. The Senecas and the Tories among them, who had taken refuge at Fort Niagara, continued depredations on the frontiers of civilized New York and Pennsylvania. The Onondagas professed neutrality, but it was believed they shared in the hostilities of the Senecas. To chastise them for their suspected perfidy, a detachment was sent out from Fort Stanwix (which see), which smote them suddenly and destroyed their villages. The Indians retaliated by devastating the settlements in Schoharie County and the western border of Ulster County, N. Y. The Pennsylvania frontier, particularly in the vicinity of Pittsburgh, was exposed to similar assaults from the barbarians of western New York. A grand campaign against the hostile Six Nations was now planned, and the expedition was led by General Sullivan. (See *Sullivan's Campaign*.)

Six Nations, TREATIES WITH THE. This confederacy had always claimed and enjoyed the right of free passage through the great valley west of the Blue Ridge. Some backwoodsmen of Virginia had penetrated that valley, and, in 1743, came into collision with the Iroquois. War with the French was then threatened, and hostilities between any of the colonists and the Six Nations, at that juncture, might be perilous. Governor Clinton, of New York, hastened to secure the firm friendship of the confederacy by liberal presents, for which purpose, in conjunction with commissioners from New England, he held a meeting at Albany in June. The commissioners proposed an association of the five Northern colonies for mutual defence; but the Assembly of New York, hoping to secure the same neutrality enjoyed during the previous war, declined the proposition. The next year the difficulties between the Six Nations and the Virginians were settled by a treaty concluded at

Lancaster (July 2, 1744), to which Pennsylvania and Maryland were parties. By the terms of this treaty, in consideration of \$2000, the Iroquois relinquished all title to the valley between the Blue Ridge and the central chain of the Alleghany Mountains. The lands in Maryland were, in like manner, transferred to Lord Baltimore, but with definite limits. By the deed to Virginia, the claim of that colony was extended indefinitely in the West and Northwest.

Sixteenth Amendment Proposed. In his annual message, in December, 1875, President Grant recommended an amendment of the Constitution to secure the public schools from sectarian influence. Mr. Blaine offered a joint resolution to that effect in the House of Representatives. It was passed by the House by an almost unanimous vote. Carried to the Senate, it lay undisturbed several months, when Senator Frelinghuysen moved (Aug. 7, 1876) that it be referred to the Judiciary Committee. A substitute was submitted by that committee, embodying the substance of Mr. Blaine's proposition. Meanwhile, certain religionists had raised a clamor against it outside of Congress that had an effect on one of the political parties; and this amendment to more effectually separate the Church and State was defeated in the Senate by a strict party vote—twenty-eight Republicans to sixteen Democrats—the votes of two thirds being necessary to carry the measure.

Skene, PHILIP, entered the British army in 1739, and served against Porto Bello and Carthagená; also in Great Britain in the Rebellion of 1745. He came to America in 1756, and was wounded in the attack on Ticonderoga. He was afterwards placed in command at Crown Point, and projected a settlement at the head of Lake Champlain, on the site of Whitehall. In the storming of Morro Castle (1762) he was one of the first to enter the breach. His settlement at the head of Lake Champlain was called Skenesborough, and in 1770 he made his residence there. Adhering to the crown, he was arrested in Philadelphia, but was exchanged in 1776. He accompanied Burgoyne's expedition, and was with the British force defeated at Bennington. He was taken prisoner at Saratoga. The Legislature confiscated his property in 1779. He died in Bucks, Eng., Oct. 9, 1810.

Skenesborough and St. John, CAPTURE OF (1775). After the capture of Ticonderoga and Crown Point, Arnold was joined by about fifty recruits, who had seized a schooner and some cannons, with several prisoners, at Skenesborough (now Whitehall), at the head of Lake Champlain. [This place was founded by Colonel Philip Skene, a British officer, who was then in England soliciting the command of Ticonderoga.] In the captured schooner Arnold went down the lake, entered the Sorel River (its outlet), and, capturing an armed vessel and some valuable stores there, returned with them to Crown Point. A superior force at Montreal compelled Arnold to abandon St. John.

Skinner, CORTLANDT, loyalist, was grandson of Stephen Van Cortlandt, of Van Cortlandt's

Manor, N. Y. In 1775 he was attorney-general of New Jersey. He organized three battalions of loyalists, called "New Jersey Volunteers." He went to England after the war, where he received compensation for losses as a loyalist. He died at Bristol, Eng., in 1799, aged 71 years.

Skinnera. A predatory band in the old war for independence who professed to be Whigs, who plundered the Tory families living on the Neutral Ground, in Westchester County, N. Y., between the British and American lines. They were not very scrupulous in their choice of victims, plunder being their chief aim. (See *Cowboys*.)

Skrælings. The name given by the Northmen (which see) to the Esquimaux, in contempt, as it implies chips or dwarfs. Thorwald, a successor of Lief, in a voyage to America, spoke of finding Skrælings, who, because of a grave offence committed by the Northmen, attacked that navigator and his followers and compelled them to leave the beautiful country where they intended to settle. Thorwald was mortally wounded during the fray and was buried on the shore. Did the Esquimaux occupy the shores of Massachusetts before the Indians found by post-Columbus Europeans occupied that land? The boats engaged in the attack on the Northmen were made of skius, like those used by the Esquimaux now.

Slater, SAMUEL, cotton manufacturer, was born at Belper, Derbyshire, Eng., June 9, 1768; died at Webster, Mass., April 20, 1835. He was apprenticed to cotton-spinning under Strutt, partner of Arkwright, the great inventor of spinning machinery. One of the first acts of the national Congress in 1789 was for the encouragement of American manufactures, and the Legislature of Pennsylvania offered a bounty for the introduction of the Arkwright patents. Young Slater was a favorite of his master, aiding him, with his inventive genius, in making improvements in his mills. He heard of the action of the Pennsylvanians, and believed that his thorough mastery of Arkwright's machinery would enable him to build a machine without models or drawings. When his apprenticeship had ended he hastened to America with the treasures of his brain. He landed in New York in November, 1789. Heavy penalties deterred any one from making a model, or drawing, and sending it out of the country. Slater accidentally learned that Moses Brown, of Rhode Island, had made some attempts at cotton-spinning by machinery there. He wrote to Mr. Brown, informing him of what he could do. "If thou canst do this thing," wrote the earnest manufacturer, "I invite thee to come to Rhode Island and have the credit and the profit of introducing cotton-manufacture into America." Slater went, and, with the aid of the Brown family, succeeded in producing machinery, by the close of 1790, that made cotton-yarn equal in quality to the best then made in England.

Slater secured both the "credit and the profit" of introducing cotton-manufacture into the United States. And this enterprising man, within six years, had many persons at work for him, and established a Sabbath-school for

SAMUEL SLATER.

the benefit of these and their children. His first mill was set up at Pawtucket. In 1812 he began the building of mills at Oxford (now Webster), and there grew up a large establishment.

Slave-chain in Maryland, THE LAST. Slavery was abolished in Maryland Oct. 13, 1864, when the people of that state ratified a new state constitution that guaranteed freedom for all persons. Evil-disposed slaveholders tried to evade the law. A Freedmen's Bureau was established in Maryland in November, and all persons within the limits of the Middle Department who had been slaves but made free were placed under special military protection. General Lew. Wallace, in command of the Department, liter-

LAST SLAVE-CHAIN IN MARYLAND.

ally removed the last slave-chain in the state. That slave was a young girl, nineteen years of age, named Margaret Toogood. She had left her former master on gaining her freedom and gone to Baltimore. That master procured her arrest on a charge of theft. She was taken back, when he withdrew the charge, his object being accomplished in getting her into his possession. To prevent her going away again he put an iron chain about her neck and fastened it with a rude clasp, which a blacksmith had prepared. Hearing of this, Wallace ordered the girl to be brought to Baltimore, where, in the office of the provost-marshal, the

chain was removed. It was made of rough iron, its links being two inches in length, and its entire weight, with the clasp, was nearly four pounds. The girl had worn this horrible neck-lace seven weeks.

Slave-Laws, FIRST, IN MARYLAND. In 1663 the Maryland Legislature enacted a law that "all negroes and other slaves within the province, and all negroes and other slaves to be thereafter imported into the province, should serve during life; and all children born of any negro should be slaves, as their fathers were, for the term of their lives." The same law recited that "divers free-born Englishwomen, forgetful of their free condition, and to the disgrace of the nation, did intermarry with negro slaves," and it was enacted for deterring from such "shameful matches" that, during their husbands' lives, white women so intermarrying should be servants to the masters of their husbands, and that the issue of such marriages should be slaves for life.

Slave-Laws, FIRST, IN VIRGINIA. In 1662 the Virginia Assembly passed a law that children should be held, bond or free, "according to the condition of the mother." This was to meet the case of mulatto children, born of black mothers, in the colony. It was thought right to hold heathen Africans in slavery; but, as mulattoes must be part Christians, a knotty question came up, for the English law in relation to serfdom declared the condition of the child must be determined by that of the father. The Virginia law opposed this doctrine in favor of the slaveholders. Some of the negroes brought into Virginia were converted to Christianity and baptized. The question was raised, Is it lawful to hold Christians as slaves? The General Assembly came to the relief of the slaveholders by enacting a law that slaves, though converted and baptized, should not therefore become free. It was also enacted that killing a slave by his master by "extreme correction" should not be esteemed a felony, since it might not be presumed that "malice prepense" would "induce any man to destroy his own estate." It was also enacted, as an evasion of the statute prohibiting the holding of Indians as slaves, "that all servants, not being Christians, imported by shipping, shall be slaves for life." Indian slaves, under this law, were imported from New England and the West Indies. Freed slaves were now subjected to civil disabilities.

Slave-Laws in Maryland. In 1681 the Legislature of Maryland passed a new act to remedy the evils of intermarrying of whites and blacks. The preamble recited that such matches were often brought about by the instigation or connivance of the master or mistress, who took advantage of the former law to prolong the servitude of their white feminine servants, and at the same time to raise up a brood of mulatto slaves. The new law enacted that all white feminine servants intermarrying with negro slaves were free, at once, after the nuptials, and their children also; and that the minister celebrating and the master or mistress promot-

ing or conniving at such marriages, were subject to a fine of ten thousand pounds of tobacco.

Slave-Laws in Virginia. In 1682 the slave code received additions. It was enacted that runaways who refused to be arrested might be lawfully killed. Slaves were forbidden to carry arms, offensive or defensive, or to go off the plantations of their masters without a written pass, or to lift a hand against a Christian, even in self-defence. The condition of slavery was imposed upon all servants, whether "negroes, Moors, mulattoes, or Indians, brought into the colony by sea or land, whether converted to Christianity or not, provided they were not of Christian parentage or country, or, if Turks or Moors, in amity with his majesty."

Slavery, ABOLITION OF, IN NEW JERSEY. On Feb. 15, 1804, the Legislature of New Jersey, by an almost unanimous vote, passed an act to abolish slavery in that state by securing freedom to all persons born there after the 4th of July next ensuing, the children of slave parents to become free, masculine at twenty-five years of age, feminine at twenty-one.

Slavery, ABOLITION OF, IN NEW YORK. The Legislature of the State of New York, sitting at Albany, enacted a law in April, 1799, for the gradual abolition of slavery within its domains. Those who were slaves at the passage of the act were to continue so for life. All their children born after the 4th of July then following were to be free, but were to remain with the owner, the masculine until they were twenty-eight years of age and the feminine until they were twenty-five. The exportation of slaves was forbidden, under a pecuniary punishment, the slave upon whom the attempt should be made to become free at once. Persons settling in the state might bring slaves with them whom they had owned for a year previously, but slaves so brought in could not be sold.

Slavery Forced upon Virginia. The statesmen and leading inhabitants of Virginia had long sought a way to rid the colony of the curse of negro slavery by passing laws restraining the importation of negroes from Africa; but these laws were disallowed by the crown, for the traffic was profitable to England. The king in council, on Dec. 10, 1770, issued an instruction, under his own hand, commanding the Governor of Virginia, "upon pain of the highest displeasure, to assent to no law by which the importation of slaves should be in any respect prohibited or obstructed." In 1772 the Virginia Assembly earnestly discussed the question, "How shall we get rid of the great evil?" Jefferson, Henry, Lee, and other leading men anxiously desired to rid the colony of the evil. "The interest of the country," it was said, "manifestly requires the total expulsion of them." The Assembly finally resolved to address the king himself on the subject, who, in council, had cruelly compelled the toleration of the traffic. They pleaded with him to remove all restraints upon their efforts to stop the importation of slaves, which they called "a very pernicious commerce." In this matter Virginia represented

the sentiments of all the colonies, and the king knew it; but the monarch "stood in the path of humanity and made himself the pillar of the colonial slave-trade." Ashamed to reject the earnest and solemn appeal of the Virginians, he evaded a reply. The conduct of the king caused Jefferson to write as follows in his first draft of the Declaration of Independence: "He has waged cruel war against human nature itself, violating its most sacred rights of life and liberty in the persons of a distant people who never offended him, capturing and carrying them into slavery in another hemisphere, or to incur a miserable death in their transportation thither. This piratical warfare, the opprobrium of infidel powers, is the warfare of the *Christian* King of Great Britain. Determined to keep open a market where MEN should be bought and sold, he has prostituted his negative for suppressing every legislative attempt to prohibit or to restrain this execrable commerce." This paragraph was stricken out of the Declaration of Independence before the committee submitted it to a vote of the Congress.

Slavery (African) in America. Slavery was first introduced into the Spanish colonies in the West Indies, and was begun within the domain of the United States in 1619, when a Dutch trader sold twenty negroes to the Virginia settlers. It was not only sanctioned, but promoted, by the English government, as it had been by the Spanish and Portuguese governments for a hundred years before. Ferdinand of Spain, in 1513, issued a decree, contrary to the known feelings of his dead queen, Isabella, "that the servitude of the Indians in America is warranted by the laws of God and man." And two hundred years afterwards a British queen and Spanish monarch were equal partners in a company in carrying on the slave traffic. (See *Slave-trade in America*.) An English attorney-general had given an official opinion fifty years before, that negroes, being *pagans*, might justly be held in slavery, even in England; and this opinion was sustained by British courts until 1772, when Chief-justice Mansfield decided, in the famous *Somerset* case, that, by the law of England, no man could be held in slavery there. That judgment has never since been disturbed. The Trustees of the colony of Georgia at first prohibited slavery there, but finally permitted it; and when the war for independence broke out in 1775 all the colonies had slavery within their borders. At that time there were about seven hundred thousand slaves in the thirteen English-American colonies. A Georgia convention protested against the system in 1775; and in 1776 Jefferson, in the Declaration of Independence (drawn by him), pronounced against it, but the clause was stricken out. Many of his contemporary patriots were opposed to it, and desired to have the slave-trade forbidden by the national Constitution framed in 1787. The cotton-culture was made so profitable by Whitney's cotton-gin that slavery became a cherished institution in the cotton-growing states. It became overshadowing in our national politics. Anti-slavery societies were formed in the free-labor states

(see *Abolition Convention*), and violent sectional strife was aroused by the discussion of slavery from time to time, and legislation growing out of it. (See *Missouri Compromise* and *Fugitive Slave Law*.) It was the principal cause of the Civil War, during which—on Jan. 1, 1863—slavery was abolished in every state and territory of the Republic by a proclamation issued by President Lincoln. About four million slaves were liberated by that proclamation.

Slavery in Connecticut. The Legislature of Connecticut, early in 1784, passed an act that no negro or mulatto child born within that state after the 1st day of March that year should be held in servitude longer than until the age of twenty-five years.

Slavery Introduced into Georgia. The unwise regulations of the Trustees of Georgia which crushed incentives to industry and thrift (see *Georgia, Colony of*), and other causes which exist in all new settlements, made that colony languish. The settlers saw the prosperity of their neighbors in South Carolina, and attributed the difference to the positive prohibition of slavery in Georgia. This became their leading grievance, and even Whitefield advocated the introduction of slavery, under the old (and later) pretence of propagating, in that way, Christianity among the heathen Africans. Habersham, too, advocated the introduction. "Many of the poor slaves in America," he wrote, "have already been made freemen of the heavenly Jerusalem." The Germans were assured by their friends in Germany of its harmlessness. Word came to them in 1749: "If you take slaves in faith and with the intent of conducting them to Christ, the action will not be a sin, but may prove a benediction." So it was that avarice subdued conscience. Already slaves had been introduced into Georgia from South Carolina as hired servants, under indentures for life, or for ninety-nine years; and at Savannah the continual toast was, "The one thing needful," which meant negro slaves. Leading men among the Scotch and Germans who opposed the introduction of slavery were threatened and persecuted. Under great pressure, the Trustees yielded, and slavery was introduced on the condition that all masters should be obliged to compel the negroes to "attend, at some time on the Lord's day, for instruction in the Christian religion." In 1752 the charter was surrendered to the crown, the colony had all the privileges accorded to others, and flourished. Slavery had really existed in Georgia for some time, under the false pretence of hiring slaves during their natural lives, and making them Christians, the planters there hiring negroes from South Carolina masters for the term of ninety-nine years.

Slavery of White People Decried in Massachusetts. Lawrence and Cassandra Southwick were banished from the colony of Massachusetts in 1658, under penalty of death if they should return. Their crime was the embracing of the principles and mode of worship of the Quakers. Their two children remained behind in extreme poverty. They were fined for non-

attendance upon the public worship carried on by their persecutors. The magistrates insisted that the fine must be paid, and passed the following order: "Whereas, Daniel Southwick and Provided Southwick, son and daughter of Lawrence Southwick, absenting themselves from the public ordinances, having been fined by the courts of Salem and Ipswich, pretending they have no estates, and resolving not to work, the Court, upon perusal of a law which was made upon account of debts, in what should be done for the satisfaction of the fines, resolves, That the treasurers of the several counties are and shall be fully empowered to sell said persons to any of the English natives at Virginia or Barbadoes to answer the said fines." Endicott, it is said, urged the execution of the measure with vehemence; but, to the honor of the marine service, not a sea-captain in the port of Boston could be induced to become a slave-dealer to please the General Court. They were spared the usual brutal whipping of contumacious persons as a special mark of humanity.

Slavery Recognized by Law—in Virginia in 1620; in Massachusetts in 1641; in Connecticut and Rhode Island about 1650; in New York in 1656; in Maryland in 1663; in New Jersey in 1665. There were few slaves in Pennsylvania. Some were there so early as 1690, and were chiefly in Philadelphia. At about the same time a few appeared in Delaware, and in the Carolinas at the time of their settlement. By an evasion of law they were introduced into Georgia to some extent soon after its settlement; and in 1652, when it became a royal province, the institution was legalized.

Slaves, DUTY ON, PROPOSED. On May 12, 1789, the Tariff bill having been reported to Congress (see *Revenue System*), and being under discussion on the question of its second reading, Parker, of Virginia, moved to insert a clause imposing a duty of ten dollars on every slave imported. "He was sorry," he said, "the Constitution prevented Congress from prohibiting the importation altogether. It was contrary to revolutionary principles, and ought not to be permitted." A warm debate ensued. It called forth the opposition of South Carolinians and Georgians particularly. Jackson, of Georgia, made a vehement speech in opposition, in the course of which he said he hoped the proposition would be withdrawn, and that if it should be brought forward again it would comprehend "the white slaves as well as the black imported from all the jails of Europe—wretches convicted of the most flagrant crimes, who were brought in and sold without any duty whatever." This was not a fair allusion to the indentured white servants who were sold by the captains of vessels on their arrival here to pay the cost of their passage (see *Redemptioners*), a practice which had been put a stop to by the old war for independence, but partially revived. The motion was finally withdrawn.

Slaves, FIRST COMMERCE IN, IN AMERICA. A Flemish favorite of Charles V. of Spain obtained from that king a patent (1517) for sending four

thousand negroes annually to Santo Domingo, Cuba, Jamaica, and Porto Rico. He sold his patent to some Genoese merchants, who first made the slave-trade between Africa and America a regular commercial transaction.

Slaves in England. James Somerset, a negro slave of James Stewart, had been brought from Virginia to England, where he refused to serve his master any longer. Stewart caused him to be arrested and put on board a vessel to be conveyed to Jamaica. Being brought before Chief-justice Mansfield on a writ of *habeas corpus* (December, 1771), his case was referred to the full court, where it was argued for the slave by the great philanthropist, Granville Sharp. The decision would affect the estimated number of fourteen thousand slaves then with their masters in England, involving a loss to their owners of \$3,500,000. After a careful judicial investigation of the subject in its legal aspects, Chief-justice Mansfield gave the decision of the court that slavery was contrary to the laws of England—that slavery could not exist there. "Whatever inconveniences, therefore, may follow from the decision," he said, "I cannot say this case is allowed or approved by the law of England, and therefore the black must be discharged." How could the colonial assemblies, in the face of this decision, enact laws in favor of slavery, when they were restricted, either by charter or the royal commissions under which they met, to the enactment of laws "not repugnant to those of England?"

Slaves in New Netherland. The West India Company was largely engaged in the slave-trade, and during the administration of Stuyvesant a number of negroes were imported into New Netherland from Africa. Most of them, however, remained the property of the company. The more trusty and industrious, after a certain period of labor, were allowed small farms, paying, in lieu of all services, a stipulated amount of produce. This emancipation did not extend to the children, and so perpetual slavery was introduced. Slavery in New York was always of a mild type—a sort of patriarchal system.

Slaves in the Confederate Army. In his annual message to the Confederate Congress (Nov. 7, 1864), President Davis drew a gloomy picture of the condition of the Confederate finances and the military strength. He showed that the Confederate debt was \$1,200,000,000, without a real basis of credit, and a paper currency depreciated several hundred per cent. It had been recommended, as the enlistments and conscriptions of the white people failed to make up losses in the Confederate army, to arm the slaves; but this was considered too dangerous, for they would be more likely to fight for the Nationals than for the Confederates. Davis was averse to a general arming of the negroes, but he recommended the employment of forty thousand of them as pioneer and engineer laborers in the army, and not as soldiers, excepting in the last extremity. "Should the alternative ever be presented," he said, "of a subjugation, or the employment of the slave as a soldier,

there seems to be no reason to doubt what should then be the decision;" and he suggested the propriety of holding out to the negro, as an inducement for him to give faithful service, even as a laborer in the army, a promise of his emancipation at the end of the war. These propositions and suggestions disturbed the slaveholders, for they indicated an acknowledgment on the part of "the government" that the cause was reduced to the alternative of liberating the slaves and relying upon them to secure the independence of the Confederacy, or of absolute subjugation. There was wide-spread discontent; and when news of the re-election of Mr. Lincoln, by an unprecedented majority, reached the people, they lost hope, and yearned for peace rather than for independence.

Slave-trade. The question of prohibiting the African slave-trade by a provision in the national Constitution caused much and warm debate in the convention that framed that instrument. A compromise was agreed to by the insertion of a clause (article I, section 9, clause 1) in the Constitution, as follows: "The migration or importation of such persons as any of the states now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight; but a tax, or duty, may be imposed on such importation, not exceeding ten dollars for each person." The idea of prohibiting the African slave-trade, then warmly advocated, was not new. In 1774 the Continental Congress, while releasing the colonies from other provisions of the American Association (which see), had expressly resolved "that no slave be imported into any of the United States." Delaware, by her constitution, and Virginia and Maryland by special laws, had prohibited the importation of slaves. Similar prohibitions were in force in all the more northern states; but they did not prevent the merchants of those states from carrying on the slave-trade elsewhere, and already some New England ships were engaged in a traffic from the African coast to Georgia and South Carolina. These states were forgetful of or indifferent to the pledges they had made through their delegates in the face of the world by their concurrence in the Declaration of Independence, and seemed fully determined to maintain not only the slave system of labor, but the nefarious slave-trade. North Carolina did not prohibit the traffic, but denounced the further importation of slaves into the state as "highly impolitic," and imposed a heavy duty on future importations.

Slave-trade, ABOLITION OF THE. In 1807 an act was passed for the abolition of the slave-trade on the first of January, 1808, the time fixed by the national Constitution. It imposed a fine of \$20,000 upon all persons concerned in fitting out any vessel for the slave-trade, with the forfeiture of the vessel; likewise a fine of \$5000, with forfeiture, also, of the vessel, for taking on board any negro, mulatto, or person of color in any foreign country, with the purpose of selling such person within the jurisdiction of the

United States as a slave. For actually transporting and selling as a slave any such person within the United States, the penalty was imprisonment for not less than five nor more than ten years, and a fine not to exceed \$10,000 nor less than \$1000. There were minor penalties for minor offences in the matter. Altogether the law was very stringent. The act was violently denounced by John Randolph of Virginia, as laying the axe at the root of all Southern property, and he asked leave to bring in an explanatory bill. "If this proposition shall be rejected," said Randolph, "I doubt if this House will ever again see any Southern delegate on this floor. I for one would say, let us secede at once, and go home." Leave was granted to the fiery Virginian. In its preamble his explanatory bill disavowed any right in Congress to abridge, modify, or affect the right of property in slaves not illegally imported into the United States. This referred to a provision in the act forbidding any vessel, less than forty tons burden, to take any slave on board except for transportation on the inland bays and rivers of the United States. The bill was referred in the usual way, and was not reached at that session. It slept forever, and yet the Union remained undissolved.

Slave-trade (African) in America. In 1562 John Hawkins, an English navigator, seeing the want of slaves in the West Indies, determined to enter upon the piratical traffic. Several London gentlemen contributed funds liberally for the enterprise. Three ships were provided, and with these and one hundred men Hawkins sailed to the coast of Guinea, where, by bribery, deception, treachery, and force, he procured at least three hundred negroes and sold them to the Spaniards in Hispaniola, or Santo Domingo, and returned to England with a rich freight of pearls, sugar, and ginger. The nation was shocked by the barbarous traffic, and the queen (Elizabeth) declared to Hawkins, that, "if any of the Africans were carried away without their own consent, it would be detestable, and call down the vengeance of heaven upon the undertakers." He satisfied the queen and continued the traffic, pretending, as all abettors of slavery have done, that it was for the good of the souls of the Africans, as it introduced them to Christianity and civilization. Already negro slaves had been introduced by the Spaniards into the West Indies. They first enslaved the natives, but these were unequal to the required toil, and they were soon almost extinguished by hard labor and cruelty. Charles V. of Spain granted a license to a Fleming to import four thousand negroes annually into the West Indies. He sold his license to Genoese merchants, who began a regular trade in human beings between Africa and the West Indies. These were found to thrive where the native laborers died. The benevolent Las Casas (see *Las Casas*, Bartolome de) and others favored the system as a means for saving the Indian tribes from destruction; and the trade was going on briskly when the English, under the influence of Hawkins, engaged in it in 1562. Ten years before a few negroes had been sold in England, and it is said that Queen Elizabeth's scruples

ples were so far removed that she shared in the profits of the traffic carried on by Englishmen. The Stuart kings of England chartered companies for the trade; and Charles II. and his brother James were members of one of them. After the revolution of 1688 the trade was thrown open, and in 1713 an English company obtained the privilege of supplying the Spanish colonies in America, South and Central, for thirty years, stipulating to deliver one hundred and forty-four thousand negro slaves within that period. One quarter of the stock of the company was taken by King Philip V. of Spain, and Queen Anné of England reserved for herself the other quarter. So the two monarchs became great slave-dealers. The first slaves were introduced into the English-American colonies by a Dutch trader, who, in 1619, sold twenty of them to the settlers at Jamestown, Va. After that the trade between North America and Africa was carried on quite vigorously; but some of the colonies remonstrated, and in the Continental Congress, and also in the public mind, there was a strong desire evinced to abolish the slave-trade. When the national Constitution was framed, Congress was prohibited from interfering with it under twenty years. Then it was denounced as piracy. The State of Georgia prohibited it in 1798. Feeble attempts were made just before the Civil War in America to reopen the trade. The inter-state slave-trade was carried on vigorously until the breaking-out of the Civil War. When the Confederate government threatened to cut off that trade with any slave-labor state that did not join their Confederacy, a Richmond journal urged Virginia to hasten to be annexed, because its people were receiving from thirteen to twenty million dollars annually from the sale of their slaves to the cotton-planters.

Slave-trade in Massachusetts. In 1788 the captain of a vessel in Boston seized three colored persons, took them to the West Indies, and sold them there for slaves. This event caused the Legislature of Massachusetts to pass a law to prevent the slave-trade in that state, and for granting relief to the families of such persons as may be kidnapped or decoyed from the commonwealth. The law subjected to a heavy penalty any person who should forcibly take or detain any negro for the purpose of transportation as a slave, and the owner of the vessel in which such kidnapped man should be carried away incurred, also, a heavy penalty. The insurance on the vessel was made void; and the relatives of the person kidnapped, if the latter were sold into slavery in a distant country, were allowed to prosecute for the crime.

Slave-trade in the United States Abolished. The national Constitution, Article I., section 9, clause 1, provided for the continuation of the slave-trade, by permission, until the year 1808. This was one of the "compromises of the Constitution"—a provision which, if denied, would have caused the rejection of that instrument by the convention that formed it. In 1807 Congress, by statute, forbade the importation of slaves after the 1st of January, 1808, and that

traffic was subsequently denominated *piracy* by an act of Congress in 1820.

Slave-trade Made Piracy. By an act of Congress passed in 1820, for the suppression of piracy, the name of "piracy" and the punishment of death was extended to the detention or transportation as a slave, in any vessel, of any negro or mulatto "not held to service under the laws of some one of the states."

Slave-trade Reopened. By a provision of the national Constitution the foreign slave-trade in the United States was abolished, and Congress declared it to be "piracy." Encouraged by the practical sympathy of the national government, the friends of the slave-labor system formed plans for its perpetuity, which practically disregarded the plain requirements of the fundamental law. They resolved to reopen the African slave-trade. Africans were kidnapped in their native country, brought across the sea and landed on our shores as in colonial times, and placed in perpetual slavery. In Louisiana, leading citizens engaged in a scheme for legalizing the traffic, under the guise of what they called the "African Labor-supply Association," of which the late J. B. De Bow, editor of *De Bow's Review*, published in New Orleans, was president. His *Review* was the acknowledged organ of the slaveholders, and wielded extensive and powerful influence when the flames of the late Civil War were a-kindling. In Georgia, negroes from Africa were landed and sold, and when a grand jury at Savannah was compelled by law to find several bills against persons engaged in the traffic, or charged with complicity in the slave-trade, they protested against the law they were compelled to support. "We feel humbled," they said, "as men, conscious that we are born freemen but in name, and that we are living, during the existence of such laws, under a tyranny as supreme as that of the despotic governments of the Old World. Heretofore the people of the South, firm in their consciousness of right and strength, have failed to place the stamp of condemnation upon such laws as reflect upon the institution of slavery, but have permitted, unrebuked, the influence of foreign opinion to prevail." The *True Southern*, published in Mississippi, suggested the "propriety of stimulating the zeal of the pulpit by founding a prize for the best sermon on free-trade in negroes." This proposition was approved, and pulpits exhibited zeal in the cause. James H. Thornwell, D.D., President of the Presbyterian Theological Seminary at Columbus, S. C., asserted his conviction that the African slave-trade formed the most worthy of all missionary societies. Southern legislatures and conventions openly discussed the subject of reopening the slave-trade. The "Southern Commercial Convention," held at Vicksburg, Miss., May 11, 1859, resolved, by a vote of forty-seven to sixteen, that "all laws, State or Federal, prohibiting the African slave-trade ought to be abolished." It was warmly advocated by several men who became Confederate leaders in the late Civil War. The late John Slidell of Louisiana (a native of New York) urged in the

United States Senate the propriety of withdrawing American cruisers from the coasts of Africa, that the slave-trade might not be interfered with by them. By an arrangement between the governments of the United States and Great Britain, the cruisers of each nation were empowered to board vessels of either party suspected of being engaged in the slave-trade. When, in the summer of 1858, it was known that the traffic was to be carried on actively by the "African Labor-supply Association," the British cruisers in the Gulf of Mexico were unusually vigilant, and in the course of a few weeks boarded about fifty American vessels suspected of being slavers. The influence of the slaveholders was brought to bear so powerfully upon the administration that the government protested against what it was pleased to call the "odious British doctrine of the right of search." The British government, for "prudential reasons," put a stop to the practice and laid the blame on the officers of the cruisers.

Slave-trade, REVIVAL OF THE, IN SOUTH CAROLINA. In 1804 a provision was inserted into the act organizing the Territory of Orleans, that no slaves should be carried thither, except from some part of the United States, by citizens removing into the territory as actual settlers, this permission not to extend to negroes introduced into the United States since 1793. The object of this provision was to guard against the effects of an act recently adopted by the Legislature of South Carolina for reviving the slave-trade after a cessation of it, as to that state, for fifteen years, and of six years as to the whole Union. This was a consequence of the vast increase and profitability of the cotton-culture, made so by Whitney's cotton-gin (which see).

Slave-trade, THE, OPPOSED IN VIRGINIA. Never had England carried on the slave-trade with greater vigor and persistence than at the close of the French and Indian War. The remonstrances of the colonies were unheeded. Obedience to the instructions of the Board of Trade and Plantations kept every American port open as markets for the traffic. Virginia had often tried to suppress it, and in 1761 it was proposed in her Legislature to suppress the importation of Africans by levying a prohibitory duty. Danger to the political interest of that colony was foreboded by her wisest men in the continuance of the trade. An act for levying the tax was passed by the Assembly, but in England it met the fate of similar bills from other colonies to suppress the nefarious traffic. It was sent back with a veto.

Slave-trade, TREATY FOR THE SUPPRESSION OF THE. On April 7, 1862, a treaty was concluded between the United States and Great Britain for the suppression of the African slave-trade, and signed at the city of Washington, D. C. By it, ships of the respective nations should have the right of search of suspected slave-ships; but that right was restricted to vessels of war authorized expressly for that object, and in no case to be exercised with respect to a vessel of the navy of either of the powers, but only

as regards merchant vessels. Nothing was done under this treaty, as the Emancipation Proclamation (which see) and other circumstances made action unnecessary.

Slemmer, ADAM J., was born in Montgomery County, Penn., about 1828; died at Fort Laramie, Kansas, Oct. 7, 1868. He graduated at West Point in 1850, and was promoted for gallant conduct in the Seminole War. He was for a while assistant professor of ethics and mathematics at West Point. He was in command of a small garrison at Fort McRee, near Pensacola, when the Civil War broke out. He took his men and supplies to stronger Fort Pickens, and held it against the perseverance and brute force of the Secessionists until relieved by Colonel Brown. (See *Fort Pickens*.) He was made brigadier-general of volunteers in 1862, was severely wounded in the battle of Stone's River, and was disabled from further active service. In March, 1865, he was breveted brigadier-general in the United States Army.

Slidell, JOHN, was born in New York city in 1793; died in London, July 29, 1871. He graduated at Columbia College in 1810, and settled, as a lawyer, in New Orleans, where, in 1829-30,

JOHN SLIDELL

he was United States District-attorney. He served in the State Legislature, and from 1843 to 1845 he was in Congress. In the last-named year he was appointed United States Minister to Mexico, and in 1853 he was elected to the United States Senate, where he remained, by re-election, until February, 1861. He was a very conspicuous Secessionist, and withdrew from the United States Senate to engage in furthering the insurrection then begun. He was sent as a commissioner of the Confederacy to France, in the fall of 1861, when he was captured by a cruiser of the United States. (See *Mason and Slidell, Capture of*.) After his release from Fort Warren, he sailed for England (Jan. 1, 1862), where he resided until his death.

Slocum, HENRY WADSWORTH, was born at Syracuse, N. Y., Sept. 24, 1827. He graduated at West Point in 1852; resigned in 1856, and settled in Syracuse as a lawyer. Early in the Civil War he was colonel of a New York volun-

teer regiment; joined McDowell's troops, and took part in the battle of Bull's Run (which see), where he was shot through the thigh. He was made brigadier-general of volunteers in August, 1861, and commanded a brigade in Franklin's division. He served with distinction in the campaign on the Peninsula, in 1862, and on July 4, 1862, he was made major-general. In the battle of Groveton (or second battle of Bull's Run), at South Mountain, and Antietam, he was engaged, and in October, 1862, was assigned to the command of the Twelfth Corps, which he led at Fredericksburg, Chancellorsville, and Gettysburg. At the latter he commanded the right wing of Meade's army. From September, 1863, to April, 1864, he guarded the Nashville and Chattanooga Railroad, and in the Atlanta campaign he commanded the Twentieth Corps. In the march to the sea he commanded one of the grand divisions of Sherman's army; also through the Carolinas, until the surrender of Johnston (which see). General Slocum resigned Sept. 28, 1865. From 1869 to 1871 he was a member of Congress from Brooklyn, N. Y.

Small-pox, INOCULATION FOR. In 1721 the small-pox made great havoc in Boston and its vicinity. There were nearly six thousand cases in New England, and about one thousand deaths. Inoculation for the disease, so as to mitigate its malignity, had just been introduced into England by Lady Mary Wortley Montagu, whose son had been inoculated at Constantinople. Her daughter was the first person inoculated in England. An account of inoculation had been previously published in the transactions of the Royal Society. Dr. Cotton Mather, having read the account, recommended the physicians of Boston to try the operation. None dared attempt it excepting Dr. Zabdiel Boylston, who, to show his confidence of success, began with his own family, and continued the practice against violent opposition. Pious persons denounced it as an interference with the prerogatives of Jehovah—an attempt to thwart God, who sent the small-pox as a punishment for sins, and whose vengeance would thus be provoked more. Other physicians denounced the practice, and many sober people declared that if any of Dr. Boylston's inoculated patients should die he ought to be tried for murder. An exasperated mob paraded the streets with halters in their hands, threatening to hang the inoculators, and Dr. Boylston's family was hardly safe in his own house. A lighted grenade was thrown into the chamber of an inoculated patient in the house of Dr. Cotton Mather. The select-men of Boston took strong ground against inoculation; so, also, did the popular branch of the Legislature. The violent opposition of the physicians, led by a Scotchman named Douglas, was the chief cause of the excitement. When news arrived of the success attending the operation on Lady Mary's daughter (performed the same month that Dr. Boylston introduced it in Boston) opposition was soon silenced, and inoculation was extensively practised in the colonies until Jenner's greater discovery of the merits of vaccination for the kine-pox.

Smallwood, WILLIAM, was born in Maryland, and died there Feb. 14, 1792. In 1776 he became a colonel in the Maryland line, and his battalion, which joined Washington, at New York, before the battle of Long Island, was composed

WILLIAM SMALLWOOD.

of men belonging to the best families of his native state. These suffered in that battle, at which Smallwood was not present. He was in the action at White Plains, about two months later; and when, late in the summer of 1777, the British, under the Howes, appeared in Chesapeake Bay, he was sent to gather the militia on the western shore of Maryland. With about one thousand of these he joined Washington after the battle of Brandywine. He was in the battle of Germantown with his militia. While he was with Gates, in the South, he was promoted to major-general (Sept. 15, 1780), and soon afterwards he returned to the North. Smallwood refused to serve under Baron de Steuben, who was his senior officer, and demanded that his own commission should be dated two years before his appointment. Smallwood was a member of Congress in 1785, and was governor of Maryland from 1785 to 1788.

Smibert (or Smybert), the first portrait-painter in America, was born in Edinburgh about 1684, and died in Boston about 1751. He had studied in Italy and painted in London, and in 1728 accompanied Dean Berkeley to America. He painted the portraits of many New England worthies. The only portrait of Jonathan Edwards ever made was painted by Smibert. (See *Fine Arts, First School of.*)

Smith, ANDREW JACKSON, was born in Bucks County, Penn., about 1814, and graduated at West Point in 1838. He entered the dragoons; served in the war against Mexico and against the Indians in Oregon (1855-60), and when the Civil War broke out he was made major of cavalry. He was chief of cavalry in the Department of Missouri in the spring of 1862, and in the Department of the Mississippi from March to July. He was one of the most active and

useful officers in the Southwest, commanding divisions in Missouri and Arkansas, in the Vicksburg and Red River campaigns, and afterwards (1864) in driving Price out of Missouri, and assisting Thomas against Hood at Nashville. He was in the Mobile campaign, early in 1865. For his services during the war he was breveted major-general. He resigned in May, 1869.

Smith, CHARLES FERGUSON, was born in Pennsylvania about 1806; died at Savannah, Tenn., April 25, 1862. He graduated at West Point in 1825, and was assistant instructor of tactics there from 1829 to 1831. He was adjutant of the post from September, 1831, to April, 1838, and then again instructor, till 1842. He served in the war against Mexico, received the brevet of colonel, and was made full colonel in September, 1861. In August, 1861, he was made brigadier-general of volunteers, and major-general in March, 1862. For some time he was in command of the National forces in Kentucky, and led a division, under General Grant, in the capture of Fort Donelson, in which he was distinguished, leading a decisive charge with great gallantry. He was afterwards ordered to Savannah, Tenn., where he died of dysentery.

Smith, CHARLES H., was born at Eastport, Me., and was made captain of the First Maine Cavalry soon after the beginning of the Civil War. He rose to colonel in the spring of 1863, and was very active as a cavalry officer in the campaigns in Virginia and at Gettysburg that year. He was with Sheridan in his important operations in May and June, 1864, and was one of the most efficient cavalry officers of the Army of the Potomac in the campaign against Richmond that year, commanding a brigade of Gregg's division south and west of Petersburg, and then in the later operations, that resulted in the capture of Lee and his army. For "gallant and meritorious services during the war" he was breveted Major-general United States Army.

Smith, EDMUND KIRBY, was born at St. Augustine, Fla., about 1825, and graduated at West Point in 1845. At the beginning of the war with Mexico he entered the field under General Taylor, and after the war was assistant professor of mathematics at West Point (1849-52). He left the service in April, 1861, and joined the insurgents, and became a brigadier-general in the Confederate army, under General Joseph E. Johnston, in 1861. Promoted to major-general, he was placed in command of the (Confederate) Department of East Tennessee early in 1862. Leading the advance in Bragg's invasion of Kentucky (which see), and behaving gallantly, he was made lieutenant-general (October, 1862), and was in the battle at Stone's River (or Murfreesborough). Early in 1863 he was put in command of the Trans-Mississippi Army, which he surrendered to General Canby May 26, 1865, at Baton Rouge. General Smith commanded in the Red River campaign against General Banks.

Smith, FRANCIS, a British officer, was colonel and aide-de-camp to the king in 1775. He came

to America early that year, and commanded the troops sent to seize the American stores at Concord, in April, 1775. (See *Concord*.) In the skirmish at Lexington he was wounded. Made a brigadier-general, he commanded a brigade in the battle on Long Island (which see) and on Quaker Hill (which see).

Smith, GUSTAVUS WOODSON, was born in Scott County, Ky., about 1820; graduated at West Point in 1842; served in the war against Mexico, and in 1854 resigned for the consideration of \$10,000 from the Cuban fund, to join a projected expedition against Cuba, under General Quitman (which see). He was a politician in the city of New York, and was appointed street commissioner there, which office he left to join the Confederates under General Mansfield Lovell, at New Orleans. He was made a Confederate major-general, and after General Joseph E. Johnston was wounded at Fair Oaks he took command of the army temporarily. In 1864 he commanded at Augusta, Ga., and was made prisoner at Marion (April 2, 1865) by General Wilson.

Smith, JAMES, a signer of the Declaration of Independence, was born in Ireland, about 1720; died at York, Penn., July 11, 1806. He was educated at the College of Philadelphia, became a lawyer and surveyor, and in 1774 raised the first volunteer company in Pennsylvania to resist British oppression. He was also an active patriot in civil affairs, and was largely instrumental in kindling the flame of resistance in his province. He was a member of the Pennsylvania Convention (1775) and the convention (June, 1776) that framed a new government for the province. He seconded the resolution of Dr. Rush, in the Provincial Convention, in favor of declaring independence. This was unanimously adopted, signed by the members, and presented to Congress a few days before that body adopted the famous Declaration. On June 20, 1776, he was elected a delegate in Congress, and he remained so until November, 1778. In 1780 he was a member of the new Pennsylvania Assembly.

Smith, JOHN, born at Willoughby, Lincolnshire, England, in January, 1579; died in London, June 21, 1631. From early youth he was a soldier, and for four years he was in wars in the Netherlands. Returning home, he soon went abroad again to fight the Turks, distinguishing himself in Hungary and Transylvania, for which service Sigismund Bathori ennobled him and gave him a pension. Serving under an Austrian general in besieging a Turkish fortress, he performed a wonderful exploit. One of the Turkish generals sent a message to the Austrian camp saying, "I challenge any captain of the besieging army to combat." Smith was chosen by lot to accept it. They fought in the presence of a multitude on the ramparts. Smith cut off his antagonist's head. A second appeared and suffered the same fate, and then a third, whose head soon rolled in the dust. The combat ended, and when Smith was ennobled he had upon his coat-of-arms, in two quarterings of his shield, three

Turks' heads, with a chevron between the two upper ones and the lower one. Taken prisoner by the Turks, he was sent a slave to Constantinople, where he won the affection of his young

JOHN SMITH.

mistress. He was sent by her to her brother in the Crimea, with a letter avowing her attachment. The indignant Turk cruelly maltreated Smith, when the latter one day slew his taskmaster, put on the Ottoman's clothes, mounted a horse and escaped to a Russian port on the Don. The account he gave of his personal exploits was most remarkable. On his return to England, Bartholomew Gosnold persuaded Smith to engage in founding a colony in Virginia, and at the age of twenty-seven years, already great-

SMITH'S COAT-OF-ARMS.

ly renowned, he sailed for America, Dec. 19, 1606, with Captain C. Newport, who commanded three vessels that bore one hundred and five emigrants. He was accompanied by Gosnold, Edward Maria Wingfield (one of the London Company), George

Percy, Rev. Robert Hunt, and other men of property. The voyage was by the southern route, and was long and tedious. Captain Smith's conduct on shipboard was boastful and arrogant, and quarrels with him were frequent. At the Canaries, Wingfield charged him with conspiring to usurp the government in Virginia, and make himself king. There was no head to the company at sea, for the silly king, with his love for concealment, had placed the names of the councillors in a sealed box, which was not to be opened until they should land in Virginia. Some of the passengers, believing Wingfield's charge to be true, confined Smith and kept him a prisoner until the voyage was ended. A part of the company landed on Cape Henry, at the mouth of Chesapeake Bay, had a skirmish with the Indians, and that night the box was opened, when it was discovered that Smith was one of the council. But he was rejected. After resting at Point Comfort, at the mouth of the James River, they went up that stream, and landed where they built Jamestown, and chose that for the seat of the new empire. Captain Smith, with Newport and twenty men, explored the James River as far as the falls, the site of Richmond, and made the acquaintance of Powhatan, emperor of thirty Indian tribes. They returned and found the government organized by the choice of Wingfield as president, who, to get rid of Smith, proposed that he should return to England with Newport and avoid the disgrace of a trial. The indignant soldier demanded an instant trial. His innocence was proven, Wingfield withdrew his charges, and Smith took his seat in the council, when that body demanded that the president should pay Smith £200 for false imprisonment. All of Wingfield's property was seized to pay it, when Smith generously placed it in the public store for the use of the colony. Sickness prostrated the colony before the close of summer. At one time there were scarcely ten men who could stand up. It was discovered that Wingfield was living on the choicest stores, and was preparing to desert the colony in a pinnace Newport had left when he returned with the ships to England for more emigrants and supplies. He was deposed, and one weaker and as wicked (Ratcliffe) was put in his place. The settlers now took the management of affairs and put them in Smith's hands, who soon brought order out of confusion, made the Indians bring stores of corn, and had the colony well supplied with food (see *Virginia, Colony of*) for the ensuing winter. But one half of the emigrants had perished by the end of summer. Among the victims was Gosnold. The company had instructed the leaders of the colony to explore every considerable stream in search of the coveted northwest passage. Smith smiled at the ignorance of the company, but gladly undertook explorations. He went up the Chickahominy in an open boat to shallow water among the swamps of the Virginia peninsula. Leaving the boat in charge of part of his company, he with two others and two Indian guides penetrated the forest, when Smith was seized by savages under Opechancanough, King

of Pamunkey, an elder brother of Powhatan, and conducted to the presence of the emperor at Werowocomoco, on the borders of the York River. At a great council presided over by Powhatan, he was doomed to die. Matoa, or Pocahontas, a daughter of Powhatan, begged her father to spare the prisoner's life, but in vain. His head was laid upon two huge stones, and two stalwart warriors had raised heavy clubs to crush it, when Pocahontas sprang from her seat by her father's side, clasped the prisoner's head with her arms, and laid her own head on his. (See *Pocahontas*.) The emperor yielded, and Smith was released and sent to Jamestown with an escort, where he found only forty persons, and the stronger ones on the point of abandoning the settlement and escaping in the pinnace. He also found that during his absence the little church that had been built had been burned, and the settlers were worshipping under a tent. Other emigrants came with Newport in 1608, but they were chiefly idle and dissolute men, sent thither "to escape ill destinies at home." Some shining yellow deposits from a stream issuing from a bank of sand were discovered, and with a belief that the stream flowed from a mine of gold, they sought the precious metal with avidity instead of tilling the ground for food. Smith implored them in vain to plant and sow; and in the early summer, disgusted with their fatal folly, he left them, and with his friend Dr. Russell and a few of the more sensible men, he explored the Potomac and Rappahannock rivers, Chesapeake Bay and its estuaries and tributaries, and the Patuxent to the site of Baltimore. He went up the Susquehanna, probably a few miles above its mouth, where he heard of the powerful Iroquois Confederacy in the present State of New York. (See *Iroquois Confederacy*, *The*.) These explorations were made in two different voyages in the space of three months. He travelled in his boat about three thousand miles, made friends of powerful chiefs, and made the way plain for future settlements around the Chesapeake. When he returned to Jamestown early in September, he found the settlement in confusion again, and three days afterwards he was chosen president of the council. Soon afterwards Newport came again with supplies and seventy emigrants, no better than the former ones. Two women came with them—the wife of one of the emigrants and her maid, Anne Burrows, who soon afterwards married John Laydon. These were the first women of European blood seen on the banks of the James. With these new-comers the London Company sent word that unless the colonists should send back the ships, commodities enough to pay the cost of the voyage (\$10,000), and other valuable products or information, they should "be left in Virginia as banished men." (See *Virginia, Colony of*.) Smith made a spirited reply, and begged them to send over emigrants who would be producers before they could expect much in return. But the threat assisted Smith in exercising discipline and enforcing rules for labor. He demanded six hours of work each day from every able-bodied man, and said "He who will not work shall not

eat." Very soon the "gentlemen" became expert with the axe and the hoe, yet the colony continued to depend upon the bounty of the barbarians around them. Five hundred new settlers came in the summer of 1609, but the appointed rulers under a new charter (see *London Company, Second Charter of the*) had been wrecked in a storm on one of the Bermuda islands. Anarchy menaced the colony, but Smith, with his usual energy, "held over" in office, and by asserting authority became, as he had on other occasions, the savior of the colony from utter ruin. He devised new expeditions and new settlements, that the idle and vicious might be employed and the libertines kept in restraint. In the autumn of 1609 he was on the James River in a boat, when an explosion of gunpowder so wounded him that he was compelled to go to England for surgical treatment, delegating his authority to George Percy, a brother of the Duke of Northumberland. He never returned to Virginia. His labors there had been disinterested. Brave, honest, and true, he won the imperishable honor of being the first permanent planter of men of the Saxon race on the soil of the United States, and is entitled to the endearing name of Father of Virginia. Smith had made a rude map of his explorations in south Virginia; he afterwards explored the coasts of New England (1614), and made a map of the country between the Penobscot and Cape Cod. He started to found a colony there (1615), but failed. (See *New England*.) The remainder of his life was passed in retirement. Captain Smith published in 1608 *A True Relation of Virginia*; in 1626, *The General History of Virginia, New England, and the Somer Isles*; and in 1630, *The True Travels, Adventures, and Observations of Captain John Smith in Europe, Asia, Africa, and America*. One or two other books were written and published by him. John Smith's body lies buried in the Church of St. Sepulchre, London. His life was saved three times, and each time by a princess—Culaneta, of Hungary; Tragabigzanda, of Turkey; and Pocahontas, of Virginia.

Smith, JOHN COTTON, LL.D., was born at Sharon, Conn., Feb. 12, 1765; died there, Dec. 7, 1845. He graduated at Yale College in 1783, and was admitted to the bar in 1786. Member, clerk, and speaker of the Connecticut Assembly from 1793 to 1809, excepting three years (speaker in 1800), he became a leading man in the state, and in 1809 was chosen a member of the Council and a judge of the Supreme Court of Connecticut. Elected lieutenant-governor before the second term of the court, he was elected governor in 1813, and remained in that office five years. Governor Smith was a member of the Society of Northern Antiquaries, also of other learned societies at home. He was president of the Connecticut State Bible Society, of the American Board of Foreign Missions, and of the American Bible Society. For several years Governor Smith was an occasional contributor to various scientific and literary periodicals.

Smith, JOHN E., a native of Pennsylvania, was aide-de-camp to Governor Yates, of Illinois,

when the Civil War began. In July, 1861, he became colonel of Illinois volunteers, and served well at forts Henry and Donelson, and in the battles of Shiloh and Corinth. In November he was made brigadier-general of volunteers; in 1862 he commanded a division in the Sixteenth Army Corps, and was in all the operations against Vicksburg in 1863. He was afterwards in the battles near Chattanooga, and in 1864 was in the Atlanta campaign under Sherman, also in his subsequent campaigns in Georgia and the Carolinas to the surrender of Johnston (which see). He was breveted major-general of the United States Army.

Smith, JOSEPH, was born at Hanover, Mass., March 30, 1790. He entered the navy as midshipman in 1809; was distinguished in the battle at Plattsburg (which see) under Macdonough, where he was wounded, and was in the Mediterranean under Decatur in 1815. He was in constant service, afloat and ashore, for sixty years. From 1847 until 1869 he was chief of the Bureau of Yards and Docks. He was created rear-admiral on the retired list in July, 1862, and died in 1865.

Smith, JOSEPH, founder of the Mormon Church, was born at Sharon, Vt., Dec. 23, 1805; killed at Carthage, Ill., June 27, 1844. His parents were of Scotch descent, and not very reputable. When Joseph was a small child they emigrated to Palmyra, N. Y., where, at the age of twenty-two, he began the career of a bold impostor, and followed it up until his violent death at the hands of a mob. (See *Mormons*.)

Smith, JUNIUS, LL.D., a pioneer of ocean steam navigation, was born in Plymouth, Conn., Oct. 2, 1780; died at Astoria, N. Y., Jan. 23, 1853. He graduated at Yale College in 1802; became a lawyer, and practised at the New Haven bar until 1805, when he was employed to prosecute a claim against the British government in the Admiralty Court of London. Successful, he afterwards embarked in commercial pursuits in connection with America, and won a fortune. In 1832 he engaged in the project for establishing a line of steamships to navigate the Atlantic Ocean from England to the United States. Through a prospectus, he pressed the matter upon the public mind, and succeeded, in 1836, in establishing the British and American Steam Navigation Company. The feasibility of the enterprise was proven in 1838, by the crossing of the Atlantic by the small steamer *Sirius*. Yet, before he could successfully carry out this grand project, which soon afterwards developed into vast importance, Mr. Smith engaged in an attempt to introduce the cultivation of the teaplat into this country. He bought an extensive plantation near Greenville, S. C. One day he was assaulted, and received a blow which fractured his skull. He never recovered.

Smith, MELANCTHON, who commanded a detachment of troops in the battle of Plattsburg, had been commissioned a major in February, 1813, and promoted to colonel in April following. He left the army at the close of the war, and died at Plattsburg on the 18th of August, 1818.

Colonel Smith was an active member of the Masonic order, and his funeral was directed by them. At his request, Masonic emblems were placed on the elaborately wrought slab of blue limestone that marks his grave and bears the following inscription: "To the memory of Colonel Melancthon Smith, who died Aug. 18, 1818,

COLONEL SMITH'S MONUMENT.

aged 38 years. As a testimony of respect for his virtues, and to mark the spot where rests the ashes of an excellent father, this stone is erected by his son Richbill. United with many masculine virtues, he had a tear for pity, and a hand open as day for melting charity."

Smith, MELANCTHON, was born in New York, May 24, 1809. He entered the navy as midshipman in 1826, and was made captain in July, 1862. He served in the Seminole War (which see), and was in command of the steamer *Massachusetts* in 1861. He was active in the movements against New Orleans in 1862, and with the *Mississippi* he ran the ram *Manassas* ashore and destroyed her. His vessel grounded while passing Port Hudson (March 14, 1863), when he set her on fire. With her he had participated in several engagements. He assisted in the capture of Port Hudson (which see), and afterwards commanded a sloop-of-war in the North Atlantic blockading squadron. In May, 1864, he engaged with the Confederate ram *Albemarle* (which see), and was in command of the *Wabash* in both attacks on Fort Fisher (which see). In 1866 he was made chief of the Bureau of Equipment and Recruiting.

Smith, PERSIFER F., was born in Philadelphia in November, 1798; died at Fort Leavenworth, Kan., May 17, 1858. He graduated at Princeton in 1815; became a lawyer in New Orleans; was adjutant-general of Louisiana, and was a volunteer under General Gaines in two campaigns of the Seminole War as colonel of Louisiana volunteers. When General Taylor went to the Rio Grande in 1846 (see *Mexico, War with*), Smith led a brigade of Louisiana volunteers under him. He was breveted brigadier-general for his services at Monterey (which see), and major-gen-

eral for gallantry at Contreras and Churubusco (which see) in August, 1847. He was a commissioner in arranging the armistice before the city of Mexico (which see), and after the conquest he was made civil and military governor of the city (October, 1847), and commander of a division of the United States Army. In 1848 he was governor of Vera Cruz, and subsequently commanded the departments of California and Texas. Just before his death he was appointed to command the Utah expedition against the Mormons (which see).

Smith, SAMUEL, was born at Carlisle, Penn., July 27, 1752; died in Baltimore, Md., April 22, 1839. He went to Baltimore with his father in 1760, and was an active patriot there. Samuel, after receiving a good common education, en-

SAMUEL SMITH.

tered his father's counting-room in 1771, and soon afterwards visited Europe in one of his father's vessels. He joined a volunteer company, and became captain in Smallwood's regiment in January, 1776. He was in the battle of Long Island, was distinguished on Harlem Plains (which see), and was wounded at White Plains. Captain Smith was in the retreat of Washington to the Delaware late in 1776; was lieutenant-colonel of a Maryland regiment in 1777; fought at Brandywine, and immediately afterwards was placed in command of Fort Mifflin, which weak and exposed work he gallantly defended from Sept. 26 to Nov. 11 against a British naval and land force, and in that affray he was severely wounded. In the ensuing winter he suffered at Valley Forge; took an active part in the battle of Monmouth, and continued to do duty as a colonel of militia until the end of the war. Having lost his fortune during three years' service, he was compelled to resign his Continental commission late in 1778. He served a short time as Secretary of the Navy under Jefferson, and as major-general of Maryland state-troops he did good service in the defence of Baltimore (which

see) in 1814. General Smith was a member of Congress, either as Representative or United States Senator, from 1793 to 1833—a period of forty years. When, in the eighty-third year of his age (1835), a mob took possession of Baltimore, General Smith, at the call of the citizens, led a force that effectually suppressed the disturbances, and he was afterwards elected mayor of the city.

Smith, WILLIAM, Chief-justice of Canada, was born in New York, June 25, 1728; died there, Dec. 3, 1793. He graduated at Yale College in 1745. He became one of the leading lawyers in America, and was appointed judge of the Supreme Court of New York in 1763; member of the Council in 1769, and when the war for independence broke out he at first opposed the measures of government, but finally adhered to the crown and went to England at the end of the struggle in 1783. In November, 1786, he was appointed Chief-justice of Canada. Judge Smith wrote a brief history of the Province of New York from its settlement to 1732, published in London in 1757. This was continued to 1752 by his son William.

Smith, WILLIAM, D.D., was born in Aberdeen, Scotland, in 1726; died in Philadelphia, May 14, 1803. He graduated at the University of Aberdeen in 1747; emigrated to America in 1750, and, accepting an invitation to take charge of the college in Philadelphia, he went to England to receive ordination as a minister in the Protestant Episcopal Church. He was placed at the head of the college in 1754. He was its founder and first provost. It was the origin of the present University of Pennsylvania. Dr. Smith was distinguished for his patriotism and oratory. At the request of Congress he pronounced orations on the deaths of General Montgomery and Dr. Franklin, and these are considered masterpieces of English composition. He was the author of several works, religious, moral, philosophical, and historical.

Smith, WILLIAM FARRAR, was born at St. Albans, Vt., Feb. 17, 1824, and graduated at West Point in 1845, entering the corps of Topographical Engineers. He was engaged in several important military surveys before the Civil War. When that began he was Secretary of the Light-house Board at Washington. He became a brigadier-general of volunteers in August, 1861, having done good service in the battle of Bull's Run the previous month. In the Peninsular campaign he was particularly distinguished, and was promoted to major-general (July, 1862). He commanded a division in Franklin's corps, and was in the battles of South Mountain and Antietam (which see). He commanded the Sixth Corps at Fredericksburg (December, 1862); was Chief-engineer of the Army of the Cumberland late in 1863; was active in operations about Chattanooga late in that year; and from May to July, 1864, he commanded the Eighteenth Corps, Army of the Potomac. He was breveted major-general for "gallant and meritorious services during the Rebellion." General Smith was made President of the International Tele-

graph Company in 1864, and resigned his commission in the army in 1867.

Smith's Petition for Pocahontas. When Sir Thomas Dale arrived in England from Virginia in 1616, with John Rolfe and his wife, Pocahontas, Captain Smith was in London, expecting to sail immediately for New England. Fearing he might sail before she should reach London from Portsmouth, he addressed a petition to the queen in her behalf, in which he said: "During the time of two or three years she, next under God, was still the instrument to preserve the colony from death, famine, and utter confusion; which if, in these times, had been once dissolved, Virginia might have lain as it was at our first arrival till this day. . . . She was the first Christian ever of that nation; the first Virginian who ever spoke English, or had a child in marriage by an Englishman."

Smithson, JAMES LEWIS MACIE, F.R.S., an English chemist, and founder of the Smithsonian Institution at Washington, was born about 1765; died in Genoa, Italy, June 27, 1829. At the commencement of his will, Mr. Smithson wrote: "I, James Smithson, son of Hugh, third Duke of Northumberland, and Elizabeth, heiress of the Hungerfords of Audley, and niece to Charles, the proud Duke of Somerset," without giving the date of his nativity. He took his degree at Oxford University (1786) under the surname of Macie, but between 1791 and 1803 he adopted the family name of Smithson. He was a natural son of the then Duke of Northumberland. He became distinguished at the university as a chemist; became the associate of the leading scientists of the day; and was elected Fellow of the Royal Society in 1787, to the "Transactions" of which he contributed eight papers. At his death he left about two hundred manuscripts, which seemed to be chiefly portions of a philosophical dictionary. In his will, dated Oct. 23, 1826, he bequeathed to his nephew the whole of his property, appraised at £120,000, or about \$590,000, with the condition that, in case of the death of the latter without a child or children, the property was to go to the government of the United States to found, at the national capital, under the name of "The Smithsonian Institution," an establishment for the increase and diffusion of knowledge. His nephew died in 1835, without heirs, and the property came into the possession of our government. (See *United States a Legatee.*)

Smyth and Porter, GENERALS. The failure of General Alexander Smyth, in command on the Niagara frontier in the autumn of 1812, to accomplish an invasion of Canada, which in pompons proclamations he had declared his intention of doing, was openly attributed by General Peter B. Porter, in command of the New York volunteers and militia on that frontier, to the cowardice of the former. Smyth, in his report to Dearborn, spoke disparagingly of Porter. A bitter quarrel ensued. The volunteers took the part of their beloved general, and for some time Smyth was in personal danger. He was fired at several times when he ventured

from his marquee, and he was compelled to place a double guard around it, and to move it from place to place to avoid continual insults. At length Smyth challenged Porter—his second in command—to fight a duel. It was accepted. They both violated the articles of war in the challenge and acceptance. With friends, seconds, and surgeons, they repaired to Grand Island (Dec. 12, 1812), on the Niagara River, exchanged shots at twelve paces distance, and neither of them was hurt. The expected tragedy was a solemn comedy. The affair took the usual ridiculous course—settled by the seconds. General Porter acknowledged that he considered Smyth "a man of courage," and Smyth declared Porter to be "above suspicion as a gentleman and an officer." So ended the melodrama of Smyth's invasion of Canada. General Smyth was deposed without trial. He afterwards petitioned Congress to reinstate him, declaring in his memorial that he asked the privilege of "dying for his country." The phrase was ridiculed by his enemies. At a public celebration at Georgetown, D. C., on Washington's birthday in 1814, the following toast was offered: "General Smyth's petition to Congress to 'die for his country'—May it be ordered that the prayer of said petitioner be granted." A wag wrote on the panel of the door of the House of Representatives:

"All hail, great chief! who quailed before
A *Biashopp* on Niagara's shore;
But looks on *Death* with dauntless eye,
And begs for leave to bleed and die.
O my!"

Concerning his pompons proclamations and his signal failure in performances, a wag wrote:

"Just so (and every wiser head the likeness can discover)
We put a *chestnut* in the fire and pull the embers over;
Awhile it waxes hot and hotter, and eke begins to hop,
And, after much confounded pother, explodes a mighty *Pop!*"

General Smyth had many good social qualities, and had "troops of friends." He was a faithful representative of his district (in Virginia) in Congress from 1817 to 1825, and again from 1827 until his death (April 17, 1830) in Washington, at the age of sixty-five years. He was born in Ireland. He was made Inspector-general of the United States Army, with the rank of brigadier-general, in July, 1812.

Social and Political Troubles in the South (1874). The aspect of affairs in several of the Southern States, particularly in Louisiana, was so unsettled in 1874 that there was much uneasiness in the public mind. Outrages of various kinds and murders were committed for the evident purpose of keeping peaceable citizens from the polls, and an utter disregard for law prevailed in many districts. In September, when these outrages were increasing in number and violence, the Attorney-general, with the sanction of the President, issued a circular letter to the authorities in the states alluded to, expressing his determination to take vigorous steps for upholding the laws and protecting the rights of all citizens of whatever class or hue; and the President directed the Secretary of War to consult and act with the Attorney-general in the matter. By vigorous action these outrages

were almost suppressed at the beginning of 1875; but they broke out with more violence in the summer of 1876, and appeared in fearful strength during the canvass for President and Vice-President in the fall of that year. The leaders and inciters of these outrages were members of a secret organization known as "The White League," formed for the purpose of depriving the colored citizens of the elective franchise.

Social Condition of Holland in the Seventeenth Century. THE, was favorable to the development of new states. The feudal system, in which large landholders whose tenants were military men controlled all labor and bore allegiance to the lordly proprietor, had begun to decay. A new era had gradually dawned upon Holland. Labor had become honorable. The owner of the soil was no longer the head of a band of armed desperadoes who were his dependents, but the careful proprietor of broad acres, and devoted to industry and thrift. The nobles, who composed the landed class, gradually came down from the stilts of exclusiveness, and in their habits, and even costume, imitated the working people. The latter became elevated in the social scale. Their rights were respected, and their value in the state was duly estimated. Ceaseless toil in Holland was necessary to preserve the hollow land from the invasion of the sea, and to extract, by the hands of skilled and unskilled industry, bread for the multitude. Common needs assimilated all classes in a country where all must work or starve or drown. The moral tone of society was wonderfully elevated and political wisdom abounded. It was this state of society in Holland that stimulated agricultural interests and pursuits and furnished sturdy, intelligent, and industrious yeomen for New Netherland (which see). Their example changed the pursuit of many a hunter and trapper in the Hudson and Mohawk valleys who became farmers.

Societies and Institutions, RELIGIOUS AND BENEVOLENT. The United States abounds in these associations and establishments. The Christian Church was for a long time the only existing one. Finally out of it grew societies for the promotion of Christianity and morality, and institutions to aid the afflicted. The first society for the publication and distribution of religious knowledge was the Methodist Book Concern, established in Philadelphia in 1789, and removed to New York in 1804. In 1803 the Massachusetts Society for Promoting Christian Knowledge was organized, and seems to have been the first undenominational tract society established. Many local tract societies soon afterwards appeared. The New England Tract Society was founded at Andover in 1812. In 1823 it changed its name to American Tract Society, and removed to Boston. In 1825 the American Tract Society—a new organization—was established in New York, and the elder society became a branch of it. It remained so until 1859, when the hesitancy of the New York society to publish tracts or essays on slavery

caused the Boston society to resume its independent organization. There are several denominational tract and publication societies—namely, the Methodist Episcopal Book Concern, founded in 1789; the Baptist Publication Society, founded in 1824; the Congregational Publication Society, organized in 1829; the Presbyterian Board of Publication, established in 1833; the Protestant Episcopal Evangelical Knowledge Society, founded in 1847; the Protestant Episcopal Church Book Society, founded in 1854; the Reformed Church Board of Publication Society, organized in 1854; and the New Jerusalem (Swedenborgian) Tract and Publication Society, established in 1863. The first Bible society in the United States was founded in Philadelphia in 1802, and when the American Bible Society was organized in 1816 there were between fifty and sixty local Bible societies in the Union. (See *Bible Society, The American, and Tract Society*.) The Baptists seceded from the American Bible Society in 1836, and founded the American and Foreign Bible Society, conducted entirely by that denomination. It has published the Scriptures in more than forty languages. In 1850 a secession from the Baptist society occurred, when the American Bible Union was founded. Attention was early called to the necessity of missionary work among the Indians and negroes in America. The English Society for the Propagation of the Gospel in Foreign Parts (which see) had begun the work. In 1810 the first foreign missionary society in the United States was founded, and called the American Board of Commissioners of Foreign Missions. It followed the English society in the exclusion of a denominational basis, but it has been largely controlled by the Congregationalists and Presbyterians. The Reformed (Dutch) Church separated from it, and organized a denominational board in 1857. There was another secession in 1870, when the "new school" branch of the Presbyterian Church withdrew and gave their support to the Presbyterian board mentioned below. So early as 1814, the American Baptist Missionary Union was formed, and is still engaged in extensive missionary work. The Protestant Episcopal Church organized a board of missions in 1820. The Board of Foreign Missions of the Presbyterian Church was organized in 1837, and was sustained by the "old school" churches, while the other branch co-operated with the American board until 1870, as above mentioned. In 1859 a United Presbyterian Missionary Society was formed. Other denominations sustain foreign missions, and all are earnestly engaged in domestic missions. The first temperance society in the United States was formed in 1789 by two hundred farmers in Litchfield County, Conn., who agreed not to use distilled liquors in doing their farm-work. Organized temperance societies began to be formed in 1811, but the total abstinence principle was not adopted until 1836, when a national convention held at Saratoga took that higher stand. The "Washington Society," the first founded upon that principle, was organized in Baltimore in 1840 by six men of intemperate habits. At

the first anniversary of the society one thousand reformed drunkards were in the procession. Young Men's Christian associations were first organized in America in 1852. These have rapidly increased in number and usefulness since 1866, when there were only sixty-six associations in the United States. Ten years later (1876) they numbered seven hundred. The first public hospital established within the domain of the Republic was opened at Boston in 1717 for the use of persons sick with any contagious disease. It was merely a "pest-house." The first general hospital chartered in the colonies was the Pennsylvania Hospital, created in 1751. Twenty years afterwards the second one—the New York Hospital—was chartered. Hospitals are now more abundant in the United States than in any other part of the world in proportion to population. Asylums for the deaf and dumb, the blind, the idiotic, the insane, for orphans, and for juveniles abound, and thousands continually enjoy the blessings which they provide. The first public asylum for the deaf and dumb was opened at Hartford, Conn., in 1817; and at the same time the second—the New York Asylum for the Deaf and Dumb—was chartered. The first public asylum for the blind was the Perkins Institute and Massachusetts Asylum, founded in 1829. It was opened in 1832, under the superintendence of Dr. S. G. Howe, who treated the complicated infirmities of Laura Bridgman (which see) successfully. The first asylum for the insane in this country was founded at Williamsburg, Va., in 1773, and was the only one in the United States until 1818, when another was established at Somerville, Mass. That was followed by the Bloomingdale Asylum, New York, in 1821, and the asylum at Hartford in 1824. In 1870 there were more than sixty institutions for the care of the insane in the United States. At that time there were thirty-eight thousand insane persons in the Union, out of a population of thirty-eight millions. The Moravians in Georgia established the first orphan-asylum in the American colonies about 1738, and Rev. George Whitefield laid the foundation-stone of one ten miles from Savannah in 1740. In 1876 there were four hundred orphan-asylums in the United States. Preventive and reformatory institutions are among our most important public charities. The first of the kind in the United States was the New York House of Refuge for Juvenile Delinquents, founded in 1824. It was opened at the beginning of 1825. It still exists, in a modified form, and occupies a considerable space on Randall's Island, East River. Care for the bodily comfort and social condition of seamen—a greatly neglected class of citizens—has been manifested for many years. So early as 1801 Captain Randall, of New York, founded the Sailors' Snug Harbor in that city; and, later, benevolent citizens established the Seamen's Friend Society in the same community. The latter effort has been blessed with great success. The society provides good boarding-houses and a home for seamen when in port. The latter, situated in Cherry Street, New York, is provided with a

reading-room and museum, conveniences for bathing, and wholesome dormitories, and a Seamen's Savings Bank is in operation. Since the late Civil War homes have been provided in various places for disabled sailors and soldiers, and these men have learned that a republic is not always ungrateful. So prevalent is a spirit of benevolence in the United States that everywhere societies, of various names and objects, for the alleviation of the distressed and the enlightenment of the ignorant are popular and flourishing. Some of the oldest associations among us were organized with a benevolent purpose. Such was the object of the Cincinnati Society (which see). The New York Chamber of Commerce, the oldest institution of the kind in our country, was established by twenty merchants in 1768 "for the purpose of promoting and extending all just and lawful commerce; and for affording relief to decayed members and their widows and children." And the Tammany Society, founded in 1789, was organized as a patriotic, social, and benevolent institution. (See *Tammany Society*.)

Societies for the Promotion of the Fine Arts. In 1791 Archibald Robertson, a Scotchman and a portrait-painter, established a seminary in the city of New York which he called "The Columbian Academy of Painting." He succeeded well, and his pupils did honor to the institution. In 1801 Robert R. Livingston, then American minister in France, proposed the establishment of an academy of fine arts in New York. He wrote to friends, suggesting the raising of funds by subscription for the purpose of purchasing copies of antique statuary and paintings for the instruction of young artists. An association for the purpose was formed late in 1802, but it was not incorporated until 1808. Meanwhile Mr. Livingston had obtained fine plaster copies of ancient statues and sent them over. In the board of managers were distinguished citizens, but there was only one artist—Colonel Trumbull. It bore the corporate title of "Academy of Fine Arts." It had a feeble existence, though it numbered among its honorary members King George IV., of England, and the Emperor Napoleon, who contributed liberally to its establishment. De Witt Clinton was its president in 1816, when its first public exhibition was opened. In 1805 seventy gentlemen, mostly lawyers, met in Independence Hall, Philadelphia, for the purpose of considering the subject of founding an academy of fine arts in that city. They formed an association for the purpose, and established "The Philadelphia Academy of Fine Arts," with George Clymer as President. Their first exhibition was held in 1806, when more than fifty casts of antique statues in the Louvre were displayed, and two paintings by Benjamin West. By purchases and gifts the collection of the academy was unsurpassed in this country in 1845, when the building and most of its contents were destroyed by fire. The association has a superb building on Broad Street, which was first opened to the public in April, 1876. Unwise management and alleged injustice to the younger artists who were studying

in the New York academy caused great dissatisfaction, and in the autumn of 1825 they held a meeting and organized a "Society for Improvement in Drawing." This movement was made at the instigation of Samuel F. B. Morse (which see), who was made president of the association. At a meeting of the association in January, 1826, Mr. Morse submitted a plan for the formation of what he called a "National Academy of Design" in the United States. The proposition was adopted, and the new academy was organized on the 15th of January, with Mr. Morse as President, and fourteen associate officers. Only two of those officers now (1880) survive—namely, Thomas S. Cummings, the first Treasurer; and Asher B. Durand, one of the first Council. The academy then founded flourished from the beginning, and is now one of the cherished institutions of the city of New York.

Societies, LITERARY AND SCIENTIFIC. Almost every department of human activity in the United States is represented by societies of various degrees of prominence. In nearly every state there is an historical society, with a library and growing archaeological collection. One of the oldest of these associations yet in existence is the Philadelphia Library, founded by Benjamin Franklin and others in 1731. It now (1876) contains about 100,000 volumes. One of the most interesting is the Academy of Natural Sciences, in Philadelphia, founded in 1812, and containing, among other treasures, a collection of 60,000 birds. Among the most useful of the associations is the New York Geographical Society, founded in 1852. Of the most important of the literary and scientific associations is the American Association for the Advancement of Science, founded in 1847. A Social Science Association, founded in Boston in 1865, had, in 1876, more than 300 members. An American Philological Society was organized in 1870. The last three named are migratory, meeting at different places each year.

Society for Constitutional Information. The friends of the Americans in London had formed a society with the foregoing title, and, on June 7, 1775, raised \$500, to be applied, as they said, "to the relief of the widows, orphans, and aged parents of our beloved fellow-subjects, who, faithful to the character of Englishmen, preferring death to slavery, were, for that reason only, inhumanly murdered by the king's troops at Lexington and Concord." Other sums were collected, and an account of the proceedings was given to the people through the *Public Advertiser* by John Horne Tooke. The king and his ministers were made terribly angry by this publication, and Tooke and the printers were unmercifully persecuted.

Society in Rhode Island (1650). When Roger Williams had obtained a charter for Rhode Island it was the middle of the seventeenth century. Society in that colony was then in a continual ferment, owing to the entire freedom enjoyed there, in the exercise of private judgment and the expression of opinion upon every subject. There was danger such as

excessive liberty often creates; but the colony passed through the fiery ordeal unscathed. In the plenitude of freedom enjoyed, each man was "a law unto himself." In religion and politics the people were absolutely free. Almost every phase of religious belief might have been encountered there, "so that, if a man lost his religious opinions, he might have been sure to find them in some village in Rhode Island." Agitation—healthful agitation—was the consequence. Town-meetings and other like gatherings of the people were often stormy, and the disputes of rivals were sometimes fierce, but never brutal. There was a remarkable propriety of conduct on all occasions; and out of the seething political caldron came to the surface the best men in the colony to administer its affairs. There was visible a high tone of morality among the people, and a much healthier religious sentiment than in Massachusetts at that time, which preserved the colony from many perils. "Our population," says one of its records, "shall not, as some conjecture it will, prove an anarchy, and so a common tyranny, for we are exceedingly desirous to preserve every man safe in person, name, and estate."

Society Library of New York. In 1754 the first public library established in the English-American colonies was founded in New York, with the avowed object of promoting a spirit of inquiry among the people by a loan of books to non-subscribers. Nearly £600 were raised, and a foundation was laid for an institution which still exists and is an ornament and a blessing to the city of New York. The trustees received a charter, afterwards, from Governor Tryon. This institution was named The New York Society Library. In 1876 it contained sixty-four thousand volumes.

Soldiers' Bounty Lands. In testimony of the "royal sense and appreciation" of the conduct and bravery of the officers and soldiers of the English and Provincial armies who had served through the French and Indian War, King George III., by proclamation, in 1763, commanded and empowered the royal governors of English provinces in America to grant lands, without fee or reward, to such reduced officers as had served in America during the late war, and to such private soldiers as had been, or should be, disbanded in America and were actually residing there, and should personally apply for the same, subject, at the expiration of ten years, to the same quit-rents as other lands were subject to in the province within which they were granted, and also subject to the same conditions of cultivation and improvement. The governors were ordered to grant to every person of the rank of field officer, 5000 acres; to every captain, 3000; to every subaltern or staff officer, 2000; to every non-commissioned officer, 200; to every private, 50.

"Solid South," THE. The Confederate Congress having passed a decree for silencing Union men and making all residents loyal to the Confederate cause (see *Confederate States Congress, Third Session of the*), President Davis issued a

proclamation (Aug. 14, 1861) in accordance with the intent of that decree. This and the Confiscation Act put the seal of silence upon the lips of all Union men. Few could leave, for obstacles were cast in their way. To remain was to acquiesce in the new order of things, or suffer intensely from social ostracism, if not from actual persecution. In East Tennessee, where the majority of the people were Unionists, fearful persecutions occurred at times. Unionists were imprisoned (see *Brownlow, William Gannaway*) and their property was plundered. Very soon the jails were filled with loyalists, and so completely were the people of that region under the control of armed Confederates that, in November, 1861, Colonel W. B. Wood, a Methodist clergyman from Alabama, holding a Confederate military commission, wrote to Judah P. Benjamin, Secretary of War, at Richmond: "The rebellion [resistance to Confederate rule] in East Tennessee has been put down in some of the counties, and will be effectually suppressed in less than two weeks." After speaking of breaking up the camps of the loyalists, he said, "It is a farce to arrest them and turn them over to the courts. . . . They really deserve the gallows, and, if consistent with the laws, ought speedily to receive their deserts." The gallows was sometimes used, and Union fugitives, driven from their homes, were hunted by blood-hounds in some parts of Tennessee.* On Nov. 20 Colonel Wood wrote to Secretary Benjamin that the sentiment of the people of East Tennessee was so "hostile to the Confederate government that it was useless to attempt to have them arrested and convicted by the courts," and recommended the summary trial of "bridge-burners and spies." To this letter Benjamin replied (Nov. 25): "All such as can be identified as having been engaged in bridge-burning [to obstruct the march of Confederate raiders] are to be tried summarily by drum-head court-martial, and, if found guilty, executed on the spot, by hanging. It would be well to leave the bodies hanging in the vicinity of the burned bridges. . . . In no case is one of the men known to be up in arms against the government to be released on any pledge or oath of allegiance. The time for such measures is past. They are all to be held as prisoners of war, and held in jail to the end of the war." This spirit of the Confederate Secretary of War, manifested in all parts of the Confederate service at that time, produced a "solid South." It was history repeated — "Order reigns in Warsaw!"

* The following advertisement appeared in the *Memphis Appeal*:

"BLOOD-HOUNDS WANTED.—We, the undersigned, will pay \$5 per pair for fifty pairs of well-bred hounds, and \$50 for one pair of thoroughbred blood-hounds, that will take the track of a man. The purpose for which these dogs are wanted is to chase the infernal, cowardly Lincoln bushwhackers of East Tennessee and Kentucky (who have taken advantage of the bush to kill and cripple many good soldiers) to their haunts and capture them. The said hounds must be delivered at Captain Hammer's livery stable by the 10th of December next, where a mustering-officer will be present to muster and inspect them.

"F. N. MCNAIRY.
"H. H. HARRIS.

"CAMP COMFORT, CAMPBELL CO., TENN., Nov. 16."

Somers Isles. A name given to the Bermudas, in compliment to Sir George Somers, one of the commissioners for Virginia, who was wrecked there in 1609. (See *Virginia, Colony of*.) [These islands received their present name in honor of Juan Bermudez, a Spaniard, who was wrecked upon one of them in 1522.] In 1614 the islands were settled under a charter given by King James and called Somers Isles. In 1640 a regular government was established there. Sir George Somers was sent there in 1610 by Lord Delaware for provisions; but, by tempests, the ship was driven northward and finally returned to Virginia. Thence he sailed again, and, after boisterous weather and great fatigue, reached the Bermudas, where he died in 1611, when upwards of sixty years of age. On the spot where he died the town of St. George was built. His heart and entrails were buried in Bermuda and his body was sent to England. In 1620 the Governor of Bermuda caused a large marble slab to be laid over the portion of his remains buried there, upon which was cut an epitaph, written by the governor himself, beginning:

"In the year 1611
Sir George Somers went to heaven;

and concluding:

"At last, his soul and body having to part,
He here bequeathed his entrails and his heart."

Song of the Guillotine. During the prevailing madness occasioned by the French Revolution (1793), Thelwall, a celebrated English Jacobin, wrote and put forth the following song, adapted to the air of "God save the King," called "God save the Guillotine."

"God save the guillotine!
Till England's king and queen
Her power shall prove;
Till each anointed knob
Affords a clipping job,
Let no rude halter rob
The guillotine.

"France, let thy trumpet sound—
Tell all the world around
How Capet fell;
And when great George's poll
Shall in the basket roll,
Let merry then control
The guillotine.

"When all the accepted crew
Have paid their homage due
The guillotine,
Let Freedom's flag advance
Till all the world, like France,
O'er tyrants' graves shall dance,
And peace begin."

Joel Barlow, an American, who had become a radical French Democrat, was invited to a Jacobin festival at Hamburg, on July 4, 1793, where he furnished Thelwall's song, at dinner, and it was sung, with great applause. It was supposed to have been written by Barlow, who, on his return, was coldly received in New England, not only on that account, but because he had assisted Paine in publishing his *Age of Reason*. The song of the guillotine was republished in Boston.

Sons of Liberty. At the period of Zenger's trial (1735) the radical opponents of the royal governors were called Sons of Liberty; but the

name was not often heard until after the memorable speech in the House of Commons (1765) of Colonel Barré against the taxation of the Americans. In reply to Charles Townshend's assertion that the colonies had been cared for and nourished into strength by the indulgence of the British government, Barré scornfully denied it, saying that care was exercised in sending unfit persons as governors to rule over them — "men whose behavior on many occasions had caused the blood of those *sons of liberty* to recoil within them." The associated patriots in America instantly assumed this name. They were chiefly ardent young men, who loved excitement, but who were truly patriotic. They had, as a general rule, nothing to lose, let events turn as they might. Persons of consideration and influence, though they generally favored the acts of the Sons of Liberty, kept aloof from open coalition with them, for prudential motives; for the combination appeared dangerous. Their first business seemed to be the intimidation of stamp-distributors and to oppose the act in every way; but they finally, spreading widely over the colonies from Massachusetts to Georgia, became the most radical leaders in the quarrel with Great Britain and promoters of the war for independence, in which many of them became distinguished leaders, in the council and in the field.

Sortie at Fort Erie. After the terrible explosion and the repulse of the British at Fort Erie (Aug. 15, 1814), both parties prepared for a renewal of the contest. (See *Siege of Fort Erie*.) Each was strengthened by reinforcements, but the struggle was not again begun for a month. General Brown had recovered from his wound, and was again in command of his army. The fort was closely invested by the British, but Drummond's force, lying upon low ground, was greatly weakened by typhoid fever. Hearing of this, Brown determined to make a sortie from the fort. The time appointed for its execution was the 17th of September. He resolved, he said, "to storm the batteries, destroy the cannons, and roughly handle the brigade on duty, before those in reserve at the camp could be brought into action." Fortunately for the sallying troops, a thick fog obscured their movements as they went out, towards noon, in three divisions — one under General Porter, another under James Miller (who had been breveted a brigadier), and a third under General Ripley. Porter reached a point within a few rods of the British right wing, at near three o'clock, before the movement was suspected by his antagonist. An assault was immediately begun. The startled British on that flank fell back, and left the Americans masters of the ground. Two batteries were then stormed, and were carried after a close struggle for thirty minutes. This triumph was followed by the capture of the block-house in the rear of the batteries. The garrison were made prisoners, the cannons and carriages were destroyed, and the magazine blown up. Meanwhile, General Miller had carried two other batteries and block-houses in the rear. Within forty minutes after Porter and Miller began

the attack, four batteries, two block-houses, and the whole line of British intrenchments were in the hands of the Americans. Fort Erie was saved, with Buffalo, and stores on the Niagara frontier, by this successful sortie. In the space of an hour the hopes of Drummond were blasted, the fruits of the labor of fifty days were destroyed, and his force reduced by at least one thousand men. Public honors were awarded to Brown, Porter, and Ripley. Congress presented each with a gold medal. (See p. 1317.) To the chief commander (Brown), of whom it was said, "no enterprise which he undertook ever failed," the corporation of New York gave the freedom of the city in a gold box. (See *Freedom of a City*.) The Governor of New York (D. D. Tompkins) presented to him an elegant sword. The states of New York, Massachusetts, South Carolina, and Georgia each gave Ripley tokens of their appreciation of his services.

Soulé, PIERRE, was born at Castillon, in the Pyrenees, in 1801; died in New Orleans, March 14, 1870. His father was a lieutenant-general in the army of the French Republic. Pierre, destined for the Church, prepared by study at the Jesuits' College at Toulouse and at Bordeaux. Engaged in a conspiracy against the returned Bourbons (1816), the plot was discovered, and he lived more than a year in the guise of a shepherd. Permitted to return, he assisted in the establishment of a republican newspaper at Paris, for the utterances of which he was condemned to prison at St. Pelagie, but escaped to England, and from thence came to Baltimore. In the fall of 1825 he went to New Orleans, where he became a very eminent lawyer; was elected to the United States Senate in 1847, where he served eight years, always taking ground in favor of the most extreme views on slavery and state supremacy. In 1853 President Pierce appointed him minister to Spain, where he soon became involved in a quarrel with M. Turgot, the French ambassador, whom he severely wounded in a duel. Having taken a high-handed measure in reference to a treaty for reciprocity of trade between the United States and Cuba, he joined in the Ostend Conference, and was one of the framers of the Ostend Manifesto (which see). Mr. Soulé returned to the United States in 1855, and in 1862 he was arrested by General Butler for disloyalty to the government, and confined several months in Fort Lafayette, New York. He was released on condition that he should leave the country. He returned to New Orleans a few months before his death.

Soulouque, FAUSTIN, Emperor of Hayti, was born a slave, in the southern part of Santo Domingo, in 1789; died in Jamaica, W. I., Aug. 6, 1867. He was made free, by the decree of the French government, in 1790, and took part in the negro insurrection against the French in 1803. He was a skilful military leader, as captain, under Boyer, in 1820; as colonel, under Herard, in 1844, and as brigadier-general, under Guerrier, in 1845. While two candidates for the presidency of Hayti were disputing and plotting,

GENERAL BROWN'S MEDAL.

GENERAL PORTER'S MEDAL.

GENERAL RIPLEY'S MEDAL.

the Senate unexpectedly elected Soulouque to the office, March 1, 1847. As soon as he was seated in office he began to pursue a system of terrorism towards the citizens, who were proscribed, executed, and their property confiscat-

ed. He unsuccessfully attempted to subjugate the Republic of Santo Domingo. Ostensibly by the will of the people, he restored the empire in his own person in 1849, having been chosen emperor in August. On April 18, 1852, he was

crowned with great pomp, imitating the ceremonial at the crowning of Napoleon I. While repeating his attempt, in 1855, to subdue Santo Domingo, he was thoroughly defeated by Santana. Other misfortunes followed, and in 1858, when there was general discontent throughout Hayti, General Geffrard, an enterprising mulatto, led a rebellion, and was recognized as President of Hayti by the officials. Soulouque fled to Jamaica (January, 1859) in a British vessel, and resided there.

South Carolina. A state constitution was first adopted in South Carolina March 26, 1776, and the national Constitution was ratified by that state May 23, 1788. Great political agitation existed in the state from 1828 to 1833, there being strong opposition to the high tariff upon importations imposed by the national government. Immediately after the presidential election in 1832, a state convention met (November), and adopted unanimously a "nullification ordinance" (see *Nullification*), which pronounced the tariff "null, void, and no law, nor binding

STATE SEAL OF SOUTH CAROLINA.

on this state, its officers and citizens," and prohibited the payment of duties on imports imposed by that law within the state after Feb. 1, 1833. It was declared that no appeal in the matter should be made to the Supreme Court of the United States against the validity of an act of the Legislature to that effect, and that, should the national government attempt to enforce the law thus nullified, or interfere with the foreign commerce of the state, the people of South Carolina would "hold themselves absolved from all further obligations to maintain or preserve their political connection with the people of the other states." This was an assertion of the doctrine of state supremacy pure and simple. It was approved by the governor (Robert Y. Hayne [which see]) in his message to the Legislature, and that body took measures to give practical effect to the ordinance. President Jackson met the vital issue boldly and promptly, in a proclamation which made the nullifiers pause; and, during the ensuing session of Congress, a compromise tariff was passed, which allayed feeling and postponed civil war. (See *Nullification*.) A more fatal political excitement began in South Carolina in 1860, when Abraham Lincoln, the Republican candidate for President of the United States, was elected. Threats of seceding from the Union had been made at the Democratic National Convention in Charleston (which see), and immediately after the election a call was made for a state convention, which assembled first at Columbia, and then at Charleston, and on Dec. 20, 1860, passed an ordinance of secession. (See *South Carolina Ordinance of Secession, Signing of the*.) A few

days afterwards civil war was begun in the harbor of Charleston, by the firing on a steamer in the employ of the national government. (See *Star of the West fired upon and Fort Sumter, First Gun fired at*.) South Carolina was officially proclaimed to be a "sovereign nation," and the public property of the national government within its borders was speedily seized. Finally, in April, 1861, citizens of South Carolina attacked Fort Sumter, and compelled its evacuation by national troops, and for about four years afterwards kept up a warfare upon the life of the Republic. At the close of the war a provisional governor was appointed (June 30, 1865) by the President for South Carolina, and in September a state convention, at Columbia, repealed the ordinance of secession, and declared slavery abolished. In October James L. Orr was chosen governor, with other state officers, and the government passed into their hands Dec. 25, 1865. This government continued until superseded (March, 1867) by military government, South and North Carolina being included in one military district. On Jan. 14, 1868, at a convention composed of thirty-four white people and sixty-three colored, a constitution was adopted, which was ratified at an election in April, 1869, by a large majority. Members of the Legislature (seventy-two white and eighty-five colored) and representatives in Congress were chosen. Reorganization was practically completed on the ratification of the Fourteenth Amendment, by the withdrawal of the military authorities on the 13th of July, 1868. The Legislature ratified the Fifteenth Amendment of the national Constitution March 11, 1869.

South Carolina Commissioners in Washington. On Dec. 21, 1860, the South Carolina Secession Convention appointed Robert W. Barnwell, James H. Adams, and James L. Orr commissioners to proceed to Washington to treat for the possession of the public property within the limits of their state, which was speedily seized. They arrived in Washington Dec. 26, and, evidently expecting to stay long as ambassadors of their "sovereign state," took possession of the house of a widow on K Street, which Mr. Trescott had hired for them, as a ministerial residence, with servants and other necessities for carrying on a domestic establishment. On the day after their arrival they heard of the movement of Anderson. (See *Anderson in Fort Sumter*.) On the 28th they addressed a formal diplomatic letter to the President, drawn up by Orr, informing him of their official authority to treat for the delivery, by the United States, of all forts and other public property in South Carolina to the authorities of that "sovereign state." They also furnished him with a copy of the Ordinance of Secession. They urged the President to immediately withdraw all the national troops from Charleston harbor, because they were "a standing menace." The President was highly offended by the arrogance of the commissioners, acting under the peculiar circumstances of the case, and the best friends of the country urged him to arrest them; but,

soothed by his fears, he replied to them courteously (Dec. 30), and expressed a willingness to lay before Congress any proposition they might make. To recognize their state as a foreign power would be usurpation on his part, and he should refer the whole matter to Congress. He denied ever having made any agreement with members of Congress from South Carolina to withhold reinforcements from the forts at Charleston, or any pledge to do so, which William Porcher Miles asserted had been done. He alluded to the seizure of the arsenal at Charleston, and gave them to understand that he should defend Fort Sumter. Two days later the commissioners replied to this, in a long and extremely insulting letter, in which they charged the President with perfidy, and taunted him with dereliction of duty. The President made no reply, but returned the letter to the commissioners endorsed—"This paper, just presented to the President, is of such a character that he declines to receive it." This occurred on New-year's day, 1861. The excitement in Washington was very great. Few calls were made on the President that day. Unionists and Secessionists, having lost confidence in him, refused to shake hands with him. Secession cockades, worn by men and women, multiplied in the streets. Fully fifty Union flags were displayed; and that night a large police force was detailed to guard the house of the commissioners. Having occupied the ministerial residence on K Street ten days, the commissioners left, and returned to South Carolina.

South Carolina Declaration of Independence. Charles G. Memminger, afterwards the "Secretary of the Treasury of the Confederate States of America," reported to the Secession Convention of South Carolina a "Declaration of the Causes which justify the Secession of South Carolina from the Federal Government." Various causes were specified, among which was "a sectional combination for the subversion of the Constitution" in the North; but it is remarkable that in no word was the national government charged with the slightest actual wrongdoing. It ended with the concluding words of the great Declaration of Independence. It was a supplement to an "Address of the People of South Carolina to the People of the Slave-holding States," prepared by R. Barnwell Rhett, in which they declared, "All we demand of other people is to be let alone to work out our own high destinies. United together, and we must be the most independent, as we are the most important, among the nations of the world. United together, and we must be a great, free, and prosperous people, whose renown must spread throughout the civilized world, and pass down, we trust, to remotest ages. We ask you to join us in forming a confederacy of slave-holding states." At about the same time the governor of South Carolina (Pickens) issued a proclamation declaring that "South Carolina is, and has a right to be, a separate, sovereign, free, and independent state, and vested with all the powers of such a state," and declared the proclamation to be given under his hand, on the 24th day

of December, 1860, "and in the eighty-fifth year of the sovereignty and independence of South Carolina." Then the Charleston newspapers published intelligence from all the states in the Union under the head of "Foreign News," and a small medal was struck in commemoration of the great act of separation. The governor was authorized to receive ambassadors, ministers, consuls, etc., from foreign countries.

South Carolina Flag and Medal (1861). On the day when the South Carolina Ordinance of Secession was passed, the convention

SOUTH CAROLINA FLAG.

adopted a new banner for the empire. It was composed of red and blue silk, the former being the ground of the standard, and the latter, in the form of a cross, bearing fifteen stars. The larger star was for South Carolina. In one upper corner was a white crescent moon, and in the other a palmetto-tree. A small medal was also struck to commemorate the important event.

SOUTH CAROLINA MEDAL.

South Carolina Flag in the Revolution. When a portion of Colonel Moultrie's regiment had taken possession of Fort Johnson (which see), he was requested to devise a banner. The standard military uniform of the colony was blue, and the first and second regiments wore a silver crescent on the fronts of their caps; he therefore ordered a large flag of blue silk, with a simple white or silver crescent on the right-hand corner.

South Carolina, OCCUPATION OF, BY THE BRITISH (1780). On the fall of Charleston, Clinton sent three expeditions into the interior to secure the submission of the state. One, under Cornwallis, marched up the Santee towards Camden; another, under Lieutenant-colonel Cruger, was ordered to penetrate the country as far as Fort Ninety-six; and a third, under Lieutenant-colonel Brown, marched up to and took post at Augusta, in Georgia. On his march, Cornwallis despatched Tarleton to capture a Virginia force under Colonel Buford, fleeing up the north side of the Santee. (See *Buford's Defeat*.) Clinton issued a circular calling upon those loyally disposed to form a militia to uphold the royal authority. A proclamation followed (May 22), threatening great severity and confiscation of property as a penalty for appear-

ing in arms against the king; and a second one (June 1) offered pardon to all excepting a few who had caused the execution of offending loyalists. No resistance was made to the march of the expeditions through the state. By a proclamation (June 3, 1780), no alternative was allowed the inhabitants but to take an oath of allegiance to the crown or to be treated as enemies of the sovereign. The conquest of South Carolina being completed, Sir Henry returned

Dec. 20, 1860 (see *South Carolina Secession Convention*), was signed the same evening in the hall of the South Carolina Institute, in the presence of the constituted authorities of the state. When the convention adjourned for dinner at four o'clock in the afternoon, and went in regular procession from St. Andrew's Hall, they were cheered by the populace, and the chimes of St. Michael's Church pealed forth *Auld Lang Syne* and other airs. At seven o'clock they reassem-

BANNER OF THE SOUTH CAROLINA SECESSION CONVENTION.

to New York, leaving Cornwallis, with four thousand troops, to hold South Carolina in subjection. There was then (June, 1780) only a single Continental regiment (Porterfield's Virginia) in the whole Southern Department, extending from the Roanoke to the Gulf of Mexico.

South Carolina Ordinance of Secession, SIGNING OF THE. The South Carolina Ordinance of Secession, adopted by the convention

bled in the hall of the Institute for the purpose of signing it. The ordinance had been engrossed on parchment, twenty-five by thirty-three inches in size, with the great seal of South Carolina attached. The governor and his council and both branches of the Legislature were present, and the hall was densely crowded with men and women of Charleston. Back of the president's chair was suspended a banner, composed

of cotton cloth, with devices painted in water-colors by a Charleston artist named Alexander. The base of the design was a mass of broken and disordered blocks of stone, on each of which were the name and arms of a free-labor state. Rising from this mass were two columns of perfect and symmetrical blocks of stone, connected by an arch of the same material, on each of which, fifteen in number, were seen the name and coat-of-arms of a slave-labor state. South Carolina formed the key-stone of the arch, on which stood a statue of Calhoun leaning upon a trunk of a palmetto-tree, and holding a scroll bearing the words "Truth, Justice, and the Constitution." On each side of the statue were allegorical figures of Faith and Hope. Beyond each of these was a North American Indian with a rifle. In the space formed by the two columns and the arch was the device of the seal and flag of South Carolina—namely, a palmetto-tree, with a rattlesnake coiled around its trunk, and at its base a park of canons and some emblems of state commerce. On a ribbon flitting from the body of the tree were the words "Southern Republic." Over the whole design were fifteen stars in the segment of a circle, the (then) number of the slave-labor states. Underneath all, in large letters, were the words "Built from the Ruins." So it was that the South Carolina State Convention proclaimed to the world, at the moment when they signed the Ordinance of Secession, their determination to lay the Republic in ruins, and upon these ruins to construct an empire whose corner-stone should be human slavery. On each side of the platform on which the president sat was a real palmetto-tree. After the signature of every member of the convention was affixed to the ordinance the venerable Rev. Dr. Bachman advanced to the front of the platform and uttered a petition to Almighty God for his blessing and favor on the act. Then the president stepped forward, read and exhibited the instrument to the people, and said, "The Ordinance of Secession has been signed, and I proclaim the State of South Carolina an independent commonwealth." A great shout of exultation went up from the multitude. So closed the first great act of the American Civil War.

South Carolina Preparing for Secession.*

On the day when Lincoln was elected (Nov. 5, 1860) the South Carolina Legislature assembled at Columbia, when joint resolutions of both houses providing for a state convention to consider the withdrawal of the state from the Union were offered. Some of the more cautious members counselled delay, and to wait for the co-operation of other states, but this advice was condemned by more zealous members. "If we wait for co-operation," said one of them, "slavery and state rights will be abandoned; state sovereignty and the cause of the South lost forever." James Chestnut, then a member of the United States Senate, recommended immediate secession; and W. W. Boyce, a member of the national House of Representatives, said, "I think the only policy for us is to arm as soon as we receive authentic intelligence of the

election of Lincoln. It is for South Carolina, in the quickest manner and by the most direct means, to withdraw from the Union." In the course of the debate the fact came out that emissaries had already been sent from the Southern States to Europe to prepare the way for aid and recognition of the contemplated "Southern Confederacy" by foreign governments; and that France had made propositions for the arrangement of such relations between that country and the government about to be established in South Carolina as would insure to the former such a supply of cotton for the future as its increasing demand for that article would require. On Nov. 12 the Legislature passed an act authorizing a state convention. That Legislature also declared that a "sovereign state of the Union had a right to secede from it; that the states of the Union are not subordinate to the national government, were not created by it, and do not belong to it; that they created the national government; that from them it derives its powers; that to them it is responsible; and that when it abuses the trust reposed in it they, as equal sovereigns, have a right to resume the powers respectively delegated to it by them. (See *State Supremacy and Resolutions of '98.*)

South Carolina Secession Convention. As soon as the Legislature of South Carolina authorized (Nov. 12, 1860) a state convention, orators of every grade went out to harangue the people in all parts of the state. Every speech was burdened with complaints of "wrongs suffered by South Carolina in the Union." The organ of the Secessionists in Charleston called upon all natives of South Carolina in the army and navy to violate their oaths—to resign their commissions and join in the revolt. "The mother looks to her sons to protect her from outrage," said this fiery newspaper (the *Charleston Mercury*); "she is sick of the Union—disgusted with it upon any terms within the range of the widest possibility." This was responded to by the resignation of many South Carolinians; and the leaders in the revolutionary movement declared that "not a son of that state would prove loyal to the old flag." They commended the course of Lieutenant J. R. Hamilton, a South Carolinian and member of the United States Navy, who issued a circular letter to his "fellow-Southerners" in the marine service, expatiating much upon honor, and saying, "What the South asks of you now is to bring with you every ship and man you can, that we may use them against the oppressors of our liberties and the enemies of our aggravated but united people." Vigilance committees were organized to discover and suppress every anti-secession sentiment and movement in South Carolina. These committees, clothed with power, were called "Guardians of Southern Rights." Their officers possessed full authority to decide all questions brought before them, and their decision was "final and conclusive." Their patrols were authorized to arrest and bring before the committees all suspected white men, and to suppress all gatherings of negroes. It was un-

der such circumstances that the election of members of the convention was held, and the *Charleston Mercury* was enabled to say to the officers of the army and navy natives of that state it was calling home, "You need have no more doubt of South Carolina's going out of the Union than of the world's turning round. *Every man that goes to the convention will be a pledged man*—pledged for immediate separate state secession in any event whatever." This promise was uttered before the members of the convention had been chosen. They were chosen Dec. 3, 1860. They met at Columbia, the capital of the state, on the 17th, and chose David F. Jamison president. The great prevalence of

DAVID F. JAMISON

the small-pox there caused the delegates to adjourn to Charleston, where they proceeded at once to business. They chose several committees, one of which was to draft an ordinance of secession. J. A. Inglis was chairman of that committee, and on Dec. 20 reported the following ordinance: "We, the people of the State of South Carolina, in convention assembled, do declare and ordain, and it is hereby declared and ordained, that the ordinance adopted by us in convention on the 23d day of May, in the year of our Lord one thousand seven hundred and eighty-eight, whereby the Constitution of the United States was ratified, and also all acts and parts of acts of the General Assembly of the state ratifying amendments of the said Constitution, are hereby repealed, and the union now subsisting between South Carolina and other states under the name of the United States of America is hereby dissolved." This ordinance had been framed at the house of Edmund Rhett, at Beaufort, S. C., some time before, and the committee to report it had been selected with Mr. Inglis at its head. The ordinance, reported at noon Dec. 20, 1860, was adopted just forty-five minutes after it was submitted to the convention. There was no debate, for every man was pledged to vote for it. The one hundred and sixty-nine members of the convention were then assembled in St. Andrew's Hall, and it was agreed that at seven o'clock in the evening they should go in procession to Institute Hall and sign "the great act of deliverance and liberty."

It was done. (See *South Carolina Ordinance of Secession, Signing of the*.)

South Carolina, STATE GOVERNMENT FORMED IN (1776). Following the example of New Hampshire, the convention of South Carolina resolved itself into an assembly (March 24, 1776) and chose from its own body a legislative council of thirteen members. John Rutledge was chosen president, and Henry Laurens vice-president. A judiciary was organized, and William Henry Drayton appointed chief-justice. This government was formed to last only during the war.

South Carolina, THE COLONY OF, was one of the original thirteen states of the Union. It is supposed by some that Verazzani visited its coast in 1524. D'Allyon was there in 1520 (see *America, Discoverers of*); but the first attempt to colonize that region was made by John Ribault, at the head of some Huguenots, in 1562. (See *Huguenots in America*.) The region was granted to eight of the favorites of Charles II., in 1663 (see *North Carolina, The Colony of*), and in 1670 they sent three ships with emigrants, under the direction of Sir William Sayle and Joseph West, to plant a colony below Cape Fear. They entered Port Royal Sound, landed on Beaufort Island, on the spot where the Huguenots had dwelt, and there Sayle died, in 1671. The immigrants soon afterwards abandoned Beaufort, entered Charleston harbor, went up the Ashley River, and seated themselves on its banks, a few miles above the site of Charleston. West exercised the authority of chief-magistrate until the arrival of Governor Sir John Yeamans, in December, 1671, with fifty families and a large number of slaves from Barbadoes. The next year representative government was established, under the title of the Carteret County Colony—so called in honor of Sir George Carteret. Ten years afterwards the colony removed to Oyster Point, at the junction of the Ashley and Cooper rivers, and there the city of Charleston was founded. Very soon afterwards some Dutch families, dissatisfied with English rule at New York, went to South Carolina, and planted themselves along the Edisto and Santee rivers. Like the settlers in North Carolina, those of the Southern colony refused to be governed by the constitution framed by Shaftesbury and Locke. (See *Fundamental Constitutions*.) Political and religious quarrels distracted the colony a long time, and finally the coast Indians made raids upon them, plundering the plantations of grain and cattle, and menacing the inhabitants. They were subdued in 1680. In 1690 a large number of Huguenots, or French Protestants, settled in the colony, and afterwards a considerable number of Swiss, Irish, and German emigrants made their way to South Carolina. The people were often in opposition to the proprietary rulers. They broke into open rebellion, and, in 1690, the popular Assembly impeached and banished Governor John Colleton. While this turbulence prevailed, Seth Sothel arrived, pursuant to his sentence of banishment from North Carolina, and the people unanimously chose him for governor. For two years he plundered and oppressed them, when he, too, was deposed and

banished. Philip Ludwell came to re-establish the authority of the proprietors, but the people, thoroughly aroused, resolved not to tolerate even so good a man as he. He tried to enforce the Fundamental Constitutions, but soon gladly withdrew from the turbulent community. The good Quaker, John Archdale, came in 1695 as governor, and by his mild republican rule made the people happy. In 1702 Governor Moore led an expedition against the Spaniards at St. Augustine. It was unsuccessful, and burdened the colony with a debt of more than \$26,000, for the payment of which they issued bills of credit for the first time. Moore conducted a more successful expedition against the Appalachian Indians (who were in league with the Spaniards) in 1703. Their whole territory in Georgia was made tributary to the South Carolinians. This cause of excitement had just passed by, when the proprietors attempted to establish the Anglican Church ritual as the state method of worship in South Carolina. The Assembly passed acts to that effect, and Dissenters were excluded from all public offices. This being a violation of chartered rights, the British ministry compelled the Colonial Assembly to repeal the law (1706), but the Church party remained dominant. French and Spanish war-vessels entered Charleston harbor with troops, to capture the province and annex it to the Spanish domain of Florida; but they were repulsed, with great loss. A few years later there was a general Indian confederacy formed, to exterminate the white people of South Carolina. They came upon the South Carolinians from Georgia, the west, and from North Carolina, thirsting for vengeance; but, after several severe encounters, the South Carolinians were victorious. The proprietors appearing indifferent to the sufferings of the colonists, the people arose in their might in 1719, deposed the proprietary governor, and appointed Colonel Moore governor of the colony. This course was sustained by the crown, and in 1729 the King of England bought the two Carolinas for \$30,000, and they became separate royal provinces. From that time until the French and Indian War the general history of the Carolinas presented nothing very remarkable, excepting their brave efforts for defending the colonies against the Indians and Spaniards. The South Carolinians warmly sympathized with the patriotic movements in the North preceding the old war for independence. The royal governor of South Carolina (Lord Campbell) abdicated the government, and took refuge on board a British war-vessel, in September, 1775, when the government was administered by a Provincial Council. A state constitution was adopted March 19, 1776, and John Rutledge was chosen the first governor of the new state, with the title of President. (See *Rutledge, John*.) South Carolina suffered much in the war that ensued.

South Mills, BATTLE OF (1862). General Reno, with New England, New York, and Pennsylvania troops, went in transports up the Pasquotank to within three miles of Elizabeth city, and, lauding cautiously in the night of April 19,

a part of them, under Colonel Hawkins, pushed forward to surprise and intercept a body of Confederates known to be about leaving that place for Norfolk. Misled by his guide, the Confederates were apprised of the movement before he appeared, and near South Mills, in the vicinity of Camden Court-house, they assailed the Nationals with grape and causter. Reno, with his main body, met the attack bravely. The Confederates were flanked, and hastily withdrew. A gunboat drove them out of the woods along the river-bank, and Hawkins's Zouaves made a charge, but were repulsed with heavy loss. The Confederates were defeated. This event caused much consternation at Norfolk. The Nationals lost (chiefly of Hawkins's Zouaves) fifteen killed, ninety-six wounded, and two made prisoners. The Confederates left thirty killed and wounded on the field. Winton, at the head of the Chowan; Plymouth, at the mouth of the Roanoke; and Washington, at the head of the Pamlico River, were now all quietly occupied by the National forces. For the remainder of the year the coasts of North Carolina were in possession of the Nationals.

South Mountain, BATTLE ON. The National army pursued the Confederates from Frederick (see *Invasion of Maryland and Pennsylvania*) in two columns over South Mountain into the beautiful valley of Antietam Creek. General Burnside led the right and centre by way of Turner's Gap; and the left, composed of Franklin's corps, went by the way of Crampton's Gap, on the same range, nearer Harper's Ferry. The division of D. H. Hill was the only Confederate force guarding Turner's Gap, and McLaws was guarding Crampton's Gap. The Confederates had no idea that the Nationals would make such a vigorous pursuit as they did; but on the morning of Sept. 14, 1862, a startling apparition met the eyes of the Confederates from the mountain heights. Pleasanton's cavalry was leading nearly the whole of the National army down the Kittocetan Hills and across the lovely valley towards South Mountain. A portion of General Cox's division of Ohio troops reached the borders of the Gap early in the forenoon, and, under the cover of a portion of McMullin's battery, he pressed up the wooded and rocky acclivity. He was at first confronted by Garland's division, which was badly cut up and its commander killed in the severe action that ensued. The place of this division was soon filled by the troops of Anderson, supported by Rhodes and Ripley. These held the position for a long time, but finally gave way, and Cox gained the crest of the mountain. It was now noon. Very soon the battle assumed far greater proportions, for two of Longstreet's brigades came to the aid of Hill. These were soon followed by Longstreet himself with seven brigades, making the Confederate force defending the Gap and the two crests about thirty thousand strong. First the divisions of National troops of Wilcox, Rodman, and Sturgis came up, followed soon after by Hooker's troops, and a little later a general battle-line was formed with Ricketts's, Reno's, and King's divisions. At four o'clock fighting was

general all along the line, and at many points the ground was contested inch by inch. General Hatch, who commanded King's division, was wounded, when General Doubleday took his command, his own passing to the care of General Wainwright, who was soon disabled. At dusk Hooker had flanked and beaten the Confederate left. Reno's command, which had gained a foothold on the crest, fought desperately until dark. At about sunset their leader, at the head of the troops in an open field, was killed. He died almost at the moment of victory, and his command devolved on General Cox. Meade, with his brigades, led by General Seymour and Colonels Magilton and Gallagher, fought on the right of Hatch's division. General Duryée, whose fine brigade of Ricketts's division had participated in the later struggles of Pope with Lee, was just coming up when the contest ceased at that point. Meanwhile the brigades of Gibbons and Hartenff had pushed up the road along the Gap, fighting and winning steadily until about nine o'clock in the evening, when, having reached a point near the summit of the Gap, their ammunition was exhausted. But the victory for the Nationals was secured. During the night Lee withdrew his forces, and so ended the battle of South Mountain. Franklin meanwhile, confronted by Confederates led by Howell Cobb (late Secretary of the national Treasury), had fought and driven his enemies over the mountain into the valley at Crampton's Gap, and held a position in Pleasant Valley, within six miles of Harper's Ferry.

South Sea Surveying and Exploring Expedition (1838). Propositions having been made to the national government for the fitting out of an expedition to survey and explore the South seas in the Antarctic regions, it was approved, and in December, 1836, a scientific corps was appointed, to receive pay from July 4, 1837. It was to be commanded by Captain Ap Catesby Jones, of the United States Navy. An expedition was organized, but, serious disputes arising, it was disbanded. Another was organized, and its command was intrusted to Lieutenant Charles Wilkes, of the navy. The scientific corps consisted of nine members—namely, H. Hale, Philologist; C. Pickering and T. R. Peale, Naturalists; J. Conthong, Conchologist; J. D. Dana, Mineralogist; W. Rich, Botanist; J. Drayton and A. T. Agate, Draughtsmen; Mr. Brackenridge, Horticulturist. The squadron consisted of the frigates *Vincennes* and *Peacock*, and the brig *Porpoise* and schooners *Flying-fish* and *Sea-horse* as tenders, with the store-ship *Relief*. It sailed from Hampton Roads Aug. 18, 1838, and on Jan. 26, 1839, was anchored opposite the mouth of the Rio Negro, Patagonia. The squadron, after visiting various groups of islands in the Pacific, visited New South Wales. Leaving Sydney in December (1839), important discoveries were made in the Antarctic regions. Lieutenant Wilkes then visited and explored the Feejee and Hawaiian islands, and in 1841 visited the northwest coast of North America. He crossed the Pacific from San Francisco, Cal., and visited some of the islands of the Indian

Archipelago, and thence sailed to the Cape of Good Hope and the Island of St. Helena, and cast anchor in New York harbor June 10, 1842. The expedition had penetrated to 66° south latitude. It made a voyage of about ninety thousand miles, and brought home a large number of fine specimens of natural history and of other departments of scientific research, which are preserved in the custody of the National Institute, in the building of the Smithsonian Institution, Washington city.

Southern Army, THE (1780). After the defeat of Gates the Congress requested Washington to name his successor in command of the Southern army. He selected General Nathaniel Greene, and he was appointed Oct. 30, 1780. Major Henry Lee's corps of horse and some companies of artillery were ordered to the South. The Baron de Steuben was ordered to the same service; and Thaddeus Kosciuszko, a patriot of Poland, was chosen engineer of that department to supply the place of Duportail, made prisoner at Charleston. Efforts were made to reorganize the Southern army. To supply the place of captured regiments, the Assembly of Virginia voted three thousand men, apportioned among the counties, and a special tax was laid to raise means to pay bounties. In addition to money offered, volunteers were each offered three hundred acres of land at the end of the war and "a healthy, sound negro" or \$200 in specie. Virginia also issued \$350,000 in bills of credit to supply the treasury. North Carolina used its feeble resources to the same end. Drafts and recruits, and one whole battalion, came forward; and as Cornwallis retired General Gates advanced, first to Salisbury, and then to Charlotte, where General Greene took the command (Dec. 2, 1780). On the following day Gates departed for the headquarters of Washington to submit to an inquiry into his conduct at Camden. Greene found the troops in a wretched condition—clothes in tatters, insufficient food, pay in arrears producing discontent, and not a dollar in the military chest. Subsistence was obtained only by impressment. But with his usual energy he prepared for active operations even with such unpromising materials, arranging the army in two divisions, and posting the main body at Cheraw, east of the Pedee; while Morgan and others were sent to occupy the country near the junction of the Pacolet and Broad rivers.

Southern Independence Association in England. A large proportion of the British ruling classes, from the prime-minister down to the verge of the "common people," were anxious to see the prosperous and influential Republic of the West overturned, and for more than two years gave every possible aid and comfort to the insurgents. Elated by the disasters to the National army at Fredericksburg and Chancellorsville in the spring of 1863, these British sympathizers became very active, and urged their government to acknowledge the independence of the Confederate States. Public meetings were held in favor of the insurgents.

At one of these, held in the open air at Sheffield, May 26, 1863, Rev. Mr. Hopp offered the following resolution, which was adopted by an immense majority: "Resolved, That in the opinion of this meeting the government would act wisely, both for the interests of England and those of the world, were they immediately to enter into negotiations with the great powers of Europe for the purpose of obtaining the acknowledgment by them of the independence of the Confederate States of North America." In the spring of 1864 a "Southern Independence Association" was formed, with a British peer (Lord Wharncliffe) as president. Its membership was composed of powerful representatives of the Church, State, and trade. It was organized at Manchester in April. Nearly nine hundred names appeared on its list of members. Not a few of them were members of the House of Lords and House of Commons. There were baronets, clergymen, lawyers, magistrates, and merchants, prominent in all parts of the country. The funds at the disposal of the association were immense, and no one doubts that these were used without stint in furnishing the Confederate armies with arms and clothing, and so prolonging the war. This association was thoroughly condemned by every right-minded Englishman, and the British government was too prudent to listen to the suggestions of the association, or the proposals of members of the Peace faction in New York made to Lord Lyons, the British ambassador, six months before.

Southwest Pass, NAVAL ENGAGEMENT AT. In the fall of 1861 there was a blockading squadron at the Southwest Pass of the Mississippi River, composed of the war-steamer *Richmond*, sloop-of-war *Vincennes* and *Preble*, and steam-tender *Water-witch*, commanded by Captain J. Pope. J. S. Hollins, of the United States Navy, who had deserted his flag, was there in command of the *Manassas*, a Confederate ram, or iron-beaked and iron-clad vessel. About four o'clock on the morning of Oct. 12, 1861, this ram appeared suddenly close to the *Richmond*, and by the time an alarm could be given by the watch, her iron prow had struck the war-steamer abreast the port fore-chaunnels, staving a hole in the ship's side. Then she withdrew and attempted to breach the *Richmond's* stern, but failed. A signal of danger had been given to the other vessels. They slipped their cables and ran down to the Pass, while the *Richmond* gave the assailant a volley from her port battery. The commander of the *Vincennes*, mistaking a signal, attempted to set fire to his vessel. They abandoned her, but, happily, the match intended to explode her magazine went out, and her crew returned to her. The *Richmond* and *Vincennes* had grounded, and for a while were bombarded by Hollins. He also sent down fire-rafts to burn them, but did not succeed. Hollins was soon driven up the river. The only damage he had done to the squadron was to slightly injure a coaling-schooner, sink a large boat, and pierce a hole in the side of the *Richmond*.

Sovereignty of the Confederacy (1861). The

first assumption of sovereignty by the "Congress" at Montgomery was on Feb. 12, when it was resolved that the new government should take under its charge all questions and difficulties then existing "between the sovereign states of the Confederacy and the government of the United States" relating to the occupation of forts, arsenals, navy-yards, and other public establishments. This action was extremely offensive to South Carolina, for in it they saw a vision of the fading sovereignty of their state, which had so lately been declared a "sovereign nation." It reduced that "nation" to the level of its "sister sovereignties." The Hotspurs of the coast region were about to rebel, for they claimed Fort Sumter and all other public property seized or to be seized in that state, as the individual property of South Carolina. These malcontents were pacified by being allowed to "humiliate the United States" by seizing Fort Sumter themselves (see *Fall of Fort Sumter*). The *Charleston Mercury* had sounded the trumpet of revolt by saying, "After two efforts to obtain peaceable possession of Fort Sumter, and a submission for two months to the insolent military domination in our bay of a handful of men, the honor of the state requires that no further intervention from any quarter should be tolerated, and that this fort should be taken by South Carolina alone."

Spain Fears America (1769). "The position and strength of the countries occupied by the Americans," said Grimaldi, the Spanish minister, in 1769, "excites a just alarm for the rich Spanish possessions on their borders. They have already introduced their grain and rice into our colonies by a commerce of interlopers. If this introduction should be legalized and extended to other objects of commerce, it would effectually increase the power and prosperity of a neighbor already too formidable. Moreover, should this neighbor separate from its metropolis, it would assume the republican form of government—and a republic is a government dangerous, from the wisdom, the consistency, and the solidity of the measures which it would adopt for executing such projects of conquest as it would naturally form." This was the reply of the Spanish minister to a suggestion of establishing free-trade in America. Grimaldi's fears were prophetic.

Spain Hostile to the United States. The Spanish court was more hostile to the United States than any other in Europe, for it was seen that encouragement to the revolt might hasten the independence of the Spanish-American colonies. Spain was not only hostile in principle, but was willing to be actively meddlesome in checking the good offices of France towards the United States. Soon after the arrival in Philadelphia in 1778 of the first French minister, a Spanish emissary (Juan de Miralles) appeared there, without any authority, but was received as a friend and diplomatic agent of Spain by the unsuspecting Congress. He was only a spy. France had pressed Spain to join her in helping the Americans, but the latter had steadily re-

fused, and when a despatch announcing the treaty reached Madrid the government was amazed, and saw spectres of colonial losses in the near future. Florida Blanca, the Spanish minister, suspected the good faith of the French; and when in April (1778) the French ambassador at Madrid asked him at what time Spain would take part in the war against Great Britain, he burst out into a tirade against the French policy. "The American deputies," he said, "are treated like the Roman consuls, to whom the kings of the East came to ask support." Blanca soon began the meditation of intrigues with Great Britain to crush or reduce the growing power of the United States.

Spain, RELATIONS WITH, AND HER COLONIES. A leading topic in Congress early in 1818 was the course to be pursued towards Spain and her revolted colonies. (See *Spanish-American Governments, Recognition of the Independence of*.) The announcement in the President's message (December, 1817) that he had authorized expeditions against Amelia Island and Galveston (which see), produced remonstrances from Don Onís, the Spanish minister, and from Vincent Pazos, the yet unrecognized agent at Washington of the Spanish-American republics. Onís had primarily remonstrated against McGregor's enlistments at Charleston and Savannah. Pazos addressed a petition to Congress on the subject of McGregor's movements, but that body refused to receive it by a vote of one hundred and twenty-four to twenty-eight. On the same day (March 14, 1818) the President laid before Congress a voluminous correspondence between Don Onís and the Secretary of State which had been begun by a remonstrance of the former against the violation of the Spanish territory by the expedition of McGregor to Amelia Island, a measure which President Adams had justified because Spain was too weak to protect the United States against the adventurers collected there. Then followed a full discussion as to the boundaries of Louisiana and Florida, and the claims for Spanish spoliation on American commerce. Spain had offered to refer all the points in dispute to the arbitration of Great Britain, but the United States had declined the proposition.

Spain secretly Gives Aid to the Americans. Under the wise administration of Grimaldi, Spain trod cautiously in the footsteps of France and gave money to the American insurgents, but only on condition that the act should be kept a most profound secret, and at the same time the suspicions of England were parried by the warmest expressions of friendship. The unscrupulous Florida Blanca, a thorough monarchist, did not approve of giving aid to republicans, but proposed that France and Spain should send large reinforcements to their respective American colonies, and let England and her colonies continue their struggle for the mastery until both parties should be exhausted and invite the intervention of the two Bourbon dynasties as mediators, when the latter would be able, in the final adjustment, to take good care of their respective interests.

Spain, TREATY WITH (1795). Thomas Pinckney was sent on a special mission to Spain in 1795, where he negotiated a treaty which settled a long-pending dispute concerning the Spanish boundary and the navigation of the Mississippi River. This treaty was signed at Madrid by Thomas Pinckney and El Principe de la Paz on Oct. 20, 1795. It fixed the Florida boundary at the thirty-first degree of north latitude between the Mississippi and the Appalachicola, and east of the Appalachicola a line from the junction of the Flint to the head of the St. Mary, and thence by that river to the sea. The navigation of the Mississippi was to be free to both parties throughout its entire extent. The Americans were to enjoy a right of deposit at New Orleans for three years, at the end of which period either this privilege was to be continued, or an equivalent establishment was to be assigned them at some other convenient point on the lower Mississippi. Neither party was to make alliances with the Indian tribes living within the territories of the other, nor was either party to allow its Indians to carry hostilities into the territories of the other. It made stipulations concerning commerce and neutral rights, and a board of commissioners was provided for to liquidate losses on the part of the Americans in consequence of illegal captures by Spanish cruisers, such losses to be paid by the Spanish crown.

Spalding, SOLOMON, author of the *Book of Mormon*, was born at Ashford, Conn., in 1761; died at Amity, Washington County, Penn., in 1816. He graduated at Dartmouth College in 1785, and in 1787 became a Congregational clergyman as a licentiate. In 1797 he was ordained an evangelist, but on account of ill-health never settled over a congregation. While living in Salem, Ohio, about 1812, he wrote a work of fiction, suggested by the opening of some ancient mounds, entitled *The Manuscript Found*, and this was the *Book of Mormon* fraudulently used afterwards. (See *Smith, Joseph, and Mormonism as it Existed in 1875*.)

Spangenberg, AUGUSTUS GOTTLIEB, Ph.D., was born at Keetlenberg, Germany, July 15, 1704; died near Herrnhut, Sept. 18, 1792. He was a benevolent teacher and helper of poor children. Joining the Moravians (which see) in 1733, he was sent as a missionary to the West Indies and North America in 1735. He established a colony in Georgia, and received a grant of land from the trustees. He was the founder of Bethlehem, a Moravian settlement in Pennsylvania, and in 1743 he was made bishop. He crossed the Atlantic Ocean several times to look after the Church in America, and on the death of Count Zinzendorf in 1760 he was called to the Supreme Council of the sect. In 1764 he was appointed supreme inspector in Upper Alsatia. In 1769 Bishop Spangenberg became president of the General Directory.

Spaniards, THE, IN TEXAS. The French under the lead of La Salle (which see) made the first European settlement in Texas. In 1714 the Viceroy of Mexico proceeded to colonize the

country with Spaniards by planting missions in that territory. One was established at Natchitoches, within the present limits of Louisiana, another west of the Sabine, and others at different points. The establishment of these missions was under the direction of Captain Don Domingo Ramo, and they were first in the hands of the Franciscans. The mission stations were really Spanish military posts. When war between France and Spain broke out in 1718, the French broke up these posts, but they were soon re-established. Down to 1720, the only Spanish inhabitants of Texas were in the missions, but in that year the Spanish government ordered the transportation of four hundred families from the Canaries to Texas, but only thirteen families arrived that year and settled at San Antonio. This new population stimulated the missions to greater efforts. A Spanish governor of Texas was appointed. The population of Texas increased but slowly. So late as 1744 it did not exceed fifteen hundred souls. That province remained in the possession of Spain until the independence of Mexico was achieved (see *Mexico*), and it was part of that republic until it won its own independence in 1836.

Spanish-American Governments, RECOGNITION OF THE INDEPENDENCE OF THE. The rising of the people of the Spanish-American provinces to secure their political independence of Spain began soon after the royal family of Portugal abandoned Europe and took refuge in Brazil in 1807. The rising began in Buenos Ayres, Venezuela, and Chili. In 1810 Mexico revolted, but did not secure its independence until 1821. The other states followed at various intervals, Bolivia, in 1824, being the last. The people of the United States naturally sympathized with these movements. When the diplomatic appropriation bill came up in Congress in the spring of 1818 (March 24), Henry Clay moved to insert an appropriation for a minister to the new South American Republic of La Plata. Early in the session of 1819 he proposed the acknowledgment of the South American republics, but it was considered premature. He brought the question before Congress again early in 1821, when the House of Representatives adopted resolutions to that effect. In his annual message (Dec. 3, 1821), President Monroe called the attention of Congress to these republics, suggesting that they were really independent of Spain and deserved acknowledgment. In accordance with these suggestions, a resolution was offered in the House of Representatives in January, 1822, for recognizing the independence of Mexico and five provinces of South America formerly under the dominion of Spain. The vote in the House in favor was nearly unanimous, and \$100,000 were appropriated to defray the expenses of envoys to those republics, who were soon afterwards appointed by the President. Before these states had assumed a permanent shape, their independence was formally acknowledged by the United States, openly and boldly, in the face of the world. This measure was proposed by President Monroe in a special message, March 8, 1822.

Spanish Attack on Georgia. Admiral Vernon's disaster before Carthage (see *Vernon*) inspired the Spaniards with courage, and an expedition against Georgia and South Carolina was fitted out at Havana. Monteano, the Spanish general, sailed from that port in June, 1742, with three thousand men, but, ignorant of the coast and the proper objects to attack, he wasted much time among the inlets of the Georgia shores. By an artful stratagem, Oglethorpe, with a much inferior force, repelled an attack on Frederica (see *Oglethorpe*, *James Edward*), after which the Spanish armament returned to Cuba. Charleston had been greatly alarmed by this threatening force, and had the Spanish general been aware of its weakness, he might have sailed thither and captured it with ease. After the Spaniards had retired, Vernon sent five hundred men to garrison Charleston.

Spanish Board of Trade. In 1507, Ferdinand of Spain established a court which he called *Casa de Contratacion*, or Board of Trade, to which he committed the administration of American affairs.

Spanish Coins, SUPPRESSION OF, IN THE UNITED STATES. In February, 1857, Congress directed by an act that Spanish quarters, eighths, and sixteenths of a dollar should only be received by public officers at the rate of twenty, ten, and five cents, and that these coins should be sent to the Mint. The object was to drive these worn-out coins from circulation. Provision was also made for the coinage of a small new cent, composed of copper and nickel.

Spanish Conquests in West Florida (1779). Galvez, the Spanish governor of New Orleans, promptly took measures to establish the claim of Spain to the territory east of the Mississippi. He invaded West Florida with fourteen hundred men, Spanish regulars, American volunteers, and colored people. He took Fort Bute, at Pass Manchac (September, 1779), and then he went against Baton Rouge, where the British had four hundred regulars and one hundred militia. The post speedily surrendered, as did also Fort Pausanias, recently built at Natchez. A few months later he captured Mobile, leaving Pensacola the only port of West Florida in possession of the British.

Spanish Expedition against Louisiana. The Americans claimed that the boundary between Louisiana and Mexico was the Rio Grande, while the Spaniards limited the territory acquired from France to a narrow strip along the western bank of the Mississippi. Both sides had hitherto regarded the Sabine as a sort of provisional boundary; but the Spanish commander in Texas crossed that river with a body of irregular cavalry, in 1805, and occupied the settlement at Bayou Pierre, on the Red River, a few miles above Natchitoches, the westernmost American military station. It was deemed necessary to repel this aggression, and orders were sent to General Wilkinson, at St. Louis, then commander-in-chief of the American army and governor of the District of Louisiana, to reinforce, from posts in his territory,

the five hundred regulars in the Orleans Territory, and himself to take the command, to drive back the Spaniards. Wilkinson went to the Sabine, and made a peaceful arrangement that stopped the invasion. It was at this crisis that Burr's mysterious enterprise (which see) was undertaken.

Spanish Intrigues. Florida Blanca, continually fearing the threatened power of the United States, if independent, sought negotiations with France to adopt measures for restricting the inchoate republic within narrow territorial limits at the peace. Spain preferred the dominion of England in America to that of an independent republic that might corrupt the fidelity of her own colonies. He proposed that England, after the peace, should hold Rhode Island, Connecticut, New York, and other places along the coast; but to this Vergennes replied that France was in honor bound by the treaty to uphold the independence of the whole thirteen states. The French minister at Philadelphia entered into the intrigue with Blanca, and zealously urged members of Congress to renounce all ambitious longings for an extension of territory; and this idea was favored by Morris and Jay of the New York delegation. To quiet the apprehensions of the Spanish court respecting the Americans as a race of conquerors, Vergennes asked them to peruse the constitutions of the several states, which, he said, would show that they would never be more than a feeble people.

Spanish Mediation Rejected. Early in 1779 the Spanish court offered to be a mediator between France and Great Britain. Pending this affair the French minister (Gerard) had urged Congress to fix what terms of peace they would accept and to appoint ministers authorized to negotiate. The Spanish offer was at first evaded and then rejected by Great Britain, when the Spanish court published a manifesto, which was equivalent to a declaration of war against England, and so, indirectly, gave aid to the United States. France, financially weak, now wished for peace, and therefore the minister suggested to Congress measures for securing it. (See *Independence, Longings for*.)

Spanish Minister, TROUBLE WITH (1806). Don Carlos Martinez, Marquis De Yrugo, succeeded Jaudeuvis as Spanish minister in 1796. He was quite a young man, free and easy in his manner, and well informed. His conduct was unexceptionable here until there was unpleasant feeling engendered between the two governments, on account of boundary claims concerning Louisiana. De Yrugo had married Sally McKean, the daughter of the chief-justice of Pennsylvania, and was a pleasant member of Philadelphia society; but his course on the Spanish question became offensive. In 1804 the editor of a newly established Federal newspaper in Philadelphia accused De Yrugo of attempting to bribe him to the support of the Spanish side of the boundary question. De Yrugo answered the charge in a long letter, in which he asserted that his only object was to

make the Americans acquainted with the rights of Spain. He claimed that he had a right to offer to pay a printer for inserting his paper. This answer not being deemed satisfactory, the Spanish government was asked to recall him. The Spanish government responded by asking that, as he had already asked leave to return, his departure be put upon that footing. It was allowed; but De Yrugo lingered about Washington in a manner "dissatisfactory to the President." He was told that his departure would be expected as soon as the inclement season would allow, to which he replied that he had a right to remain as long as he pleased, and that he should, so long as his conscience and the interests of his king inclined him to. In another letter he told the government that the minister of Spain received no orders from any one excepting his sovereign, and charged Madison (Secretary of State) with an invasion of his diplomatic rights.

Spanish Territory in the United States. At one time or another more than one half the present territory of the United States has been subject to the King of Spain. From Mexico, the Spaniards claimed the country northward indefinitely. Cortez discovered California, and Spanish missionaries planted the cross far up the Pacific coast. In the interior, the Spanish adventurers west of the Rocky Mountains penetrated far to the northward (see *Coronado, Francis Vazquez de*)—almost to the present southern boundary of the British possessions—in search of the precious metals, and everywhere they planted the Spanish tokens of sovereignty. They held possession of the country along the northern shore of the Gulf of Mexico (Florida and Texas) until a very recent period. Everywhere that Spanish missionaries and traders gained a foothold, the cross and the royal arms were set up.

Spanish West India Settlements, WAR UPON THE. War was begun by Great Britain against Spain in 1739, and Admiral Vernon (which see) was sent with a squadron to act against the Spanish dominions in the West Indies. He sailed from Jamaica with six ships, attacked Porto Bello (Nov. 21, 1739), and captured it. He blew up the castle and fortifications there and returned to Jamaica. The next year a great fleet was despatched to reinforce Vernon, who held possession of Porto Bello and Chagres, on the Atlantic side of the Isthmus of Panama, depots for all merchandise destined for the Pacific coast. The fleet conveyed an army of 12,000 men, led by General Cathcart, and the number of seamen amounted to 15,000. The army was composed of British regulars, battalions from the American colonies, and negroes from Jamaica—the greatest armament ever seen in the West Indies. The second in command of the troops was Sir Alexander Spottawood, formerly governor of Virginia. The expedition met with sad disaster. While the fleet, with the soldiers yet on board the transports, was blockading Carthagena, the yellow-fever broke out among them with great fury. Cathcart and Spotta-

wood perished by this disease, and the command devolved on General Wentworth, who could not agree with Vernon. After several unsuccessful attacks upon the city, the enterprise was abandoned, with immense loss, chiefly through sickness. Additional troops were sent from Massachusetts, and, with them, Vernon sailed for Cuba, but was unsuccessful. A fleet under Anson, which had been sent to the Pacific to repeat the exploits of Drake (which see) on the American coast, was equally unsuccessful. England now found herself (1742) threatened with a war with France. The war, really begun through the resolution of British merchants to force a trade with Spanish-America, after spreading first to Europe and then to India, and adding nearly \$150,000,000 to the British national debt, was brought to a close by the treaty of Aix-la-Chapelle (which see) in the autumn of 1748.

Sparks, JARED, LL.D., historian, was born at Willington, Conn., May 10, 1789; died at Cambridge, Mass., March 14, 1866. He graduated at Harvard in 1815, and was a tutor there from 1817 to 1819. He had passed his youth in mechanical pursuits, and, during his college course, taught for a while a small private school at Havre de Grace, Md. He was in the militia that opposed Cockburn and his marauders. (See *Havre de Grace, Attack on*.) At Cambridge he studied theology; became an editor of the *North American Review*, and was sole proprietor and conductor of it from 1823 to 1830. He was a Unitarian minister at Baltimore from 1819 to 1823. In 1821 he was chaplain to the House of Representatives. In 1839 he was chosen professor of history at Harvard, occupying the position ten years, and from 1849 to 1852 he was president of that institution. In 1857 Dr. Sparks made a tour in Europe with his family, and afterwards resided at Cambridge until his death. Dr. Sparks's earlier publications were mostly on theological subjects. In 1834 he began the publication of his exceedingly useful work, *The Writings of George Washington, with a Life*. It was completed in 1837, in twelve volumes. He had already (1829-30) published *Diplomatic Correspondence of the American Revolution*, twelve volumes, and *Life of Gouverneur Morris*, 1832. He edited *The American Almanac* for many years from 1830, and in 1840 completed *The Works of Benjamin Franklin*, in twelve volumes. He also edited a series of *American Biography*, fifteen volumes, of which he wrote several of the sketches. His last great labor in the field of American documentary history, in which he wrought so conscientiously and usefully, was the publication, in four volumes, in 1854, of *The Correspondence of the American Revolution*. His *Washington* cost him nine years of labor, including researches, in 1828, in the archives of London and Paris, which were then opened for historical purposes for the first time.

Spear's Raid. When Lee moved towards the Potomac in June, 1863, General Keyes, at Yorktown, prepared to menace Richmond, then held by a few troops under Henry A. Wise.

Colonel Spear, with about 1000 Massachusetts and Illinois cavalry, made a sudden dash upon White House, drove the Confederates from the post, and pushed on towards Richmond, greatly alarming Wise and the people. The mayor called upon the latter to "remember New Orleans," and to rally for the defence of the city. Spear turned northward to Hanover Courthouse and beyond, destroying the railway and capturing the wounded general W. H. F. Lee, at Beverly Ford, and, sweeping round, returned to White House, then held by Keyes, who, on July 1, moved about 6000 troops, under General Getty, towards the Chickahominy, with 1500 cavalry, to cut off Lee's communications with Richmond. This was not done, and Keyes fell back, to the great relief of the Confederates at Richmond.

Special Licenses to Trade (Napoleon's perfidy). In his greed for money the Emperor Napoleon relaxed the rigors of his decrees against the commerce of the world by an act of perfidy. While reducing thousands to misery for the sake of his favorite Continental System, he became himself a wholesale violator of it. He ordered licenses to be sold, at enormous prices, for introducing, subject to heavy duties, certain foreign articles otherwise prohibited. Certain favored manufacturers had thus been authorized, notwithstanding the Rambouillet Decree, to employ thirty or forty American vessels in the importation of cotton, fish-oil, dye-woods, salt fish, hides, and peltry from the ports of New York and Charleston, exclusively, and under an obligation to export, in return, certain special articles of French produce. Orders were sent to French consuls in America to grant certificates of origin to all American vessels bound to French ports, provided they were loaded with American products only—excepting cotton and tobacco, which could only be imported under special licenses.

Special Sessions of Congress have been seven in number previous to 1880—namely: First, May 15, 1797, called by President Adams, to provide for a threatened French war; second, Sept. 4, 1837, called by President Van Buren, to provide for financial exigencies, the banks having suspended specie payments (May 10); third, May 31, 1841, called by President Harrison, in March, to consider the revenues and finances of the country, particularly on the subject of rechartering the United States Bank; fourth, Aug. 21, 1856, called by President Pierce (three days after the adjournment of Congress), to provide appropriations for the army; fifth, July 4, 1861, called by President Lincoln, to provide for suppressing the great insurrection; sixth, Oct. 15, 1877, called by President Hayes; seventh, Mch. 18, 1878.

Specie Circular. Under the stimulus of loans easily made by state deposit banks (see *United States Bank*), speculators made extensive purchases of the public lands. In this business individuals and companies were engaged. To check this speculation, Senator Benton, of Missouri, offered a resolution (April 22, 1836) declaring that only gold and silver ought to be

received in payment for the public lands. The resolution was not acted upon in the Senate, but soon after Congress adjourned the Secretary of the Treasury (Levi Woodbury), by order of the President, issued a circular (July 11, 1836), directing the receivers of the public moneys to accept in payment for public lands nothing but gold and silver, and, for Virginia land scrip, in certain cases. The immediate effect of this specie circular was to divert the course of coin from legitimate channels of commerce, and otherwise to derange the currency, for the deposit banks had loaned very large sums to speculators in the public lands. It greatly embarrassed the business community, but was, finally, beneficial to the nation. (See *Credit System and its Collapse*.) A bill for the partial repeal of the Specie Circular Act passed both houses of Congress at or near the close of the session, which President Jackson vetoed, and, to prevent its being passed by a two-third vote, he kept it in his hands until fifteen minutes before his term of office and that of the current Congress expired. His message, giving his reasons for his veto, was dated "March 3, 1837, quarter before twelve o'clock."

Specie Payments, RESUMPTION OF, IN 1816. The banks had suspended specie payments during the war. After its close a new National Bank had been created, which became the great controller and regulator of the finances of the country. The public money had been intrusted to the keeping of about one hundred local deposit banks, including all of much account in the South and West. The Secretary of the Treasury (Crawford), early in 1816, resolved on enforcing the resumption of specie payments, and, to induce the banks to concur in the measure, he offered to let these deposits lie till the middle of the year, and then draw out the money only as it might be needed for current expenditures. If they did not accede to this proposition, he threatened to transfer these balances at once to the new National Bank. The latter, also, promised its indulgence and support in the scheme of resumption; and, under the circumstances, the local banks did not venture to refuse. By the aid of a loan of \$500,000 from the new bank, whose notes now began to make their appearance, and after a suspension of specie payments for more than two years by the government and the banks, resumption was secured.

Specie Payments, RESUMPTION OF, IN 1879. (See *Resumption of Specie Payments*.)

Spencer, JOSEPH, was born at East Haddam, Conn., in 1714; died there, Jan. 13, 1789. He served as a lieutenant-colonel in the French and Indian War, having previously held the office of probate judge. In 1766 he was a member of the Governor's Council, and in June, 1775, Congress appointed him one of the brigadier-generals of the Continental army. In August, 1776, he was promoted to major-general. He resigned in June, 1778, and the next year was elected to Congress. In 1780 he was elected to the State Council, and held that position, by annual election, until his death.

Spies Executed at Franklin, Tenn. (1862).

Two young men, calling themselves, respectively, Colonel Anton and Major Dunlop, rode up to the quarters of Colonel J. P. Baird, at Franklin, and represented themselves as officers of Rosecrans's army, detailed for special duty from the War Department, and declared they had narrowly escaped capture by Van Dorn's men, then closely investing the National troops at that place. They asked Baird to loan them \$50 to go to Nashville to refit, which he did, giving them at the same time a pass. As soon as they had departed, they were suspected of being spies, and were pursued and brought back. Rosecrans, telegraphed to, denied the existence of officers of their names in his army, and directed them to be tried by a court-martial, and, if found guilty, to be instantly hanged. They made a full confession. At a little past midnight they were found guilty, and between nine and ten o'clock the next morning were hanged on the limb of a wild-cherry tree near Fort Granger, three-fourths of a mile from Franklin. The spies were relatives of the wife of General Robert E. Lee, the chief of the Confederate armies. "Anton" was Colonel Orton Williams, about twenty-three years of age, son of a gallant officer of the National army who was killed in Mexico, and "Dunlop" was his cousin, Lieutenant W. G. Peter. Williams was at that time on the staff of General Bragg and Peter on that of General Wheeler.

Spirit of New England Soldiers. There was a spirit of religious enthusiasm and genuine piety among the New England soldiers engaged in the early wars against the French and Indians on the frontiers. Indeed, such was the prevailing feeling among the whole people. Seth Pomeroy (afterwards appointed a brigadier-general in the Continental army), while engaged in the expedition against Louisburg, in 1745, wrote to his wife: "It looks as if our campaign would last long; but I am willing to stay till God's time comes to deliver the city into our hands." The patriotic woman answered: "Suffer no anxious thought to rest on your mind about me. The whole town is much engaged with concern for the expedition, how Providence will order the affair, for which religious meetings every week are maintained. I leave you in the hand of God." The New Hampshire troops, on that expedition, bore on their banners a motto given them by the great evangelist Whitefield: *Nil desperandum Christo sub duce*—"Nothing is to be despaired of, with Christ as a leader." This motto inspired many of the soldiers with the zeal of the old Crusaders.

Spoiliations, CLAIMS FOR (1817). The war had wiped out all claims for commercial spoiliations against England. Those against France, Spain, Holland, Naples, and Denmark remained to be settled. Gallatin, at Paris, and Eustis, at the Hague, had been instructed to press the subject. William Pinkney, former ambassador at London, appointed in Bayard's place as minister to Russia, had been also commissioned to take Naples in his way, and to ask payment for Ameri-

ican vessels and cargoes formerly confiscated by Murat, the Napoleonic sovereign. The restored Bourbon government demurred. The demand, they said, had never been pressed upon Murat himself, and they disclaimed any responsibility for the acts of one whom they regarded as a usurper, by whom they had suffered more than had the Americans. Notwithstanding an American ship of war—the *Washington*, 74 guns—and several armed sloops were in the Bay of Naples, Pinkney could not obtain any recognition of the claims, and left for Russia.

Spottswood, SIR ALEXANDER, Governor of Virginia from 1710 to 1723, was born at Tangier, Africa, in 1676; died at Annapolis, Md., June 7, 1740. He had served in the army under the Duke of Marlborough; was wounded in the battle of Blenheim. He came to Virginia soon afterwards as governor. In 1736 he was colonial postmaster, and in 1739 commander of the forces intended to operate against Florida. Governor Spottswood was the first who explored the Appalachian chain of mountains, and he was a zealous friend of the College of William and Mary and of efforts to Christianize the Indians.

Spottsylvania Court-house, BATTLE OF (1864). Lee was evidently satisfied, at the close of the battle of the Wilderness (which see), that he could not maintain a further contest with Grant on the ground he (Lee) had chosen, so he retired behind intrenchments, where he was found standing on the defensive by the skirmish-line of the Nationals, sent out at daybreak on Saturday morning, May 7, 1864. There had been sharp skirmishing the day before. A charge had been made on Hancock's corps, when seven hundred of his cavalry were captured. Grant had no desire to renew the conflict there, and after dark that night he put his army in motion towards Spottsylvania Court-house, fifteen miles southeast from the battle-field. Warren and Sedgwick took the direct route by the Brock road, and Hancock and Burnside, with the trains, by a road farther east. The march was slow, for many obstacles—such as felled trees and opposing troops—were in the way. Lee had anticipated Grant's movement, and was pushing on by a parallel road towards the same destination. His advance, under General Anderson, continued the march all night, and reached the vicinity of Spottsylvania Court-house and intrenched before Warren came up. By the evening of the 8th Lee's whole force were intrenched on a ridge around Spottsylvania Court-house, facing north and east. The following day was spent by Grant in making dispositions for attack, and by Lee in strengthening his position. There had been sharp fighting the day before (Sunday, May 8) between Warren and a force of the Confederates. Warren held his position until relief arrived from Sedgwick, when the Confederates were repulsed. The Nationals lost about thirteen hundred men. The commanders of several regiments fell. One Michigan regiment went into battle with two hundred men, and came out with twenty-three. The day was intensely hot, and many suffered

from sun-stroke. Monday, the 9th, was comparatively quiet in the morning. There was skirmishing nearly all day. In the afternoon General Sedgwick was killed by the bullet of a sharpshooter while superintending the planting of cannons on a redoubt, and his command of the Sixth Corps devolved on General H. G. Wright. Towards night Grant ordered another advance on the Confederates. The divisions of Gibbon and Birney, of Hancock's corps, crossed a branch of the Po River, and had a severe struggle. Hancock attempted to capture a wagon-train. He had made a lodgment with three divisions, and was pushing forward, when he was recalled for other service. On his return he was attacked, and lost heavily. The woods between a part of his troops and the river had taken fire, and many of his men perished in the flames. That night Lee's army occupied Spottsylvania Court-house, and stood squarely across the path of the intended march of the Army of the Potomac towards Richmond. Everything was in readiness for battle on the morning of the 10th. The main attack by the Nationals was against Lee's left centre, strongly intrenched on Laurel Hill, wooded, and surrounded by a dense growth of cedar. It was the strongest point in the Confederate line. In two attacks the Nationals were repulsed, with heavy loss. At five o'clock in the afternoon the Second and Fifth corps moved to the attack. The conflict was fearful, and the Nationals were repulsed. The assault was repeated an hour later, with a similar result. In the two attacks, nearly six thousand Unionists had fallen, while not more than six hundred of the Confederates had been disabled. The enterprise was abandoned. Farther to the left, a portion of the Sixth Corps carried the first line of the Confederate intrenchments, and captured nine hundred prisoners and several guns. Then the first day's real battle at Spottsylvania Court-house was ended. On the morning of the 11th Grant wrote to the Secretary of War: "We have now ended the sixth day of very heavy fighting. The result to this time is much in our favor. Our losses have been heavy, as well as those of the enemy. I think those of the enemy must be greater. We have taken over five thousand prisoners by battle, while he has taken from us but few, except stragglers. I propose to fight it out on this line, if it takes all summer." The 11th was mostly spent in preparing for another battle. Grant determined to strike Lee's right centre where it appeared most vulnerable. The night was very dark and stormy. He moved at midnight, and Hancock took a position within twelve hundred yards of the Confederate line. He stormed it at four o'clock on the morning of the 12th. He burst through the lines, and, after a hand-to-hand conflict inside the trenches, captured four thousand men, and drove his adversaries through the woods towards the village. At the second line of intrenchments Hancock's men, having lost their organization, were forced to retire to the first, which they held with the aid of the Sixth Corps. Five times during the day Lee attempted to dislodge Hancock, but was repulsed each

time, with heavy loss. So fierce had been the battle that one half of the forest within range of the musketry was destroyed by bullet-wounds. A tree eighteen inches in diameter was entirely cut in two by musket-balls. Meanwhile Burnside, on the left, and Warren, on the right, had made attacks on Lee's wings, but were repulsed. At midnight Lee withdrew to his second line, and Hancock finally held the works he had captured in the morning, with twenty-two guns. So ended the battle of Spottsylvania Court-house. The official report of the National losses, from the crossing of the Rapid Anna (May 4 [see *Wilderness, Battle of the*]) to the close of the battle on May 12, gave a total of 29,410 men; of whom 269 officers and 3019 enlisted men were killed, and nearly 7000 had been made prisoners.

Springfield, N. J., BATTLE AT (1780). Military movements at the North, in 1780, exhibited scarcely any offensive operations, yet there were some stirring events occurring occasionally. There was a British invasion of New Jersey. On June 6 (before the arrival of General Clinton from Charleston [see *Siege of Charleston*]), General Knyphausen despatched General Matthews from Staten Island, with about 5000 men, to penetrate New Jersey. They took possession of Elizabethtown (June 7), and burned Connecticut Farms (then a hamlet, and now the village of Union), on the road from Elizabethtown to Springfield. When the invaders arrived at the latter place, they met detachments which had come down from Washington's camp at Morristown, and by them were driven back to the coast, where they remained a fortnight, until the arrival of Clinton from the South, who, with additional troops, joined Matthews (June 22). The British then attempted to draw Washington into a general battle or to capture his stores at Morristown. Feigning an expedition to the Hudson Highlands, Clinton deceived Washington, who, with a considerable force, marched in that direction, leaving General Greene in command at Springfield. Perceiving the success of his stratagem, Sir Henry, with Knyphausen, marched upon Greene with about 5000 infantry, a considerable body of cavalry, and about twenty pieces of artillery. After a severe engagement (June 23, 1780), during which the British forced the bridge over the Rahway, the invaders were defeated and driven back. When they began their retreat, they set fire to the village. They did not halt until they reached the waters between the main and Staten Island, to which spot they all retired. The British lost, it was estimated, in killed and wounded, during the entire invasion, about 300 men; the loss of the Americans was less than 100. The British were 6000 strong; the Americans only 1500; but the latter were strongly posted on heights.

Spurious Letters of Washington. A pamphlet was published in London, in 1777, containing letters purporting to have been written by Washington, in the summer of 1776, to members of his family. These letters contained sentiments so totally at variance with his character and conduct that, whatever effect they may have

had in England, they had none in this country, where he was known. In them Washington is made to deprecate the misguided zeal and rashness of Congress in declaring independence, and pushing the opposition to Great Britain to so perilous an extremity. In the preface it was stated that, when Fort Lee was evacuated, General Washington's servant was left behind sick; that in his possession was a small portmanteau belonging to the general, in which, among other things of trifling value, were the drafts of letters to Mrs. Washington, her son (John Parke Custis), and his manager at Mount Vernon, Lund Washington, and that these had been transmitted to England by an officer into whose hands they had fallen. This fiction was contrived to deceive the public into a belief of their genuineness. It is well known that Washington was not at Fort Lee at the time of the surprise and evacuation, and that no servant of his nor a particle of his baggage fell into the hands of the enemy during the war. The pamphlet was republished by Rivington, in New York, and extensively circulated by the Tories, to injure the commander-in-chief. The author of these spurious epistles was never publicly known. It must have been some person acquainted with many particulars of Washington's family affairs. The chief paid no attention to the publication, regarding it as beneath his notice. During his second Presidential term, party malignity was carried so far as to reprint the letters as genuine. Even then he did not notice them; but when he was about to retire from public life he wrote to the then Secretary of State (Timothy Pickens), under date of March 3, 1797, referring to the letters and the motives of their production, saying, "Another crisis in the affairs of America having occurred, the same weapon has been resorted to to wound my character and deceive the people." He then gave the dates and addresses of the letters, seven in number, and added, "As I cannot know how soon a more serious event may succeed to that which will this day take place (his retirement from office), I have thought it a duty which I owe to myself, to my country, and to truth, now to detail the circumstances above recited, and to add my solemn declaration that the letters herein described are a base forgery, and that I never saw or heard of them until they appeared in print." Washington desired this letter to Pickens to be deposited in the office of the Secretary of State.

Squier, EPHRAIM GEORGE, was born at Bethlehem, N. Y., June 17, 1821. He engaged in journalism and civil engineering. From 1845 to 1848 he edited the *Scioto Gazette* at Chillicothe, Ohio, and became familiar with the ancient mounds in the Scioto valley. In conjunction with Dr. Davis, of Ohio, he began a systematic investigation of the aboriginal monuments of the Mississippi valley, the results of which were published in a volume of the *Smithsonian Contributions to Knowledge*. Thenceforth his life was devoted to researches into the archaeology and ethnology of the ancient races of our continent. In 1848 he was appointed chargé d'affaires to the republics of Central America, where he made special

efforts towards securing the construction of an interoceanic railway, and afterwards published several works concerning those countries. He was made United States commissioner to Peru in 1863-64, and in 1871 became the first president of the Anthropological Institute of New York. Mr. Squier's researches and publications thereon have added greatly to the sum of human knowledge.

Stadacona, an Indian town on the site of Quebec, and the capital of the "King of Canada." (See *Cartier, Jacques*.)

Stamp-Act Congress, THE, assembled at New York on Monday, Oct. 7, 1765, to consider Grenville's obnoxious scheme of taxation. (See *Stamp Act, Local Opposition to the*.) It was organized by the choice of Timothy Ruggles, of Massachusetts, chairman, and John Cotten, clerk. The following representatives presented their credentials: Massachusetts—James Otis, Oliver Partridge, Timothy Ruggles. New York—Robert R. Livingston, John Cruger, Philip Livingston, William Bayard, Leonard Lispenard. New Jersey—Robert Ogden, Hendrick Fisher, Joseph Borden. Rhode Island—Metcalf Bowler, Henry Ward. Pennsylvania—John Dickinson, John Morton, George Bryan. Delaware—Thomas McKean, Caesar Rodney. Connecticut—Eliphalet Dyer, David Rowland, William S. Johnson. Maryland—William Murdock, Edward Tilghman, Thomas Ringgold. South Carolina—Thomas Lynch, Christopher Gadsden, John Rutledge. The Congress continued in session fourteen consecutive days, and adopted a "Declaration of Rights," written by John Cruger, a "Petition to the King," written by Robert R. Livingston, and a "Memorial to Both Houses of Parliament," written by James Otis. In all these the principles which governed the leaders in the Revolution soon afterwards were conspicuous. The proceedings were signed by all the delegates excepting Ruggles and Ogden, who were afterwards active loyalists or Tories.

Stamp Act in Massachusetts. In 1759 the Legislature of Massachusetts passed a Stamp Act in which newspapers were included. The printers remonstrated and asked for a repeal of the clause which applied to newspapers, pleading that they were vehicles of knowledge and necessary information. It was done.

Stamp Act, LOCAL OPPOSITION TO THE. A variety of local and illegal methods were adopted to oppose the operations of the Stamp Act. The 1st of November, the day it was to go into operation, was ushered in by a funereal tolling of the bells. Many shops and other places of business were shut, and effigies of friends of the act were carried about the streets in derision, and then torn in pieces by the populace. There was neither violence nor disorder. At Boston the colors of the shipping appeared at half-mast. At Portsmouth the bells tolled, a coffin bearing an effigy and inscribed on the lid, "Liberty, aged 145," was carried to a grave, preceded by muffled drums, and followed by a funeral procession, while minute-guns were fired. At the close of an oration the coffin was taken up, signs of life

appeared in the corpse, "Liberty Revived" was placed on the lid, the bells rang merrily and joy lighted every countenance. In Newport and Providence, R. I., several obnoxious citizens were hanged in effigy. At New York the obnoxious act was printed with a skull and cross-bones instead of the royal arms, and contemptuously paraded through the streets under the title of "England's Folly and America's Ruin." At Philadelphia the people showed similar signs of contempt for the act. In Maryland the effigy of the stamp-master, on one side of which was written "Tyranny," and on the other "Oppression," was carried through the streets from the place of confinement to the whipping-post, and thence to the pillory. After suffering many indignities it was burned. The act was not less odious to many of the inhabitants of the British West India islands than to those on the continent of America. The people of St. Christopher (St. Kitt's) obliged the stamp-officer and his deputy to resign; while Barbadoes, Canada, and Nova Scotia submitted to the act.

Stamp Act, OPPOSITION TO, IN AMERICA. In the preamble to the Stamp Act the open avowal was made that its purpose was the "raising of a revenue for defraying the expenses of defending, protecting, and securing his majesty's dominions in America." (See *Colonial War Expenditures*.) This phraseology was rather deceptive. The British treasury had been exhausted not by defending the colonies, but by wars in Europe, and its coffers needed replenishing. This was the real meaning of the Stamp Act, and the Americans clearly perceived it. When accounts of this scheme reached Boston, the newly elected representatives of that town were instructed to use all their efforts "against the pending plan of parliamentary taxation," and for the "repeal of any such acts already passed." These instructions were drawn by Samuel Adams, and contained the first decided protest uttered against this taxation scheme. It was suggested that a combination of all the colonies in opposition to the act would be expedient. A committee of correspondence was appointed to hold communications with the other colonial assemblies, and the political postulate—"Taxation without representation is tyranny"—an idea borrowed from the Dutch, was boldly enunciated in a pamphlet by James Otis, entitled *The Rights of the British Colonies Asserted*. The Assembly also resolved, "That the imposition of duties and taxes by the Parliament of Great Britain upon a people not represented in the House of Commons is absolutely irreconcilable with their rights." Opposition to the measure soon appeared in all the colonies. The people in cities and villages gathered in excited groups and loudly expressed their indignation. The pulpit denounced the scheme, and associations calling themselves the "Sons of Liberty," in every colony, put forth their energies in defence of popular freedom. The press, then assuming much power, spoke out fearlessly. Men appointed by the crown, known as "stamp-distributors," were insulted and despised, and not allowed to act. Stamps were seized on their arrival and secreted or burned, and when the 1st

of November arrived—the day on which the law was to take effect—there were no officials courageous enough to attempt to enforce it. The public sentiment had already taken a more dignified tone and assumed an aspect of nationality. A general congress of delegates was called, and met in New York (see *Stamp Act Congress, The*) in October, 1765, and sent out documents boldly asserting the rights of the people. The 1st of November was observed as a day of fasting and mourning. Funeral processions paraded city streets, and bells tolled funereal knells. The colors of sailing-vessels were trailed at half-mast, and the columns of newspapers exhibited broad black lines. The courts were closed, legal marriages ceased, ships remained in port, and, for a while, all business was suspended. Out of this calm a tempest was evolved. Mobs began to assail the residences of officials, and burn distinguished royalists in effigy. Merchants entered into agreements not to import goods from Great Britain, and very soon such a cry of remonstrance from all classes in America assailed the ears of the British ministry, as well as from merchants and manufacturers of London, that, on the 18th of March, 1766, the obnoxious act was repealed. The ministry had evidently expected trouble in America, for in a new mutiny act they were authorized to send as many troops to America as they saw fit.

Stamp Act Repealed. There was such unusual and decided opposition to the Stamp Act in the English-American colonies that, in pursuance of the provisions of a bill introduced in Parliament by William Pitt early in 1776, it was repealed. In the bill was a clause declaratory of the right of Parliament to tax the colonies, which was not acceptable to the latter. Pitt said the repealing bill could not have passed but for this clause, so of two evils he chose the least. The Americans were so pleased, however, with the repeal of the obnoxious act that, in gratitude to the king and to Pitt, statues were erected to them. An equestrian statue of the king was erected in Bowling Green, New York city, and a statue of Pitt in the attitude of speaking was set up at the intersection of Wall and William streets. Another was erected in Charleston, S. C. (which see). The king was dissatisfied with the repeal of the Stamp Act, regarding it as “a fatal compliance which had wounded the majesty of England, and planted thorns under his pillow.” He scolded Lord North, for he preferred the risk of losing the colonies rather than to yield one iota of his claim to absolute authority over them.

Stamp Act, THE. Laws authorizing the use of stamps, stamped paper, or stamps on packages, bearing fixed rates for the stamps, for raising revenue, were introduced into England, in the reign of William and Mary, from Holland. From that time until now the system has been a favorite one in England for raising revenue. Each stamp represents a tax for a certain sum which must be paid to obtain it. A penalty is imposed upon those attempting to evade it, and the transaction in which it should have been

used was declared invalid without it. A stamp duty had never been imposed in the colonies. In 1732 it was proposed, but the great minister, Walpole, said, “I will leave the taxation of America to some of my successors who have more courage than I have.” In 1739 Sir William Keith, Governor of Pennsylvania, proposed such a tax in that province. Franklin thought it just, as he said in the convention at Albany in 1754; Lieutenant-governor De Lancey proposed it in New York in 1755; and in 1756 Governor Shirley, of Massachusetts, urged Parliament to adopt a stamp tax. In 1757 it was proposed to Pitt to tax the colonies. “I will never burn my fingers with an American stamp tax,” he said. But George Grenville, Pitt’s brother-in-law, bolder than his predecessors, proposed in 1764 a stamp tax to be extended to the colonies. It was delayed to await suggestions from the latter. It became a law in the spring of 1765, but was violently opposed in America. The law required that for every skin or piece of vellum or parchment, or sheet or piece of paper, on which should be engrossed, written, or printed any declaration, plea, replication, rejoinder, demurrer, or other pleading, or any copy thereof,

in any court of law within the British colonies and plantations in America, a stamp duty should be imposed. Also for all legal documents of every kind, marriage certificates, etc., a stamp duty should be paid. The stamps were printed in embossed letters, sometimes directly upon the paper used.

but more generally, for the colonies, on coarse

A STAMP.

blue paper, such as is known as “tobacco paper.” The value of each stamp was indicated upon it, and varied from threepence to two pounds sterling. The kinds of documents and other papers to be stamped to make them legal numbered fifty-four. To the blue-paper stamps was attached a narrow strip of tin-foil, represented in the engraving by the white space. The ends of the foil were passed through the parchment or paper, flattened on the opposite side, and a piece of paper with a rough device and number, seen in the smaller engraving, with a crown and the initials of the king, pasted over to secure it.

A STAMP.

Stamp-distributors were men appointed by the British government to sell stamps in the American colonies. Wishing to make the obnoxious Stamp Act as palatable as possible in the colonies, the British ministers consulted the colonial agents as to fit persons to be appointed. Even the sagacious Franklin did not foresee the result, and he procured the appointment for one of his particular friends in Philadelphia. He

advised Ingersoll, the agent for Connecticut, to accept the office, at the same time foreseeing an impending struggle in which numbers would be an important factor, he said to him, "Go home, and get children as fast as you can." The agents appointed had to face a terrible storm of indignation. They were insulted and despised, and were actually compelled to relinquish the office everywhere.

Stamp Duty Proposed by Shirley. The energetic governor of Massachusetts, commander-in-chief of the British forces in North America after Braddock's death, continued to urge the imperial government to take measures to raise a revenue in the colonies. In 1756 he proposed a stamp duty, as well as excise and a poll tax. He admitted the almost universal opposition of the people to any tax imposed by act of Parliament, and suggested "for the general satisfaction of the people in each colony, to leave it to their choice to raise the sum assessed upon them according to their own discretion." At the same time he recommended that, in case of no such response being made by the assemblies, proper officers should be appointed to collect a revenue "by warrants of distress and imprisonments of persons."

Standing Army in America. The British government perceived with alarm and jealousy the strength of the English-American colonies after the French and Indian War. That conflict had taught the colonists their inherent strength and their resources. They had spent \$20,000,000 in the war and sacrificed 30,000 men, and yet the land was full of trained soldiers, and plenty filled their granaries and abundantly supplied their tables. The long-continued and splendid success of the war had filled the colonies with a martial spirit, and a military force had become, in their estimation, an expedient method for settling disputed points of authority and right. Local self-government and broad independence were a continual day-dream with them, and the British government clearly perceived it. The British ministry, in 1763, under a pretext of furnishing a perpetual defence to the colonies, proposed to keep 10,000 troops there as a peace establishment. It was rightly conjectured that the colonial assemblies might refuse to contribute towards the expenses of a standing army among them, and so a scheme of colonial taxation was planned by which the colonies would indirectly support the troops. (See *Stamp Act, The*.) A standing army became a source of constant irritation in the colonies, for, by a new Mutiny Act (1769), provision was made for quartering and providing for the troops in America at the expense of the colonies.

Standing Army, ORGANIZATION OF A (1775). Congress, after much delay, owing to hesitation on account of fears of a standing army, finally resolved, late in 1775, to raise one, to consist of 75,000 men, to serve for the term of three years or during the war, and that it should be composed of eighty-eight battalions, to be raised in the several colonies, according to their respective abilities. The following was the propor-

tion of each of the colonies: In New Hampshire, three battalions; Massachusetts, fifteen; Rhode Island, two; Connecticut, eight; Delaware, one; Maryland, eight; Virginia, fifteen; North Carolina, nine; New York, four; New Jersey, four; Pennsylvania, twelve; South Carolina, six; Georgia, one. Recruiting orders were issued, but the progress in raising troops was so slow that, on the last day of December, 1775, when all the old troops not engaged for the new army were disbanded, there had been enlisted for the more extended term only 9650 men. These were increased after the middle of January (1776), Congress having, on the earnest recommendation of Washington, offered bounties. Washington had then been besieging Boston since July, 1775. "It is not in the pages of history, perhaps" (he wrote to Congress), "to furnish a case like ours—to maintain a post within musket-shot of the enemy for six months together, without ammunition; and, at the same time, to disband one army and recruit another, within that distance of twenty odd British regiments, is more, probably, than was ever attempted."

Standish, MILES, a "Pilgrim" soldier, who came to New England in the *Mayflower* in 1620, was born in Lancashire, Eng., about 1584, and died at Duxbury, Mass., Oct. 8, 1656. Standish had served as a soldier in the Netherlands. He was chosen captain of the New Plymouth settlers (see *New Plymouth, Charter for*), though not a member of the church. He was small in person, of great energy, activity, and courage, and rendered important service to the early settlers by inspiring Indians, disposed to be hostile, with awe for the English. Standish visited England in 1625 as agent for the colony, and brought supplies the next year. The captain's wife, Rose Standish, was one of the victims of the famine and fever in the spring of 1621. In 1626 Standish settled at Duxbury, Mass., where he lived the remainder of his days, administering the office of magistrate, or assistant, during the whole term. He also took part in the settlement of Bridgewater (1649). A monument to his memory was erected on Captain's Hill, Duxbury, a few years ago. (See *Maiden Bride, The First, in New England*.)

Stanley, DAVID S., was born in Wayne County, O., June 1, 1828, and graduated at West Point in 1852, entering the dragoon service. When the Civil War began he brought off the government property from the forts in the Southwest, and performed good service in Missouri, especially at Dug Springs and Wilson's Creek (which see). After performing signal service in Mississippi, he became chief of cavalry in the Army of the Cumberland late in 1862, and displayed great skill in the battle of Stone's River (which see), and afterwards in driving Bragg into Georgia. Late in 1863 he commanded a division of the Fourth Corps. He was in the Atlanta campaign, and commanded the Fourth Corps from July, 1864, to the close of the war. By his arrival on the battle-field at Franklin (which see) he averted serious disaster, but was wounded and disabled. He had been made major-gen-

eral of volunteers in November, 1862, and in March, 1865, was breveted major-general United States Army.

Stanley, HENRY M., American traveller, was born near Denbigh, Wales, in 1840. His original name was John Rawlands. For ten years he was in the poor-house of St. Asaph, where he received a good education, and left it at the age of thirteen, became teacher of a school, and finally shipped at Liverpool as a cabin-boy for New Orleans. There he found employment with a merchant named Stanley, who adopted him and gave him his name. Enlisting in the Confederate army at the beginning of the Civil War, he was made prisoner, and entered the United States Navy as a volunteer. After the war he travelled in Turkey and Asia Minor and visited Wales. At the poor-house of St. Asaph he gave a dinner to the children, and told them that what success he had attained in life he owed to the education received there. Returning to the United States, he was engaged, in 1868, by the proprietor of the *New York Herald* to accompany the British expedition to Abyssinia, as the correspondent of that journal. In the fall of 1869 he was commissioned by the proprietor of the *Herald* to "find Dr. Livingstone." After visiting several countries in the East, he sailed from Bombay (Oct. 12, 1870) for Zanzibar, where he arrived early in January, 1871, and set out for the interior of Africa (March 21), with one hundred and ninety-two followers. He found Livingstone (Nov. 10), and reported to the British Association Aug. 16, 1872, and in 1873 he received the patron's medal of the Royal Geographical Society. He was commissioned by the proprietors of the *New York Herald* and the *London Telegraph* to explore the lake region of Central Africa. He set out from the eastern coast in November, 1874, with three hundred men. When he reached the Victoria Nyanza Lake (Feb. 27, 1875), he had lost one hundred and ninety-four men by death or desertion. He circumnavigated the lake, covering about one thousand miles in the voyage. After exploring that interior region, he entered upon the Congo River and made a most perilous and exciting voyage down that stream to the city. A minute account of his explorations, with numerous illustrations, was published, in two volumes, by Harper & Brothers in 1878.

Stanton, EDWIN McMASTERS, was born at Steubenville, O., Dec. 19, 1814; died in Washington, D. C., Dec. 24, 1869. His parents were of Quaker descent, and he graduated at Kenyon College, Ohio, in 1833. In 1836 he was admitted to the bar, and acquired an extensive practice at Steubenville. In 1848 he went to Pittsburgh, Penn., where he became a leader in his profession. He removed to Washington in 1857, and was employed by Attorney-general Black to plead important cases for the United States. In December, 1860, he succeeded Black as Attorney-general, and resisted the Secessionists with all his might. In January, 1862, he succeeded General Cameron as Secretary of War, and managed that department with singular ability dur-

ing the remainder of the Civil War. After his difficulties with President Johnson (see *Impeachment of President Johnson*), he resigned (May, 1868), and was appointed judge of the United

EDWIN McMASTERS STANTON.

States Supreme Court, Dec. 20, 1869. He died four days afterwards, his health having been shattered by his arduous labors as war minister.

Stanwix, FORT, TREATY AT (1768). Various projects by land speculators had been started immediately after the peace with the Western Indians (see *Pontiac's War*) had been concluded, for settlements west of the mountains. In a treaty concluded at Fort Stanwix between the Six Nations and the white people (Nov. 5, 1768), the former, in consideration of the payment of about \$50,000, ceded all their territory south of the Ohio, as far as the Tennessee River, to the crown. So much of this country, however, as lay south of the Great Kanawha was claimed by the Cherokees as a part of their hunting-grounds. (See *Land Companies*.)

Stanwix, JOHN, a British general, who came to America, in 1756, as colonel commandant of the first battalion of the Sixtieth, or Royal Americans. He was commander of the Southern District, with his headquarters at Carlisle, Penn., in 1757. In December he was promoted to brigadier-general. On being relieved by Forbes, he proceeded to Albany, and was directed to build a fort at the "Oneida carrying-place," on the Mohawk, on the site of Rome, Oneida Co., N. Y. It was called Fort Stanwix (afterwards Fort Schuyler), in his honor. He returned to Pennsylvania, a major-general, in 1759, strengthened Fort Pitt, and secured the good-will of the Indians. In May, 1760, he resigned his commission to Monckton, and, on his return to England, was appointed Lieutenant-governor of the Isle of Wight, and afterwards promoted to lieutenant-general. He also became a member of Parliament. He had served with reputation in the wars of Queen Anne before coming to America, having entered the army in 1706. General Stanwix was lost at sea while crossing from Dublin to Holyhead in December, 1765.

Star of the West fired upon. It having been resolved, on the advice of Secretary Holt and General Scott, to send troops to reinforce the garrison at Fort Sumter, orders were given for the United States steam-frigate *Brooklyn*—the only war-ship available then—to be in readiness to sail from Norfolk at a moment's notice. This order the disloyal Thompson, Secretary of the Interior, revealed to the conspirators. Virginians were ready to seize the *Brooklyn*; the lights of the shore-beacons in Charleston harbor were extinguished, and the buoys that marked the channel were removed. Informed of the betrayal of his order, President Buchanan countermanded it, when Thompson threatened to resign in consequence of such an order. The President promised him that none like it should be given "without the question being first considered and decided in the cabinet." It was soon evident that there were members of the cabinet who could not be trusted. Dangers were thickening; and the President, listening to the councils of Holt and Scott, resolved to send supplies and men to Sumter, by stealth. It was a humiliating spectacle to see the head of a great nation resorting to secret measures to execute the laws and protect the public property! The stunch merchant steam-vessel *Star of the West* was chartered by the government for

cret, imparted it to the authorities at Charleston. "As I was writing my resignation," he afterwards wrote, "I sent a despatch to Judge Longstreet that the *Star of the West* was coming with reinforcements." He also gave a messenger another despatch to be sent, in which he said, as if by authority, "Blow the *Star of the West* out of the water." The messenger patriotically withheld the despatch. When the vessel was within two miles of Fort Sumter, unsuspecting of danger, a shot came ricochetting across her bow from a masked battery on Morris Island, three fourths of a mile distant. The national flag was flying over the *Star of the West*, and her captain immediately displayed a large American ensign at the fore. As she passed on, a continuous fire was kept up from Morris Island, and an occasional shot from Fort Moultrie was hurled at her. Two steam-tugs and an armed schooner put out from Fort Moultrie to intercept her. Captain McGowan, finding himself hemmed in, powerless, and in imminent danger of capture, turned his vessel seaward, after seventeen shots had been fired by the insurgents, and returned to New York, Jan. 12. This firing on the flag of the United States was the first overt act of war that marked the inauguration of the great Civil War of 1861-65. Had Major Anderson, in Sumter, then known that loyal men were in power

in his government, he would have opened the great guns of the fortress, and the *Star of the West* and her precious freight would not have been driven to sea. There was great exultation in South Carolina because of this act of war. The Legislature resolved that they "learned with pride and pleasure of the successful resistance this day by the troops of this state, acting under orders of the governor, to an attempt to reinforce Fort Sumter."

The *Charleston Mercury*, Jan.

STAR OF THE WEST.

the purpose and quickly laden with supplies. She was cleared for Savannah and New Orleans, so as to mislead spies, and left New York at sunset, Jan. 5, 1861. Far down the bay, she received, under cover of thick darkness, four officers and two hundred and fifty artillerymen and marines, with their arms and ammunition, and proceeded to sea, under her commander, Captain John McGowan. On the morning of the 9th of January she reached Charleston bar, before daylight. Finding all the shore-lights put out, she extinguished her own. Just at dawn a scouting steamboat discovered her, burned colored lights as signals, and ran for the inner harbor. The *Star of the West* had all her soldiers concealed below and was in the guise of a merchant-vessel. The deception was fruitless; her errand was already known. Alexander Jones, a telegraphic correspondent of the Southern newspapers, had informed the *Charleston Mercury* of the sailing of the vessel from New York, and Secretary Thompson, in possession of the se-

10, said, exultingly: "Yesterday, the 9th of January, will be remembered in history. Powder has been burned over a decree of our state, timber has been crashed, perhaps blood spilled. The expulsion of the *Star of the West* from Charleston harbor, yesterday morning, was the opening of the ball of revolution. We are proud that our harbor has been so honored." . . . South Carolina "has not hesitated to strike the first blow, full in the face of her insulter. Let the United States government bear or return, at its good will, the blow still tingling about its ears—the fruit of its own bandit temerity. We would not exchange or recall that blow for millions. It has wiped out half a century of scorn and outrage. . . . If that red seal of blood be still lacking to the parchment of our liberties—and blood they want—blood they shall have, and blood enough to stamp it all in red. For, by the God of our fathers, the soil of South Carolina shall be free!" Such was the spirit in which South Carolina kindled the Civil War.

Stark, JOHN, was born at Londonderry, N. H., Aug. 27, 1723; died at Manchester, N. H., May 8, 1822. He removed, with his father, to Derryfield (now Manchester) when he was about eight years old. In 1752, while on a hunting

JOHN STARK.

excursion, he was made a prisoner by the St. Francis Indians, and was ransomed in a few weeks for \$103. He became popular with the Indians, and was adopted into their tribe. In 1755 he was made lieutenant of Rogers's Rangers, and performed good service during the French and Indian War. A member of the Committee of Safety at the commencement of the Revolution, he was alive to the importance of every political event. On the news of the affair at Lexington, he hastened to Cambridge and was immediately chosen colonel of the New Hampshire troops. He was efficient in the battle on Bunker's (Breed's) Hill. Near the close of 1776, after doing effective service in the Northern Department, he joined Washington on the Delaware. He commanded the vanguard in the battle at Trenton, and was active in that at Princeton. In the spring of 1777, displeased because he had been overlooked in promotions, he resigned his position in the army and was placed in command of New Hampshire militia, raised there to oppose the British advance from Canada. Acting upon the authority of his state and his own judgment, he refused to obey the orders of General Lincoln to march to the west of the Hudson. He soon afterwards gained the battle at Hoosick, near Bennington (Aug. 16, 1777), for which Congress, overlooking his insubordination, thanked him. He joined Gates at Bemis's Heights, but the term of his militia having expired, he went home, raised a new force, and cut off Burgoyne's retreat from Saratoga. Stark was placed in command of the Northern Department in 1778, and in 1779-80 he served in Rhode Island and New Jersey. He was also at West Point, and was one of the court that condemned Major André. Stark was again in command of the Northern Department in 1781, with his headquarters at Saratoga. After the war he lived in retirement. He was the last surviving general of the army, excepting Sumter, who died in 1832.

Star-spangled Banner, SONG OF THE. On

the return of the British to their vessels after the capture of Washington (which see), they carried with them Dr. Beanes, an influential and well-known physician of Upper Marlborough. His friends begged for his release, but Admiral Cockburn refused to give him up, and sent him on board the flag-ship of Admiral Cochrane. Francis S. Key, a resident of Georgetown, D. C., well known for his affability of manner, was requested to go to Cochrane as a solicitor for the release of the doctor. He consented, and the President granted him permission. In company with John S. Skinner, a well-known citizen of Baltimore, he went in the cartel-ship *Minden*, under a flag of truce. They found the British ships at the mouth of the Potomac, preparing to attack Baltimore. Cochrane agreed to release Beanes, but refused to allow him or his friends to return then. They were placed on board the *Surprise*, where they were courteously treated. When the fleet went up Patapsco Bay, they were sent back to the *Minden* with a guard of marines to prevent their landing and conveying information to their countrymen. The *Minden* was anchored within sight of Fort M'Henry, and from her deck the three friends observed the fierce bombardment of the fortress which soon ensued. It ceased before the dawn (Sept. 14, 1814). The anxious Americans did not know whether the fort had surrendered or not. They awaited the appearance of daylight with painful suspense. In the dim light of the opening morning they saw through their glasses the star-spangled banner yet waving in triumph over the fort, and soon learned the fate of the land expedition against Baltimore and preparations of the discomfited British for speedy departure. When the fleet was ready to sail, Key and his friends were released, and returned to the city. It was during the excitement of the bombardment, and when pacing the deck of the *Minden* between midnight and dawn, that Key composed the popular song *The Star-spangled Banner*, the first stanza of which expressed the feelings of thousands of eye-witnesses of the scene, which is its burden:

"O, say, can you see by the dawn's early light,
What so proudly we hail'd at the twilight's last gleaming,
Whose broad stripes and bright stars, through the clouds
Of the fight,
O'er the ramparts we watch'd were so gallantly streaming?
And the rocket's red glare, the bomb bursting in air,
Gave proof through the night that our flag was still there:
O, say, does that star-spangled banner yet wave
O'er the land of the free and the home of the brave?"

The rude substance of the song was written on the back of a letter which Key happened to have in his pocket. On the night after his return to Baltimore he wrote it out in full and read it to his uncle, Judge Nicholson, one of the defenders of the fort, and asked his opinion of it. The pleased judge took it to the printing-office of Captain Benjamin Edes and caused it to be printed in hand-bill form. Samuel Sands, living in 1876, set up the song in type, printed it, and distributed it among the citizens. It was first sung by Charles Durning, at a restaurant

The Star-shafted banner—

O Jay! when you see by the dawn's early light
 That so proudly we hail'd at the twilight's last gleaming,
 whose broad stripes and bright stars, through the clouds of the night,
 O'er the ramparts we watch'd, were so gallantly streaming?
 And the rocket's red glare - the bomb bursting in air,
 gave proof through the night that our flag was still there,
 O say, that Star-shafted banner yet we see
 O'er the land of the free & the home of the brave? —

Facsimile of the original manuscript of the first stanza of "The Star-Shafted Banner."

next door to the Holliday Street Theatre, Baltimore, to an assemblage of patriotic defenders of Baltimore, and after that nightly at the theatre and everywhere in public and private.

Starving Time. (See *Jamestown*.)

State Action on Jay's Treaty. The dis-

cussions of the treaty were transferred from public meetings and the newspapers to the arena of state legislatures. Governor Shelby, in his speech to the Kentucky Legislature, attacked the treaty. The House seemed to agree with him (Nov. 4, 1794), but the Senate evaded any decided committal. The House of Dele-

gates of Virginia adopted, by a vote of one hundred to fifty, a resolution approving the conduct of their Senators in voting (Nov. 20) against the treaty. A counter-resolution declaring their undiminished confidence in the President was lost—fifty-nine to seventy-nine; but another resolution disclaiming any imputation of the President's motives was passed—seventy-eight to sixty-two. The Legislature took the occasion to adopt a series of resolutions proposing an amendment to the national Constitution to admit the House of Representatives to a share in the treaty-making power. The Legislature of Maryland resolved that they felt a deep concern at efforts to detach from the President the "well-earned confidence of his fellow-citizens," and declaring their "unabated reliance in his judgment, integrity, and patriotism." The Senate of Pennsylvania made a similar declaration. The Legislature of New Hampshire expressed (Dec. 5, 1795) their "abhorrence of those disturbers of the peace" who had endeavored to render abortive measures so well calculated to advance the happiness of the country. The North Carolina Legislature, by a decided majority, adopted a series of resolutions (Dec. 8) reproaching the treaty and thanking their Senators for having opposed it. In the Legislature of South Carolina resolutions were introduced declaring the treaty "highly injurious to the general interests of the United States;" when the friends of the treaty, finding themselves in a minority, declared the Legislature had no business to interfere with the duties of the President and Senate of the United States, and, refusing to vote, the resolutions were adopted unanimously. The House did not venture to send up these resolutions to the Senate. A resolution declaring the treaty unconstitutional was defeated. The Legislature of Delaware passed (Jan. 14, 1796) a resolution of approval. Governor Samuel Adams, of Massachusetts, spoke of the treaty as "pregnant with evil," suggested a conflict of authority between the President and Senate and the House of Representatives, and transmitted to the General Court the resolutions of Virginia on the subject of amendments to the Constitution. His suggestions and sentiments met with no favorable response from the Legislature. The Massachusetts Senate declared their concurrence in the belief of the governor that the national government was in "honest hands," and expressed the opinion, unanimously, that it would "be an interference with duties intrusted to that government for the state legislatures to decide on the British treaty." The House, by a large majority, suggested "a respectful submission on the part of the people to the constituted authorities as the surest means of enjoying and perpetuating the invaluable blessings of our free and representative government." The General Court of Rhode Island expressed their confidence in the general government and rejected the Virginia resolutions for amendments to the Constitution. So, also, did the Legislature of New York. (See *Jay's Treaty*.)

State Church in South Carolina. In 1704 the Provincial Assembly of South Carolina

passed an act for the establishment of the Church of England as the legal church of the colony, and requiring all public officers to conform to its doctrine and ritual. The province was divided into ten parishes, lands were granted for glebes and church-yards, and salaries, payable from the provincial treasury, were fixed and appointed for the rectors. The regulation included the French settlements on the Santee and the Dutch settlement on the Ashley. Several churches were soon afterwards built. A commission was appointed for the displacing of rectors and ministers of the churches. A portion of the acts establishing the Anglican Church in South Carolina were disapproved by some of the proprietors as well as by the people. These acts were referred to the Lords of Trade and Plantations (which see), and were declared void by the queen in 1705.

State Church in Virginia. On Aug. 24, 1662, an act of the British Parliament was passed which required uniformity in public worship throughout the realm. Under this act about two thousand dissenting ministers were ejected from their benefices without provision being made for them or their families. Soon afterwards they were banished five miles distant from every corporation in England. At the same time, the Church of England was made the established church in Virginia by vote of the Assembly; churches were ordered to be built, glebes appropriated, and ministers furnished; and all others were forbidden to preach the Gospel on pain of banishment from the colony.

State Constitutions. The ideas of many of the state constitutions were derived largely from the colonial charters, which in several of them, down to the Declaration of Independence, formed the basis of the colonial administrations. After that declaration, in Massachusetts, Connecticut, and Rhode Island these charters continued, with some modifications, to serve as the basis of state governments. The constitutions of New Hampshire, South Carolina, Virginia, and New Jersey, adopted in haste, just before the Declaration of Independence, were framed without much deliberation, and in some points were very defective. The constitutions of Maryland and New York were more carefully and elaborately drawn. South Carolina revised and modified her first constitution in 1788. The same year Massachusetts, exercising government under the modified colonial charter, undertook to frame a state constitution. It was submitted to the people for their approval or rejection, and it was rejected. This was the first time that a constitution of a state had been submitted to the judgment of the people. Its rejection was chiefly because it included no bill of rights, and also because a special convention had not been summoned to frame it. Such a convention met the next year—a novelty which has since become common. A constitution was framed and approved by the people in July, 1790. In all the states the sovereign power was vested in the state legislatures, which had

been conferred upon them by the people, the only legitimate source of political power in a republican government. The legislatures were only amplifications of the town meetings, in which the people, in the form of a pure democracy, directly expressed their will and delegated sovereign powers to their representatives. This forms the most perfect system of constitutional government.

State Debts in 1870. According to the census of 1870, the entire indebtedness of the several states and territories of the Union at that time was \$968,785,067. This sum includes the debts of the states and territories as such, and all their counties and towns, as follows: *States*.—Alabama, \$13,277,154; Arkansas, \$4,151,152; California, \$18,089,082; Connecticut, \$17,058,906; Delaware, \$526,125; Florida, \$2,185,838; Georgia, \$21,753,712; Illinois, \$42,191,869; Indiana, \$7,818,710; Iowa, \$8,043,133; Kansas, \$6,442,282; Kentucky, \$18,953,484; Louisiana, \$53,087,141; Maine, \$16,624,624; Maryland, \$29,032,577; Massachusetts, \$69,211,538; Michigan, \$6,725,231; Minnesota, \$2,788,707; Mississippi, \$2,594,415; Missouri, \$46,909,865; Nebraska, \$2,089,264; Nevada, \$1,986,093; New Hampshire, \$11,153,373; New Jersey, \$22,854,304; New York, \$150,808,234; North Carolina, \$32,474,036; Ohio, \$22,241,988; Oregon, \$218,486; Pennsylvania, \$89,027,131; Rhode Island, \$5,938,642; South Carolina, \$13,075,229; Tennessee, \$48,827,191; Texas, \$1,613,907; Vermont, \$3,594,700; Virginia, \$55,921,255; West Virginia, \$561,767; Wisconsin, \$5,903,532. *Territories*.—Arizona, \$10,500; Colorado, \$681,158; Dakota, \$5,761; District of Columbia, \$2,596,545; Idaho, \$222,621; Montana, \$278,719; New Mexico, \$7,560; Utah, \$——; Washington, \$88,827; Wyoming, \$——. The debts of states have generally been contracted by expenditures for public improvements, largely in giving facilities for transportation.

State Department (1775). (See *Secret Committee of Correspondence*.)

State Governments Established. On the 10th of May, 1776, the Congress resolved "that it be recommended to the respective assemblies and conventions of the United Colonies, where no government sufficient to the exigencies of their affairs hath been hitherto established, to adopt such government as shall, in the opinion of the representatives of the people, best conduce to the happiness and safety of their constituents in particular and America in general." This resolution was offered by John Adams, and he, Edward Rutledge, and Richard H. Lee were appointed a committee to draft a preamble to it. It was reported and adopted on the 15th. In that preamble it was asserted that "all oaths for the support of government under the crown of Great Britain were irreconcilable with reason and good conscience; and that the exercise of every kind of authority under that crown ought to be totally suppressed, and all the powers of government exerted, under authority from the people of the colonies, for the maintenance of internal peace and the defence of their lives, liberties, and properties against the hostile in-

vasions and cruel depredations of their enemies." This was the first act of Congress in favor of absolute independence of Great Britain. The recommendation was generally followed, but not without opposition. New Hampshire had prepared a temporary state government in January, 1776. The royal charters of Rhode Island and Connecticut were considered sufficient for independent local self-government. New Jersey adopted a state constitution July 2, 1776; Virginia, July 5; Pennsylvania, July 15; Maryland, Aug. 14; Delaware, Sept. 20; North Carolina, Dec. 18; Georgia, Feb. 5, 1777; New York, April 20; South Carolina, March 19, 1778; and Massachusetts, March 2, 1780. No national government was established until the armed struggle had been going on for six years.

State Legislatures, SUPREME POWER OF. For all practical purposes—even to the extent of alterations of the constitutions, except in a few states where different provisions were made—the supreme power was vested in the respective legislatures, which, excepting Pennsylvania and Georgia, consisted of two branches. The more numerous branch retained the name it had borne in colonial times. In Massachusetts and other states it was the House of Representatives; in Virginia, the House of Burgesses; in North Carolina, the House of Commons; in other states, the House of Assembly. In some of the states the colonial title of Council was given to the other House. Virginia called it the Senate, an appellation afterwards adopted by other states. This branch of government was to fill the place of the former Colonial Council. (See *State Constitutions*.)

State Rights. This term is synonymous, as popularly used, with state supremacy (which see). The word "rights" involves a sacred idea in the minds of all men, and that word was more effective in swaying the multitude than "supremacy" or "sovereignty." It was always used in communicating with the people directly by the advocates of state supremacy.

State-rights Party. This is a misnomer. It is a popular equivalent for "State-supremacy party," or a party which claims that the states are sovereigns and their power supreme, and the national government only a compact between the states. (See *Resolutions of '98 and State Supremacy*.) This party first appeared in conspicuous form in the convention of 1787 that framed the national Constitution. In that convention it grew out of a claim for each state to have the right of equal representation in the first branch or House of Representatives of the government, instead of a proportional representation according to population. This was strenuously insisted upon by the smaller states; but finally, at the suggestion of Dr. Franklin, it was agreed that the representation in the first branch of the national legislature should be in the proportion of one member for every forty thousand inhabitants, and an equality in the second branch (the Senate) as it exists at the present day.

State Support of Churches. The result of

the French Revolution confirmed the opinion of thinking minds, especially in New England, that something more than general intelligence, virtue, and good morals, public and private, afforded the foundation upon which alone a republican government could be sustained. It was then, as now, admitted that religion afforded the only solid support of morality; and such being the case, it was argued that it was the duty of the government to provide for public instruction in religion, just as much as for public instruction in letters. It was therefore proposed to have the State lend support by taxation to the churches, leaving each individual to choose to what Church organization he would contribute his measure of support. It was significantly remarked on this subject, in connection with the common-school system in New England, that as out of New England there was no Church establishment, so out of New England there was no extensive system of public education. But a feeling of opposition to a union of Church and State, the evils of which were seen in England, caused the matter to rest in a mere proposition for consideration.

State Supremacy. James Madison, in a letter to Edmund Randolph, in April, 1787, wrote: "I hold it for a fundamental point that an individual independence of the states is utterly irreconcilable with the idea of aggregate sovereignty." Washington, in a letter to John Jay, in March, 1787, on the subject of a national Constitution, said: "A thirst for power, and the bantling—I had liked to have said the *monster*—sovereignty, which has taken such fast hold of the states individually, will, when joined by the many whose personal consequences in the line of state politics will, in a manner, be annihilated, form a strong phalanx against it."

State Supremacy in Legal Forms. The closing form of legal documents is usually as follows: "Done in the — year of American independence." For years before the outbreak of the late Civil War, in Virginia and other slave-labor states, the form had been: "Done in the — year of Virginia [or North Carolina] independence."

State Supremacy or Sovereignty. The advocates of the political doctrine of state sovereignty claim that the citing of the names of the different states concerned in the treaty of peace in 1783 implied the independent sovereignty of each. The opponents of the doctrine say that they were named only to define what states were included in the treaty; that they were independent commonwealths, but not sovereignties; that the latter term implies no superior; that the colonies and states had never been in that exalted position; that while they were colonies they were under Great Britain, and by the Declaration of Independence they assumed only the position of equals in a national league, acknowledging the general government which they thus established a live, superior, controlling power; that they adopted a broad signet for the common use bearing the words, "SEAL OF THE UNITED STATES," as the insignia

of its authority; that when a treaty of peace was negotiated the states did not each choose a separate commissioner for the purpose, but three agents were appointed by the general Congress as representatives of the nationality of the confederation; that when, a few years afterwards, they adopted a Constitution, whose preamble began, "We the people [not the states] of the United States," it was ratified by the people assembled in representative conventions, and not by the state legislatures, and so disowned all independent state sovereignty, which the opponents of the doctrine declare never existed either as colonies or states.

Staten Island, SULLIVAN'S EXPEDITION TO. When Howe sailed southward (June, 1777) he left about three thousand men, one third of them loyalists, on Staten Island. Washington, who was watching Howe's movements, had placed Sullivan, with his division, near the coast in New Jersey. The British on the island continually plundered the Jerseymen on the main. Some of these plunderers, stationed nearly opposite Amboy, were attacked by Sullivan (Aug. 22) with about one thousand men. He took several prisoners, and among the spoils were the records and papers of the Yearly Meeting of Friends, which revealed such defection to the cause of the patriots that the Congress advised the Council of Pennsylvania to arrest eleven of the leading and wealthy members of that society.

States, ALLEGED ORIGIN OF THE NAMES OF THE. Alabama (Indian), "Here we rest." Arkansas (Indian), the same as Kansas, "smoky water," with the prefix of the French *arc*, or bow for arrows. California, a name given by Cortez in 1535 to the peninsula of Lower California. He probably derived it from *Espanadian*, a Spanish romance published in 1510, in which the name is given to an imaginary island "on the right hand of the Indies, very near to the terrestrial paradise," abounding in great treasures of gold. Colorado (Spanish), "red," or "colored." Connecticut, from the Indian word, *Quah-na-ta-cut*, "country upon the long river." Delaware, in honor of Thomas West, Lord De la Warr, or Delaware, first governor of the Virginia colony. Florida, so named by Ponce de Leon because of the abundance of flowers there, or because of the day on which he discovered it—Easter or Palm Sunday (*Pascua Florida*), 1512. Georgia, in honor of George II. of England, in whose reign it was settled. Illinois, from the Indian word *illini*, "men," and the French suffix *ois*, "tribe of men." Indiana, from the word "Indian." Iowa, the French rendering of an Indian word signifying "the drowsy," or the "sleepy ones." Kansas (Indian), "smoky water." It is also said to signify "good potato." Kentucky (Indian), *Kain-tuck-ee*, "at the head of a river." Louisiana, so named by La Salle after King Louis XIV. of France. Maine, in compliment to the queen of Charles I., who owned the province of Mayne, in France. Maryland, named in honor of Henrietta Maria, queen of Charles I., who called the province *Terra Maria*, "Mary's Land." Massachusetts

(Indian), "about the great hills." Michigan (Indian), *mit-chi*, "great," and *saw-ge-gan*, a Chippewa word for "liken." Minnesota (Indian), "whitish water." Mississippi (Indian), "great, long river." Missouri (Indian), "muddy river." Nebraska (Indian), "water valley," or "shallow river." Nevada, a Spanish word. New Hampshire, so named by George Mason after Hampshire, a county in England. New Jersey, so called in honor of Sir George Carteret, one of its proprietors, who had been governor of the island of Jersey, in the British Channel. New York, so named in compliment to the Duke of York, to whom the territory was granted in 1664. Carolina, North and South, so named in compliment to Charles II. (Latin *Carolus*), who granted the colonial charter. Ohio (Indian), *O-kee-yuk* (Seneca), "beautiful river." The French spelled it *O-y-o*. Oregon, from *oregano* (Spanish), the wild marjoram, which grows abundantly on the Pacific coast. Pennsylvania, "Penn's woods," so named in honor of Admiral Penn, to whose son William it was granted by Charles II. Rhode Island, a corruption of *Rodee Islandt*, "Red Island," so named by the Dutch traders because of the abundance of cranberries found on the shore. Tennessee (Indian), "river of the big bend." Texas, from an Aztec word signifying "north country." Vermont (French, *verd mont*), "green mountain," from the green mountain ranges that traverse it. Virginia, so named in compliment to Elizabeth, the unmarried queen of England. West Virginia, formed from the western portion of old Virginia. Wisconsin, or Ouisconsin, the French form of an Indian word meaning "a wild, rushing river."

States-General of Holland. One of the five chief powers of the government of the Netherlands, established after the declaration of their national independence. These powers were the States-General, the Council of State, the Chamber of Accounts, the Stadtholder, and the College of the Admiralty. The States-General usually sat at the Hague. It was not in any true sense a representative body, but rather a deputation. It had no claim to sovereignty. It obeyed the instructions of its constituents to the letter. When new subjects were introduced for consideration, the States-General applied to the provinces for direction. Neither war nor peace could be made without the unanimous consent of the provinces, nor troops raised without the same unanimity. The States-General constituted a congress of the same general character of that of the United States under the Articles of Confederation.

Statue of King George III. The people of New York city, grateful for the repeal of the Stamp Act, voted a statue to the king and to Pitt. That of the former was equestrian, made of lead, and gilded. It was placed in the centre of the Bowling Green, near Fort George, at the foot of Broadway. Raised upon a pedestal, with the head of the king and the horse facing westward, it made an imposing appearance. It was set up, with great parade, Aug. 21, 1770.

Within six years afterwards the people pulled it down, with demonstrations of contempt. Washington occupied New York with Continental troops in the summer of 1776. There he received the Declaration of Independence (July 9) and it was read to the army. The same evening a large concourse of soldiers and civilians assembled at the Bowling Green, pulled down the statue, broke it in pieces, and sent a portion to the house of Oliver Wolcott, on the western edge of Connecticut, where it was run into bullets by his family. In a letter to General Gates upon this event, Ebenezer Hazard wrote: "His [the king's] troops will probably have melted majesty fired at them." The venerable Zachariah Greene (which see), who was present at the pulling-down of the statue, said the artist had made an omission of stirrups for the saddle of the horse, and it was a common remark of the soldiers, "The king ought to ride a hard-trotting horse without stirrups." Portions of that statue are now (1880) in possession of the New York Historical Society.

Statue of Pitt. The citizens of New York, grateful to Pitt for his services in procuring the repeal of the Stamp Act, voted a statue of marble, to be erected in the city. It was made the natural size, and set up at the intersection of Wall and William streets in the summer of 1770. The figure was in the habit of a Roman orator, and in one hand was a partly-open scroll, on which was inscribed "Articuli Magnæ Chartæ Libertatum." The left hand was extended in oratorical attitude. On the pedestal was the following inscription: "This statue of the Right Honorable William Pitt, Earl of Chatham, was erected as a public testimony of the grateful sense the colony of New York retains of the many services he rendered to America, particularly in promoting the repeal of the Stamp Act. Anno Domini 1770." When the British occupied the city, this statue was mutilated by the soldiery. After the war it was removed, and lay for many years among rubbish in the corporation yard. Then it was set up at Riley's Fifth Ward Hotel, corner of West Broadway and Franklin Street, where it remained many years, but has again been lost sight of.

Statues and Monuments to the Memory of Washington. On Aug. 7, 1783, the Continental Congress, sitting at Princeton, resolved unanimously (ten states being represented) "That an equestrian statue of General Washington be erected at the place where the residence of Congress shall be established." The matter was referred to a committee consisting of Messrs. Arthur Lee, Ellsworth, and Mifflin, to prepare a plan. The committee reported the same day "That the statue be of bronze; the general to be represented in a Roman dress, holding a truncheon in his right hand, and his head encircled with a laurel wreath. The statue to be supported by a marble pedestal, on which are to be represented, in basso-relievo, the following principal events of the war, in which General Washington commanded in person, viz.: the evacuation of Boston, the capture of the Hes-

sians at Trenton, the battle at Princeton, the action at Monmouth, and the surrender of York. On the upper part of the pedestal to be engraved as follows: 'The United States, in Congress assembled, ordered this statue to be erected in the year of our Lord 1783, in honor of George Washington, the illustrious commander-in-chief of the armies of the United States of America during the war which vindicated and secured their liberty, sovereignty, and independence.' It was further resolved that the statue should be made by the best artist in Europe, under the direction of the United States minister at Versailles (Dr. Franklin), and that the best resemblance of General Washington that could be procured should be sent to the minister, together with "the fittest description of the events which are to be the subject of the basso-relievo." Happily for historic truth, that statue of Washington "in a Roman dress" was never executed. Washington died on Dec. 14, 1799, and on the 23d Congress adopted a joint resolution that a marble monument should be erected to the memory of Washington at the national capital. Early in the session of Congress (1799-1800) the question of erecting a monument in accordance with the resolves at his death was discussed. It was proposed to erect a marble mausoleum of a pyramidal shape, with a base of one hundred feet square. This was objected to by many members opposed to his administration, who thought a simple slab sufficient, as history, they said, would erect a better monument. At the next session it was brought up, and reference was made to the resolve of Congress in 1783. The bill for a mausoleum finally passed the House, with an appropriation of \$200,000. The Senate reduced the amount to \$150,000. The House proposed other amendments, and the matter was allowed to rest indefinitely. Finally, in 1878, Congress made an appropriation for finishing an immense obelisk to the memory of Washington, begun by means of private subscriptions. Meanwhile Congress had caused an equestrian statue of bronze to be erected in a square at the national capital. The state of Virginia had also erected a monument, surmounted by a bronze equestrian statue, at Richmond; and the citizens of New York caused an equestrian statue of bronze to be erected at Union Square, by Henry K. Brown, superior to any yet set up. A spacious building, in which might be gathered the statues of our statesmen and heroes, with Washington as a central figure, erected at the national capital, would be more sensible, and more conformable to good taste, than the pile of stones—like the heathen cairn that tells no truth—now (1880) partly completed at the capital.

Status of the Insurgents. At the beginning of July, 1861, the Secessionists had formed a confederacy, civil and military, vast in the extent of its area and operations, strong in the number of its willing and unwilling supporters, and marvellous in its manifestation of energy hitherto unsuspected. It had all the visible forms of a regular government, modelled after that it was seeking to destroy (see "*Confederate*

States of America, Permanent Constitution of the), and through it they were wielding a power equal to that of many of the empires on the globe. They had been accorded belligerent rights, as a nation struggling for its independence, by leading governments of Europe, and under the sanction of that recognition they had commissioned ambassadors to foreign courts, and sent out upon the ocean armed ships bearing their chosen ensign to commit depredations (see *Confederate Privateers*), as legalized by the law of nations. They had created great armories, and were successfully defying the power of the government to suppress their revolt. At midsummer, 1861, the insurrection had become an organized rebellion, and assumed the dignity and proportions of a civil war.

Status of the Navy of the United States at the Close of the War of 1812. James Fenimore Cooper, in his *History of the Navy of the United States*, says: "The navy came out of the struggle with a vast increase of reputation. The brilliant style in which the ships had been carried into action, the steadfastness and rapidity with which they had been handled, and the fatal accuracy of their fire on nearly every occasion, produced a new era in naval warfare. Most of the frigate actions had been as soon decided as circumstances would at all allow, and in no instance was it found necessary to keep up the fire of a sloop of war an hour when singly engaged. Most of the combats of the latter, indeed, were decided in about half that time. The execution done in these short conflicts was often equal to that made by the largest vessels of Europe in general actions, and in some of them the slain and wounded composed a very large proportion of the crews. It is not easy to say in which nation this unlooked-for result created the most surprise. . . . The ablest and bravest captains of the English fleet were ready to admit that a new power was about to appear on the ocean, and that it was not improbable the battle for the mastery of the seas would have to be fought over again."

Steam Navigation in the United States. Immediately after the close of the old war for independence James Rumsey, of Maryland, propelled a vessel by steam on the Potomac River, a fact certified to by Washington. In 1785 an association was formed to aid him, which was called the "Rumsey Society," of which Dr. Franklin was president. Nothing came of it. The next year John Fitch, a native of Connecticut, exhibited a boat on the Delaware propelled by steam; and in 1788 he applied to the Continental Congress for a patent, saying his boat could be propelled eight miles an hour by the vapor. A stock company was formed at Philadelphia, and built a steam packet-boat, which ran until the company failed in 1790. Fitch's efforts in steam navigation also failed. John C. Stevens, of Hoboken, N. J., constructed a steamboat on the waters of the Hudson that was driven by a Watt engine, moved by vapor from a tubular boiler of his own invention, and a screw propeller. The same year Oliver Evans

put a steam dredging-machine on the Delaware and Schuylkill rivers propelled by a steam paddle-wheel moved by a high-pressure engine, the first of its kind ever used. Meanwhile Robert Fulton, a professional painter, had conceived a plan for steamboat navigation while an inmate of Joel Barlow's residence in Paris. He met Chancellor Livingston, of Livingston Manor, in Paris, and interested that gentleman in his projects. He tried two experiments on the Seine in 1803. Fulton visited Scotland, where a steamboat was in operation, and received from the inventor a description of its construction. With these facts in his possession, Fulton planned, and, on his return to New York in 1806, built, in conjunction with Livingston, a steamboat, which he called the *Clermont*, the title of the latter's country seat on the manor. The vessel was one hundred and thirty feet in length, eighteen in width, and seven in depth, and was of one hundred and sixty tons burden. She was propelled by a Watt & Boulton engine. Fulton was generally regarded as an unwise enthusiast, and when, on the morning of Friday, Aug. 7, 1807, the *Clermont* left New York on a trial-trip to Albany, bearing Fulton and a few friends who had faith in his enterprise, and the boat stopped a while on account of a slight imperfection, he was greeted by jeers from a crowd on shore. But she soon moved on out of sight of the deriding multitude, and made her way to Albany and back against wind and tide, frightening many along the shores of the river, who regarded it, as it cast forth sparks, flame, and smoke during the night, a monster of the deep. The great experiment then became a demonstration, and navigation by steam was then first successfully undertaken. From that day vast improvements have been made in steam navigation, until now steam-vessels are seen in all parts of the world, even among the ice-packs of the polar seas. The *Clermont* began regular trips between New York and Albany on the 1st of September, 1807, making the round trip of about three hundred miles in seventy-two hours. On that day the following advertisement appeared in the New York newspapers: "The North River steamboat will leave Paulus's Hook [Jersey City] on Friday, the 4th of September, at nine o'clock in the morning, and arrive at Albany on Saturday, at nine o'clock in the afternoon. Provisions, good berths, and accommodations are provided." Before the breaking-out of the War of 1812-15 Fulton and Livingston had caused six steamboats to be built for navigating the Hudson and for ferrying at New York. Steam navigation was soon in operation on the rivers and lakes of the United States, and quite early on the sea. In 1808 Robert L. Stevens, son of John C., went in the *Phoenix*, then lately launched at Hoboken, around to the Delaware River; and in July, 1819, the steamship *Sarannah* crossed the Atlantic Ocean from New York to Liverpool in twenty-six days. Six years later the steamship *Enterprise* went from Falmouth, England, to the East Indies, the first voyage of the kind ever made. For this achievement her com-

mander (Captain Johnson) received \$50,000. These were extraordinary voyages at that time. The beginning of the regular navigation of the ocean between Europe and America was postponed until June, 1838, when the *Great Western* crossed the Atlantic from Bristol to New York in eighteen days. From that time steam navigation between the continents has been regularly kept up, and the Atlantic is now traversed by steam-vessels from New York to Liverpool in from seven to ten days. Steamships are seen on every sea. They are employed in arctic explorations; and in the early part of 1879 a steamship made the first voyage from the waters of the Atlantic to those of the Pacific through the ocean lying at the north of Europe and Asia. The first American steam-vessel seen in the East India seas was the schooner *Midas*, which became a passenger-boat in Chinese waters in 1844. It is said that Jonathan Hull, an Englishman, first suggested steam navigation in 1736.

Steamboat Navigation on the Hudson River in 1813. Announcements similar to the following in the New York papers at that exciting period, when the War of 1812-15 was in progress, were of frequent occurrence: "The Albany steamboat which arrived yesterday brings intelligence that Fort Erie had surrendered to the troops of the United States under Generals Dearborn and Lewis, with little or no resistance on the part of the enemy." The following advertisement, taken from the *New York Evening Post* of June, 1813, with a copy of a cut of "the steamboat" at its head, will seem curious to the traveller now:

HUDSON RIVER STEAMBOATS.

For the Information of the Public.

The *Paragon*, Captain Wiswall, will leave New York every Saturday afternoon at five o'clock. The *Car of Neptune*, Captain Roorback, do, every Tuesday afternoon at five o'clock. The *North River*, Captain Bartholomew, do, every Thursday afternoon at five o'clock.

The *Paragon* will leave Albany every Thursday morning at nine o'clock. The *Car of Neptune*, do, every Saturday morning at nine o'clock. The *North River*, do, every Tuesday morning at nine o'clock.

PRICES OF PASSAGE.

From New York to Verplanck's Point, \$2; West Point, \$2.50; Newburgh, \$3; Wappinger's Creek, \$3.25; Poughkeepsie, \$3.50; Hyde Park, \$4; Esopus, \$4.25; Red Hook, \$4.50; Catskill, \$5; Hudson, \$5; Coxsackie, \$5.50; Kinderhook, \$5.75; Albany, \$7. From Albany to Kinderhook, \$1.50; Coxsackie, \$2; Hudson, \$2; Catskill, \$2.25; Red Hook, \$2.75; Esopus, \$3; Hyde Park, \$3.25; Poughkeepsie, \$3.50; Wappinger's Creek, \$4; Newburgh, \$4.25; West Point, \$4.75; Verplanck's Point, \$5.25; New York, \$7.

All other way passengers to pay at the rate of one dollar for every twenty miles. No one can be taken on board and put on shore, however short the distance, for less than one dollar. Young persons from two to ten years of age to pay half price. Children under two years, one fourth price. Servants who use a berth, two thirds price; half price if none.

Steedman, CHARLES, was born at Charleston, S. C., Sept. 24, 1811, and entered the navy in 1828. He served on the coast of Mexico during the war against that country. He was in command of the *Dolphin* in the Paraguay expedition (which see) in 1859-60. He performed excellent service as commodore on the Southern coasts in 1861-62, and commanded the *Ticonderoga* in both attacks on Fort Fisher (which see). In 1866 he was in command of the European squadron, and in 1870 of the navy-yard at Boston. In June, 1871, he was made Rear-admiral United States Navy.

Steedman, JAMES BARRETT, was born in Northumberland County, Penn., July 30, 1818. He was in Ohio in 1849, where he organized a company to cross the plains to California, gold-hunting. Returning, he became a member of the Board of Public Works of Ohio. Mr. Steedman entered the military service as colonel of Ohio volunteers in 1861, and was active in western Virginia. He afterwards joined the army under Buell in Kentucky, and was appointed brigadier-general in July, 1862. At the battle of Perryville (which see) he was distinguished. The following year (1863) he commanded a division of the reserved corps of the Army of the Cumberland, and was made major-general of volunteers in April, 1864, for distinguished services in the battle of Chickamauga (which see). He was active in the Atlanta campaign in 1864; and when Sherman departed for the sea, he joined General Thomas in Tennessee, and was distinguished in the battle of Nashville (which see). He resigned July 9, 1866, and became revenue collector at New Orleans.

Steele, FREDERIC, was born at Delhi, N. Y., in 1821; died at San Mateo, Colombia, in 1868. He graduated at West Point in 1843; served during the war against Mexico; and was major of infantry at the beginning of the Civil War,

FREDERIC STEELE.

in service in Missouri. He was made brigadier-general of volunteers for his good conduct at the battle of Wilson's Creek (which see), and major-general in November, 1862. He commanded a division under Sherman, and took

part in the battle of Chickasaw Bluff and the capture of Fort Hindman (which see). He commanded a division of Grant's army in the siege of Vicksburg, and afterwards he commanded the Department of Arkansas to the end of the war. General Steele assisted in the capture of Mobile (which see) in April, 1865, and was then transferred to Texas. In March, 1865, he was breveted major-general in the United States Army.

Steele, JOHN, was born at Lancaster, Penn., in 1758; died Feb. 27, 1827. He was captain in the Pennsylvania line during the Revolution; was wounded at Brandywine; was commander of Washington's life-guard in 1780; and assisted in the capture of Cornwallis. He was State Senator after the war, and was a commissioner to settle the Wyoming difficulties. (See *Wyoming*.) Steele was Collector of the Port of Philadelphia a long time, and general of the Pennsylvania militia.

Steinwehr, ADOLPH WILHELM FRIEDRICH (Baron von), was born at Blankenburg, Duchy of Brunswick, Sept. 25, 1822. His father and grandfather were in the Prussian military service, and he was educated at the military academy of Brunswick. He came to the United States in 1847, and offered his services to the government in the war against Mexico. He failed to get a commission in the army, and returned to Germany. Coming again to the United States in 1854, he settled on a farm in Connecticut; and when the Civil War broke out he raised a regiment in New York, and with it fought in the battle of Bull's Run. In the fall of 1861 he was made brigadier-general, and commanded the second brigade of Blenker's division. After the organization of the Army of Virginia (which see) Steinwehr was appointed to command the second division of Sigel's corps, and was active in the campaign in Virginia from August to December, 1862. He was in the battles of Chancellorsville and Gettysburg in 1863.

Stephen, ADAM, was an officer of merit in the French and Indian and other colonial wars, serving with distinction under Braddock. He was afterwards in command of Fort Cumberland, with the rank of lieutenant-colonel. Returning from an expedition against the Creek Indians, he was assigned to the defence of the Virginia frontier and made brigadier-general. Commanding a Virginia regiment when the war for independence began, he was made (September, 1776) brigadier-general in the Continental service, and in February, 1777, major-general. His behavior was exemplary in the battle of Brandywine; but, yielding to temptation, he was intoxicated at the battle of Germantown, and was dismissed from the army.

Stephens, ALEXANDER HAMILTON, acknowledged to be one of the ablest statesmen in the South when the Civil War broke out, was born in Taliaferro County, Ga., Feb. 11, 1812. He was educated at Franklin College, and graduated in 1832. Being left an orphan, he was indebted to the care of friends for his education and youth-

ful training for usefulness. He was admitted to the practice of the law in 1834 at Crawfordsville, Ga., his present place of abode, and soon rose to eminence. His first care was to reim-

ALEXANDER HAMILTON STEPHENS.

burse expenditures by his friends and to purchase from the hands of strangers the home of his childhood at Crawfordsville. In early manhood he adopted the doctrine of state supremacy (which see) in all its breadth, and has always believed in the righteousness of slavery. In this doctrine and belief he has always acted consistently. Though small in stature and weak in constitution, he has given many instances of personal courage. He entered the Legislature of Georgia as a member in 1834, and remained there until 1841. In 1842 he was elected to the State Senate; and from 1843 to 1859 was a representative in Congress, where he was an able and industrious worker on committees, and fluent in debate. Like all leaders in the slave-labor states, he favored the annexation of Texas, and supported Clay for President in 1844. He took a leading part in effecting the compromises of 1850 (which see), and was an active supporter of the Kansas-Nebraska Act (which see). When the old Whig party broke up, he joined the Democrats, and was a firm supporter of Buchanan's administration. He favored Douglas's election to the Presidency, and in various public addresses denounced those who advocated a dissolution of the Union. On this subject he and Robert Toombs, of Georgia, were diametrically opposed, and at public meetings during the autumn and winter of 1860-61 these popular leaders had strong contentions in public, Stephens always setting forth the beneficence and value of the Union, Toombs denouncing it as an oppressor and a hinderance to the progress of Georgia. In a speech at Milledgeville opposing secession, Stephens said, "Some of our public men have failed in their aspirations. That is true, and from that comes a great part of our troubles." Toombs was present, and keenly felt this thrust at demagogues of every hue. When a Georgia state convention debated the propriety of passing an ordinance of secession, Stephens, who was a member, opposed the scheme; but when it was

adopted by a clear majority, he, in accordance with his views of paramount allegiance to his state, acquiesced in it and signed it. In his speech against it, he had said, "Should Georgia determine to go out of the Union, I speak for one, though my views might not agree with theirs, whatever the result may be, I shall bow to the will of the people of my state." A month later Mr. Stephens was vice-president of a league formed for the destruction of the Union. In a speech at Richmond (April 22, 1861) he justified the secession movement, and there and elsewhere declared that slavery was the true corner-stone of the "Confederate government" then just formed. Mr. Stephens was confined some time as a state prisoner in Fort Warren, in Boston harbor, but was released Oct. 11, 1865. He published a history of the Civil War, under the title of *History of the War between the States*—a title that is a misnomer, for there never was a war between the states: it was a war between the national government and insurgents in several states. In 1866 he was chosen a delegate to the Philadelphia "National Union Convention," but did not attend; and in 1877 he took a seat in the national House of Representatives as a delegate from Georgia.

Stephens, JOHN LLOYD, was born at Shrewsbury, N. J., Nov. 28, 1805; died in New York, Oct. 12, 1852. He graduated at Columbia College in 1822; studied at the Litchfield Law School, and practised in New York. From 1834 to 1836 he was in Europe, and went to Egypt and into Arabia and the Holy Land. He travelled in Greece, Turkey, Russia, and Poland, and published accounts of incidents of travel in those countries. In 1839 he was appointed special ambassador to Central America, when he explored the ancient ruins in that country. On his return he published a work, in two volumes, entitled *Incidents of Travel in Central America, Chiapa, and Yucatan*. In 1842 he again visited that region and made further investigations, and in 1843 he published *Incidents of Travel in Yucatan*. All of his works were very popular, those on the antiquities of Yucatan having acquired an enormous sale. They are regarded as the richest contributions on the subject of American antiquities ever made by one man. The late Frederic Catherwood accompanied Mr. Stephens, and made numerous drawings for the books. Mr. Stephens was a director of the Ocean Steam Navigation Company. He was also President of the Panama Railroad Company, and was active in the construction of the road. In the Constitutional Convention of the State of New York (1846) Mr. Stephens was a delegate from the city of New York.

Steben (Baron), FREDERICK WILLIAM AUGUSTUS, was born at Magdeburg, Prussia, Nov. 15, 1730; died at Steubenville, N. Y., Nov. 28, 1794. He was educated at Neisse and Breslau. At the siege of Prague he was, at the age of fourteen years, a volunteer under his father, and he was so distinguished at Prague and Rossbach in 1757 that he was made adjutant-general the next year. In 1761 he was sent prisoner

to St. Petersburg, but was soon released, and in 1762 was placed on the staff of Frederick the Great of Prussia. In 1764 he was appointed grand-marshal and general of the guard of the

ed over his grave by private subscription, the recumbent slab bearing only his name and title.

FREDERICK WILLIAM AUGUSTUS STEUBEN.

Prince of Hohenzollern-Hechingen, who made him a Knight of the Order of Fidelity. Leaving an ample income, he came to America late in 1777 (arriving at Portsmouth, N. H., in November), and joined the army under Washington at Valley Forge. He was appointed inspector-general of the army with the rank of major-general in March, 1778, and fought as a volunteer in the battle of Monmouth in June. Steuben introduced thorough discipline in the army, and prepared a manual of tactics which was approved by Congress. He commanded in Virginia in 1781, and was distinguished at Yorktown in October. The State of New Jersey gave him a small farm

STEUBEN'S LOG HOUSE.

at the close of the war, and the State of New York gave him 16,000 acres of wild land in Oneida County. The national government gave him an annuity of \$2500. He withdrew from society, built a log house on his domain, and lived there until his death. He gave a tenth of his estate to his aids—

North, Popham, and Walker—and his servants, and parcelled the remainder among twenty or thirty tenants. He was generous, witty, cheerful, and of polished manners. Steuben was buried in his garden at Steubenville. Afterwards, agreeably to his desires, his aids had his remains wrapped in his cloak, placed in a plain coffin, and buried in a grave in the town of Steuben, about seven miles northwest of Trenton Falls. There, in 1826, a monument was erect-

STEUBEN'S RURAL MONUMENT.

His grateful aid, Colonel North, caused a neat mural monument to be erected to his memory upon the walls of the German Reformed Church edifice in Nassau Street, between John Street and Maiden Lane, New York city, with a long and eulogistic inscription.

Steuben in Virginia.

Baron Steuben was in Virginia when Arnold invaded the state. (See *Arnold in Virginia*.) He had been left there by General Greene to gather up and discipline the levies voted for the Southern Army by that state. On the appearance of this new danger, the militia flocked to his standard. Believing Petersburg to be Arnold's chief object, the baron kept his small force on the southern side of the James, and after the traitor had

STEUBEN'S MURAL MONUMENT.

burned Richmond and gone down the river on a marauding expedition, Steuben (with General Nelson) pursued him with Virginia militia, when Arnold fled up the Elizabeth River. Soon afterwards, Lafayette and Wayne joined Steuben in chasing Cornwallis down the Virginia peninsula.

Stevens, EBKNEZER, was born in Boston in 1752; died in New York city, Sept. 2, 1823. At the age of twenty-one he formed one of the famous "Boston Tea-party" (which see), and soon afterwards went to Long Island. He entered the military service in 1775, and raised two companies of artillery and one of artificers for the expedition against Canada. In November, 1776, he was appointed major, and commanded the artillery at Ticonderoga and in the battle of Stillwater, or Bemis's Heights (which see). In April, 1778, he was made lieutenant-colonel and assigned to Lamb's artillery regiment; and he served with Lafayette in Virginia in 1781, participating in the capture of Cornwallis at Yorktown. He was for many years a leading merchant in New York, and major-general of militia, serving in defence of the city of New York in 1814.

Stevens, EDWARD, was born in Culpepper County, Va., in 1745; died there, Aug. 17, 1820. At the battle of Great Bridge (which see) he commanded a battalion of riflemen, and was soon afterwards made colonel of a Virginia regiment, with which he joined the army under Washington and fought in the battle of Brandywine, saving a part of the army there from capture by his skill and bravery. After the battle of Germantown (which see) he was made a brigadier-general. He was distinguished in the battle near Camden (see *Sanders's Creek, Battle at*) and at Guilford Court-house (which see). He was highly commended by General Greene for his services. At the latter battle he was severely wounded. He was also distinguished in the siege of Yorktown. General Stevens was a State Senator from the organization of the state government in Virginia until 1790.

Stevens, ISAAC INGALLS, was born at Andover, Mass., March 25, 1818; killed in battle, Sept. 6, 1862. He graduated at West Point, first in his class, in 1839, and entered the Engineer Corps. He was attached to General Scott's staff during the war in Mexico (1847-48) as adjutant, and was severely wounded in the attack on the city of Mexico. He resigned in 1853, and was appointed Governor of Washington Territory and placed in charge of the survey of a route for a North Pacific railway, establishing its practicability. Governor Stevens was a representative in Congress from Washington Territory from 1857 till 1861. A leading Democrat, he was in the convention at Charleston and Baltimore in 1860 (which see), and supported Breckinridge for the Presidency; but when the secession movements began he advised Buchanan to dismiss Floyd and Thompson, and supported the government nobly with his sword in the Civil War that ensued, entering the military service as colonel of the Seventy-ninth New York Highlanders. He was active under Sherman in the Port Royal expedition in 1862; was afterwards attached to Pope's command, leading a division; and in the battle at Chantilly fell while bearing aloft the colors of one of his regiments and cheering on his men. He had been made major-general of volunteers July 4, 1862.

Stevens, JOHN, inventor, was born in New York in 1749; died at Hoboken, N. J., in 1838. Seeing John Fitch's steamboat on the "Collect" in New York in 1787, he became interested in the subject of steamboat navigation, and experimented for nearly thirty years. He unsuccessfully petitioned the Legislature of New York for the exclusive navigation of the waters of the state. He built a propeller in 1804—a small open boat worked by steam. It was so successful that he built the *Phoenix*, a steamboat completed soon after Fulton and Livingston had set the *Clermont* afloat. (See *Fulton, Robert*.) The

latter having obtained the exclusive right to navigate the waters of New York, Stevens placed his boats on the Delaware and Connecticut rivers. In 1812 he published a pamphlet urging the United States government to make experiments in railways traversed by carriages propelled by steam, and proposed the construction of a railway for such a purpose from Albany to Lake Erie. This was nearly a quarter of a century before such a work was accomplished.

Stevens, ROBERT LIVINGSTON, son of John Stevens, the inventor, was born at Hoboken, N. J., in 1788; died there, April 20, 1856. At the age of twenty years he built a steamboat with concave water-lines, the first application of the wave-line to ship-building. He discovered the utility of employing anthracite coal in steam navigation in 1818, when coal was about to become an article of commerce. In 1822 he first substituted the skeleton wrought-iron for the heavy cast-iron walking-beam, and in 1824 first applied artificial blast to the boiler furnace. In 1827 he introduced the "hog-frame" for steamboats to prevent their bending in the centre. Mr. Stevens began the first steam ferryage between New York and the New Jersey shores in 1816, and was the inventor of the T rail for railroads. He was a projector of the Camden and Amboy Railroad, and was its president for many years. About 1815 he invented an improved bomb for the naval service. In 1842 he was commissioned by the United States government to build an immense steam iron-clad floating

STEVENS'S IRON-CLAD FLOATING BATTERY.

battery for the defence of the harbor of New York. It was left unfinished at the time of his death, and in 1880 was sold at auction. (See *Floating Batteries*.)

Stevens, THADDEUS, was born at Peacham, Vt., April 4, 1793; died in Washington, D. C., Aug. 11, 1868. He graduated at Dartmouth College in 1814, and removed to York, Penn., where he taught school, studied law, and was admitted to the bar, practising for many years successfully in Gettysburg. In 1842 he removed to Lancaster, where he became a leader of the bar. Having served many years in the State Legislature, he was sent to Congress in 1848, and was among the most earnest opposers of the extension of slavery. He was a member of Congress from 1857 until his death, and was a recognized leader. He was always conspicuous for his zeal and industry, and was radical in everything. He advocated the emancipation of the slaves with vehemence, urging President Lincoln to issue a

proclamation to that effect, and he initiated and pressed the Fourteenth Amendment to the Constitution. He always advocated extreme measures towards those who instigated and promoted the great insurrection.

Stevens, THOMAS HOLDUP, was born in Charleston, S. C., in 1793; died in Washington, D. C., Jan. 22, 1841. His original name was Holdup, Stevens being added by legislative enactment in 1815. He entered the United States Navy in 1808, and was made lieutenant in July, 1813. In 1812 he volunteered for lake service, and in December he was severely wounded by a canister-shot through his hand while storming a battery at Black Rock, near Buffalo. In the summer of 1813 he superintended the fitting and rigging of Perry's fleet at Erie, and in the battle (see *Lake Erie, Battle of*), Sept. 10, he commanded the sloop *Trippe*, behaving gallantly. He was afterwards in command of different vessels.

Stevens, THOMAS HOLDUP, Jr., son of the preceding, was born in Connecticut, May 27, 1819, and entered the navy in 1836. He was active in naval operations on the southern coast, and in movements against Mobile in the Civil War. He was specially distinguished in operations against forts Wagner and Sumter in 1863, and in the capture of the Confederate fleet and of Fort Morgan in the summer of 1864. His gallantry and coolness won for him the highest consideration.

Stevenson, THOMAS G., was born in Boston in 1836; killed at Spottsylvania, Va., May 10, 1864. He was an excellent tactician, and when the Civil War began he drilled a large number of young men, who afterwards became distinguished in the field. He raised a regiment, and participated with it as colonel in the capture of Roanoke Island and New Berne (which see). He was active in eastern North Carolina, and was made brigadier general late in 1862; served in the reduction of Fort Wagner in 1863, and was in command of the First Division of the Ninth Corps in the Army of the Potomac when he fell.

Stewart, CHARLES, was born in Philadelphia, July 28, 1778. His parents were natives of Ireland. He was the youngest of eight children, and lost his father when he was two years old. At the age of thirteen he entered the merchant service as a cabin-boy, and rose rapidly to be commander of an Indiaman. In 1798 he was commissioned a lieutenant in the navy, making his first cruise with Captain Barney. In 1800 he was appointed to the command of the schooner *Experiment*, and fought and captured the French schooner *Deux Amis* (Two Friends) Sept. 1. Soon afterwards he captured the *Diana* (Sept. 14), besides recapturing a number of American vessels which had been taken by French privateers. In the war with Tripoli (which see), Stewart was distinguished for skill and bravery, and was Decatur's favorite. In May, 1804, he was made master-commandant and placed in command of the frigate *Essex*. He was promoted to captain in 1806, and was employed in superintending

the construction of gunboats at New York. In December, 1812, Captain Stewart was appointed commander of the frigate *Constellation* (which he had previously commanded), and assisted in the defence of Norfolk against British marauders. He sailed on a cruise in the frigate *Constellation* in December, 1813, and after her return she was laid up for a long time. Again sailing in her, he captured the *Cyane* and *Lerant* (see

CHARLES STEWART, AGED 86.

Constitution, Cruise of the). and this was his last exploit in the War of 1812-15. After the war he was in command of the Mediterranean Squadron (1817-20), and from that time until the breaking-out of the Civil War he was almost constantly in the naval service of his country afloat or ashore. In 1857 he was placed on the retired list on account of his age, but in 1859 he was replaced on the active list by special legislation. In July, 1862, he was promoted to rear-admiral on the retired list. Admiral Stewart died at Bordentown, N. J., Nov. 7, 1869, in the ninety-second year of his age.

Stiles, EZRA, D.D., LL.D., was born at North Haven, Conn., Dec. 15, 1727; died in New Haven, May 12, 1795. He graduated at Yale College in 1746, was tutor there for six years, and its president for seventeen years (1778-95). Dr. Franklin having sent an electrical apparatus to Yale College, Stiles and one of his fellow-tutors entered with zeal upon the study of this new science, and performed the first electrical experiments in New England. In consequence of religious doubts, he began to study law in 1752, and gave up preaching, for which he had been licensed in 1749. His doubts having been removed, he resumed preaching at Newport, R. I., in 1755. In 1777 he was invited to the presidency of Yale College and accepted, entering upon the duties June 23, 1778, and filled that office until his death. After the death of Professor Daggett, in 1780, Dr. Stiles filled his place

himself as professor of divinity. By hard study he learned several Oriental languages, and corresponded with Jesuits in Latin, and Greek bishops in Greek. He was, undoubtedly, one of the most gifted men of his time. He wrote an interesting *History of Three of the Judges of King Charles I.*, 1794—Goffe, Whalley, and Dixon (which see)—who came to this country. His published addresses and sermons, and his MS. diary and other works are preserved at Yale in forty-five bound volumes.

Stirling SIR THOMAS, of Ardoch, Scotland, entered the royal army in 1757; served in America under Abercrombie and Amherst (1758-60); and in 1765 was stationed at Fort Chartres, Illinois, whence he marched with his command to Philadelphia in 1766. Throughout our war for independence he commanded the Forty-second Regiment, as its lieutenant-colonel. He was in the battle of Long Island and at the capture of Fort Washington (which see) in 1776; was at some of the most important engagements until 1780, when, as brigadier-general, he accompanied General Clinton in the capture of Charleston (which see). He rose to the rank of general in January, 1801, having been created a baronet in 1796.

Stockbridge Indians. After the affairs of Lexington and Concord, about fifty domiciliated Indians of the Stockbridge tribe, accompanied by their wives and little ones, and armed mostly with bows and arrows, a few only with muskets, planted their wigwams in the woods near where the Charles River enters the bay. They formed a company of minute-men, authorized by the Provincial Congress of Massachusetts. On July 8 some British barges were sounding the Charles River near its mouth, when they were driven off by these Indians. On June 21, two Indians, probably of this company, killed four of the British regulars with their bows and arrows and plundered them. There is no record of their doing any other military service in the siege of Boston. These were the Indian savages "brought down upon" the British at Boston, alluded to in General Gage's letter to agent Stuart. (See *Royal Orders to Employ Indians*.)

Stockton, RICHARD, a signer of the Declaration of Independence, was born at Princeton, N. J., Oct. 1, 1730; died near there, Feb. 28, 1781. He graduated at the College of New Jersey, Princeton, in 1748; was admitted to the bar in 1754, and soon became eminent in his profession and very popular as a citizen. He was a member of the Council in 1768, and judge of the Supreme Court of New Jersey in 1774. He was elected to Congress in 1776 in time to participate in the debates on the subject of independence. He signed the great Declaration, and cordially supported the measures of the Continental Congress, in which he was active and influential. He was sent on a mission to the Northern Army, and soon after his return in November, 1776, a party of loyalists captured him. He was cast into prison, and was so ill-treated that when he was exchanged his health was so shattered that

he never recovered. The British destroyed his library when they occupied Princeton at the close of 1776, and devastated his estate. His fine mansion in the suburbs of Princeton, which he called "Morven," was the scene of the destruction of his library and the mutilation of furniture and pictures. The portraits of the signer and his wife were pierced with bayonets,

MORVEN.

and the only books in his library which were saved were the Bible and Young's *Night Thoughts*.

Stockton, ROBERT FIELD, was born at Princeton, N. J., in 1796; died there, Oct. 7, 1866. He was a grandson of Richard Stockton, a signer of the Declaration of Independence, and entered the navy as midshipman in 1811; was conspicuous in several of the battles of the War of 1812-15; became captain in 1838, and resigned in May, 1850. In the Mediterranean and on the coast of Africa he was active and efficient—against the Algerine pirates in the first instance, and the slavers in the second—and in 1821 he made treaties with African chiefs by which was obtained the territory of Liberia. (See *Colonization Society, American*.) He also broke up the nests of many West India pirates. He was among the foremost in advocating steam-vessels for the navy, and the *Princeton*, built after his plan, in 1844, was the pioneer. In 1845 he was sent to the Pacific with fifteen hundred men, including six hundred sailors, in a small squadron, and in a few months he was chiefly instrumental in conquering California and forming a provisional United States government there. He was United States Senator from 1851 to 1853, and to him the navy is indebted for the abolition of flogging on the ships.

Stone, THOMAS, a signer of the Declaration of Independence, was born in Charles County, Md., in 1743; died at Port Tobacco, Md., Oct. 5, 1787. Educated by a Scotch tutor, he became a lawyer at Fredericktown, Md., at the age of twenty-one. From 1775 to 1779 he was a member of Congress, and warmly supported the resolution for independence. He was a member in 1783-84, and was president *pro tem.* at one time. He was a member of the Maryland Senate repeatedly during the intervals of his attendance upon Congress.

Stone-fleet, THE. The Confederates had sunk

obstructions in the channel leading up to Norfolk in April, 1861. This hint was acted upon by the National government in December following. It sent a number of condemned merchant-vessels, chiefly New England whale-ships, which had been stripped of their copper bottoms and filled with blocks of granite, to be sunk at the entrance to Charleston harbor. Twenty-five of them—some of four hundred tons burden—arrived off Charleston Bar Dec. 20, 1861. In their sides, below water-mark, were holes filled with wooden planks, to be removed when they were in a proper condition. Sixteen of these were sunk on the bar at the entrance of the main ship-channel, six miles from Fort Sumter, at intervals, checkerwise, so as to form disturbing currents, that would perplex, but not destroy, the navigation. It was intended as a temporary interference, as a war measure. It was a failure.

Stoneman, GEORGE, was born in Chautauqua County, N. Y., Aug. 8, 1822, and graduated at West Point in 1846. In 1861 he was captain, in command of Fort Brown, Texas, and refused to obey the order of General Twiggs (which see) to surrender the government property to the Secessionists. He chartered a steamer, evacuated the post, and proceeded to New York, where he arrived March 15. He was made major of cavalry, and served in western Virginia as inspector-general until made a brigadier of volunteers and chief of cavalry, in August. He was active in the Peninsular campaign, in 1862; and after the fall of General Kearney, at Groveton, or second battle of Bull's Run, he took command of that general's division. He succeeded General Heintzelman as commander of the Third Army Corps, which he led in the battle of Fredericksburg (which see), and was promoted to major-general in November, 1862. In the campaign towards Richmond, in May, 1863, he commanded a cavalry corps on raids; and from January to April, 1864, he led the Twenty-third Corps. Then he was transferred to the command of the cavalry in the Department of the Ohio, and until July was engaged, under Sherman, in the Atlanta campaign, where he was captured while on a raid towards Andersonville. He was exchanged, and near the close of the year he was engaged in a raid in southwestern Virginia. In the spring of 1865 he was engaged in an expedition into North Carolina. In March he was breveted major-general United States Army, and retired in 1871.

Stoneman's Raid (1864). General Sherman ordered General Stoneman, at Atlanta, to take his own and Garrard's cavalry, about five thousand in all, and move by the left, around Atlanta, to Macon, while McCook was to move by the right to Fayetteville (see *McCook's Raid*), and, sweeping round, join the latter at Lovejoy's Station, on the Macon Railway. He moved on the night of July 28 (1864). Stoneman, ambitious, tried to do too much, and failed in nearly all his undertakings on that raid. He obtained consent to go farther than Lovejoy's, after reaching that station, and attempt the cap-

ture of Macon, and, pushing on, release the captives at Andersonville. He omitted to co-operate with McCook in his movement upon the railway at Lovejoy's, and with his own command, separated from Garrard's, about three thousand in number, he pressed on to Macon. There he was met by Confederate cavalry, under General Iverson, and was compelled to turn hastily back, closely pressed by the Confederates. His command was divided. One of his brigades reached Atlanta without much loss; another was dispersed, and the remainder, one thousand strong, led by Stoneman himself, were surrounded by Iverson, and seven hundred of them made prisoners. The remainder escaped. Iverson had only about five hundred men.

Stoneman's Raid (1865). Late in 1864 General Stoneman took command in East Tennessee, and concentrated the forces of Gillem and Burbridge at Bean's Station. He moved towards Bristol (Dec. 12, 1864), where his advance struck a force under Basil Duke, one of Morgan's officers, near Kingsport, dispersed them, and captured their trains and eighty-four of their men. He menaced the salt-works at Saltville, in southwestern Virginia. General Gillem was very active in that region, and Stoneman proceeded to destroy the salt-works. Breckinridge, who was defending them, was driven over the mountains, and they were laid waste. Late in the winter Stoneman, who had returned to Knoxville, was ordered to make a cavalry raid into South Carolina, in aid of Sherman's movements. Before he was ready to move, Sherman had advanced so far that the raid into South Carolina was unnecessary, and Stoneman proceeded to strike and destroy the Virginia and Tennessee Railway, in southwestern Virginia. It was torn up to within four miles of Lynchburg by a part of his command. At the same time Stoneman, with his main body, advanced on Christiansburg, and, sending troops east and west, destroyed about ninety miles of the railroad. Then he turned his force southward (April 9, 1865), and struck the North Carolina Railway between Danville and Greensborough. He sent Colonel Palmer to destroy the railway between Salisbury and Greensborough and the factories at Salem, N. C., while the main body moved on Salisbury, forcing the Yadkin at Huntville (April 11), and skirmishing near there. Palmer captured a South Carolina regiment of four hundred men. Ten miles east of Salisbury (which was a depot for Union prisoners) the raiders encountered three thousand Confederates, under Pemberton, Grant's opponent at Vicksburg, now reduced from a lieutenant-general to a colonel. He had eighteen guns. This force was charged by the brigades of Gillem and Brown; its guns were captured, also three thousand small-arms, and a large collection of ammunition, provisions, and clothing, and over twelve hundred men were made prisoners. The Confederates, who fled, were chased several miles. At Salisbury the raiders destroyed ten thousand small-arms, four cotton-factories, seven thousand bales of cotton, a vast amount of ammunition, provisions, and clothing, and the railway

tracks in each direction. The Union prisoners had been removed. On April 17 Stoneman started for East Tennessee. On the 19th Major E. E. C. Moderswell, with two hundred and fifty cavalry, burned the fine bridge of the Charlotte and South Carolina Railroad, eleven hundred and fifty feet in length and fifty feet above the water, over the Catawba. It was a blackened ruin in the space of thirty minutes. After a sharp skirmish with Confederate cavalry, the raiders returned to their main body at Dallas, with three hundred and twenty-five prisoners, two hundred horses, and two pieces of artillery. During the raid the National cavalry captured six thousand prisoners, twenty-five pieces of artillery taken in action, twenty-one abandoned, and a large number of small-arms.

"Stonewall" Jackson. General Thomas J. Jackson received the name of "Stonewall" from a circumstance that occurred at the battle of Bull's Run, July 21, 1861. A furious charge, made by a New York regiment under Colonel H. W. Slocum, had shattered the Confederate line, and the troops had fled to a plateau whereon General Jackson had just arrived with reserves. "They are beating us back!" exclaimed General Bee. "Well, sir," replied Jackson, "we will give them the bayonet!" Bee was encouraged. "Form! form!" he cried to the fugitives; "There stands Jackson like a stone wall." The effect of these words was wonderful. The flight was checked, order was brought out of confusion, and ever afterwards the calm general was called "Stonewall" Jackson. (See *Jackson, T. J., and Bull's Run, Battle of.*)

Stonington, BOMBARDMENT OF (1814). On Aug. 9, 1814, Sir Thomas Hardy appeared off Stonington, Conn., with a squadron consisting of the *Ramillies*, 74 guns (flag-ship); *Pactolus*, 44 guns; bomb-ship *Terror*; brig *Dispatch*, 22 guns; and barges and launches. He anchored his little squadron within two miles of the town, and proceeded reluctantly to the execution of an order of Admiral Cochrane "to destroy the coast-towns and ravage the country." The depth of the water before Stonington would not allow the flag-ship to approach nearer the town than a mile and a half. Hardy sent a flag of truce ashore, with the following message to the selectmen, dated 5 o'clock P. M.: "Not wishing to destroy the unoffending inhabitants residing in the town of Stonington, one hour is granted them, from the receipt of this, to remove out of the town." "Will a flag be received from us in return?" inquired the magistrate of the bearer. "No arrangements can be made," he answered; and it was declared that it was the intention of the commodore to destroy the town totally. The magistrate then said, "We will defend the place to the last extremity; should it be destroyed, we will perish in its ruins!" Nearly all the inhabitants incapable of bearing arms left the place, and that evening the bomb-ship *Terror* and some launches rained shells and rockets upon the village without doing serious damage. During that bombardment some brave men in Stonington

cast up a sort of redoubt on the extremity of the peninsula on which the borough now stands, and placed upon it a battery of two cannons—a 6-pounder and an 18-pounder—and from these they hurled solid balls upon the assailants with so much effect that the bomb-ship and her consorts withdrew to the larger vessels. Some men gathered at Stonington the next day, but they were of little service; but a few from Mystic, not far away, led by Captain Jeremiah Holmes, flew to the aid of their neighbors, and did gallant service at the redoubt. Captain Holmes was a good gunner, and he took charge of the 18-pounder. With that piece he fought the British ships until his ammunition was spent, and no more could then be found. The borough seemed to be at the mercy of the invaders, and some timid citizens proposed to the captain to haul down the flag that floated over the battery, and surrender. "No!" shouted the captain, "that flag shall never come down while I

STONINGTON FLAG.

am alive!" When the wind died away, and the flag hung drooping by the side of the staff, the brave captain held it out at the point of a bayonet, that the British might see it. Several shots passed through it while it was in that position. To prevent some coward from hauling it down, the captain nailed the flag to the staff. But the old piece was not long silent. Some concealed powder was found. Double-shotting his cannon, the captain kept the British at bay until a competent force of militia, under General Isham, arrived to prevent the landing of the invaders. On the 12th, after a sharp bombardment, the discomfited squadron withdrew. Not a single life in the village had been lost, and only one person mortally wounded. Between fifty and sixty were slightly wounded, forty buildings were more or less injured, and two or three were nearly ruined.

Stono Ferry, BATTLE AT (1779). After Prevost menaced Charleston, and, on account of the approach of Lincoln (see *Invasion of South Carolina*), retired to John's Island (April, 1779), both armies encamped within thirty miles of the South Carolina capital. The British cast up works at Stono Ferry, between the island and the main, and garrisoned them with eight hundred men, under Colonel Maitland. These were attacked (June 12, 1779) by about twelve hundred of Lincoln's troops, in an attempt to dis-

lodge the British. The contest was severe for more than an hour. Maitland was reinforced, and the Americans were compelled to retreat. When they fell back, the whole garrison sallied out to pursue, but the American light-horse covered the retreat so skilfully that all the wounded patriots were taken away by their friends. The Americans lost, in killed and wounded, one hundred and forty-six, besides one hundred and fifty-five missing; the British loss was somewhat less. Three days afterwards the British evacuated Stono Ferry, and retreated from island to island to Beaufort, on Port Royal Island, and thence by boats to Savannah.

Stono Ferry, SKIRMISH AT (1782). In a skirmish at Stono Ferry (September, 1782) with a British foraging party, sent out of Charleston by General Leslie, Captain Wilmot, commanding the Americans, and accompanied by Kosciuszko, was killed. His was the last blood shed in the old war for independence.

Stony Creek, BATTLE AT. When Fort George was secured (see *Fort George, Capture of*), Chauncey left Dearborn, and returned to Sackett's Harbor. The latter sent General Winder (June 1, 1813), with about eight hundred troops, including Burn's dragoons and Archer's and Towson's artillery, in pursuit of retreating General Vincent, who was making his way towards Burlington Heights, on the western end of Lake Ontario. Winder took the lake-shore road. He

after driving off a patrol of militia, under Captain Merritt. Moving on, ten miles farther, to Stony Creek, seven miles from Vincent's camp, they encountered a British picket, whom they dispersed. The main body encamped at Stony Creek; and there, on the night of the 6th, they were surprised and fiercely attacked by Vincent. The night was intensely dark, and a severe battle was fought in the gloom. The British were repulsed, but, in the darkness and confusion, both of the American commanders were captured. Meanwhile General Vincent, having been thrown from his horse in the darkness, and being unable to find either his horse or his camp, wandered off in the woods, and for a while his friends supposed he was killed. Colonel Harvey, who took the command of the British forces, hurried back to Burlington Heights with his notable prisoners. At the same time, the Americans, bereft of their generals, and fearing a renewal of the attack, retreated towards Niagara with equal precipitation. They were met by a relief-party, under Colonel James Miller. Vincent was found in the woods next day, without hat or sword, and almost famished. On their way back, the Americans were threatened by a British fleet, under Sir James L. Yeo, on their left, and hostile savages on their right; but they drove away the former with hot shot, defied the latter and the local militia, and reached Fort George in safety. In the terrible night battle at Stony Creek the Americans lost, in killed,

BATTLE-GROUND OF STONY CREEK.

pushed on to Twenty-mile Creek, where, hearing of reinforcements for Vincent at Burlington Heights, he prudently halted, and sent back to Dearborn for reinforcements. On the 5th he was joined by General Chandler, with about five hundred men, who, being the senior officer, took the chief command. Then the whole body moved forward to Forty-mile Creek, where they rested,

wounded, and missing, one hundred and fifty-four men; the British lost one hundred and seventy-eight.

Stony Point, CAPTURE OF, BY THE AMERICANS. The unfinished fort at Stony Point at the King's Ferry, on the Hudson, was seized by the British on the 30th of May, 1779. The fort stood upon a rocky promontory, connected with the

VIEW OF STONY POINT FROM THE SOUTHWEST.

mainland by a tide-submerged causeway across a narrow marsh—an island at high-water. It was garrisoned by a regiment of foot, some grenadiers, and artillery, the whole commanded by Lieutenant-colonel Johnson. General Anthony Wayne undertook to take the fort by storm; and at the same time a force, under General Robert Howe, was to attack the fort at Verplanck's Point. Several small British vessels of war were anchored in the river, within cannon-range of the forts. The latter had been enlarged and strengthened. Upon a complete surprise of the garrison depended the success of the undertaking. With the Massachusetts light infantry, Wayne marched through defiles in the mountains, and rendezvoused, at eight o'clock in the evening, a mile and a half from the fort. Silently they had gained the spot, killing every dog on the way. At midnight they moved on the fort. A portion of the troops crossed the causeway, and formed in two columns, the van of the right, consisting of one hundred and fifty volunteers, led by Lieutenant-colonel De Fleury; that of the left, one hundred strong, also volunteers, commanded by Major Stewart. These composed the forlorn hope. They moved to the attack at two different points simultaneously, with unloaded muskets and fixed bayonets, followed by the two main divisions, the left led by General Wayne in person. The Americans were undiscovered until within pistol-shot distance of the pickets on the height. The pickets fired several shots. The advanced guard pressed forward with the bayonet. The garrison were aroused by the roll of the drum and the cry "To arms! to arms!" Very soon musketry rattled and cannons roared in defence of the fort, but the Americans forced their way through ev-

ery obstacle, until the van of each column met in the centre of the work. Wayne had been hit on the head and stunned by a musket-ball, but speedily recovered. The garrison soon surrendered, and not a life was taken after the flag was hauled down. Wayne wrote to Washington: "Stony Point, 16th July, 1779, 2 o'clock A. M. Dear General,—The fort and garrison, with Colonel Johnson, are ours. Our officers and men behaved like men determined to be free." At dawn the next day the guns of the fort were turned upon the works at Verplanck's Point, on the opposite side of the river, but Howe did not make the attack in time to dislodge the garrison. Lacking a force

to man the fort properly, the ordnance and stores were conveyed to West Point, the works were destroyed, and the place evacuated on the night of July 18. The British repossessed themselves of Stony Point on the 20th. Congress gave the thanks of the nation to the brave actors in this event, and voted a gold medal to Wayne and a silver medal to Stewart and De Fleury. The

MAJOR STEWART'S MEDAL.

capture of Stony Point was regarded as one of the most brilliant as well as the most important achievements of the war.

Story, JOSEPH, was born at Marblehead, Mass., Sept. 18, 1779; died at Cambridge, Mass., Sept. 10, 1845. He graduated at Harvard University in 1798, and was admitted to the bar in 1801, beginning practice at Salem. He was a poet, and in 1804 published a volume of his poems. After serving in the State Legislature, he became a member of Congress in 1808. He was speaker of the Massachusetts Assembly in 1811, and from November of that year until his death was associate judge of the United States Supreme Court. From 1829 until his death he was Dane Professor of Law in Harvard University. His published judicial works evince very extensive learning, clear exposition, and profound views of the legal science. His commentaries on the Constitution, entitled *Conflict of Laws*, and his written judgments in his circuit make twenty-seven volumes; his judgments in

the Supreme Court of the United States make an important part of thirty-four volumes more.

JOSEPH STRAIN.

Strain, ISAAC G., lieutenant United States Navy, was born at Roxbury, Franklin Co., Penn., in 1821; died at Aspinwall, May 15, 1857. While yet a midshipman (1845), he led a small party to explore the interior of Brazil, and in 1848 explored the peninsula of California. In 1849 he crossed South America from Valparaíso to Buenos Ayres, and wrote an account of the journey, entitled *The Cordillera and Pampa, Mountain and Plain: Sketches of a Journey in Chili and the Argentine Provinces*. In 1850 he was assigned to the Mexican Boundary Commission (which see), and afterwards (1854) led a famous expedition across the Isthmus of Darien, for an account of which see *Harper's Magazine*, 1856-57. In 1856, in the steamer *Arctic*, Lieutenant Strain ascertained by soundings the practicability of laying an ocean telegraphic cable between America and Europe.

Streight's Raid. Colonel A. D. Streight left Nashville (April 11, 1863) with unmounted troops on steamboats, to descend the Cumberland to Fort Donelson, at Dover, and thence to sweep around the rear of Bragg's army in southern Tennessee, cut off all his railway communications in northern Georgia, destroy manufactories and depots of supplies, and in every way to cripple the Confederates. His was called an "independent provisional brigade," created for a temporary purpose. Landing at Dover, Streight marched across to the Tennessee, at Fort Henry, where he remained until the boats went down the Ohio and up the Tennessee to that post. There he embarked his men, and, landing at Eastport, made a feint with General Dodge, then moving on Tusculumbia, to mask the real intention of his expedition. He had been directed to gather up horses on the way. He remained with Dodge until after the capture of Tusculumbia. Then, with only about 300 of his 1800 men on foot, he started southward, and, soon turning eastward, hastened towards Rome and Atlanta, in Georgia. The former was the seat of extensive Confederate iron-works, and the latter the focus of several converging railways. At the same time, Dodge struck off southward, swept through a

portion of northern Alabama, destroying a large amount of Confederate property, and returned to Corinth. Streight and his raiders were pursued by Forrest and Roddy, and there was continual skirmishing and racing until they approached Rome, when Streight's ammunition and horses failed him, many of the poor beasts dying from sheer exhaustion. On the 3d of May, when near Rome, the raiders, struck by their pursuers, were compelled to surrender. The captives were sent to Richmond and confined in the loathsome Libby Prison (which see), from which Streight and 100 officers escaped (February, 1864), by burrowing under the foundation walls of that edifice. Streight surrendered 1365 men—Ohio, Indiana, and Illinois troops.

Strength of the Colonies Discovered. The war with the French and Indians, and the contests with royal authority in which the colonies had been engaged at its close, in 1763, revealed to the colonists their almost unsuspected innate strength. During these contests, disease and weapons had slain 30,000 of the colonists. They had also spent more than \$16,000,000, of which \$5,000,000 had been reimbursed by Parliament. Massachusetts alone had kept from 4000 to 7000 men in the field, besides garrisons and recruits to the regular regiments. They served but a few months in the year, and were fed at the cost of the British government. At the approach of winter they were usually disbanded, and for every campaign a new army was summoned. Yet that province alone spent \$2,000,000 for this branch of the public service, exclusive of all Parliamentary disbursements. Connecticut had spent fully \$2,000,000 for the same service, and the outstanding debt of New York, in 1763, increased largely for the public service, was about \$1,000,000. The Southern colonies, too, had been liberal in such public expenditures, according to their means. At that time Virginia had a debt of \$3,000,000. Everywhere the English-American colonies felt the consciousness of puissant manhood, and were ready to grapple in deadly conflict with every enemy of their inalienable rights. They demanded a position of political equality with their fellow-subjects in Great Britain, and were ready to maintain their rights at all hazards.

Stribling, CORNELIUS K., rear-admiral and senior officer on the retired list of the navy, was born June 18, 1812, and became a midshipman in 1812. He was assigned to the captured British vessel *Macedonian*, on her arrival at New York, Jan. 1, 1813; became a lieutenant in 1818, commander in 1840, captain in 1853, commodore in 1862, and rear-admiral on the retired list in 1866. During a long life, Admiral Stribling was ever active in the service, most of the time afloat. From 1850 to 1853 he was superintendent of the Naval Academy at Annapolis; commanded the East India squadron from 1859 to 1861; the Philadelphia navy-yard, 1863-64; the Eastern Gulf blockading squadron, 1864-65, and was a member of the Light-house Board from 1867 to 1871. He died at Martinsburg, Va., Jan. 20, 1880.

Strickland's Plain, BATTLE AT. At Horse-neck, on the confines of Connecticut, a severe battle was fought, in 1644, between the Dutch and Indians, at a place called Strickland's Plain. Great numbers were slain on both sides, and for a century or more the graves of the dead were visible. The Dutch were victorious.

Stringer, SAMUEL, was born in Maryland, in 1734; died in Albany, N. Y., July 11, 1817. In 1755 Governor Shirley appointed him to the medical department of the Provincial army, and, at the close of the war, he married and settled in Albany. In 1775 he was appointed director-general of the hospitals in the Northern Department, under General Schuyler, and accompanied the troops that invaded Canada.

Stringham, SILAS HORTON, was born at Middletown, N. Y., Nov. 7, 1798; died in Brooklyn, Feb. 7, 1876. He entered the navy as midshipman at eleven years of age, and was lieutenant at sixteen. He was with Rodgers in the affray

SILAS HORTON STRINGHAM.

between the *President* and *Little Belt* (which see), and in 1815 was in Decatur's expedition against the Barbary powers. In 1820 he was in the *Cyane*, which conveyed the first immigrants that settled on the coast of Liberia, Africa, and formed the nucleus of the Republic of Liberia (which see). In the war against Mexico, Captain Stringham, in command of the *Ohio*, took part in the bombardment of Vera Cruz. He was afterwards in command of different squadrons, and in 1861 was appointed flag-officer of the Atlantic blockading squadron and ordered to the *Minnesota* as his flag-ship. With her he went as joint commander with Butler, with the land and naval expedition which captured the forts at Hatteras Inlet (see *Hatteras, Forts at, Captured*), Aug. 27-28, 1861. In September he was relieved at his own request, and in July, 1862, was made a rear-admiral on the retired list. In 1871 he was made port-admiral at New York.

Stuart, GILBERT CHARLES, artist, was born at Narragansett, R. I., in 1754; died in Boston, July 9, 1828. He was taken to Edinburgh when eighteen years of age by a Scotch artist named Alexander, but soon returned, and painted at New-

port, Boston, and New York. When the war for independence broke out, he went to London, received instructions from Benjamin West, and rose to eminence. In Paris he painted a portrait of Louis XIV. He returned to America in 1793, and painted, from life, portraits of Washington and many worthies of the Revolutionary period. After residing several years in Philadelphia and awhile in Washington, he made his permanent abode in Boston in 1806. Stuart's last work was a portrait of John Quincy Adams. He is regarded as one of the best portrait-painters America has ever produced. His two daughters, Mrs. Stebbins and Miss Jane Stuart, both meritorious artists, long followed the profession of their father.

Stuart, JAMES E. B., was born in Patrick County, Va., in 1832; killed in battle, May 11, 1864. He graduated at West Point in 1854 and entered the cavalry corps in 1855; served against the Cheyenne Indians and was wounded in 1857; left the army and joined the insurgents in 1861, receiving the commission of colonel of a Virginia cavalry regiment. He was one of the most daring of the cavalry officers in the Confederate army. (See *Stuart's Raid*.) He was especially active on the flanks of McClellan's army, and in the next year during the Gettysburg campaign, though invariably defeated by the National cavalry. In Grant's campaign against Richmond, in 1864, he was mortally wounded in an encounter with Sheridan's cavalry near the Confederate capital.

Stuart's Raid. J. E. B. Stuart was one of the boldest and most daring of the Confederate cavalry officers in Virginia. At about the middle of June, 1862, he, with fifteen hundred cavalry and two pieces of horse artillery, rode completely around the Army of the Potomac. He attacked and dispersed two squadrons of National cavalry at Hanover Old Church, and, sweeping round to the White House, by Tunstall's Station, seized and burned fourteen wagons and two schooners, laden with forage, at Garlick's Landing, above the White House. He captured and carried away one hundred and sixty-five prisoners, two hundred and sixty mules and horses, rested three hours, and, during the night, crossed the Chickahominy on a hastily built bridge, and then leisurely returned to Richmond on the Charles City road.

Sturgis, SAMUEL DAVIS, was born in Shipensburg, Penn., in 1822, and graduated at West Point in 1846, entering the dragoons. His first service was in the war with Mexico, in which he was active. Before the battle of Buena Vista he was made prisoner, but was soon exchanged. For his energy in warfare with the Indians he was promoted to captain in 1855, and was in command of Fort Smith, Ark., until 1861, when all his officers resigned and joined the Southern insurgents. He took an active and important part in the military service during the entire period of the Civil War—first with General Lyon in Missouri; then in command of the fortifications around Washington; in operations in Kentucky; as chief of cavalry in the Depart-

ment of the Ohio; and in conflicts in Tennessee and Mississippi. He was commissioned a brigadier-general of volunteers in August, 1861, and in March, 1865, was breveted brigadier and ma-

SAMUEL DAVIS STURGIS.

jor-general in the United States Army. At the battles of South Mountain, Antietam, and Frederickburg, General Sturgis was in command of a division.

Stuyvesant, PETER, the last Dutch governor of New York, was born in Holland in 1602; died in New York city in August, 1682. He was a brave soldier in the Dutch military service in the West Indies, and was director, or governor, of the colony of Curaçoa. He was a strong-headed, and sometimes wrong-headed, official. He had lost a leg in battle in the West Indies, and, with a wooden one, bound with silver bands, he came to New Netherland as its director-general, or governor, late in May, 1647. He was received with joy as the successor of Kieft. He assumed great dignity; marched from the vessel to the fort with great pomp, and assured the people that justice should rule. He began his administration by the assertion of vice-regal authority, and frowned upon every expression of republican sentiment, declaring it to be treason to petition against one's magistrate, "whether there be cause or not." He defended Kieft's conduct in rejecting the interference of the council of twelve (see *Kieft, William*), saying, "If any one, during my administration, shall appeal, I will make him a foot shorter and send the pieces to Holland, and let him appeal in that way."

Stuyvesant was an honest despot, and acted wisely. He set about needed reforms with great vigor, and into the community he infused much of his own energy. Enterprise took the place of indifference. He soon regulated the troubles be-

tween the Dutch on Manhattan and the Swedes on the Delaware (see *New Sweden*), made arrangements for adjusting difficulties with the Puritans in the East, and pacified the surrounding tribes of barbarians. In 1650 he arranged, at Hartford, the boundary in dispute between the English and Dutch possessions. Finding the finances of the province in a wretched condition, he perceived that taxation would be necessary, so he summoned representatives of the people to meet at New Amsterdam to provide for it. (See *Representative Government in New York*.) This germ of popular rule he tried to smother, but in vain, and there were angry controversies between the governor and the people during nearly the whole of his administration. A fort built by the Dutch on the Delaware in 1651 was captured by the Swedes in 1654. This caused Stuyvesant to lead an expedition in person against the Swedes the next year, which resulted in the subjugation of New Sweden. In 1653 a convention of two deputies from each village in New Netherland demanded certain political rights for the people, and gave the governor to understand that they should act independently of him. (See *Representative Government in New York*.) He stormed and threatened, but to no purpose. The spirit of resistance increased. Disturbed by encroachments of the English on the East, he remonstrated, but in vain, and was compelled to yield to the pressure of changing circumstances around him. Finally, when an English military and naval force came from England to assert the claim of the

PETER STUYVESANT.

Duke of York to New Netherland, and revolutionary movements occurred on Long Island, his troubles tried him most severely. His fortitude and obstinacy never forsook him. When Colonel Richard Nicolls appeared with

four ships of war and four hundred and fifty soldiers in front of New Amsterdam (August, 1664) and demanded the surrender of the province (Aug. 31), he found his alienated people willing to submit to English rule. Yet he stoutly refused the demand. Nicolls sent Governor Winthrop, of Connecticut, with a letter to Stuyvesant, repeating his demand. He laid it before the Council, who said, "Read it to the people." Stuyvesant would not. The Council and magistrates insisted that he should, when the enraged governor, who had fairly earned the title of "Peter the Headstrong," unable to control his passion, tore the letter in pieces. Stuyvesant held out for a week, but on Monday morning, Sept. 8, 1664, he yielded, and the formal surrender took place. The governor went to Holland to report to his superiors, in 1665, and, returning, spent the remainder of his days on his *bouvery*, or farm, on Manhattan Island, bordering on the East River. His remains rest in St. Mark's church-yard, New York city.

Stuyvesant's Authority Resisted at Beverswyck (Albany). Van Slechtenhorst, the commissary or managing agent of the property of the young patroon, after the death of his father, Killian Van Rensselaer, proprietor of the original Van Rensselaer Manor, was a man of much force of character. (See *Patroons*.) He denied and defied the authority of the director-general at New Amsterdam over the patroon's domain. Stuyvesant, full of wrath, went to Fort Orange (Albany), with a determination to assert his authority in a more positive manner than by mere orders. The hamlet of Beverswyck had grown up around Fort Orange, and Stuyvesant ordered certain houses to be pulled down, to permit of a better defence of the fort if attacked by the Indians. He also ordered stone and timber to be taken from the lands of the patroon for use in the fortifications. Van Slechtenhorst would not permit the houses to be torn down, and forbade depredations on the patroon's property. Stuyvesant sent a company of soldiers from New Amsterdam to enforce his orders. The commissary dared them to interfere with his authority on the manor, or to touch a tree belonging to the patroon. High words ensued, but the prudent commander at Fort Orange did not proceed to blows. It was clear that the Indians would have taken sides with Van Slechtenhorst. The commissary was the victor, not only in this threatened personal encounter, but in the fulfilment of long and fiery proclamations from both parties.

Style, OLD AND NEW. Julius Cæsar caused a reform to be made in the calendar in B.C. 46, and three hundred and sixty-five days and a quarter were given as the measurement of a year, which is about eleven minutes too much, an error which has now amounted to about twelve days. Pope Gregory XIII. issued an order to add ten days to the current computation, and call the 5th of October, 1582, the 15th. Protestant countries refused to adopt the new calendar by order of the pope, and Russia adheres to the calendar of Julius Cæsar to this day. The

British government, by act of Parliament, in September, 1752, adopted the Gregorian plan, and added eleven days, the 3d of the month being called the 14th. Dates according to the old calendar are called Old Style, and those according to the Gregorian are called New Style, indicated generally by the initials O. S. and N. S. Much confusion and uncertainty respecting exact dates have occurred in consequence of the change of eleven days, for dates in English books and documents written before 1752 are old style, while for a long time afterwards books and documents bore the date according to both the old and the new style. Franklin's birthday, O. S., was Jan. 6; N. S. it is Jan. 17.

Sub-treasury System. The extraordinary session of Congress (September to October, 1837) was the first of the Twenty-fifth Congress. It was called ostensibly for the relief of the commercial interests of the country, but the President (Van Buren), in his message, expressed the opinion that the National Legislature could do nothing to mitigate the business evils that existed. The most important recommendation of the message was the measure of an independent treasury, which its opponents called a "sub-treasury." The funds of the government were then in the possession of numerous banks, all of which refused to pay specie. The President regarded the use of their circulating notes, under the circumstances, as a violation of existing law, and he proposed that the treasury of the United States should be kept by public officers, and that there should be an entire divorce of bank and state. The scheme was violently opposed, especially by those interested in banks, and final action on the matter was postponed to the regular session, when it was again pressed upon Congress by the President. A sub-treasury bill passed the Senate, but was rejected by the House of Representatives, June 25, 1838. Finally, after long and able debates, it passed both houses of Congress, and became a law by the signature of the President, July 4, 1840. The divorce of bank and state, and a return to the original design of the Constitution concerning the financial affairs of the government, after a deviation for half a century, was a conspicuous feature in the administration of Mr. Van Buren. The nuptials have since been celebrated again. (See *National Currency*.)

Sucker State. A cant name given to the state of Illinois by the Western people. On the great prairies the crawfish makes holes and descends to the water beneath. The traveller across the great plains, in early times, provided himself with a long hollow reed, by which he sucked the pure water from these holes. From this circumstance the settlers on the prairies were called *Suckers*, a name applied to all the inhabitants of the state.

Sufferings in South Carolina. In 1779 and 1780 the inhabitants of South Carolina endured unutterable woes. Their plantations were pillaged by British troops, and the property of the patriotic people was confiscated or wasted; families were divided in opinion and their homes be-

came theatres of bitter discord; patriots were outlawed and savagely assassinated; houses were laid in ashes and women and children driven to the cold shelter of forests; and loyalists of the baser sort spread terror over the land and threatened to depopulate it. Civil war in its worst form prevailed for a time, but the bravery and fortitude of the true men and women of South Carolina overcame their internal and external enemies, and gave to their state the honor of being foremost in beating the invaders out of the country.

Suffolk, OPERATIONS AT (1863). General J. J. Peck was in command of 9000 men at Suffolk, in southeastern Virginia, where he had erected strong defensive works. Believing he was preparing there a base of operations for a movement against Richmond, in conjunction with the Army of the Potomac, the Confederate authorities took countervailing measures, and in February, 1863, General James Longstreet was placed in command of the Confederate forces in that region, then fully 30,000 strong. Early in April Longstreet made a descent upon Peck with 28,000 men. He thought his movement was so well masked that he should take the Nationals by surprise. He drove in their pickets; but Peck, aware of his expedition, was ready for him. He had been reinforced by a division under General Getty, making the number of his effective men 14,000. The Confederates were foiled; and in May, 1863, Longstreet abandoned the enterprise and retreated, pursued some distance by Generals Corcoran and Dodge and Colonel Foster. The siege of Suffolk had continued for several weeks before the final dash upon it, the object being the recovery of the whole country south of the James River, extending to Albemarle Sound, in North Carolina; the ports of Norfolk and Portsmouth; eighty miles of new railroad iron; the equipment of two roads; and the capture of all the United States forces and property, with some thousands of contrabands. (See "*Contrabands*.") The services of the troops under Peck were of vast importance. Besides preserving that region from seizure, they kept Longstreet and a large Confederate force from joining Lee; which event, had it happened, might have caused the capture of the whole Army of the Potomac at Chancellorsville (which see).

Suffolk Resolutions. At a meeting of delegates of every town in Suffolk County, Mass., on the 9th of September, 1774, nineteen bold resolutions, prefaced by a long preamble, were adopted, and laid before the Continental Congress. They declared, 1. The loyalty of the people to the king; 2. That it was their duty to defend and preserve their civil and religious liberties; 3. That the late laws of Parliament concerning the people of Massachusetts were gross infractions of popular rights; 4. That no obedience was due to either or any part of the acts complained of; 5. That the act for the appointment of judicial officers by the crown was unconstitutional, and therefore not to be regarded; 6. That justices disqualified by the late acts should be supported in the continued

performance of their duties, and that creditors ought to be lenient during the confusion caused by the obnoxious laws; 7. That they recommend all collectors of taxes to retain the moneys in their hands until action should be had by arbitration or otherwise; 8. That the mandamus counsellors (which see) be recommended forthwith to resign, or be regarded as public enemies; 9. That the erection of fortifications on Boston Neck be condemned; 10. Also the Quebec Act (which see), as dangerous to the Protestant religion; 11. That the people be recommended to prepare for war; 12. That the people should act only on the defensive as long as possible; 13. That the proposition to transport beyond the sea for trial be condemned; 14. That non-intercourse in trade with Great Britain be established; 15. That domestic arts and manufactures be encouraged; 16. That a Provincial Congress was necessary and should be chosen; 17. That obedience to the Continental Congress should be given; 18. That all riots and violence be avoided; and, 19. That provision be made for unity of action, in case hostilities should be begun at any place. These resolves formed the basis of important action in the Continental Congress.

Suffrage in Virginia. In 1670 the Assembly of Virginia passed a law that disfranchised all the poorer inhabitants. It provided that none but householders and freeholders should have a voice in the election of burgesses. This law was enacted on the pretence that the elections by the "common people" were tumultuous, and that the poor voters had not discretion enough to vote properly.

Sugar. The cultivation of the sugar-plant was introduced into this country about the year 1751 by some Jesuits from Santo Domingo, who, with some negro slaves, settled on the banks of the Mississippi, just above New Orleans. The first sugar-mill was constructed about 1758, but the juice of the cane was not converted into sugar until 1764. The business was so prosperous that in 1770 sugar was the staple product of that region. When Louisiana was ceded to Spain, sugar-making ceased there, and was not revived until 1791; but when Louisiana was purchased from France (1803) there were but a few sugar-mills in that province. After that the production increased. In 1850 the product was 347,500 hogsheads. It decreased, especially by the effects of the Civil War, and in 1870 the product was only 87,000 hogsheads.

Sugar Act, THE. A law known as the "Sugar Act" was passed by Parliament (April 5, 1764) reducing by one half the duties imposed by a previous act on foreign sugar and molasses imported into the colonies, and levying duties on coffee, pimento, French and East India goods, and wines from Madeira and the Azores, which had hitherto been admitted free. This act, like others proposed or passed at about the same time, produced wide-spread discontent in the colonies.

Sugar, Molasses, and Rum Duty. The New-Englanders had begun the manufacture of rum out of molasses bought at the French West

India Islands and Louisiana. They became competitors in that traffic with the English sugar-islands. The chief seat of this distillation was Newport, R. I., which was the fourth or fifth town in population, and second or third in commerce, in the colonies. To stop this traffic, and to compel the American colonies to supply themselves with sugar from the British sugar-islands in the West Indies, a duty was imposed by Parliament upon sugar, molasses, and rum imported from the French or Dutch West Indies. The act was warmly opposed in the colonies, and smuggling was so successfully prosecuted that, though there were large importations into the colonies, very little duty was collected.

Sullivan, Fort, Honor to the Defenders of. On the morning of July 30, 1776, General Lee reviewed the garrison of Fort Sullivan, and bestowed on them marked praise for their valor and fortitude in its defence. At the same time Mrs. Susanna Elliot, young and beautiful, with the women of Charleston, stepped forth and presented to Moultrie's regiment a pair of silken colors, one of blue, the other of crimson, both richly embroidered by their own hands. In a low, sweet voice, Mrs. Elliot said: "Your gallant behavior in defence of liberty and your country entitle you to the highest honors. Accept these two standards as a reward justly due to your regiment; and I make not the least doubt, under Heaven's protection, you will stand by them as long as they can wave in the air of liberty." On receiving them Moultrie said: "The colors shall be honorably supported, and shall never be tarnished." On the morning of the 4th of July Governor Rutledge visited the garrison, and in the name of South Carolina thanked them; and to Sergeant Jasper he offered a lieutenant's commission and a sword. The sergeant refused the former, but accepted the latter. (See *Jasper, Sergeant*.) The fort on Sullivan's Island which Moultrie had so gallantly defended was named Fort Moultrie.

Sullivan, JOHN, LL.D., was born at Berwick, Me., Feb. 17, 1740; died at Durham, N. H., Jan. 23, 1795. He was a lawyer and an earnest patriot, and a member of the First Continental Congress. In December, 1774, he, with John Langdon, led a force against Fort William and Mary, near Portsmouth, and took from it one hundred barrels of gunpowder, fifteen cannons, small-arms, and stores. In June, 1775, he was appointed one of the brigadier-generals of the Continental army, and commanded on Winter Hill in the siege of Boston. After the evacuation in March, 1776, he was sent with troops to reinforce the army in Canada, of which he took command on the death of General Thomas, June 2, 1776, and soon afterwards exhibited great skill in effecting a retreat from that province. On the arrival of Gates to succeed Sullivan, the latter joined the army under Washington at New York, and at the battle of Long Island (which see), in August, he was made prisoner. He was soon exchanged for General Prescott, and joining Washington in Westchester County,

accompanied him in his retreat across New Jersey. On the capture of Lee, he took command of the troops under that officer, and performed good service at Trenton and Princeton. In Au-

JOHN SULLIVAN.

gust, 1777, he made an unsuccessful attack on the British on Staten Island, and then joining Washington, commanded the right wing in the battle of Brandywine. He skillfully led in the battle of Germantown, and would have driven the British from Rhode Island, or captured them, in August, 1778, had not D'Esterre failed to co-operate with him. After a sharp battle (see *Quaker Hill, Battle at*), he withdrew with slight loss. In 1779 he was sent to chastise the Indians in the heart of New York, when he laid waste their settlements in the Genesee country, and defeated forces of Tories and savages under Sir John Johnson and Brandt. Sullivan then resigned on account of his shattered health, and received the thanks of Congress. He took a seat in Congress late in 1780, and aided in suppressing the mutiny in the Pennsylvania line. From 1782 to 1786 he was attorney-general of New Hampshire, and from 1786 to 1789 was president of that commonwealth. He was active in other public employments, and saved the state from great confusion by his prudence and intrepidity when discontented persons were stirring up the spirit of insurrection. From 1789 until his death General Sullivan was United States judge of New Hampshire.

Sullivan's Campaign against the Senecas. The atrocities of the Indians (especially the Senecas, the most westerly of the Six Nations) in the Wyoming valley, and their continual raids upon the frontier settlements in New York, caused a retaliatory expedition to be made into their country in the summer of 1779. It was led by General Sullivan, who was instructed to "chastise and humble the Six Nations." He collected troops in the Wyoming valley, and

marched (July 31, 1779) up the Susquehanna with about three thousand soldiers. At Tioga Point he met (Aug. 22) General James Clinton, who had come from the Mohawk valley with about sixteen hundred men to join him. On the 29th they fell upon some Tories and Indians who were pretty strongly fortified at Chemung (now Elmira), and dispersed them. Before they could rally, Sullivan had pushed onward to the Genesee River, when he began the work of destruction. In the course of three weeks he destroyed forty Indian villages and a vast amount of food growing in fields and gardens. In fields and granaries one hundred and sixty thousand bushels of corn were wasted by fire. The Senecas had planted orchards in the rich openings in the forest. These were destroyed. A vast number of the finest apple and pear trees, the product of many years of growth, fell before the axe; hundreds of gardens abounding with edible vegetables were desolated; the inhabitants were hunted like wild beasts; their altars were overturned and their graves trampled on by strangers; and a beautiful, well-watered country, teeming with a prosperous people and just rising from a wild state by the aid of cultivation, was cast back a century in the course of a few weeks. This dreadful scourging awed the Indians for the moment, but it did not crush them. In the reaction they had greater strength, and by it the fires of deeper hatred of the white people were kindled far and wide among the tribes upon the borders of the Great Lakes and in the valley of the Ohio.

Sully, ALFRED, was born in Pennsylvania about 1820; died at Vancouver barracks, Washington Territory, April 27, 1879. He was a son of Thomas Sully, the eminent painter, and graduated at West Point in 1841. He served in the Seminole War, and in the war against Mexico. He was colonel of a Minnesota volunteer regiment early in 1862, and in the Peninsular campaign commanded a brigade. He was also in the principal battles of the Army of the Potomac in Maryland and Virginia until the close of that year, and in the battle of Chancellorsville (which see). He was sent to the Dakota territory in 1863 to keep the Indians in subjection, where he was successful, and served in the Northeast until his death.

Sully, THOMAS, a skilful painter of portraits of women and children, was born in Lincolnshire, England, in June, 1783, and came to the United States with his parents, who were players, when he was ten years of age. At fifteen he began to paint at Charleston, S. C., and at twenty established himself as a portrait-painter at Richmond, Va. He went to Philadelphia in 1809, where he resided and practised his profession until his death, Nov. 5, 1872. During a visit to England (1837-38) he painted Queen Victoria, then just crowned and eighteen years of age. His picture of "Washington crossing the Delaware" is in the possession of the Boston Museum.

Sumner, CHARLES, LL.D., was born in Boston, June 6, 1811; died in Washington, D. C., March

11, 1874. He graduated at Harvard College in 1830. Appointed a reporter of the United States Circuit Court, he published three volumes known as *Sumner's Reports*, containing the decisions of Judge Story. He also edited the *American Jurist*, a quarterly law magazine of high reputation. For three winters, while Judge Story was absent at Washington, Mr. Sumner was lecturer to the law school at Harvard, and his familiar theme was constitutional law and the law of nations. In 1837 he visited Europe, travelled extensively on the Continent, and resided nearly a year in England. Bearing a complimentary letter to the latter country from Judge Story, he was cordially received, and was introduced by statesmen on the floor of the Houses of Parliament. In 1840 he returned to Boston, and from 1841 to 1846 he published an edition with annotations of *Facey's Reports* in twenty volumes. His first participation in active politics was in 1845. On July 4 he delivered an oration before the municipal authorities of Boston on the "True Grandeur of Nations." At that time war with Mexico was impending. He denounced the war system as a means for determining international questions, and declared that it ought to be superseded by peaceful arbitration. This oration attracted much attention, led to much controversy, and was widely circulated in America and Europe. This was followed by many public addresses on kindred themes, and his reputation as an orator, suddenly created, made them widely and thoughtfully read. He then first appeared as a public opponent of slavery, and opposed the annexation of Texas because he believed it was intended to extend the boundaries of that labor system in our country. From that day until his death, Sumner was an earnest advocate of the emancipation of the slaves. In 1846 he addressed the Whig State Convention of Massachusetts on "The Antislavery Duties of the Whig Party," and soon afterwards published a letter of rebuke to R. C. Winthrop, representative in Congress from Boston, for voting in favor of war with Mexico. He finally left the Whig party and joined the Free-soilers (see *Free-soil Party, The*), supporting Van Buren for President in 1840. In April, 1851, Mr. Sumner was elected by a coalition of Democrats and Free-soilers in the Massachusetts Legislature to a seat in the United States Senate, to fill the place vacated by Daniel Webster. He took his seat Dec. 1, 1851, and kept it by successive re-elections until his death. He was recognized as the leader in all antislavery movements in the Senate, and his political action in the matter was guided by the formula "Freedom is national, Slavery is sectional." He took a very active part in the debates on the Kansas questions. His speech upon "The Crime against Kansas" took two days in its delivery (May 19 and 20, 1856). Some passages in it greatly incensed the members of Congress from South Carolina, and one of them (Preston S. Brooks) assaulted Mr. Sumner while he was writing at his desk in the Senate Chamber on May 26. Brooks approached Sumner with a gutta-percha cane and dealt him such a blow on the head that he fell insensible upon the floor.

From this blow he long suffered severely, and did not recover until three or four years afterwards. Brooks was rewarded for this act by his constituents with the present of a gold-headed cane and a re-election to Congress. In the Senate in January, 1862, Mr. Sumner argued that the seizure of Mason and Slidell was unjustifiable, according to the principles of international law. (See *Mason and Slidell, Capture of*.) His voice was heard frequently during the war in defence of the national policy, and in 1865 he pronounced a eulogy on President Lincoln. In April, 1869, his speech on American claims on England caused great excitement and indignation in Great Britain, where it was supposed to threaten war and an attempt to excite popular feeling against that country. In the same year his opposition to the scheme for the annexation of Santo Domingo to the United States brought him into collision with President Grant, and led to Sumner's removal from the chairmanship of the Committee on Foreign Relations in March, 1870. He afterwards separated from the Republican party, and supported (1872) for the Presidency the nominee of the Liberal Republicans and Democratic party—Horace Greeley. He opposed General Grant's renomination, and at a convention of Democrats and Liberal Republicans held at Worcester in September, 1872, he was nominated for governor of Massachusetts. He was then in England in search of health, and declined. He returned home and to the Senate late in 1872, and in the course of the session he introduced an unpopular bill, which drew from the Massachusetts Legislature in 1873 a vote of censure. It was to remove from the regimental colors of the army and from the army register the names of battles won by Union troops in the Civil War. The vote of censure was rescinded in 1874, a short time before his death. He died of *angina pectoris* after an illness of a few hours. A *Memorial of Charles Sumner* was published in Boston in 1874 by order of the Massachusetts Legislature.

Sumner, EDWIN VOSK, was born in Boston in January, 1796; died at Syracuse, N. Y., March 21, 1863. In early life he was engaged in mercantile pursuits, and entered the army as second lieutenant in 1819. He was in the Black Hawk War (which see); served many years on the frontier; was distinguished in the war against Mexico and was breveted colonel; and from 1851 to 1853 was military governor of New Mexico. In the spring of 1861 he superseded A. Sidney Johnston in command of the Department of the Pacific, and was made brigadier-general of volunteers. He commanded the First Corps of the Army of the Potomac in the Peninsular campaign, and was twice wounded. He was also wounded at Antietam, and in the battle of Fredericksburg he commanded the right grand division of the Army of the Potomac. In May, 1862, he was breveted major-general of the United States Army. He left two sons—Edwin V. and Samuel S.—who were captains of cavalry.

Sumner, JETHRO, was born in Virginia; died in Warren County, N. C. He was paymaster of the provincial troops in North Carolina in 1760,

and commander of Fort Cumberland. In the spring of 1776 he was appointed colonel by the Provincial Congress, and with his regiment joined Washington's army. He was made brigadier-general in the Continental service in 1779, and in 1780 was engaged in the battle near Camden. (See *Sander's Creek, S. C., Battle at*.) In 1781, after active service in North Carolina, he joined Greene in the High Hills of Santee (which see). Sumner was in the battle of Eutaw Springs, and was active in overawing the Tories in North Carolina until the close of the war, when he married a wealthy widow at New Bern.

Sumter, THOMAS, was born in Virginia in 1734; died at South Mount, near Camden, S. C., June 1, 1832. He was a volunteer in the French and Indian War, and was present at Braddock's defeat in 1755. In March, 1776, he became lieu-

THOMAS SUMTER.

tenant-colonel of a South Carolina regiment of riflemen, and was stationed in the interior of the state to overawe the Indians and Tories. After the fall of Charleston in 1780, Sumter hid in the swamps of the Santee; and when his state was ravaged by the British, he retreated to North Carolina, where he raised a larger force than he could arm, and with these he fought and defeated a British force at Hanging Rock (which see), and totally routed a British force on the Catawba (July 12, 1780), but was afterwards (August 18) surprised and defeated at Fishing Creek (which see) by Tarleton. He soon raised another corps and repulsed Colonel Wemyss near the Broad River (November 12), and at Blackstocks (which see) defeated Colonel Tarleton, who attempted to surprise him. So vigilant and brave was Sumter that the British called him the "South Carolina Game-cock." Raising three regiments, with Marion and Perkins he dreadfully harassed the British and Tories in South Carolina. He received the thanks of Congress (Jan. 13, 1781). Cornwallis, writing to Tarleton, said of him, "He certainly has been our greatest plague in this country." He captured the British post at Orangeburg (May, 1781), and soon afterwards

those at Dorchester and Monk's Corner. General Sumter was a warm friend of the national Constitution, and was member of Congress under it from 1789 to 1793, and again from 1797 to 1802. He was United States Senator from 1801 to 1810, and from 1809 to 1811 he was United States Minister to Brazil, then seventy-four years of age.

Sunbury, FORT, TAKEN. British forces were sent to Georgia from New York late in 1778, and at about the time of their landing at Savannah (Dec. 29), General Prevost, in command of the British and Indians in eastern Florida, marched northward. On Jan. 9, 1779, he captured Fort Sunbury, twenty-eight miles south of Savannah, the only post of consequence then left to the Americans on the Georgia seaboard. Campbell, who had taken Savannah, was then preparing to attack this post. Prevost pushed on to Savannah, and took the chief command of the British forces in Georgia.

Sun-worshippers in the Gulf Region. The Indians found in the region of the Gulf of Mexico and on the lower Mississippi by the Europeans, had undoubtedly been in contact with the higher civilization of Mexico and South America at that time, and were sun-worshippers. They regarded that orb as the Supreme Deity, for they perceived that it was the sum of light and life on the earth. In all their invocations for blessings, the sun was appealed to as we appeal to God—"May the Sun guard you!" "May the Sun be with you!" were usual forms of invocation. At the beginning of March the men of a community selected the skin of a large deer with the head and legs attached, which they filled with a variety of fruit and grain. Its horns were garlanded with fruit and early spring flowers. The effigy, appearing like a live deer, was carried in a procession of all the inhabitants to a plain, was placed on a high pole, and at the moment of sunrise the people all fell upon their knees with their faces towards the rising luminary, and implored the god of day to grant them the ensuing season an abundance of fruit and grain as good as that which they there offered.

Suppression of the Slave-trade. On March 13, 1824, articles of convention between the United States and Great Britain were signed at London, by diplomats appointed for the purpose, providing for the adoption of measures to suppress the African slave-trade. The first article provided that the commanders and commissioned officers of each of the two contracting powers, duly authorized to cruise on the coast of Africa, of America, and of the West Indies, for the suppression of the slave-traffic, were empowered, under certain restrictions, to detain, examine, capture, and deliver over for trial and adjudication by some competent tribunal, any ship or vessel concerned in the illicit traffic in slaves, and carrying the flag of either nation. This convention was signed by Richard Rush for the United States, and by W. Huskisson and Sir Stratford Canning for Great Britain.

Supremacy Claimed for Parliament. Massachusetts had refused to be subject to the laws

of Parliament (see *Royal Colonial Commission, First*), and had remonstrated against such subjection as "the loss of English liberty." The Long Parliament conceded the justice of the remonstrance, but the judges, at the Restoration in 1660, asserted the legislative supremacy of Parliament over the colonies without restriction. The contest between that body and the colonies as to authority began in 1634, and continued until the Revolution in 1775.

Supreme Court of New York. The first session of the Supreme Court of the State of New York was opened by Chief-justice Jay, at Kingston, on Sept. 9, 1777. In his charge to the grand jury he said, "You will know no power but such as you [the people] create; no laws but such as acquire all their obligations from your consent. The rights of conscience and of private judgment are by nature subject to no control but that of the Deity, and in that free situation they are now left."

Supreme State Courts. All the states excepting Georgia established or contained some supreme tribunal authorized to review and correct the decisions of inferior courts. In Georgia the several County Courts had final jurisdiction. In New York the Senate constituted the Supreme Court of Errors, assisted by the chancellor and the judges. In New Jersey the governor and Council constituted the Court of Appeals. In Virginia a Court of Appeals was composed of the admiralty and chancery judges, and the judges of the General Court. In Maryland and South Carolina the presiding judges of the District Courts composed a Court of Appeals, but did not extend to chancery cases. The Supreme Court of North Carolina fulfilled the same functions, as did courts with the same, or nearly the same, titles in Connecticut, Rhode Island, Massachusetts, New Hampshire, Pennsylvania, and Delaware. (See *Chancery Jurisdiction*.)

Surrender of Burgoyne. After the battle of Oct. 7 (1777), Burgoyne retreated, in a heavy rain-storm, to the Heights of Saratoga, which he reached on the morning of the 10th. Perceiving no chance for victory or escape, negotiations for surrender were opened with Gates. These were completed, and at eleven o'clock on the morning of Oct. 17, his vanquished troops, to the number of 5,799 (of whom 2,412 were Germans) laid down their arms on the plain near the Hudson River, in front of the present Schuylerville. Besides these there were 1800 prisoners of war, including the sick and wounded, abandoned to the Americans, making the whole number included in the capitulation 7599. After the troops had laid down their arms, Burgoyne rode to the headquarters of Gates, and in the presence of many American officers he surrendered his sword to Gates, who immediately returned it with complimentary remarks. This scene is depicted on the medal awarded to Gates by Congress. The terms granted by the nominal victor were generous. The troops were not held as prisoners of war, but were allowed a free passage to their homes on the condition that they should never again take up arms against the

Americans. Arrangements were made for the march of the troops to Boston, there (the Europeans) to be embarked as speedily as possible. Congress ratified the terms, but afterwards receded. (See *Convention Troops*.) The entire loss of the British after they entered the province of New York, in-

sand six hundred muskets, and a large quantity of munitions of war.

Surrender of Burgoyne, EFFECT OF THE, IN GREAT BRITAIN. The disaster to Burgoyne's army produced a profound sensation in England. This was intensified by indications that France was disposed to acknowledge the independence of the colonies. Efforts were made to supply the place of the lost troops by fresh recruits. Liverpool and Manchester undertook to raise each one thousand men, and efforts were made to induce London to follow the example. The new lord mayor worked zealously for that purpose, but failed, and the ministry had to be

both raised a regiment, and several more were enlisted in the Scotch Highlands by the great landholders of that region, to whom the appointment of the officers was conceded. The surrender created despondency among the English To-

ries, and Lord North, the prime-minister, was alarmed. (See *Conciliatory Bills*.)

Susquehanna Company, THE. The early charters granted to Massachusetts, Connecticut, Virginia, and the Carolinas made the Pacific Ocean the nominal western boundary of those colonies. Prior occupancy by the Dutch and the settlement of boundaries had created an exception in favor of New York and New Jersey; but all the country west of the Delaware within the same parallel of latitude with Connecticut was still claimed by that colony as a part of their domain. In 1753 an association called the "Susquehanna Company" was formed, and, with the consent of the Connecticut Assembly, applied to the crown for leave to plant a new colony west of the Delaware. It was granted, and the company sent agents to the convention at Albany in 1754, who succeeded in obtaining from representatives of the Six Nations the cession of a tract of land on the eastern branch of the Susquehanna River—the beautiful valley of Wyoming. The proprietaries of Pennsylvania claimed that this land was within the limits of their charter. The French and Indian War prevented any attempt at settlement until 1762, when about two hundred colonists commenced building and planting near the site of Wilkesbarre. Already another Connecticut association, called the "Delaware Company," had begun a settlement on the Delaware River (1767). Proclamations were issued and writs of ejectment were placed in the hands of the sheriff of Northampton County. In the autumn of 1768 a war-party of the Six Nations descended the Susquehanna and murdered Teedyuscung, the beloved old chief of the Delawares, and charged the crime upon the Connecticut settlers. The Delawares believed the tale, and at noon on the 14th of October they attacked and massacred thirty of the settlers in the fields. Men, women, and children fled to the mountains, from which they saw their homes plundered and burned and their cattle taken away. They made their way back to Connecticut. The settlement was broken up. Meanwhile Pennsylvania took possession of the Wyoming valley and built a fortified trading-house there. In 1769 forty pioneers of the Susquehanna Company went there to assert their rights, and civil war prevailed there for some time. (See *Penny-mite and Yankee War*.) In 1771 the Assembly of Connecticut proposed to make an effort to adjust all the difficulties, but the Governor of Pennsylvania refused to enter into any negotiation. The Connecticut Assembly then made out a case and sent it to England for adjudication. It was submitted to the ablest lawyers in the realm, and was decided in favor of the Susquehanna Company. The decision was unheeded by Governor Penn, and in 1775 civil war again began there, which was soon finished by the more important events of the war for independence.

Sutter (or Suter), JOHN A., on whose property the first discovery of gold in California was made, was of Swiss ancestry. He was born at

Kandern, Baden, Feb. 3, 1803; died at Washington, D. C., June 19, 1880. He graduated at the Military Academy at Berne in 1823, and entered the "Swiss Guard" as lieutenant. He served in the Spanish campaign of 1823-24, and remained in the Swiss army until 1834, when he emigrated to the United States, settled in Missouri, and became a naturalized citizen. There he engaged in a thriving cattle-trade with New Mexico by the old Santa Fé trail. Speaking French, German, Spanish, and English fluently, he became one of the best known and most popular of frontiersmen. Hearing of the beauty and fertility of the Pacific coast, he set out from Missouri with six men in 1838, and crossed two thousand miles of a region which had rarely been trodden by civilized men. He went to Oregon, and descended the Columbia River to Vancouver. Thence he proceeded to the Sandwich Islands. There he bought and freighted a ship, and in her proceeded to Sitka, the capital of Alaska, then a Russian possession. The venture was successful, and he sailed to the Bay of San Francisco in July, 1839. On the banks of the Sacramento River, California, he established himself, gathered a little colony there, put various industries in motion, and accumulated an immense fortune. Within two years after his arrival in California he possessed 1000 horses, 2500 horned-cattle, and 1000 sheep; and he became a formidable rival of the Hudson's Bay Company as a trader in furs with the Indians. Sutter's Fort became a hospitable resort of explorers on the Western coasts, and Sutter rendered valuable assistance to those in distress. Frémont experienced his kindness, and at the close of the war with Mexico (which see) Captain Sutter was the leading man in wealth and influence in California. He had experienced some trouble with the Mexican authorities, who tried to drive him out of the country. In the midst of his annoyances Frémont arrived with troops, hoisted the American flag over Sutter's Fort, and so took the first step towards making California a state of the Union. It is agreed that to no man was the United States more indebted for the conquest of California than to Captain Sutter. On the 19th of January, 1848, gold was first discovered in California on his estate. (See *Gold Discovered in California*.) This discovery was a great misfortune to Captain Sutter. As a consequence of that discovery he lost his land grant of thousands of acres made by Mexican governors as a reward for military services. He was stripped of his magnificent estate and reduced to poverty. In 1864 the Legislature of California granted him a pension of \$3000 a year, when he and his wife visited Europe. The latter years of his life were spent at Lititz, Lancaster Co., Penn. He anxiously but unsuccessfully importuned Congress to grant him some indemnity for his losses.

Swaanendael, COLONY OF. In anticipation of the establishment of patroonships (see *Patroons*), a partnership was formed by directors of the Dutch West India Company (which see) for making settlements on the Delaware River.

Godyn, Bloemart, Van Rensselaer, and others were the partners. They sent (Dec. 16, 1630) a ship and yacht, under the command of Pieter Heyes, with some colonists, and in the spring purchases of land were made from the Indians on both shores of Delaware Bay. Near the site of the (present) town of Lewes, in Delaware, a colony was planted, and the spot was called *Swaanendael*. In 1632 this little colony was destroyed by the Indians. *Swaanendael* was sold to the West India Company in 1633.

Swamp Fight, THE, is the name in history of one of the fierce struggles in King Philip's War. Philip and his allies—the Narragansets—had taken refuge in a fort which they had built in a pine and cedar swamp three or four miles west of South Kingston, R.I., for the protection of their winter store of food and their women and children. This fort was made more accessible by the cold that had frozen the surface of the morass. It was on rising ground in the morass—a sort of island of three or four acres—fortified by a palisade and surrounded by a close hedge a rod thick. There was but one narrow entrance to the fort, defended by a tree thrown across it, with a block-house of logs in the front and another on the flank. The Colonial soldiers were enabled to approach the fort on the frozen surface of the morass. As they approached they were met by a galling fire from the Indians, and many fell. The troops pressed on, forced the entrance, and engaged in a deadly struggle. The battle lasted two hours, when the colonists were victorious. The wigwams were set on fire and the events of the Pequot massacre were repeated. (See *Pequot War*.) The stores were consumed, with old men, women, and children. (See *King Philip's War*.) Of the colonists, six were captured and two hundred and thirty killed and wounded. In the midst of a snow-storm the colonists abandoned the scene that night (Dec. 19, 1675) and marched fifteen miles. The troops engaged in the battle were composed of six companies of foot and one of cavalry from Massachusetts, under Major Appleton; two companies from Plymouth, commanded by Major Bradford; and three hundred white men and one hundred and fifty Mohegan and Pequot Indians, in five companies, from Connecticut, under Major Treat. The whole were commanded by Josiah Winslow, son of Edward Winslow, of Plymouth.

"Swamp-angel" Battery. One of the most astonishing feats of military engineering was the construction of a redoubt in a morass of deep black mud between Morris and James islands, near Charleston, S. C., in 1863. The mud was about sixteen feet in depth, overgrown with reeds and rank marsh-grass and traversed by sluggish winding streams. Upon a platform of heavy timbers the redoubt was planted. It was com-

posed wholly of bags of sand. Heavy piles were driven under the gun-platform entirely through the mud into the solid earth, and upon it a 200-pounder rifled Parrott gun was mounted, thoroughly protected by the sand-bag parapet. The

A PARROTT GUN.

gun was named the "Swamp-angel," and fired its heavy shot into Charleston, five miles distant. To do this it had to be fired at an elevation of thirty-five degrees. One of its shots went into St. Michael's Church and demolished the table of the Ten Commandments back of the chancel, excepting the portion containing the sixth and seventh.

Swayne, JOHN WAGER, was born at Columbus, O., in 1835. He graduated at Yale College in 1856; became a lawyer; and was a useful officer in the Civil War (1861-65), serving at the battles of Iuka and Corinth (which see), and in the Atlanta campaign, losing a leg at Salka-hatchie. In June, 1865, he was made a major-general of volunteers, and was afterwards assistant commissioner of refugees, freedmen, and abandoned lands. He retired from military service Jan. 1, 1870.

Sweeney, THOMAS W., was born in Ireland in 1818, and served in the war against Mexico, in which he lost an arm. In May, 1861, he was made colonel of volunteers, and was distinguished at Wilson's Creek, where he was severely wounded. In January, 1862, he was colonel of Illinois volunteers, and was engaged in the battles at Fort Donelson, Shiloh, Corinth,

THE SWAMP-ANGEL BATTERY.

and Iuka Springs. He became brigadier-general late in 1862, and in the Atlanta campaign commanded a division, distinguishing himself in several of the battles. The city of New York

gave him a silver medal for his services in the war with Mexico, and the city of Brooklyn gave him one for his services in the Civil War. In May, 1870, he retired a brigadier-general of the United States Army.

Swift, JOSEPH GARDNER, LL.D., was born at Nantucket, Dec. 31, 1783; died at Geneva, N. Y., July 23, 1865. He was the first graduate of the Military Academy at West Point (which see) as lieutenant of Engineers, Oct. 12, 1802. He rose

JOSEPH GARDNER SWIFT.

from grade to grade until he was commissioned colonel and principal engineer of the army, July 31, 1812. He planned the chief defence of New York harbor in 1812, and was chief-engineer on the Northern frontier in 1813. In February, 1814, he was breveted brigadier-general for meritorious services, and in 1816 was made Superintendent of the Military Academy. He left the army in 1818, and was appointed Surveyor of the Port of New York the same year. General Swift entered the service of the United States as civil engineer, and from 1829 to 1845 superintended harbor improvements on the Lakes. Meanwhile (1830-31) he constructed the railroad from New Orleans to Lake Pontchartrain over an unfathomable swamp, and in 1839 was chief-engineer in the construction of the Harlem Railroad. President Harrison sent him on an embassy of peace to Canada, New Brunswick, and Nova Scotia in 1841, and ten years later he and his son made a tour of Europe.

Swine, IMPROVEMENT OF. De Soto landed the first swine brought to America in Florida in 1538. Portuguese sailors introduced them into Newfoundland and Nova Scotia as early as 1553. The English settlers took some to Virginia in 1609, and in a few years they overran the colony so that the Indians ate the flesh of many running wild in the woods. It has been estimated that the product of a single pair would increase to six millions in ten genera-

rations. They were all of inferior quality, and so they remained until the close of the last century. The Duke of Bedford sent a pair of pigs—a cross between a Chinese and a large English hog—to Washington, and their descendants became numerous and greatly improved the breed of swine in this country. Early in the present century efforts were made to improve the breeds by importations. Chancellor Livingston imported some and tried to disseminate the breed, but found much opposition from the farmers, who were averse to innovations. It was at about that time that the merino sheep were introduced by Colonel Humphreys, in which the chancellor took great interest, and in derision the new breed of swine were called “merino hogs.” A wag wrote:

“Let Humphreys rear his Spanish sheep
In spite of Yankee dogs:
Our worthy chancellor will keep
Flocks of merino hogs.
Our tall and stately big eared swine
That served our fathers well
Must bow before the superfine
Small hogs of Clermont dell.”

Sykes, GEORGE, was born in Maryland about 1823, and graduated at West Point in 1842. He served in the war with Mexico, and was breveted captain for gallant services at Cerro Gordo. He became assistant commissary of Twiggs's division of the army in Mexico, and was promoted to captain in 1855. In May, 1861, he was commissioned major of infantry United States Army, and in September was made brigadier-general of volunteers. He was promoted to major-general in November, 1862. He commanded a division of the Fifth Corps of the Army of the Potomac under Generals Fitz-John Porter and Butterfield, and took a conspicuous part in nearly all the battles fought by that army. In June, 1863, he was placed in command of the Fifth Corps, with which he fought at Gettysburg, and afterwards was active in Virginia. General Sykes was breveted major-general United States Army for services in the Rebellion. He died at Fort Brown, Texas, Feb. 9, 1880.

Symmes, JOHN CLEVES, jurist, was born on Long Island, N. Y., July 21, 1742; died in Cincinnati, Feb. 26, 1814. He married a daughter of Governor William Livingston, of New Jersey. In 1785-86 he was a member of the Continental Congress; was Judge of the Supreme Court of New Jersey, and Chief-justice. Making a purchase of a vast tract of land between the Great and Little Miami rivers, Ohio, he settled there towards the close of the last century. His daughter Anna was the wife of President Harrison. His nephew, JOHN CLEVES, was a soldier in the War of 1812, but is known as the author of the theory that the earth is hollow,

SYMME'S MONUMENT.

habitable within, open at the poles for the admission of light, and containing within it half a dozen concentric hollow spheres, also open at their poles. He petitioned Congress to fit out an expedition to test his theory. It was first promulgated in 1818. Mr. Symmes died in Hamilton, O., May 19, 1825; and over his grave is a short column, surmounted by a globe showing open poles.

Symmes's Purchase. Soon after the passage of the ordinance of 1787 for the establish-

ment of a government northwest of the Ohio (which see), lands in that region which had been surveyed in anticipation of this action of Congress were sold. An association called the "Ohio Company" (which see) bought five million acres between the Muskingum and Scioto rivers, fronting on the Ohio; and John Cleves Symmes, of New Jersey, purchased two million acres in the rich and beautiful region on the Ohio between the Great and Little Miami rivers, including the site of Cincinnati.

T.

Talbot and a Fire-brig. Silas Talbot, of Rhode Island, accepted the command of a fire-brig on the Hudson. By orders of Washington, after gaining Harlem Heights (Sept. 15, 1776), Talbot attempted the destruction of the British vessels of war, lying off (present) One Hundred and Twenty-fourth Street. At two o'clock on the morning of the 16th, when it was dark and cloudy, Talbot left his hiding-place under the Palisades, three or four miles above Fort Lee, ran down the river with a fair wind, and, grappling the *Romney*, set his brig on fire. The crew of the brig escaped in a boat, and the *Romney* soon freed herself without injury. The other war-vessels fled out of the harbor in alarm.

Talbot, SILAS, was born in Rhode Island about 1750; died in New York, Jan. 30, 1813. He was captain in a Rhode Island regiment at the siege of Boston; accompanied the American army to New York, and, for skilful operations with fire-

SILAS TALBOT.

rafts against the British shipping there, received from Congress the commission of major. Talbot received a severe wound in the defence of Fort Mifflin (which see), and gave material aid to General Sullivan on Rhode Island in 1778. A few weeks later he captured a British floating battery anchored in one of the channels commanding Newport, and for this brilliant exploit was commissioned lieutenant-colonel. In his

prize (the *Pigot*) he cruised off the New England coast, capturing several prizes, and was commissioned captain in September, 1779. In 1780 he was captured and confined in the prison-ship *Jersey* (which see), removed to England, and exchanged in 1781. After the war he purchased the confiscated estate of Sir William Johnsen, near the Mohawk River; served in the New York Assembly, and was a member of Congress in 1793-94. He was employed in 1794 to superintend the construction of the frigate *Constitution*, which, in 1799, was his flag-ship in a cruise to the West Indies. He resigned in September, 1801.

Talladega, BATTLE AT. On the evening of Nov. 8, 1813, Jackson and his troops were resting within six miles of Talladega, one of the chief gathering-places of the hostile Creeks. It was in Talladega County, Ala., a little east of the Coosa River. Jackson's forces were composed of 1200 infantry and 800 mounted men. He disposed them for action so as to enclose the foe in a circle of armed men. He moved at sunrise, Nov. 9. When the attack began the Indians rushed out with great fury, and their yells at first so alarmed the militia that some of them fell back, but were soon rallied and fought gallantly. The battle soon became general, and raged for about fifteen minutes, when the Indians broke and fled in all directions. They were pursued for several miles, and over 300 of the dusky warriors were slain, besides a large number wounded. The Americans lost fifteen killed and eighty-five wounded. Among the few trophies of victory borne back to the Coosa was a coarse banner, on which were the Spanish arms, an evidence of the complicity of the Spaniards with the Indians. The chastisement of the Indians at Tallasahatchee (which see) and Talladega had an immediate and powerful effect upon them, and promised a speedy termination of the war.

Tallasahatchee, BATTLE AT. The massacre at Fort Mimms (which see) stirred the indignation of the whole people of the Southwest. A cry for help went northward. Jackson was then prostrate at a Nashville inn, from the effects of a bullet received from the hand of Thomas H. Benton, in a duel. He appealed to the Tennesseans to take the field, promising to be with them as soon as possible. Five thousand men speedily responded. Jackson despatched (Sept.

26, 1813) General John Coffee, with 500 dragoons and as many mounted volunteers as could join him immediately, towards the Creek country. Jackson, with his arm in a sling, joined him soon afterwards, and drilled his troops thoroughly for the emergency. When he arrived at the Coosa he was informed that the hostile Creeks were assembled at Tallasahatchee, a town in an open woodland. Jackson sent the stalwart Coffee, with 1000 horsemen, to attack them. He was accompanied by friendly Creeks and Cherokees. On the morning of Oct. 3, by a manoeuvre, the Indians were decoyed out of the town, when they fell upon the Tennesseans furiously. They were immediately smitten by a volley of bullets and a charge of the cavalry. The Creeks fought valiantly. Inch by inch they were pushed back by the narrowing circle of their assailants, who attacked them at all points. Not one would ask quarter, but fought as long as he could wield a weapon. Every warrior was killed. In falling back to their village, they became mingled with the women and children, and some of these were slain. Fully 200 Indians perished, and eighty-four women and children were made prisoners. The loss of the Americans was five killed and forty-one wounded, most of them slightly. Having destroyed the town and buried the dead, Coffee marched back to Jackson's camp on the Coosa, followed by a train of sorrowful captives. Thus was commenced the fearful chastisement of the Indians for their work at Fort Mimms.

Tallmadge, BENJAMIN, was born at Setauket, L. I., Feb. 25, 1754; died at Litchfield, Conn., March 7, 1835. He entered the patriot army as lieutenant of a Connecticut regiment in June, 1776, and soon rose to the rank of colonel. In

BENJAMIN TALLMADGE.

1779-80 he was engaged in expeditions against bodies of British and Tories on Long Island, and was in some of the principal battles of the war. In the fall of 1780 he had the custody of Major André until after that officer's execution. He was long in Washington's military family, and was his secret correspondent. He became a successful merchant, and, from 1801 to 1817, was a member of Congress.

Tammany, ST., was a great and good chief of the Delawares, called Tamenand by the early settlers of Pennsylvania. He is supposed to have been one of those who made the famous treaty with William Penn. (See *Penn's Treaty*.)

He was revered by the Delawares almost like a deity, and old and young went to him for counsel. He never had his equal among them. In the old war for independence, the admirers of the good chief conferred upon him the title of saint, and he was established as the patron saint of America. His name was inserted in some calendars, and his festival was celebrated on the first day of May each year. After the Revolution an association was formed in Philadelphia, called the Tammany Society. On the 1st of May they paraded the streets, with bucktails in their hats, and proceeded to a pleasant retreat out of town, which they called the "wigwam," where, after a long talk, or Indian "palaver," had been delivered, and the calumet of peace and friendship had been duly smoked, they spent the day in festivity and mirth. After dinner, Indian dances were performed in front of the wigwam, the calumet was again smoked, and the company separated.

Tammany Society (or **Columbian Order**). This society, still in existence, was formed chiefly through the exertions of William Mooney, an upholsterer in the city of New York, at the beginning of the administration of President Washington. Its first meeting was held on May 13, 1789. The society took its name from St. Tammany, or Tamenand (which see), a noted Delaware chief, of whom it was said, "he loved liberty more than life." The officers of the society consisted of a grand sachem and thirteen inferior sachems, representing the President and the governors of the thirteen states. Besides these there was a grand council, of which the sachems were members. It was a very popular society and patriotic in its influence. Its mem-

TAMMANY HALL.

bership included most of the best men of New York city. No party politics were tolerated in its meetings. But when Washington denounced "self-constituted societies," in consequence of

the violent resistance to law made by the secret Democratic societies, at the time of the Whiskey Insurrection (which see), nearly all the members left it, believing their society to be included in the reproof. Mooney and others adhered to the organization, and from that time it became a political society, taking part with Jefferson and the Democratic party. The society, as a political organization, is yet in existence, and wields immense power in the politics of the city and state of New York. They met as such, first, at Martling's Long Room, southeast corner of Nassau and Spruce streets. In the year 1800 the society determined to build a wigwam, and Tammany Hall was erected by them on that spot. The corner-stone was laid in May, 1811, and the hall was finished the following year. A few years ago they abandoned the old wigwam and made their quarters in a fine building on Fourteenth Street, not far from Irving Place. The venerable Jacob Barker, who died in Philadelphia in 1871, at the age of ninety-two years, was the last survivor of the building committee of thirteen appointed in 1800.

Tampico, a seaport town of Mexico, in the State of Tamaulipas, on the river Pannco, five miles from the Gulf of Mexico, was taken possession of by the fleet of Commodore Conner, Nov. 14, 1846, in the early part of the war with Mexico.

Taney, ROGER BROOKE, Chief-justice of the United States, was born in Calvert County, Md., March 17, 1777; died in Washington, D. C., Oct. 12, 1864. He graduated at Dickinson College in 1795, and was admitted to the bar in 1799. He was of a family of English Roman Catholics who settled in Maryland. At the age of twenty-three he was a member of the Maryland Assembly; was State Senator in 1816, and in 1827 was Attorney-general of the State of Maryland. In 1831 President Jackson appointed him United States Attorney-general, and in 1836 he was appointed Chief-justice of the Supreme Court of the United States, to succeed Judge Marshall. In 1857 he gave his famous opinion in the Dred Scott case (which see), and was one of the most earnest upholders of the slave-system in our republic.

Tar, Pitch, and Glass first made in Virginia. With the seventy immigrants that came to Virginia with Newport, in 1609, were eight Dutchmen and Polanders, who came to introduce the making of tar, pitch, glass, and potash. Excepting these Dutchmen and Poles and about a dozen others, the colonists then, according to Smith, consisted of "poor gentlemen, tradesmen, serving-men, libertines, and such like, ten times more fit to spoil a commonwealth than either to begin or help to maintain one."

Tarleton and Marion. Tarleton was one of the most alert of the British officers, and his "legion" was feared and admired. He was employed by Cornwallis in searching out partisan corps, such as Marion's and Sumter's. He was cruel, and performed the orders of his general with fidelity. When, on one occasion, he set out to pursue Marion, Cornwallis wrote (Nov. 5,

1780): "I most sincerely hope you will get at Mr. Marion." On that march Tarleton and his corps set fire to all the houses and destroyed all the corn from Camden to Nelson's Ferry; beat the widow of a general officer because she would not tell where Marion was encamped, and burned her dwelling and wasted everything about it, not leaving her even a change of raiment. And along the line of their march were seen groups of houseless women and children, who had enjoyed the comforts afforded by ample fortunes before the destroyer came, sitting around fires in the open air. Marion, on the contrary, although equally alert, was always humane. In September, 1780, a band of two hundred Tories were sent to surprise him. With only fifty-three men, he first surprised a part of his pursuers and dispersed them, capturing some who had committed great outrages; but he would not allow a prisoner to be hurt. At Black Mingo Creek, on the 28th, he made a successful attack on a guard of sixty militiamen, and made prisoners of those under its escort. At that time the British were burning houses on the Little Pedee. He allowed his men to return to protect their families and property, but would not permit them to retaliate. He wrote afterwards: "There is not one house burned by my orders or by any of my people. It is what I detest, to distress poor women and children."

Tarleton, SIR BANASTRE, was born in Liverpool, Eng., Aug. 21, 1754; died Jan. 23, 1833. At the beginning of the war for independence he purchased a commission in the British army

SIR BANASTRE TARLETON.

(dragoons), came to America, and was concerned in the capture of General Lee (which see), late in 1776. After the evacuation of Philadelphia, in 1778, he commanded a cavalry corps called the "British Legion," and accompanied the troops that captured Charleston in May, 1780. He was one of Cornwallis's most active officers in the Carolinas and Virginia, in 1780-81, and was one of the prisoners at the surrender of Cornwallis (which see). In 1789 he was a member of Parliament, and was made a baronet in 1818. He published a history of his campaigns in 1780-81.

Ta-ron-tee (or Rivière aux Canards), SKIRMISH AT. General Hull cautiously moved (July 13, 1812) from Sandwich to attack Fort Malden, eighteen miles below. He sent forward a recon-

noitring party, who returned with information that Tecumtha, with his Indians, had been lying in ambush near Turkey Creek, not far from Amherstburg, and that the forest was full of prowling barbarians. There were rumors also that British armed vessels were about to ascend the Detroit River. Hull ordered his cannons to be placed near the shore and his camp fortified on the land side. He sent McArthur in pursuit of the Indians in the woods, and Colonel Cass pushed on towards the Ta-ron-tee, as the Indians called it, with two hundred and eighty men. It is a broad and deep stream flowing through marshes into the Detroit River about four miles above Fort Malden, at Amherstburg, and was then, as now, approached by a narrow cause-

Taxation in America, EFFECT OF, ON BRITISH REVENUE. In striking a balance of losses and gains in the matter of parliamentary taxation in America, it was found in 1772 that the expenses on account of the Stamp Act exceeded \$60,000, while there had been received for revenue (almost entirely from Canada and the West India islands) only about \$7500. The operation of levying a tax on tea had been still more disastrous. The whole remittance from the colonies for the previous year for duties on teas and wines, and other articles taxed indirectly, amounted to no more than about \$400, while ships and soldiers for the support of the collecting officers had cost about \$500,000; and the East India Company had lost the sale of goods to the

VIEW AT THE RIVIÈRE AUX CANARDS.

way and spanned by a bridge. At the southern end of the bridge was a detachment of British regulars, Canadian militia, and Indians under Tecumtha. Cass marched up the stream to a ford, crossed it, at sunset dashed upon the enemy, and, after a conflict of a few minutes, dispersed them and drove them into the forest. He asked permission to hold the bridge as an important point in the march upon Fort Malden, but his detachment was too weak to face the peril of such nearness to the fort, and the request was denied. Besides, Hull was not then aware of the real strength of the garrison at Fort Malden, and was not prepared to attack it. The affair at the Ta-ron-tee was the first skirmish and victory in the War of 1812-15.

Tatnall, JOSIAH, was born near Savannah, Ga., in November, 1796; died June 14, 1871. He entered the United States Navy in 1812, and rose to captain in 1850. He first served in the frigate *Constellation*, and assisted in the repulse of the British at Craney Island (which see) in 1813. He afterwards served under Perry and Porter, and was engaged on the Mexican coast during the war against Mexico. He left the service of his country, obtained a commission in the Confederate service, improvised a flotilla known as the "Mosquito Fleet," and attempted to defend Port Royal Sound against Dupont. (See *Port Royal Sound, Expedition to.*) He commanded at Norfolk when the *Merrimac* was destroyed, and the Mosquito Fleet at Savannah.

amount of \$2,500,000 annually for four or five years.

"**Taxation no Tyranny**" is the title of a pamphlet written by Dr. Samuel Johnson, the eminent lexicographer, in favor of the taxation schemes of the British government. It appeared early in 1775, and is one of the most heartless, intensely bitter, and savagely insolent of all the essays of the day. It was only the echo of the angry threats and grotesque arguments of the stubborn king and venal minister, and the mad passions of the aristocracy, which were then poisoning the minds of the people of Great Britain with unreasoning hatred of the Americans. Johnson was employed by the ministry in this work of inflaming the passions of the British people to divert their attention from the monstrous injustice they were inflicting upon their fellow-subjects in America by oppressing Boston and robbing Massachusetts of its charter, and endeavoring to make its free people absolute slaves to a tyrant's will. The one great blot upon the names of Johnson and Gibbon the historian is the barter of their consciences for money; for both had expressed sympathy for the Americans up to that time. Gibbon had even written against the ministerial measures. He became suddenly silent at the time when Johnson's pen was inditing his coarse and ribald paragraphs. To them a writer of a stinging epigram alluded in the line,

"What made Johnson write made Gibbon dumb."

With unpardonable malignity he uttered ponderous sarcasms and conscious sophistries as arguments. Pointing at Franklin (then in England) with a sneer, he spoke of him as "a master of mischief, teaching Congress to put in motion the engine of political electricity, and to give the great stroke like the name of Boston." To the declaration of the people of Boston that to preserve their liberties they were willing to leave their rich town and wander into the country as exiles, he heartlessly said: "Alas! the heroes of Boston will only leave good houses to wiser men." To the claim of the Americans to the right of resistance to oppression, he exclaimed, "Audacious defiance! The indignation of the English is like that of the Scythians, who, returning from war, found themselves excluded from their own houses by their slaves." To the words of "A Pennsylvania Farmer" (which see), insisting that the Americans complained only of innovations, he retorted: "We do not put a calf into the plough; we wait till he is an ox." The ministry bade him erase these lines because they were unwilling to concede that the calf had been spared, and not for its coarse ribaldry. Johnson shamelessly avowed his bargain by comparing himself, when he obeyed the commands of the ministers, to a mechanic for whom "his employer is to decide." To the assertion that the Americans were increasing in numbers, wealth, and love of freedom, he retorted: "This talk that they multiply with the fecundity of their own rattlesnakes disposes men accustomed to think themselves masters to hasten the experiment of binding obstinacy before it becomes yet more obdurate." He sneered at the teachings of the rule of progression which showed that America must in the end exceed Europe in population, and said in derision, with no suspicion that he was uttering a sure prophecy: "Then, in a century and a quarter, let the princes of the earth tremble in their palaces!" That was a sad spectacle of an old man prostituting the powers of a great intellect, and weakening the prop of his morality, by aiming such a malignant but utterly feeble shaft at his kindred in nationality struggling for freedom.

Taxation of the American Colonies. So early as 1696 a pamphlet appeared in England recommending Parliament to tax the English-American colonies. Two pamphlets appeared in reply, denying the right of Parliament to tax the colonies, because they had no representative in Parliament to give consent. From that day the subject of taxing the colonies was a question frequently discussed, but not attempted until seventy years afterwards. After the ratification of the Treaty of Paris (which see) in 1763, the British government resolved to quarter troops in America at the expense of the colonies. The money was to be raised by a duty on foreign sugar and molasses, and by stamps on all legal and mercantile paper. It was determined to make the experiment of taxing the American colonists in a way which Walpole feared to undertake. A debate arose in the House of Commons on the right of Parliament to tax the

Americans without allowing them to be represented in that body. The question was decided by an almost unanimous vote in the affirmative. "Until then no act, avowedly for the purpose of revenue, and with the ordinary title and recital taken together, is found on the statute-book of the realm," said Burke. "All before stood on commercial regulations and restraints." Then the House proceeded to consider the Stamp Act (which see).

Taxation Resisted in North Carolina. Refugees from Virginia, involved in Bacon's rebellion (which see), fostered a spirit of liberty among the inhabitants of North Carolina, and successful oppression was made difficult, if not impossible. The whole state did not at that time contain quite four thousand inhabitants. They carried on a feeble trade in Indian corn, tobacco, and fat cattle with New England, whose little coasting-vessels brought in exchange those articles of foreign production which the settlers could not otherwise procure. The English navigation laws interfered with this commerce. In 1677 agents of the government appeared, who demanded a penny on every pound of tobacco sent to New England. The colonists resisted the levy. The tax-gatherer was rude and had frequent personal collisions with the people. On one occasion he attempted to drive away a steer in satisfaction of a demand for the tax on the tobacco of a planter which had just been shipped for Boston, when the sturdy wife of the yeoman beat him off with a mop-stick and saved the animal. Finally, the people, led by John Culpepper, a refugee from South Carolina, seized the governor and the public funds, imprisoned him and six of his councillors, called a new representative Assembly, and appointed a new chief magistrate and judges. For two years the colony was free from foreign control.

Taxation Schemes (1767). In Pitt's cabinet, as Chancellor of the Exchequer, was the brilliant Charles Townsend, loose in principles and bold in suggestions. He had voted for the Stamp Act, and voted for its repeal as expedient, not because it was just. In January, 1767, by virtue of his office, on which devolves the duty of suggesting ways and means for carrying on the government, he proposed taxation schemes which aroused the most vehement opposition in America. He introduced a bill imposing a duty on tea, paints, paper, glass, lead, and other articles of British manufacture imported into the colonies. It was passed June 29. The exportation of tea to America was encouraged by another act, passed July 2, allowing for five years a drawback of the whole duty payable on the importation. By another act, reorganizing the colonial custom-house system, a Board of Revenue Commissioners for America was established, to have its seat at Boston. Connected with these bills were provisions very obnoxious to the Americans, all having relation to the main object—namely, raising a revenue in America. There was a provision in the first bill for the maintenance of a standing army in America and enabling the crown to establish a general civil list;

fixing the salaries of governors, judges, and other officers in all the provinces, such salaries to be paid by the crown, making these officers independent of the people and fit instruments for government oppression. A scheme was also approved, but not acted upon, for transferring to the mother country, and converting into a source of revenue, the issue of the colonial paper currency.

Taxes, INTERNAL, REPEAL OF (1802). For some time the internal taxes, and especially the excise, had been the source of much irritation of feeling. These taxes were denounced as anti-republican in character, and it was shown that the revenue derived from them was not very largely in excess of the expenses incurred in their collection. These taxes were abolished in 1802.

Taylor, BAYARD, traveller, was born at Kennet Square, Penn., Jan. 11, 1825; died at Berlin, Prussia, Dec. 19, 1878. He became a printer's apprentice at seventeen years of age, and at about the same time wrote verses with much facility. His rhymes were collected and published in a volume in 1844, entitled *Ximena*. In 1844-46 he made a tour on foot in Europe, of which he published (1846) an account in *Views Afoot*. In 1847 he went to New York and wrote for the *Literary World* and for the *Tribune*, and in 1848 published *Rhymes of Travel*. In 1849 he became owner of a share in the *Tribune*, and was one of the shareholders at the time of his death. He made long journeys to different parts of the globe, continually furnishing the most interesting letters to the *Tribune*, which were afterwards published in a series of volumes under various titles. He made a long tour in the East in 1851, including a journey of four thousand miles into the interior of Africa; and the next year went first to England, and thence through Spain to Bombay and China. In the latter country, after serving two months as the secretary of the American legation at Shanghai, he joined the expedition of Commodore Perry to Japan (which see). He reached New York Dec. 20, 1853, having accomplished a journey of fifty thousand miles. He made a fourth tour in 1856-58, and in 1862-63 was secretary of legation to Russia. In 1874 he went to Iceland, and participated in the celebration of the one thousandth anniversary of the first settlement of that island by the Norwegians. Afterwards he made an admirable translation of Goethe's *Faust*. Mr. Taylor was a charming poet as well as prose writer, and published several volumes of poetry. He read a poem at Philadelphia on the 4th of July, 1876—the centennial year—and a short time before his death put forth a remarkable poem called *Deucalion*. In the spring of 1878 he went to Berlin as American minister at the German court, and died there.

Taylor, GEORGE, a signer of the Declaration of Independence, was born in Ireland in 1716; died at Easton, Penn., Feb. 23, 1781. He arrived in the United States at the age of twenty years, but, having a good education, rose from the position of a day laborer in an iron foundry to

the station of clerk, and finally married his employer's widow, and acquired a handsome fortune. For five consecutive years he was a prominent member of the Pennsylvania Assembly, and in 1770 was made judge of the Northumberland County Court. He was elected to Congress July 20, 1776, and signed the Declaration of Independence on the 2d of August.

Taylor, RICHARD, son of President Taylor, was born in Florida. In 1861 he became colonel of Louisiana volunteers in the Confederate service, and was in the battle of Bull's Run. In October he was made a brigadier-general; served under "Stonewall" Jackson in Virginia; was promoted to major-general, and in 1863-64 served under E. Kirby Smith (which see) in the trans-Mississippi Department, opposing Banks in his Red River expedition. He was in command at Mobile, and on May 4, 1865, surrendered to General Canby. General Taylor afterwards visited England. He died in New York, April 12, 1879.

Taylor (RICHARD) in Louisiana. When General Banks left Alexandria, on the Red River, and marched to the siege of Port Hudson (which see), General "Dick" Taylor (son of President Taylor), whom he had driven into the wilds of western Louisiana, returned, occupied that abandoned city and Opelousas, and garrisoned Fort De Russy. Then he swept vigorously over the country in the direction of the Mississippi River and New Orleans. With a part of his command he captured Brashear City (June 24, 1863), with an immense amount of public property and the small-arms of four thousand National troops. By this calamity about five thousand refugee negroes were remanded into slavery. Another portion of the Confederates, under General Greene, operating in the vicinity of Donaldsonville, on the Mississippi, was driven out of that district. New Orleans was then garrisoned by only about seven hundred men, when a way was opened for Taylor to Algiers, opposite; but the Confederate leader dared not attempt to cross the Mississippi, for Farragut's vessels were patrolling its waters and guarding the city. When Banks's forces were released by the surrender of Port Hudson (July 9) they proceeded to expel Taylor and his forces from the country eastward of the Atchafalaya. This was the last struggle of Taylor to gain a foothold on the Mississippi.

Taylor, WILLIAM ROGERS, was born at Newport, R. I., April 1, 1811, and entered the navy in 1828. He was engaged on the Mexican coast during the war (1846-48), and was in the Atlantic blockading squadron in 1862-63; was flag-captain in operations against Forts Wagner and Sumter in 1863, and was in the North Atlantic blockading squadron in 1864-65, engaging in both attacks on Fort Fisher. In January, 1871, he was made rear-admiral.

Taylor, WILLIAM VIGERON, was born at Newport, R. I., in 1781; died Feb. 11, 1858. Having been for some time in the merchant-marine service, he was appointed sailing-master in the United States Navy in April, 1813,

and ably assisted in fitting out Perry's fleet at Erie. He navigated Perry's flag-ship (*Lawrence*) into and during the battle. His last service was on a cruise in the Pacific, in command of the *Ohio*, 74 guns, in 1847.

Taylor, ZACHARY, twelfth President of the United States, was born in Orange County, Va., Sept. 24, 1784; died in Washington, D. C., July

ZACHARY TAYLOR.

9, 1850. His father, a soldier of the Revolution, removed from Virginia to Kentucky in 1785, where he had an extensive plantation near Louisville. On that farm Zachary was engaged until the twenty-fourth year of his age, when, in 1808, he was appointed to fill the place of his brother, deceased, as lieutenant in the United States Army. He was made a captain in 1810;

commissioned a major; but on the reduction of the army, in 1815, he was put back to a captaincy, when he resigned, and returned to the farm near Louisville. Being soon reinstated as major, he was for several years engaged in military life on the northwestern frontier and in the South. In 1819 he was promoted to lieutenant-colonel. In 1832 he was commissioned a colonel, and was engaged in the Black Hawk War (which see). From 1836 to 1840 he served in Florida (see *Seminole War, The Second*), and in 1840 was appointed to the command of the first department of the Army of the Southwest, with the rank of brigadier-general by brevet. At that time he purchased an estate near Baton Rouge, to which he removed his family. After the annexation of Texas (which see), when war between the United States and Mexico seemed imminent, he was sent with a considerable force into Texas, to watch the movements of the Mexicans. In March, 1846, he moved to the banks of the Rio Grande, opposite Matamoras, and in May engaged in two sharp battles with the Mexicans on Texas soil. (See *Palo Alto, Battle of*, and *Resaca de la Palma, Battle of*.) Taylor was promoted to the rank of major-general. He entered Mexico May 18, 1846, and soon afterwards captured the stronghold of Monterey (which see). He occupied strong positions, but remained quiet for some time, awaiting instructions from his government. Early in 1847 a requisition from General Scott deprived him of a large portion of his troops, and he was ordered to act on the defensive only. While so doing, with about five thousand men, he was confronted by Santa Anna with twenty thousand. Taylor defeated and dispersed the Mexicans in a severe battle at Buena Vista, Feb. 23, 1847. During the remainder of the war the valley of the Rio Grande remained in the quiet possession of the Americans. During his campaign in Mexico he acquired the nickname of "Old Rough and Ready," in allusion to the plainness

GENERAL TAYLOR'S RESIDENCE AT BATON ROUGE.

and after the declaration of war, in 1812, he was placed in command of Fort Harrison (which see), which he bravely defended against an attack by the Indians. Taylor was active in the West until the end of the war. In 1814 he was

of his personal appearance and deportment. On his return home, in November, 1847, he was greeted everywhere with demonstrations of warmest popular applause. In June, 1848, the Whig National Convention, at Philadelphia,

nominated him for the office of President of the United States, with Millard Fillmore, of New York, for Vice-President. Both were elected. General Taylor was inaugurated March 4, 1849. On the 4th of July, 1850, he was seized with a violent bilious fever, and died on the 9th. President Taylor was of medium height, stout form, dark complexion, high forehead, and keen, penetrating eyes, and had an expression of much kindness and good-nature. At the time of his election to the Presidency, General Taylor was living on his plantation, near Baton Rouge, La., his residence being a fair specimen of the ordinary farm-houses in the cotton-growing states. The picture of it here given is from a pencil-sketch made by the general for the author, in November, 1848. The portrait of him was made from a daguerreotype taken at about the same time.

Taylor's Cabinet. On the 5th of March, 1849, President Taylor nominated to the Senate the following named gentlemen for his constitutional advisers: John M. Clayton, of Delaware, Secretary of State; William M. Meredith, of Pennsylvania, Secretary of the Treasury; George W. Crawford, of Georgia, Secretary of War; William B. Preston, of Virginia, Secretary of the Navy; Thomas Ewing, of Ohio, Secretary of the Interior; Jacob Collamer, of Vermont, Postmaster-general; Reverdy Johnson, of Maryland, Attorney-general. These nominations were unanimously confirmed by the Senate, and on the 8th of March each took the oath of office and entered upon his duties.

Tea in Politics. Among other articles imported into the colonies upon which a duty was laid in 1767, was tea, the furnishing of which, for England and her colonies, was a monopoly of the East India Company. In consequence of the violent manifestation of opposition to this method of taxation, and especially of the serious effects upon British trade by the operations of the non-importation league, Lord North, then prime-minister, offered a bill in Parliament, in the spring of 1770, for the repeal of the duties upon every article enumerated (see *Taxation Schemes*) excepting tea. He thought, unwisely, that tea, being a luxury, the colonists would not object to paying the very small duty imposed upon it, and he retained that simply as a standing assertion of the right of Parliament to tax the colonists. It was a fatal mistake. The bill became a law April 2, 1770. The minister mistook the character and temper of the Americans. It was not the petty amount of duties imposed, for none of this species of taxation was burdensome; it was the principle involved, which lay at the foundation of their liberties. They regarded the imposition of ever so small a duty upon one article as much a violation of their sacred rights as if a heavy duty on tea was imposed. The ministry would not yield the point, and a series of troubles followed, culminating in the destruction of cargoes of tea in Boston harbor and at other places by determined citizens. (See *Boston Tea Party*.)

Tea, LEAGUE AGAINST ITS USE. Merchants in

Boston, New York, Philadelphia, Annapolis, and other places agreed not to import tea, and there were combinations against its use in various places. Before North introduced his repeal bill into Parliament (see *Tea in Politics*), the mistresses of three hundred families in Boston subscribed to a league (Feb. 9, 1770), binding themselves not to drink any tea until the revenue act should be repealed. Three days afterwards (Feb. 12) the young maidens followed the example of the matrons, and multitudes signed the following document: "We, the daughters of those patriots who have, and do now, appear for the public interest, and in that principally regard their posterity—as such, do with pleasure engage with them in denying ourselves the drinking of foreign tea, in hopes to frustrate a plan which tends to deprive a whole community of all that is valuable in life." Violators of the non-importation agreements were sometimes handled roughly. A Boston merchant (Theophilus Lillie) of Tory tendencies continued to sell tea openly, which excited popular indignation. A company of half-grown boys placed an effigy near his door with a finger upon it, pointing towards his store. While a man was attempting to remove it, he was pelted with dirt and stones. Running into the store, he seized a gun, and discharged its contents among the crowd. A boy named Snyder was killed, and a lad named Samuel Gore was wounded. The affair produced intense excitement, not only in Boston, but throughout the colonies. The funeral of Snyder was a most impressive pageant. His coffin, inscribed "Innocence itself is not safe," was borne to "Liberty Tree," where an immense concourse were assembled, who thence followed the remains to the grave. Six of Snyder's school-mates bore the coffin, and nearly five hundred school-boys led the procession. The bells of Boston were tolled; so, also, were those of the neighboring towns.

Tea-plant, THE. This plant, which played such a conspicuous part in our history just previous to the old war for independence, was brought to Europe by the Dutch East India Company, and first appeared in Holland. It was known in England so early as 1650, and in 1660 it began to be used as a rare luxury in the London coffee-houses. Samuel Pepys, who was Secretary to the Admiralty, made the following record in his diary, under date of Sept. 26, 1661: "I sent for a cup of tea (a Chinese drink), which I had never drunk before." In 1667 the English East India Company (formed in 1600) sent their first order to import tea, directed to their agent at Bantam, to the effect that he should send home one hundred pounds of the best tea he could get. It was nearly one hundred years before the exports were very large or its use became extensive in England and in the English-American colonies. So early as 1770 the cultivation of the tea-plant was undertaken in Georgia, and from time to time the attempt has been renewed. Sufficient has been discovered by these experiments to show that, with proper cultivation, it may become an important industry in some parts of our Republic. The plant

barely survives the winter in the latitude of Washington, but in North Carolina and in Georgia it flourishes. The imports of tea into the United States for five years, ending June 30, 1874, for home consumption, was 2,528,644 hundred weight. The total value in gold was \$99,728,243.

Tea-ships, RECEPTION OF. When news reached America that tea-ships were loading for colonial ports, the patriots took measures for preventing the unloading of their cargoes here. The Philadelphians moved first in the matter. At a public meeting held Oct. 2, 1773, in eight resolutions the people protested against taxation by Parliament, and denounced as "an enemy to his country" whoever should "aid or abet in unloading, receiving, or vending the tea." A town-meeting was held in Boston (Nov. 5), at which John Hancock presided, which adopted the Philadelphia resolutions, with a supplement concerning remissness in observing non-importation and non-consumption agreements, but insisting upon a strict compliance with them in the future. A tea-vessel, bound for Philadelphia, was stopped (Dec. 25, 1773) four miles below that city, information having been received of the destruction of tea in Boston. Another, driven by stress of weather to the West Indies, did not arrive at New York for several months afterwards. When it arrived (April 21, 1774) at Sandy Hook the pilots, under instructions from the city committee, refused to bring her up, and a "Committee of Vigilance" soon took possession of her. When the captain was brought to town, he was ordered to take back his ship and cargo. The consignees refused to interfere; and meanwhile another ship, commanded by a New York captain, was allowed to enter the harbor, on the assurance that she had no tea on board. A report soon spread that she had tea on board, and the captain was compelled to acknowledge that he had eighteen chests, belonging to private parties, and not to the East India Company. The indignant people poured the tea into the harbor, and the captain of the East India tea-ship—with grand parade, a band of music playing "God save the King," the city bells ringing, and colors flying from liberty-poles—was escorted from the custom-house to a pilot-boat, which took him to his vessel at the Hook, when, under the directions of the Vigilance Committee, the vessel was started for England. A tea-ship (the *Dartmouth*) arrived at Boston late in November, 1773, and was ordered by a town-meeting (Nov. 29) to be moored at Griffin's Wharf. It was voted by the same meeting that the "owner be directed not to enter the tea-ship at his peril;" and the captain was warned not to suffer any of the tea to be landed. Two other tea-ships that arrived there were served in the same way, and suffered outrage. (See *Boston Tea Party*.) A fourth tea-vessel, bound for Boston, was wrecked on Cape Cod, and a few chests of her tea, saved, were placed in the castle by the governor's orders. About twenty chests brought in another vessel, on private account, were seized and cast into the water. In Charleston a cargo was landed, but, being stored in damp cellars, was spoiled.

Tecumtha (or **Tecumseh**), an Indian warrior, and chief of the Shawnoese, was born at Old Piqua, near Springfield, O., about 1770; killed in battle Oct. 5, 1813. He was one of the boldest and most active of the braves who opposed Wayne (1794-95), and was at the Treaty of

TECUMTHA.

Greenville (which see). So early as 1804 he had begun the execution of a scheme, in connection with his brother, "The Prophet," for confederating the Western Indians for the purpose of exterminating the white people. He visited many tribes with his brother, who pretended to be a commissioner from the Great Spirit. He had partially succeeded in 1811, when his plans were defeated by Governor Harrison. (See *Tippencanoe, Battle of the*.) He next sought the alliance of the Southern Indians, and visited the Creeks for the purpose, and in the War of 1812-15 he was the active ally of the British, and received the commission of brigadier-general in the British army. Assisting General Proctor in the battle of the Thames, he was slain there. Who killed Tecumtha? was an unsettled, and, at one time, quite exciting question. It was supposed, at the time of the battle on the Thames, that he was slain by the pistol of Colonel Richard M. Johnson. Indeed, the friends of Colonel Johnson asserted it positively as an undoubted fact; and during the political campaign when he was a candidate for the Vice-Presidency of the United States the question caused much warm discussion. That he killed an Indian under circumstances which were warranted was never denied. Two Indian warriors lay dead upon the spot after the battle, one of whom was believed to be Tecumtha. They were stripped naked. It has been pretty clearly shown that neither body was that of Tecumtha, for his was carried away by his warriors. The exasperated Kentuckians mutilated the supposed body of Tecumtha, and later Kentuckians have record-

ed, by a sculpture in marble upon Colonel Johnson's monument, in the cemetery at Frankfort, their conviction that he killed Tecumtha. The matter is of no historic importance. The spell-

JOHNSON'S MONUMENT.

ing of Tecumtha's name here is in accordance with the correct pronunciation of it, according to the testimony of the late Colonel Johnson, of Ohio, who was for many years agent of the United States government among the Shawnoese.

Tecumtha among the Creeks. This great Shawnoese warrior had been among the Seminoles in Florida, the Creeks in Alabama and Georgia, and tribes in Missouri in 1811, trying to induce them to join in a confederacy which he was forming in the Northwest to exterminate the white people on the borders and save the country to the Indians. He went on a similar mission in the autumn of 1812, taking with him his brother, "The Prophet" (which see), partly to employ him as a cunning instrument in managing the superstitious Indians, and partly to prevent his doing mischief at home in Tecumtha's absence. About thirty warriors accompanied them. His mission now was to engage the barbarians as allies for the British and against the Americans. The Choctaws and Chickasaws, through whose country Tecumtha passed, would not listen to him; but the Seminoles and Creeks lent him willing ears. He addressed the assembled Creeks for the first time in the lower part of (the present) Autauga County, Ala., late in October. Soon afterwards, having addressed the Creeks at different points, he approached a great Council called by Colonel Hawkins, United States Indian Agent, at Toockabatcha, the ancient Creek capital, where fully 5000 of the barbarian nation were gathered. Tecumtha marched with dignity into the square with his train of thirty followers, entirely naked excepting their

flaps and ornaments, their faces painted black, their heads adorned with eagles' feathers, while buffalo-tails dragged behind, unsuspended by bands around their waists. Like appendages were attached to their arms, and their whole appearance was as hideous as possible, and their bearing uncommonly pompous and ceremonious. They marched round and round in the square, and then approaching the Creek chiefs, gave them the Indian salutation of a hand-shake at arm's length and exchanged tobacco in token of friendship. So they made their appearance each day until Hawkins departed. That night a council was held in the great round-house. It was packed with eager listeners. Tecumtha made a fiery and vengeful speech, exhorting the Creeks to abandon the customs of the pale faces and return to those of their fathers; to cast away the plough and loom and cease the cultivation of the soil, for it was an unworthy pursuit for noble hunters and warriors. He warned them that the Americans were seeking to exterminate them and possess their country; and he told them that their friends, the British, had sent him from the Great Lakes to invite them to the war-path. The wily Prophet, who had been told by the British when a comet would appear, told the excited multitude that they would see the arm of Tecumtha, like pale fire, stretched out in the vault of heaven at a certain time, and thus they would know by that sign when to begin the war. The people looked upon him with awe, for the fame of Tecumtha and the Prophet had preceded them. Tecumtha continued his mission with success, but found opponents here and there. Among the most conspicuous of them was Tustinuggee-Thlucco, the "Big Warrior." Tecumtha tried every art to convert him to his purposes. At length he said, angrily, "Tustinuggee-Thlucco, your blood is white. You have taken my redsticks and my talk, but you do not mean to fight. I know the reason; you do not believe the Great Spirit has sent me. You shall believe it. I will leave directly and go straight to Detroit. When I get there, I will stamp my foot upon the ground and shake down every house in Toockabatcha." Strangely enough, at about the time Tecumtha must have arrived at Detroit, there was heard a deep rumbling under ground all over the Alabama region, and there was a heaving of the earth that made the houses of Toockabatcha reel and totter as if about to fall. The startled savages ran out, exclaiming, "Tecumtha is at Detroit! Tecumtha is at Detroit! We feel the stamp of his foot." It was the shock of an earthquake that was felt all over the Gulf region in December, 1812. At the same time the comet—the blazing arm of Tecumtha—appeared in the sky. These events made a powerful impression on nearly the whole Creek nation, but it did not move the "Big Warrior" from his allegiance to the United States. The Creeks rose in arms, and in less than two years their nation was ruined. Tecumtha's visit brought dreadful calamities on them.

Tecumtha and the Prophet. Among the Shawnoese (which see) in Ohio, in 1811, were two brothers, one an orator and warrior named

Tecumtha (signifying "a wild-cat springing on its prey"), the other also a warrior and "medicine-man," who was called "The Prophet." They were born of a Creek mother, with another brother, all at the same birth, and were named, respectively, Tecumtha, Elksawatawa (the Prophet), and Kamskaka. The first was intrepid, active, crafty, and unscrupulous; the second was also crafty and unscrupulous, pretending to hold intercourse with, and receive instructions from, the Great Spirit, and to possess miraculous powers. As early as 1805 he assumed to be supernaturally guided. Up to that period he had been noted only for drunkenness and stupidity. He had lost an eye in an encounter. His mission cunningly began by his falling suddenly one day while lighting his pipe, and lying apparently dead until he was being borne away for burial, when he opened his eyes and said, "Be not fearful; I have been in the Land of the Blessed. Call the nation together, that I may tell them what I have seen and heard." They assembled, and he told a marvellous story of the land he had seen and the instructions and warnings he had received; and from that time he was a preacher of righteousness among his people—a thorough hypocrite and artful deceiver of them. So great was his influence that his disciples believed he possessed many of the powers of the Great Spirit, and told wonderful tales of his doings—making pumpkins as large as wigwams spring out of the ground, and corn so large that one ear would feed a dozen men. So great was his fame at one time, and so many flocked to Greenville (his home in western Ohio) to see him, that the southern shores of lakes Superior and Michigan were almost depopulated, and traders were compelled to abandon business. Not more than one third of the deluded fanatics returned, the greater part having perished from the effects of hunger, cold, and fatigue. The Prophet finally lost caste among his people and died. Tecumtha served the British in the War of 1812–13 as a leader of the Indians, with the rank of brigadier, and was killed at the battle on the Thames, in Canada (Oct. 5, 1813), by troops under the command of Colonel Richard M. Johnson.

Telegraph in Massachusetts (1799). A telegraph on an improved plan was invented by Jonathan Grant, of Belchertown, Mass., in the above year. The inventor set up one of his lines between Boston and Martha's Vineyard, places ninety miles apart, at which distance he asked a question and received an answer in less than ten minutes.

Telegraphic Despatches, SEIZURE OF. By an order of the government of the United States, issued April 19, 1861, the originals of the despatches in the telegraph offices in all the principal cities of the free-labor states received during a year previous were seized by United States marshals at the same hour (three o'clock, P.M.) on April 20. The object was to obtain evidence of the complicity of politicians in those states with the enemies of the Republic. Every despatch that seemed to indicate such complicity was sent to

Washington, and the government obtained such positive evidence of such complicity that the offenders became exceedingly cautious and far less mischievous. Such offenders who persisted in "giving aid and comfort to the enemy" were arrested and imprisoned in Fort McHenry, at Baltimore; Fort Lafayette, New York; and Fort Warren, Boston. Within six months after the tragedy at Baltimore (April 19, 1861), no less than one hundred prisoners of state, to whom the privilege of the writ of *habeas corpus* was denied, were confined in Fort Lafayette.

Telegraphy. Until the perfecting of the electro-magnetic telegraph by Professor Morse in 1844, telegraphy was carried on by means of contrivances visible to the eye. The Morse system is now universally used, but seems yet in its infancy. The astonishing developments of its capabilities fill us with perpetual wonder, and its use has become an absolute necessity. Its growth has been marvellous. In 1846, three men conducted the entire telegraph business in the United States from a dingy basement in New York city; in 1876, 1000 persons were employed in that business in New York city alone, and one company (the Western Union), which monopolized the business, had a building, chiefly used for the purpose, which cost about \$2,000,000. In 1876 there were 80,000 miles of telegraph communication over the Republic. Telegraphic communications are freely sent over the wires in opposite directions at the same moment.

Telephone, THE, is a speaking instrument, first brought to public notice in 1877–78, by which, by means of the electro-magnetic telegraph, sounds may be transmitted to great distances, and conversation may be carried on by persons many scores of miles apart. A singer or an instrumental musician may perform in one city, and every tone may be distinctly heard by an audience in a room in another city. The telephone has become an instrument of common use in keeping up audible communications with various places. It was first used in public communications on March 7, 1879, when every phase of the proceedings in Congress pending the passage of the Silver Bill over the President's veto was transmitted vocally from the Capitol to the Treasury Department in Washington, and thence by telegraph to the President's house. The telephone is now (1880) very extensively used among business men in cities; and persons hard of hearing make use of the instrument in churches to enable them to distinctly hear the voice of the preacher. It is yet in its infancy of usefulness.

Telfair, EDWARD, Governor of Georgia in 1786, and from 1790 to 1793, was born in Scotland in 1735; died at Savannah, Sept. 17, 1807. He came to America in 1758 as agent for a mercantile house; resided first in Virginia, then in North Carolina, and finally settled as a merchant in Savannah in 1766. An active patriot there, he was on the revolutionary committees, and was one of a party which broke open the magazine at Savannah and removed the gunpowder in 1775. He served in the Continental Congress in

1778, and again from 1780 to 1783, and in 1786 was elected governor.

Temperance Societies. The first modern temperance society was formed in 1789 by two hundred farmers of Litchfield County, Conn., who agreed not to use "any distilled liquor in doing their farm-work the ensuing season." Organized societies of a similar kind began to be formed in 1811, and in 1826 the first public temperance society was organized in the United States. The total-abstinence principle was not adopted until 1836, when a national convention held at Saratoga, N. Y., took that higher stand. The Washingtonian Society, the first formed on total-abstinence principles, was organized in Baltimore in 1840 by six men of intemperate habits, who signed a pledge to totally abstain from intoxicating drinks. At the first anniversary of the society, one thousand reformed drunkards walked in procession.

Temporary Government for Western Territory. In 1784 Congress provided a temporary government for the country ceded by the several states and the Indians "beyond the mountains." Such territory was to be divided into distinct states; the inhabitants of any such division might be authorized to hold a convention of "their free males of full age" for the purpose of establishing a temporary government, and to adopt the constitution and laws of any state already established, and, under certain restrictions, to make political divisions in the newly organized territory into counties and townships. These were to be preliminary movements. It was provided that when any such state had acquired 20,000 inhabitants, the latter, on giving due proof thereof to Congress, should receive authority from that body to call a convention of representatives to establish a permanent government for themselves on the following basis: 1st. That they should forever remain a part of the Confederation of the United States of America; 2d. That they should be subject to the Articles of Confederation equally with those of the original states; 3d. That they should in no case interfere with the rights of the United States to the soil of such states, nor with the ordinances and regulations which Congress might find necessary for securing the title of such soil to *bona fide* purchasers; 4th. That they should be subject to pay a part of the national debt contracted or to be contracted; 5th. That no tax should be imposed on lands belonging to the United States; 6th. That these respective governments should be republican in form; and, 7th. That the lands of non-resident proprietors should in no case be taxed higher than that of the residents within any new state. It was also provided that whenever any of the new states should have as many free inhabitants as the least populous of the thirteen original states, it should be admitted into Congress by delegates on an equal footing with the original states, provided the requisite number of the states forming the Union should consent to such admission.

Tender Law in Massachusetts. Very little money had been in circulation in the Massachu-

setts colony during its earlier years, for what coin the settlers brought with them soon went back to England to pay for imported articles. Taxes were paid in grain and cattle, at rates fixed by the General Court. Every new set of emigrants brought some money with them, and the lively demand for corn and cattle on the part of the new-comers raised the prices to a high pitch. When the political changes in England (see *Long Parliament, The*) stopped emigration, prices fell, and a corresponding difficulty was felt in paying debts. In 1640 the Legislature of Massachusetts enacted that grain, at different prices for different sorts, should be a legal tender for the payment of all debts. To prevent sacrifices of property in cases of inability to pay, corn, cattle, and other personal goods, or, in default of such goods, the home and lands of the debtor, when taken in execution, were to be delivered to the creditor in full satisfaction, at such value as they might be appraised at by "three intelligent and indifferent men"—one to be chosen by the creditor, another by the debtor, and a third by the marshal. Beaver-skins were also paid and received as money, and held a place next to coin in the public estimation. At one time, musket-balls, at one farthing each, were made legal tender. A more available currency was found in wampum (which see), the money of the Indians.

Tennessee was originally a part of North Carolina, and was claimed as a hunting-ground by the Chickasaws, Choctaws, Shawnoese, and even by the Six Nations (which see). No tribe made it a fixed habitation excepting the Cherokees, who dwelt in the extreme southeast part. Earl London, Governor of Virginia, sent Andrew Lewis thither in 1756 to plant a settlement, and he built Fort Loudon, on the Tennessee River, about thirty miles from the site of Knoxville. It was besieged by Indians in 1760 and captured, the inmates being murdered or reduced to captivity. Armed men from Virginia and North Carolina retook the fort in 1761, and compelled the barbarians to sue for peace, when the settlements along the Holston and Watanga rapidly increased. The settlers were known as the "Watanga Association" from 1769 to 1777. The territory was represented in the North Carolina

Legislature as the District of Washington. In 1785 the State of Frankland or Franklin (which see) was organized, but was reunited with North Carolina in 1788, and the next year that state ceded the territory to the national government.

In 1790 it was organized, together with Kentucky, as "The Territory South of the Ohio." A distinct territorial government was granted to Tennessee in 1794, and in 1796 (June 1) it entered the Union as a state. The constitution then framed

STATE SEAL OF TENNESSEE

was amended in 1835, and again in 1853. The seat of government was migratory, having been at Knoxville, Kingston, Nashville, and Murfreesborough until 1826, when it was permanently fixed at Nashville. Tennessee took an active part in the War of 1812-15, especially in the operations in the Gulf region. Like those of Kentucky, the large majority of the people of Tennessee were opposed to secession in 1861, but their governor, who sympathized with that movement, finally plunged the state into revolution and the horrors of civil war, which raged fearfully at times within its borders. When the question of calling a convention to consider the subject of secession was submitted to the people (Feb. 9, 1861), there was a majority of 12,000 votes against it. After the attack on Sumter the Legislature was summoned to meet. It submitted the question of secession to the people, and it was declared that a large majority were in favor of it. (See *Tennessee Ordinance of Secession*.) The authorities had formed a military league with the Confederate States government, which the Legislature ratified, and from that time until the end of the war Tennessee was a theatre of distressing hostilities. They ceased only when Hood was driven from Tennessee near the close of 1864. (See *Nashville, Battle of*.) On Jan. 9, 1865, a state convention assembled at Nashville and proposed amendments to the constitution abolishing slavery and prohibiting the legislative recognition of property in man. The military league with the Confederacy, the ordinance of secession, and all acts of the Confederate States government were annulled, and the payment of any debts contracted by that government was prohibited. These proceedings were ratified by the people, and W. G. Brownlow was chosen governor. In April the Legislature ratified the Thirteenth Amendment to the national Constitution, reorganized the state government, and elected senators to Congress. The Fourteenth Amendment to the national Constitution having been ratified by the state in 1866, it was soon afterwards admitted to representation in Congress. The constitution of the state was revised early in 1870.

Tennessee, ANNEXATION OF, TO THE CONFEDERACY. On the 1st of May, 1861, the Legislature of Tennessee authorized its governor to take measures to annex that state to the Southern Confederacy, by which the whole military rule of the commonwealth should be subjected to the will of the leader of that league. (See *Tennessee Ordinance of Secession*.) The governor appointed Gustavus A. Henry, Archibald O. W. Totten, and Washington Barrow commissioners for the purpose. They negotiated a treaty with the agent of the Confederate States, H. W. Hilliard, and on the 7th a copy of the treaty was submitted to the Legislature. So Tennessee was bound to the fortunes of the Confederacy. By the treaty the authorities of Tennessee were to "turn over" to the Confederate States "all the public property, naval stores, and munitions of war of which she might then be in possession, acquired from the United States, on the same terms and in the same manner as the

other states of the Confederacy." Already the governor (Harris) had ordered (April 29, 1861) the seizure of Tennessee bonds to the amount of \$66,000 and \$5000 in cash belonging to the United States in the hands of the collector at Nashville. At about that time Jefferson Davis, disgusted with the timidity of Governor Magoffin, of Kentucky, recommended the Kentuckians "true to the South" to go into Tennessee and there "rally and organize."

Tennessee, DEPARTMENT OF THE. After the battle at Corinth (Oct. 4, 1862) there was brief repose in General Grant's department; and, by general orders (Oct. 16), it was much extended and called the "Department of the Tennessee," with headquarters at Jackson. Grant made a temporary division of it into four districts, commanded, respectively, by Generals W. T. Sherman, S. A. Hurlbut, C. S. Hamilton, and T. A. Davies, the first commanding the district of Memphis, the second that of Jackson, the third of Corinth, and the fourth of Columbus.

Tennessee Ordinance of Secession. Governor Isham G. Harris called the Legislature of Tennessee to meet on April 25, 1861, and in a message to them he strongly urged the immediate secession of the state. He urged that there was no propriety in wasting time in submitting the question to the people, for a revolution was imminent. A few days afterwards Henry W. Hilliard, a commissioner of the "Confederate States of America" (which see), clothed with authority to negotiate a treaty of alliance with Tennessee, appeared (April 30) and was allowed to address the Legislature. He expressed his belief that there was not a true-hearted man in the South who would not spurn submission to the "Abolition North," and considered the system of government founded on slavery which had just been established as the only form of government that could be maintained in America. The Legislature, in which was a majority of Secessionists, authorized (May 1) the governor to enter into a military league with the Confederate States, by which the whole military rule of the commonwealth was to be subjected to the will of Jefferson Davis. (See *Virginia Ordinance of Secession*.) It was done on May 7. The eighteen members from East Tennessee (which section remained loyal) did not vote. The Legislature passed an act to submit to a vote of the people of Tennessee a declaration of independence and an ordinance of secession; also an ordinance for the adoption of the constitution of the Confederate States of America. The governor was empowered to raise 50,000 volunteers "for the defence of the state," and, if necessary, to call out the whole available military strength of the commonwealth, to be under the absolute immediate control of the governor. He was also authorized to issue bonds of the state for \$5,000,000, to bear an annual interest of eight per cent. So the purse and the sword of Tennessee were placed in the hands of the disloyal governor before the people were allowed to be heard on the vital subject of secession from the Union. Yet they ventured to

speak in the face of threatened violence, and competent authority declared that the vote was against secession by a large majority. It is also said by competent authority that, by a concerted plan of making false election returns and the changing of figures at Nashville by the governor and his confederates, Harris asserted in a proclamation (June 24) that the vote in the state was 104,913 for secession, and 47,238 against secession. Even this report showed that East Tennessee—the mountain region of the state—was loyal by an overwhelming majority.

Tennessee, POSITION OF (1861). The people of Tennessee—the daughter of North Carolina—like those of the parent state, loved the Union supremely; but their governor (Isaac G. Harris) was an active enemy of the Republic, and had been for months in confidential correspondence with the public enemies in the Gulf States and in South Carolina and Virginia. To further the cause of disunion, he labored incessantly to bring about the secession of Tennessee. He called a special session of the Legislature at Nashville Jan. 7, 1861, and in his message he recited a long list of so-called grievances which the people of the state had suffered under the rule of the national government. He appealed to their passions and prejudices, and recommended amendments to the national Constitution favorable to the perpetuation and protection of the slave system. The Legislature provided for a convention, but decreed that when the people should elect the delegates they should vote for "Convention" or "No Convention;" also, that any ordinance adopted by the convention concerning "Federal relations" should not be valid until submitted to the people for ratification or rejection. The election was held Feb. 9, 1861, and the Union candidates were elected by an aggregate majority of about sixty-five thousand; and, by a majority of nearly twelve thousand, decided not to have a convention. The loyal people were gratified, and believed the secession movements in the state would cease. It was a delusive belief and hope. (See *Tennessee Ordinance of Secession*.)

Tennessee Troops (1812). Tidings of the declaration of war reached Andrew Jackson at the Hermitage, near Nashville, a week after that event, and on the same day (June 26) he authorized Governor Blount to tender to the President of the United States the services of himself and 2500 men of his division (he was a major-general of Tennessee militia) as volunteers for the war. Madison received Jackson's generous offer with gratitude, and accepted it "with peculiar satisfaction." The Secretary of War wrote (July 11) a cordial letter of acceptance to Governor Blount, and that official publicly thanked Jackson and his volunteers for the honor they had done the State of Tennessee by their patriotic movement. Everything seemed so quiet below the Tennessee River that it was past mid-autumn before the Tennessee volunteers were called upon. On Oct. 21 Governor Blount was asked for 1500 volunteers to be sent to

New Orleans to reinforce Wilkinson, and he made a requisition upon Jackson for that number. The latter immediately entered upon that military career which rendered his name famous. On Dec. 10, when the weather in Tennessee was intensely cold and deep snow lay upon the ground, about 2000 troops assembled at Nashville, bearing clothes for both cold and warm weather. When organized, these consisted of two regiments of infantry of 700 men each, commanded respectively by Colonels William Hall and Thomas H. Benton, and a corps of cavalry, 670 in number, under the command of Colonel John Coffee. These troops were composed of the best physical and social materials of the state. On the 7th of January, 1813, the little army went down the Cumberland River in boats, excepting the mounted men, whom Coffee led across the country to join the others at Natchez, on the Mississippi. In a letter to the Secretary of War, General Jackson, alluding to the conduct of some Pennsylvania and New York troops on the Niagara frontier who had constitutional objections to going into a foreign country by invading Canada, said: "I am now at the head of 2070 volunteers—the choicest of our citizens—who go at the call of their country to execute the will of the government, 'who have no constitutional scruples,' and, if the government orders, will rejoice at the opportunity of placing the American eagle on the ramparts of Mobile, Pensacola, and Fort Angustine, effectually banishing from the Southern coasts all British influence." Jackson was then forty-six years of age. The troops, after many hardships, reached Natchez and disembarked; when they met an order from Wilkinson to halt there and await further orders, as he had no instructions concerning their employment; nor had he quarters for their accommodation. There Jackson and his men waited until the 1st of March, when he wrote to the Secretary of War, saying he saw little chance for the employment of his small army in the South, and suggested that they might be used in the North. Day after day he waited anxiously for an answer. At length one came from John Armstrong, the new Secretary of War, who wrote simply that the causes of calling out the Tennessee volunteers to march to New Orleans had ceased to exist, and that on the receipt of that letter they would be dismissed from public service. He was directed to turn over to General Wilkinson all public property that may have been put into his hands. The letter concluded with the tender of cold and formal thanks of the President to Jackson and his troops. The hero's anger was fiercely kindled because of this cruel letter, which dismissed his army five hundred miles from their homes, without pay, without sufficient clothing, without provisions, or means of transportation through a wilderness in which barbarians only roamed. He wrote fiery letters to the President, Secretary of War, and Governor Blount, and took the responsibility of disobeying his orders and taking the troops back to Nashville before he would dismiss them. The Secretary apologized, saying

he did not know that Jackson had moved far from Nashville when he wrote the letter. Late in March he began his homeward movement. It was full of peril and fatigue, and took a month to accomplish it, moving eighteen miles a day. The general shared the privations of his soldiers, who admired his wonderful endurance. They said he was as "tough as hickory," and he received the nickname, which he bore through life, of "Old Hickory." Drawn up in the public square at Nashville, the Tennessee volunteers were presented with an elegant stand of colors from the ladies of Knoxville, and were there disbanded, May 22, 1813.

Tenure-of-office Act. Late in February, 1867, a bill was passed by Congress limiting the powers of the President in removals from office. Among other things, it took from the President the power to remove members of his cabinet excepting by permission of the Senate, declaring that they should hold office "for and during the term of the President by whom they may have been appointed, and for one month thereafter, subject to removal by and with the consent of the Senate." The President vetoed this bill (March 2), when it was passed over his veto and became a law.

Terms of Peace (1779). At the suggestion of the French ministers (Gerard and Luzerne) that the United States ought to accept an indirect acknowledgment of independence from Great Britain and make concessions in regard to boundaries (see *Yearnings for Peace*), Congress debated the matter at different times from February to August, 1779. They would listen to nothing short of absolute and full acknowledgment of their independence as preliminary to negotiations for peace. Concerning boundaries, fisheries, etc., they insisted upon the Mississippi as low down as latitude 31° north (present southern boundary of the State of Mississippi) as the western boundary. For the southern boundary, the thirty-first degree to the Appalachianicola, and down that river to meet a due west line drawn from the head of the St. Mary River and through it to the Atlantic Ocean—the northern boundary of Florida as fixed by the proclamation of 1763. The northern boundary was to be the original limits of the province of Quebec (see *Treaty of 1763*)—a line drawn from the outlet of Lake Nepissing to the St. Lawrence at the forty-fifth degree; thence along that parallel across the foot of Lake Champlain to the head of the Connecticut River; thence by the height of land separating the waters that flow, respectively, into the St. Lawrence and the sea, to meet a due north line drawn from the head of the St. Croix River; which line, and the river itself, from its source to its mouth, were to form the northeastern boundary. Rather than continue the war, they were willing to give up a claim to the peninsula between Lakes Erie, Ontario, and Huron. The right to fish on the Banks of Newfoundland and the free navigation of the Mississippi were at first insisted upon, but this point was finally yielded. These definitions formed the

basis of instructions to the commissioners sent to Europe.

Ternay, CHARLES LOUIS (D'Arsac de), French admiral, commander of the fleet that brought troops to America under Rochambeau. He entered the French service in 1738; commanded a squadron in the invasion of Newfoundland in June, 1762; resigned in 1772; and in 1779 was Governor of Bourbon and the adjacent islands. He arrived at Newport, R. I., with the French troops July 10, 1780, and died there, Dec. 15, 1780, aged fifty-eight years.

Terrapin War. The opponents of the War of 1812 denounced the embargo acts in unmeasured terms of scorn and ridicule. They called the conflict a "Terrapin War"—the nation, by extinguishing commerce, drawing within its own shell like a terrapin. Squibs, epigrams, caricatures, and songs were levelled against the acts. Newspapers and speakers especially condemned the "land embargo"—the cutting off trade with Canada. The trade so suddenly thrown into confusion by it was represented in a caricature by a bewildered serpent which had been suddenly stopped in its movements by two trees, marked, respectively, "Embargo" and "Non-intercourse." The wondering snake is puzzled to know what has happened, and the head cries out, "What's the matter, tail?" The latter answers, "I can't get out." A cock, representing France, stands by, crowing joyfully.

FAC-SIMILE OF A NEWSPAPER CUT.

In the late spring and early summer of 1812 a very popular song was sung at all gatherings of the Federalists. The following is a copy:

"Huzza for our liberty, boys,
These are the days of our glory—
The days of true national joys.
When terrapins gallop before ye!
There's Porter and Grundy and Rhea,
In Congress who manfully vapor,
Who draw their six dollars a day,
And fight bloody battles on paper!
Ah! this is true Terrapin war.

"Poor Madison the tremors has got,
'Bout this same arming the nation;
Too far to retract, he cannot
Go on—and he loses his station.
Then bring up your 'regulars,' lads,
In 'attitude' nothing ye lack, sirs,
Ye'll frighten to death the Danads,
With fire-coals blazing aback, sirs!
Oh, this is true Terrapin war!

"As to powder and bullet and swords,
For, as they were never intended,
They're a parcel of high-sounding words,
But never to action extended.
Ye must frighten the rascals away,
In 'rapid descent' on their quarters;
Then the plunder divide as ye may,
And drive them headlong in the waters.
Oh, this is great Terrapin war!"

Territorial Dispute between Massachusetts and New York Settled. By the terms of its original charter, Massachusetts claimed a part of the territory west of the Hudson River. Commissioners of Massachusetts and New York met at Hartford, Dec. 16, 1786, and made an amicable settlement. It was agreed that Massachusetts should have the pre-emptive right to two large tracts of land in the State of New York, the whole being about five million acres. Of that domain, two hundred and thirty thousand acres were near the centre of the State of New York; the remainder bordered on Lake Erie. All the residue claimed by Massachusetts was ceded to New York. In the matter of the tracts of land in New York, Massachusetts ceded to New York the sovereignty and jurisdiction of all the territory, and New York ceded to Massachusetts the property of the soil. The line commenced in the forty-second degree of north latitude, eighty-two miles west of the northeast corner of Pennsylvania, and was called the "Pre-emption Line." It ran through Seneca Lake at its mouth, about the middle of Geneva, and through Sodus Bay—the meridian of the city of Washington. This tract included most of the beautiful Genesee County.

Territories of the United States. All of the states of the Republic have been first organized by acts of Congress as territories excepting the original thirteen states. There are at the present time (1880) nine organized territories besides Alaska, which has not been so organized. That region contains 580,107 square miles, including the islands, and in 1870 had a population of 29,097 souls, of whom 26,843 were Indians. The following are the names of the territories, date of creation, area, and population of each:

NAME.	Date of Creation.	Area in Square Miles.	Population in 1870.
Arizona.....	1863	113,000	9,658
Dnkota.....	1854	150,932	14,181
Idaho.....	1863	86,294	14,999*
Indian Territory.....	1834	68,991	68,152†
Montana.....	1864	145,776	20,594
New Mexico.....	1850	121,201	91,874
Utah.....	1850	84,476	84,476
Washington.....	1853	60,994	69,994
Wyoming.....	1863	97,883	97,889

Terry, ALFRED HOWE, was born at Hartford, Conn., Nov. 10, 1827. He was educated at Yale College, and received an honorary degree from that institution in 1865. He was admitted to the bar in 1848, and practised law from 1854 to 1860. He led volunteers from New Haven in the battle of Bull's Run, retiring in good order when defeat was certain, hurrying up the rear

of the retreat, and saving a large amount of government property. Raising a Connecticut regiment, he was attached to the expedition to the coast of South Carolina, under General T. W. Sherman, and occupied Hilton Head. He assisted in the capture of Fort Pulaski (which see), and was placed in command of it; and during the summer of 1862 he had command of the posts and forts on the eastern coast of Florida, having been made brigadier-general in March. He led a division in the operations against Fort Wagner, and afterwards in the Army of the James, in its operations against Petersburg and Richmond. From May to December, 1864, he commanded the Tenth Corps; and in January, 1865, aided by the fleet of Porter, he captured Fort Fisher. For this act he was made major-general of volunteers and brigadier-general United States Army. He afterwards captured Wilmington, N. C., and was breveted major-general United States Army. After the surrender of Lee he was in command of Richmond, and was finally employed as commander in the Northwest, keeping in check the Sioux and other hostile Indians.

Test Oath. Congress passed an act (July 22, 1862) which required that every member of Congress should make oath that he had not "voluntarily borne arms against the United States since he had been a citizen thereof," or "voluntarily given aid, countenance, counsel, or encouragement to persons engaged in hostility thereto," and had never "yielded voluntary support to any pretended government, authority, power, or constitution within the United States hostile or inimical thereto."

Texas. The first European settlement made in Texas was by La Salle, in 1685, by accident. (See *La Salle, Robert Cavalier de*.) In 1689 Captain De Leon, a Spanish officer, was sent to drive out the French. He found them scattered, and the next year he returned with one hundred and ten men and some friars, and on the site of a fort built by La Salle, on Matagorda Bay, established a Spanish mission. A Spanish governor, with troops, was sent thither in 1691, but Indian hostilities and menaces of famine caused the settlement to be abandoned in 1693. In 1714 the French again attempted to plant settlements in Texas, under the direction of Crozat, of Louisiana (which see). Soon afterwards (1715) Spanish missions were planted at various points in the present domain of Texas; the name of "New Philippines" was given to the country, and a governor-general was appointed. The Indians slaughtered the people at some of the missions, and in 1765 there were not more than seven hundred and fifty white inhabitants in Texas.

STATE SEAL OF TEXAS

* Of this number, 4274 were Chinese.

† This territory has no territorial government. Of its population in 1870, 59,367 were Indians, and the remainder were white people and negroes. (See *Indian Territory*.)

After the cession of Louisiana to the United States a controversy arose about its western boundary (see *Louisiana, Purchase of*), which was amicably settled, in 1806, by General Wilkinson and the Spanish commander, establishing the territory between the Sabine River and Arroya Honda as neutral ground. In 1806 revolutionary movements, incited by those of Aaron Burr (see *Burr's Mysterious Expedition*), began in that region, and many skirmishes and battles occurred, chiefly by invasions of Americans. In conflicts in 1813 the Spanish lost about one thousand men; and in a conflict the same year, a force of about twenty-five hundred Americans and revolted Mexicans was nearly destroyed. Only about one hundred escaped. The Spaniards murdered seven hundred of the peaceable inhabitants of San Antonio. After the close of the War of 1812-15 Lafitte (which see) made Galveston Island his headquarters, established there a town named Campeachy, and remained there until 1821, when the settlement was broken up by United States forces. In 1819 the Sabine was established as the eastern boundary of Texas, but dissatisfaction caused disturbances to continue, and the territory was almost deserted. In 1820 Moses Austin, then living in Missouri, received from the Spanish authorities of Mexico a grant of land in Texas, and, dying, his son, Stephen F., received a confirmation of the grant in 1823. Emigrants from the United States flocked into Texas. A thousand families were soon there. Spanish rule was harsh towards the American colonists, and they were so oppressed that, in 1833, when Texas contained twenty thousand Americans, a convention was held, and measures were taken to obtain the independence of the state. Committees of safety were established in 1835, and that year armed resistance to the government of Mexico, of which Santa Anna was the head, began. Battles were fought; San Antonio de Bexar was taken by the insurgents, under Samuel Houston (which see), who was commander-in-chief. By the victory of San Antonio the Mexican forces were driven out of Texas. On the 20th of December, 1835, a "Declaration of Independence" was issued, and soon afterwards Santa Anna, with seventy-five hundred men, provided with artillery, ammunition, and stores, set out for Texas, and in February, 1836, he invested the Alamo, a strong fort near San Antonio. It was bombarded eleven days, when it was carried by storm by four thousand men, and the entire garrison were butchered. After that the war-cry of the Texans was "Remember the Alamo!" In that assault the Mexicans lost sixteen hundred men. A convention assembled in March, issued another declaration of independence, adopted a constitution, and made David G. Burnet provisional president of the declared Republic of Texas. The constitution was signed March 17. On the 27th Colonel Fanning's command were captured at Goliad, and, in violation of the terms of surrender, were massacred. Houston, meanwhile, was falling back before the Mexican troops, in order to divide and scatter them. On the San Jacinto

he gave battle, and won a victory, killing and wounding eight hundred and thirty-two Mexicans, and taking seven hundred and thirty prisoners, among them Santa Anna, who commanded in person. The war was ended, and Texas was independent. General Houston was elected President in September, 1836. The first Congress assembled in October, and the independence of Texas was acknowledged by the United States in March, 1837. In 1839-40 it was acknowledged by France, England, Holland, and Belgium. The Mexican government sent marauding expeditions into Texas from 1841 to 1843. In the latter year President Tyler made propositions to the President of Texas for its annexation to the United States. That measure was effected, and on Dec. 29, 1845, Texas was declared to be a state of the Union. Its annexation led to a war with Mexico (see *Mexico, War with*), begun in 1846, and ended by treaty in February, 1848. It then embraced an area of 376,163 square miles. In 1850 the state ceded to the United States its claim to all territory beyond its present limits (274,356 square miles), in consideration of \$10,000,000 in bonds, with the proceeds of which the state debt was paid. In 1860 politicians began to move for secession. Governor Houston opposed them, but a convention, on Feb. 1, 1861, passed an Ordinance of Secession. (See *Texas Secession Ordinance*.) Soon afterwards General Twiggs betrayed the United States troops in Texas into the hands of the Secessionists (see *Twiggs, David E., Treacherous Conduct of*), and the state was arrayed against the Union. The last engagement of the Civil War (which see) occurred on the soil of western Texas. A. J. Hamilton was appointed by the President provisional governor in the summer of 1865, and measures were taken for the reorganization of civil government there. Under the "Reconstruction Acts" of 1867, Texas, with Louisiana, was made a military district, and subjected to military rule under General Sheridan. A convention assembled Dec. 7, 1868, adopted a constitution, which was ratified at an election (Nov. 30 to Dec. 3) in 1869, and a governor and legislature were chosen at the same time. The Fourteenth and Fifteenth Amendments to the national Constitution were ratified (Feb. 23, 1870), and on March 30, by act of Congress, the state was entitled to representation in Congress. On April 16 the government was transferred to the civil authorities.

TEXAS, ATTEMPTS TO "REPOSSESS" IT (1863.) General Banks sent General Franklin, with four thousand troops, accompanied by four gunboats, under Lieutenant Crocker, to seize the Confederate post at Sabine Pass, on the boundary-line between Louisiana and Texas, preparatory to an attempt to recover the latter state from Confederate control. The expedition sailed from New Orleans Sept. 5, 1863. A premature attack of the gunboats on the garrison at Sabine Pass (Sept. 8) was unfortunate, and the expedition was a disastrous failure. Two of the gunboats were captured, and the transports, with Franklin's troops, fled back to New Orleans, the Nationals having lost two hundred men made pris-

oners and fifty killed and wounded; also two gunboats and fifteen heavy rifled cannons. The garrison attacked consisted of about two hundred men, and only forty were present. Banks now concentrated his forces on the Atchafalaya, for the purpose of penetrating Texas by way of Shreveport, on the Red River; but this design was abandoned for a time (see *Red River Expedition*), and it was determined to attempt to seize and hold the coast harbors of Texas. To mask this movement, General C. C. Washburne, with a considerable body of troops, advanced from Brashear City to Opelousas, to give the impression that a march upon Alexandria and Shreveport was again begun. When, in obedience to orders, he began falling back, he was suddenly and furiously struck by Confederates under Dick Taylor, and a regiment (Twenty-third Wisconsin) on which the blow fell was reduced from two hundred and twenty-six men to ninety-eight, most of them made prisoners. Meanwhile about six thousand National troops, under General Dana, with some war-vessels, had sailed for the Rio Grande. Banks, in person, accompanied the expedition. The troops debarked (Nov. 2) at Brazos Santiago, drove a small Confederate cavalry force stationed there, and followed them to Brownsville, opposite Matamoros, which Banks entered on Nov. 6. At the close of the year the National troops occupied all the strong positions on the Texan coast excepting Galveston Island (see *Galveston, Surrender of*) and a formidable work at the mouth of the Brazos River, and the Confederates had abandoned all Texas west of the Colorado River.

Texas Committee of Safety (1861). The Secession Convention of Texas appointed a Committee of Safety to carry out the scheme of disunion before the people could think or act upon the Ordinance of Secession. The committee was immediately organized, and appointed two of their number (Devine and Maverick) commissioners to treat with General David E. Twiggs, then in command of the National troops in Texas, for the surrender of his army and the public property under his control to the authorities of Texas. Twiggs gladly performed that act. This Committee of Safety so managed the votes cast on the 23d of February, concerning the Ordinance of Secession (see *Texas Secession Ordinance*), that there seemed to be full twenty-three thousand majority in favor of the ordinance, when it is asserted that really a very large proportion of the people of Texas were opposed to it.

Texas, INDEPENDENCE OF. Texas was a part of the Spanish province of Mexico which had declared itself independent of Spain. In 1824, when a considerable number of colonists from the United States were there, the Mexican government united Coahuila, hitherto a separate state, with Texas, and placed a Mexican as governor over the united states. He treated the Americans there with great injustice, and some of them, engaged in a revolution, were compelled to retreat into the United States in 1827. In 1830 Bustamente, who had made himself dictator of Mexico, issued a decree forbidding the

people of the United States to enter Texas as colonists. The American settlers in Texas then numbered about twenty thousand, and in 1833 they held a convention, determined to separate Texas from Coahuila, prepared a state constitution, and requested Santa Anna, then at the head of the government of Mexico, to admit them as a separate state of the republic. Colonel S. F. Austin, representing the American colonists, went to Mexico, where Santa Anna detained him until 1835; during which time—keeping the Texans quiet by promises of compliance with their desires—he prepared to occupy the country with his troops. A Committee of Safety was created in Texas, which assumed governmental powers. The people armed. A skirmish took place with some Mexicans, near Gonzales, Oct. 2, 1835, and other battles followed. On Nov. 9 a provisional government was formed in a delegate convention, called the "Consultation," and a governor and lieutenant-governor were chosen. At the same time Samuel Houston, of Tennessee, who had settled in Texas, was chosen commander-in-chief of the forces, and Austin was sent as commissioner to the United States. After San Antonio de Bexar was captured (Dec. 10, 1835), the entire Mexican force was driven out of Texas, and on the 20th a Declaration of Independence was adopted, and issued at Goliad, by Captain Philip Dimitt and others. Santa Anna, with a well-provided army of seventy-five hundred men, set out for the recovery of Texas. He invested the Alamo (February, 1836), a strong fort near San Antonio, with four thousand men, and, after bombarding it eleven days, carried it by storm. It was garrisoned by about one hundred and seventy men, under Captain W. B. Travis. The whole garrison were massacred (March 6) by order of Santa Anna—only one woman, a child, and a servant were saved. "Remember the Alamo!" was a Texan war-cry after that. The Mexicans lost, in the attack, sixteen hundred men. On March 1 a convention issued a Declaration of Independence, and a provisional president (David G. Burnett) was chosen. On the 27th the command of Colonel Fauning, at Goliad, were massacred in cold blood, and successive defeats of the Texans produced a panic. Houston, meanwhile, in order to scatter the Mexican forces, continually fell back, until he reached San Jacinto. There, at the head of a force of eight hundred troops, he gave battle (April 21, 1836) to about twice that number of Mexicans, and in the pursuit of them killed six hundred and thirty, wounded two hundred and eight, and took seven hundred and thirty prisoners. Among the latter, captured the next day, was President Santa Anna. His force was annihilated. The survivors fled westward in terror. The war was practically at an end. The Mexicans did not again invade Texas. Houston was elected President of the Republic (September, 1836). The independence of Texas was acknowledged by the United States in March, 1837, but Mexico never gave up her claim to it until the close of the war in 1846-48. (See *Annexation of Texas*.)

Texas, PERSISTENT REBELLION IN. Notwithstanding the downfall of the civil and military power of the Confederacy east of the Mississippi, the insurgents west of it, under the command and influence of General E. Kirby Smith, were disposed to continue the conflict longer. He addressed his soldiers on April 21, telling them that upon their prowess depended "the hopes of the [Confederate] nation." He assured them that there were hopes of succor from abroad. "Protract the struggle," he said, "and you will surely receive the aid of nations who already deeply sympathize with you." Public meetings were held in Texas, where resolutions to continue the contest were adopted. To meet this danger, General Sheridan was sent to New Orleans with a large force, and made preparations for a vigorous campaign in Texas. His appearance dismayed the trans-Mississippi insurgents, and they refused to longer follow their leaders in the hopeless struggle. Kirby Smith formally surrendered his whole command to General Canby (May 26, 1865), but exhibited "the bad faith," said Grant in his report, "of first disbanding most of his army, and permitting an indiscriminate plunder of the public property." So ended the Civil War in the field.

Texas Secession Ordinance. The venerable governor of Texas, Samuel Houston, opposed secession movements in his state with all his might; but an organization known as "Knights of the Golden Circle" (which see) was working secretly and effectively in the cause of disunion. Among the "Knights" were many members of the Legislature and active politicians, all over the state. Sixty of these irresponsible persons, early in January, 1861, called a state convention, to meet at Austin on the 28th of that month; and a single member of the Legislature issued a call for the assembling of that body at the same time and place. When they met, the Legislature, by a joint resolution, declared the convention a legally constituted body. Governor Houston protested against the assumption of any power by the convention, except to refer the matter of secession to the people. The convention assembled in the hall of the House of Representatives, on the appointed day, under the chief management of Judge John H. Reagan. A commissioner from South Carolina (McQueen) was there to assist in the management. Not one half of the one hundred and twenty-two counties in the state were represented. On the 1st of February, 1861, an ordinance of secession was adopted by a vote of one hundred and sixty-six against seven. It declared that the national government had failed "to accomplish the purpose of the compact of union between the states," and the chief grievance complained of was that the national government would no longer uphold the slave system. They therefore abrogated, in the name of the people of Texas, the Ordinance of Annexation adopted July 4, 1845. They talked of a "resumption of sovereign powers" with some plausibility, for Texas was the only state in the Union that had ever possessed them, as an absolutely independent state. They decreed that

the ordinance should be submitted to the people, but the day named (Feb. 23) was so early that no opportunity was afforded the people for discussion. They appointed a "Committee of Safety" and delegates to the general convention at Montgomery.

Texas State Convention, USURPATIONS OF THE. Governor Houston, of Texas, in his address to the people of his state, early in March, 1861, revealed what he called its usurpations. He had denounced the convention as an illegal body, gathered through fraud and violence. "To enumerate all its usurpations," he said, "would be impossible, as a great portion of its proceedings were in secret. This much has been revealed: It has elected delegates to the provisional council of the Confederate States" (which see) "at Montgomery, before Texas had withdrawn from the Union; and also, on the 2d day of March, annexed Texas to the Confederate States and constituted themselves members of Congress, when it was not officially known by the convention until the 4th of March that a majority of the people had voted for secession. While a portion of these delegates were representing Texas in the Congress of the Confederate States, two of them, still claiming to be United States Senators, have continued to represent Texas in the United States Senate, under the administration of Mr. Lincoln — an administration which the people of Texas have declared odious and not to be borne. Yet Texas has been exposed to obloquy and forced to occupy the ridiculous attitude, before the world, of attempting to maintain her position as one of the United States, and, at the same time, claim to be one of the Confederate States. It has created a Committee of Safety" (see *Texas Committee of Safety*), "a portion of which has assumed the executive power of the government, and, to supplant the executive authority, have entered into negotiations with Federal officers." (See *Twiggs, David E., Treacherous Conduct of.*) "This committee, and commissioners acting under it, have caused the Federal troops to be removed from posts in the country exposed to Indian depredations, and had them located, with their arms and field-batteries, on the coast, where, if their desire is to maintain a position in the country, they cannot only do so successfully, but destroy the commerce of the state. They have usurped the power to withdraw these troops from the frontier; but though in possession of ample stores, munitions of war, and transportation, have failed to supply troops in place of those removed. As a consequence, the wail of women and children is heard upon the border. Devastation and ruin have thus come upon the people; and though the convention, with all the means in its power, has been in session two weeks [adjourned session], no succor has been sent to a devastated frontier. . . . The convention has assumed to appoint agents to foreign states, and created offices, civil and military, unknown to the laws, at its will, keeping secret its proceedings. It has deprived the people of a right to know its doings. It has appointed

officers and agents under its assumed authority. It has declared," he said, "that the people of Texas ratify the provisional government of the Confederate States, requiring all persons then in office to take an oath of allegiance to the same or suffer the penalty of removal." It had changed the State Constitution and established a test-oath of allegiance to the Confederate States, and, "in the exercise of its petty tyranny," had required the governor and other officers to appear at its bar at a certain time to take the oath. It had assumed to create organic laws, and to put the same into execution. "It has overthrown," he said, "the theory of free government by combining in itself all the departments of government and exercising the powers belonging to each." The governor concluded by saying: "I have refused to recognize this convention. I believe it has received none of the powers it has assumed either from the people or the Legislature. I believe it guilty of a usurpation which the people cannot suffer tamely and preserve their liberties. I am ready to lay down my life to maintain the rights and liberties of Texas. I am ready to lay down office rather than yield to usurpation and degradation." These charges, in general, might be appropriately applied to the secession conventions of other states. It may be seen, by the proceedings of these conventions, that in each case they unwarrantably stretched the powers given by choosing from among its partisans, without the consent of the people, delegates to a general convention to form a confederacy independent of the old Union.

Textile Fabrics. The first cotton-factory in the United States was started at Beverly, Mass., in 1789, by a company who only succeeded in introducing that industry, with very imperfect machinery. A woollen-factory was in operation at Hartford, Conn., in 1789, and in 1794 one was established at Byfield, Mass. The same year a carding-machine for wool was first put into operation in our country. It was constructed under the direction of John and Arthur Schofield. Samuel Slater (which see) may be considered the father of cotton-manufacturing in the United States. But his operations were only in spinning the yarn. It remained for a citizen of the United States, Francis C. Lowell, a merchant of Boston, to introduce the weaving of cotton cloth here. He invented a power loom, and in 1812 he and Francis S. Jackson erected a mill at Waltham, Mass. The machinery was constructed by Paul Moody. After many failures and alterations, they succeeded in perfecting looms that worked well, and in 1813 they had also a spinning-mill, with 1300 spindles. Slater's Rhode Island mill had then only 144 spindles. In 1876 full 9,000,000 spindles were at work in the United States. In 1870 there were 956 cotton-manufacturing establishments in the United States, employing 135,369 persons, to whom more than \$39,000,000 were paid in wages that year. The aggregate value of their productions was \$177,500,000. There were 489,250,000 yards of print-cloth or calico made that year. The total value of the product of the

woollen manufactures in the United States in 1870 was about \$200,000,000.

Textile Fabrics First Made in New England. The difficulty of paying for imported goods in Massachusetts, about 1640, stimulated the people to new kinds of industry. Among other things, cotton and woollen cloths were manufactured. The cultivation of hemp and flax was successfully undertaken. Vessels were sent to the West Indies for cotton, and, at Rowley, where a colony of Yorkshire clothiers had recently settled, the fabrication of linen, woollen, and cotton cloth was set on foot.

Thacher, JAMES, M.D., was born at Barnstable, Mass., Feb. 14, 1754; died at Plymouth, Mass., May 24, 1844. He joined the Continental army at Cambridge in 1775, and served through the war as surgeon, being present at many of the prominent battles in the North. He kept a diary, and in 1824 published a *Military Journal of the Revolution*, a work of great historical value. He was author, also, of several other works, scientific, philosophical, and historical.

Thames, BATTLE OF THE. When General Harrison landed his invading army near Fort Malden, Canada (see *Harrison's Invasion of Canada*), General Proctor, in command of the British troops there, fled northward, leaving the fort, navy buildings, and store-houses in flames. Proctor had impressed into his service all the horses of the inhabitants to facilitate his flight. Harrison wrote to the Secretary of War (Sept. 27): "I will pursue the enemy to-morrow, although there is no probability of overtaking him, as he has upwards of 1000 horses and we have not one in the army. I shall think myself fortunate to collect a sufficiency to mount the general officers." Harrison did pursue. On the 1st of October he was joined by Colonel Richard M. Johnson, with his cavalry, at Sandwich. There a council of officers was held. Only two lines of pursuit were feasible—one by Lake Erie to Long Point, the other by land to the rear of the fugitives. The latter was chosen. McArthur and his brigade were left to hold Detroit; Cass's brigade and Ball's regiment were left at Sandwich, and 3500 men, mostly Kentucky volunteers, started in pursuit towards Chatham, on the River Thames, where, it was ascertained, Proctor had encamped. General Cass accompanied Harrison as volunteer aid. Learning that some small vessels containing the enemy's artillery and baggage were escaping on Lake St. Clair towards the mouth of the Thames, Commodore Perry detached a portion of his fleet (the *Niagara*, *Lady Provost*, *Scorpion*, and *Tygress*), under Captain Elliott, in pursuit. Perry soon followed in the *Ariel*, accompanied by the *Caledonia*. The little squadron reached (Oct. 2) the mouth of the Thames, with the baggage, provisions, and ammunition-wagons of the Americans, but the vessels of the enemy had escaped up that stream. Harrison pressed forward rapidly, along the border of the lake and up the Thames. Three of Perry's armed vessels also went up the river as convoys to transports.

The British had encamped at Dolsen's—700 white men and 1200 Indians—but on the approach of Harrison they continued their flight, Tecumtha cursing Proctor for his cowardice.

the pursuit was so sharp and close that Proctor was compelled to make a stand on the bank of the Thames, near the Moravian town (which see), his left on the river, where the bank is high

APPEARANCE OF THE THAMES BATTLE-GROUND IN 1860.

The former boasted of the victory he should win, but kept on retreating, destroying bridges and other property in his flight, burning his own vessels and leaving arms behind. At last,

OSHAWAHNAH.*

* This picture is from a photograph from life of Tecumtha's lieutenant at the battle of the Thames, taken at Brantford, Canada, in September, 1858, when he was attending a

and precipitous, and on his right a marsh, running almost parallel with the river for about two miles. The space between was covered with woods, with very little undergrowth. The British regulars were formed in two lines between a smaller swamp and the river, their artillery being planted in the road, near the bank of that stream. The Indians were posted between the two swamps, and so disposed as easily to flank Harrison's left. They were commanded by Tecumtha, assisted by Oshawahnah, a brave Chippewa chief. Harrison's force was now little more than 3000 in number, composed of 120 regulars, five brigades of Kentucky volunteers, under Governor Shelby, and Colonel Johnson's regiment of mounted men. Harrison attacked (Oct. 5, 1813), and a severe battle ensued. Tecumtha was slain, and his amazed followers, who had fought desperately, broke and fled to the shelter of the swamp. The whole British force was speedily vanquished, and most of them were made prisoners. Proctor escaped in a carriage, with his personal staff, a few dragoons, and mounted Indians, hotly pur-

grand council there. In that council he appeared with all his testimonials of bravery—his "stars and garters"—as seen in the picture. Around his hat was a silver band. He also displayed a silver gorget, medals, etc., a sash of bead-work, strings of wampum, and an ornamented tomahawk pipe. He was then about ninety years of age. He had been a famous warrior—the hero of fifteen battles. He was a mild-spoken, pleasant man, very vigorous in mind and body. He was yet living in 1861, the principal of seven or eight chiefs, on Walpole Island, in Lake St. Clair, opposite the town of Algoma, Mich., fifty miles above Detroit. Walpole Island is about ten miles in length. The Indians are Chippewas, Potawatomes, and Ottawas. They were settled here by the Indian agent of the British government at the close of the War of 1812. They were placed in charge of a superintendent in 1839. They numbered in 1867 about one thousand. Their principal business is hunting in the country around the Canadian borders of Lake St. Clair.

sned some distance by Johnson and his horsemen. He made his way to the western end of Lake Ontario, and there his military career was ended. Censured by his superiors, rebuked by the Prince Regent (which see), and scorned by honorable men for his career of cruelty and cowardice in America, Proctor sank into merited obscurity. Harrison's victory was complete. The whole country resounded with his praises. Congress gave him and Shelby the thanks of the nation and each a gold medal. At the battle of the Thames six brass cannons taken from Hull at Detroit were recovered, on two of which were engraved the words "Surrendered by Burgoyne at Saratoga." These may now be seen at West Point, on the Hudson. The loss in this short but decisive battle is not exactly known. It lasted only about fifteen minutes. The Americans lost about 45 killed and wounded; the British 44, besides 600 made prisoners. Harrison had recovered all that Hull had lost. He had gained much. He had subdued western Canada, broken up the Indian Confederacy, and ended the war on the northwestern border of the Union. The frontier being secured, Harrison dismissed a greater portion of the volunteers. Leaving General Cass (whom he had appointed civil and military governor of Michigan) in command of a garrison at Detroit, composed of 1000 regulars, he proceeded (Oct. 23) with the remainder of his troops to Niagara, to join the "Army of the Centre." For some unexplained reason General Armstrong, the Secretary of War, treated Harrison so badly that the latter left the army, and the country was deprived of his valuable services at a most critical time.

Thanksgiving-day in New England, ORIGIN OF. In the autumn of 1621 Governor Bradford sent out four men to gather game, so that the whole colony might "rejoice together," after they had garnered the fruits of their labors. The following year (1622), at the same season, after the abundant harvest was collected, the colonists assembled, and, as an old chronicle says, "solemnized a day of thanksgiving unto the Lord." Another account says that Massachusetts and his court were invited to participate in the rejoicings, and that they remained three days, feasting on venison.

Thanksgiving-days. The first recorded public thanksgiving, appointed by authority, in America, was proclaimed in Massachusetts Bay, in 1631. Owing to the great scarcity of provisions and consequent menace of starvation, the 22d of February was appointed to be observed as a fast-day. Before that time a long-expected vessel arrived, laden with provisions, and the fast-day was changed into one of thanksgiving. The practice was sometimes observed in New Netherland. Governor Kieft proclaimed a public thanksgiving, to be held in February, 1644, on account of a victory over the Indians; and again, in 1645, because of the conclusion of peace. (See *Kieft, William*.) Thanksgivings and fasts, sometimes general and sometimes partial, were appointed in the several colonies, and early in the war for independence the

Continental Congress adopted the practice. The days appointed during the war were as follows: Thursday, July 20, 1775; Friday, May 17, 1776; and another, to be fixed by the several states, ordered by resolution, Dec. 11, 1776; Wednesday, April 22, 1778; Thursday, May 6, 1779; Wednesday, April 6, 1780; Thursday, May 3, 1781; Thursday, April 25, 1782. These eight several appointments of thanksgiving-days were made by the Continental Congress, in the form of recommendations to the executive heads of the several state governments, reciting the occasion which prompted the observance. With only one exception, Congress suspended business on the days appointed for thanksgiving. Washington issued a proclamation for a general thanksgiving by the Continental army on Thursday, Dec. 18, 1777; and again, at Valley Forge, May 7, 1778. As President, Washington appointed Thursday, Nov. 26, 1789, a day for general thanksgiving throughout the Union; also Thursday, Feb. 19, 1795. Successive Presidents of the United States were moved to do likewise, from time to time. The Book of Common Prayer, revised (1789) for the use of the Protestant Episcopal Church in America, directs the first Thursday of November (unless another day be appointed by the civil authorities) "to be observed as a day of thanksgiving to Almighty God for the fruits of the earth," etc. In New England, especially, a day of thanksgiving has been annually celebrated for a century and more, and made the occasion for family reunions. The custom gradually extended to other states, and for several years the President of the United States has issued a proclamation for a day of public thanksgiving throughout the Union—usually the last Thursday in November—and the state executives have chosen the same day, so that the custom is now general in all parts of the Republic. Thanksgiving-day is now a legal holiday.

Thanksgiving, FIRST NATIONAL (1789). A few days before the adjournment of Congress (September, 1789), Elias Boudinot, a Representative, moved, in the House, that the President be requested to recommend a day of public thanksgiving and prayer to be observed by the people of the United States, in acknowledgment of the many signal favors of Almighty God, and especially his affording them the opportunity, peaceably, to establish a constitution of government for their safety and happiness. Roger Sherman, of Connecticut, supported the motion. Cavillers were ready to oppose it. Adanus Burke, of South Carolina, did not like this "mimicking" European customs; and Tucker, of Virginia, intimated that it might be as well to wait for some experience of the effects of the Constitution before returning thanks for it; besides, he thought the question ought to be left to the state authorities. In spite of these objections, the motion was carried, and Washington issued a proclamation accordingly (Oct. 3, 1789), appointing as Thanksgiving-day Nov. 26 succeeding. (See *Thanksgiving-days*.)

Thanksgiving, PROCLAMATION FOR (1863). The friends of the Union felt that in the victory

at Gettysburg the turning-point in the war had been reached; that the victory there and at Vicksburg (which see) were sure prophecies of the ultimate, and perhaps speedy, suppression of the rebellion. The President of the United States, as the representative of the government, in a proclamation (July 15, 1863), recommended the people to set apart the 6th of August to be "observed as a day for national thanksgiving, praise, and prayer" to Almighty God "for the wonderful things he had done in the nation's behalf, and to invoke the influence of his Holy Spirit to subdue the anger which has produced and so long sustained a needless and cruel rebellion; to change the hearts of the insurgents; to guide the councils of the government with wisdom adequate to so great a national emergency; and to visit with tender care and consolation, throughout the length and breadth of our land, all those who, through the vicissitudes of marches, voyages, battles, and sieges, had been brought to suffer in mind, body, or estate; and, finally, to lead the whole nation, through paths of repentance and submission to the Divine Will, back to the perfect enjoyment of union and fraternal peace."

Thatcher, HENRY KNOX, a grandson of General Knox, was born at Thomaston, Me., May 26, 1806. He entered the navy in 1823; was made captain in 1831, and commodore in July, 1862. In 1862-63 he commanded the Mediterranean squadron, and was in command of the steam-frigate *Colorado*, of the North Atlantic squadron, in both attacks on Fort Fisher. He afterwards commanded the West Gulf squadron, and assisted General Canby in the reduction of Mobile. On May 10, 1865, Thatcher received the surrender of the Confederate naval forces at Mobile and on the Alabama River. In July, 1866, he was made rear-admiral, and retired in May, 1868.

Thayer, SIMON, was born at Mendon, Mass., April 30, 1737; died at Cumberland, R. I., Oct. 14, 1800. In 1756 he served with the Rhode Island troops in the French and Indian War, and the next year in the Massachusetts line, under Colonel Frye and Rogers the Ranger. He was taken prisoner in 1757 at Fort William Henry. He accompanied Arnold in his famous expedition to Quebec (1775), and was made prisoner; but was exchanged in July, 1777, and was prominent in the defence of Red Bank and Fort Mifflin, where he was major. He was wounded in the battle of Mowmouth; served in New Jersey in 1780, and in 1781 retired from the service. He left a *Journal of the Invasion of Canada in 1775*, which was published in 1867.

Thayer, SYLVANUS, LL.D., was born at Braintree, Mass., June 19, 1785; died there, Sept. 7, 1871. He graduated at Dartmouth College in 1807 and at West Point in 1808, entering the corps of engineers. He was chief-engineer of Dearborn's army in 1812, and of Hampton's division in 1813. He was chief-engineer in the defence of Norfolk, Va., in 1814. In 1815 he was sent with Colonel McRae to Belgium and France to examine the fortifications there; and from

1817 to 1833 he was superintendent at West Point, and established the academy on its present exalted basis. In 1838 he was made lieutenant-colonel, and from 1833 to 1857 was constructing engineer of the defences of Boston harbor, and temporary chief of the engineer corps from 1857 to 1859. He was commissioned colonel in March, 1863, breveted brigadier-general in May, and resigned June 1.

The Fields, PUBLIC MEETING IN. The space now occupied by the Post-office, City Hall, and City Hall Park, in New York city, was in the outskirts of the town at the middle of the last century, and was called "The Fields." There, after the organization of the Sons of Liberty (1765), public meetings of citizens were held under their direction. The first of these of much note was in the middle of December, 1769, when one thousand four hundred people were gathered there, summoned by a handbill distributed over the city, addressed "to the betrayed inhabitants of the city and colony of New York," and signed "A Son of Liberty." It was inspired by an act of the Provincial Assembly, which provided an indirect method of cheating the people into a compliance with the Mutiny Act and the Quartering Act. It was the issuing of bills of credit, on the security of the province, to the amount of \$700,000, to be loaned to the people, and the interest to be applied to defraying the expenses of, ostensibly, the colonial government, but really for maintaining troops in the province—a monster bank without checks. This money scheme was denounced in the handbill as a covering to wickedness, as a virtual approval of the revenue acts, and that it was intended to distract and divide, and so to weaken, the colonies. It hinted at a corrupt coalition between acting Governor Colden and the powerful James De Lancey, and called upon the Assembly to repudiate the act concocted by this combination. It closed with a summons of the inhabitants to the Fields the next day, Monday, Dec. 17. The people were harangued by young John Lamb, an active Son of Liberty, a prosperous merchant, and vigorous writer. Swayed by his eloquence and logic, the meeting, by unanimous vote, condemned the obnoxious action of the Assembly. They embodied their sentiments in a communication to the Assembly borne by seven leading Sons of Liberty. In that house, where the leaven of Toryism was then working, the handbill was pronounced an "infamous and scandalous libel," and a reward was offered for the author. The frightened printer of the handbill gave the name of Alexander McDougall (afterwards General McDougall). He was indicted for libel, and imprisoned fourteen weeks, when he gave bail. He was arraigned, and for the nature of his answer to the indictment (months afterwards) was again imprisoned, and treated by the patriots as a martyr. In February, 1771, he was released, and this was the end of the drama in "The Fields" begun in December, 1769.

The Prophet (Elkswatawa), brother of Tecumtha, was born at Piqua, the seat of the

Piqua clan of the Shawnoese, about four miles north of Springfield, O. He was a shrewd deceiver of his people by means of pretended visions and powers of divination. By harangues

THE PROPHET.

he excited the superstition of the Indians; and such became his fame as a "medicine-man," or prophet, that large numbers of men, women, and children of the forest came long distances to see this oracle of the Great Spirit, who they believed could work miracles. His features were ugly. He had lost one eye in his youth, and, owing to dissipation, he appeared much older than his brother Tecumtha. The latter was really an able man, and used this brother as his tool. The Prophet lost the confidence of his people by the events of the battle of Tippecanoe. On

BIRTHPLACE OF TECUMTHA AND THE PROPHET.

the evening before the battle the demagogue, surrounded by his dupes, prepared for treachery and murder. He brought out a pretended magic bowl. In one hand he held a "sacred torch," in the other a string of "holy beans," which were accounted miraculous in their effects. His followers were all required to touch this talisman and be made invulnerable, and then to

take an oath to exterminate the pale-faces. When this was accomplished the Prophet went through a long series of incantations and mystical movements; then, turning to his highly excited band—about seven hundred in number—he told them that the time to attack the white men had come. "They are in your power," he said, holding up the holy beans as a reminder of their oath. "They sleep now, and will never awake. The Great Spirit will give light to us and darkness to the white men. Their bullets shall not harm us; your weapons shall be always fatal." Then followed war-songs and dances, until the Indians, wrought up to a perfect frenzy, rushed forth to attack Harrison's camp, without any leaders. Stealthily they crept through the long grass of the prairie in the deep gloom, intending to surround their enemy's position, kill the sentinels, rush into the camp, and massacre all. The result of the battle of Tippecanoe (which see) caused the Indians to doubt his inspiration by the Great Spirit. They covered him with reproaches, when he cunningly told them that his predictions concerning the battle had failed because his wife had touched the sacred vessels and broken the charm. Even Indian superstition and credulity could not accept that transparent falsehood for an excuse, and the Prophet was deserted by his disappointed followers and compelled to seek refuge among the Wyandots.

Theatrical Performance, FIRST, IN BOSTON.

In 1750 a tragedy was performed at the British Coffee-house in King Street, Boston, by two young Englishmen, assisted by some young men of the town. The pressure for entrance to the novelty was so great that a disturbance arose, which gave the authorities reason for taking measures for the suppression of such performances. At the next session of the Legislature a law was made prohibiting theatrical entertainments, because, as it was expressed in the preamble, they tended not only "to discourage industry and frugality, but likewise greatly to increase immorality, impiety, and a contempt for religion."

Theatrical Performances, FIRST, IN AMERICA.

The religious excitement in New England (see *New Lights*) had helped to deepen the fading traces of rigid Puritanism. Some young Englishmen and Americans at Boston alarmed the pious people by getting up at a coffee-house

a representation of Otway's *Orphan*. Some untoward circumstances occurred which caused the authorities to forthwith pass a law forbidding theatrical performances of every kind, as prejudicial to public morals. Regular theatrical performances were introduced into America soon afterwards, when, in 1752, a company of actors from London, led by William and Lewis Hallam,

played (a part of them) the *Beau's Stratagem* at Aunapolis. Soon afterwards the whole brought out the play of the *Merchant of Venice* at Williamsburg, Va. The same company afterwards played at Philadelphia, Perth Amboy, New York, and Newport. The laws excluded them from Connecticut and Massachusetts.

Theocracy, A, ESTABLISHED IN MASSACHUSETTS. At the General Court held May 18, 1631, a form of government for Massachusetts was adopted which lasted about fifty years. No man was thereafter to be admitted a freeman—that is, a citizen and voter—unless he were a member of some colonial church. The admission to these churches was so difficult that not one fourth of the population were ever members. The system of government then adopted intimately blended the Church and the State. The magistrates and the General Court, aided by the advice of the Gospel ministers, claimed and exercised supreme control in spiritual as well as in temporal matters, while in matters purely temporal the ministers were always to be consulted.

Theocracy in New England. In 1631 the government of Massachusetts was made a theocracy. In May of that year the General Court decreed that no man should be a "freeman"—a citizen and voter—unless he were a member of some colonial church. To become such was to submit to the most rigid tests of his purity of life and his orthodoxy in religion. The magistrates and General Court were aided by the clergy, and they jointly exercised a supreme control in temporal as well as spiritual matters. The clergy were always consulted in matters purely temporal. They were maintained at the public expense, for which the people were taxed; and by the joint influence of the clergy and magistrates many severe laws were enacted, sumptuary and otherwise. Men were whipped, their ears were cropped, or they were banished, for "slandering the government or the churches, or for writing letters in disparagement of the authorities in Church and State." The system of manners during the reign of this tyrannous theocracy was very austere. Gravity was a sign of holiness; all amusements were proscribed; gayety seemed to be regarded as sin; religious lectures on week-days were so frequent that their attendance imposed a heavy burden on the industry of the people, who went from town to town to hear them. There was a rigid fast in spring, answering to Lent, and a thanksgiving at the close of autumn. The observance of Christmas and other holidays of the Roman Catholic and English churches was denounced, and came to be regarded by the people as idolatrous. Even the eating of mince-pies on Christmas was discontinued. This tyrannous theocracy prevailed in Massachusetts with increasing strength for full fifty years, until the chain was gradually removed by enlightenment. "It seemed like an attempt to establish a vast Puritan monastery, with freedom only in marrying and money-making."

Thirteen United Colonies, THE. This was

the style assumed for the Union on the reassembling of the Continental Congress, Sept. 13, 1775, delegates from Georgia having been admitted and taken their seats. This was the style until the Declaration of Independence, when it was changed to "The United States of America."

Thirteenth Amendment to the Constitution, THE. In his annual message (Dec. 6, 1864), President Lincoln urged the House of Representatives to concur with the Senate in the adoption of an amendment to the national Constitution for prohibiting slavery in the Republic forever. The Senate had adopted it (April 8, 1864) at the preceding session by a vote of thirty-eight to six. On the 31st of January, 1865, the House adopted the amendment by a vote of one hundred and nineteen against fifty-six. The amendment was first submitted to the Senate by Mr. Henderson, of Missouri, Jan. 11, 1864; subsequently submitted to the action of the several state legislatures; and on Dec. 18, 1865, the Secretary of State officially announced its ratification. The amendment is as follows: "ARTICLE XIII. Section 1. Neither slavery nor involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction. Section 2. Congress shall have power to enforce this article by appropriate legislation."

Thirty-sixth Congress, THE. The meeting of the Thirty-sixth Congress, in its last session (December, 1860), was looked forward to with deep anxiety by all Americans. The annual message of President Buchanan disappointed the people. It was so timid and indecisive that the friends and foes of the Union spoke lightly of it. It favored the views of the Secessionists to a degree that gave the friends of the Union cause for anxiety, but it fell so much short of the demands of the Secessionists that some of them spoke scornfully. Senator Jefferson Davis spoke of it as having "the characteristics of a diplomatic paper, for diplomacy is said to abhor certainty, as nature abhors a vacuum, and it is not in the power of man to reach any conclusion from that message." Senator Hale, of New Hampshire, said that if he understood the message on the subject of secession, it was this: "South Carolina has just cause for seceding from the Union; that is the first proposition. The second is that she has no right to secede. The third is that we have no right to prevent her from seceding. He goes on to represent that this is a great and powerful country, and that a state has no right to secede from it; but the power of the country, if I understand the President, consists in what Dickens makes the English constitution to be—a power to do nothing at all. . . . He has failed to look the thing in the face. He has acted like the ostrich, which hides her head, and thereby thinks to avoid danger." With no finger-post to guide them to definite action, Congress opened the business of the session. The Attorney-general (Black, of Pennsylvania) had infused

into the message the only portion that pleased the Secessionists—namely, the assertion that the national government possessed no power to coerce a state into submission in case of rebellion. Patriotic men had watched with intense interest for a few weeks the rising waves of rebellion, and instinctively drew the marked line of distinction between Jackson and Buchanan under similar circumstances. In the House of Representatives open declarations of disunion sentiments were made at the beginning. In the Senate also Senator Clingman boldly avowed the intention of the slave-labor states to revolt. "I tell those gentlemen [his political opponents] in perfect frankness that, in my judgment, not only will a number of states secede in the next sixty days, but some of the other states are holding on merely to see if proper guarantees can be obtained. We have in North Carolina only two considerable parties: the absolute submissionists are too small to be called a party." After demanding "guarantees" and "concessions," he broadly intimated that no concessions would satisfy the South; that a dissolution of the Union was at hand. He was opposed to free debate on the subject, and said that a senator from Texas had told him that a good many free debaters "were hanging up by the trees in that country." The venerable Senator Crittenden, of Kentucky, arose and rebuked Clingman, and said: "I rise here to express the hope, and that alone, that the bad example of the gentleman will not be followed." He also expressed the hope that there was not a senator present who was not willing to yield and compromise much for the sake of the government and the Union." Mr. Crittenden's mild rebuke and earnest appeal to the patriotism of the Senate were met by more scornful words from other senators, in which the speakers seemed to emulate each other in the utterance of seditious words. Senator Hale replied with stinging words to Clingman's remarks, which aroused the anger of the Secessionists. He had said, "The plain, true way is to look this thing in the face—see where we are." The disunionists thought so too, and cast off all disguise, especially Senator Iverson, of Georgia, and Wigfall, of Texas. The former answered that the slave-labor states intended to revolt. "We intend to go out of this Union," he said. "I speak what I believe, that, before the 4th of March, five of the Southern States will have declared their independence." He referred to the patriotic governor of Texas (Houston) as a hindrance to the secession of that state, and expressed a hope that "some Texan Brutus will arise to rid his country of the hoary-headed incubus that stands between the people and their sovereign will." He said that in the next twelve months there would be a confederacy of Southern States, with a government in operation, of "the greatest prosperity and power that the world has ever seen." He declared that if war should ensue the South would "welcome" the North "with bloody hands to hospitable graves." Wigfall uttered similar sentiments in a coarser manner, declaring that cotton was king. "You dare not make war on

cotton," he exclaimed; "no power on earth dare make war on cotton." He said South Carolina was about to secede, and that she would send a minister plenipotentiary to the United States, and when his credentials should be denied she would "assert the sovereignty of her soil, and it will be maintained at the point of the bayonet." In the House of Representatives Secessionists were equally bold. When Mr. Boteler, of Virginia, proposed by resolution to refer so much of the President's message as related to the great question before the House to a committee of one from each state (thirty-three), the members from the slave-labor states refused to vote. "I do not vote," said Singleton, of Mississippi, "because I have not been sent here to make any compromise or patch up existing difficulties. The subject will be decided by a convention of the people of my state." They all virtually avowed their determination to thwart all legislation in the direction of compromise or conciliation. The motion for the committee of thirty-three was adopted, and it became the recipient of a large number of suggestions, resolutions, and propositions offered in the House for amendments to the Constitution, most of them looking to concessions to the demands of the slave interest. There was such an earnest desire for peace that the people of the free-labor states were ready to make all reasonable sacrifices for its sake. In the Senate a committee of thirteen was appointed to consider the condition of the country and report some plan, by amendments to the Constitution or otherwise, for its pacification. Senator Crittenden offered a series of amendments and joint resolutions. These did not meet with favor on either side. On receiving news of the passage of the ordinance of secession by South Carolina, her two remaining representatives (Boyce and Ashmun) left the House of Representatives and returned home. Early in January the proceedings of a secret caucus of Southern members of Congress was revealed, which showed that they should remain in Congress until its close to prevent means being adopted by the government for its own security, and that the movements in the South were principally directed by secession members in Congress. These revelations astonished and alarmed the people, for the President, in a message on Jan. 8, 1861, had uttered a sort of cry of despair. The disunionists in Congress became more and more bold and defiant. Senator Toombs, of Georgia, declared himself a rebel. The two great committees labored in vain. Towards the middle of January, Hunter, of Virginia, and Seward, of New York, in able speeches, foreshadowed the determination of the Secessionists and the Unionists. During January the disloyal members of Congress began to withdraw, and early in February, 1861, the national Legislature had heard the last disloyal word spoken, for the Secessionists had left. Thenceforward, to the end of the session (March 4, 1861), Union men were left free to act in Congress in the preparation of measures for the salvation of the Republic. The proceedings of the Thirty-sixth Congress had revealed to the coun-

try its great peril, and action was taken accordingly.

Thomas, GEORGE HENRY, was born in Southampton County, Va., July 31, 1816; died in San Francisco, Cal., March 28, 1870. He graduated at West Point in 1840, and entered the Artillery. He served in the Seminole War; was with Gen-

GEORGE HENRY THOMAS.

eral Taylor in the war against Mexico; and again fought the Seminoles in Florida in 1849-50. From 1851 to 1854 he was Instructor of Artillery at West Point, and was made major of cavalry in May, 1855. From 1856 to 1860 he served in Texas, and in a fight with Indians near the Brazos River was wounded. He was made colonel of the Fifth Cavalry (Colonel Robert E. Lee's regiment) in May, 1861; and, having served in the vicinity of the Upper Potomac a while, was made brigadier-general of volunteers in August. From November, 1861, till March, 1862, he commanded a division of the Army of the Ohio, defeating the Confederates in the battle of Mill Spring (which see) in January. At Corinth, Miss. (which see), he commanded the right wing of the Army of the Tennessee, and was second in command of the Army of the Ohio at Perryville in October. For nearly a year from November, 1862, he commanded the Fourteenth Corps of the Army of the Cumberland, doing eminent service in the battles of Stone's River and Chickamauga (which see). In October, 1863, he was placed in command of the Department and Army of the Cumberland, and was made brigadier-general United States Army. He was in the battle of Missionaries' Ridge (which see), and did signal service in the Atlanta campaign, when he took post at Nashville and defended Tennessee against the invasion of Hood. (See *Franklin, Battle of*, and *Nashville, Battle of*.) For this service he was made major-general in the United States Army and received the thanks of Congress, and from the Legislature of Tennessee thanks and a gold medal. In February, 1868, he was offered the brevet of lieutenant-general by President Johnson, but he declined to receive it. General Thomas's father was of Welsh descent, and his mother was descended from a Huguenot. On Nov. 19,

1879, an exquisitely wrought equestrian statue of General Thomas, in design and execution, by J. Q. A. Ward, was unveiled at the national capital, with very imposing ceremonies—such as had never been seen there before.

Thomas, ISAIAH, LL.D., printer and author, was born in Boston, Mass., Jan. 19, 1749; died at Worcester, Mass., April 4, 1831. He was apprenticed to a printer seven years, and started business for himself in Newburyport, Mass., when he was eighteen years of age. In 1770 he transferred his printing establishment to Boston, and on July 17, 1771, began the publication of the *Massachusetts Spy*, which became the champion of the colonies contending for right and justice. The government tried to suppress it, but in vain. After the skirmish at Lexington (April 19, 1775) he transferred his printing establishment to Worcester, where he continued to publish the *Spy* until 1801, when it was continued by his son from that time until 1819. Enterprising in business, he established a book-store in Boston in 1788 with Mr. Andrews, and they established branches of their publishing business in various places. They published the *Massachusetts Magazine* from 1789 to 1796, and the *New England Almanac* forty-two years—from 1775. For many years the Bibles and school-books used in the English colonies, and in the States afterwards, were issued from Thomas's press at Worcester. He printed several editions of the Bible. In 1791 he issued a folio edition, with copperplates, and another, in quarto, with a concordance; in 1793 an edition in octavo; and in 1797 another in duodecimo. Thomas says Isaac Collins printed, at Trenton, N. J. (where he was state printer), "a handsome and very correct octavo edition of the Bible." Collins also printed a quarto edition. (See *Bible, First Editions of the, Printed in the United States*.) In 1812 Mr. Thomas founded the "American Antiquarian Society," at Worcester; provided a building for its use on his grounds; gave it between seven and eight thousand books and a most valuable series of newspapers; and bequeathed to it the land on which the hall was built. He also made a provision for the maintenance of the library and museum equal to about \$24,000. Mr. Thomas wrote and published (1810) a valuable *History of Printing*. A revised edition was recently published.

Thomas, JOHN, was born at Marshfield, Mass., in 1725; died at Chambly, Canada, June 2, 1776. He was a practising physician, and was surgeon in the Provincial army sent to Nova Scotia in 1746. In 1747 he was on Shirley's medical staff, and in 1759 he became colonel of a Provincial regiment. He commanded a regiment under Amherst and Haviland in 1760 in the capture of Montreal. Colonel Thomas was one of the most active Sons of Liberty in Massachusetts; was appointed brigadier-general by Congress in 1775; commanded a brigade during the siege of Boston (see *Dorchester Heights*); and after the evacuation was sent to take command of the American troops in Canada. He joined the

army before Quebec May 1, 1776, and found the small-pox raging among the troops, of which disease he died.

Thomas, LORENZO, was born at New Castle, Del., Oct. 26, 1804; died in Washington, D. C., March 2, 1875. He graduated at West Point in 1823; served in the Seminole War and in the war with Mexico; and in May, 1861, was made adjutant-general, with the rank of brigadier-general, which office he held throughout the Civil War. In 1863 he successfully organized troops in the West. He resigned Feb. 2, 1869.

Thompson, EGBERT, was born in New York, June 10, 1822, and entered the navy in 1837. He was attached to the South Sea Exploring Expedition (which see), and was in all the operations of the home squadron in the war with Mexico. In the attacks on Fort Donelson (which see) and Island Number Ten he commanded one of the iron-clad gunboats; also in the attack on Confederate "rams" near Fort Pillow. He commanded the steamer *Commodore Macdonough* in the South Pacific squadron in 1866-67.

Thompson, JACOB, was born in Caswell County, N. C., May 15, 1810, and graduated at the University of North Carolina in 1831. Admitted to the bar in 1834, he began the practice of law in Chickasaw County, Miss., in 1835. He was elected to Congress in 1839, and remained in that body until 1851. For several years he was Chairman of the Committee on Indian Affairs, and he defended his adopted state when she repudiated her bonds. He was vehemently pro-slavery in his feelings, and was one of the most active disunionists in his state many years before the Civil War. He was Secretary of the Interior under President Buchanan, but resigned the office Jan. 7, 1861, and entered warmly into the disunion movements that ensued. He was Governor of Mississippi from 1862 to 1864, and was an officer in the Confederate service. (See *Indian Trust Fund, Robbery of the.*)

Thompson, SIR BENJAMIN. (See *Rumford, Count.*)

Thompson, WILLIAM, was born in Ireland; died near Carlisle, Penn., Sept. 4, 1781. He served as captain of Horse in the French and Indian War, and after the affair at Lexington he marched to Cambridge as colonel of a regiment of riflemen. He was made brigadier-general in March, 1776, and succeeded Lee in command at New York. In April he was ordered to reinforce Sullivan in Canada, and there had an unfortunate engagement at Three Rivers (which see), where he was made prisoner. He was not exchanged for two years, though allowed to go to Philadelphia on parole.

Thomson, CHARLES, LL.D., Permanent Secretary of the Continental Congress, was born at Derry, Ireland, Nov. 29, 1729; died at Lower Merion, Penn., Aug. 16, 1824. He landed at New Castle, Del., with his three sisters in 1741, and by industry they thrived. Charles was educated by the famous Dr. Allison, and became teacher in the Friends' school at New Castle.

Afterwards making his home in Philadelphia, he was favored with the friendship of Dr. Franklin, and, taking an interest in the labors in behalf of the Indians by the Friendly Asso-

CHARLES THOMSON.

ciation (which see), he attended Indian treaties. The Delawares adopted him with a name which signified "one who speaks the truth." As he was alighting from a carriage in Philadelphia with his Quaker bride—the possessor of a handsome fortune—a messenger came to him from the Continental Congress, just assembled, saying, "They want you at Carpenters' Hall to keep the minutes of their proceedings, as you are very expert at that business." Thomson complied, and he served in that capacity almost fifteen years. He was a thorough patriot, and held the respect and confidence of all his associates. He had married, at the age of forty-five, Hannah Harrison, aunt of President Harrison. Thomson was an excellent classical scholar, and made a translation of the Old and New Testaments. He had gathered much material for a history of the Revolution, but it was never used.

Thornton, MATTHEW, a signer of the Declaration of Independence, was born in Ireland in 1714; died at Newburyport, Mass., June 24, 1803. In early life he came to America, was educated at Worcester, and became a physician in New Hampshire. He was in Pepperell's expedition against Louisburg in 1745 as a surgeon; presided over the New Hampshire Provincial Convention in 1775; and was a short time a delegate to the Continental Congress, taking his seat in November, 1776, when he signed the great declaration. He was made Chief-justice of the County of Hillsborough, and Judge of the Supreme Court of the state. He was in both branches of the Legislature, and in the Council in 1785.

Three Compromises of the Constitution. Compromises seemed necessary to secure a majority vote for the national Constitution. These were—first, the concession to the smaller states of an equal representation in the Senate; sec-

ond, to the slaveholders the counting of three fifths of the slaves in determining the ratio of representation; and, third, the concession to the South Carolina rice-planters of twenty years' continuance of the African slave-trade as an equivalent for the unrestricted power of Congress to enact navigation laws that would favor Northern merchants. Fortunately for humanity, the term for perpetuating the slave-trade was restricted to twenty years. (See *Records of the Federal Convention.*)

Three Rivers, BATTLE OF. When a large British and German force began to arrive in the St. Lawrence (May, 1776) the Americans retreated up the river to the mouth of the Sorel. A British force took post at Three Rivers. General Sullivan sent General Thompson with Pennsylvania troops, led by St. Clair, Wayne, and Irvine, to attack the British there. Thompson was badly beaten, and he and Irvine, with one hundred and fifty private soldiers, were made prisoners. This disaster discouraged Sullivan, and he was compelled to abandon Canada.

Threshing-machines have almost entirely superseded the use of the flail in the United States. At the Paris Exhibition in 1855 the comparison was made between the work of a flail and Pitt's American threshing-machine. In an hour six men with flails threshed thirty-six litres of wheat. In the same time the threshing-machine threshed out seven hundred and forty litres. A litre is about two and one ninth pints wine measure. Threshing-machines were rare in the United States until 1835, when American inventors made great improvements in their construction, and their use rapidly increased. At first nothing was accomplished but simple "threshing;" then came an invention for "separating;" and this was followed by an apparatus for "cleaning." Now the grain may be threshed and prepared for market by a single operation. Both horse and steam power are used for the purpose, and the saving of labor is marvellous. There has been an enormous increase in the number and value of farm implements within twenty-five years. The value of those employed in the United States in 1870 was \$337,000,000. In 1880 the value was \$152,000,000—an increase of \$185,000,000 in twenty years.

Ticonderoga, CAPTURE OF (1759). Pitt conceived a magnificent plan for the campaign of 1759, the principal feature of which was the conquest of all Canada, and so ending the puissance of France in America. Abercrombie, who had been unsuccessful, was superseded by General Sir Jeffrey Amherst in the command of the British forces in America in the spring of 1759. The new commander found twenty thousand Provincial troops at his disposal. A competent land and naval force was sent from England to co-operate with the Americans. The plan of operations against Canada was similar to that of Phipps and Winthrop in 1690. A powerful land and naval force, under General James Wolfe, were to ascend the St. Lawrence and attack Quebec. Another force, under Amherst,

was to drive the French from Lake Champlain, seize Montreal, and join Wolfe at Quebec; and a third expedition, under General Prideaux, was to capture Fort Niagara, and then hasten down Lake Ontario and the St. Lawrence to Montreal. Amherst appeared before Ticonderoga (July 22, 1759) with about eleven thousand men. The French commander had just heard, by Indian runners, of the arrival of Wolfe before Quebec (June 27), and immediately prepared to obey a summons to surrender. The garrison left their outer lines on the 23d and retired within the fort, and three days afterwards, without offering any resistance, they abandoned that also, partially demolished it, and fled to Crown Point. That, too, they abandoned, and fled down the lake to the Isle au Noix, in the Sorel. Amherst pursued them only to Crown Point. (See *Fort Ticonderoga, Capture of, 1775.*)

Ticonderoga, EVACUATION OF (1777). With about 7000 men, Lieutenant-general Burgoyne left St. Johns, on the Sorel, in vessels, and moved up Lake Champlain. His army was composed of British and German regulars, Canadians and Indians. The Germans were led by Major-general Baron de Riedesel, and Burgoyne's chief lieutenants were Major-general Phillips and Brigadier-general Fraser. The invading army (a part of it on land) reached Crown Point, June 26, and menaced Ticonderoga, where General St. Clair was in command. The garrison there, and at Mount Independence opposite, did not number in the aggregate more than 3500 men, and not more than one in ten had a bayonet; while the invaders numbered between 8000 and 9000, including a reinforcement of Indians, Tories, and a splendid train of artillery. There were strong outposts around Ticonderoga, but St. Clair had not men enough to man them. On the 29th of June, Burgoyne issued a grandiloquent proclamation to the people, and on July 1 moved against the fort. He secured important points near it, and finally planted a battery on a hill 700 feet above the fort, since known as Mount Defiance. The battery there made Ticonderoga absolutely untenable, and a council of war determined to evacuate it. On the evening of July 5, invalids, stores, and baggage were sent off in boats to Skeenesborough (now Whitehall); and at two o'clock on the morning of the 6th, the troops left the fort silently, and withdrew to Mount Independence across a bridge of boats. Thence they began a flight southwards through the forests of Vermont before daylight. The movement was discovered by the British by the light of a building set on fire on Mount Independence, and pursuit was immediately begun. (See *Hubbardton, Battle at.*) The Americans lost at Ticonderoga a large amount of military stores and provisions, and nearly two hundred pieces of artillery.

Ticonderoga, EXPEDITION AGAINST (1758). In the summer of 1758 the Marquis de Montcalm occupied the fortress of Ticonderoga, on Lake Champlain, with about 4000 men, French and Indians. General Abercrombie personally commanded the expedition designed to capture this

fortress, and at the beginning of July he had assembled at the head of Lake George about 7000 regulars, nearly 9000 provincials, and a heavy train of artillery. Viscount George Augustus Howe, Colonel of the Sixtieth (Royal American) Regiment, and then a brigadier-general, was Abercrombie's second in command. Howe was then thirty-four years of age, a skilful soldier, and greatly beloved by his men. The army moved (Sunday, July 5) down the lake in 900 bateaux and 125 whale-boats, and spent the night at a place yet known (as then named) as Sabbath-day Point. At dawn they landed at the foot of the lake, about four miles from Ticonderoga. The whole country was covered with a dense forest, and tangled morasses lay in the way of the English. Led by incompetent guides, they were soon bewildered; and while in that condition the right column, led by Lord Howe, was suddenly attacked by a small French force. A sharp skirmish ensued. The French were repulsed with a loss of 148 men made prisoners. At the first fire Lord Howe was killed, when the greater part of the troops fell back in confusion to the landing-place. From the prisoners Abercrombie learned that a reinforcement for Montcalm was approaching. He was also told of the strength of the garrison and the condition of the fortress; but the information, false and deceptive, induced him to press forward to make an immediate attack on the fort without his artillery. This was a fatal mistake. The outer works were easily taken, but the others were guarded by abatis and thoroughly manned. Abercrombie ordered his troops to scale the works in the face of the enemy's fire (July 8), when they were met by insuperable obstacles. After a bloody conflict of four hours, the assailants were compelled to fall back to Lake George, leaving about 2000 men dead or wounded in the forest. Abercrombie then hastened to his camp at the head of the lake. The loss of the French was inconsiderable.

Ticonderoga, LINCOLN'S ATTEMPT TO RECOVER. While Burgoyne was pressing down the valley of the Upper Hudson towards Albany, General Lincoln, in command of troops eastward of that river, attempted to recover Ticonderoga and other posts in the rear of the invaders. On Sept. 13 (1777) he detailed Colonel John Brown with 500 men for the purpose. Brown landed at the foot of Lake George, and by quick movements surprised all the posts between that point and Fort Ticonderoga, four miles distant. He took possession of Mount Defiance and Mount Hope, the old French lines, 200 bateaux, several gunboats, an armed sloop with 290 prisoners, besides releasing 100 American prisoners. He then proceeded to attempt the capture of Ticonderoga and Mount Independence opposite, but it was found impracticable, and Brown abandoned the enterprise and rejoined Lincoln.

Tilghman, TENCH, was born in Baltimore in 1744; died there April 18, 1786. Before the Revolution he was a merchant. He was one of Mercer's Flying Camp (which see) as captain of a company of Philadelphia light infan-

try. In August, 1776, he became Washington's aid and confidential secretary, and remained in that position until the close of the war, with the rank of lieutenant-colonel after April, 1777. He was thoroughly patriotic, and much of the time while with Washington for five years he refused pay for his services. He was in every action in which the main army was concerned. He was chosen by Washington to bear to Congress at Philadelphia despatches announcing the surrender of Cornwallis. In a letter to General Sullivan in Congress (May 11, 1781), he had highly commended Tilghman as deserving of great consideration.

Timby, THEODORE R., inventor, was born in Dutchess County, N. Y., in 1822. He conceived the idea of a revolving turret for military purposes when he was a lad. At the age of nineteen he made a model, and at the beginning of 1843, Mr. Timby, not quite twenty-one years of age, filed his first caveat in the United States Patent Office. He obtained other patents for improvements, and received for his invention the official sanction of the national government several years before the time when Captain Cole, of the British Navy, claims to have invented the turret. When the Civil War broke out, Mr. Timby perfected his invention and obtained a fifth patent—a broad one—for it was for “a revolving tower for offensive or defensive warfare, whether used on land or water.” The constructors of “monitors,” after the affray with the *Merrimac*, recognized the validity of Mr. Timby's claim, and paid him a liberal sum for the right to use his invention.

Tingey, THOMAS, Commodore, United States Navy, was born in England in 1750; died in Washington, D. C., Feb. 25, 1829. He was appointed captain in 1798, commanded the *Ganges* in 1799, and captured many French vessels. He was in the naval service fifty years, twenty-eight of which he was in command of the navy-yard at Washington. (See *Washington, Capture of*.)

Tippecanoe, BATTLE OF THE. In the summer of 1811, the followers of Tecumtha and his brother showing signs of hostility, the governor of Indiana suggested to the government the propriety of establishing a military post high up the Wabash. The government proposed the seizure of Tecumtha and his brother as hostages for peace. A regiment under Colonel John Boyd, stationed at Pittsburgh, was ordered to repair to Vincennes to be placed under Harrison's command, and the latter was authorized, should the Indians begin hostilities, to call out the militia. Harrison agreed with the people of Vincennes that decisive measures should be taken at once. Tecumtha had gone south, and it was evident that his brother, the Prophet, was stirring up the Indians to war. Harrison, with Boyd's regiment, 300 strong, and 500 militia partly from Kentucky, including two or three mounted companies, went up the Wabash about sixty miles to Terre Haute, and near there established a post called Fort Harrison. Thence he sent Delaware chiefs on a mission to the Prophet, who

treated them with scorn. The troops pressed forward, and on the 6th of November (1811) they encamped within three miles of the Prophet's town. For more than a day they had discerned savages hanging on their flanks, for the Prophet had become aware of their approach. Harrison arranged his camp in the form of an irregular parallelogram, having on its front a battalion of United States Infantry under Major G. R. C. Floyd, flanked on the left by one company, and on the right by two companies, of Indiana militia under Colonel J. Bartholomew. In the rear was a battalion of United States Infantry under Captain W. C. Baen, acting as major, with Captain R. C. Barton, of the regulars, in immediate command. These were supported on the right by four companies of Indiana militia, led respectively by Captains Snelling, Posey, Scott, and Warrick, the whole commanded by Lieutenant-

tinguished. A desperate fight ensued. Nineteen twentieths of the troops had never seen a battle. The combat soon extended to almost the whole square. The Indians advanced and retreated several times until, after daylight, they were attacked and dispersed by the mounted men, leaving forty of their dead on the field. Harrison's loss was upwards of sixty killed, and twice as many wounded. The mounted men rode to the Prophet's town and found it entirely deserted. They had left much that was valuable behind. The town was burned, and Harrison deemed it prudent to make a speedy retreat, encumbered as he was with the wounded. He destroyed much of the baggage of the army to afford transportation to the wounded, and fell back to Vincennes. This battle of Tippecanoe gave Harrison a decided military reputation. The battle-ground is close by Battle Ground

TIPPECANOE BATTLE-GROUND IN 1860.

colonel L. Decker. The right flank, eighty yards wide, was filled with mounted riflemen under Captain Spencer. The left, about one hundred and fifty yards in extent, was composed of mounted riflemen under Major-general S. Wells, and led by Colonels F. Geiger and David Robb. Two troops of dragoons under Colonel J. H. Daviess, were stationed in the rear of the first line, and at a right-angle with those companies was a troop of cavalry as a reserve, under Captain B. Parke. In the centre were the wagons, baggage, officers' tents, etc. Having supped, Harrison gave instructions to the several officers, and very soon the whole camp, excepting the sentinels on duty, were soundly slumbering. There was a slight drizzle of rain, and the darkness was intense. In the camp of the Prophet all were awake, prepared to execute his orders, and after midnight (Nov. 7, 1811) the warriors crept through the prairie grass, and with horrid yells fell upon Harrison's camp. The whole camp was soon awakened, and their fires were ex-

tinguished. A little village near the Louisville, New Albany, and Chicago Railway, in Indiana. The little village is the child of the Battle Ground Institute located there, a flourishing institution when the writer visited the place in 1860. The battle-field, yet covered with the same oaks as at the time of the contest, belonged to the State of Indiana, which had enclosed about seven acres with a rude wooden fence, which was to be replaced by one of iron.

Titles of Nobility. In the new Naturalization Bill was a clause prohibiting the use of a title of nobility by an alien after he should become a citizen of the United States. This provision was first suggested by Giles, of Virginia. The New England Federalists ridiculed it, and it became a subject of warm debate in Congress. They argued that a title was harmless, and that to refuse it might seem churlish, especially to require its renunciation by an unhappy exile. "The very judge," they said, "who administered the oath or pledge to such a naturalized citizen

might the next moment address him as 'marquis,' 'count,' or 'my lord,' and who could prevent it? . . . Why not require him to renounce his connection with the Jacobin Club, if he should be a member of it?" asked a New England member. "Why not require him to renounce the pope?" Priestcraft, he thought, was quite as dangerous as aristocracy. Giles, who had called for the yeas and nays, placed these New-Englanders in a dilemma in which they must vote for his proposition or be numbered among the friends of aristocracy—then a very unpopular position. To force Giles to abandon his call for the yeas and nays, Dexter, of Massachusetts, moved as an additional amendment that in case the applicant for citizenship were a slaveholder, he should renounce, along with his titles of nobility, all his claim, right, and title as an owner of slaves. This motion produced an intense excitement among the Southern members. It was declared to be an indirect attack upon the Constitution and those who held slaves. Another said it would wound the feelings and alienate the affections of six or eight states of the Union. The motion had its intended effect. Giles, who saw the awkwardness of voting against titles of nobility and in favor of slaveholding in the same breath, professed his readiness to give up the yeas and nays. Holding slaves to be as sacred property as any other, he would never consent to prohibit immigrants from holding slaves. Titles of nobility were but names, and nobody was obliged to give them up unless he wished to become an American citizen. It was argued by Lee, of Virginia, that, as the cause of the obnoxious provision was the fear of harboring among us a class who, because of the nature of their education, their habits of assumed superiority, the servile court they had uniformly received, could not make good citizens of a free republic, the same reasoning applied to the existing relations of superiority and servility between master and slave would prove the Southern slaveholder to be unfit for an American citizen—a relation really more objectionable than that of lord and vassal. The vote in favor of the renunciation of the use of titles was carried, fifty-eight to thirty-two.

Tlascalans. Cortez, in his march towards the city of Mexico, came to the province of Tlascalala. He resolved to pass through it, for he believed great treasures awaited him at the palace of Montezuma, who had sent an order to him to depart out of his domain, which, like other orders from the emperor, had been accompanied by rich presents. "Truly, this is a great monarch and rich," said Cortez; "with the permission of God, we must see him." Approaching near the confines of Tlascalala, Cortez met 5000 of their warriors to fight his 500 foot-soldiers, fifteen horsemen, and six field-pieces. The Tlascalans were in ambush. The field-pieces did terrible execution. The Tlascalans were slaughtered by scores, when the garrison surrendered themselves as vassals of the crown of Castile and engaged to become allies of Cortez in all his future operations in Mexico. He entered their chief city, Sept. 23, 1519, and took the province

under his protection. With several thousand of these new allies, Cortez resumed his march on Mexico.

Tobacco, a plant so called by the natives of Hayti, or Santo Domingo. It played an important part in the early history of Virginia, and was found there under cultivation by the natives by the first adventurers sent by Raleigh, and by them introduced into England, where its use rapidly increased. When the English became seated at Jamestown, they began its cultivation, and it soon became the staple agricultural product of the colony, and their chief source of revenue. Within less than ten years it became the standard currency of the colonies, by the price of which values were regulated. The standard price was about sixty-six cents a pound. For the seven years ending in 1621, the annual exportation of tobacco to England from Virginia averaged about 143,000 pounds. King James tried to suppress its inordinate use, and wrote *A Counter-blast to Tobacco*; and in May, 1621, Parliament passed a bill for that purpose, by which no tobacco was allowed to be imported into England except from Virginia and the Somers Isles (Bermudas), and none was allowed to be planted in England. It was also subject to a crown duty of sixpence per pound. In 1624 the king forbade by proclamation its cultivation except in Virginia and the Somers Isles. Finally, by relaxing restrictions, it became a source of large revenue to England, amounting in 1676 to \$775,000. It was afterwards cultivated in other English-American colonies, and at the middle of the last century there were exported to England in three years 40,000,000 pounds, of which about one half was re-exported and the remainder consumed in England. In 1870 the tobacco crop in the United States was nearly 263,000,000 pounds. The amount exported in 1875 was 224,000,000 pounds. It is estimated that the amount of tobacco consumed annually by the whole human family, reckoning the total population at 1,000,000,000, is 4,000,000,000 pounds, or about seventy ounces a head.

Tobacco, FIRST, IN ENGLAND. Ralph Lane (which see) and his companions, who went back to England from Virginia with Sir Francis Drake, carried with them the first tobacco seen in that country. Sir Walter Raleigh introduced it to the queen and nobility. (See *Raleigh, Walter, and Elizabeth, Queen of England.*)

Tobacco-plant Cutters. In 1680 tobacco had fallen in price to a penny a pound, and the colonists were not able to buy common necessities. They petitioned for permission to resort to an old plan for reducing production and so raising the price by a cessation of crops for a year or two. The inhabitants of several counties signed a petition to the governor to call a special session of the Assembly for that purpose. The governor, alarmed by symptoms of a new rebellion, did so (April 18); but that body proceeded no further than to petition the king to order a "stint," or "cessation," in Virginia, Maryland, and Carolina. The disappointed planters assembled, and in a riotous manner

cut up the tobacco-plants extensively. They were prosecuted. Several of them were found guilty, and, under advice from England, some of them were executed—not for the act of cutting the plants alone, but for a violation of a Colonial act which pronounced the assembling of eight or more persons to destroy crops of any kind to be high-treason.

Todd, CHARLES SCOTT, was born near Danville, Ky., Jan. 22, 1791; died at Baton Rouge, La., May 17, 1871. He graduated at William and Mary College in 1809. He was a subaltern and judge-advocate of Winchester's division of Ken-

CHARLES SCOTT TODD.

tucky volunteers in 1812; was made captain of infantry in May, 1813; and was aid to General Harrison in the battle of the Thames (which see). In March, 1815, he was made inspector-general, with the rank of colonel; and in 1817 was Secretary of State of Kentucky. In 1820 he was confidential agent to Colombia, and from 1841 to 1845 he was United States Minister to Russia.

Tohopeka (or Horseshoe Bend), BATTLE AT. In February, 1814, troops from East Tennessee were on the march to reinforce Jackson for the purpose of striking a finishing blow at the power of the Creek Indians. About two thousand of them pressed towards the Coosa, and at the same time a similar number from West Tennessee were making their way into Alabama. Colonel Williams, with 600 regulars, reached Fort Strother on Feb. 6. Other troops soon joined them, and the Choctaw Indians openly espoused the cause of the United States. At the close of February Jackson found himself at the head of 5000 men. Supplies were gathered, and at the middle of March the troops were ready to move. Meanwhile the Creeks, from experience, had such premonitions of disaster that they concentrated their forces at the bend of the Tallapoosa

River, in the northeast part of Tallapoosa County, Ala., at a place called Tohopeka, or Horseshoe Bend, a peninsula containing about one hundred acres of land. White men from Pensacola and half-bloods hostile to the United States aided them in building a strong breastwork of logs across the neck of the peninsula. They pierced it with two rows of port-holes, arranged in such a manner as to expose the assailants to a cross-fire from within. Back of this was a mass of logs and brush; and at the foot of the peninsula, near the river, was a village of log huts, where hundreds of canoes were moored, so that the garrison might have the means for escape if hard pushed. They had an ample supply of food for a long siege. There were about twelve hundred in number, one fourth being women and children. There the Indians determined to defend themselves to the last extremity. To this stronghold Jackson marched, sending his stores down the Coosa in flatboats; and on the morning of March 27 he halted within a few miles of the breastworks at Tohopeka. His spies soon informed him of the position of the Indians. He sent General Coffee, with all the mounted men and friendly Indians, to cross the river two miles below and take position opposite the village at the foot of the peninsula. Then he pressed forward and planted two cannons within eighty yards of the breastworks on the neck, and opened fire upon them. As the small balls were buried in the logs and earth the Indians sent up a shout of derision and defied their assailants. Coffee, with some Cherokees, swam across the river and seized the boats, with which quite a body of troops were enabled to cross at once. These burned the Indian village and approached the enemy in their rear, but were too few to dislodge the barbarians. Meanwhile Jackson had been vainly battering the works on the neck with cannon-balls, and he proceeded to storm them. In the face of a tempest of bullets they pressed forward. The leader of the storming-party (Major L. P. Montgomery) leaped upon the breastworks and called upon his men to follow. He was shot dead, when Ensign Sam Houston (afterwards conqueror and President of Texas, United States Senator, etc.), who was wounded in the thigh by a barbed arrow, leaped down among the Indians and called upon his companions to follow. They did so, and fought like tigers. Their dexterous use of the bayonet caused the Indians to break their line and flee in wild confusion to the woods that covered the peninsula. Believing torture awaited every captive, not one of them would suffer himself to be taken or ask for quarter. Some attempted to escape by swimming across the river, but were shot by Tennessee sharpshooters. Others secreted themselves in thickets, and were driven out and slain; and a considerable number took refuge under the river bluffs, where they were covered by a part of the breastworks and felled trees. To the latter Jackson sent a messenger, telling them their lives should be spared if they would surrender. He was fired upon. A cannon brought to bear upon the stronghold effect-

ed little. Then the general called for volunteers to storm it, and wounded Ensign Houston was the first to step out. Nothing could be effected until the torch was applied; and as the barbarians rushed out from the flames they were shot down without mercy. The carnage continued until late in the evening; and when it ended 557 Creek warriors lay dead on the peninsula. Of the one thousand who went into the battle in the morning, not more than two hundred were alive, and many of these were severely wounded. Jackson lost 32 killed and 99 wounded. The Cherokees lost 18 killed and 36 wounded. The spoils of victory were 300 widows and orphans made prisoners. This blow broke the proud spirit of the Creeks, and they had no heart to make a stand anywhere else.

Toleration Act of Maryland. The General Assembly of Maryland, convened at St. Mary's (April 2, 1649), after enacting severe punishments for the crime of blasphemy, and declaring that certain penalties should be inflicted upon any one who should call another a sectarian name of reproach, adopted the declaration that "whereas the enforcing of conscience in matters of religion hath frequently fallen out to be of dangerous consequence in those commonwealths where it has been practised, and for the more quiet and peaceable government of this province, and the better to preserve mutual love and unity among the inhabitants, . . . no person or persons whatsoever within this province, or the islands, posts, harbors, creeks, or havens thereunto belonging, professing to believe in Jesus Christ, shall from henceforth be any ways troubled or molested or discountenanced for or in respect of his or her religion, nor in the free exercise thereof, within the province or the islands thereunto belonging, nor any way compelled to the belief or exercise of any other religion against his or her conscience." This was an outgrowth of English statutes. On the 27th of October, 1645, the English House of Commons ordered "that the inhabitants of the Bermudas, and of all other American plantations now or hereafter planted, should, without molestation or trouble, have and enjoy the liberty of conscience in matters of God's worship." In 1647 Parliament passed another act, allowing all persons to meet for religious duties and ordinances in a fit place, provided the public peace was not disturbed. The Maryland Toleration Act (1649) was the joint work of Roman Catholics and Protestants. The General Assembly at that time was composed of eight Roman Catholics and sixteen Protestants—three councillors and five burgesses were Roman Catholics, and the governor (William Stone), six councillors, and nine burgesses were Protestants. The act did not establish absolute toleration, as did the act of Rhode Island passed two years before, for it applied only to orthodox Christians, so-called, who accepted the doctrine of the Trinity. (See *Toleration Act of Rhode Island*.)

Toleration Act of Rhode Island. At a General Court of Elections (see *Rhode Island*,

Colony of) held at Portsmouth, beginning May 19, 1647, for "the Colonie and Province of Providence," after adopting many acts and orders concerning the government and for the punishment of crimes, it was decreed that "These are the laws that concern all men, and these are the penalties for the transgression thereof, which by common consent are ratified and established throughout the whole colony; and otherwise than thus, what is herein forbidden, all men may walk as their consciences persuade them, every one in the name of his God." This act of toleration was so broad and absolute that it would include Christian, Jew, Mohammedan, Parsee, Buddhist, or pagan.

To-mo-chi-chi, a venerable Creek chief presiding over a tribe near the site of Savannah, met Oglethorpe there in friendly conference early in 1733. (See *Oglethorpe, James Edward*.) He was then ninety-one years old, of commanding person and grave demeanor, and though for some reason he had been banished from the Lower Creeks, he had great influence throughout the confederacy as a brave chief and wise sachem. Mary Musgrove (which see), the half-breed wife of a South Carolina trader, acted as interpreter. He pledged his unwavering friendship for the English, and he kept his word. Presenting a buffalo-skin to Oglethorpe, on which were painted the head and feathers of an eagle, he said: "Here is a little present. I give you the skin of a buffalo adorned with the head and feathers of an eagle, which I desire you to accept, because the eagle is an emblem of speed and the buffalo of strength. The English are as swift as the bird and as strong as the beast, since, like the former, they flew over vast seas to the uttermost parts of the earth, and, like the latter, they are so strong that nothing can withstand them. The feathers of the eagle are soft, and signify love; the buffalo-skin is warm, and signifies protection; therefore I hope the English will love and protect our little families." A satisfactory treaty was made, by which the English obtained sovereignty over the domain between the Savannah and Altamaha rivers, and westward as far as the extent of their tide-waters. Oglethorpe distributed presents among the Indians present. In the spring of 1734 To-mochichi went with Oglethorpe to England. He was accompanied by his wife, their adopted son and nephew, and five chiefs. They were cordially received in England, and were objects of great curiosity, for Indians had not been seen in that country since Peter Schuyler was there with Mohawks in Queen Anne's reign. They were taken in coaches, each drawn by six horses, to have an interview with the king, arrayed in brilliant English costume—the Creek monarch and his queen in scarlet and gold. He made a speech to King George and gave him a bunch of eagle's feathers, to which a gracious reply was made assuring the barbarians of English protection. They remained four months in England, during which time a brother of the Indian queen died of small-pox. The company were conveyed to the place of embarkation in the royal coaches, with presents valued at two

thousand dollars; and the Prince of Wales gave Tomochichi's heir a gold watch, with an injunction to call upon Jesus Christ every morning when he looked at it. They reached Savannah late in December, 1734. Tomochichi died Oct. 5, 1739, aged about ninety-seven years. At his funeral minute-guns were fired at the battery at Savannah, and musketry was discharged. He was buried in the centre of the town, and Oglethorpe ordered a "pyramid of stone" to be erected over his grave. The funeral was attended by the magistrates and people of Savannah and a train of Indians.

Tonti, HENRI DE, son of Lorenzo Tonti, an Italian, and inventor of the Tontine system of association. He entered the French army in his youth, and in the French naval service he lost a hand. In 1678 he accompanied La Salle to Canada, and assisted him in his Western explorations, building a fort on the site of Peoria, Ill., in 1680. He descended the Mississippi to its mouth with La Salle in 1682. In 1684 he went to the mouth of the Mississippi to meet La Salle, and attempted a settlement of Europeans in Arkansas. In 1685 he incited a force of Western Indians to attack the Senecas. Again he went down to the Gulf to meet La Salle, and was again disappointed; and in 1699 he went down to meet Iberville, and remained in the Gulf region, dying at Fort St. Louis, Mobile, in September, 1704.

Toombs, ROBERT, was born at Washington, Wilkes Co., Ga., July 2, 1810, and graduated at Union College, Schenectady, N. Y., in 1828. He studied law at the University of Virginia, and practised it until elected to Congress in 1845.

ROBERT TOOMBS.

He was a captain under General Scott in the Creek War; was several years a member of the Georgia Legislature; and in 1845 was elected to Congress, where he remained until 1853, when he became United States Senator. He was re-elected in 1859, and was expelled March 14, 1861. He was a prominent member of the extreme pro-slavery party, and was one of the most vehement advocates of secession in 1860-61. In his manner he was overbearing and defiant in the Senate in promoting insurrection. A member of the Confederate convention at Mont-

gomery (which see) in February, 1861, he was made Secretary of State of the provisional government then established. He left the office in September and became a brigadier-general in the Confederate army.

Toombs's Last Speech in the Senate (1861).

Robert Toombs, of Georgia, was the embodiment of the revolutionary spirit in the slave-labor states at the beginning of 1861. In the Senate (Jan. 7), following a patriotic speech by Senator Crittenden, of Kentucky, he said: "The Abolitionists have for long years been sowing dragons' teeth, and they have finally got a crop of armed men. The Union, sir, is dissolved. That is a fixed fact lying in the way of this discussion, and men may as well hear it. One of your confederates [South Carolina] has already wisely, bravely, boldly met the public danger and confronted it. She is only ahead and beyond any of her sisters because of her greater facility of action. The great majority of those sister states under like circumstances consider her cause as their cause." He then declared that "the South" was prepared for the arbitrament of the sword. "Now, sir," he said, "you may see the glitter of the bayonet and hear the tramp of armed men from your capital to the Rio Grande." This was uttered before any state convention excepting that of South Carolina had passed an ordinance of secession. (See *Revolution Organized at Washington*.) Toombs then defined his own position. "I believe," he said, "for all the acts which the Republican party call treason and rebellion there stands before them as good a traitor and as good a rebel as ever descended from Revolutionary loins." He demanded the right of going into all territories with slaves as property, and that property to be protected by the national government. "You say No," he said; "you and the Senate say No; the House says No; and throughout the length and breadth of your whole conspiracy against the Constitution there is one shout of No! It is the price of my allegiance. Withhold it, and you can't get my obedience. There is the philosophy of the armed men that have sprung up in this country; and I had rather see the population of my own, my native land, beneath the sod than that they should support for one hour such a government."

Torbet, ALFRED T., was born in Delaware, and graduated at West Point in 1855, serving in Florida in 1856-57. He became colonel of the First New Jersey volunteers in September, 1861, and was active in the Peninsular campaign. He commanded a brigade in the battles of Groveton, or second battle of Bull's Run (which see), South Mountain (where he was wounded), and Antietam. In November, 1862, he was made brigadier-general of volunteers; was engaged at Gettysburg; and commanded a division of cavalry in the Army of the Potomac from May to July, 1864. He was chief of cavalry in the Shenandoah campaign from August to October, 1864. He was breveted major-general United States Army in March, 1865. He

resigned in October, 1866, and in 1871 was sent as consul-general to Havana. He was lost in the wreck of the steamer *Fera Cruz*, Aug. 29, 1880.

Tories. (See *Whigs and Tories*.)

Tories on Long Island Disarmed. Early in 1776 the Continental Congress authorized the several Provincial conventions, or committees, to disarm "the unworthy Americans who take the part of the oppressors;" and they were invested with full authority to direct and control the Continental troops that might be employed in this business. Queens County, Long Island, N. Y., had many Tories, and New Jersey troops were sent thither to disarm every man who voted against sending deputies to the New York Congress. Before the end of the month of January (1776), they, with the assistance of Lord Stirling's battalion, and in perfect accord with the New York Committee of Safety, executed the commission fully.

Tories (or Loyalists), TREATMENT OF. After the declaration of independence and the organization of state governments, the line between the Whigs and Tories was more distinctly defined. It was necessary for each party to choose one side or the other. In the great political change which had taken place, the Tories were exposed to dangers from new laws as well as mobs. The new state authorities claimed the allegiance of every citizen within their limits; and, under the lead and recommendation of Congress, those who refused to acknowledge their authority, or who adhered to their enemies, were exposed to severe penalties, confiscation of property, imprisonment, banishment, and, finally, if they persisted, death. The most obnoxious Tories left the country (see *Evacuation of Boston*), and the new governments contented themselves with admonitions, fines, recognizances to keep the peace, and prohibition to go beyond certain limits. They were placed under vigilant watchfulness by a regularly appointed Committee of Inspection and Observation of the several counties and districts in each colony. To the more ardent Whigs this leniency appeared dangerous. Joseph Hawley wrote to Elbridge Gerry: "Can we subsist—did any state ever subsist—without exterminating traitors? It is amazingly wonderful that, having no capital punishment for our intestine enemies, we have not been utterly ruined before now."

Toronto was the name of an Indian village when Governor Simcoe made it the capital of Upper Canada in 1794, and named it York. There the seat of the provincial government remained until 1841, when Upper and Lower Canada (now Ontario and Quebec) formed a legislative union. When the confederation was formed, in 1867, Toronto, the name by which York had been known since 1834, became the permanent seat of government for Ontario. (See *York, Capt-nre of*.)

Torpedo Warfare. The government of the United States, like that of Great Britain, re-

fused to make use of Fulton's torpedoes in warfare, but it was attempted by individuals against the British blockading squadron. In New York harbor a schooner named the *Eagle* was used as a torpedo-vessel. In her hold John Scudder, Jr., originator of the plot, placed ten kegs of gunpowder, with a quantity of sulphur mixed with it, in a strong cask, and surrounded it with huge stones and other missiles, which, in the event of an explosion, might inflict great injury. At the head of the cask, in the inside, were fixed two gunlocks with cords, attached to their triggers at one end, and two barrels of flour at the other end, so that, when the flour should be removed, the lock would be sprung, the powder ignited, and the terrible mine exploded. The *Eagle*, commanded by Captain Riker, sailed for New London late in June, where, as was intended, she was captured by armed men in boats sent from the *Ramillies*, Commodore Hardy's flag-ship. The crew of the *Eagle* escaped to the shore and watched the result. An unavailing attempt was made to get the *Eagle* alongside the *Ramillies*, for the purpose of transferring her cargo to that ship. Finally boats were sent out as lighters, and when the first barrel of flour was removed the explosion took place. A volume of fire shot up from the *Eagle* full two hundred feet in height, and a shower of pitch and tar fell on the deck of the *Ramillies*. The *Eagle* and the first lieutenant and ten men of the *Ramillies* were blown into atoms, and some of the occupants of boats near were fatally injured. This was followed by an attempt to explode a torpedo under the *Ramillies*. A citizen of Norwich, Conn., acquainted with Bushnell's torpedo (which see), invented a submarine boat, in which he voyaged under water at the rate of three miles an hour. Three times he went under the *Ramillies*, and on the third occasion had nearly fastened the torpedo to the ship's bottom, when the breaking of a screw baffled the attempt. He was discovered, but escaped. A fisherman of Long Island, named Penny, made attempts on the *Ramillies* with a torpedo in a whale-boat, and Hardy was kept continually on the alert. He kept the *Ramillies* constantly in motion, and caused her bottom to be swept with a cable every two hours, night and day. Finally he warned the inhabitants that if such warfare was not discontinued he would proceed to burn the town. The warning was effectual. In July Mr. Mix, of the navy, attempted to blow up the *Plantagenet*, 74 guns, with a torpedo. She was lying off Cape Henry, Virginia. Under cover of intense darkness, the torpedo was carried out in an open boat, called the *Chesapeake Avenger*, and dropped so as to float down under the ship's bow. It exploded a few seconds too soon. A column of water twenty-five feet in diameter, half-luminous with lurid light, was thrown up at least forty feet high, with an explosion as terrific as thunder, producing a concussion like the shock of an earthquake. It burst at the crown, and water fell in profusion on the deck of the *Plantagenet*. At the same moment she rolled into the chasm made by the explosion, and nearly upset. Tor-

pedoes were also placed at intervals across the Narrows, at New York, and at the entrance to the harbor of Portland. The impression prevailed in the British navy that the United States government had adopted Fulton's torpedoes, and this made the British commanders on our coast very circumspect. No doubt the fear of torpedoes saved the American coast-towns from plunder and the torch. Torpedo warfare was much practised in the late Civil War. The torpedoes used by the Confederates were various in form and construction, as several illustrations in this work show. The most efficient ones were the galvanic and percussion. The former were provided with a wire connected with a galvanic battery on the shore, by which the mine might be exploded at any moment. The percussion or "sensitive" ones exploded by the act of for-

PERCUSSION TORPEDO.—No. 1.

cible contact. Some of these were made in the form of a double cone, with percussion tubes arranged around the cylinder thus formed, at the point of contact of the bases of the cones, as seen in the illustration here given. Others were arranged as No. 2. In the James River the tor-

PERCUSSION TORPEDO.—No. 2.

pedoes were chiefly galvanic. Some were cylindrical, with one end conical, but a greater portion were pear-shaped. These were anchored in the channels or in shallow water, by means of a segment of a hollow iron sphere, called a "mushroom," which was attached to the buoyant mine by a chain. These were generally sunk opposite batteries, where the wires connected with bomb-proofs on shore. One of these, containing nearly a ton of powder, was planted in the centre of the deep channel at Drewry's Bluff (which see). On account of the depth of water, it was attached to a long rod, and that to the "mushroom" anchor by a chain, as it was desirable to have the torpedo only the depth of a vessel below the surface. No. 1 was made of a common barrel, with solid pointed ends, made of palmetto-wood, and were used in Charleston harbor. After the capture of Fort Fisher, vessels were sent to pick up the torpedoes sunk in the Cape Fear River. The same thing was done in the James River, from City Point to Richmond, after the Confederates had evacuated the latter place. To do this with safety, a net, with hooks, was suspended at the bow of the vessel in search of them, or was dragged after it. When a nest of torpedoes was found, a little float was anchored above it, and a small

national flag was attached to the float as a warning to pilots of the presence of danger.

Totten, JOSEPH GILBERT, was born at New Haven, Conn., Aug. 23, 1788; died in Washington, D. C., April 22, 1864. He graduated at West Point in 1805 as lieutenant of engineers, and was chief-engineer of the army on the Niagara frontier in 1812-13. For meritorious services in the capture of Fort George (which see), he was breveted major in June, 1813. He was chief-engineer of Generals Izard and Macomb on Lake Erie in 1814, and was breveted lieutenant-colonel for gallantry in the battle of Plattsburg (which see). He was chief-engineer of the army of General Scott in the siege of Vera Cruz (which see), in 1847, and breveted brigadier-general. From 1846 to 1864 he was a regent of the Smithsonian Institution (see *Smithson, James Lewis Macie*), and in the Civil War was chief-engineer of the United States Army. He was breveted major-general United States Army, dating the day before his death. He was author of an able *Report on the Subject of National Defences* (1851), and translator of *Vicat on Mortars*.

Toussaint and Santo Domingo. The French portion of the Island of Santo Domingo, after a sanguinary insurrection, passed under the control of the negroes. Very soon there was a large and well-disciplined black army under Toussaint. The English had long tried in vain to obtain possession of this colony. Finding it impossible to conquer it, and perceiving that the actual control of things was in the hands of Toussaint, the English entered into negotiations with him in 1798, and had withdrawn their troops, with an understanding that he should assume the government, and keep the island neutral during the war with France. Hedonville, a commissioner of the Directory, was there with some white troops. Toussaint compelled him and his soldiers to depart; and the mulattoes, in the southern district of the colony, under Rigaud, were compelled to submit to the power of Toussaint. This expulsion of the French led to a great diminution in the number of privateers issuing from that part of the island, and Toussaint, wishing to renew commercial intercourse with the United States, sent an agent to effect it. A consul-general—a sort of ambassador—was sent to Toussaint in April, 1798. Soon after he sailed for Santo Domingo, General Maitland, who had lately commanded the English endeavoring to capture that island, arrived at Philadelphia. An arrangement was entered into as to the trade with Toussaint's people. The latter agreed to the arrangement, and the President issued his proclamation (June, 1798) reopening commerce with that portion of Santo Domingo.

Toussaint, FRANÇOIS DOMINIQUE (surnamed *L'Ouverture*), was born a slave, near Cape François, in 1743; died in the dungeon of Joux, France, April 27, 1803. He was of pure negro blood. He was at first a coachman, and then held a position of trust in a sugar manufactory on the estate to which he belonged, having learned to read and write. He first appeared

in public life in 1791, when there was an uprising in the French part of Santo Domingo by the blacks against the whites. Having secured the escape of the director of the estate and his family, he joined the black insurgents. They accepted the aid of Spain, and repelled the offers of the French Convention. Toussaint soon captured the entire white army, under Brandincourt, without bloodshed, and occupied several important military posts. In 1793 the English invaded the island, and took Port au Prince, while all the inhabitants were engaged in civil war. The French Revolutionary government had proclaimed Hayti to be a part of France, and declared the freedom of the slaves; and Toussaint, looking upon the situation with the eye of a statesman and philanthropist, seeing the best hopes of his country to be centred, evidently, in a connection with France, declared his fealty to the Republic. He applied himself so vigorously in efforts to bring all parties to the same conclusion, that Laveaux, the French commander, exclaimed, "*Mais cet homme fait ouverture partout*;" and from that time he bore the surname of *L'Ouverture* — "the opening." Joining the French, he led his troops successfully against the Spanish and English forces, capturing twenty-eight Spanish batteries in four days, and receiving the surrender of the English at St.-Marc in 1797. Toussaint, having been appointed commander-in-chief, now restored order and industry—for the Spaniards abandoned all idea of conquering the western portion of the island, which is properly Hayti. Hedonville, the French director, shorn of his power, fled to France, and entered complaints against Toussaint, but the French government sustained him. Before his departure, Hedonville had prepared the way for a new civil war by creating enmity between Rigaud, the leader of the mulattoes, and Toussaint, and for nearly a year war raged between the negroes and the mixed race. Toussaint subdued the mulatto insurrection, and later in 1800 assumed the government, but held himself amenable to the French Directory. The whole Island of Santo Domingo became subject to his rule in 1801, and he invited the well-disposed white colonists to return to the homes they had deserted. In his public life he assumed great state. He chose a council, who drew up a constitution of government, in which Toussaint was named President for life, and established free-trade. The constitution was sent to France, with a letter to Bonaparte by Toussaint, when the former said, "He is a revolted slave, whom we must punish; the honor of France is outraged." Leclerc, who married Bonaparte's sister, was sent to Santo Domingo with thirty thousand soldiers. He was kept at bay by the brave negro troops. Leclerc, finding negotiation unavailing, declared Toussaint and his officers to be outlaws, and began a war, in which his army was dreadfully smitten. He then won over some of the black leaders, and finally made such fair offers to the people and the rulers that Toussaint made a treaty of peace. With perfidy most foul, Leclerc caused Toussaint to be seized and

sent to France, where he was thrust into a dungeon, without trial, by Bonaparte, and slowly starved to death. The death of Toussaint l'Ouverture will ever remain a black spot on the name of Napoleon Bonaparte.

Town-meetings. The town-meeting, a conspicuous feature in New England colonial politics, was the promoter and conservator of free speech, a free press, and a spirit of liberty which pervaded the whole population. It was the fruitful seed of republicanism. In the town-meeting its taxes were voted and its affairs discussed and settled. Therein the agents and public servants of each town were annually elected by a free ballot, and there abstract political principles were debated. By these discussions an intelligent public sentiment was created concerning the rights of man, and particularly the rights of Englishmen in America, which was ready to support, by its power, the champions of freedom in the great struggle for justice, and finally for independence. It was this latter feature of the town-meeting that excited the opposition of the crown officers, who called it a "focus of rebellion." They hated and feared it.

Townshend, CHARLES, an English statesman, was born Aug. 29, 1725; died Sept. 4, 1767. He entered Parliament in 1747, where he soon became distinguished as an orator, and in June, 1749, he became one of the Commissioners of Trade and Plantations (which see). A member of the Privy Council in 1756, he went forward in the offices of Secretary of War, First Lord of Trade, Paymaster-general, to Chancellor of the Exchequer and a Lord of the Treasury in 1766. He favored the obnoxious measures of Parliament for deriving a revenue from America, and in June, 1767, he introduced into Parliament a series of resolutions levying duties on articles imported by the American colonists.

Townshend, GEORGE (marquis), an English field-marshal, was born Feb. 28, 1724; died Sept. 14, 1807. He commanded a division under Wolfe in the expedition against Quebec, and took command of the army after the death of that general, receiving the capitulation of the French. He then returned to England, and was a member of Parliament ten years (1754-64). He attained the highest rank in the army, became a privy-councillor, was Lord-lieutenant of Ireland (1767-72), and was created marquis in October, 1787.

Towson, NATHAN, an artillery officer, was born near Baltimore, Md., Jan. 22, 1784; died in Washington, D. C., July 20, 1854. He was appointed captain of artillery in March, 1812, having had some experience in that service as commander of a volunteer artillery company. He was sent to the Niagara frontier, and there, in 1813-14, he performed distinguished services. He bore a prominent part in the battles of Chippewa and Lundy's Lane (which see); also in the defence of Fort Erie (which see). In 1816 he was breveted lieutenant-colonel, and was made paymaster-general in 1819. In March, 1849, Towson received the brevet of major-general

for "meritorious services during the Mexican War."

GENERAL TOWSON'S GRAVE.

Tract Society. The first undenominational tract society in the United States was formed in Boston in 1803. In 1814 an efficient society was formed at Andover, Mass., which, in 1823, made its abode in Boston, with the name of the American Tract Society. Another American Tract Society was formed in New York in 1825, and a union of all was effected. In 1859, because of the Society's hesitancy to publish tracts on the subject of slavery, the Boston society withdrew. A colporteur system was established in 1842, and the colporteurs disposed of a vast number of tracts. The various denominations also have tract societies.

Traffic in German Soldiers. OPINION OF THE. The bargain with England for the soldiers of German princes to serve in her armies in America filled Europe with disgust, and there was a universal cry of "Shame!" Frederick the Great would not let the pressed soldiers pass any portion of his domain on their march to ports of embarkation. Publicists everywhere condemned the traffic; and Mirabeau, then a fugitive in Holland, lifted up his voice against the iniquity. To the people and the soldiers he said: "Alas, miserable men, you burn not the camp of an enemy, but your own hopes! Germans, what brand do you suffer to be put upon your foreheads? You war against a people who never injured you; who fight for a righteous cause, and set you the noblest pattern." He called upon the soldiers to desert when they should reach America, and then join the strugglers

for independence. "He that fights to recover freedom," said the great revolutionist, "exercises a lawful right. Insurrection becomes just."

Training System in the Navy. The necessity for the establishment of a higher moral tone and greater professional efficiency among the seamen of the navy of the United States had been felt and expressed long before any steps were taken to produce the needed reform. So, also, in England. Immediately after the close of the war between the United States and Great Britain (1812-15), Sir Howard Douglas, perceiving the necessity for educated seamen in the Royal Navy, called the attention of his government to the matter. Nothing was done, however, officially, until June, 1830, when an admiralty order directed that a "gunnery-school" should be formed in one of the British ships-of-war. It was done, and this was the initial step towards the present admirable training of boys for service in the British navy. Its great object has been to make the sailors expert "seamen-gunners," as well as in the use of small-arms and the broadsword. The British government now has several ships devoted exclusively to the training of boys, with the happiest effect upon the general character of the Royal Navy. In 1835 John Goin, of New York, called public attention to the necessity of education for seamen, not only in the navy proper, but in the service of the mercantile marine. It was deemed essential that more Americans should be found among our seamen; for official statistics showed that of the one hundred thousand seamen then sailing out of the ports of the United States, only about nine thousand were Americans. This positive evil could only be met and remedied, it was argued, by the establishment of nautical schools, in which American boys could be trained for seamen. A petition for such a measure went from New York to Congress in 1837. That body, the same year, authorized the enlistment of boys for the navy, and it was not long afterwards when the frigate *Hudson* had three hundred boys on board of her as apprentices. Several nautical schools were opened on other vessels, but within five years the plan seems to have been abandoned. In 1863 the United States practice-vessel at the Naval Academy, Annapolis, went on a summer cruise across the Atlantic, and visited the ports of Plymouth and Portsmouth, Eng. Her officers there visited the British training-ships. Impressed with the importance of the system, the commander of the practice-ship (Captain S. B. Luce), on his return, called the attention of the Navy Department to the subject, and recommended a similar system of training for the United States Navy. The law of 1837 was revived, and the United States frigate *Sabine* was selected as a school-ship, and in due time the sloop-of-war *Saratoga* and *Portsmouth* were added as practice-vessels. This second effort was a failure. The project was revived in 1875, in a circular issued by the Secretary of the Navy on the 8th of April that year. In pursuance of instructions in that circular, the United States steam-frigate *Minnesota*

was commissioned as a school-ship, under the command of Captain Luce, and is yet (1880) engaged in that service. The system has been modified, and promises to be successful. There have been about fifteen hundred boys enlisted up to June, 1880, and the work is still going on. They are under excellent moral restraint, are systematically taught all the branches of a common-school education, and are trained in every department of seamanship, as well as in gunnery

cunniary. In case they kill a woman, they pay double; and the reason they render is that she breedeth children, which men cannot do. It is rare that they fall out if sober; and, if drunk, they forgive it, saying it was the drink and not the man that abused them."

Transcendentalism is the doctrine in metaphysics which embraces beliefs and opinions evolved from the action of pure reason, applied in general to ideas and doctrines that are not

THE SCHOOL-SHIP SARKIS.

and military tactics. Such a system, if successful, will elevate the character of the seaman's profession—in the navy proper and in the mercantile marine—to the level of any other industry in which the brain and muscle of Americans may engage.

Training-schools for the Navy. (See *Training System in the Navy*.)

Traits of Indian Character. William Penn has left on record the following description of the Indians who inhabited the Delaware region of Pennsylvania: "They are tall, straight, tread strong and close, and walk with a lofty chin. Their custom of rubbing their body with bear's fat gives them a swarthy color. They have little black eyes. Their heads and countenances have nothing of the negro type; and I have seen as comely, European-like faces among them as on your side the sea. Their language is lofty, yet narrow, like short-hand in writing, one word serving in the place of three, and the rest are supplied by the understanding of the hearer. I have made it my business to understand it, that I might not want an interpreter on any occasion. In liberality they excel; nothing is too good for their friend; give them a fine gun, coat, or other thing, it may pass twenty hands before it sticks; light of heart, strong affections, but soon spent. The justice they have is pe-

suggested or limited by experience. Thus by the transcendental philosophy of Kant is meant his system of the principles of the pure reason, which occupies itself not with the objects or matter of knowledge, but with the subjective ideas of forms, as time, space, substance, and causality, through which objects are presented to us as phenomena. A transcendental school of philosophy arose in New England about 1840, of which Ralph Waldo Emerson has been the acknowledged leader.

Transylvania. While the English populations on the Atlantic seaboard were in great political commotion in the early part of 1775, efforts were in progress to form a new commonwealth westward of the great mountain ranges in the valley of the Mississippi. Richard Henderson, an energetic lawyer of North Carolina, and a land speculator, induced by the reports of Finley, Boone, and others of the fertile regions on the banks of the Lower Kentucky River, purchased of the Cherokees for a few wagon-loads of goods a great tract of land south of that river. Others were associated with him; and the adventurer Daniel Boone, who had been present at the treaty, was soon afterwards sent (March, 1775) to mark out a road and to commence a settlement. He built a palisaded fort on the site of the present Boonesborough, Madi-

son Co., Ky. At about the same time Colonel James Harrod, an equally bold backwoodsman, founded Harrodsburg. Governor Dunmore, of Virginia, denounced Henderson's purchase as illegal and void, and offered these Western lands for sale under the crown. Regardless of the proclamation, delegates from Boonesborough, Harrodsburg, and two other settlements, eighteen in number, met at Boonesborough, and organized themselves into an Assembly of a state which they named Transylvania by appointing Thomas Slaughter chairman, and Matthew Jewett clerk. They were addressed by Henderson on behalf of the proprietors, between whom and the settlers a compact was made, the most important features of which were an agreement—1. That the election of delegates should be annual; 2. Perfect freedom of opinion in matters of religion; 3. That judges should be appointed by the proprietors, but answerable for bad conduct to the people; and, 4. That the Convention or Assembly have the sole power of raising and appropriating all moneys, and of electing their treasurers. Courts and a militia were organized, and laws were enacted. The proprietors held a meeting in September at Oxford, Greenville Co., N. C., and elected James Hogg a delegate for Transylvania in the Continental Congress, but the claim of Virginia to the territory of the new commonwealth was a bar to his admission. The Legislature of Virginia afterwards annulled the purchase of Henderson, and the inchoate state disappeared. Virginia gave Henderson a tract of land on the Ohio twelve miles square, below the mouth of Green River.

Treachery in New Mexico. Floyd had sent Colonel Loring, of North Carolina, and Colonel Crittenden, of Kentucky, into New Mexico, about a year before the Civil War broke out, to corrupt the patriotism of the twelve hundred United States troops stationed there. They did not succeed; and, exciting the indignation of these troops by their treasonable propositions, they were compelled to flee from their wrath in July, 1861. At Fort Fillmore, near the Texas border, they found the officers in sympathy with them. Major Isaac Lynde, of Vermont, their commander, professed to be loyal, but in July, while leading about five hundred of his troops towards the village of Mesilla, he fell in with a few Texan insurgents, and, after a light skirmish, fell back to the fort. He was ordered by his superiors to take his command to Albuquerque. His soldiers were allowed to drink whiskey freely on the way, and when they had gone ten miles on the road a large portion of them were intoxicated. Then, as if by previous arrangement, a large force of Texans appeared. The sober soldiers wanted to fight, but Lynde, either treacherously or through cowardice, ordered them to surrender. His commissary, Captain Plummer, handed over to the leader of the insurgents \$17,000 in government drafts. Thus, at one sweep, nearly one half of the government troops in New Mexico were lost to its service.

Treason Act in Virginia. In consequence of the disturbances in western North Carolina

(see *Frankland*) and symptoms of disaffection on its southwestern border, and in Kentucky, the Virginia Legislature passed a law in October, 1785, subjecting to the penalties of treason all attempts to erect a new state in any part of her territory without permission first obtained of the Assembly. Pennsylvania had passed a similar law.

Treason, how Defined. The first clause of section III., article 3, of the national Constitution says: "Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort."

Treason of Arnold. In the summer of 1780 the old Continental bills of credit had become almost worthless, and there was continual depreciation of the bills of a new issue. Washington doubted whether the Continental army could be kept together for another campaign, and he was exceedingly anxious to strike some decisive blow. He proposed to Rochambeau, then in command of the newly arrived French forces at Newport, to make a combined attack upon New York. Letters were sent to the French admiral in the West Indies soliciting his co-operation, and in September (1780) Washington repaired to Hartford to meet the French general in consultation. During his absence Arnold attempted to execute his scheme of treason. His career had distinguished him as the most brilliant officer in the American service; but his arrogance, his disregard for the rights of others, his quarrelsome nature, and his doubtful integrity had won for him many enemies. Not sufficiently recovered from the wound in his leg which he received at Saratoga to take the field, he was made military governor of Philadelphia when the British evacuated it (June, 1778). There he lived extravagantly, became involved in debt, and married Miss Shippen, daughter of one of the leading Tory inhabitants of that city. To meet the demands of importunate creditors, he engaged in fraudulent transactions, for which his official position gave him facilities, and charges of dishonesty and malpractice in office were preferred against him before the Continental Congress. A tribunal before which he was tried convicted him, but sentenced him to a reprimand only by the commander-in-chief. Washington performed the duty with great delicacy, but the disgrace aroused in the bosom of Arnold a fierce spirit of revenge. He resolved to betray his country, and, making treasonable overtures to Sir Henry Clinton, kept up a correspondence on the subject for a long time with Major John André, the adjutant-general of the British army. This correspondence was carried on mutually under assumed names, and on the part of Arnold in a disguised hand. Feigning great patriotism and a desire to serve his country better, he asked for and, through the recommendation of General Schuyler and others, obtained the command of the important post of West Point and its dependencies in the Hudson Highlands. He arranged with Major André to surrender that post into the hands of a British

force which Sir Henry might send up the Hudson. For this service he was to receive the commission of a brigadier in the British army and nearly \$50,000 in gold. He made his headquarters at the house of Beverly Robinson, a Tory, opposite West Point, and the time chosen for the consummation of the treason was when Washington should be absent at a conference with Rochambeau at Hartford. Arnold and André had negotiated in writing; the former

return to New York by land. He left his uniform, and, disguised in citizen's dress, he crossed the river towards evening with a single attendant, passed through the American works at Verplauk's Point without suspicion, spent the night not far from the Croton River, and the next morning journeyed over the Neutral Ground (which see) on horseback, with a full expectation of entering New York before night. Arnold had furnished him with papers revealing the

FAC-SIMILE OF A PORTION OF ONE OF ANDRÉ'S LETTERS.

wished a personal interview, and arrangements were made for it. André went up the Hudson in the British sloop-of-war *Vulture* to Teller's (now Croton) Point, from which he was taken in the night in a small boat to a secluded spot near Haverstraw, on the west side of the river, where, in bushes, he met Arnold for the first time. Before they parted (Sept. 22, 1780) the whole matter was arranged: Clinton was to sail up the river with a strong force, and, after a show of resistance, Arnold was to surrender West Point and its dependencies into his hands. But all did not work well. The *Vulture* was driven from her anchorage by some Americans with a cannon on Teller's Point, and when André, with Arnold, at Joshua H. Smith's house, above Haverstraw, looked for her in the early morning she had disappeared from sight. He had expected to return to the *Vulture* after the conference was over; now he was compelled to cross the river at King's Ferry (which see), and

condition of the highland stronghold. At Tarrytown, twenty-seven miles from the city, he was stopped (Sept. 23) and searched by three young militiamen, who, finding those papers concealed under the feet of André in his boot, took him to the nearest American post. The commander (Colonel Jameson) did not seem to comprehend the matter, and unwisely allowed André (who bore a pass from Arnold in which he was called "John Anderson") to send a letter to Arnold telling him of his detention. Washington returned from Hartford sooner than he expected. He rode over from Fishkill towards Arnold's quarters early in the morning. Two of his military family (Hamilton and Lafayette) went forward to breakfast with Arnold, while Washington tarried to inspect a battery. While they were at breakfast André's letter was handed to Arnold. With perfect self-possession he asked to be excused, went to his wife's room, bade her farewell, and, mounting the horse of

one of his aids that stood saddled at the door, rode swiftly to the river shore. There he entered his barge, and, promising the oarsmen a handsome reward if they would row the boat swiftly, escaped to the *Future*. André was taken to the headquarters of the army at Tappan, Rockland County, tried by a court-martial as a spy, and hanged there, Oct. 2, 1780. Strong but ineffectual efforts were made to save André by getting Arnold in his place. The latter lived

who at first regarded him as a deserter from the British army, was a matter of wonder; and when, after he had been exchanged and had rejoined the army at Valley Forge (1778), he was required to take the oath of allegiance with some other officers, he at first refused. His persistence in opposing any interference with the march of Clinton across New Jersey, and his extraordinary conduct on the field at Monmouth, could not be explained by any reason excepting inca-

capacity or treachery. Indeed, Washington was warned against Lee the night before that battle by a Virginia captain who believed him to be treacherous. For his conduct on that occasion, and for an impertinent letter to his commander-in-chief, he was court-martialled and suspended from command in the army. He died out of the service. Three fourths of a century afterwards a document was found among Sir William Howe's papers endorsed "Mr. Lee's Plan, 29th March, 1777," in the handwriting of Henry Strachy, Howe's secretary. The writing within was in Lee's own hand, and it embodied a plan of operations by the British fleet and army which it was thought was best calculated to insure the subjugation of the colonies. It was upon this

SMITH'S HOUSE.*

many years afterwards, thoroughly despised by both nations and the world. His young wife, and her infant son joined him in New York and shared his fortunes until his death. André's captors—John Paulding, David Williams, and Isaac Van Wart—were each rewarded with a silver medal and \$200 a year for life.

Treason of General Charles Lee. The conduct of General Lee at several periods during the war was inexplicable. He was disappointed in not being made the commander-in-chief of the Continental forces, and continually showed a censorious spirit towards Washington and others which was injurious to the service. His abilities were greatly overrated, and later in the conflict there were thoughtful men who regarded his profession of devotion to the American cause with suspicion. In 1775 he corresponded with Burgoyne, his old commander in Europe, while in Boston. In the summer of 1776, when at Charleston, he tried to induce Colonel Moultrie to abandon Fort Sullivan when it was attacked by land and water. In the autumn of that year he persistently disobeyed the orders of Washington to join the army, with a large force under his command, while it was retreating before Lord Cornwallis, and he was taken prisoner at a house far away from his camp, in New Jersey, under very suspicious circumstances. A letter which he had just written to Gates contained disparaging remarks on Washington's military character. His tender treatment by Howe,

plan that Howe acted in going to the Chesapeake in the summer of 1777, instead of up the Hudson River to assist Burgoyne, and so ruined the latter general. This document cast a flood of light upon the character and conduct of Lee during the Revolution, and proved beyond cavil that he was a traitor to the cause which he professed to serve. This document and circumstantial evidence of his treason are given in a small volume by George H. Moore, LL.D., entitled *The Treason of Charles Lee*.

Treasures from the Sea. William Phipps, a native of the Kennebec region, and at one time governor of Massachusetts, and one of twenty-six children by the same parents, engaged in commerce in early life. He heard of sunken Spanish treasure-ships in the waters around the West India islands, and he went in search of them. Having found one that did not yield much, he aroused such interest in the matter that the king gave him the use of a well-appointed ship-of-war to make further search. He was gone two years, but found nothing, excepting, as he thought, the exact spot where a rich Spanish galleon lay on the bottom of the sea. Phipps gained the reputation of a skilful naval commander, and a company was formed to enable him to prosecute the search. The vessel was found, laden with bullion, coin, and plate, and these were recovered to the value of \$1,500,000, and a gold cup worth \$5000, which was given to the Duchess of Albemarle, whose husband was a patron of the expedition. Phipps's share of the treasure was nearly \$40,000. The poor ship-builder's apprentice, who had learned to read and write when he had almost reached manhood, was now made wealthy, and his king

* This house, yet (1879) standing, is about half-way between Stony Point, or King's Ferry, and Haverstraw. It is upon the slope of what has ever since been known as "Treason Hill." It was in a room in the second story that the conspirators remained during the day of their arrival there.

knighted him. Honors and emoluments awaited him in his native country on his return. (See *Phippe, Sir William*.)

Treat, ROBERT, governor of Connecticut from 1686 to 1701, was born in England in 1622; died in Milford, Conn., July 12, 1710. He came from England with Sir Richard Saltonstall, and was one of the first settlers of Wethersfield, Conn. He was chosen judge, then a magistrate (from 1661 to 1665), and major of the provincial troops in 1670. In King Philip's War he was active in the relief of menaced settlements in the Connecticut valley, especially of Springfield and Hadley. He aided in the destruction of the Narraganset fort in December, 1676 (see *King Philip's War*), and the same year was lieutenant-governor.

Treaties with Foreign Nations. The following treaties have been made between the United States and foreign governments, between 1776 and 1876 (some of these agreements may be classed as conventions to serve certain temporary purposes): *Algiers*, Sept. 5, 1795, peace and amity; June 30 and July 6, 1815, peace and amity; Dec. 22, 1816, peace and amity.—*Argentine Confederation*, July 10, 1853, free navigation of rivers Paraná and Uruguay; July 27, 1853, friendship, commerce, and navigation.—*Austria and Austro-Hungary*, Aug. 27, 1829, commerce and navigation; May 8, 1848, disposal of property; July 3, 1856, extradition; July 11, 1870, rights of consuls; Sept. 20, 1870, naturalization; Nov. 25, 1871, trade-marks.—*Baden*, Jan. 30, 1857, extradition; July 19, 1868, naturalization.—*Bavaria*, Jan. 21, 1845, abolition of *droit d'aubaine* and taxes on emigration; Sept. 12, 1853, extradition; May 26, 1868, naturalization.—*Belgium*, Nov. 10, 1845, commerce and navigation; July 17, 1858, commerce and navigation; May 20, 1863, import duties and capitalization of Scheldt dues; July 20, 1863, extinguishment of Scheldt dues; Nov. 16, 1868, naturalization; Dec. 5, 1868, rights, etc., of consuls; Dec. 20, 1868, additional article and trade-marks.—*Bolivia* (see *Peru-Bolivia*), May 13, 1858, friendship, commerce, and navigation.—*Borneo*, June 23, 1850, peace and amity and consular jurisdiction.—*Brazil*, Dec. 12, 1828, friendship, commerce, and navigation; Jan. 27, 1849, claims.—*Bremen* (see *Hanseatic Republics*), 1853, extradition.—*Brunswick and Lunenburg*, Aug. 21, 1854, disposal of property.—*Central America*, Dec. 5, 1825, commerce and navigation.—*Chili*, May 16, 1832, friendship, commerce, and navigation; Sept. 1, 1833, explanatory; Nov. 10, 1858, arbitration of *Macedonian* claims.—*China*, July 3, 1844, peace, amity, and commerce; June 18, 1858, peace, amity, and commerce; Nov. 8, 1858, regulation of trade; Nov. 8, 1858, claims; July 28, 1868 (additional articles), amity, commerce, and navigation.—*Colombia, Republic of* (see *Ecuador, New Granada, and Venezuela*), Oct. 3, 1824, friendship, commerce, and navigation.—*Colombia, United States of* (see *New Granada*), Feb. 10, 1864, claims.—*Costa Rica*, July 10, 1851, amity, commerce, and navigation; July 2, 1860, claims.—*Denmark*, April 26, 1826, friendship, commerce, and navigation; March 26, 1830, in-

demnity claims; April 11, 1857, Sound and Belt dues; July 11, 1861, additional articles.—*Dominican Republic*, Feb. 8, 1867, amity, commerce, navigation, and extradition.—*Ecuador*, June 13, 1839, friendship, navigation, and commerce; Nov. 25, 1862, claims.—*France*, Feb. 6, 1778, alliance, amity, and commerce; Feb. 6, 1778, article separate and secret; July 16, 1782, payment of loan; Feb. 25, 1783, new loan; Nov. 14, 1788, consuls; Sept. 30, 1800, peace, commerce, navigation, fisheries, etc.; April 30, 1803, cession of Louisiana (payment of 60,000,000 francs by the United States), claims against France to be paid; June 24, 1822, duties, consuls, and separate article; July 4, 1831, claims, duties on wines and cottons; Nov. 9, 1843, extradition; Feb. 24, 1845, extradition; Feb. 23, 1853, rights, etc., of consuls; Feb. 10, 1858 (additional article), extradition; April 16, 1869, trade-marks.—*German Empire*, Dec. 11, 1871, consuls and trade-marks.—*Great Britain*, Nov. 30, 1782, preliminary treaty of peace; also a separate article; Jan. 20, 1783, armistice; Sept. 3, 1783, peace; Nov. 19, 1794, peace, amity, commerce, navigation, boundary, claims, extradition; also an additional article; May 4, 1796, explanatory article; March 15, 1798, explanatory article; Jan. 8, 1802, additional convention; Dec. 24, 1814, peace, boundary, slave-trade; July 3, 1815, commerce, duties, consuls; April 28, 1817 (arrangement), armed vessels on the Lakes; Nov. 24, 1817 (decision of commissioners), boundary; Oct. 20, 1818, fisheries, boundaries, slaves; June 18, 1822 (decision of commissioners), boundary; July 12, 1822, differences referred to Emperor of Russia; Nov. 13, 1826, indemnity; Aug. 6, 1827, boundary, renewal of commercial conventions; Sept. 29, 1827, boundary, differences to be referred to an arbitrator; Aug. 9, 1842, boundary, slave-trade, extradition; June 15, 1846, boundary west of the Rocky Mountains; April 19, 1850, ship-canal from the Atlantic to the Pacific; Feb. 8, 1853, claims; June 5, 1854, reciprocity of trade and fisheries with British possessions in North America; July 17, 1854 (additional convention), claims; April 17, 1862, suppression of slave-trade; Feb. 17, 1863, additional article; July 1, 1863, claims of Hudson Bay and Puget Sound Agricultural Companies; May 13, 1870, naturalization; June 3, 1870, slave-trade, mixed courts; Feb. 23, 1871, renunciation of naturalization; May 8, 1871, *Alabama* and other claims, fisheries, boundaries, etc.—*Greece*, Dec. 10-22, 1837, commerce and navigation.—*Guatemala*, March 3, 1849, amity, commerce, navigation, etc.—*Hanover*, May 20, 1840, commerce, navigation, etc.; June 10, 1846, commerce, navigation, etc.; Jan. 18, 1855, extradition; Nov. 6, 1861, abolition of State or Brunswick dues.—*Hanseatic Republics*, Dec. 20, 1827, friendship, commerce, and navigation; June 4, 1828, additional article; April 30, 1852, consular jurisdiction.—*Hawaiian Islands*, Dec. 20, 1849, commerce, navigation, extradition, etc.—*Hayti*, Nov. 3, 1864, commerce, navigation, extradition.—*Hesse*, March 26, 1844 (Hesse-Cassel), abolition of *droit d'aubaine* and taxes on emigration; Aug. 1, 1868 (Grand-duchy of), naturalization.—*Honduras*, July 4,

1864, friendship, commerce, and navigation.—*Italy*, Feb. 8, 1868, rights, etc., of consuls; March 23, 1868, extradition; Jan. 21, 1869 (additional articles), consuls, extradition; Feb. 26, 1871, commerce and navigation.—*Japan*, March 31, 1854, peace and amity; June 17, 1857, opening of Nangasaki, coin, consuls, etc.; July 29, 1858, amity and commerce; Jan. 28, 1864, reduction of duties; Oct. 22, 1864, indemnity.—*Loo-choo*, July 11, 1854, friendship and commerce.—*Liberia*, Oct. 21, 1862, commerce and navigation.—*Madagascar*, Feb. 14, 1867, commerce, rights of citizens, consular jurisdiction, etc.—*Mecklenburg-Schwerin*, Dec. 9, 1847, commerce, navigation, etc.; Nov. 26, 1853, extradition.—*Mecklenburg-Strelitz*, Dec. 2, 1853, extradition.—*Mexico*, Jan. 12, 1828, boundary; April 5, 1831, additional article; also commerce and navigation and additional article; April 3, 1835, second additional article to treaty of Jan. 12, 1828; April 11, 1839, claims; Jan. 30, 1843, additional convention; Feb. 2, 1848, peace, friendship, limits, claims, etc.; Dec. 30, 1853, boundary, road across Tehuantepec, etc.; Dec. 11, 1861, extradition; July 4, 1866, claims; July 10, 1868, naturalization; April 19, 1871 (additional convention), claims.—*Morocco*, January, 1787, peace and friendship and an additional article; Sept. 16, 1836, commerce, prisoners, etc.; May 31, 1865, light-house at Cape Spartel.—*Muscat*, Sept. 21, 1833, amity and commerce.—*Nassau*, May 27, 1846, abolition of *droit d'aubaine* and tax on emigration.—*Netherlands*, Oct. 8, 1872, amity and commerce; also recaptured vessels; Jan. 19, 1839, commerce and navigation; Aug. 26, 1852, supplemental convention; Jan. 22, 1855, American consuls in Dutch colonies.—*New Granada*, Dec. 12, 1846, amity, commerce, and navigation; also an additional article; May 4, 1850, consuls; Sept. 10, 1857, claims.—*Nicaragua*, June 21, 1867, friendship, commerce, and navigation; June 25, 1870, extradition.—*North German Union*, Feb. 22, 1868, naturalization.—*Oldenburg*, March 10, 1847, commerce and navigation; Dec. 30, 1853, extradition.—*Ottoman Empire*, May 7, 1830, friendship and commerce; Feb. 25, 1862, commerce and navigation.—*Paraguay*, Feb. 4, 1859, United States and Paraguay Navigation Company; also friendship, commerce, and navigation.—*Persia*, Dec. 13, 1856, friendship and commerce.—*Peru-Bolivia*, Nov. 30, 1836, friendship, commerce, and navigation.—*Peru*, March 17, 1841, claims; July 26, 1851, friendship, commerce, and navigation; July 22, 1856, rights of neutrals at sea; July 4, 1857, of interpretation; Dec. 20, 1862, *Lizzie Thompson* and *Georgiana*; Jan. 12, 1863, claims; Dec. 4, 1868, claims.—*Portugal*, Aug. 26, 1840, commerce and navigation; Feb. 26, 1851, certain claims to be referred to an arbiter.—*Prussia*, July 9 and 28, Aug. 5, and Sept. 10, 1785, amity and commerce; July 11, 1799, amity and commerce; May 1, 1828, commerce and navigation.—*Prussia and other States*, June 16, 1852, extradition; Nov. 16, 1852 (additional article), extradition.—*Russia*, April 5-17, 1824, navigation, fishing, etc., in the Pacific Ocean; Dec. 6-18, 1832, commerce and navigation; also a separate article; July 22, 1854, rights of neutrals at sea;

March 30, 1867, cession of Russian possessions (Alaska) in North America to the United States; Jan. 27, 1868 (additional article), trade-marks.—*San Salvador*, Jan. 2, 1850, amity, navigation, commerce, etc.—*Sardinia*, Nov. 26, 1838, commerce and navigation; also a separate article.—*Saxony*, May 14, 1845, abolition of *droit d'aubaine* and taxes on emigration.—*Schaumburg-Lippe*, June 7, 1864, extradition.—*Siam*, March 20, 1833, amity and commerce; March 29, 1836, amity and commerce; Dec. 17-31, 1867, modification.—*Spain*, Oct. 27, 1795, friendship, limits, and navigation; Aug. 11, 1802, indemnity; Feb. 22, 1819, amity, settlement, and limits; Feb. 17, 1834, indemnity; Feb. 12, 1871, certain claims for wrongs in Cuba.—*Sweden*, April 3, 1873, amity and commerce; also separate articles; Sept. 4, 1816, amity and commerce.—*Sweden and Norway*, July 4, 1827, commerce and navigation; also a separate article; March 21, 1860, extradition; May 26, 1869, naturalization.—*Swiss Confederation*, May 18, 1847, abolition of *droit d'aubaine* and taxes on emigration; Nov. 25, 1850, friendship, commerce, and extradition.—*Texas*, April 11, 1838, indemnity for brigs *Packet* and *Durango*; April 25, 1838, boundary.—*Tripoli*, Nov. 4, 1796, peace, friendship, and navigation; June 4, 1805, peace, friendship, and navigation.—*Tunis*, August, 1797, March 26, 1799, peace, friendship, and navigation; Feb. 24, 1824, supplemental convention.—*Two Sicilies*, Oct. 14, 1832, indemnity; Dec. 1, 1845, commerce and navigation; Jan. 13, 1855, rights of neutrals at sea; Oct. 1, 1855, commerce, navigation, extradition.—*Venezuela*, Jan. 20, 1836, friendship, commerce, navigation; Jan. 14, 1859, Aves Islands claims; Aug. 27, 1860, commerce, navigation, and extradition; April 25, 1866, claims.—*Württemberg*, April 10, 1844, abolition of *droit d'aubaine* and taxes on emigration; Oct. 13, 1853, extradition; July 27, 1868, naturalization and extradition.

Treaties with France (1778). Franklin, Deane, and Lee were United States commissioners at the French court at the close of 1776. The Continental Congress had elaborated a plan of a treaty with France, by which it was hoped the states might secure their independence. The commissioners were instructed to press for an immediate declaration of the French government in favor of the Americans. Knowing the desire of the French to widen the breach and cause a dismemberment of the British empire, the commissioners were to intimate that a renunciation of the colonies with Great Britain might be the consequence of delay. But France was then unwilling to incur the risk of war with Great Britain. When the defeat of Burgoyne was made known at Versailles, assured thereby that the Americans could help themselves, the French court were ready to treat for an alliance with them. The presence of an agent of the British ministry in Paris, on social terms with the American commissioners, hastened the negotiations, and, on the 6th of February, 1778, two treaties were secretly signed at Paris by the American commissioners, and the Count de Vergennes on the part of France. One was a commercial agreement, the other an alliance contingent on the

breaking-out of hostilities between France and Great Britain. It was stipulated in the treaty of alliance that peace should not be made until the mercantile and political independence of the United States should be secured. The conciliatory bills of Lord North (which see) made the French monarch anxious, for a reconciliation between Great Britain and her colonies would thwart his scheme for prolonging the war and dismembering the British empire; and he caused the secret treaties to be officially communicated to the British government, in language so intentionally offensive that the announcement was regarded as tantamount to a declaration of war, and the British ambassador at the French court was withdrawn.

Treaties with France Annulled. Because the treaties with France had been repeatedly violated; the just claims of the United States for the reparation of injuries to persons and property had been refused; attempts on the part of the United States to negotiate an amicable adjustment of all difficulties between the two nations had been repelled with indignity; and because, under the authority of the French government, there was yet pursued against the United States a system of predatory violence infracting those treaties, and hostile to the rights of a free and independent nation—Congress, on July 7, 1797, passed an act declaring the treaties heretofore concluded with France no longer obligatory on the United States.

Treaty of Paris. On Feb. 18, 1763, a definitive treaty of peace was signed at Paris (and was soon after ratified) between Great Britain, France, Spain, and Portugal, which materially changed the political boundaries and aspects of North America. The acquisitions of Great Britain, both from France and Spain, on the continent of North America, during the war then recently closed, were most important in their bearings upon the history of the so-called New World. France renounced and guaranteed to Great Britain all Nova Scotia or Acadia, Canada, the Isle of Cape Breton, and all other islands in the Gulf and River of St. Lawrence. The treaty gave to the French the liberty of fishing and drying on a part of Newfoundland and in the Gulf of St. Lawrence, at a distance of three leagues from the shores belonging to Great Britain; ceded the islands of St. Peter and Miquelon, as a shelter for French fishermen; declared that the confines between the dominions of Great Britain and France, on this continent, should be fixed by a line drawn along the middle of the Mississippi River, from its source as far as the river Iberville (fourteen miles below Baton Rouge), and from thence by a line drawn along the middle of this river and of the lakes Maurepas and Pontchartrain, to the sea; guaranteed to Great Britain the river and port of Mobile, and everything on the left side of the Mississippi, excepting the town of New Orleans and the island on which it is situated, which should remain to France; the navigation of the Mississippi to be equally free to the subjects of both nations, in its whole breadth and length, from

its source to the sea, as well as the passage in and out of its mouth; that the French in Canada might freely profess the Roman Catholic faith, as far as the laws of Great Britain would permit, enjoy their civil rights, and retire when they pleased, disposing of their estates to British subjects; that Great Britain should restore to France the islands of Guadeloupe, Marie Galante, Desadea, and Martinique, in the West Indies, and of Belle-Isle, on the coast of France, with their fortresses, giving the British subjects at these places eighteen months to sell their estates and depart, without being restrained on any account, excepting by debts or criminal prosecutions. France ceded to Great Britain the islands of Grenada and the Grenadines, with the same stipulation as to their inhabitants as those in the case of the Canadians; the islands of St. Vincent, Dominica, and Tobago to remain in possession of England, and that of St. Lucia, of France; that the British should cause all the fortifications erected in the Bay of Honduras, and other territory of Spain in that region, to be demolished; that Spain should desist from all pretensions to the right of fishing about Newfoundland; that Great Britain should restore to Spain all her conquests in Cuba, with the fortress of Havana; that Spain should cede and guarantee, in full right, to Great Britain, Florida, with Fort St. Augustine and the Bay of Pensacola, and all that Spain possessed on the continent of America to the east, or to the southeast, of the Mississippi River. Thus was vested in the British crown, by consent of rival European claimants, the whole eastern half of North America, from the Gulf of Mexico to Hudson's Bay and the Polar Ocean, including hundreds of thousands of square miles of territory which the foot of a white man had never trodden.

Treaty of Peace, DEFINITIVE (1783). In April, 1783, the Preliminary Treaty of Peace having been ratified by the United States and Great Britain, the latter vested David Hartley with full powers to negotiate a definitive treaty with the American commissioners. It was concluded and signed at Paris, Sept. 3, 1783, by Hartley, on the part of Great Britain, and Dr. Franklin, John Adams, and John Jay, on the part of the United States. The terms were similar to those of the Preliminary Treaty (which see). When he had signed it, Franklin put on the clothes he had laid aside about ten years before, in accordance with a vow. (*See Franklin before the Privy Council.*) On the same day definitive treaties between Great Britain, France, and Spain were signed, and one between Great Britain and Holland was signed the day before.

Treaty of Peace, EFFECT OF (1814). On the evening of Saturday, Feb. 11, 1815, the treaty of peace, borne by the messengers who carried it to England for ratification, arrived at New York by the British sloop-of-war *Favosite*. News of its arrival spread over the city. The tidings were unexpected. No one inquired what its terms were; it was enough to know that peace had been secured. The streets were soon filled, and

a placard was issued on a slip of paper, five by six inches in size, from the office of the *Mercantile Advertiser*, containing these words: "New York, Saturday evening, nine o'clock, Feb. 11, 1814. PEACE. The great and joyful news of PEACE between the United States and Great Britain reached this city this evening by the British sloop-of-war *Favorite*, the Hon. J. C. Mowatt, Esq., commanding, in forty-two days from Plymouth. Henry C. Carroll, Esq., Secretary of the American Legation at Ghent, is the welcome bearer of the treaty, which was signed at Ghent on the 24th of December by the respective commissioners, and ratified by the British government on Dec. 28. Mr. Baker, late secretary of the British legation at Washington, has also arrived on the sloop-of-war, with a copy of the treaty ratified by the British government." This placard was thrown out of the window as fast as printed and scattered among the assembled people. It was also posted all over the city. Bauquets and illuminations marked the public satisfaction in towns and cities throughout the Union. Philadelphia was the first to illuminate, on Wednesday evening, Feb. 15. The mayor (Robert Wharton), in a proclamation, suggested that as the principles of the Quakers would not allow them to illuminate, the police should see to it that they should be protected "in their peaceful rights." On the 22d the illumination took place in New York, and on March 16 a "superb ball" was given at the Washington Hotel (corner of Broadway and Chambers Street). The number of ladies and gentlemen in attendance was six hundred. The most active women in the management of this entertainment were those who composed the managers of the association for the relief of the soldiers, formed in 1814. (See *Relief for Soldiers*.) The effect of the treaty upon financial matters was very marked. Six-per-cents rose, in twenty-four hours, from seventy-six to eighty-six, and Treasury notes from ninety-two to ninety-eight. Coin, which was twenty-two per cent. premium, fell to two per cent. in forty-eight hours. The effect on commerce was equally great. Within forty-eight hours sugar fell from \$26 per cwt. to \$12.50; tea, from \$2.25 per pound to \$1; tin, from \$20 a box to \$25. These are mentioned as specimens, among scores of others, to show the effect of the treaty upon commercial values. In England, especially among the manufacturing and commercial classes, there was equal rejoicing, and medals were struck in commemoration of the event. (See *Peace Medals*.)

Treaty of Peace, PRELIMINARY (1782). In the spring of 1782, Richard Oswald was sent by the British ministry to Paris, to confer with Dr. Franklin on the subject of peace. His mission was initiatory in character. In July following Oswald was vested with full power to negotiate a treaty of peace, and in September the United States appointed four commissioners, representing the various sections of the Union, for the same purpose. These were John Adams, of Massachusetts; John Jay, of New York; Dr. Franklin, of Pennsylvania; and Henry Laurens, of South Carolina. These were all in Europe at

the time. Dr. Franklin and Mr. Oswald had already prepared the way for harmonious negotiations. Franklin had assured Oswald that independence, satisfactory boundaries, and a participation in the fisheries would be indisputable requisites in a treaty. In July, Parliament had passed a bill to enable the king to acknowledge the independence of the United States, and all obstacles in the way of negotiations were removed. Laurens joined the other American commissioners at Paris, and on the 30th of November, 1782, a preliminary treaty of peace was signed by the commissioners and Mr. Oswald, without the knowledge of the French government. This was a violation of the treaty of alliance. All of the American commissioners but Franklin doubted the good faith of Vergennes, whom they supposed to be under Spanish influence; but he acted honorably throughout. Dr. Franklin never doubted him; and he removed dissatisfaction from the mind of the French minister, because of the affront, by a few soft words. The chief features of the treaty were: 1. The unqualified recognition of the independence of the thirteen United States; 2. The Mississippi was made the western boundary, and Canada and Nova Scotia the northern and eastern boundaries of the United States; 3. The navigation of the St. Lawrence was abandoned to the English; 4. The navigation of the Mississippi was made free to both parties; 5. Mutual rights to the Newfoundland fisheries were adjusted; 6. No impediments to be allowed in the way of the recovery of debts by *bona-fide* creditors; 7. Certain measures of restitution of confiscated property to loyalists was to be recommended by the Congress to the several states; and, 8. A general cessation of hostilities, withdrawal of troops, and a restoration of public and private property. (See *Treaty of Peace, Definitive*.)

Treaty of Peace, PUBLIC RECEPTION OF THE (1814). (See *Peace, Treaty of*.) The treaty of peace between the United States and Great Britain was taken from Ghent to London by Mr. Baker, secretary to Lord Gambier, and Mr. Carroll, one of the secretaries to the American commissioners. There it was ratified on Dec. 28, 1814, by the Prince Regent, and then sent to America by the same messengers, who sailed in the British sloop-of-war *Favorite*. She arrived at New York on the evening of Saturday, Feb. 11, 1815. Mr. Hughes, principal secretary to the American commissioners, left Ghent with a copy of the treaty at the same time, sailed for the Chesapeake from the Texel in the schooner *Transit*, landed at Annapolis two days after the *Favorite* reached New York, and put his copy of the treaty into the hands of the President before the ratified copy arrived there. The treaty of peace spread joy over the land, because it assured peace; but when its contents were known, and that immunity from search or impressment had not been secured, it was severely criticised. The opposition pointed to it exultingly as proof of the wisdom of their prophecies, the patriotism of their course in opposing the war, and the truth of their declaration that the "war was a failure." The opposition newspapers contained some well-pointed

epigrams, keen satires, and genuine wit, aimed at the friends of the war, and in illustration of the shortcomings of the treaty; there was also much coarse abuse of the administration poured out through the same channels. The usually dignified *New York Evening Post* had some severe criticisms, that seemed to justify the following stanza in its *New Year's Address*, printed a few weeks before:

"Your commerce is wantonly lost,
Your treasures are wasted and gone;
You've fought to no end, but with millions of cost,
And for rivers of blood you've nothing to boast
But credit and nation undone."

The English public, too, indulged in strong condemnation of the treaty, because it made concessions to the Americans. The following will show the feeling:

"ADVERTISEMENTS EXTRAORDINARY.

"*Wanted*.—The spirit of Elizabeth, Oliver, and William.

"*Lost*.—All idea of national dignity and honor.

"*Found*.—That every insignificant state may insult that which used to call herself MISTRESS OF THE SEAS."

Treaty of Utrecht. (See *Utrecht, The Treaty of*.)

Treaty of Westminster, THE, between England and Holland, was concluded March 6, 1674. By that treaty, proclaimed simultaneously at London and at the Hague, New Netherland was surrendered to the English. Information of this surrender was first made known to the Dutch governor, Colve, by two men from Connecticut. The inhabitants of New Orange (as New York had been renamed) were so exasperated that the bearers of the evil news were arrested and punished. They gathered in excited groups in the streets, and cursed the States-General for giving up the fairest colony belonging to the Dutch. They declared that no authority of "States" or "Prince" could compel them to yield the country to the English again; and that they would fight to defend it "so long as they could stand with one leg and fight with one hand." They had tasted of "English liberty" and found it bitter; but they quietly submitted.

Treaty with France Proposed. In September, 1776, the Continental Congress, after weeks of deliberation, adopted an elaborate plan of a treaty to be proposed to France. They wanted France to engage in a separate war with Great Britain, and so give the Americans an opportunity for establishing their independence. They renounced in favor of France all eventual conquests in the West Indies, but claimed the sole right of acquiring British Continental America, and all adjacent islands, including the Bermudas, Cape Breton, and Newfoundland. They proposed arrangements concerning the fisheries; avowed the principle of Frederick the Great that free ships make free goods, and that a neutral power may lawfully trade with a belligerent. Privateering was to be restricted, not abolished; and while the Americans were not willing to make common cause with the French, they were willing to agree not to assist Great Britain in the war on France, nor trade with that power in goods contraband of war. The

commissioners sent to negotiate the treaty were authorized to promise that, in case France should become involved in the war, neither party should make a definitive treaty of peace without six months' notice to the other.

Treaty with Great Britain, INEXECUTION OF THE (1783). For some years the British government omitted to execute the provisions of the treaty of peace with the United States concerning the delivering up of the forts on the north-eastern frontier. It was evident that Great Britain was waiting to have a definite perception of the course European affairs were to take (for affairs between her and Spain were unsettled), and of the result of the attempt of the United States to perform national functions under their weak league of states. With the settled belief that the league would soon fall in pieces, she was indifferent to her relations with the young republic, especially after she was assured that an alliance between the United States and Spain would not take place. Gouverneur Morris was directed by Washington to go to England from Paris (1791) to sound the British ministry on the subject of a full and immediate execution of the treaty. He remained there about nine months, endeavoring to obtain a positive answer to the questions, Will you execute the treaty? Will you make a treaty of commerce with the United States? After enduring ungenerous diplomacy, and treated with neglect if not with positive discourtesy, Morris left London at the close of the year. Meanwhile Lord Dorchester (Carleton) had been instructed to pass through New York to England, and endeavor to find out the real sentiments of the United States government concerning an alliance with Spain, for there was still an apprehension that it might be effected. From New York Dorchester sent his aide-de-camp to Philadelphia to sound the American government; but he went away with as little information concerning the mind of Washington and his cabinet as Morris had of that of the British government when he left London. The British had come to the conclusion that the new national government contained vastly more vitality than the league of states, and could enforce its wishes with energy; so in August, 1791, George Hammond was sent as full minister to the United States. But the treaty of 1783 was not fully executed until after that of Jay was negotiated and ratified. (See *Jay's Treaty*.)

Treaty with the Creeks (1790). (See *Creek Indians in New York*.) A treaty signed at New York, Aug. 7, 1790, by Henry Knox for the United States, and Alexander McGillivray and twenty-three other Creek chiefs, provided for the relinquishment of Georgia to claims of an immense tract of land belonging to the Creeks south and west of the Oconee River; the acknowledgment of the Creeks being under the protection of the United States; the resignation of the Creeks of all pretensions to lands north and east of the Oconee River; a mutual exchange of prisoners, and an agreement for the delivery of an Indian murderer of a white man.

A secret article provided that presents to the value of \$1500 should be distributed annually among the nation; annuities of \$100 secured to six of the principal chiefs, and \$1200 a year to McGillivray annually, in the name of a salary; also the privilege of importing goods for supplying the Indians. These money considerations to the leaders were intended to secure their fidelity to the terms of the treaty.

Treaty with the Six Nations at Philadelphia. In 1742, a treaty was held at Philadelphia by the government of Pennsylvania with deputies of the Six Nations, who agreed to release their claim to all the land on both sides of the Susquehanna River, as far south as that province extended, and northward to the Endless Mountain or Kittochatinny Hills. In compensation for this cession the Indians received goods of considerable value.

Trenton, BATTLE AT. Late in December (1776), Washington's army, by much exertion, had increased to nearly 6000 men. Lee's division, under Sullivan, and some regiments from Ticonderoga under Gates, joined him on the 21st. Contrary to Washington's expectations, the British, content with having overrun the Jerseys, made no attempt to pass the Delaware, but established themselves in a line of cantonments at Trenton, Pennington, Bordentown, and Burlington. Other corps were quartered in the rear, at Princeton, New Brunswick, and Elizabethtown; and so sure was Howe that the back of the "rebellion" was broken that he gave Cornwallis leave to return to England, and he was preparing to sail when an unexpected event detained him. Washington knew that about 1500 of the enemy, chiefly Hessians (Germans), were stationed at Trenton under Colonel Rall, who, in his consciousness of security and contempt for the Americans, had said, "What need of intrenchments? Let the rebels come; we will at them with the bayonet." He had made the fatal mistake of not planting a single cannon. Washington felt strong enough to attack this force, and at twilight on Christmas-night he had about 2000 men on the shore of the Dela-

mas festival, would be peculiarly exposed to a surprise, and he prepared to fall upon them before daylight on the morning of the 26th. With him were Generals Stirling, Greene, Sullivan, Mercer, Stephen, and Knox (the latter commissioned a brigadier two days afterwards), commanding the artillery. Arrangements were made for a similar movement against the cantonments below Trenton, the command of which was assigned to General Gates; but that officer, jealous of Washington, and in imitation of General Lee, with wilful disobedience refused the duty, and turning his back on Washington, rode on towards Baltimore to intrigue among Congressmen against General Schuyler. (See *Schuyler and Gates*.) Ice was forming in the Delaware, and its surface was covered with floating pieces. The current was swift, the night was dark, and towards midnight a storm of snow and sleet set in. It was four o'clock in the morning before

RALL'S HEADQUARTERS.

the troops in marching order stood on the New Jersey shore, boats having been hurriedly provided for their passage. The army moved in two columns—one, led by Sullivan, along a road nearest the river; the other, led by Washington, and accompanied by the other generals, along a road a little distance to the left. It was broad daylight when they reached Trenton, but they were undiscovered until they reached the picket-line on the outskirts of the village. The firing that ensued awakened Rall and his fellow-officers (who had scarcely recovered from the night's debauch) from their deep slumbers.

The colonel was now at the head of his men in battle order. A sharp conflict ensued in the village, lasting only thirty-five minutes. The Germans were defeated and dispersed, and Colonel Rall was mortally wounded, and taken to his quarters, where he died. The main body, attempting to escape by the Princeton road, were intercepted by Colonel Hand and made prisoners. Some British light-horse and infantry at Trenton escaped to Bordentown. The victory was complete. The spoils were about 1000 prisoners, 1200 small-arms, six brass

GREAT BRIDGE AT MCCONKEY'S FERRY, 1850.

were at McConkey's Ferry (now Taylorsville), a few miles above Trenton, preparing to cross the freezing flood. He rightly believed that the Germans, after the usual carouse of the Christ-

field-pieces, and all the German standards. The triumphant army recrossed the Delaware with their prisoners (who were sent to Philadelphia), and went back to their encampment. This

bold stroke puzzled and annoyed the British. Cornwallis did not sail for England, but was sent back into New Jersey. The Tories were alarmed, and the dread of the mercenary Germans was dissipated. The faltering militia soon began to flock to the standard of Washington, and many of the soldiers who were about to leave the American army re-enlisted.

Trespass Act. Some of the states whose territory had been longest and most recently occupied by the British were inclined to enact new confiscation laws. Such was the so-called Trespass Act of New York, which authorized the owners of real estate in the city to recover rents and damages against such persons as had used their buildings under British authority during the war. This act was passed before the news arrived of the terms of the Preliminary Treaty of Peace (which see). In 1786 the Supreme Court of New York, by the efforts of Hamilton, declared the Trespass Act void, as being in conflict with the Definitive Treaty of Paris (which see).

Tribunal of Arbitration. In accordance with the provisions of a treaty negotiated by the Joint High Commission (which see) to consider the matters in dispute between the governments of the United States and Great Britain and the appointment of arbitrators, the United States appointed Charles Francis Adams, and Great Britain Sir Alexander Cockburn. The two governments jointly invited the Emperor of Brazil, the King of Italy, and the President of the Swiss Confederation, each to appoint an arbitrator. The emperor appointed Baron d'Itazuba, the king chose Count Frederic Sclopis, and the President of the Swiss Confederation appointed James Staempfli. J. C. Bancroft Davis was appointed agent of the United States, and Lord Tenterden that of Great Britain. These several gentlemen formed the "Tribunal of Arbitration." They assembled at Geneva, Switzerland, Dec. 15, 1871, when Count Sclopis was chosen to preside. After two meetings they adjourned to the middle of January, 1872. A final meeting was held in September the same year, and on the 14th of that month they announced their decision on the "*Alabama* claims." That decision was a decree that the government of Great Britain should pay to the government of the United States the sum of \$15,500,000 in gold, to be given to citizens of the United States in payment of losses incurred by the depredations of the *Alabama* and other Anglo-Confederate cruisers. That amount was paid into the treasury of the United States a year afterwards. The other matters in dispute were settled. The question of boundary on the Pacific coast was referred to the Emperor of Germany, who decided in favor of the claims of the United States to the possession of the island of San Juan, the domain in dispute.

Trinity Church. The first Episcopal church organized in the province of New York was called in its charter (1697) "The Parish of Trinity Church." The wardens and vestrymen first chosen included several members of the King's Council. The following are the names of the

first officers of the church: Bishop of London, rector; Thomas Wenham and Robert Lurting, wardens; Caleb Heathcote, William Merret, John Tudor, James Emott, William Morris, Thomas Clarke, Ebenezer Wilson, Samuel Burt, James Evets, Nathaniel Marston, Michael Howden, John Crooke, William Sharpas, Lawrence Read, David Jamison, William Hudleston, Gabriel Ludlow, Thomas Burroughs, John Merret, and William Janeway, vestrymen. In 1705 a tract of land known as "The Queen's Farm" extended (on the west side of Broadway) from St. Paul's Chapel (Vesey Street and Broadway) along the river to Skinner Road, now Christopher Street. This farm was then totally unproductive. Money was collected for the building of the church. It was a small square edifice, then on the bank of the Hudson River. It was enlarged in 1737 to 148 feet in length, including the tower and chancel, and to 72 feet in width. The steeple, which was not completed until 1772, was 175 feet in height. The building was consumed in the great fire in 1776. It was rebuilt in 1788, taken down in 1839, and on May 21, 1846, the present edifice was consecrated to Christian worship. The corporation of Trinity Church still holds a portion of the land of the Queen's Farm, from which a large income is derived. That corporation has contributed generously towards the building and supporting of churches in various parts of the country and carrying on Christian work of various kinds.

Tripartite Treaty Proposed. The Spanish authorities in Cuba became thoroughly alarmed by the invasion from the United States, and also very suspicious. The idea became prevalent in Cuba and in Europe that it was the policy of the United States government to ultimately acquire absolute possession of that island, and thus have control over the commerce of the Gulf of Mexico (the door to California) and the trade of the West India group of islands, which are owned chiefly by France and England. The governments of these two countries, to prevent such a result, asked the United States to enter with them into a treaty which should secure Cuba to Spain by agreeing to disclaim "now and forever hereafter all intention to obtain possession of that island," and to "discountenance all such attempts to that effect on the part of any power or individual whatever." To this extraordinary request Edward Everett, Secretary of State, answered (Dec. 1, 1852) with keen logic and patriotic and enlightened sentiments. He told France and England plainly that the question was an American one, and not a European one, and not properly within the scope of their interference; that, while the United States disclaimed all intention to violate existing neutrality laws, it would not relinquish the right to act in relation to Cuba independent of any other power, and that it could not see with indifference "the island of Cuba fall into the hands of any other power than Spain." This was a full reiteration of the Monroe Doctrine (which see). The diplomatic correspondence on the subject ended with a reply to Secretary Everett's letter (Feb-

ruary, 1853) by Lord John Russell, the British premier. France made no rejoinder.

Tripoli, WAR WITH. The ruler of Tripoli, learning that the United States had paid larger gross sums to his neighbors (see *Algiers, Tribute to*) than to himself, demanded an annual tribute in the autumn of 1800, and threatened war in case it was refused. In May, 1801, he caused the flag-staff of the American consulate to be cut down, and proclaimed war June 10. In anticipation of this event, the American government had sent Commodore Richard Dale with a squadron to the Mediterranean. His flag-ship was the *President*. He sailed from Hampton Roads, reached Gibraltar July 1, and soon after the Bey had declared war he appeared before Tripoli, having captured a Tripolitan corsair on the way. The Bey was astonished, and the little American squadron cruising in the Mediterranean made the Barbary powers more circumspect. Recognizing the existence of war with Tripoli, the United States government ordered a squadron, under Commodore Richard V. Morris, to relieve Dale. The *Chesapeake* was the commodore's flag-ship. The vessels did not go in a body, but proceeded one after another, between February (1801) and September. Early in May the *Boston*, after taking the United States minister (R. R. Livingston) to France, blockaded the port of Tripoli. There she was joined by the frigate *Constellation*, while the *Essex* blockaded two Tripolitan corsairs at Gibraltar. The *Constellation*, left alone, had a severe contest not long afterwards with seventeen Tripolitan gunboats and some land batteries, which were severely handled. Another naval expedition was sent to the Mediterranean in 1803, under the command of Commodore Edward Preble, whose flag-ship was the *Constitution*. The other vessels were the *Philadelphia*, *Argus*, *Siren*, *Nautilus*, *Vixen*, and *Enterprise*. The *Philadelphia*, Captain Bainbridge, sailed in July, and captured a Moorish corsair of Tangier, holding an American merchant vessel. Preble arrived in August, and, going to Tangier, demanded an explanation of the Emperor of Morocco, who disclaimed the act and made a suitable apology. Then he proceeded to bring Tripoli to terms. Soon afterwards the *Philadelphia* fell into the hands of the Tripolitans. Little further of much interest occurred until early in 1804, when the boldness of the Americans in destroying the *Philadelphia* in the harbor of Tripoli greatly alarmed the Bey. (See *Philadelphia, The Frigate, Destruction of*.) For a while Preble blockaded his port; and in July, 1804, he entered the harbor (whose protection lay in heavy batteries mounting one hundred and fifteen guns) with his squadron. The Tripolitans also had in the harbor nineteen gunboats, a brig, two schooners, and some galleys, with twenty-five thousand soldiers on the land. A sheltering reef afforded further protection. These formidable obstacles did not dismay Preble. On Aug. 3 he opened a heavy cannonade and bombardment from his gunboats, which alone could get near enough for effective service. A severe conflict ensued. Finally, Lieutenant Decatur lay his vessel (the gunboat

Number Four) alongside the largest of those of the enemy, and boarded and captured her after a desperate struggle. After the Americans had sunk or captured six of the Tripolitan vessels, and inflicted a heavy loss of life on the enemy, they withdrew, but resumed the attack four days later (Aug. 7). After the loss of a gunboat and ten men, the Americans again withdrew; but renewed the attack on the 24th, without any important result. A fourth attack was made on the 28th, and, after a sharp conflict, the American squadron again withdrew, and lay at anchor off the harbor until Sept. 2, when a fifth attack was made. A floating mine, sent to blow up the Tripolitan vessels in the harbor, exploded prematurely, apparently, and destroyed all of the Americans in charge of it. (See *Intrepid, Destruction of the*.) The stormy season approaching, Preble withdrew from the dangerous Barbary coast, leaving a small force to blockade the harbor of Tripoli. Commodore Samuel Barron was sent to relieve Preble, who, with a large squadron, overawed the Moors and kept up the blockade. Meanwhile a movement under Captain William Eaton, American consul at Tunis, soon brought the war to a close. He joined Hamet Caramelli, the rightful Bey of Tunis, in an effort to recover his rights. (See *Hamet Caramelli*.) Hamet had taken refuge with the Viceroy of Egypt. There Eaton joined him with a few troops composed of men of all nations, and, marching westward across northern Africa one thousand miles, with transportation consisting of one hundred and ninety camels, on April 27, 1805, captured the Tripolitan seaport town of Derne. They fought their way successfully towards the capital, their followers continually increasing, when, to the mortification of Eaton and the extinguishment of the hopes of Caramelli, they found that Tobias Lear, the American consul-general, had made a treaty of peace (June 4, 1805) with the terrified ruler of Tripoli. So ended the war. The ruler of Tunis was yet insolent, but his pride was suddenly humbled by the appearance of a squadron of thirteen vessels under Commodore Rodgers, who succeeded Barron, and he sent an ambassador to the United States. The Barbary states now all feared the power of the Americans, and commerce in the Mediterranean Sea was relieved of great peril. Pope Pius VII declared that the Americans had done more for Christendom against the North African pirates than all the powers of Europe united.

Trist, NICHOLAS P., was born in Virginia and educated at West Point, where he was acting professor from 1819 to 1820. In 1845 he was chief clerk of the State Department, and was United States commissioner with the army under General Scott in Mexico authorized to treat for peace, which he accomplished at Guadalupe Hidalgo in January, 1848. He was afterwards United States consul at Havana. He was a personal friend and the private secretary of President Jackson. Mr. Trist married a granddaughter of Thomas Jefferson.

Troops Called into Service (1861-65). The

provost-marshal-general (James B. Fry) reported that the aggregate quotas charged against the several states, under all calls of the President, from April 15, 1861, to April 14, 1865, when drafting and recruiting ceased, was 2,759,049. The aggregate number of men put into the service of the Republic—army, navy, and marine corps—during that time was 2,656,553. In enforcing the draft, those thus chosen for service were allowed to pay a commutation-fee. The aggregate of such fees collected by the provost-marshal-general from the people of twenty states was \$26,366,316. This large sum was collected at an expense of less than seven tenths of one per centum, without the loss of a dollar through neglect, accident, fraud, or otherwise. The whole number of negro troops recruited and enlisted during the war was 186,077. Of the whole number of men called into the service, about 1,493,000 were actually there.

Troops for America Obtained in Ireland.

The people of Ireland were generally the friends of the Americans, but the placemen and her Legislature were under the control of the British ministry, who, while bargaining for the use of German mercenaries against the Americans, asked for four thousand Irishmen to send thither, and to receive in their stead four thousand German Protestants. This proposition was vehemently opposed in the debates on the subject. "The war is unjust, and Ireland has no reason to be a party therein." "If men must be sent to America to butcher men who are fighting for their liberty," said George Ogle, "send these foreign mercenaries, not the brave sons of Ireland." Notwithstanding strong opposition, the Irish Parliament voted (one hundred and twenty-one against seventy-six) to supply four thousand troops.

Troubles with the Carolina Proprietaries.

Almost from the beginning the colonists in Carolina evinced an independent disposition that greatly annoyed the proprietaries. A greater portion of the difficulties arose because of the rapacity or maladministration of the governors sent to rule them, and, a little later, from the attempts to enforce upon them the government called the Grand Model, or Fundamental Constitutions (which see). There were quarrels and insurrections and continual efforts to secure immunity from taxation of every kind; and the country was seldom at peace internally until the proprietaries abandoned their magnificent scheme of government and the mild and just administration of the Quaker governor, John Archdale, began in 1695.

Troup, ROBERT, LL.D., was born in New York city in 1757; died there, Jan. 21, 1832. He graduated at King's (now Columbia) College in 1774; studied law under John Jay; and joined the army on Long Island as lieutenant in the summer of 1776. He became aid to General Woodhull; was taken prisoner at the battle of Long Island; and was for some time in the prison-ship *Jersey* and the provost jail at New York. Exchanged in the spring of 1777, he joined the Northern army, and participated in the capture

of Burgoyne. In 1778 he was Secretary of the Board of War. After the war he was made Judge of the United States District Court of New York, holding that office several years. Colonel Troup was the warm personal and political friend of Alexander Hamilton. For many years he resided at Geneva, N. Y., as principal agent of the great Pulteney estate.

Trumbull, JOHN, soldier and artist, son of Governor Jonathan Trumbull, was born at Lebanon, Conn., June 6, 1756; died in New York city, Nov. 10, 1843. He graduated at Harvard University in 1773. Having made an accurate sketch of the works around Boston in 1775, he attracted the attention of Washington, who, in August of that year, made him one of his aides-de-camp. He became a major of brigade, and in 1776 deputy adjutant-general of the Northern Department, with the rank of colonel. In February, 1777, he retired from the army, and went to London to study painting under West. On the execution of Major André (October, 1780), he was seized and cast into prison, where he remained eight months. In 1786 he painted his "Battle of Bunker's Hill." From 1789 to 1793 he was in the United States, painting portraits for his historical pictures (now in the rotunda of the national Capitol)—"The Declaration of Independence," "The Surrender of Burgoyne," "The Surrender of Cornwallis," and the "Resignation of Washington at Annapolis." In 1794 Trumbull was secretary to Jay's mission to London (see *Jay's Treaty*), and was appointed a commissioner (1796) to carry the treaty into execution. He returned to America in 1804, and went back to England in 1808, when everything American was so unpopular that he found little employment. He came back, settled in New York, and assisted in founding the Academy of Fine Arts there, of which he was president from 1816 to 1825. Mr. Trumbull painted a large number of pictures of events in American history. In consideration of receiving from Yale College \$1000 a year during his life, Colonel Trumbull presented to that institution fifty-seven of his pictures, which form the "Trumbull Gallery" there. The profits of the exhibition, after his death, were to be applied towards the education of needy students.

Trumbull, JOHN, LL.D., poet, was born at Westbury (since Watertown), Conn., April 24, 1750; died at Detroit, Mich., May 10, 1831. He graduated at Yale College in 1767, having been admitted to the college at the age of seven years, such was his precocity in acquiring learning. But he did not reside there until 1763, on account of delicate health. In 1773 he was admitted to the bar, having been two years a tutor in Yale College. During that time he wrote his first considerable poem, *The Progress of Dulness*. He was a warm and active patriot. In 1775 the first canto of his famous poem, *McFingal*, was published in Philadelphia. The whole work, in four cantos, was published at Hartford in 1782. It is a burlesque epic, in the style of *Hudibras*, directed against the Tories and other enemies of liberty in America. This famous

poem has passed through more than thirty editions; the last, with notes by Benson J. Lossing, was issued by G. P. Putnam in 1864. After the war, Trumbull, with Humphreys, Barlow, and Lemuel Hopkins, wrote a series of poetic essays, entitled *American Antiquities*, pretended extracts from a poem which they styled *The Anarchiad*. It was designed to check the spirit of anarchy then prevailing in the feeble Union. From 1789 to 1795 Mr. Trumbull was state attorney for Hartford; and he was a member of the Legislature in 1792 and 1800. He was a judge of the Supreme Court for eighteen years (1801-19), and Judge of the Court of Errors in 1808. In 1825 he removed to Detroit, and spent the remainder of his years there with his daughter, the wife of Governor Woodbridge.

Trumbull, JONATHAN, son of Governor Trumbull, was born at Lebanon, Conn., March 26, 1740; died Aug. 7, 1809. He graduated at Harvard University in 1759. When the war for independence broke out, he was an active member of the Connecticut Assembly, and its speaker. From 1775 to 1778 he was paymaster of the Northern army; and in 1780 he was secretary and first aid to Washington, remaining in the military family of the commander-in-chief until the close of the war. He was a member of Congress from 1789 to 1795—speaker from 1791 to 1795; United States Senator in 1795-96; and Lieutenant-governor of Connecticut in 1796. He became governor in 1797, and held the office until his death.

Trumbull, JONATHAN, LL.D., Governor of Connecticut from 1769 to 1783, was born at Lebanon, Conn., June 10, 1710; died there, Aug. 17, 1785. He graduated at Harvard University

JONATHAN TRUMBULL

in 1727; preached a few years; studied law; and became a member of Assembly at the age of twenty-three. He was chosen lieutenant-governor in 1766, and became *ex-officio* Chief-justice of the Superior Court. In 1768 he boldly refused to take the oath enjoined on officers of the crown, and in 1769 he was chosen gov-

ernor. Trumbull was the only Colonial governor who espoused the cause of the people in their struggle for justice and freedom. In the absence in Congress of the Adamses and Hancock from New England, Trumbull was considered the Whig leader in that region, and Wash-

THE TRUMBULL HOUSE, 1850.

ington always placed implicit reliance upon his patriotism and energy for support. (See *Brother Jonathan*.) His sons, Jonathan and Joseph, were both active patriots during the war for independence. Governor Trumbull's dwelling-house was a substantial frame building in Lebanon, and was yet well preserved in 1850. Then his "war-office," in which many a patriotic scheme was planned, grave questions settled, and daring enterprises resolved upon and put in motion, was well preserved—a quaint

GOVERNOR TRUMBULL'S WAR-OFFICE

old building, with its gabled roof and shingled sides.

Trumbull, JOSEPH, commissary-general from 1775 to 1777, was born at Lebanon, Conn., March 11, 1737; died July 23, 1778. He graduated at Harvard University in 1756. In July, 1775, he was made commissary-general of the Continental army. In November, 1777, he was made a commissioner of the Board of War, which office he resigned in April, 1778, on account of ill-health, and died a few weeks afterwards.

Truxton, THOMAS, was born at Jamaica, L. I., Feb. 17, 1755; died at Philadelphia, May 5, 1822. He went to sea when he was twelve years of age, and for a short time was impressed on board a British man-of-war. Lieutenant of the privateer *Congress* in 1776, he brought one of her prizes to New Bedford; and in June, 1777, com-

MEDAL PRESENTED TO COMMODORE TRUXTUN.

manding the *Independence*, owned by himself and Isaac Sears (which see), he captured three valuable prizes off the Azores. Truxtun performed other brave exploits during the war for independence, and was afterwards extensively engaged in the East India trade in Philadelphia. In 1794 he was made captain of the new frigate *Constellation*, and in 1793-99 he made two notable captures of French vessels of superior size—*L'Insurgente*, of 40 guns and 409 men, and *La Vengeance*, of 54 guns and 400 men. The former was a famous frigate, and the engagement with her, which lasted one hour and a quarter, was very severe. *L'Insurgente* lost seventy men killed and wounded, the *Constellation* only three men wounded. (See *Constellation and L'Insurgente*.) The action with *La Vengeance* was equally severe. The vessels were fought at pistol-shot distance, the engagement lasting till one o'clock in the morning. *La Vengeance*, much crippled, escaped before daylight, and Truxtun lost his

prize. This second victory gave him great popularity, and Congress voted him the thanks of

NAVAL PITCHER.

the nation and a gold medal. These victories, at that critical time, made the navy very popular, and "The Navy" became a favorite toast at all banquets. Pictures of naval battles and naval songs filled the shop-windows, and some earthen pitchers, of different sizes, were made in Liverpool for an American crockery merchant in commemoration of the American navy. The small engraving shows the appearance of one of these. In 1801 Truxtun was transferred to the *President*, and was commodore on the Guadeloupe station, with ten sail under his command at one time. In 1802 he was appointed to command an expedition against Tripoli, but declined the service because he was denied a captain for his flag-ship. Jefferson dismissed him from the service. From 1816 to 1819 Truxtun was High-sheriff of Philadelphia. His remains were buried in Christ Church-yard, in that city, and his grave is marked by an upright slab of white marble.

Tryon, WILLIAM, a royal colonial governor, was born in Ireland; died in London, Feb. 27, 1788. He became a reputable officer in the British army, and mar-

TRUXTUN'S GRAVE.

ried Miss Wake, a beautiful and accomplished kinswoman of the Earl of Hillsborough, the Secretary of State for the Colonies. Through him Tryon procured the office of Lieutenant-governor of North Carolina in 1764, and on the death of Governor Dobbs, in 1765, he was appointed governor. He was fond of ostentatious display, and built a palace at New Berne at an expense to the colony of \$25,000. To gain this appropriation, Lady Tryon and her beautiful sister, Esther Wake, gave brilliant balls and dinner-parties to the members of the Legislature and used every blandishment they possessed. The taxes on account of this palace added greatly to the burdens of the people, and brought about the "Regulator" movement in the western counties. The history of

ure of a large amount of stores in a fortification at Bermuda. He commanded a regiment at the siege of Yorktown, where he was severely wounded. After the war he became a Virginia legislator, a reviser and digester of the laws of Virginia, professor in the College of William and Mary, and member of the convention at Annapolis in 1786, which led to that of 1787 that framed the national Constitution. He was a judge in the state courts nearly fifty years, and in the Court of Appeals from 1803 to 1811. In 1813 he was made a judge of the United States District Court. Judge Tucker was possessed of fine literary taste and keen wit, and he was a poet of no ordinary ability. He wrote some poetical satires under the name of Peter Pindar; also some political tracts; and in 1803 he published an annotated edition of Blackstone.

Tucker, SAMUEL, was born at Marblehead, Mass., Nov. 1, 1747; died at Bremen, Me., March 10, 1833. Before the Revolution he was a captain in the merchant service, sailing between Boston and London. In March, 1777, he was commissioned a captain in the Continental navy, and, in command of the *Boston*, he took John Adams to France as American minister in February, 1778. During 1779 he took

SEAL AND SIGNATURE OF TRYON.

Tryon's administration in North Carolina is a record of folly, extortion, and crime, and he gained the name of "The Wolf of North Carolina." He was Governor of New York when the war for independence broke out, and he was the last governor of that province appointed by the crown. Compelled to take refuge from the Sons of Liberty on board a vessel in New York harbor, it proved to be a permanent abdication. He entered the British military service, and engaged in several disreputable marauding expeditions. His property in North Carolina was confiscated. He went to England in 1780, and became lieutenant-general in 1782.

Tucker, JOSIAH, D.D., an English divine, was born at Langham, Wales, in 1711; died at Gloucester, England, Nov. 4, 1799. Educated at Oxford, he took orders, and was for many years a rector in Bristol. From 1758 he was Dean of Gloucester. He was a prolific writer on political and religious subjects, and published several tracts on the dispute between Great Britain and the American colonies, which attracted much attention, as at an early period he recommended a separation of the colonies from the empire and the recognition of their independence.

Tucker, ST. GEORGE, LL.D., was born at Port Royal, Bermuda, June 29, 1752; died at Edgewood, Nelson Co., Va., in November, 1827. He graduated at the College of William and Mary in 1772; studied law; but entered the public service at the beginning of the Revolution, planning and assisting personally in the seiz-

many prizes. In 1780 he helped in the defence of Charleston; was made prisoner; and was released in June, 1781, when he took command of *The Thorne*, and made many prizes, receiving, at the close of the war, the thanks of Congress. He settled in Bristol, Me., in 1792; and during the War of 1812 he captured, by a trick, a British vessel which had greatly annoyed the shipping in that vicinity. He was several times in the legislatures of Maine and Massachusetts.

Tunisian Ambassador, THE. When Tobias Lear made a treaty with the Bey of Tunis (see *War with Tunis*) an ambassador was sent by that power to the United States. He came in 1806, was received with much ceremony, and entertained at the public expense. He insisted upon having the best house in Washington for his dwelling; and he visited, at the public expense, the principal cities in the Union. He was an expensive and not very welcome "guest of the nation," and did not remain long.

Tupper, BENJAMIN, was born at Stonington, Conn., in 1738; died at Marietta, O., in June, 1792. He was a soldier in the French and Indian War, and afterwards taught school at Easton. He was very active in the siege of Boston, and was colonel of a Massachusetts regiment early in 1776. In August that year he commanded the gunboats and galleys in the North (Hudson) River; served under Gates in the Northern army in 1777; was in the battle of Monmouth the next year; and before the end of the war was made a brigadier-general. Tupper was one of the originators of the Ohio Land

Company, and was appointed surveyor of Ohio lands in 1785. In suppressing Shays's Insurrection (which see) he was distinguished. He settled at Marietta in 1787, and became judge in 1788.

"Turn down for Richmond, quick." These words were sent by telegraph from Fortress Monroe to the operator at Washington between nine and ten o'clock in the morning, April 3, 1865. The operator at Washington—W. E. Kittles, then a boy of fifteen—thought it a grim joke, for there had been no communication by telegraph with the Confederate capital since the beginning of the war; but he lad quickly "turned down for Richmond." Signals of the operator at Richmond were bounding along the line to Washington. When communication was assured, the following message—the first in four years—came:

"RICHMOND, Va., April 3, 1865.

"Hon. E. M. Stanton, Secretary of War:—We entered Richmond at eight o'clock this morning.

"G. WEITZEL, Brigadier commanding."

Kittles carried the message to General Eckert's room, where President Lincoln sat, and when made aware of its tenor, he hurried with it to Secretary Stanton. The news soon spread over the national capital and the Union, producing great joy among the loyal people.

Turner, THOMAS, was born in Virginia, April 21, 1808, and entered the navy in April, 1825. He was actively engaged in the war with Mexico. In command of the sloop-of-war *Saratoga*, he captured two Spanish steamers in the harbor of San Antonio, March 6, 1860. In the attack on the forts in Charleston harbor, in April, 1863, he commanded the *New Ironsides*. In 1869-70 he commanded the Pacific squadron. In May, 1868, he was made rear-admiral, and retired in 1870.

Turner's Falls, FIGHT WITH INDIANS NEAR. Around the falls in the Connecticut River known as Turner's a sharp action occurred in May, 1676. A large body of Indians, who had desolated Deerfield, were encamped around these falls. Captain Turner was then in command of the English troops in the valley, and, taking one hundred and twenty mounted men, started on a night ride through Hadley and Deerfield in search of Indians. He found them fast asleep in their camp, and surprised them. Many fled to their canoes, but, leaving their paddles behind, went over the falls. Others hid away among the rocks, and were killed, and others were shot while crossing the river. After the battle the bodies of one hundred Indians were found dead at their camp, and one hundred and forty who went over the falls perished. About three hundred Indians were destroyed. Turner lost only one man. Another party of Indians were soon on his track, and a panic seized the troops when it was rumored that King Philip, with one thousand men, were in pursuit. A running fight occurred. Turner was killed, many of his men were slain, and Captain Holyoke, who took command of the whole, died not long afterwards from the effects of the excitement and fatigue of the eventful May 10, 1676. It was a severe blow to King Philip.

Turpentine State, a popular name given to North Carolina, from which state immense quantities of turpentine are exported.

Turreau's Rudeness. Monsieur Turreau, the French minister at Washington, was as rude in his diplomatic intercourse with the United States as was Yrugo, the Spanish minister. When the arrangement made with Erskine (which see) was proclaimed, Turreau addressed a very rude note to the Secretary of State, in which he severely reflected on the conduct of the American government, accusing them of partiality for Great Britain; complaining loudly of the freedom of the American press in its comments on France, her institutions, and "the sacred person of her august representative" (Napoleon); specifically declaring that, until these grievances should be redressed, especially the last, the emperor would never consent to the renewal of the convention of commerce, which was about to expire—a convention which had been continually disregarded with signal contempt in the issue and enforcement of the Berlin, Milan, and Bayonne decrees.

Tuscaroras, a tribe of the Iroquois Confederacy, who were separated from their kindred at an early day, and were seated in North Carolina when the Europeans came. They were divided into seven clans, and at the beginning of the eighteenth century occupied fifteen villages and had twelve hundred warriors. They attempted to exterminate the white people in North Carolina in 1711, but troops that came to the aid of the assailed from South Carolina chastised them in a battle fought near the Neuse (Jan. 28, 1712), killing and wounding four hundred of them. They made peace, but soon broke it. At war again in 1713, they were subdued by Colonel Moore, of South Carolina, at their fort near Snow-hill (March 20), who captured eight hundred of them. The remaining Tuscaroras fled northward, and joined their kindred of the Iroquois Confederacy, constituting the sixth nation of that league.

Twiggs, DAVID EMANUEL, was born in Richmond County, Ga., in 1790; died at Augusta, Ga., Sept. 15, 1862. He entered the United States military service as captain in the spring of 1812, and became major of infantry in 1814. In 1836 he became colonel of dragoons, and as commander of a brigade he distinguished himself in the battles of Palo Alto and Resaca de la Palma (which see). He was made brigadier-general June 30, 1846, and was breveted major-general for gallantry at Monterey (which see). Twiggs commanded a division in Scott's campaign in Mexico in 1847, and in 1848 he was made civil and military governor of Vera Cruz. Early in 1861 he was in command of United States troops in Texas, and betrayed them (in February) into the hands of the enemies of his government, for which crime he was dismissed from the army March 1, 1861. He was then given an important position in the Confederate army, and was for a short time in command at New Orleans, resigning towards the close of 1861.

Twiggs, DAVID E., TREACHEROUS CONDUCT

OF. General Twiggs had served his country honorably in its armies for forty years, but the virus which corrupted so many noble characters did not spare him. He was a native of Georgia, and seems to have been under the complete control of the Secession leaders. He was placed in command of the Department of Texas only a few weeks before the act about to be recorded occurred. A state convention of politicians in Texas appointed a committee of safety (see *Texas Secession Ordinance*), who sent two of their number (Devine and Maverick) to treat with Twiggs for the surrender of United States troops and property into the hands of the Texas insurgents. Twiggs had already shown signs of disloyalty. These had been reported to the War Department, when Secretary Holt, in a general order (Jan. 18), relieved him from the command in Texas, and gave it to Colonel Charles A. Waite. When Devine and Maverick heard of the arrival of the order in San Antonio, they took measures to prevent its reaching Colonel Waite, who was sixty miles distant; but the vigilant Colonel Nichols, who had watched the movements of the general with the keen eye of suspicion, foiled them. He duplicated the orders, and sent two couriers with them, by different routes. One of them reached Waite Feb. 17; but the dreaded mischief had been accomplished. Twiggs had been cautious. He did not commit himself in writing; he always said, "I will give up everything." He was now allowed to temporize no longer. He had to find an excuse for surrendering his troops, consisting of two skeleton corps. It was readily found. Ben McCulloch, the famous Texan Ranger, was not far off, with a thousand men. He approached San Antonio at two o'clock on the morning of Feb. 10, 1861. He had been joined by armed Knights of the Golden Circle (which see) near the town. With a considerable body of followers, he rushed into the town with yells, and took possession. Twiggs, pretending to be surprised, met McCulloch in the Main Plaza, and there, at noon, Feb. 16, a negotiation for surrender (begun by the commissioners so early as the 7th) was consummated. He gave up to the insurgent authorities of Texas all the National forces in that state, about two thousand five hundred in number, and with them all the stores and munitions of war, valued, at their cost, at \$1,200,000. He surrendered all the forts in his department. By this act Twiggs deprived the government of the most effective portion of the regular army. When the government heard of it, an order was issued (March 1, 1861) for his dismissal "from the Army of the United States for treachery to the flag of his country." Twiggs threatened, in a letter to the ex-President, to visit Buchanan in person, to call him to account for officially calling him a "traitor." Earlier than this, a benevolent institution in New Orleans (Charity Lodge of the Sons of Malta) had expelled him (Feb. 25); but on March 12 the Secession Convention of Louisiana united with citizens of New Orleans in honoring Twiggs with a public reception. The betrayed troops, who, with most of their officers, remained loyal,

were allowed to leave Texas, and went to the North, taking quarters in Fort Hamilton, at the entrance to New York Harbor.

Tyler, DANIEL, was born at Brooklyn, Conn., Feb. 22, 1799. He graduated at West Point in 1819. In 1828-29 he visited France, to study improvements in artillery; and in May, 1834, he resigned, and practised the profession of civil engineer. At the breaking-out of the Civil War he became colonel of the First Connecticut Volunteers, and soon afterwards brigadier-general of three-months troops. Next in rank to General McDowell, he was second in command in the battle of Bull's Run. In March, 1862, he was ordered to the West, and commanded a division of the Army of the Mississippi. Afterwards he was employed in guarding the Upper Potomac. When the Confederate army invaded Maryland, in 1863, he was in command at Harper's Ferry. General Tyler resigned April 6, 1864.

Tyler, JOHN, tenth President of the United States, was born in Charles City County, Va., March 29, 1790; died at Richmond, Va., Jan. 17, 1862. He graduated at the College of William and Mary in 1807, and was admitted to the bar

JOHN TYLER.

in 1809. Two years afterwards he was elected a member of the Virginia Legislature, and was re-elected for five successive years. In 1816 he was appointed to fill a vacancy in Congress—and was twice re-elected—in which he opposed all internal improvements by the general government, the United States Bank, a protective tariff, and all restrictions on slavery. He was afterwards in the State Legislature, and in December, 1825, was chosen Governor of Virginia by the Legislature, to fill a vacancy. In 1827 he became a member of the United States Senate, and was re-elected in 1833, when he was a firm supporter of the doctrine of state supremacy, and avowed his sympathy with the South Carolina Nullifiers. He joined the Whig party, and was elected by them Vice-President of the United States in 1840. On the death of President Harrison he became, by a provision of the Constitution, President. He lost the confidence of both par-

ties by his acts during his administration, and was succeeded in the Presidential office by James K. Polk, in 1837. All of his cabinet excepting Mr. Webster resigned in 1837, and he left it after an important treaty had been concluded and ratified (August, 1842), when Hugh S. Legaré succeeded him. The last important act of Tyler's administration was signing the act for the annexation of Texas (which see). He had been nominated for the Presidency by a convention of office-holders in May, 1844, but in August, perceiving that he had no popular support, he withdrew from the contest. In February, 1861, Mr. Tyler was President of the Peace Convention (which see) held at Washington city. Soon afterwards he withdrew his allegiance to the United States, and used his best endeavors in support of the cause of those who tried to destroy the Union.

Tyranny in New England. Governor Andros, appointed by James II. President of New England, exercised his powers in a tyrannous manner. He, with his council, made laws and

levied taxes at their pleasure. Without the voice of an assembly, they levied a penny on the pound on all the estates in the country, and another penny on all imported goods, besides twenty pence per head as poll-tax, and an immoderate excise on wine, rum, and other liquors. In many towns the inhabitants refused to levy the assessments; and as this was construed by the tyrant as seditious, punishments were inflicted. The selectmen of Ipswich voted, in 1688, "That inasmuch as it is against the privilege of English subjects to have money raised without their own consent in an assembly or parliament, therefore they will petition the king for liberty of an assembly before they make any rates." For this offence Sir Edmund caused them to be fined—some \$100, some \$150, and some \$250. So offensive became the government of Andros that some of the principal colonists sent the Rev. Increase Mather to England to represent their grievances to the king. His agency availed nothing, for Andros was acting under instructions from the monarch.

U.

Uchees. This was a diminutive Indian nation, seated in the beautiful country in Georgia extending from the Savannah River at Augusta to Milledgeville and along the banks of the Oconee and the headwaters of the Ogeechee and Chattahoochee. They were once a powerful nation, and claimed to be the oldest on the continent. Their language was harsh, and unlike that of any other; and they had no tradition of their origin, or of their ever having occupied any other territory than the domain on which they were found. They have been driven beyond the Mississippi by the pressure of civilization, and have become partially absorbed by the Creeks. Their language is almost forgotten, and the Uchees are, practically, one of the extinct nations.

Ulloa, FRANCISCO DE, a Spanish discoverer of California, was a lieutenant of Cortez in his explorations in America, and was left by him, in 1535, in charge of the colony of Santa Cruz. In 1539-40 he commanded the expedition that explored California, giving to the Gulf the name of *Sea of Cortez*. Ulloa discovered that southern California was a peninsula.

Ultimatum of Massachusetts (1774). On March 5, 1774, John Hancock and Samuel Adams spoke to a great meeting of citizens in Faneuil Hall. The former said: "Permit me to suggest a general congress of deputies from the several houses of assembly on the continent as the most effectual method of establishing a union for the security of our rights and liberties." Samuel Adams said: "It will be in vain for any to expect that the people of this country will now be contented with a partial and temporary relief, or that they will be amused by court promises while they see not the least relaxation of grievances. By means of a brisk correspondence among the several towns in this

province they have wonderfully animated and enlightened each other. They are united in sentiments, and their opposition to unconstitutional measures of government is become systematical. Colony begins to communicate freely with colony. There is a common affection among them; and shortly the whole continent will be as united in sentiment and in their measures of opposition to tyranny as the inhabitants of this province. Their old good-will and affection for the parent country are not totally lost; if she returns to her former moderation and good-humor, their affection will revive. They wish for nothing more than a permanent union with her upon the condition of equal liberty. This is all they have been contending for; and nothing short of this will, or ought to, satisfy them." This was the ultimatum of Massachusetts. The General Congress followed. (See *Continental Congress, The First*.)

Ultimatum of the Secessionists. Senator Wigfall, of Texas, on the floor of the United States Senate (Feb. 21, 1861), spoke for the Secessionists and their Northern friends, as their ultimatum, these pregnant words: "We say that man has a right to property in man. We say that our slaves are our property. We say that it is the duty of every government to protect its property everywhere. . . . If you wish to settle this matter, declare that slaves are property, and, like all other property, entitled to be protected in every quarter of the globe, on land and on the sea. Say that to us, and then the difficulty is settled."

Ultimatum of the United States (1779). Vergennes pressed the United States, through the French minister at Philadelphia, to accede to the demands of Spain, the price of whose friendship was Pensacola and the exclusive navigation of the Mississippi River. It was

intimated that if these demands were not complied with, Spain and England might make common cause against the Americans. Congress referred the subject (Feb. 17, 1779) to a special committee, composed of Gouverneur Morris, Burke, Witherspoon, Samuel Adams, and Smith of Virginia. They reported (Feb. 23) as the ultimatum of the United States, in case of the acknowledgment of the independence of the new Republic by Great Britain, that the territory should extend from the Atlantic to the Mississippi, and from the Floridas to Canada and Nova Scotia; that the right of fishing and curing fish on the Banks of Newfoundland should belong equally to the United States, France, and Great Britain; and that the navigation of the Mississippi should be free to the United States down to the southern boundary, with the benefit of a free port below, in the Spanish dominion. Ten states refused to adopt the clause concerning the right to the free navigation of the Mississippi, for it was a question between the United States and Spain alone. Great Britain, according to the American view of the case, was not to possess any territory on the Mississippi, from its source to its mouth. The Congress also agreed to a clause making it optional with the United States to extend their boundaries westward from Lake Ontario on the parallel of the forty-fifth degree. In May, 1779, Congress went back on its resolve "that in no case, by any treaty of peace, should the common right of the fisheries be given up." In June the question of the terms of peace was again discussed, and the French minister, alarmed lest the action of Congress might break the then political connection between France and Spain (see *Convention between France and Spain*), sought an interview with leading members of that body. In that interview he threatened the United States with disaster if the policy of France and Spain should not be complied with. He tried to persuade the United States to end the war by a truce. But finally the Congress, unwilling to give up the navigation of the Mississippi and other demands of Spain, ended the discussion for the time by resolving to send a minister of its own to Spain. On Sept. 26 the Congress appointed John Jay minister to Spain, and John Adams was appointed to negotiate a treaty of commerce with Great Britain. Spain refused to receive Jay.

Unauthorized Use of Public Money. Through the efforts of young John Laurens, Dr. Franklin had received from the French government a large sum of money, which Laurens brought to the United States. The French government wished it to be disbursed by Washington, but he refused a trust which would have aroused the jealousy of Congress. South Carolina had at that time an unexecuted contract in Holland for supplies. Laurens, who was acting for his state (South Carolina) as well as for the United States, made a transfer of the funds to South Carolina, and, "without taking the pains," says Bancroft, "to understand the condition of the business, and without su-

perintending it, paid all arrears out of the funds obtained from France. South Carolina was relieved from a burdensome engagement; while great aid, as it proved, useless expenses were thrown on the United States."

Uncas, Sachem of the Mohegans in Connecticut, died at Norwich, Conn., about 1682, at a great age. His remains rest under a monument of granite in the Mohegan royal cemetery, upon a high plain in Norwich. Uncas was originally

UNCAS'S MONUMENT.

a Pequod sachem, but about the year 1635 he revolted against Sassacus and gathered a band of Indians who were known by the name of Mohegans, the ancient title of his nation. He joined the English in their war with the Pequods in 1637 (see *Pequod War*), and received for his services a portion of the Pequod territory. When the war was over, Uncas shielded many of the Pequods from the wrath of the English, and incurred the enmity of the colonists for a time; but the white people soon gave him their confidence, and treated him with so much distinction that jealous Indians tried to assassinate him. For this treachery Uncas conquered one of the sachems on the Connecticut River, and in 1643 he overpowered the Narragansets and took Miantonomoh prisoner. By consent of the authorities at Hartford, he caused the Narraganset monarch to be put to death. Having cut a piece from the shoulder of his fallen enemy, the savage Uncas eagerly devoured it, declaring that it made his heart strong—"the sweetest morsel he ever ate." A block of granite marks the spot, near Norwich, where Miantonomoh was slain. In 1648 the Mohawks and others waged an unsuccessful war against Uncas. In 1657 he was besieged in his stronghold on the Connecticut River by the Narraganset chief Pessacus, and was nearly starved out when some white soldiers came to his relief with supplies. For this act Uncas gave the white leader (Ensign Leffingwell) a deed for the land on which Norwich now stands, but afterwards sold it to a company. A writer, in 1674, alluded to him as "an old and wicked, wilful man, a drunkard, and otherwise very vicious, who hath always been an opposer and underminer of praying to God."

Uncle Sam. A cant name of the government of the United States. Its origin was as follows: Samuel Wilson, commonly called "Uncle Sam," was an inspector of beef and pork, at Troy, N. Y., purchased for the government after the declaration of war against England in 1812. A contractor named Elbert Anderson purchased a quantity of provisions, and the barrels were marked "E. A.," the initials of his name, and "U. S.," for United States. The latter initials were not familiar to Wilson's workmen, who inquired what they meant. A facetious fellow answered, "I don't know, unless they mean 'Uncle Sam!'" A vast amount of property afterwards passed through Wilson's hands, marked in the same way, and he was rallied on the extent of his possessions. The joke spread, and it was not long before the initials of the United States were regarded as "Uncle Sam," which name has been in popular parlance ever since. The song says:

"Uncle Sam is rich enough to give us all a farm."

Underground Railroad. A popular designation of the secret means by which slaves, fleeing from the slave-labor states for their liberty, escaped through the Northern States into Canada during the operation of the Fugitive Slave Law. These secret means were various kinds of aid given to the slaves by their Northern friends. (See *Fugitive Slave Law*.)

Underhill, CAPTAIN JOHN, was born in Warwickshire, England; died at Oyster Bay, L. I., about 1672. He had been a soldier on the Continent; came to New England with Winthrop in 1630; represented Boston in the General Court; favored Mrs. Hutchinson (see *Hutchinsonian Controversy*); and was associated with Captain Mason, in command of forces in the Pequot War, in 1637. Banished from Boston as a heretic, he went to England, and there published a history of the Pequot War, entitled *News from America*. Dover, N. H., regarded as a place of refuge for the persecuted, received Underhill, and he was chosen governor. It was discovered that it lay within the chartered limits of Massachusetts, and the latter claimed political jurisdiction over it. Underhill treated the claim with contempt at first, but, being accused of gross immorality, he became alarmed, and not only yielded his power, but urged the people to submit to Massachusetts. He went before the General Court and made a most abject confession of the truth of the charges. He did the same publicly in the church, and was excommunicated. He afterwards lived at Stamford, Conn., and in 1646 went to Flushing, L. I. In the war between the Dutch and Indians he commanded troops, and in 1655 he represented Oyster Bay in the Assembly at Hempstead. His descendants still possess lands given him by Indians on Long Island.

Unfaithful Cabinet Ministers. Three of President Buchanan's cabinet ministers were unfaithful to their trusts, and were engaged in a conspiracy for the overthrow of the Republic while in office and sworn to protect it from harm. These were the Secretary of the Treas-

ury, Howell Cobb, of Georgia; the Secretary of War, John B. Floyd, of Virginia; and the Secretary of the Interior, Jacob Thompson, of Mississippi. These men had evidently been engaged in secret movements against the life of the Republic before they became cabinet ministers. After the nomination of Mr. Lincoln, whose election seemed certain, they were active in movements tending to the destruction of the Union. The Assistant Secretary of State, W. H. Trescott, one of the most active members of the "Southern Rights Association" of South Carolina, revealed not only this fact, but the secret designs of the Secretary of the Treasury, so early as Nov. 1, 1860. In a letter of that date (the original is before me) he wrote from Washington to the editor of the *Charleston Mercury*, as follows:

"DEAR RHETT,—I received your letter this morning. As to my views or opinions of the administration, I can, of course, say nothing. As to Mr. Cobb's views, he is willing that I should communicate them to you, in order that they may aid you in forming your own judgment; but you will understand that this is confidential—that is, neither Mr. Cobb nor myself must be quoted as the source of your information. I will not dwell on this, as you will, on a moment's reflection, see the embarrassment which might be produced by any authorized statement of his opinions. I will only add, by way of preface, that, after the very fullest and freest conversations with him, I feel sure of his earnestness, singleness of purpose, and resolution in the whole matter. Mr. Cobb believes that the time is come for resistance; that upon the election of Lincoln, Georgia ought to secede from the Union; and that she will do so. That Georgia and every other state should, as far as secession, act for herself, resuming her delegated powers, and thus put herself in position to consult with other sovereign states who take the same ground. After the secession is effected, then will be the time to consult. But he is of opinion, most strongly, that whatever action is resolved on should be consummated on the 4th of March, not before. That while the action determined on should be decisive and irrevocable, its initial point should be the 4th of March. He is opposed to any Southern convention merely for the purpose of consultation. If a Southern convention is held, it must be of delegates empowered to act, whose action is at once binding on the states they represent. But he desires me to impress upon you his conviction that any attempt to precipitate the actual issue upon this administration will be most mischievous—calculated to produce differences of opinion and destroy unanimity. He thinks it of great importance that the cotton crop should go forward at once, and that the money should be in the hands of the people, that the cry of popular distress should not be heard at the outset of this move.* My own opinion is, it would be well to have a discreet man—one who knows the value of silence, who can listen wisely—at Milledgeville [capital of Georgia], at the meeting of the State Legislature, as there will be there an outside gathering of the very ablest men of the state. And the next point, that you should, at the earliest possible day of the session of our own Legislature, elect a man as governor whose name and character will conciliate, as well as give confidence to, all the men of the state. If we do act, I really think this half the battle—a man on whose temper the state can rely. I say nothing about a convention, as I understand on all hands that it is a fixed fact, and I have confined myself to answering your questions. I will be much obliged to you if you will write me soon and fully from Columbia. It is impossible to write to you, with the constant interruption of the office, and, as you want Cobb's opinion, not mine, I send this to you.

Yours, W. H. T."

Floyd acted, but did not write. He stripped the arsenals of the free-labor states of arms and ammunition, and crowded those of the slave-labor states with these munitions of war. (See *Floyd's Disloyal Acts*.) Thompson had been an avowed disunionist for ten years. From his seat in Congress in 1850 he wrote (Sept. 2) to General

* It was a common practice for the planters to receive pay for their crops in advance. The crop then to "go forward" was already paid for. The money which was to be received on its delivery was for the next year's crop, which would never be delivered. So the Northern people would lose many million dollars.

Quitman, then Governor of Mississippi, saying, "When the President of the United States commands me to do one act, and the executive of Mississippi commands me to do another thing inconsistent with the first order, I obey the governor of my state. To Mississippi I owe *allegiance*, and, because she commands, I owe *obedience* to the United States"—the doctrine of state supremacy in a nutshell. On Nov. 20, 1860, Thompson, Secretary of the Interior, wrote from his official desk at Washington: "My allegiance is due to Mississippi and her destiny. I believe she ought to resist, and to the bitter end, Black Republican rule. (See *Black Republican*.) . . . As long as I am here I shall shield and protect the South. Whenever it shall come to pass that I think I can do no further good here, I shall return home. Buchanan is the truest friend of the South I have ever known in the North. He is a jewel of a man." After speaking of the intended secession of Mississippi, he said: "I want the co-operation of the Southern States. I wish to do all I can to secure their sympathy and co-operation. A confederacy of the Southern States will be strong enough to command the respect of the world and the love and confidence of our people at home. South Carolina will go. I consider Georgia and Florida as certain, Alabama probable. Then Mississippi must go. But I want Louisiana, Texas, Arkansas, Tennessee, North Carolina, Virginia; and Maryland will not stay behind long. As soon as our mechanics, our merchants, our lawyers, our editors, look this matter in the face and calculate the consequences, they will see their interest so strong in the movement I fear they will be violent beyond control." Floyd and Thompson remained in office until January, 1861. Cobb, who for several months had been endeavoring to destroy the public credit of the United States, resigned Dec. 8, 1860—two days after he had written, from his official desk in the Treasury Department, an inflammatory address to the people of Georgia, in which he said: "On the 4th of March, 1861, the Federal government will pass into the hands of the Abolitionists. It will then cease to have the slightest claim either upon your confidence or your loyalty; and, in my honest judgment, each hour that Georgia remains thereafter a member of the Union will be an hour of degradation, to be followed by certain and speedy ruin. I entertain no doubt either of your right or your duty to secede from the Union. Arouse, then, all your manhood for the great work before you, and be prepared, on that day, to announce and maintain your independence of the Union, for you will never again have equality or justice in it. Identified with you in heart, feeling, and interest, I return to share in whatever destiny the future has in store for our state and ourselves." In his letter of resignation, Cobb informed the President of this address, and of his determination to assist his state in the work of revolution.

Uniforms of the American Army. The American provincial troops serving with British

regulars in the colonial wars were generally without uniforms; but there were exceptions. The New Jersey infantry, under Colonel Schuyler, were clad in blue cloth, and obtained the name of "The Jersey Blues." Their coats were blue faced with red, gray stockings, and buckskin breeches. The portrait of Washington, painted by Charles Wilson Peale in 1772, shows his dress as a Virginia colonel of infantry to be a blue coat faced with buff, and buff waistcoat and breeches. This was his uniform during the Revolution, and in it he appeared at the session of the Second Continental Congress (1775), indicating, as Mr. Adams construed it, his readiness for the field in any station. In this costume he appeared when, early in July, 1775, he took command of the army at Cambridge. There is a political significance in the blue-and-buff-colored uniform. The coats of the soldiers of William of Orange who invaded Ireland in 1689 were blue faced with orange or buff, and this Hollandish insignia became that of the English Whigs, or champions of constitutional liberty. The American Whigs naturally adopted these colors for a military uniform. In the battle of Bunker's (Breed's) Hill there were no uniformed companies. Washington prescribed a uniform for his officers on his arrival soon afterwards. Their coats were blue faced with buff, and the generals each wore a ribbon across the breast—each grade of a separate color. Field-officers wore different-colored cockades to distinguish their rank. Brown being then the color most convenient to be procured, Washington prescribed for the field-officers brown coats, the distinction between regiments to be marked by the facings. He also recommended the general adoption by the rank and file of the hunting-shirt, with trowsers buttoned at the ankle. This was always the costume of the riflemen or sharpshooters; and Washington remarked that "it is a dress justly supposed to carry no small terror to the enemy, who think every such person a complete marksman." These hunting-shirts were black, white, or of neutral colors. The uniform of Washington's Life-guard, organized early in the war, was a blue coat faced with buff, red waistcoat, buckskin breeches, and black felt hat bound with white tape. The different colonies had uniformed companies in the earlier period of the struggle. The prevailing color of their coats was blue, with buff or white facings. For a long time the artillery were not uniformed, but in 1777 their regulation costume was "a dark-blue or black coat reaching to the knee and full-trimmed, the lapels fastened back, with ten open-worked button-holes in yellow silk on the breast of each lapel, and ten large regimental yellow buttons at equal distances on each side, three large yellow regimental buttons on each cuff, and a like number on each pocket-flap; the skirts to hook back, showing the red lining; bottom of coat cut square; red lapels, cuff-linings, and standing capes; single-breasted white waistcoat with twelve small regimental buttons; white breeches, black half-gaiters, white stock, ruffled shirt, and at the wrists, and black cocked hat bound with yellow; red plume

and black cockade; gilt-handled small-sword, and gilt epaulets." For the navy officers—blue coats with red facings, red waistcoats, blue breeches, and yellow buttons; and for its marine officers, a green coat with white facings, white breeches edged with green, white waistcoat, white buttons, silver epaulets, and black gaiters. The distress of the American soldiers for want of clothing was at its height during their winter encampment at Valley Forge. Baron Steuben wrote: "The description of the dress is most easily given. The men were literally naked—some of them in the fullest extent of the word. The officers who had coats had them of every color and make. I saw an officer at a grand parade at Valley Forge mounting guard in a sort of dressing-gown made of an old blanket or woollen bed-cover." The uniform of the Continental army was prescribed by a general order issued in October, 1779, by the commander-in-chief. The coat was to be blue, and the facings for infantry varied—white, buff, red, and blue. Those of the artillery and artificers were faced with scarlet, with scarlet linings, and of the light dragoons faced with white; white buttons and linings. Until this time the uniforms of the Continental army had been variegated. In the summer of 1780 Washington prescribed the uniforms of the general officers, and of the staff generally. The coats and facings were the same as those already described—blue, buff, and white. The major-generals to wear two epaulets, with two stars upon each, and a black and white feather in the hat; the brigadiers a single star and a white feather; the colonels, two epaulets; the captains, an epaulet on the right shoulder; the subalterns, an epaulet on the left shoulder; the aides-de-camp, the uniform of their rank and corps; those of the major-generals and brigadier-generals to have a green feather in the hat; those of the commander-in-chief, a white feather. Cockades were to be worn in the hat by all military men. In the field, such of the regiments as had hunting-shirts were required to wear them. In the summer of 1782 the uniform of the infantry and cavalry was prescribed as follows: "Blue ground, with red facings and white linings, and buttoned;" the artillery and sappers and miners to retain their uniform. The cavalry had brass helmets, with white horse-hair. It was found difficult to procure the prescribed color for clothing, and the order was only partially complied with. White facings were generally used; the buff rarely, excepting by the general officers. At the close of the Revolution some of the colonels of infantry wore black round hats, with black and red feathers. During the period of the Confederation the troops retained substantially the uniform of the Continental army. In 1787 the shoulder-strap of dark blue edged with red first made its appearance. In 1792 bearskin-covered knapsacks, instead of linen painted ones, were first issued to the troops. In 1796 the infantry had dark-blue coats reaching to the knee and full-trimmed, scarlet lapels, cuffs, and standing capes, retaining white buttons, white trimmings, and white under-dress, black stocks,

and cocked hats with white binding. Black top-boots now replaced the shoe and black half-gaiter. In 1794 the artillery wore helmets with red plumes. The coats of the musicians were red, with pale-blue facings, blue waistcoats and breeches, and a silk epaulet for the chief musician. This was the uniform of the drummers in the royal regiments of the British army at an early period, it being the royal livery. The red coat was the uniform of the drummers in the American army until 1857. In 1799 the white plume was prescribed for the infantry; it is worn now (1880). The cavalry had green coats and white facings, white vests and breeches, top-boots, and leather helmet with black horse-hair. In Jefferson's administration the infantry wore round ("stove-pipe") hats, with brim three inches wide, and with a strip of bearskin across the crown. Artillery officers had gold epaulets. The infantry wore a white belt over the shoulder and across the breast, with an oval breast-plate three by two and a half inches, ornamented with an eagle. In 1810 high standing collars for the coats were prescribed, and in 1812 they were ordered to "reach the tip of the ear, and in front as high as the chin would permit in turning the head." At that time many changes were made in the uniform. Officers of the general staff wore cocked hats without feathers; single-breasted blue coats with ten gilt buttons; vest and breeches, or pantaloons, white or buff; high military boots and gilt spurs; and waist-belts of black leather, but no sashes. The rank and file were put into blue coats, or jackets. The medical officers, whose coats had been dark blue from 1787, were put into black coats in 1812. In 1814 a portion of the army on the Niagara frontier were compelled by circumstances to change from blue to gray. (See *Cadet's Gray*.) In the army regulations in 1821 dark blue was declared to be the national color. President Jackson, in 1832, tried to restore the "facings" which were worn in the Revolution, but was only partially successful. When the Civil War broke out in 1861 some of the volunteer troops were dressed in gray. As the Confederates adopted the same color for their regiments, and butternut brown for their militia, the United States troops were clad in blue, with black felt hats and feathers and gilt epaulets for officers. In this old Whig color they fought in defence of the Republic. At this time (1880) the infantry coats have white edgings, stripes, and facings, and plumes of the Revolution; and the artillery the red plume, red facings, and yellow buttons of the same period. General officers alone retain buff sashes and buff-colored body-belts.

Union Armies in Virginia. When McClellan's army went to the Virginia peninsula (April, 1862), there were three distinct Union armies in the vicinity of the Blue Ridge, acting independently, but in co-operation with the Army of the Potomac. One was in the "Mountain Department," under General Frémont; a second in the "Department of the Shenandoah," under General Banks; and a third in the newly created "Department of the Rappahannock," under

General McDowell. Frémont was at Franklin, in Pendleton County, early in April, with 15,000 men; Banks was at Strasburg, in the Shenandoah valley, with about 16,000 men; and McDowell was at Fredericksburg, on the Rappahannock, with 30,000 men. When Washington was relieved by the departure of Johnson for the Peninsula, McDowell was ordered forward to co-operate with McClellan, and Shields's division was added to his force, making it about 40,000.

Union Called For. After the destruction of tea in Boston harbor, there was a general impression throughout the colonies that unity of action was indispensable. The *Boston Gazette* expressed the sentiments of the people when it said, on Dec. 27, 1773: "There is no time to be lost; a congress or a meeting of the American states is indispensable; and what the people will shall be effected."

Union Convention in North Carolina. Satisfied that there was a prevailing Union sentiment in eastern North Carolina, Colonel Hawkins, who had been left to garrison the Hatteras forts (which see), issued a proclamation to the people of that portion of the state, assuring them that the National troops made war only on the enemies of the government, and had come to support the loyal people in upholding the law and the Constitution. A response to this was a convention of the people in the vicinity of Cape Hatteras (Oct. 12, 1861), who professed to be loyal. By resolutions the convention offered the loyalty of its members to the national government. A committee drew up and reported a list of grievances; also a declaration of independence of Confederate rule. A more important convention was held at Hatteras more than a month later (Nov. 18), in which representatives from forty-five of the counties of North Carolina appeared. That body assumed the functions of a state government, and by a strongly worded ordinance provided for the government of North Carolina in allegiance to the national Constitution. The promise of good was so hopeful that President Lincoln, by proclamation, ordered an election to be held in the First Congressional District in North Carolina. C. H. Foster was elected to Congress, but never took a seat. This haven of loyalty in North Carolina was soon destroyed by the strong arm of Confederate power.

Union Defence Committee of New York. On the evening of the day (April 15, 1861) when the President called for seventy-five thousand troops to put down insurrection in the South, some gentlemen met at the house of an influential citizen in New York and resolved to take immediate steps for the support of the national government. They made arrangements for a great public meeting (April 20) at Union Square. (See *Union Meeting in New York*.) At that gathering a Committee of Safety was appointed, com-

posed of some of the most eminent citizens of New York, of all parties, and that evening it was organized under the title of "The Union Defence Committee of New York." The chairman was John A. Dix; vice-chairman, Simeon Draper; secretary, William M. Evarts; treasurer, Theodore Dehon. The other members of this remarkable committee were Moses Taylor, R. M. Blatchford, Edwards Pierrepont, Alexander T. Stewart, Samuel Sloane, John Jacob Astor, Jr., John J. Cisco, James S. Wadsworth, Isaac Bell, James Boorman, Charles H. Marshall, Robert H. McCurdy, Moses H. Grinnell, Royal Phelps, W. E. Dodge, Greene C. Bronson, Hamilton Fish, William F. Havemeyer, Charles H. Russell, James T. Brady, Rudolph A. Witthaus, A. A. Low, Prosper M. Wetmore, A. C. Richards, and the Mayor, Comptroller, and presidents of the two boards of the Common Council of the city of New York. The specific duties assigned to the committee by the great meeting that appointed it were "to represent the citizens in the collection of funds, and the transaction of such other business, in aid of the movements of the government, as the public interests may require." So zealously and efficiently did this committee work, in concert with Major-general Wool, that within ten days after the President's call for troops no less than eight thousand well-equipped and fully armed men had gone to the field from the city of New York. During the existence of this committee, which continued about a year, it disbursed almost \$1,000,000 which the corporation of New York had appropriated for war purposes and placed at its disposal. It assisted in the organization, equipment, etc., of forty-nine regiments, or about forty thousand men. For military purposes, it spent of the city fund nearly \$759,000, and for the relief of soldiers' families \$230,000.

Union Devices. When the quarrel between the British Parliament and the English-American colonies became warm, the patriotic newspapers in America, as well as handbills, bore devices emblematic of union. One was espe-

UNION DEVICE

cially a favorite—namely, a snake, disjointed, each separate part representing one of the thirteen English-American colonies, with the words "Unite or die." This snake device first appeared when the Stamp-act excitement was at

its height. John Holt, the patriotic publisher of the *New York Journal*, varied it after the adjournment of the First Continental Congress in 1774. He had a column standing upon Magna Charta, and firmly grasped, as a pillar indicat-

UNION DEVICE.

ing inalienable rights, by twelve hands, representing the twelve colonies (Georgia not having had a representative in that Congress). The hands belonged to bare arms coming out of the clouds, denoting heavenly strength. The whole was surrounded by a large serpent, perfect, and in two coils, on whose body were the following words:

"United, now, alive and free,
Firm on this basis Liberty shall stand,
And, thus supported, ever bless our land,
Till time becomes eternity."

After the Declaration of Independence a print appeared in London with a device combining a part of Holt's (the hands, thirteen of them), but instead of bare arms they were heavily mailed, denoting warfare, and symbolizing union by grasping an endless chain. These arms all came out of the clouds, indicating that their strength was from above. Within the chain was a radiant heart, and within the heart a lighted candle, denoting the sincerity, truth, rectitude, and divine emotions of those whose hearts were engaged in the cause. Above this device was a balance equipoised, with a naked sword, held in the paw of a lion couchant. The lion symbolized British power; the sword, in that connection, British valor; and the balance, British justice. These the Americans, who were yet a part of the British nation, invoked in aid of their cause. A noon-day sun, shining near, indicated that the Americans stood manfully, in broad daylight, before the world in defence of their rights, and invited the closest scrutiny of their conduct.

Union First Announced. In the second petition of the Continental Congress to the king (July, 1775), written by John Dickinson, negotiation was thus proffered, according to Duane's proposition (which see): "We beseech your majesty to direct some mode by which the united applications of your faithful colonists to the throne may be improved into a happy and permanent reconciliation; and that in the meantime measures may be taken for preventing the further destruction of the lives of your majesty's subjects, and that such statutes as more immediately distress any of your majesty's colonies may be repealed." This was the first official announcement to the king of the union of the colonies, and their refusal to treat separately confirmed it. It was a great step towards independence. The king could not consistently receive a document from Congress, whose legality he denied. They thought to have it received if the members individually signed it. Dickinson believed it would be received. He de-

plored one word in it—Congress—and that proved fatal to it. "It is the only word which I wish altered," he said. "It is the only word I wish to retain" was the reply of the staunch patriot Benjamin Harrison, of Virginia. Richard Penn, a proprietary of Pennsylvania and recently its governor—a loyal Englishman—was selected to bear this second petition to the throne.

Union, First Assertion of the. The first official intimation that the English-American colonies were politically united was in the following resolution adopted by the second Continental Congress, June 7, 1775: "On motion, *Resolved*, That Thursday, the 20th of July next, be observed throughout the Twelve United Colonies as a day of humiliation, fasting, and prayer." After that the term "United Colonies" was frequently used; and in the Declaration of Independence the term "United States" was first used. Georgia not having sent delegates to the first and second congresses, only "twelve" were alluded to in the expression. The inhabitants of St. John's parish, in Georgia, had chosen Lyman Hall (March 21, 1775) to represent them in the Congress, and he took his seat on the third day of the session, but without the privilege of voting. The movements in St. John's soon led to the accession of Georgia to the Continental Union, making the number of colonies that carried on the war thirteen.

Union Flag at Boston. On the 1st of January, 1776, the new Continental army was organized, and on that day the Union flag was displayed over Washington's camp at Cambridge for the first time, in compliment to the United Colonies. "The hoisting of that flag," Washington wrote to Joseph Reed, "was received at Boston by the British commanders as a token of the deep impression the king's speech had made upon the Americans, and as a signal of submission. . . . By this time, I suppose, they begin to think it strange that we have not made a formal surrender of our lines." Why the hoisting of the Union flag in compliment to the United Colonies should have been received by the British as "a signal of submission" was a question which historians could not answer until 1855, when the writer of this work discovered among the papers of General Philip Schuyler a drawing of the *Royal Sarage*, Arnold's flag-vessel on Lake Champlain in the battle in October, 1776, with the Union flag at its mast-head. It was composed of thirteen stripes, alternately red and white, with the British union—the combined crosses of St. George and St. Andrew—in an upper corner of the flag. It was the British union that excited the hopes of the British officers that the Americans were about to submit. Why was the British union in the American flag? The colonies had not yet declared themselves independent, and did not for six months afterwards. They acknowledged their allegiance to Great Britain and loyalty to the king, and were only opposing the oppressive measures of the British ministry and Parliament. They were yet British subjects, and so they displayed

the emblem of colonial union by the stripes, and their continued loyalty by the British union.

Union Meeting in New York. On April 20, 1861, a most remarkable meeting was held in Union Square, New York. Places of business were closed, that all might participate in the proceedings. It was estimated that at least 100,000 persons were present during the afternoon. The soiled and tattered flag which Major Anderson had brought from Sumter was placed in the hands of the equestrian statue of Washington standing there. Four stands for officers and speakers had been erected, and the multitude were addressed by representative men of all political parties. At the principal stand, John A. Dix, late Secretary of War, presided. The most notable speech on the occasion was that of Senator Baker, of Oregon, a leading Democrat in Congress. He appealed to the young men of the United States. "In all the broad land," he said, "in their rebel nest, in their traitor's camp, no truthful man can rise and say that he has ever been disturbed, though it be for a single moment, in life, liberty, estate, character, or honor. The day they began this unnatural, false, wicked, rebellious warfare, their lives were more secure, their property more secure by us—not by themselves, but by us—guarded far more securely than any people ever had had their lives and property secured from the beginning of the world. We have committed no oppression, have broken no compact, have exercised no unholy power; have been loyal, moderate, constitutional, and just. We are a majority of this Union, and we will govern our own Union, within our Constitution, in our way. We are all Democrats. We are all Republicans. We acknowledge the sovereignty of the people within the rule of the Constitution, and under that Constitution and beneath that flag, let traitors beware." Other able representatives of the venerable Democratic party spoke similar sentiments. The influence of this great meeting upon the whole country was marked. It encouraged the loyal people everywhere, for it attested the devotion to their country of the citizens of the great commercial metropolis, which, in the course of the four years of the war that ensued, gave 100,000 soldiers to the Union army, and contributed in actual expenditures of money, the loss of the labor of their able-bodied men, private and public contributions, taxes, etc., not less than \$300,000,000. The resolutions adopted were of the most patriotic character, and for several months afterwards the government had fewer obstacles cast in its way by political opponents.

Union of New England for Peace. Towards the close of 1813, the whole of the New England states presented a united front in opposition to the national administration and the war. The Peace faction was very active, and industriously sowed discontent. The newspapers and orators of the ultra-Federal party denounced the administration as hostile to New England, which, it was asserted, was treated as a conquered province; her great interests—commerce and navi-

gation—being sacrificed, and her sentiments of right and justice trampled upon. They declared that every New England man of promise in public affairs had been for twelve years proscribed by the national government, and that, reduced as New England was by follies and oppressions to the brink of ruin, it was her first duty to consult her own interest and safety. The idea was broached in a Boston newspaper (*Daily Advertiser*) that it would be desirable for New England to conclude a separate peace with Great Britain, or, at least, assume a position of neutrality, leaving it to the states that chose to fight it out to their hearts' content. No person appeared as the avowed champion of such a step. It was denounced as a treasonable suggestion, and produced considerable anxiety at Washington. These discontents finally led to the Hartford Convention (which see).

Union Troops, FIRST, TO LAND AT BALTIMORE. General Patterson, in command of the Department of Pennsylvania, determined to vindicate the dignity and honor of his government after the attack on Massachusetts troops, sent the First Pennsylvania Volunteer Artillery (Seventeenth in the line) and Sherman's Battery, in all 930 men, commanded by his son, Colonel Francis E. Patterson, to force a passage through Baltimore. These troops left Philadelphia on May 8, accompanied by some of the regulars from Texas. (See *Twigg, David E., Treacherous Conduct of*.) They went down the Chesapeake in the steamers *Fanny Cadwalader* and *Maryland*. The whole force was about 1200 strong. They debarked at Locust Point, near Fort McHenry, under cover of the guns of the *Harriet Lane* and a small gunboat, at about four o'clock (May 8), in the presence of the Mayor of Baltimore, Marshal Kane, police commissioners, and a considerable police force. The Union sentiment was then finding expression in Baltimore. Hundreds of excited citizens crowded the wharves at the landing-place, and the troops received hearty shouts of welcome. The mayor and police were overawed, and the Pennsylvanians passed through the city on their way to Washington without molestation. They were the pioneers of the immense army that passed through Baltimore without hindrance during the war that ensued. (See *Massachusetts Troops in Baltimore*.)

Unitas Fratrum. (See *Moravians in America*.)

United Colonies of New England. In May, 1643, delegates from Connecticut, New Haven, and Plymouth, and the General Court of Massachusetts, assembled at Boston to consider measures against the common danger from the Dutch in Manhattan and the Indians. Delegates were not invited from Rhode Island, for that colony was considered "schismatic" and an intruder. When it asked for admission, it was refused, unless it would acknowledge allegiance to Plymouth. Then it applied for a charter, and obtained it in 1644. (See *Rhode Island, Colony of*.) A confederacy was formed under the above title, and continued for more than forty years (1643-1686), while the government of England was changed three times during that period. It was

a confederacy of states like our early Union (see *Articles of Confederation*); and local supreme jurisdiction was jealously reserved by each colony. Thus early was the doctrine of state supremacy developed. (See *State Supremacy or Sovereignty*.) The general affairs of the confederacy were managed by a board of commissioners consisting of two church-members from each colony, who were to meet in a congress annually, or oftener if required. Their duty was to consider circumstances and recommend measures for the general good. They had no executive power, nor supreme legislative power. Their propositions were referred to and finally acted upon by the several colonies, each assuming an independent sovereignty. But war was not to be declared by one colony without the consent of this congress of commissioners, to whose province Indian affairs and foreign relations were especially consigned. All war expenses were to be a common charge, and runaway servants and fugitive criminals were to be delivered up; and it was soon an established rule that judgments of courts of law and probates of wills in each colony should have full faith and credit in all others. The commissioners of Massachusetts, representing by far the most powerful colony of the league, and assuming to be a "perfect republic," claimed precedence, which the others readily conceded. New Haven was the weakest member of the league, Plymouth next, but all were growing. Fort Saybrook, at the mouth of the Connecticut River, was yet an independent settlement. (See *Say-Brook, Fort*.)

United Colonies, THE (so first called). The second Continental Congress assembled at Philadelphia on May 10, 1775. The harmony of action in that body, and the important events in the various colonies which had been pressed upon their notice, made the representatives feel that the union was complete, notwithstanding Georgia had not yet sent a delegate to the Congress. Recognizing this fact, the Congress, on June 7, in ordering a fast, *Resolved*, "That Thursday, the 20th of July next, be observed throughout the Twelve United Colonies as a day of humiliation, fasting, and prayer." When, exactly one year later, a resolution declaring these colonies "free and independent states" was adopted, the committee to draft a declaration to that effect entitled the new government *The United States of America*.

United States and Georgia, CONTROVERSY BETWEEN THE. By a compact between the national government and Georgia, made in 1802, they forever agreed, in consideration of the latter relinquishing her claim to the Mississippi Territory, to extinguish, at the national expense, the Indian title to the lands occupied by them in Georgia, "whenever it could be peaceably done on reasonable terms." Since making that agreement, the national government had extinguished the Indian title to about 15,000,000 acres, and conveyed the same to the State of Georgia. There still remained 9,537,000 acres in possession of the Indians, of which 5,292,000 acres belonged to the Cherokees and the remainder to

the Creek nation. In 1824 the state government became clamorous for the entire removal of the Indians from the commonwealth, and, at the solicitation of Governor Troup, President Monroe appointed two commissioners, selected by the governor, to make a treaty with the Creeks for the purchase of their lands. The latter were unwilling to sell and move away, for they had begun to enjoy the arts and comforts of civilization. They passed a law forbidding the sale of any of their lands, on pain of death. After the breaking-up of the general council, a few of the chiefs violated this law by negotiating with the United States commissioners. By these chiefs, who were only a fraction of the leaders of the tribes, all the lands of the Creeks in Georgia were ceded to the United States. The treaty was ratified by the United States Senate, March 3, 1825. When information of these proceedings reached the Creeks, a secret council determined not to accept the treaty and to slay McIntosh, the chief of the party who had assented to it. He and another chief were shot, April 30. A new question now arose. Governor Troup contended that upon the ratification of the treaty the fee simple of the lands vested in Georgia. He took measures for a survey of the lands, under the authority of the Legislature of Georgia, and to distribute them among the white inhabitants of the state. The remonstrances of the Creeks caused President Adams to appoint a special agent to investigate the matter, and General Gaines was sent with a competent force to prevent any disturbance. The agent reported that bad faith and corruption had marked the treaty, and that forty-nine fiftieths of the Creeks were hostile to it. The President determined not to allow interference with the Indians until the next meeting of Congress. Troup determined, at first, to execute the treaty in spite of the President, but the firmness of the latter made the governor hesitate. A new negotiation was opened with the Creeks, and finally resulted in the cession of all the Creek lands in Georgia to the United States. By this new treaty the Creeks retained all their lands in Alabama, which had been ceded by a former treaty.

United States and Macedonian. Commodore Rodgers sailed from Boston (Oct. 10, 1812) in the *President*, accompanied by the *United States*, 44 guns, Captain Decatur, and the *Argus*, 16 guns, Lieutenant-commandant Sinclair, leaving the *Hornet* in port. The *President* parted company with her companions on Oct. 12, and, on the 17th, captured a British packet. The *United States* and *Argus* also parted company, the former sailing to the southward and eastward in search of British West Indianmen. At dawn, on Sunday morning, the 25th, the watch at the maintop of the *United States* discovered a sail to windward—an English ship-of-war. Decatur spread all his sails and gave chase, and, as the *United States* drew nearer and nearer the British ship, such loud shouts went up from her decks that they were heard on board the vessel of the enemy. At about nine o'clock in the morning, Decatur had got so near that he open-

ed a broadside upon the strange vessel, with much effect. It was responded to in kind, both vessels being on the same tack. They continued the fight by a heavy and steady cannonade with the long guns of each, the distance being so great that carrouades and muskets were of no avail. In the course of half an hour the British vessel was fearfully injured, and her commander, perceiving that her only safety from destruction was to engage in close action, drew up to the *United States* for that purpose. The latter, with splendid gunnery, sent shots which cut her enemy's mizzen-mast so that it fell overboard. Very soon her main and fore-top-masts were gone and her fore-mast was tottering. No colors were seen floating over her deck. Her main-mast was severely damaged, while the *United States* remained almost unhurt. Decatur bore away for a while, and his antago-

on the 1st of January, 1813, the *Macedonian* was anchored in the harbor of New York, where she was greeted as "a New-year's gift." "She comes with the compliments of the season from old Neptune," said one of the newspapers. The boys in the streets were singing snatches of a song:

"Then quickly met our nation's eyes,
The noblest sight in nature,
A first-rate frigate as a prize,
Brought home by brave Decatur."

Legislatures of states gave Decatur thanks, and two of them each gave him a sword. So, also, did the city of Philadelphia. The authorities of New York, in addition to a splendid banquet to Hull, Jones, and Decatur (Jan. 7, 1813), gave the latter the freedom of the city and requested his portrait for the City Hall. The National Congress thanked him and gave him a gold medal.

GOLD MEDAL AWARDED TO DECATUR.

nist, supposing his vessel, badly crippled, was withdrawing, set up an exulting shout. To their astonishment the *United States* tacked and brought up in a position of greater advantage than before. The British commander, perceiving that longer resistance would be useless, struck his colors and surrendered. The captured vessel was the British frigate *Macedonian*, 38 guns, Captain J. S. Carden. She had received no less than one hundred round-shot in her hull, many of them between wind and water, and she had nothing standing but her fore and main masts and fore-yard. All her boats were rendered useless but one. Of her officers and men—three hundred in number—thirty-six were killed and sixty-eight were wounded. The loss of the *United States* was five killed and six wounded. The *Macedonian* was a new ship, and though rated at 38, carried 44 guns. The action occurred not far from the Island of Madeira. After the contest, Decatur returned to the *United States*, arriving off New London Dec. 4, 1812. The *Macedonian*, in charge of Lieutenant Allen, arrived at Newport harbor at about the same time. At the close of the month both vessels passed through Long Island Sound, and,

United States, APPORTIONMENT OF REPRESENTATIVES IN THE CONGRESS OF THE. The first really legal apportionment was made in 1792. (See *Apportionment of Representatives, The First.*) Since then a new apportionment has been made every ten years. The first apportionment (1792) was made on the basis of the census of 1790, and gave one representative to every 33,000 inhabitants; on that of 1800, the same; on that of 1810, one to 35,000; on that of 1820, one to 40,000; on that of 1830, one to 47,700; on that of 1840, one to 70,680; on that of 1850, one to 93,420; on that of 1860, one to 126,840; on that of 1870, one to 134,400. In the above statement fractions have not been considered. A table showing the representative strength at the time of the several apportionments reveals the fact that New England has steadily fallen back, beginning with more than one fourth of the Representatives, and ending, in the probable apportionment of 1882, with not more than one tenth. In the Middle States, the representative strength has decreased but slightly; the Southern States, starting with a great preponderance of strength, began to lose their relative strength after the apportionment of

1810, while the Western States, beginning with no representation in the apportionment of 1810, now (1880) are entitled to nearly one third of the whole number of members of the House of Representatives. The probable apportionment in 1882, on the basis of the tenth census, will make some important changes in the representation of the Southern and Western States. The colored population of the South, having been invested with the rights of citizenship, will increase the representative strength of the late slave-labor states in the House of Representatives. New England and the Middle States being fairly filled up with population, must continue to recede in relative strength, compelled by the rapid growth of population elsewhere, chiefly in the West.

United States Bank, THE. Alexander Hamilton, observing the prosperity and usefulness to the commercial community and the financial operations of the government, of the Bank of North America, Bank of New York, and Bank of Massachusetts, which held the entire banking capital of the country before 1791, recommended the establishment of a government bank in his famous report on the finances (1790), as Secretary of the Treasury. His suggestion was speedily acted upon, and an act for the purpose was adopted Feb. 8, 1791. President Washington asked the written opinion of his cabinet concerning its constitutionality. They were equally divided. The President, believing it to be legal, signed the bill, and so made it a law. The bank received a charter, the existence of which was limited to twenty years. It soon went into operation, with a capital of \$10,000,000, of which amount the government subscribed \$2,000,000 in specie and \$6,000,000 in stocks of the United States. The measure was very popular. The shares of the bank rose to twenty-five and forty-five per cent. premium, and it paid an average dividend of eight and a half per cent. on its capital. The shares were \$400 each. The bank was established at Philadelphia, with branches at different points. In 1808—or three years before the charter would expire—application was made to Congress for its renewal. A sort of bank mania had succeeded the original establishment of the institution, and local banks rapidly increased. They became favorites of the people, for they furnished business facilities that were of great importance to the whole commercial community. This local bank interest combined to prevent a renewal of the charter of the United States Bank, on the grounds, 1, That it was unconstitutional; 2, That too much of the stock was owned by foreigners; and, 3, That the local banks better accommodated the public. Though the Secretary of the Treasury (Gallatin) reported in favor of a renewal of the charter, nothing was done by Congress until within a few weeks before the time when the bank would cease to exist. The bill for its re-charter was defeated by the casting vote of the Vice-President (George Clinton) in the Senate, and the bank closed its affairs, giving to the stockholders eight and a half per cent. premium over the par value. The finances of the

country were in a wretched state at the close of the war, in 1815. The local banks had all suspended specie payments, and there was very little of other currency than depreciated bank-notes. There was universal dissatisfaction, and the people clamored for another United States Bank as a cure for financial evils. One was chartered in the spring of 1816 (April 3). A bill to that effect had been vetoed by President Madison in January, 1815; now it received his willing signature. Its charter was for twenty years, and its capital was \$35,000,000, of which amount the United States subscribed \$7,000,000, and the remaining \$28,000,000 by individuals. The creation of this bank compelled the state banks to resume specie payments or wind up. Many of them were aided in resumption by the great bank, but many, after a struggle more or less prolonged, closed their doors. Of the two hundred and forty-six state banks, with an aggregate capital of about \$90,000,000 in 1816, a very large number were compelled to go into liquidation. From 1811 to 1830, one hundred and sixty-five banks, with a capital of \$30,000,000, closed their business, and the loss of the government and of individuals by these banks was estimated at \$5,000,000, or one-sixth of their capital. The second United States Bank went into operation in Philadelphia, in 1817, to continue until March, 1836. In it were deposited the funds of the government, the use of which gave the bank great facilities for discounting, and so aiding the commercial community. It soon controlled the monetary affairs of the country; and when General Jackson became President of the United States, in 1829, he expressed his decided hostility to the government bank, as a dangerous institution. He began a war upon it, which ended in its destruction. It failed to have its charter renewed, and it expired by limitation in March, 1836. It was re-chartered the same year by the Legislature of Pennsylvania, with the same capital. It was compelled to suspend specie payments, with all the local banks, in 1837, and again in 1839; and in February, 1840, it made a final suspension, and closed up its affairs. There remained nothing for the stockholders. The entire capital had been spent, and wide-spread distress was the consequence.

United States Bank, WAR UPON THE. In his first annual message to Congress (December, 1829), President Jackson took strong ground against a renewal of the charter of the United States Bank (which see), which would expire in 1836. His reasons were, that it had failed in the fulfilment of promises of its creation—namely, to establish a uniform and sound currency for the whole nation; and, also, that such an institution was not authorized by the national Constitution. Again, in his annual messages in 1830 and 1831, he attacked the bank, and renewed his objections. At the close of 1831 the proper officers of the bank petitioned, for the first time, for the renewal of its charter. The petition was presented in the Senate Jan. 9, 1832, and on March 13 a select committee, to whom it was referred, reported in favor of renewing the charter for fifteen years. Long de-

bates ensued, and finally a bill for re-chartering the bank passed both Houses of Congress—the Senate on June 11, by twenty-eight against twenty, and the House of Representatives, July 3, by a vote of one hundred and seven against eighty-five. The President vetoed it, and as it failed to receive the constitutional vote of two thirds (see *Veto, The First*) of both Houses, the bank charter expired by limitation in 1836. The commercial community, regarding such an institution as essential to their prosperity, were alarmed, and prophecies of panics and business revulsions, everywhere uttered, helped to accomplish their own speedy fulfilment. Again, in his annual message (December, 1832), Jackson's hostility to the bank was manifested by a recommendation to remove the public funds in its custody, and a sale of the stock of the bank belonging to the United States. Congress, by a decided vote, refused to authorize the measure; but after the adjournment of that body the President assumed the responsibility of performing the act. He directed the Secretary of the Treasury (William Duane) to withdraw the government funds—about \$10,000,000—from the bank, and deposit them in certain state banks. The Secretary would only consent to appoint an agent to inquire upon what terms the local banks would receive the funds on deposit. Then the President gave him a peremptory order to remove them from the bank. Duane refused compliance, and was dismissed from office. His successor, Roger B. Taney (afterwards Chief-justice of the United States), obeyed the President, and in October, 1833, the removal was accomplished. The effect produced was widespread commercial embarrassments and distress. The business of the country was plunged from a height of prosperity to the depths of adversity, because its intimate connection with the national bank rendered any paralysis of the operations of that institution fatal to commercial activity. The vital connection of the bank with the business of the country, evidenced by the confusion, confirmed the President's conviction of the danger to be apprehended from such an enormous moneyed institution.

United States Christian Commission. *THE*, had its origin in the Young Men's Christian Association, in New York city, and was first suggested by Vincent Colyer, who, with Frank W. Ballard and Mrs. Dr. Harris, who represented the Ladies' Aid Society, of Philadelphia, went to Washington immediately after the battle of Bull's Run (July, 1861), to do Christian work in the camps and hospitals there. Mr. Colyer distributed Bibles and tracts and hymn-books among the soldiers, and held prayer-meetings. In August he suggested the combination of all the Young Men's Christian Associations of the land in the formation of a society similar to that of the United States Sanitary Commission (which see). The suggestion was acted upon, and at a meeting of the Young Men's Christian Association, held in New York, Sept. 23, 1861, a committee was appointed, with Mr. Colyer as chairman, to conduct the correspondence, and make arrangements for holding

a national convention of such associations. A convention was called, and assembled in the city of New York, Nov. 14, 1861, when the United States Christian Commission was or-

VINCENT COLYER.

ganized, with George H. Stuart, of Philadelphia, at its head. Its specific work was to be chiefly for the moral and religious welfare of the soldiers and sailors, conducted by oral instruction, and the circulation of the Bible and other proper books, with pamphlets, newspapers, etc., among the men in hospitals, camps, and ships. The commission worked on the same general plan pursued by the United States Sanitary Commission. Its labors were not confined wholly to spiritual and intellectual ministrations, but also to the distribution of a vast amount of food, hospital stores, delicacies, and clothing. It, too, followed the great armies, and was like a twin angel of mercy with the Sanitary Commission. It co-operated most efficiently with the army and navy chaplains, and in various ways cast about the soldier a salutary hedge of Christian influence. The money collected for the use of the commission was chiefly gathered by the women of various denominations. It was a free-will offering, and amounted to about \$1,000,000. The entire receipts of the commission amounted to over \$6,000,000.

United States Greenback Currency. This was a name given to the paper currency issued by the government of the United States during the Civil War and afterwards, because the lettering and devices on the back of the notes were printed in a green color. These notes were called "greenbacks." The name of "Greenbackers" was given to those who opposed the resumption of specie payments in our country according to an act passed in January, 1875, and in favor of unlimited paper-money. They formed a political organization known as the "Greenback Party," and in 1880 nominated a candidate (General Weaver) for President of the United States.

United States Navy (1812). When the President of the United States proclaimed war against Great Britain (July 19, 1812), the Navy of the United States consisted of only twenty vessels, exclusive of gunboats. They were as follows:

NAME.	Rated.	Mount- ed.	COMMANDERS.	NAME.	Rated.	Mount- ed.	COMMANDERS.
Constitution...	44	58	Capt. Hull.	John Adams...	26		Capt. Ludlow.

United States Sanitary Commission.

THE, was the product of divine seed that took root in the heart of woman, and by her it was chiefly nourished. On the day when the President called for 75,000

These vessels were scattered—four of them had wintered at Newport, R. I.; four others in Hampton Roads, Va.; two were away on foreign service; two were at Charleston, S. C.; two were at New Orleans; one was on Lake Ontario, and five were laid up in ordinary. There were four bomb-vessels—*Vengeance*, *Spitfire*, *Etna*, and *Jesusius*. The gunboats were all numbered, and during the War of 1812 were distributed as follows: At New York, 54; New Orleans, 26; Norfolk, 14; Charleston, 2; Wilmington, N. C., 2; St. Mary's, 11; Washington, 10; Portland, 8; Boston, 2; Connecticut and Rhode Island, 4; Philadelphia, 20; and Baltimore, 10. Of these, only 62 were in commission; 86 were laid up in ordinary, and some were undergoing repairs.

United States of America. This name was first given to the English-American colonies in the Declaration of Independence, on July 4, 1776. They then consisted of thirteen. On the 4th day of July, 1876, the Territory of Colorado became a state, making the whole number thirty-eight. The following table shows their order of creation, name, date of settlement, when first settled, by whom, and time of their admission into the Union:

Order.	NAME.	Date of Settlement.	Where first Settled.	By whom Settled.	Date of Admission.	Area in Sq. Miles.	Population in 1870.
1	Virginia	1607	Jamestown	English	The 13 Original States	38,348	1,225,163
2	New York	1614	New York	Dutch		47,000	4,382,759

men to put down insurrection, the women of Bridgeport, Conn., organized a society for the purpose of affording relief and comfort to the volunteers. This was the first in all the land. On the same day (April 15, 1861) a woman in Charlestown, Mass. (Miss Almena Bates), took steps to form a similar organization, and a few days later the women of Lowell did the same. They proposed to supply nurses for the sick and wounded, and provisions, clothing, and other comforts not furnished by the government; also to send books and newspapers to the camps, and to keep up a constant communication with their friends in the field. On the 19th the women of Cleveland, O., formed an association for the purpose of taking care of the families of the volunteers. These were the first outcroppings of the tenderest feelings of woman everywhere. Earnest women in New York, at the suggestion of Rev. H. W. Bellows, D.D., and Dr. Elisha Harris, met with a few earnest men, and formed the "Women's Central Association for Relief." Its constitution was drawn up by Dr. Bellows. Auxiliary associations were formed. Then an organization on a more extended and efficient plan was formed, which contemplated the co-operation of the Medical Department of the

army, under the sanction of the government, in the care of the sanitary interests of the soldiers. Already Miss Dorothy Dix had done much in that direction. She had offered her services gratuitously to the government, and obtained the sanction of the War Department for the organization of military hospitals and the furnishing of nurses for them. Eight days after the President's call for troops (April 23, 1861), the Secretary of War issued a proclamation, announcing the fact of the acceptance of Miss Dix's services, and on the 1st of May the Surgeon-general (R. C. Wood) "cheerfully and thankfully" recognized the ability and energy of Miss Dix, and requested all women who offered their services as nurses to report to her. On June 9 the Secretary of War issued an order appointing H. W. Bellows, D.D., Professor A. D. Baché, LL.D. (chief of the

Coast Survey), Professor Jeffries Wyman, M.D., W. H. Van Buren, M.D., R. C. Wood (Surgeon-general of the United States Army), General G. W. Cullum, of General Scott's staff, and Alexander Shiras, of the United States Army, in conjunction with such others as might associate with them, "a Commission of Inquiry and Advice in respect of the Sanitary Interests of the United States Forces." The Surgeon-general issued a circular, announcing the creation of this commission. On Jan. 12 a Board of Managers was organized, with Dr. Bellows at its head. He submitted a plan of organization, which was adopted, and it became the constitution of the commission, bearing the signatures of President Lincoln and Secretary of War, Simon Cameron. The name now assumed was the "United States Sanitary Commission." F. L. Olmsted was chosen Resident Secretary—a post of great importance, for that officer was really the general manager of the affairs of the commission. Its seal bore the name and date of creation of the commission; also a shield bearing the figure of Mercy, winged, with the symbol of Christianity upon her bosom and a cup of consolation in her hand, coming down from the clouds to visit wounded soldiers on the bat-

campaigns, and before the smoke of conflict had been fairly lifted, there was the commission with its tents, vehicles, supplies, and necessaries. When the war was ended, and the work of the Sanitary Commission was made plain, it was found that the loyal people of the land had given to it supplies valued at \$15,000,000, and money to the amount of \$5,000,000. The archives of the United States Sanitary Commission, containing a full record of its work, were deposited in the Astor Library in 1878, as a gift to that institution. "With this act," wrote Dr. Bellows, in his letter of presentation, "and with my signature as President of the Sanitary Commission, the last official act of my service, the United States Sanitary Commission expires. You receive its ashes, in which I hope some fragrance may linger, and, at least, survive to kindle in times of new need a flame equal to its own."

United States, THE, A LEGATEE. In the summer of 1829, James Smithson, a British subject, died in Italy, and by his will, made in 1826, he bequeathed to the United States a large sum of money subject to certain conditions. (See *Smithson, James Lewis Macie*.) According to the prescribed conditions the United States, in 1835, became Mr. Smithson's sole legatee. Richard Rush was sent to London to prosecute the claim. In September, 1838, he deposited in the United States mint the proceeds of the bequest in English sovereigns, which amounted to \$515,169. After the discussion for several years of plans for the best mode of disposing of the funds, for executing the will of the testator, "for the increase and diffusion of knowledge among men," it was determined to found an institution at the national capital. By act of Congress, passed in 1846, it was provided that the institution should be placed under the control of a board of trustees, or regents, consisting of the President and Vice-President of the United States, the several members of the cabinet, the Chief-justice of the Supreme Court, the Commissioner of the Patent Office, and the Mayor of Washington, during their respective terms of office, with such other persons as these may elect honorary members of the institution. Provision was made for the increase of the fund by the accumulation of interest for the purpose of erecting buildings and of other current and incidental expenses, such expenditures to be made wholly from accruing interest (the funds being loaned at six per cent.), and not from the principal. Grounds were chosen and a building was erected at a cost of about \$500,000. In December, 1846, the regents or board of trustees of the "Smithsonian Institution," as it is called, chose Professor Joseph Henry as their secretary, which office he held until his death, early in 1878. Provision was made for a library, museum, gallery of art, and lectures. Transactions of learned societies and scientific works were collected; the museum was enriched by the fruits of government explorations and the contributions of individual explorers; a gallery of art was commenced; and lectures, chiefly on scientific subjects, were delivered up to 1865, when a fire destroyed the lecture-room. Then a change was made in the

SEAL OF THE UNITED STATES SANITARY COMMISSION.

tle-field. Compare the account in *Stillé's History of the United States Sanitary Commission*. The commission was to supplement government deficiencies. An appeal was made to the people, and was met by a most liberal response. Supplies and money flowed in, from all quarters, sufficient to meet every demand. All over the country, men, women, and children were seen working singly and collectively for it. Fairs were held in cities, which turned immense sums of money into the treasury of the commission. One small city alone (Poughkeepsie, on the Hudson) contributed \$16,000, or \$1 for every man, woman, and child of its population. Branches were established; ambulances, army-wagons, and steamboats were employed in the transportation of the sick and wounded. It followed the armies closely in all

arrangements. The library was incorporated with that of Congress, and its art collection was transferred to Mr. Corcoran's Free Art Gallery. The institution co-operates as far as practicable with other public institutions in Washington city for the diffusion of knowledge among men. It also distributes much valuable printed matter, chiefly on scientific subjects; and it gives assistance to geographical and other scientific researches. For many years it employed five hundred regular meteorological observers scattered over every part of the continent. These operations have been transferred to the United States Signal Service. The publications of the institution are numerous and of the highest value, and have been distributed gratuitously among all the important scientific and learned associations of the world; and it receives in turn the "Transactions" of such societies. Reports are made to Congress annually, by the secretary of the institution. These, besides a popular analysis of the memoirs to be contained in the several forthcoming volumes of the "Contributions" to the institution, are accompanied by a synopsis of lectures and original and translated articles, which introduce the student to information and topics of discussion much above the range of those usually presented even to the educated public. These reports are printed at the expense of Congress, and are circulated through the members of both Houses as well as by the institution itself. It keeps up a vast and continually increasing correspondence with all quarters of the globe; and each day brings to it accounts of real or supposed discoveries which are referred to the institution. In 1865 a residuary legacy of Smithsonian was received, amounting to \$26,210. In 1876 the total permanent Smithsonian fund in the United States Treasury, drawing interest at six per cent. in gold, amounted to \$651,000. There were, besides, depreciated investments valued at \$35,000, which, with a cash balance on hand, made the total resources of the institution about \$700,000.

University of Pennsylvania, THE, one of the higher institutions of learning established in the English-American colonies. In 1749 a subscription was made towards founding an academy and charitable school in Philadelphia. Dr. Franklin was one of the subscribers. It was opened in 1750, and in 1753 was incorporated and endowed by the proprietaries of Pennsylvania with nearly \$15,000. Rev. William Smith was appointed principal and Rev. Francis Allison master of the Latin school. It soon grew into a college by an act of incorporation in 1755,

under the title of "College, Academy, and Charitable School of Philadelphia." Dr. Smith was appointed provost. In 1764 the foundation of a medical school in connection with the college was laid. This was the origin of the most famous medical school in the United States. The events of the Revolution made a change in the institution. The old Provincial charter was abandoned, and in 1779 a new charter was given by the Pennsylvania Legislature, with the title of "University of Pennsylvania." It was endowed with the property of the old college and the confiscated estates of the Tories. In 1789 the law department was established. The old college was revived in that year, but in 1791 it was absorbed by the university. Then the present organization of the university was established. The university occupies fine buildings in West Philadelphia, on two squares, comprising over sixteen acres. The state granted \$300,000 for the establishment of a hospital connected with the university, and \$350,000 were obtained by subscription. The whole number of professors in the university in 1875, deducting repetitions, was 41; of other instructors, 15; of students, 800. Its libraries contained in 1875 18,000 volumes.

Upper Canada Declared a Temporary American Province (1813). On Oct. 17, 1813, General Harrison, of the United States Army, and Commodore Perry, commander of the fleet on Lake Erie, issued a proclamation, stating, that by the combined operation of the land and naval forces of the United States, British power had been destroyed within the upper districts of Canada, which was in quiet possession of United States troops. They therefore proclaimed that the rights and privileges of the inhabitants and the laws and customs of the country, which were in force before the arrival of the conquerors, should continue to prevail, and that all magistrates and other civil officers might resume their functions, after taking an oath of fidelity to the United States government so long as the troops should remain in possession of the country.

Uprising in New England. In 1774 a false rumor spread over New England that General Gage had actually begun war at Boston; that British ships were bombarding the town, and that British troops were murdering the patriotic inhabitants. This rumor created fearful excitement. The minute-men (which see) everywhere, though not organized, seized their arms and marched, in squads or singly, for Boston. Within thirty-six hours, the whole country for almost two hundred miles from the New England capital had heard the tidings. Young men and old men seized their firelocks, and matrons and maidens buckled on their well-filled knapsacks, and sent them away with the blessings of patriotic hearts. The roads were soon swarming with armed men, most of them on foot, but many on horseback—a strange cavalcade—queer-looking men and queer-looking horses, of all ages, colors, and conditions. Some of the horses were saddled and bridled, and some

were without either bit or stirrup. The host, full twenty thousand strong, in the aggregate, were intent upon the salvation of their brethren and the destruction of the invaders. Truth met the moving host, and the excitement soon ceased; but the incident gave Gage such a prophecy of what would happen should he commit an overt act of hostility that he was more circumspect afterwards.

Uprising of the People (1775). The skirmishes at Lexington and Concord (April 19, 1775), stirred society in the colonies as it was never stirred before. There was a spontaneous resolution to environ Boston with an army of Provincials that should confine the British to the Peninsula. For this purpose New Hampshire voted 2000 men, with Folsom and Stark as chief commanders. Connecticut voted 6000, with Spencer as chief and Putnam as second. Rhode Island voted 1500, with Greene as their leader; and Massachusetts voted 13,600 men. The people there seemed to rise *en masse*. From the hills and valleys of the Bay State (as from all New England) the patriots went forth by hundreds, armed and unarmed, and before the close of the month—in the space of ten days—an army of 20,000 men were forming camps and piling fortifications around Boston, from Roxbury to the River Mystic. The Provincial Congress of Massachusetts, with Joseph Warren at its head, worked day and night in consonance with the gathering army. They appointed military officers; organized a commissariat; issued bills of credit for the payment of the troops to the amount of \$375,000, and declared (May 5) General Gage to be an inveterate enemy of the people. And as the news of the events of the 19th of April went from colony to colony, the people in each were equally aroused. With the hottest haste, it did not reach Charleston, S. C., under twenty days. Arms and ammunition were seized, in various places, by the Sons of Liberty; provincial congresses were formed, and, before the close of summer, the power of every royal governor from Massachusetts to Georgia was utterly destroyed. Everywhere the inhabitants armed in defence of their liberties, and took vigorous measures for future security.

Upton, EMORY, was born in New York about 1840, and graduated at West Point in 1861. He became aid to General Tyler, and was wounded in the battle of Bull's Run. In the Peninsular campaign he commanded a battery, and was active in the battles of South Mountain, Antietam, Fredericksburg, Chancellorsville, and Gettysburg (1862-63). In the campaign against Richmond (1864) he commanded a brigade until assigned to the army under Sheridan in the Shenandoah valley, where he was wounded in the battle of Winchester (which see). Early in 1865 he commanded a division of cavalry in General Wilson's operations in Alabama and Georgia, and was distinguished in the capture of Selma. In March, 1865, he was breveted major-general United States Army for "meritorious services during the rebellion." General Up-

ton is the author of *Infantry Tactics for the United States Army*, adopted in 1867.

Ursuline Nunnery at Quebec. In 1639 Madame de la Petrie, a pious French lady, devoting her person and fortune to the religious design of founding a nunnery at Quebec, went to that place with three Ursulines, attended by Le Jenuc, superior of the Jesuit mission in Canada. (See *Jesuit Missions in North America, Early*.) When she landed on the shore at Quebec she knelt and kissed the earth, and then, in solemn procession, went to the church, while cannons thundered and the people shouted. At the church a solemn Te Deum was chanted, and Madame de la Petrie and her religious companions immediately proceeded in their pious task.

Usurpation in Georgia. Late in 1771 Noble Wimberley Jones was chosen speaker of the Georgia Assembly. He was a man of exemplary life, but the royal governor, Sir James Wright, who had reported him a strong opposer of government measures, would not consent to the choice. The Assembly voted this interference a breach of their privileges. Hillsborough, the Secretary of State for the colonies, censured the House for their "unwarrantable and inconsistent arrogance," and directed the governor to "put his negative upon any person whom they should next elect for speaker, and to dissolve the Assembly in case they should question the right of such negative." So the affections of the colonies, one after another, were alienated from the mother country by her unwise rulers.

Utah is a territory of the United States, situated between latitude 37° and 42° north, and longitude 109° and 114° west from Greenwich, and contains a population of about 100,000 souls. Of these more than 20,000 were born in the British Islands. Utah forms a part of the territory acquired from Mexico in 1848. It was settled in 1841 by a sect of polygamists called Mormons, led thither by Brigham Young. They formed an independent government and called it the State of Deseret—the land of the honey-bee—in March, 1849. This was superseded by a territorial government, organized by act of Congress, Sept. 9, 1850 (see *Omnibus Bill, The*), under the name of Utah, the name of an Indian tribe. It then contained over 220,000 square miles, embracing portions of what is now Colorado, Nevada, and Wyoming. In 1856, having a requisite number of inhabitants, the Legislature framed a constitution for the "State of Deseret," and application has since been frequently made for its admission into the Union, without success. (See *Mormons*.)

Utrecht, THE TREATY OF (April 11, 1713), secured the Protestant succession to the throne of England, the separation of the French and Spanish crowns, the destruction of Dunkirk, the enlargement of the British colonies in America, and a full satisfaction from France of the claims of the allies, England, Holland, and Germany. This treaty terminated Queen Anne's war, and secured peace for thirty years. (See *Queen Anne's War*.)

V.

Vallandigham, ARREST AND PUNISHMENT OF. The most prominent leader of the Peace faction (which see) during the Civil War was C. L. Vallandigham, member of Congress from Ohio. His seditious utterances proclaiming him to be an enemy of his country, he was arrested at his own house, near Dayton (May 4, 1863), by a military order, on a charge of "treasonable conduct." He was tried by a court-martial at Cincinnati, convicted, and sentenced to close confinement in a fortress for the remainder of the war. This sentence was modified by the President, who directed him to be sent within the Confederate lines, and, in the event of his returning without leave, to suffer the penalty prescribed by the court. Being now of no use to his "Southern friends," for whom he had earnestly labored, they treated him with such marked indifference that, disappointed and disgusted, he finally made his way to Canada, where he enjoyed the society of refugee Confederates. He was the Democratic candidate for Governor of Ohio in 1863, but was defeated. The late Matthew F. Maury, who had been Superintendent of the National Observatory, but cast his fortunes with the Confederates, wrote to the *London Times* (Aug. 17, 1863): "Vallandigham waits and watches over the border, pledged, if elected Governor of the State of Ohio, to array it against Lincoln and the war and to go for peace."

Vallandigham, CLEMENT L., was born at New Lisbon, O., in 1822; died at Lebanon, O., June 17, 1871. He was of Huguenot descent; studied at Jefferson College, Ohio; was principal of an academy at Snow Hill, Md.; and was admitted

CLEMENT L. VALLANDIGHAM.

to the bar in 1842. In 1845-46 he was a member of the State Legislature, and for ten years afterwards edited a newspaper at Dayton. An

earnest Democratic politician, he was sent to Congress in 1857, in which body he was active until 1863, opposing all measures of the government for the suppression of the insurrection and openly showing sympathy with the Secessionists. For alleged treasonable conduct, he was banished in 1863, and finally went to Canada. In 1864 he was the Democratic candidate for Governor of Ohio, but was defeated. While engaged in a suit in court he was mortally wounded by a pistol which he was handling in explaining some fact to the jury.

Valley Forge, ENCAMPMENT AT. Washington's army encamped at Whitemarsh, in a beautiful valley about fourteen miles from Philadelphia, where he remained until Dec. 11, 1777, and proceeded with his half-clad, half-barefooted

WASHINGTON'S HEADQUARTERS, VALLEY FORGE.

soldiers to Valley Forge, about twenty miles northward from Philadelphia. These numbered about eleven thousand men, of whom not more than seven thousand were fit for field duty. The place was chosen because it was further from the danger of sudden attacks from the foe, and where he might more easily afford protection for the Congress sitting at York. Blood-stains, made by the lacerated feet of his barefooted soldiers, marked the line of their march to Valley Forge. There, upon the slopes of a narrow valley on the borders of the winding Susquehanna, they were encamped, with no shelter but rude log huts which they built themselves. The winter that ensued was severe. The soldiers shivered with cold and starved with hunger, and there their genuine patriotism was fully tested. At the same time the British army was made as weak by indulgence in the city as were the American soldiers by physical privations, and Franklin was justified in saying, "Howe did not take Philadelphia; Philadelphia took Howe." At Valley Forge Baron Steuben entered upon his duties as Inspector-general of the Continental Army. There the joyful news reached the American army of a treaty of alliance with France. It was promulgated by Washington in general orders on the 6th of May, 1778. He

set apart the next day as one of rejoicing and grateful acknowledgment of the divine goodness in raising up a powerful friend "in one of the princes of the earth." It was celebrated with tokens of delight. The several brigades were drawn up to hear discourses by their respective chaplains. The men were placed in specified positions to fire a *feu de joie* with muskets and cannons—three times three discharges of thirteen cannons. At the first the army huzzied "Long live the King of France;" at the second, "Long live the friendly European Powers;" and at the third there was a shout, "The American States." Washington and his wife, and other officers and their wives, attended the religious services of the New Jersey brigade. Then the commander-in-chief dined in public with all the officers. Patriotic toasts were given, and loud huzzas greeted Washington when he left the table. As the season advanced comforts abounded at Valley Forge, the army increased, and on the 18th of June (1778) the encampment broke up and the army began a chase of the British across New Jersey when the latter had evacuated Philadelphia.

Valverde (New Mexico), **BATTLE AT**. General Canby, Commander of the Department of New Mexico, was at Fort Craig, on the Rio Grande, early in 1862. At that time Colonel H. H. Sibley, a Louisianian, had invaded New Mexico with twenty-three hundred Texas Rangers, many of them veterans who had fought the Indians. Sibley issued a proclamation demanding from the inhabitants aid for and allegiance to his marauders. Feeling confident of success, he moved towards Fort Craig to attack Canby. His light field-pieces could not injure the fort, so he crossed the Rio Grande below and out of reach of the guns of the fort for the purpose of drawing Canby out. In this he was successful. Canby threw a force across the river to occupy an eminence commanding the fort, which it was thought Sibley might attempt to gain. There a skirmish ensued, and the Nationals retired to the fort. On the following day (Feb. 21, 1862) a considerable force of cavalry, artillery, and infantry, under Lieutenant-colonel Roberts, crossed the river, and at Valverde, seven miles north of the fort, a severe battle occurred. Canby was about to make a general advance, when about one thousand Texans, horse and foot, armed with carbines, revolvers, and bowie-knives, suddenly burst from a thick wood and attacked two of the National batteries, commanded respectively by Captains McRea and Hall. The cavalry were repulsed, but the insurgent infantry pressed forward, while the grape-shot were making fearful lanes in their ranks, and captured the battery of McRea. The brave captain defended his guns with great courage. Seated upon one of them, he fought the assailants with a pistol until he was shot dead. At length the Nationals, panic-stricken by the fierceness of the charge, broke and fled, and did not stop until they had reached the shelter of Fort Craig. That flight was one of the most disgraceful scenes of the war. Canby was compelled to see the victory snatched from

him just as it seemed to be secured. Sibley, alarmed by the sudden development of Canby's strength by accessions to his ranks, hurried towards Santa Fé, captured it, but could not hold it, and was soon afterwards driven over the mountains into Texas.

Van Buren, MARTIN, eighth President of the United States, was born at Kinderhook, N. Y., Dec. 5, 1782; died there, July 24, 1862. He was educated at the village academy; studied law with W. P. Van Ness; and was admitted to the

MARTIN VAN BUREN.

bar in 1803. Having a taste for politics, he early engaged in it, being a member of a nominating convention when he was eighteen years of age. In 1808 he was appointed Surrogate of Columbia County, and was sent to the State Senate in 1812. From 1815 to 1819 he was Attorney-general of the State of New York; and was again Senator in 1816, holding both offices at the same time. He began a new organization of the Democratic party in 1818, and became the leader of a body of politicians known as the Albany Regency (which see). It held the political control of the state for nearly twenty years. Mr. Van Buren was chosen a member of the United States Senate in 1821, and was also in the convention that revised the state constitution. In the latter body he was favorable to the extension of the elective franchise, but not of universal suffrage. He opposed a proposition to deprive colored people of the elective franchise, but voted in favor of requiring of them a freehold qualification of \$250. He was again United States Senator in 1827; Governor of New York in 1828; entered Jackson's cabinet as Secretary of State in March, 1829; but resigned in 1831, when he was appointed minister to England. He arrived there in September, but in December the Senate rejected his nomination, and he returned. In May, 1832, he was nominated for Vice-President by the convention that re-nominated Jackson for the Presidency. He received all the electoral votes that were cast for Jackson excepting Pennsylvania. In 1836 he was elected President of the United States by one hundred and

seventy votes out of two hundred and eighty-three, and he was inaugurated March 4, 1837. The business of the country was in a depressed state during most of his administration, and his political opponents, unfairly holding him responsible for the grievance, accomplished his defeat at the next Presidential election. When his name was proposed at the Democratic nominating convention at Baltimore in 1844 as a candidate for the Presidency, it was rejected, because Mr. Van Buren was opposed to the annexation of Texas to the Union. In 1848, when the Democrats had nominated General Cass to please the slaveholders, the friends of Mr. Van Buren, in convention at Utica, adopting as their political creed a phase of anti-slavery, nominated him as a "free-soil" candidate for the Presidency, with Charles Francis Adams, of Massachusetts, for Vice-President. In accepting the nomination, Mr. Van Buren declared his full assent to the anti-slavery principles of the platform. The convention declared that Congress had "no more power to make a slave than to make a king," and that it was the duty of the national government to relieve itself of "all responsibility for the existence or continuance of slavery wherever the government possessed constitutional authority to legislate on that subject." General Taylor, candidate of the Whigs, was elected. Mr. Van Buren made a tour in Europe (1853-55). On the outbreak of the Civil War he took decided ground against the enemies of the government.

Van Buren's Cabinet: John Forsyth, of Georgia, Secretary of State; Levi Woodbury, of New Hampshire, Secretary of the Treasury; Joel R. Poinsett, of South Carolina, Secretary of War; Mahlon Dickerson, of New Jersey, Secretary of the Navy; Amos Kendall, of Kentucky, Postmaster-general; and Benjamin F. Butler, of New York, Attorney-general. These gentlemen were all members of President Jackson's cabinet excepting Mr. Poinsett. The latter succeeded General Lewis Cass, who, in 1836, had been sent as United States Minister to France.

Van Cleve, HORATIO PHILLIPS, was born at Princeton, N. J., Nov. 23, 1809, and graduated at West Point in 1831, but left the army in 1839. He was employed in civil-engineering and agriculture in Michigan and Minnesota until the breaking-out of the Civil War in 1861, when he became colonel of a regiment of Minnesota volunteers. He commanded these in the battle of Mill Spring (which see) in January, 1862; and for his gallant conduct there he was made a brigadier-general in March. He commanded a brigade in Crittenden's division in northern Mississippi and Alabama; and when that officer was promoted (Oct. 1, 1862) General Van Cleve took command of the division, with which he did excellent service in the battle of Stone's River, where he was wounded. In September, 1863, he performed good service in northern Georgia, particularly in the battle of Chickamauga. From 1863 to 1865 he was in command at Murfreesborough, and in January, 1866, was

made Adjutant-general of the State of Minnesota.

Van Cortlandt, PHILIP, was born in New York, Sept. 1, 1749; died Nov. 5, 1831. At the age of nineteen years he became a land-surveyor, but when the war for independence began he entered the military service as lieutenant-colonel. His Tory relatives had tried to dissuade him from this step, and Governor Tryon sent him a commission as colonel of militia, which he destroyed. In 1776 he was made colonel of the Second New York Regiment, with which he fought at Bemis's Heights and Saratoga (which see). In the winter of 1778 he was sent to protect the New York frontiers against the Indians under Braut. Colonel Van Cortlandt was a member of the court that tried General Arnold for improper conduct at Philadelphia, and was in favor of cashiering him. "Had all the court," wrote Van Cortlandt in his diary, "known Arnold's former conduct as well as myself, he would have been dismissed the service." In 1780 Colonel Van Cortlandt commanded a regiment under Lafayette; and with him in Virginia; and for his gallant conduct at Yorktown was promoted to brigadier-general. At the close of the war he retired to the Manor House at Croton. From 1788 to 1790 he was a member of the New York Legislature, and of the state convention that adopted the national Constitution. He was United States Senator from 1791 to 1794, and member of Congress from 1793 to 1809. Lafayette was accompanied by General Van Cortlandt in his tour through the United States in 1824-25.

Van Cortlandt, PIERRE, was born on the Van Cortlandt Manor, Westchester County, N. Y., Jan. 10, 1721; died at the Manor House, May 1, 1814. He was a member of the First Provincial Congress of New York. He was Chairman of the Committee of Public Safety, and was exceedingly active in the patriot cause. Throughout the Revolution he appears to have been the principal administrator of the government of New York; and so obnoxious was he to the British government that it set a bounty on his head. He was the first Lieutenant-governor of the State of New York (George Clinton was the first governor), and held that position by re-election while Clinton remained in office—eighteen years. He had been one of the committee that framed the constitution of the State of New York in 1777.

Vancouver, GEORGE, an English navigator, was born about 1758; died near London, May 10, 1798. He accompanied Captain Cook in his last two voyages. In 1790 he was made master in the royal navy, and was sent out in command of the *Discovery* to ascertain whether in North America, between north latitudes 30° and 60°, there was any interior sea or water communication between the known gulfs of the Atlantic and the Pacific oceans. He sailed from England in April, 1791, and in the spring of 1792 crossed from the Sandwich Islands to the American coast, when Nootka was surrendered by the Spaniards in accordance with previous arrange-

ments. He did not find the sought-for waters, and returned to London, late in 1795, with shattered health. His name was given to a large island on the western coast of America. He devoted himself to the arrangement of his manuscripts for publication, and his voyages, published in three volumes after his death, were edited by his brother.

Vanderbilt, CORNELIUS, was born near Stapleton, Staten Island, N. Y., May 27, 1794; died in New York city, Jan. 4, 1877. Spurning education, at the age of sixteen years he managed, with his mother's assistance, to buy a small boat, with which he carried passengers and "truck" between Staten Island and New York. At eighteen he owned two boats, and was captain of a third. Prosperity constantly attended him. He married at nineteen, and when he was twenty-three he was worth \$9000 and out of debt. Then he settled in New York, where he bought vessels of various kinds; and in 1817 he assisted in building the first steamboat that plied between New York and New Brunswick, of which he was captain, with a salary of \$1000 a year. He commanded a finer boat in 1818, his wife at the same time keeping a hotel at New Brunswick. He soon had full control of that steamboat line, and in 1827 he made \$40,000 a year profit. He started steamboats in various waters—the Hudson, the Delaware, Long Island Sound, etc., everywhere seeking to have a monopoly of the business and profits. His wealth greatly increased. He engaged in establishing steamboat and other connection between New York and California. After 1848 he fought opposition vigorously and triumphed. In 1856 he received a large subsidy for withdrawing his transit line; and in 1861 he presented to the government of the United States the *Vanderbilt*, a steam-vessel that cost \$800,000, for the suppression of the great insurrection. During his steamship career he owned twenty-one steamships, eleven of which he built; and, with steamboats, his entire fleet numbered sixty-six. For many years he was popularly called "Commodore." When he abandoned the water in 1864 his accumulations were estimated at \$40,000,000. So early as 1844 he had become interested in railroads; now he turned his capital and his energies in that direction. He obtained control of one railroad after another; and at the time of his death his various roads covered lines more than two thousand miles in extent, and, under one management, represented an aggregate capital of \$150,000,000, of which Vanderbilt and his family owned fully one half. His entire property at his death was estimated in value at nearly \$100,000,000, nearly all of which he bequeathed to his son William H., that the great railroad enterprise might go on as a unit and increase. In 1853 Mr. Vanderbilt went to Europe in his steam yacht *North Star*, and the same year he gave \$500,000 to a university of the Methodist Episcopal Church at Nashville, which is called "Vanderbilt University." He afterwards increased the gift to \$700,000, \$300,000 of which is to remain as a permanent invested sum.

Van der Lyn, JOHN, painter, was born at Kingston, N. Y., in October, 1776; died there, Sept. 23, 1852. At the age of sixteen years he received instructions in painting from Gilbert Stuart, and in 1796, through the aid of Aaron Burr, he went to Paris, and studied there five years. He returned, but went to Europe again, where he resided twelve years (from 1803 to 1815). There he painted a large picture of "Marius seated amid the Ruins of Carthage," for which he won the gold medal at the Louvre in 1808, and high commendation from Napoleon. On his return to America he painted portraits of distinguished citizens, and introduced the panoramic method of exhibiting pictures. In 1832 he was commissioned to paint a full-length portrait of Washington for the House of Representatives; and in 1839 he painted for one of the panels of the Rotunda of the Capitol "The Landing of Columbus."

Van Dorn, EARL, was born in Missouri in 1821; died at Spring Hill, Tenn., May 8, 1863. He graduated at West Point in 1842, and served in the war against Mexico. A zealous proslavery advocate, he was among the first to leave his flag and join the insurgents, taking a command of Texas volunteers. He received in Texas the surrender of a portion of the United States soldiers betrayed by General Twiggs. Made a Confederate major-general, he took command of the trans-Mississippi district in January, 1862, and was defeated at Pea Ridge (which see) in March. He was afterwards defeated at Corinth, and superseded by Pemberton. Defeated at Franklin (which see), he was not long afterwards shot by Dr. Peters, whose wife, it was alleged, he had dishonored.

Van Dorn in Texas. Major Earl Van Dorn, who had deserted his flag, was commissioned colonel by Jefferson Davis, and appeared in Texas in April, 1861, to secure for the use of the insurgent army, by persuasion or force, the remnant of the forces betrayed by Twiggs. (See *Twiggs, David E., Treacherous Conduct of.*) Van Dorn was a brave and dashing officer. He held out to them brilliant promises, and persuasions of every kind were brought to bear upon them, but in vain. At that time seven companies, under Major Sibley, were at Matagorda Bay, preparing to embark for the North on the *Star of the West*, under convoy of the gunboat *Mohawk*. These vessels did not make their appearance, and Sibley embarked on two lighters for Tampico, Mexico. Lack of coal and provisions compelled him to turn back. Again sailing, a heavy gale compelled him to anchor within the bay. During a very dark night that ensued, four vessels, with 1500 Texans under Van Dorn, came into the bay, and the next morning captured Sibley and his whole command. At about the same time a party of volunteers from Galveston captured the *Star of the West* (April 17), with all her stores—20,000 rations. On the 23d Colonel Waite and all his officers, on duty at San Antonio, were made prisoners; so also were seven companies under Colonel Reese, who were making their way towards the coast, by

1500 men under Van Dorn. These were all the National troops remaining in Texas, which Twiggs had surrendered. They were kept prisoners a while, and, after being compelled to give their parole not to bear arms against the insurgents, embarked for New York.

Vane, SIR HENRY, was born at Hadlow, Kent, Eng., in 1612; executed on Tower Hill, London, June 14, 1662. He was a son of Sir Henry, Secretary of State under kings James and Charles I. In very early life he refused to take the oath of supremacy, became a Puritan and a Republican, came to Boston in 1635 (Oct. 3), at the age of twenty-four years, and was almost immediately chosen governor. His was a stormy administration, for it was agitated by the "Hutchinson Controversy." (See *Hutchinson, Anne*.) Vane was enlightened and tolerant. He abhorred bigotry in every form, warmly defended the inviolability of the rights of conscience and the exemption of religion from all control by the civil authorities, and had no sympathy with the attacks of the clergy upon Mrs. Hutchinson. Winthrop, whom he had superseded as governor of Massachusetts, led a strong opposition to him, and the next year he was defeated as a candidate for re-election, but became a member of the General Court. Late in the summer of 1637 he sailed for England, was elected to Parliament, became one of the treasurers of the navy, and in 1640 was knighted. In the Long Parliament he was a member, and a strong opponent of royalty. He was the principal mover of the Solemn League and Covenant, and in 1648 was a leader of the minority in Parliament which favored the rejection of terms of settlement offered by the king. In 1649 he was a member of the Council of State, and had almost exclusive direction of the navy. He was then considered one of the foremost men in the nation, and Milton wrote a fine sonnet in his praise. He and Cromwell were brought in conflict by the forcible dissolution of the Long Parliament by the latter. Vane was leader of the Rebellion Parliament in 1659. When Charles II. ascended the throne, Vane, considered one of the worst enemies of his beheaded father, was committed to the Tower in 1662, and soon afterwards executed. Sir Henry Vane was chiefly instrumental in procuring the first charter for Rhode Island.

Van Horne's Defeat. The untiring Governor Meigs sent Captain Brush with men, cattle, provisions, and a mail for Hull's army. At the River Raisin (now Monroe, Mich.), Brush sent word to Hull that he had information that a body of Indians under Tecumtha was lying in wait for him near Brownstown, at the mouth of the Huron River, twenty-five miles below Detroit, and he asked the general to send down a detachment of soldiers as an escort. Hull ordered Major Thomas B. Van Horne, of Colonel Findlay's regiment, with two hundred men, to join Brush, and escort him and his treasures to headquarters. The major crossed the Detroit from Hull's forces in Canada Aug. 4, 1812. On the morning of the 5th, while the detachment

was moving cautiously, Van Horne was told by a Frenchman that several hundred Indians lay in ambush near Brownstown. Accustomed to alarmists, he did not believe the story, and pushed forward his men in two columns, when they were fired upon from both sides by Indians concealed in the thickets and woods. The attack was sudden, sharp, and deadly, and the troops were thrown into confusion. Apprehensive that he might be surrounded, Van Horne

THOMAS B. VAN HORNE.

ordered a retreat. The Indians pursued, and a running fight was kept up for some distance, the Americans frequently turning upon the savage foe and giving them deadly volleys. The mail carried by the Americans was lost, and fell into the hands of the British at Fort Malden, by which most valuable information concerning the army under Hull was revealed, for officers and soldiers had written freely to their friends at home. The Americans lost seventeen killed and several wounded, who were left behind.

Van Rensselaer, HENRY KILLIAN, was born near Albany in 1744; died at Greenbush, N. Y., Sept. 9, 1816. He commanded a regiment in the old war for independence, and was wounded in the battle of Saratoga (which see). He was afterwards a general of militia. In July, 1777, at about the time of the retreat of the American army from Ticonderoga before Burgoyne, he was attacked by a large British force near Fort Anne. He made stout resistance; but, hearing of the evacuation of Ticonderoga, he fell back towards Fort Edward. In that encounter he received a bullet in his thigh, which was not extracted until after his death. It is preserved by his family.

Van Rensselaer, SOLOMON, was born in Rensselaer County, N. Y., Aug. 6, 1774; died at Albany, N. Y., April 23, 1852. He was a son of Henry Killian. He entered the military service as cornet of cavalry in 1792, and in the battle of Fall-

en Timbers (which see), fought by Wayne (Aug. 20, 1794), was shot through the lungs. From 1801 to 1810 he was adjutant-general of the New York militia. He was lieutenant-colonel of vol-

SOLOMON VAN RENSSELAER.

unteers of New York in 1812, and commanded the troops that attacked those of the British at Queenstown, Oct. 13 of that year. At the landing-place he received four wounds, and had to be carried back to Lewiston, on the east side of the Niagara River. From 1819 to 1822 he was a member of Congress, and from 1822 until 1839 postmaster at Albany. He published a *Narrative of the Affair at Queenstown* in 1836.

Van Rensselaer, STEPHEN, LL.D., the last of the patroons (which see), was born in New

STEPHEN VAN RENSSELAER.

York, Nov. 1, 1764; died at Albany, Jan. 26, 1839. He was the fifth in lineal descent from Killian,

the first patroon. His mother was a daughter of Philip Livingston. He married a daughter of General Philip Schuyler in 1783. In 1789 he was a member of the Legislature, and State Senator from 1790 to 1795. From 1795 to 1801 he was lieutenant-governor. He presided over the Constitutional Convention in 1801, and in 1810-11 was one of the commissioners to ascertain the feasibility of a canal to connect the waters of the Lakes with the Hudson. From 1816 until his death he was one of the canal commissioners, and for fifteen years president of the board. In 1801 he commanded the state cavalry, with the rank of major-general; and when the War of 1812-15 broke out was chief of the New York state militia. (See *Queenstown, Battle at.*) In 1819 he was elected a regent of the State University, and afterwards its chancellor. In 1820 he was president of the State Agricultural Board, a member of the Constitutional Convention in 1821, and of Congress from 1823 to 1829. At his expense, and under his direction, a geological survey of New York was made in 1821-23. In 1824 he established at Troy, N. Y., a scientific school for the instruction of teachers, which was incorporated in 1826 as "The Rensselaer Institute." Yale College conferred on him the honorary degree of LL.D. in 1825.

Van Schaack, PETER, was one of the most eminent citizens of the state of New York. His ancestors were from Holland, and settled at an early period at Kinderhook, Columbia Co., N. Y., where he was born in March, 1747, and died Sept. 17, 1832. Mr. Van Schaack was educated at King's (now Columbia) College, in the city of New York, and had the reputation of being a most accomplished classical scholar. While in college he married Elizabeth Cruger; and choosing the law as a profession, entered the office of Mr. Sylvester, in Albany, concluding his studies with the eminent William Smith, in New York. Soon rising to eminence in his profession, he was appointed, at the age of twenty-six years, sole reviser of the colonial statutes. When the war for independence broke out he was one of the New York Committee of Correspondence; but when the question, Shall the American colonies take up arms against Great Britain? had to be answered by every American citizen, his voice was in the negative, and during the war that ensued Mr. Van Schaack was a conscientious loyalist, but assumed the position of strict neutrality. He did not escape persecution, for suspicion was everywhere keen-scented. The Committee on Conspiracies at Albany summoned him before them (June, 1777), and required him to take the oath of allegiance to the Continental Congress. He refused, and was ordered to Boston within ten days. From that time he was constantly restrained; and when he asked the privilege of taking his wife, who was dying with consumption, to New York, it was refused. She died, and he was banished from his native country in October, 1778, when he went to England, and remained there until the summer of 1785—almost seven years—when he returned home, and was received with open arms by men of all parties. While in England he had asso-

ciated with the most distinguished men of the realm, who regarded him as one of the brightest Americans among them, for his scholarship, legal attainments, and rare social qualities were remarkable. These made his mansion at Kinderhook (yet standing) the resort of some of the most eminent men of our land, and his society was sought after continually as a boon. In early life Mr. Van Schaack lost the sight of one of his eyes, and he suffered many afflictions with great fortitude.

Van Schaick, GOOSEN, was born at Albany, N. Y., in 1737; died July 4, 1789. He served in the French and Indian War, taking part in the expeditions against Ticonderoga, Crown Point, Fort Frontenac, and Niagara (1756-59), and was major in Colonel Johnson's regiment in 1759. On the breaking-out of the Revolution he was made colonel of the Second New York Regiment, and late in 1776 was in command of a battalion sent to the vicinity of Cherry Valley to protect the inhabitants against Brant and his followers, in which work he was vigilant and active. In the battle of Monmouth he was a brigadier under Lord Stirling. In the spring of 1779 he was sent by Washington to destroy the settlement of the Onondaga Indians, for the performance of which service Congress gave him its thanks. He was made brigadier-general by brevet, Oct. 10, 1783. (See *Breret*.) Van Schaick was a rigid disciplinarian, and his regiment one of the best in the service.

Van Twiller, WOUTER (or WALTER), was a resident of Nieuwkerk, in Holland, and in 1623 was chosen to succeed Peter Minnits as governor of New Netherland. He was one of the clerks in the West India Company's warehouse at Amsterdam, and had married a niece of Killian van Rensselaer, the wealthiest of the newly created patroons. Van Rensselaer had employed him to ship cattle to his domain on Hudson's River, and it was probably his interest to have this agent in New Netherland; so, through his influence, the incompetent Van Twiller was appointed director-general of the colony. He was inexperienced in the art of government, slow in speech, incompetent to decide, narrow-minded, and irresolute. He was called by a satirist "Walter the Doubter." Washington Irving, in his broad caricature of him, says, "His habits were as regular as his person. He daily took his four stated meals, appropriating exactly an hour to each; he smoked and dozed eight hours, and he slept the remaining twelve of the four-and-twenty." He knew the details of the counting-room routine, but nothing of men or the affairs of state. He even came into collision with abler men in the colony. In the company's armed ship *Soutberg*, with one hundred and four soldiers, he sailed for Manhattan. With him also came Evert Bogart (or Everardus Bogardus), the first clergyman sent to New Netherland, and Adam Roelandson, schoolmaster. The chief business of Van Twiller's administration appears to have been to maintain and extend the commercial operations of his principals, the West India Company. He repaired Fort Amsterdam, erected a guard-house

and barracks, and built expensive windmills; but the latter were so near the fort that their wings frequently missed the wind. Buildings were erected for officers and other employees, and several in various parts of the province. Of this extravagance complaint was made, and Van Twiller's shortcomings were severely denounced by Dominie Bogardus, who, in a letter to him, called him a "child of the devil," and threatened him with "such a shake from the pulpit" on the following Sunday "as would make him shudder." His administration was so much complained of in Holland that he was recalled in 1637. He left the colony in a sorry condition, but with an ample private estate. Van Rensselaer seems to have had confidence in Van Twiller, for he made him executor of his last will and testament. In a controversy, Van Twiller took sides against the West India Company, and vilified the administration of Stuyvesant. The company were indignant, and spoke of Van Twiller as an ungrateful man who had "sucked his wealth from the breasts of the company which he now abuses."

Varick, RICHARD, was born at Hackensack, N. J., March 25, 1753; died in Jersey City, July 30, 1831. He was a lawyer in the city of New York when the war for independence began, and he entered the service as captain in McDougal's regiment. Soon afterwards he became General Schnyler's military secretary, and remained so until that officer was superseded by Gates in the summer of 1777, continuing with the army, with the rank of colonel, until the capture of Burgoyne. Varick was inspector-general at West Point until after Arnold's treason, when he became a member of Washington's military family, acting as his recording secretary until near the close of the Revolution. When the British evacuated the city of New York (Nov. 25, 1783) Colonel Varick was made recorder there, and held the office until 1789, when he became attorney-general of the state. Afterwards he was elected mayor of New York, and held that office until 1801. He and Samuel Jones were appointed (1786) to revise the laws of the state of New York, and in 1787 he was speaker of the Assembly. Colonel Varick was one of the founders of the American Bible Society. In person he was over six feet in height, and of imposing presence.

Varnum, JAMES MITCHELL, was born at Draught, Mass., in 1749; died at Marietta, O., Jan. 10, 1789. He graduated at Rhode Island College (Brown University) in 1769, and became an eminent lawyer in East Greenwich, R. I. In 1774 he was commander of the "Kentish Guards," from the ranks of which came General Greene and about thirty other officers of the Revolution. He was made colonel of the First Rhode Island Regiment in January, 1775, and soon afterwards entered the Continental army, becoming brigadier-general in February, 1777. He was at Red Bank (which see), in command of all the troops on the Jersey side of the Delaware, when the British took Philadelphia; and it was under his direction that Major Thayer

(which see) made his gallant defence of Fort Mifflin. General Varnum was at Valley Forge the following winter; took part in the battle of Monmouth (June 28, 1778); joined Sullivan in his expedition to Rhode Island, serving under the immediate orders of Lafayette, and resigned in 1779, when he was chosen major-general of militia, which office he held until his death. In the Continental Congress (1780-82 and 1786-87) he was very active, and an eloquent speaker. Appointed Judge of the Supreme Court in the Northwest Territory, he removed to Marietta in June, 1788, and held the office until his death.

Varnum, JOSEPH BRADLEY, brother of James M., was born at Dracut, Mass., in 1750; died there, Sept. 11, 1821. He was an active patriot during the Revolution, both in the council and in the field; was member of Congress from 1795 to 1811, speaker of the Tenth and the Eleventh Congress, and United States Senator from 1811 to 1817. Mr. Varnum had been made major-general of militia at an early day, and at the time of his death was the oldest officer of that rank in Massachusetts, and also senior member of the United States Senate.

Varuna, THE. In the naval battle on the Mississippi (which see) below New Orleans, the chief efforts of the Confederate gunboats seemed to be directed against the *Cayuga*, Captain Bailey, and the *Varuna*, Captain Boggs (which see).

CAPTAIN BOGGS.

The *Cayuga* had compelled three of the Confederate gunboats to surrender to her, and was fighting desperately, when the *Varuna* rushed into the thickest of the battle to rescue her. Then the *Varuna* became the chief object of the wrath of the Confederates. "Immediately after passing the forts," reported Captain Boggs, "I found myself amid a nest of rebel steamers." As he penetrated this "nest," he poured a broadside upon each vessel as he passed. The first that received his fire appeared to be crowded with troops. Her boiler was exploded by a shot, and she drifted ashore. Soon afterwards the *Varuna* drove three other vessels ashore in flames, and all of them blew up. Very soon af-

terwards she was fiercely attacked by the "ram" *Governor Moore*, commanded by Captain Kennon, formerly of the United States Navy. It raked along the *Varuna's* port-gangway, doing considerable damage; but Boggs soon drove her out of action, when another "ram," its beak under water, struck the *Varuna* at the same point. The shots of the latter glanced harmlessly from the armor of her assailant. The "ram" backed off a short distance, and, darting forward, gave the *Varuna* another blow in the same place, which crushed in her side. The "ram" became entangled, and was drawn nearly to the side of the *Varuna*, when Boggs gave her five 8-inch shells abaft her armor from his port-guns, and drove her ashore in flames. Finding his own vessel sinking, he ran her into the bank, let go her anchor, and tied her bow fast to the trees. All that time her guns were at work crippling the *Moore*, and did not cease until the water was over the gun-trucks. Then he got his wounded and crew safely on shore. The *Moore* was soon afterwards set on fire by Kennon, who abandoned her, leaving his wounded to perish in the flames. This was one of the most daring exploits of the war, and received great applause.

Vasquez De Allyon, LUKE, was a wealthy Spanish colonist in Santo Domingo, who owned extensive mines there. Cruelty had almost exterminated the natives, and Vasquez sailed northward in two ships, in 1520, in search of men on some island, to make them slaves to work his mines. Entering St. Helen's Sound, on the coast of South Carolina, by accident, he saw with delight the shores swarming with wonder-struck natives, who believed his vessels to be sea-monsters. When the Spaniards landed, the natives fled to the woods. Two of them were caught, carried on board of the ships, feasted, dressed in gay Spanish costume, and sent back. The sachem was so pleased that he sent fifty of his subjects to the vessels with fruits, and furnished guides to the Spaniards in their long excursions through the woods. When Vasquez was ready to leave, he invited a large number of native men to a feast on board his ships. They were lured below, made stupidly drunk, and were carried away to be made slaves of. Many of them died from starvation, for they refused to eat, and one of the ships foundered, and perished with all on board. The remainder were made slaves in the mines. Vasquez was rewarded as a discoverer of new lands (see *America, Discoverers of*), and made governor of Chicora, as the natives called the region of South Carolina. With three ships he proceeded to take possession of the territory and plant a colony. On Beaufort Island, Port Royal Sound, they began to build a town. The natives seemed friendly, and very soon the sachem invited the Spaniards to a great feast near the mouth of the Combahee River. About two hundred of them went. It lasted three days. When the Spaniards were all asleep, the Indians fell upon and murdered the whole of them. Then they attacked the builders on Beaufort. Some of the Spaniards escaped to their ships, and among them was Vasquez, mortally wounded.

The treachery taught the Indians by the Spaniards was repeated in full measure.

Vassar College was the first seminary of learning for imparting a full collegiate education to women established in the world. It was founded by Matthew Vassar, at Poughkeepsie, N. Y., in 1861, who, on the organization of a board of trustees (Feb. 26, 1861), presented to them, for the purpose of building and equipping a college for women, the sum of \$408,000. The college edifice was erected during the Civil War, and a few weeks after the close of that war a faculty was chosen (June, 1865). The institution was opened for the reception of students in September following, when nearly three hundred and fifty young women entered. In 1864 Mr. Vassar purchased and presented to the college a collection of oil and water-color pictures for its art-gallery, at a cost of \$20,000, including an art-library of about eight thousand volumes. Mr. Vassar died in 1868, leaving, by his will, \$50,000 as a "Lecture Fund," \$50,000 as an "Auxiliary Fund," and \$50,000 as a "Library, Art, and Cabinet Fund," the income of each to be applied to the purpose for which it was intended—namely, the first-named for employing lecturers, the second for aiding meritorious students unable to pay the whole expense of a collegiate course, and the third for the enlargement of the library, art-gallery, and cabinets. He also bequeathed \$125,000 as a "Repair Fund," to meet necessary expenses in repairs of and additions to the college buildings. The college buildings are six in number, the main building being five hundred feet in length and five stories in height. It is furnished with an excellent observatory and a museum and art department. It has a well-chosen library of about ten thousand volumes, and every department is thoroughly equipped with everything required. The college edifice stands in the midst of two hundred acres of fine land, on which is a lake used for boating and skating purposes, which is fed by springs of pure water, from which the college is supplied with more than twenty thousand gallons a day. From the start Vassar College has been successful in every particular, and is pronounced by educators at home and abroad as a model institution. It has the honor of being the pioneer in the work of the higher education of women.

Vassar, MATTHEW, founder of Vassar College for the higher education of women, was born at Norfolk, Eng., April 29, 1792; died in the college, at Poughkeepsie, at an annual meeting of the trustees, June 23, 1868. He came to the United States with his father in 1796, when the family settled on a small farm near Poughkeepsie, Dutchess Co., N. Y., and established a brewery of ale in a small way. In 1812, at the age of twenty, Matthew began the business at Poughkeepsie, and by this and other enterprises he accumulated a large fortune. In declining life, as he was childless, he contemplated the establishment of some public institution. At the suggestion of his niece (Miss Booth), a suc-

cessful teacher of girls, he resolved to establish a college for young women, and in February, 1861, at a meeting of a board of trustees which he had chosen, he delivered to them \$408,000, for the founding of such an institution. A spacious building was erected, and in September, 1865, it was opened with a full faculty and over three hundred students. Other gifts to the college and bequests in his will increased the amount to over \$800,000. It was the first institution of the kind ever founded, and has been always flourishing. Its educational apparatus, including a valuable art-gallery for its art schools, is very perfect. It has a library of about ten thousand volumes, and the land attached to the college comprises about two hundred acres. Its site is about two miles from Poughkeepsie.

Vaudreuil, PHILIP DE RIGAND (Marquis de), had been a brave soldier when, in 1639, he was named governor of Montreal, under Frontenac. He served in an expedition against the Iroquois, and also in defence of Quebec against the armament under Phipps, in 1690. Active and brave in military life, he was made governor of Canada in 1703, and remained so until his death, Oct. 10, 1725. During his administration he gave the English colonies infinite trouble by inciting the Indians to make perpetual forays on the frontier. His son, Pierre François, who inherited his title and was the last French governor of Canada, was born at Quebec in 1698, and died in France, 1764. He, too, was a soldier in the French army; became governor of Three Rivers in 1733, and of Louisiana in 1743; was made governor of Canada in 1755, but was regarded with contempt by Montcalm, whose friends, after the surrender of Montreal and the return of Vaudreuil to France, made charges which caused the ex-governor's imprisonment in the Bastille. He was exonerated from all blame and released, but was stripped of nearly all his possessions.

Vaughan, SIR JOHN, was born in 1738; died at Martinique, June 30, 1795. He came to America as colonel of the Fortieth Regiment, and served on the staff of Sir Henry Clinton as brigadier and major-general. In January, 1777, he was made major-general in the British army. In the battle of Long Island he led the grenadiers, and was wounded at the landing on New York Island afterwards. He participated in the capture of forts Clinton and Montgomery, in the Hudson Highlands, and, proceeding up the river in a squadron of light vessels, he burned Kingston and devastated other places on the shores. (See *Kingston, Burning of*.) In May, 1779, he captured Stony and Verplanck's Points on the Hudson, and returned to England in the fall, becoming commander-in-chief of the Leeward Islands. With Rodney, he took Eustatia in 1781. He was a representative of Berwick, in Parliament, from 1774 until his death.

Velasquez, DON DIEGO, Governor of Cuba (1518), encouraged by the account of Cordova's expedition (see *Cordova, Francis Fernandez*), fitted out an armament, under Juan de Grijalva, for further explorations of Yucatan, who sailed

from Cuba with four ships and two hundred Spanish soldiers. The advantages pointed out by this expedition induced Velasquez to send another, under Hernando Cortez, to make discoveries, and, perchance, the conquest of Mexico, the shores of which Grijalva had seen. In 1520 he sent a force, under Narvaez, to put down the ambitious Cortez in Mexico. (See *Cortez, Hernando*.) Velasquez died in 1523. He was born in old Castile, about 1460.

Vera Cruz, BOMBARDMENT AND CAPTURE OF. On Nov. 30, 1846, General Winfield Scott sailed from New York to take chief command of the American armies in Mexico. He reached the mouth of the Rio Grande about the 1st of January, 1847, but the tardiness of government in furnishing materials for attacking Vera Cruz delayed that movement several weeks. For that expedition he assigned 12,000 men, and appointed the Island of Lobos, about one hundred and twenty-five miles northwest of Vera Cruz, as the place of rendezvous. When the troops were gathered, they sailed for Vera Cruz, and landed near that city March 9, 1847. Upon an island opposite was a very strong fortress, called the Castle of San Juan de Ulloa, which the Mexicans regarded as invulnerable. This and Vera Cruz were considered the "key of the country." This fortress and the city were completely invested by the Americans four days after the landing, and on the 22d General Scott and Commodore Conner were ready for the bombardment. Then Scott summoned the city and fortress to surrender. The demand was refused, when shells from seven mortars on land (soon increased to nine) were hurled upon the city. The engineering works for the siege had been skilfully prepared by the late General Totten. The entire siege continued fifteen days, during which time the Americans fired 3000 ten-inch shells, 200 howitzer-shells, 1000 Paixhan shot, and 2500 round-shot, the whole weight of metal being about 500,000 pounds. The shells did terrible damage within the city, and many women and children became victims. On the morning of March 26 the commander of the post made overtures for surrender, and on the 29th that event took place, when about 5000 Mexicans marched out to a plain a mile from the city, where they laid down their arms, gave up their flags, and retired to the interior on parole. The city and fortress of San Juan de Ulloa, with 500 pieces of artillery and a large quantity of munitions of war passed into the possession of the Americans. The latter, during the whole siege, had lost only 80 men killed and wounded; the Mexicans lost 1000 killed and many more wounded. Scott tried to induce the governor to send the women and children and foreign residents out of the city before he began the bombardment, but that magistrate refused. (See *Mexico, War with*.)

Verazzani, JOHN, a Florentine navigator, was born about 1485. Going to France, he was employed as a navigator; and some allusions in French annals make it seem probable that he was so employed as early as 1508. He became

a bold corsair, and a terror to the merchant-ships of Spain and Portugal, seizing many vessels. In 1522 he captured the treasure-ship sent by Cortez to Charles V. with the spoils of Mexico, valued at \$1,500,000. Finally his depredations aroused both Spain and Portugal, and he was captured in the autumn of 1527 and executed at Puerto del Pico, Spain, soon afterwards. Meanwhile Verazzani, according to a

JOHN VERAZZANI.

letter from the navigator to Francis I., dated July 8, 1524, and published in the collection of voyages by Ramusio in 1556, had sailed from France late in 1523 in the ship *Dauphin*, under a commission from the king, and touched America first, at the mouth of the Cape Fear River, in March, 1524. In that letter he gives an account of his explorations of the North American coast from latitude 34° to 50°, at the Gulf of St. Lawrence. He describes the people at various points, and his topographical descriptions seem to indicate that he entered the bays of Delaware, New York, and Narraganset, and the harbor of Boston. In the Strozzi library at Florence is preserved a cosmographic description of the coasts and all the countries which Verazzani visited, from which it is evident he was in search of a northwest passage to India. The region of America which he visited he called New France (which see). The authenticity of Verazzani's letter to Francis I. has been questioned by American writers, who suppose that it was forged by one of his countrymen anxious to secure for Italy the glory due to Cabot for the discovery of the North American Continent. It is possible that Verazzani the corsair was not Verazzani the navigator. Some writers say that the latter sailed again for America in 1525, and was never heard of afterwards; while it is known that Verazzani the corsair was executed in Spain in 1527.

Vergennes, CHARLES GRAVIER (Count de), was born at Dijon, Dec. 28, 1717; died at Versailles, Feb. 13, 1787. In 1740 he was sent to Lisbon in a diplomatic capacity; in 1750 was

minister at the court of the Elector of Treves; and from 1755 to 1768 he was French ambassador to Turkey. When Louis XVI. came to the throne (1774), Vergennes was minister in Sweden. The king recalled him, and made him Minister for Foreign Affairs in July. He was the eminent French minister with whom the American diplomatists had intercourse during the entire war for independence.

CHARLES GRAVIER VERGENNES.

Vergennes, PROPHECY OF. When the Count de Vergennes, the French minister, was informed of the proclamation of King George (which see), and that it had been determined by the British ministry to burn the town of Boston and desolate the country, he exclaimed, prophetically: "The cabinet of the King of England may wish to make North America a desert, but there all its power will be stranded; if ever the English troops quit the borders of the sea, it will be easy to prevent their return." Vergennes could not persuade himself that the British ministry could refuse conciliation on the reasonable terms offered by the Americans. The king's proclamation changed his mind. "That proclamation against the Americans," he said, "changes my views altogether; it cuts off the possibility of retreat; America or the ministry themselves must succumb."

Vermont a "Sovereign State." At the middle of January (15-17), 1777, the people of the "New Hampshire Grants" (which see) assembled in convention at Windsor, and declared the "Grants" an independent state, with the title of Vermont. The territory was yet claimed by New York. At the same time the convention adopted a petition to the Continental Congress, setting forth reasons for their position of independence, and asking for admission into the confederacy of free and independent states and seats for delegates in the Congress. This petition, presented to Congress April 8, 1777, was dismissed by resolutions on June 30, in one of which it was declared "That the independent government attempted to be established by the people styling themselves inhabitants of the New Hampshire Grants can derive no countenance or justification from the act of Congress declaring the United Colonies to be independent of the crown of Great Britain, nor from any other act or resolution of Congress." The Vermonters had adopted a constitution modelled on that of Pennsylvania, and on the 8th of July a convention at Windsor adopted it. Under this frame of government Vermont successfully maintained its independence and "sovereignty" until 1791. During that time the Congress refused to admit its independence as a state of the Union, according to the ideas of

state supremacy then prevailing. After the ratification of the Articles of Confederation, in 1781, Congress offered to admit it, with a considerable curtailment of its boundaries. The people refused to come in on such terms, and for ten years they remained outside of the Union. Finally, on the 10th of January, 1791, a convention at Bennington adopted the national Constitution, and Vermont, having agreed to pay to the State of New York \$30,000 for territory claimed by that state, was, by a resolution of Congress passed on the 18th of February, admitted as a state of the Union on the 4th of March, to have two representatives in Congress until an apportionment of representatives should be made.

Vermont, STATE OF. The first settlement of white people in this state was made in 1724, by the erection of Fort Dummer near the (present) site of Brattleborough, then supposed to be in Massachusetts. The portion of country between the Connecticut River and Lake Champlain was known as "New Hampshire Grants" (which see). In the spring of 1777 the settlers in Vermont petitioned the Continental Congress for admission into the confederacy, but, New York opposing, the petition was withdrawn, and at a convention held the next year at Windsor a constitution, modelled after that of Pennsylvania, was adopted. In 1781 Congress offered to admit Vermont upon terms which the people would not agree to, and it remained outside the Union until March 4, 1791. Satisfactory arrangements having been made, it assumed the position of a state of the Union. In the War of 1812-15 the

STATE SEAL OF VERMONT.

governor refused to call out the militia, and forbade troops to leave the state; but Vermont volunteers took an active part in the battle at Plattsburg (which see), in 1814. During the trouble in Canada (1837-38), sympathizing Vermonters to the number of fully six hundred, went over to the help of the insurgents, but were soon disarmed by the authorities of the United States. During the late Civil War Vermont furnished to the National army 35,256 troops.

Vermont, TOWNS ADDED TO. In February, 1781, an arrangement was made between the Legislature of Vermont and a convention held at Corinth, by which the New Hampshire Grants

(which see) east of the Connecticut River and west of the "Maine Line" were taken into union with the former state; and on April 5 the union of the Grants east and west of the Connecticut River was consummated. On the following day thirty-five representatives from the Grants east of the river took their seats in the Assembly of Vermont.

Vernon, EDWARD, was born at Westminster, England, Nov. 12, 1684; died at his seat in Suffolk, Oct. 29, 1757. He served under Admiral Hopson in the expedition which destroyed the French and Spanish fleets off Vigo on Oct. 12, 1702, and was at the naval battle between the French and English off Malaga in 1704. In 1708 he attained the rank of rear-admiral, and remained in active service until 1727, when he was elected to Parliament. He loudly condemned the acts of the ministry, and, in the course of remarks while arraigning them for their weakness, declared that Porto Bello could be taken with six ships. For this remark he was extolled throughout the kingdom. There was a loud clamor against the ministry, and to silence it they sent Vernon to the West Indies, with the commission of vice-admiral of the blue. With six men-of-war he captured Porto Bello on the day after the attack (November, 1739), the English losing only seven men. For this exploit a commemorative medal was struck, bearing an effigy of the admiral on one disk, and a town and six ships on the other. With twenty-nine ships of the line and eighty small vessels, bearing fifteen thousand sailors and twelve thousand land-troops, Vernon sailed from Jamaica (January, 1741) to attack Carthage, but was repulsed with heavy loss. Twenty thousand men perished, chiefly by a malignant fever. The admiral was afterwards in Parliament several years, and during the invasion of the Young Pretender in 1745 he was employed to guard the coasts of Kent and Suffolk; but soon afterwards, on account of a quarrel with the admiralty, his name was struck from the list of admirals. Lawrence Washington, a spirited young man of twenty-two, bearing a captain's commission, joined Vernon's expedition in 1741, and because of his admiration for the admiral he named his estate, on the Potomac, "Mount Vernon."

Veto, PRESIDENT MADISON'S. The third veto in the history of the government was made by the President near the close of the session of Congress in March, 1811, on two bills—one incorporating an Episcopal Church in the District of Columbia, the other granting a piece of public land to a Baptist Church in Mississippi. The ground of the veto was that the bill conflicted with the clause in the Constitution forbidding Congress to make any law respecting a religious establishment.

Veto, THE FIRST. Section VI., article 1 of the national Constitution authorizes the President of the United States to return any act presented to him for his approval, to the House in which it may have originated, with his objections, made in writing. This is called a veto. If

the House shall thereafter pass the bill by a vote of two thirds of its members, it becomes a law without the signature of the President. The first exercise of the veto power by the President of the United States was by Washington, who returned to the House of Representatives, wherein it originated, "an act for the apportionment of representatives among the several states according to the first enumeration," with his objections, stated as follows: "1st. The Constitution has prescribed that representatives shall be apportioned among the several states according to their respective numbers; and there is no proportion or division which, applied to the respective numbers of the states, will yield the number and allotment of representatives proposed by the bill. 2d. The Constitution has also provided that the number of representatives shall not exceed one for thirty thousand—which restriction is, by the context, and by fair and obvious construction, to be applied to the separate and respective numbers of the states—and the bill has allotted to eight of the states more than one for thirty thousand."

Vice-admiralty Courts. For the enforcement of the Navigation Acts (which see), courts of vice-admiralty were established throughout the colonies in 1697, with power to try admiralty and revenue cases without a jury—the model of our existing United States District Courts. These were strongly resisted, especially in the chartered colonies. The Privy Council (which see) maintained the doctrine that nothing prevented the king from establishing an admiralty jurisdiction within every dominion of the crown, chartered or not.

Vicksburg and Farragut. The city of Vicksburg, situated on a group of eminences called the Walnut Hills, on the east bank of the Mississippi River, in the State of Mississippi, had been fortified by the Confederates, who thus blockaded that great stream. It was at a bold bend in the river. It promised to be a most commanding centre of power for the Confederates, and towards that point operations in the southwest were soon tending. To remove this obstruction to the navigation of the Mississippi, Commodore Farragut, in command of National vessels, bent his energies. Baton Rouge had been taken possession of by National forces (May 7, 1862). At that point Farragut held communication with the commanders of gunboats above. Finally he went up and attacked the batteries there (June 26). He also attempted, with the aid of twelve hundred negroes, to cut a canal across a peninsula in front of Vicksburg, so as to avoid the Confederate guns at the city. He failed, and abandoned the enterprise. It was undertaken by Grant the next year, with the same result. (See *Vicksburg, Siege of*.)

Vicksburg, SIEGE OF. This was begun at the close of 1862, and ended early in July following. At the beginning of 1863 the national government had more than 700,000 soldiers in its service; and up to that time the loyal people had furnished 1,200,000 troops, mostly vol-

unteers, for the salvation of the life of the Republic. The Confederates had blockaded the Mississippi River by planting heavy batteries on bluffs at Vicksburg and Port Hudson. These formed connections between the insurgents on each side of that stream, and it was important to break those connections. To this end General Grant concentrated his forces near the Tallahatchee River, in northern Mississippi, where Generals Hovey and Washburne had been operating with troops which they had led from Helena, Ark. Grant had gathered a large quantity of supplies at Holly Springs, which, through carelessness or treachery, had fallen (Dec. 20, 1862) into the hands of Van Dorn, and he was compelled to fall back to Grand Junction to save his army. Taking advantage of this movement, a large Confederate force under Lieutenant-general J. C. Pemberton had been gathered at Vicksburg for the protection of that post. On the day when Grant's supplies were seized General W. T. Sherman left Memphis with transports bearing siege-guns to beleaguer Vicksburg. At Friar's Point they were joined by troops from Hatteras, and were met by Commodore Porter, whose fleet of gunboats was at the mouth of the Yazoo River, just above Vicksburg. The two commanders arranged a plan for attacking the city in the rear, and proceeded to attempt to execute it. The troops and boats went up the Yazoo to capture some batteries that blocked the way, but were unsuccessful, and abandoned the project. Early in January General J. A. McClernand arrived and, ranking Sherman, took the chief command, and went up the Arkansas River to attack Confederate posts. Meanwhile General Grant had arranged his army into four corps, and with it descended the river from Memphis to prosecute the siege of Vicksburg with vigor. He was soon convinced that it could not be taken by direct assault. He tried to perfect the canal begun by Farragut (see *Vicksburg and Farragut*), but failed. Then he sent a land and naval force up the Yazoo to gain the rear of Vicksburg, but was repulsed. Finally Grant sent a strong land force down the west side of the Mississippi, and Porter ran by the batteries at Vicksburg in the night (April 16, 1863) with nearly his whole fleet. Then Grant prepared for vigorous operations in the rear of Vicksburg, on the line of the Black River. On April 27 Porter ran by the Confederate batteries at Grand Gulf, when Grant's army crossed a little below, gained a victory at Port Gibson, and, calling Sherman down the west side of the Mississippi and across it to join him (May 8), the whole force pushed forward and captured Jackson, the capital of Mississippi. Then the victorious army turned westward towards Vicksburg, and, after two successful battles, swept on and closely invested the strongly fortified city in the rear (May 19), receiving their supplies from a base on the Yazoo established by Porter. For a fortnight the army had subsisted off the country through which it passed. After a brief rest Grant began the siege of Vicksburg. Sherman had taken possession of the Walnut Hills, near

Chickasaw Bayou, cutting off a Confederate force at Haines's Bluff (which see); while McClernand, advancing to the left, took position at Mount Albans, so as to cover the roads leading out of the city. Porter, with his fleet of gunboats, was lying in the Mississippi, above Vicksburg, and was preparing the way for a successful siege, which Grant began with Sherman on the right, McPherson in the centre, and McClernand on the left. Grant was holding a line almost twenty miles in extent—from the Yazoo to the Mississippi at Warrenton. He prepared to storm the batteries on the day after the arrival of his troops before them. It was begun by Sherman's corps in the afternoon of May 19, Blair's division taking the lead. There had been artillery firing all the morning; now there was close work. The Nationals, after a severe struggle, were repulsed. Grant engaged Commodore Porter to assist in another assault on the 22d. All night of the 21st and 22d Porter kept six mortars playing upon the city and the works, and sent three gunboats to shell the water-batteries. It was a fearful night for Vicksburg, but the next day was more fearful still. At ten o'clock on the 22d Grant's whole line moved to the attack. As before, Blair led the van, and very soon there was a general battle. At two different points the right was repulsed. Finally McClernand, on the left, sent word that he held two captured forts. Then another charge upon the works by a part of Sherman's troops occurred, but without success. The centre, under McPherson, met with no better success, and, with heavy losses, McClernand could not hold all that he had won. Porter had joined in the fray; but this second assault was unsuccessful. The Nationals had lost about 3000 men. Then Grant determined on a regular siege. His effective force then did not exceed 20,000 men. The beleaguered garrison had only about 15,000 effective men out of 30,000 within the lines, with short rations for only a month. Grant was soon reinforced by troops of Generals Lauman, A. J. Smith, and Kimball, which were assigned to the command of General Washburne. Then came General Herron from Missouri (June 11) with his division, and then a part of the Ninth Corps, under General Parke. With these troops, his force numbered nearly 70,000 men, and, with Porter's fleet, Vicksburg was completely enclosed. Porter kept up a continual bombardment and cannonade for forty days, during which time he fired 7000 mortar-shells, and the gunboats 4500 shells. Grant drew his lines closer and closer. He kept up a bombardment day and night. The inhabitants had taken shelter in caves dug in the clay hills on which the city stands. In these families lived day and night, and in these children were born. Famine attacked the inhabitants, and mule-meat made a savory dish. The only hope of the Confederates for deliverance was in the arrival of Johnston from Jackson (which see) with a force competent to drive the Nationals away. As June wore on Grant pressed the siege with vigor. Johnston tried to help Pemberton, but could not. Grant proceeded to

mine under some of the Confederate works to blow them up. One of these, known as Fort Hill Bastion, was in front of McPherson, and on the afternoon of June 25 it was exploded with terrible effect, making a great breach, at which a fierce struggle ensued. Three days later there was another explosion, when another struggle took place. Other mines were ready to be fired, and Grant prepared for a general assault. Pemberton lost hope. For forty-five days he had been engaged in a brave struggle, and saw nothing but submission in the end, and on the morning of July 3 he raised a white flag. That afternoon Grant and Pemberton met and arranged terms of surrender, and at ten o'clock the next day (July 4, 1863) the vanquished brigades of the Confederates began to march out of the lines at Vicksburg as prisoners of war. At the same time there was a great National victory at Gettysburg (which see); and the 4th of July, 1863, was the turning-point in the Civil War. In the battles from Port Gibson to Vicksburg Grant lost 9855 men, of whom 1223 were killed. In these engagements he had made 37,000 prisoners; and the Confederates had lost, besides, 10,000 killed and wounded, with a vast number of stragglers. Two days before the surrender a Vicksburg newspaper, printed on wall-paper, ridiculed a reported assurance of Grant that he should dine in that city on the 4th of July, saying, "Ulysses must first get into the city before he dines in it." The same paper eulogized the "luxury of mule-meat and fricasseed kitten."

Viele, EGBERT L., was born at Waterford, N. Y., June 17, 1825, and graduated at West Point in 1847, serving through a portion of the war against Mexico. He resigned in 1853, and was appointed State Engineer of New Jersey. In 1857 he was Engineer-in-chief of the Central Park (N. Y.) Commission, and, in 1860, of Prospect Park, Brooklyn. In August, 1861, he was made brigadier-general of volunteers, and accompanied the expedition to Port Royal. In the siege of Fort Pulaski (which see) he was in command of the investing forces; and he led the advance in the capture of Norfolk, of which place he was made military governor in August, and remained so until his resignation in October, 1863. Since then he has been a civil engineer in New York city. He is author of a *Hand-book for Actual Service, Reports on the Central Park, Topographical Survey of New Jersey, and Topography and Hydrography of New York*.

Vienna (Va.), SKIRMISH NEAR. At the middle of June, 1861, the insurgents were hovering along the line of the railway between Alexandria and Leesburg, Va., and on the 16th they fired upon a railway train at the little village of Vienna, fifteen miles from Alexandria. Ohio troops under A. McD. McCook were ordered to picket and guard this road. They left their encampment near Alexandria on June 17, 1861, accompanied by Brigadier-general R. C. Schenck, and proceeded cautiously in cars towards Vienna. Detachments were left at different points, and when they approached that village only

four companies (less than three hundred men) were on the train. A detachment of six hundred South Carolinians, a company of artillery, and two companies of cavalry, sent out by Beauregard, were waiting in ambush. These had just torn up the track and destroyed a water-tank, when they heard the whistling of the coming train. In a deep cut at a curve of the railway they planted two cannons so as to sweep the road, and masked them. When the train was fairly exposed the cannons opened fire and swept the cut with grape and canister. These went over the heads of the sitting soldiers. The troops leaped from the train, fell back along the railway, rallied in a grove near by, and maintained their position so firmly that the insurgents, believing them to be the advance of a heavier force, retired and hastened to Fairfax Court-house. The Union force lost five killed, six wounded, and thirteen missing. The loss of the insurgents is unknown. When the latter ascertained how small was the force they had assailed they returned and took possession of Vienna and Falls Church Village. On that occasion the flag of the "sovereign" State of South Carolina was first displayed before Union troops outside of that state.

Villere's Plantation, BATTLE AT (1814). The British army for the invasion of Louisiana (which see) were landed on the shore of Lake Borgne, after the fleet had destroyed the American flotilla on that sheet of water, and pushed on in barges towards the Mississippi through the Bieuvennu Bayou and Villere's Canal. They encamped on Villere's plantation, about nine miles from New Orleans and in sight of the Mississippi. As they approached that spot the active Lieutenant-colonel Thornton, of the British army, pushed forward with a detachment, surrounded the mansion of General Villere, the commander of the first division of Louisiana militia, and made him a prisoner. He soon escaped to New Orleans. Early on the 15th Jackson had been informed of the capture of the American flotilla on Lake Borgne (which see). He at once proceeded to fortify and strengthen every approach to the city. He sent messengers to Generals Coffee, Carroll, and Thomas, urging them to hasten to New Orleans with the Tennesseans, and directed General Winchester, at Mobile, to be on the alert. On the 18th he had a grand review of all the troops at his command, and there was much enthusiasm among the soldiers and the citizens. The call upon the Tennessee generals was quickly responded to. Coffee came first, and encamped five miles above New Orleans. Carroll arrived on Dec. 22; at the same time Major Hinds appeared with a troop of horse. Meanwhile the invaders were making ready to march on New Orleans, believing their presence at Villere's was unknown in the city. It was a mistake. Jackson was fully informed of their movements, and in the afternoon of the 23d issued orders for a march to meet the invaders; and Commodore Patterson was directed to proceed down the Mississippi with such vessels as might be in readiness to flank the British at Villere's. At seven o'clock in the evening the armed

schooner *Carolina*, Captain Henley, the only vessel ready, dropped down the river in the darkness and anchored within musket-shot of the centre of the British camp. She immediately opened fire from her batteries, and in the course of ten minutes killed or wounded 100 men. The British extinguished their camp-fires, and poured upon the *Carolina* a shower of rockets and bullets, but with little effect. In less than half an hour the schooner drove the invaders from their camp in great confusion. Meantime Jackson was pressing forward to the attack, piloted by Colonel De la Ronde and General Villeré. The right of Jackson's troops was composed of regulars, Planché's and D'Aquin's brigades, McRea's artillery, and some marines, and moved along the river bank. The left, commanded by Coffee, was composed of his brigade of mounted riflemen, Hinds's dragoons, and Beale's riflemen. They skirted a cypress swamp in the rear to cut off the communication of the invaders from Lake Borgne. The alarm and confusion in the British camp caused by the attack of the *Carolina* had scarcely been checked when the crack of musketry in the direction of their outposts startled them. General Keane, the commander of the British, now began to believe the tales of prisoners concerning the great number of the defenders of New Orleans—"12,000 strong"—and told the dashing Thornton to do as he pleased. He started with a detachment to support the pickets, and directed another detachment, 500 strong, to keep open the communication with Lake Borgne. Thornton was soon met by a column led by Jackson in person, 1500 in number, with two field-pieces, and perfectly covered by the darkness. At the same time the artillery and marines advanced along the levee roads, when a desperate attempt was made to seize their cannons. Very soon the engagement became general. Meanwhile Coffee had approached, dismounted his men, and moved in silence; while Beale, with his riflemen, stole around to the extreme left of the invaders on Villeré's plantation, and by a sudden movement penetrated almost to the heart of the British camp, killing several and making others prisoners. At the same time a number of Beale's men were captured, and Thornton fell heavily on Coffee's brigade. For a while the battle raged fearfully, not in regular order, but in detachments, and often in duels. In the darkness friends fought each other by mistake. The Tennesseans used long knives and tomahawks with effect. At length the British line fell back and took shelter behind the levee, more willing to endure danger from the shots of the *Carolina* than bullets from the rifles of the Tennesseans. Jackson could not follow up his victory with safety in the darkness, intensified by a thick fog, so he led his troops back a short distance. The conflict ceased at about half-past nine o'clock, and all was becoming quiet, when, at eleven o'clock, firing was heard below Villeré's. Some Louisiana militia, under General David Morgan, encamped at the English Turn of the Mississippi, had advanced and encountered British pickets at Jumonville's plantation. The

loss of the Americans in this engagement was 24 killed, 115 wounded, and 74 made prisoners. The British lost about 400 men. The number of Americans engaged in the battle was about 1800; that of the British, including reinforcements that came up during the engagement, was 2500. The *Carolina* gave the Americans a great advantage.

VINCENNES, EXPEDITION TO RECOVER. George Rogers Clarke took possession of Vincennes, on the Wabash, in the summer of 1778, and he was working successfully in the pacification of the Indian tribes, when, in January, 1779, the commander of the British post at Detroit retook that place. Clarke left the Ohio River with one hundred and seventy-five men, and in the dead of winter penetrated the dreadful wilderness, a hundred miles from that stream. For a whole week they traversed the "drowned lands," as the overflowed country in the Wabash region was called, suffering every privation from wet, cold, and hunger. When they arrived at the Little Wabash, where the forks of the stream were five miles apart, they found the intervening space covered with water at an average depth of three feet. They travelled the five miles through the icy flood, sometimes armpit deep, and arrived before Vincennes Feb. 18, 1779; and the next morning, with their faces blackened with gunpowder to make themselves appear hideous, they crossed the river in boats, and pushed towards the town. The alarmed garrison, astonished at the apparition, immediately surrendered (Feb. 20), and again the stars and stripes waved over the place. Governor Hamilton was among the prisoners. He was sent to Virginia, and on the just charge of having instigated the Indians to make war on the frontiersmen, was closely confined in jail and treated with rigor.

VINCENNES, M. BISSOT DE, founder of Vincennes, Ind., was born in Canada; died in 1736. He was nephew of Joliet (which see), the explorer, and was much employed among the Indians in the West, who greatly respected him. He went to the Miami country in 1704, where he remained until his death. In an expedition against the Chickasaws in that year (1736) he lost his life. He is supposed to have lived on the site of Vincennes at that time.

Vineland. A name given to a portion of North America discovered by the Scandinavian navigators. It was so called because of the abundance of grapes found there. (See *Northmen in America*.)

Vinton, FRANCIS LAURENS (son of Major J. R. Vinton), was born at Fort Preble, Me., June 1, 1835, and graduated at West Point in 1856. He entered the First Cavalry, but resigned in September and devoted himself to the science of metallurgy, becoming in 1857 a pupil of the Imperial School of Mines in Paris, where he graduated with distinction. At the beginning of the Civil War he was made captain of United States infantry, and was offered the command of a regiment of volunteers by the governors of three states. He accepted that of the Forty-

third New York, with which he served through the Peninsular campaign, and was wounded in the battle of Fredericksburg. In March, 1863, he was made brigadier-general of volunteers, resigned in May, and became professor of engineering in Columbia College.

Virginia a Royal Province. On the accession of Charles I. (1625) he reduced the colony of Virginia under the immediate direction of the crown, appointed a governor and council, and ordered all patents and processes to be issued in his name. The king's proclamation of this change in the government of Virginia is dated May 13, 1625. The commissions of the new governor and council were accompanied with arbitrary instructions. "Our full resolution is," he said, "that there may be one uniform course of government in and through our whole monarchie, that the government of the colony of Virginia shall ymmediately depend upon ourselfe, and not be commytted to anie company or corporation, to whom it maie be proper to trust matters of trade and commerce, but cannot be fitt or safe to commit the ordering of state affairs, be they of never soe mean consequence." This assertion of the royal prerogative alarmed the Plymouth colonists, and was the beginning of the curtailment of the commerce of Virginia and the enslavement of its people.

Virginia Assembly, FIRST ACTS OF THE. About the time when the commissioners arrived in Virginia to investigate the affairs of the colony (1624), the first laws of the commonwealth were enacted. (See *London Company*.) They were thirty-five in number, concisely expressed, repealed all former laws, and clearly showed the condition of the colony. The first acts related to the Church. They provided that in every plantation there should be a room or house "for the worship of God, sequestered and set apart for that purpose, and not to be for any temporal use whatsoever;" also a place of burial "sequestered and paled in." Absence from public worship "without allowable excuse" incurred the forfeiture of a pound of tobacco, or fifty pounds if the absence were persisted in for a month. Divine public service was to be in conformity to the canons of the Church of England. In addition to the Church festivals, the 22d of March (O. S.) was to be annually observed in commemoration of the escape of the colony from destruction by the Indians. (See *Opechanough*.) No minister was allowed to be absent from his parish more than two months in a year, under pain of forfeiting one half of his salary, or the whole of it, and his spiritual charge, if absent four months. He who disparaged a minister without proof was to be fined five hundred pounds of tobacco (see *Tobacco*), and to beg the minister's pardon publicly before the congregation. The minister's salary was to be paid out of the first gathered and best tobacco and corn; and no man was to dispose of his tobacco before paying his church-dues, under pain of forfeiting double. Drunkenness and swearing were made punishable offences. The levy and expenditure

were to be made by the Assembly only; the governor might not draw the inhabitants from their private employments to do his work; the whole Council had to consent to the levy of men for the public service; older settlers, who came before Sir Thomas Gates (1611), "and their posterity" were to be exempt from personal military service; the burgesses were not to be arrested in going to, coming from, or during the sessions of the Assembly; every private planter's lands were to be surveyed and their bounds recorded; monthly courts were to be held by special commissioners at Elizabeth City, at the mouth of the James, and at Charles City, for the accommodation of more distant plantations; the price of corn was to be unrestricted; in every parish was to be a public granary, to which each planter was to bring yearly a bushel of corn to be disposed of for public use by a vote of the freemen, and if not disposed of to be returned to the owner; every settler was to be compelled to cultivate corn enough for his family; all trade in corn with the Indians was prohibited; every freeman was to fence in a garden of a quarter of an acre for the planting of grapevines, roots, herbs, and mulberry-trees; inspectors, or "censors," of tobacco were to be appointed; ships were to break bulk only at James City; weights and measures were to be sealed; every house was to be palisaded for defence against the Indians, and no man was to go to work in the fields without being armed, nor to leave his house exposed to attack; no powder was to be spent unnecessarily, and each plantation was to be furnished with arms. Persons of "quality" who were delinquent might not undergo corporal punishment like "common" people, but might be imprisoned and fined. Any person wounded in the military service was to be cured at the public charge, and if permanently lamed was to have a maintenance according to his "quality;" and ten pounds of tobacco were to be levied on each male colonist to pay the expenses of the war. This war was that with the Indians after the massacre in 1622, and much of the legislation had reference to it, such as an order for the inhabitants, at the beginning of July, 1624, to fall upon the adjoining savages "as they did last year."

Virginia, COLONIAL SEAL OF. The colonial seal of Virginia was made of beeswax, covered with very thin paper, and stamped on both sides with appropriate devices. On one side were the royal arms of Great Britain, and on the other an effigy of the reigning monarch, with the sentence in Latin "Seal of the Province of Virginia." Kneeling before the monarch is an Indian presenting a bundle of tobacco, the chief product of the country. In the seal here delineated the sovereign represented is a woman—Queen Anné. The original from which the engraving was copied was somewhat defaced. It was sent to the colony almost immediately after the beginning of her reign, with instructions from the Secretary of the Privy Council, by its order, to break up the seal of her predecessor, William III., and send the fragments to England.

COLONIAL SEAL OF VIRGINIA.

Virginia, COLONY OF. This name was given to an undefined territory in America (of which Roanoke Island, discovered in 1584, was a part) in compliment to the unmarried queen, or because of its virgin soil. It was afterwards defined as extending from latitude 34° to 45° north, and was divided into North and South Virginia. The Northern part was afterwards called New England. (See *New England*.) The spirit of adventure and desire for colonization were again prevalent in England at the beginning of the seventeenth century, and circumstances there were favorable to such undertakings, for there was plenty of material for colonies, such as it was. Soon after the accession of James I., war between England and France ceased, and there were many restless soldiers out of employment—so restless that social order was in danger. There was also a class of ruined and desperate spendthrifts, ready to do anything to retrieve their fortunes. Such were the men who stood ready to go to America when Ferdinando Gorges, Bartholomew Gosnold, Chief-justice Popham, Richard Hakluyt, Captain John Smith, and others devised a new scheme for settling Virginia. The timid king, glad to perceive a new field open for the restless spirits of his realm, granted a liberal patent to a company of "noblemen, gentlemen, and merchants," chiefly of London, to plant settlements in America, between latitude 34° and 38° north, and westward one hundred miles from the sea. (See *London Company*.) A similar charter was granted to another company to settle between latitudes 41° and 45° north. (See *Plymouth Company*.) The space of about two hundred miles between the two territories was a broad boundary-line, upon which neither party was to plant a settlement. In December, 1606, the London Com-

pany sent three ships, under Captain Christopher Newport, with one hundred and five colonists, to make a settlement on Roanoke Island. (See *Roanoke Island*.) They took the long southern route, by way of the West Indies, and when they approached the coast of North Carolina a tempest drove them farther north into Chesapeake Bay, where they found good anchorage. The principal passengers were Gosnold, Edward M. Wingfield, Captain Smith, and Rev. Robert Hunt. The capes at the entrance to Chesapeake Bay Newport named Charles and Henry, in compliment to the king's two sons. Landing and resting at a pleasant point of land between the mouths of the York and James rivers, he named it Point Comfort, and sailing up the latter stream fifty miles, the colonists landed on the left bank, May 13, 1607, and there founded a settlement and built a village, which they named Jamestown in compliment to the king. They gave the name of James to the river.

On the voyage, Captain Smith, the most notable man among them (see *Smith, John*), had excited the jealousy and suspicion of his fellow-passengers, and he was placed in confinement on suspicion that he intended to usurp the government of the colony. It was not known who had been appointed rulers, for the silly king had placed the names of the colonial council in a sealed box, to be opened on their arrival. It was found that Smith was one of the council, and he was released. Wingfield was chosen president. Smith and others ascended the river in small boats to the falls at Richmond, and visited the Indian emperor Powhatan, who resided a mile below. (See *Powhatan*.) Early in June Newport returned to England for supplies and more emigrants. The supplies which they brought had been spoiled in the long voyage, and the savages around them appeared hostile. The marshes sent up poisonous vapors, and before the end of summer Gosnold and full one half of the adventurers died of fever and famine. President Wingfield lived on the choicest stores, and was preparing to escape to the West Indies in a pinnace left by Newport, when his treachery was discovered, and a man equally wicked, named Ratcliffe, was put in his place. He, too, was soon dismissed, when Captain Smith was happily chosen to rule the colony. He soon restored order, won the respect of the Indians, compelled them to bring food to Jamestown until wild-fowl became plentiful in the autumn and the harvest of maize or Indian corn was gathered by the barbarians. Smith and a few companions explored the Chickahominy River, where he was captured and condemned to die, but was saved by the king's daughter. (See *Pocahontas*.) Everything was in disorder on his return from the forest, and only forty men of the

colony were living, who were on the point of escaping to the West Indies. Newport returned with supplies and one hundred and twenty emigrants early in 1608. They were no better than the first. There were several unskilful goldsmiths, and most of the colonists became gold-seekers and neglected the soil. There "was no talk, no hope, no work, but dig gold, work [earth supposed to be] gold, refine gold, and load gold." Some glittering earth had been mistaken for gold, and Newport had loaded his ship with the worthless soil. Smith implored the settlers to plough and sow. They refused, and leaving Jamestown in disgust he explored Chesapeake Bay and its tributary streams in an open boat. In the course of three months he travelled one thousand miles and made a rude map of the country. Newport arrived at Jamestown soon after Smith's return in September, with seventy more emigrants, among them two women, the first Europeans of their sex seen in Virginia proper. (See *Dare, Virginia*.) These emigrants were no better than the first, and Smith entreated the company to send over farmers and mechanics; but at the end of two years, when the settlement numbered two hundred strong men, there were only forty acres of land under cultivation. In 1609 the company obtained a new charter, which made the settlers vassals of the Council of Virginia and extended the territory to the head of Chesapeake Bay. Lord De la Warr (Delaware) was appointed governor of Virginia; Sir Thomas Gates, deputy-governor; Sir George Somers, admiral; Christopher Newport, vice-admiral, and Sir Thomas Dale, high-marshal, all for life. Nine vessels, with five hundred emigrants, including twenty women and children, sailed for Jamestown in June, 1609. Gates and Somers embarked with Newport, and the three were to govern Virginia until the arrival of Lord Delaware. A hurricane dispersed the fleet, and the vessel containing these joint rulers or commissioners was wrecked on one of the Bermuda islands. Seven vessels reached Jamestown. The new-comers were, if possible, more profligate than the first—dissolute scions of wealthy families, who "left their country for their country's good," for Virginia was regarded as a paradise for libertines. Smith continued to administer the government until an accident compelled him to return to England in the fall of 1609. Then the colonists gave themselves up to every irregularity; the Indians withheld supplies; famine ensued, and the winter and spring of 1610 was long remembered as the "Starving Time" (which see). The Indians prepared to exterminate the English, but they were spared by a timely warning from Pocahontas. Six months after Smith left, the settlement of five hundred souls were reduced to sixty. The three commissioners reached Jamestown in June, 1610, and Gates determined to leave for Newfoundland with the famished settlers, and distribute them among the settlers there. In four pinnaces they departed, and were met at Point Comfort by Lord Delaware, with provisions and emigrants. Failing health compelled him to return to Eng-

land in March, 1611, and he was succeeded by a deputy, Sir Thomas Dale, who arrived with three hundred settlers and some cattle. Sir Thomas Gates came with three hundred and fifty more colonists in September following, and superseded Dale. These were a far better class than any who had arrived, and there were then one thousand Englishmen in Virginia. New settlements were planted at Dutch Gap and at Bermuda Hundred at the mouth of the Appomattox. In 1616 Deputy-governor Gates was succeeded by Samuel Argall, but his course was so bad that Lord Delaware sailed from England to resume the government of Virginia, but died on the passage, at the mouth of the bay that bears his name. George Yeardly was appointed governor in 1617, and he summoned two delegates from each of seven corporations or boroughs to assemble at Jamestown, July 30. These delegates formed a representative assembly, the first ever held on the Western Continent. A seal for the colony was adopted by the company. (See *Virginia, Colonial Seal of*.) The same year twelve hundred colonists arrived in Virginia, among whom were ninety "respectable young women," to become wives of planters, who were purchased at a profit to the company and were paid for in tobacco, then become a profitable agricultural product. Within two years, one hundred and fifty respectable young women were sent to Virginia for the same purpose. Homes and families appeared, and so the foundation of the commonwealth of Virginia was laid. Already the Indians had been made friendly by the marriage of Pocahontas with an Englishman. The tribe of gold-seekers had disappeared, and the future of Virginia appeared bright. The king injured the colony by sending over one hundred convicts from English prisons, in 1619, to be sold as servants to the planters, and this system was pursued for one hundred years, in defiance of the protests of the settlers. The same year the colonists bought twenty negro slaves of a Dutch trader, and so slavery was introduced. (See *Slavery in America and Slave-trade in America*.) On July 24, 1621, the London Company granted the colonists a written constitution for their government, which provided for the appointment of a governor and council by the company, and a representative assembly, to consist of two burgesses or representatives from each borough, to be chosen by the people and clothed with full legislative power in connection with the council. This body formed the General Assembly. This was the general form of government in Virginia until 1776. Sir Francis Wyatt was appointed governor, and brought the constitution with him. New settlements were made on the James, York, and Potomac rivers, and on the eastern shore of Chesapeake Bay. Powhatan was now dead, and his brother and successor, Opechancanough, was hostile. On March 22 (April 1, O. S.), his tribes, by a preconcerted plan, fell upon the English settlements at all points and murdered three hundred and forty-seven men, women, and children. The remote plantations fled to Jamestown, and eighty plantations were reduced to eight. A furious war of retaliation

followed, and the Indians were beaten back into the wilderness; but many colonists, alarmed, left Virginia, and sickness and famine ensued. In 1624, of the nine thousand persons who had been sent to Virginia, only a little more than two thousand remained. The same year the London Company was dissolved by a writ of *quo warranto*, and Virginia became a royal province. George Yeardly was appointed governor, with twelve councillors. He died in 1627, and was succeeded by Sir John Harvey, a haughty and unpopular ruler. Harvey was deposed by the Virginians in 1635, but was reinstated by Charles I., and ruled until 1639. Sir William Berkeley became governor in 1641, at the beginning of the Civil War in England, and being a thorough loyalist, soon came in contact with the republican Parliament. The colonists, also, remained loyal, and invited the son of the beheaded king to come and reign over them. Cromwell sent commissioners and a fleet to Virginia. A compromise with the loyalists was effected. Berkeley gave way to Richard Bennett, one of the commissioners, who became governor. But when Charles II. was restored, Berkeley, who had not left Virginia, was reinstated; the laws of the colony were revived; restrictive revenue laws were enforced; the Church of England—disestablished in Virginia—was re-established, and severe legislative acts against Non-conformists were passed. Berkeley proclaimed Charles II. "King of England, Scotland, Ireland, and Virginia," and ruled with vigor. (See *Old Dominion*.) Under Berkeley, the colonists had become discontented, and in 1676 they broke out into open rebellion, led by a wealthy and enterprising young lawyer named Nathaniel Bacon. (See *Bacon's Rebellion*.) Charles II. had given a patent for Virginia (1673) to two of his rapacious courtiers (Arlington and Culpepper), and in 1677 the latter superseded Berkeley as governor. He arrived in Virginia in 1680, and his rapacity and profligacy soon so disgusted the people that they were on the verge of rebellion, when the king, offended at him, revoked his grant and his commission. He was succeeded by an equally vile governor, Lord Howard of Effingham, and the people were again stirred to revolt; but the death of the king and other events in England made them wait for hoped-for relief. The Stuarts were driven from the throne forever in 1688, and there was a change for the better in the colonies. In 1699 Williamsburg was founded and made the capital of Virginia, where the General Assembly met in 1700. The code was revised for the fifth time in 1705, when by it slaves were declared real estate, and this law continued until 1776. Hostilities with the French broke out in 1754, they having built a line of military posts along the western slope of the Alleghany Mountains, in the rear of Virginia, and at the headwaters of the Ohio. To one of these posts young George Washington was sent on a diplomatic mission towards the close of 1753, by Dinwiddie, governor of Virginia. That was Washington's first appearance in public service. He performed the duty with so much skill and prudence that he was placed at the head of a military force

the next year, and fought the French at and near Fort Necessity (which see). During the French and Indian War that ensued, Virginia bore her share; and when England began to press her taxation schemes in relation to the colonies, the Virginia House of Burgesses took a patriotic stand in opposition, under the leadership of Patrick Henry. From that time until the breaking-out of the old war for independence, in 1775, the Virginians were conspicuous in maintaining the rights of the colonies. Under instructions from his legislature, Richard Henry Lee moved a resolution for independence, in Congress, in June, 1776 (see *Independence, First Proposition in Congress for*), and the Virginia delegation voted solidly for the resolution on the 2d of July, and for the Declaration of Independence on the 4th of July following. Already her royal governor had begun civil war within her borders. The colonial existence of Virginia ended on the 29th of July, 1776, when a state constitution was adopted by a popular convention and a state government was organized, with Patrick Henry as governor. Virginia has the honor of being the first to adopt a state constitution, with a view to a permanent separation from Great Britain.

Virginia Convention (1774). On receiving the news of the Boston Port Bill, the sympathies of the Virginians were deeply moved in favor of Massachusetts. The House of Burgesses passed strong resolutions of condolence, and appointed the 1st of June as a fast-day. The royal governor dissolved them the next day, when the delegates, eighty-nine in number, reassembled at the Apollo Room, Raleigh Tavern, and formed a voluntary convention. They prepared an address to their constituents, in which they declared that an attack upon one colony was an attack upon the whole. They adopted some other important measures while waiting for the arrival of the fast-day. Twenty-five of them remained until then, and sent out a circular recommending that the Burgesses should assemble again in convention at Williamsburg, on the 1st of August. They did so, and, on motion of George Washington, adopted a non-importation agreement; recommended the fostering of native industries, especially the raising of sheep; and chose (Aug. 5) seven delegates to represent Virginia in the Continental Congress at Philadelphia, namely—Peyton Randolph, Richard Henry Lee, George Washington, Patrick Henry, Richard Bland, Benjamin Harrison, and Edward Pendleton.

Virginia Convention (1775). On Monday, March 20, 1775, a convention of delegates from the several counties and corporations of Virginia met for the first time. They assembled in St. John's Church (yet standing in 1880), in Richmond. Among the conspicuous members of the convention were Washington and Patrick Henry. Peyton Randolph was chosen president and John Tazewell clerk. A large portion of the members yearned for reconciliation with Great Britain, while others saw no ground for hope that the mother country would be just.

Among the latter was Patrick Henry. His judgment was too sound to be misled by mere appearances of justice, in which others trusted. The convention expressed its unqualified approbation of the proceedings of the Continental Congress, and warmly thanked their delegates for the part they had taken in it. They thanked the Assembly of the Island of Jamaica for a sympathizing document, and then proceeded to consider resolutions that the colony should be instantly put in a state of defence by an immediate organization of the militia. This meant

pointed a committee to prepare a plan accordingly. Their plan for embodying the militia was adopted, and Virginia panoplied herself for the conflict. Provision was made for the enrolment of a company of volunteers in each county. The convention reappointed the Virginia delegates to seats in the Second Continental Congress, adding Thomas Jefferson, "in case of the non-attendance of Peyton Randolph." Henry had said, prophetically, in his speech, "The next gale that comes from the North will bring to our ears the clash of arms!" This prophecy

was speedily fulfilled by the clash of arms at Lexington. His bold proceedings and utterances in this convention caused his name to be presented to the British government in a bill of attainder, with those of Randolph, Jefferson, the two Adamases, and Hancock.

Virginia Currency. In 1645 the Legislature of Virginia prohibited dealing by barter, and abolished tobacco as currency. (See *Tobacco*.) They established the Spanish dollar, or "piece of eight," at six shillings, as the standard of currency for that colony. In 1655 the "piece of eight" was changed from six shillings to five shillings sterling as the standard of currency.

Virginia Divided into Counties. In 1634 Virginia was divided into eight counties—namely,

Elizabeth City, Warwick, James City, Charles City, and Henrico, along the north bank of the James River; Isle of Wight, on the south bank; York, on the York River; and Accomac, on the eastern shore of Chesapeake Bay.

Virginia, INDEPENDENCE PROCLAIMED IN. On July 25, 1776, the Declaration of Independence was read to the people at the Capitol, the courthouse, and the deserted "palace" at Williamsburg, and then it was proclaimed by the sheriff of every county, at the door of each courthouse, on the first ensuing court day.

Virginia Invaded from Washington City (1861). The Confederates assembled at Manassas Junction (which see) attempted to take a position near the capital. Early in May the family of Colonel Lee had left Arlington House, opposite Georgetown, with its most valuable contents, and joined him at Richmond. Under his guidance, the Confederates were preparing to fortify Arlington Heights, where heavy siege guns would command the cities of Washington and Georgetown. This movement was discovered in time to defeat its object. Already Con-

ST. JOHN'S CHURCH.

resistance, and the resolutions alarmed the more timid, who opposed the measure as rash and almost impious. Deceived by a show of justice on the part of Great Britain, they urged delay, for it was evident that the numerous friends of the colonists in England, together with the manufacturing interest, would soon bring about an accommodation. This show of timidity and temporizing roused the fire of patriotism in the bosom of Henry, and he made an impassioned speech, which electrified all hearers and has become in our history an admired specimen of oratory. When he closed with the well-known peroration: "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery? Forbid it, Almighty God! I know not what course others may take, but as for me, give me liberty or give me death!" all hearts and minds were in unity with the speaker. The resolutions to prepare for defence were passed, and Patrick Henry, Richard Henry Lee, Robert C. Nicholas, Benjamin Harrison, Lemuel Riddick, George Washington, Adam Stephen, Andrew Lewis, William Christian, Edmund Pendleton, Thomas Jefferson, and Isaac Lane were ap-

federate pickets were on Arlington Heights, and at the Virginia end of the Long Bridge across the Potomac. Orders were immediately given for National troops to occupy the shores of the Potomac River, opposite Washington, and the city of Alexandria, nine miles below. Towards midnight, May 23, thirteen thousand troops in Washington, under the command of General Mansfield, were put in motion for the passage of the Potomac at three points—one column to cross the Aqueduct Bridge at Georgetown; another at the Long Bridge, at Washington, and a third to proceed in vessels to Alexandria. General Irvin McDowell led the column across the Aqueduct Bridge, in the light of a full moon, and took possession of Arlington Heights. At the same time the second column was crossing the Long Bridge, two miles below, and soon joined McDowell's column on Arlington Heights and began casting up fortifications. The New York Fire Zouave Regiment, commanded by Colonel Ephraim Elmore Ellsworth, embarked in vessels and sailed for Alexandria, while another body of troops marched for the same destination by way of the Long Bridge. The two divisions reached Alexandria about the same time. The United States frigate *Pawnee* was lying in the river off Alexandria, and her commander had been in negotiation for the surrender of the city. Ignorant of this fact, Ellsworth marched to the centre of the town and took formal possession of it in the name of his government, the Virginia troops having fled. The Orange and Alexandria railway station was seized, with much rolling stock, and very soon Alexandria was in the quiet possession of the Nationals. A keeper of a public-house refused to pull down a Confederate flag that waved over it. Colonel Ellsworth went in person to haul it down. When descending the upper staircase with it he was shot dead by the proprietor, when the latter was instantly killed by some of Ellsworth's companions. This event produced much exasperation on both sides.

Virginia Opposed to a Consolidated National Government. While the foremost citizen of Virginia was leading the army fighting for independence, and was the most earnest advocate for a national bond of all the states, the representatives of her people, in her Legislature, always opposed the measures that would make the states one union. Her Legislature separately, ratified (June 2, 1779) the treaty with France, and asserted in its fullest degree the absolute sovereignty of the separate states. And when Congress received petitions concerning lands in the Ohio country, the Virginia Assembly remonstrated against any action in the premises by that body, because it would "be a dangerous precedent, which might hereafter subvert the sovereignty and government of any one or more of the United States, and establish in Congress a power which, in process of time, must degenerate into an intolerable despotism." And Patrick Henry vehemently condemned the phraseology of the Preamble to the National Constitution—"We, the people"—arguing that it should have been "We, the states." So, also,

did George Mason (which see). So jealous of their "sovereignty" were the states in general, that Congress, at the beginning of 1780, finding itself utterly helpless, threw everything upon the states. Washington deeply deplored this state of things. "Certain I am," he wrote to Joseph Jones, a delegate from Virginia, in May, "unless Congress is vested with powers by the several states competent to the great purposes of war, or assume them as matter of right, and they and the states respectively act with more energy than they have hitherto done, our cause is lost. . . . I see one head gradually changing into thirteen. I see one army branching into thirteen, which, instead of looking up to Congress as the supreme controlling power of the United States, are considering themselves as dependent on their several states." Towards the end of June General Greene wrote: "The Congress have lost their influence. I have for a long time seen the necessity of some new plan of civil government. Unless there is some control over the states by the Congress, we shall

GEORGE MASON.

soon be like a broken band." But Virginia and other states persisted in the assertion of state supremacy, and brought the American cause to the verge of ruin.

Virginia Petition. In December, 1764, the Virginia House of Burgesses appointed Peyton Randolph (attorney-general of the province), Richard Henry Lee, George Wythe (an acute lawyer), and Edmund Pendleton—all lawyers, and also leaders of the Virginia aristocracy—a committee to draw up a petition to the king, a memorial to the House of Lords, and a remonstrance to the Commons. In these papers a claim, in moderate tone, was made for the colony of the privilege of self-taxation. Instead of insisting upon this as a matter of right, they pleaded the state of the colonies, encumbered by the burdens of the late war. These faint protestations produced no effect, and in spite of the remonstrances of Franklin, the agent for Pennsylvania; Jackson, agent for Massachusetts; and Ingersoll, agent for Connecticut, and others interested in the colonies, Minister Grenville began his taxation schemes with the famous Stamp Act (which see).

Virginia Plan in the Federal Convention.

The convention to consider the Articles of Confederation, or to form a new constitution, having met on the invitation of Virginia, courtesy assigned to the delegates of that state the task of giving a start to the proceedings. Accordingly, Governor Randolph, after a speech on the defects of the confederation, on May 29, 1787, offered fifteen resolutions suggesting amendments to the federal system. They proposed a national legislature, to consist of two branches, the members of the first, or most numerous branch, to be chosen by the people, and to be apportioned to the states in the proportion of free population or taxes; those of the second branch to be chosen by the first, out of candidates to be nominated by the state legislatures. A separate national executive was proposed, to be chosen by the national Legislature; also a national judiciary; also a council of revision, to consist of the executive and a part of the judiciary, with a qualified negative on every act of legislation, state as well as national. These were the principal features of the "Virginia Plan," as it was called. It was referred to a committee, together with a sketch of a plan by Charles Cotesworth Pinckney, which, in its form and arrangement, furnished the outline of the constitution as adopted.

Virginia, ROYAL POWER IN, SUPREME. On the 26th of August, 1624, King James issued a new commission for Virginia, continuing Sir Francis Wyatt as governor, with eleven assistants, or councillors. The governor and council were appointed during the king's pleasure. No assembly was mentioned or allowed, and for a while the royal will was the only law for the colonists. James died April 8, 1625, and his son Charles asserted the full prerogative of the monarch as supreme ruler of all his dominions. Then Virginia became a royal province, and so remained until 1776.

Virginia Sanctions Independence. In May, 1776, a convention of one hundred and thirty delegates, representing the people of Virginia, assembled at Williamsburg. After having finished current business, the convention resolved itself into a committee of the whole on the state of the colony. On May 15, resolutions which had been drafted by Edmund Pendleton were unanimously agreed to, one hundred and twelve members being present. The preamble enumerated their chief grievances, and said, "We have no alternative left but an abject submission or a total separation." Then they decreed that their "delegates in Congress be instructed to propose to that body to declare the united colonies free and independent states, absolved from all allegiance or dependence upon the crown or Parliament of Great Britain; and that they give the assent of this colony to such declaration, and to measures for forming foreign alliances and a confederation of the colonies; provided that the power of forming government for, and the regulation of, the internal concerns of each colony be left to the respective colonial legislatures."

Virginia Secession Ordinance. The disunionists of Virginia found it hard work to "carry out" the state, for there was a strong Union sentiment among the people, especially in the western or mountain districts. They finally procured the authorization of a convention, which assembled in Richmond Feb. 13, 1861, with John Janney as chairman. It had a stormy session from February until April, for the Unionists were in the majority. Even so late as April 4 the convention refused, by a vote of eighty-nine against forty-five, to pass an Ordinance of Secession. But the pressure of the disunionists had now become so hard that one weak Unionist after another gave way, converted by sophistry or threats. Commissioners were sent to President Lincoln, to ascertain his determination about seceding states, who were told explicitly that he should defend the life of the Republic to the best of his ability. Their report added fuel to the flame of passion then raging in Richmond. In the convention, the only question remaining on the evening of April 15 was, Shall Virginia secede at once, or wait for the co-operation of the border slave-labor states? In the midst of excitement pending that question, the convention adjourned until the next morning. The following day the convention assembled in secret session. For three days threats and persuasion had been brought to bear upon the faithful Union members, who were chiefly from the mountain districts of western Virginia, where the institution of slavery had a very light hold upon the people. On the adjournment, on the 15th, there was a clear majority of one hundred and fifty-three in the convention against secession. The Secessionists had become desperate. It is said Richmond was in the hands of a mob, ready to do their bidding, and they resolved to act with a high hand. Many of the Unionists gave way on the 16th. It was calculated that if ten Union members of the convention should be absent, there would be a majority for secession. That number of the weaker ones were waited upon on the evening of the 16th, and informed that they had the choice of doing one of three things—namely, to vote for a secession ordinance, to absent themselves, or be hanged.* Resistance would be useless, and the ten members did not appear in the convention. Other Unionists who remained in the convention were awed by their violent proceedings, and on Monday, April 17, 1861, an ordinance was passed by a vote of eighty-five against fifty-five, entitled, "An ordinance to repeal the ratification of the Constitution of the United States of America by the State of Virginia, and to reserve all the rights and powers granted under said Constitution." At the same time the convention passed an ordinance requiring the governor to call out as many volunteers as might be necessary to repel an invasion of the state. It was ordained that the Secession Ordinance should go into effect only when it should be ratified by the votes of a majority

* Statement by a member of the convention, cited in the *Annual Cyclopaedia*, 1861, p. 735.

of the people. The day for the casting of such vote was fixed for May 23, 1861. Meanwhile the whole military force of Virginia had been placed under the control of the "Confederate States of America" (which see), and a treaty of annexation of Virginia to the Southern League had been formed. Nearly the whole state was under the control of the military authority. At the time appointed for the vote, Senator James M. Mason, author of the Fugitive Slave Law (which see), addressed a letter to the people, declaring that the Ordinance of Secession absolved them from all allegiance to the United States; that they were bound to support the "sacred pledge" made to the "Confederate States" by the treaty of annexation (see *Annexation of Virginia to the Confederate States*), and said: "If it be asked, What are those to do who, in their conscience, cannot vote to separate Virginia from the United States? the answer is simple and plain. Honor and duty alike require that they should not vote on the question; and if they retain such opinions, they must leave the state." That is to say, vote for secession or not vote at all; and if you are still Union men, you remain in your native state at the peril of your lives. There was a reign of terror in eastern Virginia at the time the vote was taken, yet there were bold Unionists who voted against secession. The vote for secession was 125,950, and against secession 20,373. This did not include the vote of northwestern Virginia, where, in convention, ten days before the voting, they had planted the seeds of a new commonwealth. (See *West Virginia*.)

Virginia, STATE OF. The state constitution was framed in June, 1776, and in 1779 Richmond became the capital. In 1784 the state ceded to the United States its claim to lands northwest of the Ohio River. Not long afterwards (1789) a portion of its territory south of the Ohio was erected into the State of Kentucky (which see).

STATE SEAL OF VIRGINIA.

For many years the State of Virginia maintained a predominating influence in the affairs of the nation. During the War of 1812-15 its coasts were ravaged by British marauders. In 1831 a servile insurrection occurred in Southampton County, led by a negro named Nat. Turner, which alarmed the whole state, but it was speedily subdued. In 1859 an attempt was made by John Brown to free the slaves of Virginia. (See *John Brown's Raid*.) Early in 1861 the question of secession divided the people. The Secessionists were very active, and, making arrangements for joining the Southern Confederacy, the Legislature made an appropriation of \$100,000,000 to provide for "the defence of the state." A state convention assembled on Feb. 13, 1861, and on April 17 passed an Ordinance of Secession. (See *Virginia Secession Ordinance*.)

The state authorities immediately afterwards took possession of national property within the limits of Virginia, and on April 25 action was taken for the annexation of the state to the Southern Confederacy, and surrendering the control of its military to the latter power. On May 7 the state was admitted to representation in the Confederate Congress, and large forces of Confederate troops were concentrated in Virginia for the purpose of attempting to seize the national capital. From that time until the close of the Civil War Virginia suffered intensely from its ravages. Western Virginia had remained loyal to the Union, and in 1861 a new state was there organized. (See *West Virginia*.) After the war the state was under military control. A new constitution was prepared, and was ratified on July 6, 1869, by a majority of 197,044 votes out of a total vote of 215,422. The constitution was in accordance with the Fourteenth Amendment of the national Constitution (which see). State officers and representatives in Congress were chosen at the same time; and in January, 1870, Virginia was admitted to representation in the Congress. On Jan. 26, 1870, General Canby, in command of the department, formally transferred the government to the civil authorities.

Virginia Toleration. In 1696 a statute was passed by the Assembly of Virginia, in obedience to orders from England, which extended to Dissenters the benefit of the English toleration act. Yet this was not a full toleration act for all consciences, by any means, as it excluded from participation in the most important functions of citizenship all who were not Christians and who did not accept the doctrine of the Trinity. That very act ordained disqualification for any office, disability to sue or to prosecute in any court, or to act as executor or guardian, and imprisonment for three years, as the penalty for denying the being of a God or the Holy Trinity, or asserting that there were more gods than one, or denying the truth of the Christian religion, or the divine authority of the Old and New Testaments. By the same act fines were imposed for non-attendance upon public worship for two months, except for a reasonable excuse.

"Virginus" Affair, THE. Troubles with the Spanish authorities in Cuba and menaces of war with Spain had existed since filibustering movements from the United States to that island began, in 1850. (See *Cuba*.) Finally a "Cuban Junta," composed of native Cubans and American sympathizers, was formed in the city of New York. An insurrection had broken out in Cuba, and assumed formidable proportions, carrying on civil war for several years. When the "Junta" began to fit out vessels to carry men and war materials to the insurgent camps, the United States government, determined to observe the strictest neutrality and impartiality, felt compelled to notice this flagrant violation of the neutrality laws of the Republic, and took measures to suppress the hostile movements;

but irritations on the part of the Spanish authorities continued, and, finally, late in 1873, war between Spain and the United States seemed inevitable. The steamship *Virginian*, flying the United States flag, suspected of carrying men and supplies to the insurgent Cubans, was captured by a Spanish cruiser off the coast of Cuba, taken into port, and many of her passengers, her captain, and some of the crew were publicly shot by the local military authorities. The affair produced intense excitement in the United States. There was, for a while, a hot war-spirit all over the Union; but wise men in control of the governments of the United States and Spain calmly considered the international questions involved, and settled the matter by diplomacy. There were rights to be acknowledged by both parties. The *Virginian* was surrendered to the United States authorities, and ample reparation for the outrage was offered, excepting the impossible restoration of the lives taken by the Spaniards. While the vessel was on its way to New York, under an escort, she sprang leak off Cape Fear, at the close of December (1873), and went to the bottom of the sea. By a wise policy, our country has been at peace with all the world since the close of the Civil War, if we except the local wars with the Indians.

Vogdes, ISRAEL, was born in Pennsylvania about 1816, and graduated at West Point in 1837, where he remained two years assistant-professor of mathematics. He entered the artillery, and served in the Seminole War. In May, 1861, he was made major. He gallantly defended Fort Pickens (which see) from February to October, 1861, when he was made prisoner in the night attack on Santa Rosa Island (which see). He was active in the operations on Folly and Morris islands against forts Wagner and Sumter, and he commanded the defences of Norfolk and Portsmouth in 1864-65. In April, 1865, he was breveted brigadier-general United States Army.

Volney and the Aliens. When war with France seemed to be inevitable, in 1798, suspicions of the designs of Frenchmen in the country were keenly awakened. Talleyrand, who had resided awhile in the United States, was suspected of having acted as a spy for the French government, and other exiled Frenchmen were suspected of being on the same errand. It was known that Frenchmen were busy in Kentucky and in Georgia fomenting discontents, and it was strongly suspected that M. de Volney, a French scholar, who had explored the western country, ostensibly with only scientific views, was acting in the capacity of a spy for the French government, with a view to finally annexing the country west of the Alleghany Mountains to Louisiana, which France was about to obtain, by a secret treaty with Spain. These suspicions led to the enactment of the Alien and Sedition Laws (which see). The passage of the Alien Law alarmed Volney and other Frenchmen, and two or three ship-loads left the United States for France.

Voltaire and Franklin. In February, 1778, Voltaire, bent with age, but great in intellect,

and a truer representative of France than Louis XVI., went to Paris, and there he and Franklin had an interview. Franklin called upon Voltaire with his grandson. The two philosophers were agreed in respect to the contest in America—its righteousness and its importance. Franklin was a great admirer of the French philosopher, and at that interview desired his grandson to demand from Voltaire a blessing. In the presence of twenty persons he laid his hand on the head of the youth and said "God and liberty." He everywhere expressed his friendship for the Americans. Being in company with the beautiful young wife of Lafayette, he expressed to her his admiration of the heroism of her husband. Still there was a wide difference between Voltaire and the Americans. He had said "There is no God;" the American people reverently said "There is a God, and he must be worshipped in spirit and in truth." His blessing must have sounded strangely.

Voluntary Contributions (1861-65). The loyal people of the Republic became most earnestly engaged in every way in the work of saving the Union from destruction. The mites of widows and the abundance of the rich fell into the great treasury of patriotism in wonderful profusion. A Michigan soldier put in a cent, and said, "I hope it will grow." It did grow, and yielded more than \$24,000. Cornelius Vanderbilt, once an humble New York boatman, presented the government of the United States a fully equipped steam ship-of-war valued at about \$800,000. In scores of ways—in benevolent gifts in aid of the soldiers, in bounties for soldiers and sailors, to associations, and for special objects, in private and isolated contributions, exclusive of heavy taxes freely voted by the people for the support of the government—the loyal people of the Republic gave for its salvation not less than \$500,000,000.

Volunteer Companies in Philadelphia. At the beginning of the War of 1812-15 the martial spirit was almost dormant in Philadelphia. The fine corps of the McPherson Blues, which formed the guard of honor at the public funeral ceremonies at Philadelphia on the death of Washington, had been disbanded twelve years before the declaration of war. Another, called Shee's Legion, was no more. Only three or four volunteer military companies of any note then existed in Philadelphia, the oldest of which was a company of cavalry called the First (or old) City Troop, which was formed in the autumn of 1774. They formed a body-guard for General Washington when he travelled from Philadelphia to New York in 1775, going to take command of the army. These, with Captain Rush's old Philadelphia Blues, and Fottevall's Independent Volunteers, both large companies, composed the most of the uniformed militia of that vicinity. During the summer of 1812 a new uniformed company was created, called "The State Fencibles." When news of the presence of the British in the Delaware was received, early in 1813, great alarm was felt because of the defenceless state of the city. A meeting

was called by James M. Porter, secretary of the Young Men's Democratic Society, to take measures for defence. About seventy young men who were present formed a military company on that very evening for artillery service. They organized under the name of "The Junior Artillerists," and tendered their services to garrison Fort Mifflin, which were accepted. A new company of infantry, called "The Washington Guards," was formed at about the same time.

Volunteer Militia in Pennsylvania. In 1747 some liberated prisoners from Martiniague—a resort for French cruisers—brought a report to Philadelphia that a fleet of privateers was about to make a raid on that city and along the Delaware River. The alarm caused fortifications to be erected and military organizations to be formed for defence; but the Quaker Assembly would do nothing in the matter, so an association of ten thousand volunteer militia was formed. A portion of the Quakers were inclined to justify defensive war. Chief-justice Chew, of Delaware, was "disowned" because of the utterance of such a sentiment.

Volunteer Refreshment Saloons, PHILADELPHIA. Working in harmony with the grand organizations of the United States Sanitary and Christian commissions (which see) were houses of refreshment and temporary hospital accommodations furnished by the citizens of Philadelphia. That city lay in the channel of the great stream of volunteers from New England after the call of the President (April 15, 1861) for 75,000 men to suppress insurrection in the South. The soldiers, crossing New Jersey, and the Delaware River at Camden, were landed at the foot of Washington Avenue, Philadelphia, where, wearied and hungry, they often vainly sought for sufficient refreshments in the bakeries and groceries in the neighborhood before entering the cars for Washington. One morning the wife of a mechanic living near, commiserating the situation of some of the soldiers who had just arrived, went with her coffee-pot and a cup and distributed its contents among them. That generous hint was the germ of a wonderful system of beneficent relief to the passing soldiers which was immediately developed in that city. Some benevolent women living in the vicinity of this landing-place of the volunteers imitated their patriotic sister, and a few of them formed themselves into a committee for the regular distribution of coffee on the arrival of soldiers. Gentlemen in the neighborhood interested themselves in procuring other supplies, and for a few days these were dispensed under the shade of trees in front of a cooper-shop at the corner of Otsego Street and Washington Avenue. Then the cooper-shop (belonging to William Cooper) was used. The citizens of Philadelphia became deeply interested in the benevolent work, and provided ample means to carry it on. Whole regiments were supplied. The cooper-shop was too small to accommodate the daily increasing number of soldiers, and another place of refreshment was opened on the corner of Washington Avenue and Swanson Street, in a building for-

merly used as a boat-house and rigger's loft. Two Volunteer Refreshment Saloon committees were formed, and known respectively as the "Cooper-shop" and the "Union." They worked in harmony and accomplished wonderful results all through the period of the war. In these labors the women of Philadelphia bore a large share. The citizens of Philadelphia so generously supplied these committees with means that during the war almost 1,200,000 Union soldiers received a bountiful meal at their saloons. In the "Union" Saloon 750,000 soldiers were fed; 40,000 were accommodated with a night's lodging; 15,000 refugees and freedmen were cared for, and employment found for them; and in the hospital attached the wounds of almost 20,000 soldiers were dressed. The refreshment tables and the sick-room were attended by women. At all hours of the night, when a little signal-gun was fired, these self-sacrificing women would repair to their post of duty.

Volunteer Ruler, A. In December, 1776, at about the time that Washington was turning the tide of war at Trenton, the French Count de Broglie, disclaiming the ambition of becoming the king of the United States, proposed to play the part of William of Orange in English history for the Americans in their struggle, or rather insinuated his willingness to do so, for a series of years, provided he could be assured of a large grant of money before his embarkation for America, an ample revenue, the highest military rank, the direction of foreign relations during his command, and a princely annuity for life after his return. This benevolent offer could not be accepted because of the poverty of the American people. The letter of De Broglie, in manuscript, was communicated to Mr. Bancroft.

Volunteer System Abandoned, THE (1813). Experience proved that the system of volunteers for an army was not only expensive, but that the soldiers, being under officers without a knowledge of their duties, remained ignorant of good discipline and wholly inefficient. So the law establishing the system was repealed (Jan. 29, 1813); and, as a substitute for it, the President was authorized to enlist twenty regiments of twelve-months' regulars, to whom a bounty of sixteen dollars was offered. Six new generals and six new brigadiers were authorized (Feb. 24), and the number of company and regimental officers was increased.

Volunteers called for (1861). The first call of the President of the United States for volunteers in 1861 was on May 3, when he asked for 42,000, in addition to the 75,000 militia called for on April 15. They were to be enlisted for three years. He also ordered an increase of the regular army of nearly 23,000 for not less than one year nor more than three years, and an enlistment of 18,000 volunteers for the naval service. For the fitting-out of these volunteer and other troops, and maintaining their families, the people in the free-labor states voluntarily contributed, through legislatures and otherwise, fully \$40,000,000 by the first week in May, 1861.

Vose, JOSEPH, colonel of a Massachusetts

regiment in the Revolution, was born at Milton, Mass., in 1738; died there, May 22, 1816. He led the expedition which destroyed the light-house and hay on islands in Boston harbor, May 27, 1775. In November he was made lieutenant-colonel of Groaton's regiment, and accompanied it to Canada in the spring of 1776. In 1777 he joined the main army in New Jersey, and his last military service was under Lafayette at Yorktown.

Voyage of the First Emigrants to Maryland. In two ships, the *Ark* and *Dove*, Leonard Calvert, with "twenty other men of good fortune" and three hundred laboring men, sailed (Nov. 22, 1633) from Cowes, Isle of Wight, accompanied by two Jesuit priests, Andrew White and John Altham. The colonists took the tedious southern route to America by way of the Canaries and the West Indies. When only two days out they were overtaken by a fearful tempest, which increased when night came on. The people of the *Dove* (the smaller vessel) notified the officers of the stanch *Ark* that in case of danger they would hang out a lighted lantern at the mast-head. At midnight that signal appeared for a few minutes and then suddenly vanished. "All is lost!" thought the company of the *Ark*, and they grieved sorely. For three days the tempest swept the ocean, when suddenly the clouds gathered in fearful blackness, rain fell in torrents, and for a few minutes a dreadful hurricane threatened instant destruction to the *Ark*. Her mainsail was split from top to bottom, her rudder was unshipped, and she was left to the mercy of the wind and waves. The emigrants fell on their knees in prayer; the Roman Catholics among them uttered vows in honor of the Virgin and of St. Ignatius, the patron saint of Maryland; and Father White supplicated God for deliverance from the great peril. "I had scarcely finished," wrote the priest, "when they observed that the storm was abating." After that the voyagers had delightful weather on sea and land. The *Ark* ran into a harbor of the island of Barbadoes; and there, after a separation of six weeks, the little *Dove*, which had been mourned as lost, joined them, with all on board well and joyful, after perilous wanderings on the great deep. Late in February they entered the mouth of Chesapeake Bay, touched at Point Comfort, went up to Jamestown, where Governor Harvey gave them a friendly reception, then sailed up the Potomac, and finally rested on the waters of the Wiconico, where they founded the capital of the Maryland colony. (See *Capital of Maryland Founded*.)

Voyage round the World, THE FIRST, BY AN AMERICAN (1790). The restoration of confidence by the operation of the funding system (which see) in 1790-91 was soon perceived by a wonderful stimulus to the various industries of the new nation. Commerce and manufactures felt new life, and new arrangements in favor of the trade and industry of the Americans produced a sudden flood-tide of prosperity. The exports rose enormously in value, and the de-

mand for shipping increased so rapidly that for a while there were doubts whether the United States could supply a sufficiency of vessels for its own carrying-trade. This doubt was soon dispelled, for ship-building kept pace with other industries. A profitable trade had recently been opened with the East Indies and China, and to this was added a lucrative traffic with the natives of the northwest coast of North America, then little known. The trade was in the rich furs of the sea-otter. These were purchased of the natives with trinkets, and sold in China at an immense profit. One of the persons in this traffic was Captain Gray, of Boston. In the *Washington*, he, with her consort, explored the Pacific coast north and south of Nootka Sound in 1790, and afterwards returned home by way of Canton (China) and the Cape of Good Hope, thus completing the first circumnavigation of the globe by an American. On a second voyage to the same coast, in the ship *Columbia*, he entered the mouth of the great Oregon river, and gave it the name of his ship, which it bears.

Vries, DAVID PIETERSEN DE, was born in 1595. When the Dutch West India Company was formed he was an enterprising mariner at Hoorn, a port in Holland, where, in 1624, he and some merchants of Rochelle, France, fitted out a vessel for the American fisheries, and to trade for peltries on the coasts of Canada. The voyage was frustrated by the jealousy of the company. On his return from a voyage to the East Indies in 1630 he became a patroon, in connection with Godyn, Bloemart, Van Rensselaer, and De Laet (see *Patroons*), and they began a settlement within the territory of the present state of Delaware, and called it Swaenendael. The Indians destroyed it in 1632, and soon afterwards De Vries sailed for the scene of disaster and made a treaty of peace with the savages. He sailed for Virginia for supplies, where he was kindly received by Governor Harvey. Swaenendael was abandoned, and De Vries went to Manhattan, where, observing the absurd conduct of Governor Van Twiller, he sailed for Holland. (See *Van Twiller, Wouter*.) De Vries returned to Manhattan in 1635, visited Virginia, and, after making arrangements for planting a colony on Staten Island, near Manhattan, went back to Holland. In 1638 he returned with emigrants and planted them on Staten Island. He began another colony on Manhattan, and bought land of the Indians at the Tappan, on the west side of the Hudson. He was chosen one of the twelve men under Kieft, and opposed the unwise and cruel dealings of that governor with the Indians (see *Kieft, William*); and when, in 1643, he departed for Virginia, uttered in the ears of the governor this prophecy: "The murders in which you have shed so much innocent blood will yet be avenged on your own head." It was fulfilled. Spending the winter in Virginia, De Vries sailed for Holland, where he arrived in June, 1644, and never returned to America. In 1655 an account of his voyages was published at Alcknaer, illustrated by a well-engraved portrait of the author when he was sixty years of age.

W.

Wadsworth, JAMES SAMUEL, was born at Geneseo, N. Y., Oct. 30, 1807; died May 8, 1864, of wounds received in battle. He was educated at Harvard and Yale colleges; studied law a while with Daniel Webster; and was admitted to the bar in 1833, but never practised, having sufficient employment in the management of a large patrimonial estate. He was a member of the Peace Convention (which see) in 1861, and was one of the first to offer his services to the government when the great insurrection broke out. When communication between Washington and Philadelphia was cut off in April, 1861, he chartered a vessel and filled it with supplies, with which he sailed for Annapolis with timely relief for Union soldiers there. In June he was volunteer aid on General McDowell's staff, and was noted for bravery in the battle of Bull's Run. In August he was made brigadier-general of volunteers, and Military Governor of the District of Columbia in March, 1862. In that year he was Republican candidate for Governor of New York, but was defeated by Horatio Seymour. In December he commanded a division under Burnside in the battle of Fredericksburg; also in the battles of Chancellorsville and Gettysburg in 1863; and after the fall of Reynolds at the latter place, commanded his corps. Early in 1864 he was sent on special service to the Mississippi valley; and at the opening of the campaign against Richmond he led a division of the Fifth Corps, and was mortally wounded in the battle of the Wilderness (which see).

Wadsworth, PEELEG, was born at Duxbury, Mass., May 6, 1748; died at Hiram, Me., Nov. 18, 1829. He graduated at Harvard University in 1769. He and Alexander Scammel were associated in business before the Revolution. As captain of minute-men, he joined the army gathering around Boston in the spring of 1775; became aid to General Ward; and afterwards adjutant-general for Massachusetts. He was in the battle of Long Island; and in 1777 was made brigadier-general of militia, serving, in 1779, as second in command in the Penobscot expedition (which see), where he was taken prisoner. In February, 1781, he was captured and confined in the fort at Castine, whence he escaped in June. After the war he engaged in business in Portland and in surveying, and in 1792 he was elected a State Senator. From 1792 to 1806 he was a member of Congress.

Wadsworth, WILLIAM, was born at Durham, Conn.; died at Geneseo, N. Y., in February, 1833. He was an early settler, with his brother James, in western New York; and when the War of 1812-15 broke out he was a brigadier-general of New York militia. He served in that war from June 15 to Nov. 12, 1812, and was distinguished in the assault on Queenstown Heights (Oct. 13, 1812), where he was in command when the Americans surrendered, giving up his sword in person to General Sheaffe.

Walbach, JOHN DE BARTH, was born in Alsace, on the Rhine, in 1764; died in Baltimore, Md., June 10, 1857. He was in the French military service; came to America in 1796; studied law with Alexander Hamilton; and entered the United States Army as lieutenant of cavalry in 1799. In June, 1813, he was made assistant adjutant-general, with the rank of major, and did good service on the Northern frontier in the War of 1812-15.

Waldo, DANIEL, was born at Windham, Conn., Sept. 10, 1762; died at Syracuse, N. Y., July 30, 1864. He graduated at Yale College in 1788; was a soldier in the Revolutionary army; suffered the horrors of imprisonment in a sugar-house in New York (see *Prisons and Prison-ships, British, at New York*); and was pastor and missionary from 1792. At the age of ninety-three he was chaplain of the national House of Representatives, when his voice and step were as vigorous as a man of sixty.

Waldron, MAJOR RICHARD, was born in Warwickshire, England, in 1615; died June 28, 1689. He came to Boston in 1635, and settled at Dover, N. H., in 1645. He represented that district from 1654 to 1676, and was seven years speaker. He was councillor and chief-justice, and in 1681 was president. Being chief military leader in that region, he took an active part in King Philip's War. Inviting Indians to Dover to treat with them, he seized several hundred of them, and hung or sold into slavery two hundred of them. They fearfully retaliated thirteen years afterwards. Two apparently friendly Indians obtained a night's lodging at Waldron's house at Dover. At midnight they arose, opened the door, and admitted a party of Indians lying in wait. They seized Waldron, who, though seventy-four years of age, made stout resistance. They bound him in an arm-chair at the head of a table in the hall, when they taunted him, recalled his treachery, and tortured him to death (June 28, 1689).

Waldseemüller, MARTIN, a German cosmographer, was born at Fribourg about 1470; died about 1530. He published an *Introduction to Cosmography*; with the *Four Voyages of Americus Vesputius* (1507), in which he proposed the name of "America" to the region discovered by Columbus and Cabot. (See *America, Origin of the Name of*.)

Walke, HENRY, was born in Princess Anne County, Va., April 26, 1809. He entered the United States Navy in 1827; served in the war against Mexico; and was a bold and efficient commander in the naval warfare on the rivers in the valley of the Mississippi during the late Civil War. He was particularly distinguished in the attacks on Fort Donelson, Island Number Ten (which see), and in operations against Vicksburg. In 1868 he was placed in command of the naval station at Mound City, Ill.

Walker, BENJAMIN, aide-de-camp to Baron Steuben, was born in England in 1753; died at Utica, N. Y., June 13, 1818. He was a captain in the Second New York Regiment at the beginning of the war for independence; became aid to Baron Steuben, and then to Washington (1781-82); and after the war was secretary to Governor Clinton. He became a broker in the city of New York, and naval officer there during Washington's administration. From 1801 to 1803 he was a member of Congress. In 1797 he became agent for estates in western New York, and was long identified with the growth of Utica.

Walker, FRANCIS AMASA, was born in Boston, July 2, 1840. He graduated at Amherst College in 1860, and began the study of law, but engaged in the military service in the spring of 1861, as sergeant-major of Devens's Massachusetts regiment. In September he was assistant adjutant-general of Couch's brigade, and adjutant-general of his division in August, 1862. In December he became colonel on the staff of the Second Army Corps, serving in the Army of the Potomac. He was wounded at Chancellorsville; was made prisoner at Reams's Station, Va., and confined in Libby Prison; and when exchanged in 1865 was compelled to resign on account of shattered health. He was in charge of the Bureau of Statistics at the capital, and was appointed superintendent of the census for 1870, which work, completed under his supervision, is the most complete of any before made. He was appointed superintendent of the census for 1880.

Walker, ROBERT JAMES, financier, was born in Northumberland, Penn., July 19, 1801; died in Washington, D. C., Nov. 11, 1869. He graduated at the University of Pennsylvania in 1819. In 1826 he settled in Natchez, Miss.; was United States Senator from 1837 to 1845, being a Democratic leader in that body; warmly supported the financial measures of President Van Buren; and had great influence over President Tyler, counselling the vigorous steps which led to the annexation of Texas. During the administration of President Polk he was Secretary of the Treasury, and in 1857-58 he was Governor of Kansas Territory. He resigned, being "unwilling," he said, "to aid in forcing slavery on that territory by fraud and forgery." In 1863-64 he was financial agent of the United States in Europe, effecting the sale of \$250,000,000 of five-twenty bonds, and defeating the second authorized Confederate loan of \$175,000,000. Mr. Walker was an efficient advocate of the Pacific Railroad and of free-trade. His celebrated report in favor of free-trade was reprinted by order of the British House of Commons.

Walker, SIR HOVENKEN, was born in Somersham, England; died in Dublin in January, 1726. He became a captain in the navy in 1692, and rear-admiral of the white in 1710. The next year he was knighted by Queen Anne. He made an attempt to capture Quebec in 1711, commanding the naval armament sent for that purpose. (See *Quebec, Expedition against, 1711.*)

Returning to England, his ship, the *Edgar*, blew up at Spithead, when nearly all the crew perished. This accident and the disastrous expedition to Quebec drew upon him almost unqualified censure, and he was dismissed from the service. He afterwards settled upon a plantation in South Carolina; but he returned to Great Britain, and "died of a broken heart" in Dublin.

Walker, WILLIAM, "filibuster," was born at Nashville, Tenn., May 8, 1824; executed at Truxillo, Honduras, Sept. 12, 1860. He was an editor in New Orleans for a while; went to California in 1850; and in 1853 organized an expedition to invade a Mexican territory. (See *Walker's Expedition.*) Making war on the government of Honduras, he was captured, condemned by a court-martial, and shot.

Walking Purchase, THE. In 1682 William Penn purchased of the Indians a tract of land in (the present) Bucks and Northampton counties, bounded on the east by the Delaware River, and in the interior at a point as far as a man could walk in three days. Penn and the Indians started on the walk, beginning at the mouth of Neshaminy Creek. At the end of a walk of a day and a half Penn concluded that it was as much land as he wanted, and a deed was given for the lands to that point—about forty miles from the starting-place—in 1686. This agreement was confirmed by the Delawares in 1718, the year when Penn died. White settlers, however, went over this boundary to the Lehigh Hills. The Indians became uneasy, and, to put an end to disputes, a treaty was concluded in 1737, by which the limits of the tract were defined as in the deed of 1682—not beyond the Lehigh Hills, or about forty miles from the place of the beginning of the "walk." It was then proposed that a "walk" of a "day and a half," as agreed upon by Penn, should be again undertaken. Thomas and Richard Penn, sons of William Penn, were then proprietors, and, contrary to the spirit of their father, they devised a plan to cheat the Indians out of a large tract of most valuable land at the forks of the Delaware and the Minisink country beyond. They advertised for the most expert walkers in the province. Three were selected—Edward Marshall, James Yeates, and Solomon Jennings—and the covetous proprietors caused them to violate the spirit of the agreement by almost running much of the way and being fed by persons who accompanied them on horseback, the walkers eating as they moved on. They started from (the present) Wrightville on the morning of the 19th of September, 1737, going northerly along the old Durham Road to Durham Creek; then westerly to the Lehigh, which they crossed near Bethlehem; then northwesterly, passing through Bethlehem into Allen County; and halted at sunset near an Indian town. The next morning they passed the Blue Mountains at the Lehigh Water-gap, and at noon completed the "walk," at a distance of about seventy miles from the starting-point, instead of forty miles in Penn's time, and as the Indians expect-

ed. Then, by running a line northeasterly, instead of more directly from that point to the Delaware, it embraced the coveted region of the forks of the Delaware and the Minisink lands. The Indians protested against the intended fraud on the first day of the walk. The result exasperated them. The greedy proprietors had obtained about twelve hundred square miles of territory, when they were not entitled to more than eight hundred square miles. This transaction alienated the Delawares, and it was one of the chief causes that impelled them to join the French against the English in 1755.

Wallace, LEWIS, son of David Wallace, Governor of Indiana from 1837 to 1840, was born in Franklin County, Ind., in 1827. He studied law, and began its practice in Crawfordsville, Ind. He served as lieutenant of Indiana volunteers in the war with Mexico, and afterwards resumed his profession. He served one term in the State Senate; and when the Civil War broke out he was appointed adjutant-general of Indiana. Soon afterwards he was made colonel of the Eleventh (Zouave) Indiana Regiment (which see), with which he performed signal service in western Virginia. (See *Romney, Skirmish at.*) In September, 1861, he was made brigadier-general of volunteers, and led a division in the siege and capture of Fort Donelson (which see). For his services on that occasion he was promoted to major-general. In the battle of Shiloh (which see) he was conspicuous for gallantry. In command at Baltimore, Md., in the summer of 1864, he gallantly held in check a large Confederate force, under General Early, endeavoring to strike Washington, until the arrival of troops that secured the latter place from capture. (See *Monocacy, Battle of.*) After the war he resumed his profession at Crawfordsville, and indulged his literary taste in writing a novel entitled *The Fair God*, the scene of which is laid in Mexico, in the time of Montezuma. In 1878 he was appointed Governor of New Mexico.

Wallace on Perilous Duty. When Colonel Wallace, with the Eleventh Indiana (Zouave) Regiment, fell back to Cumberland after his dash on Romney (which see), the insurgents took heart and advanced, four thousand strong—infantry, cavalry, and artillery—under Colonel McDonald. They pushed on to New Creek and destroyed the bridge of the Baltimore and Ohio Railway there. They pressed on, destroyed all communication between Cumberland and Grafton, and completely isolated Wallace. He had neither cañons nor cavalry, and for twenty-one days his men had only twenty-one rounds of cartridges apiece. He prepared to retreat to Bedford, Penn., if attacked. He could not hold Cumberland, and sent his sick and baggage in that direction. Then he boldly led his regiment out upon the same road, halted, changed front, and prepared for battle, believing that if the insurgents should enter Cumberland they would scatter in search of plunder; and in that case he would rush into the town and defeat them in detail. Informed of Wallace's bold stand, the insurgents halted within five miles

of Cumberland, and at night hastened to Romney. Wallace retired to Cumberland and appealed to McClellan, Morris, and Patterson for reinforcements, but none could be spared, for there was danger and weakness at all points. The Governor of Pennsylvania sent him ammunition and forwarded two regiments of the Pennsylvania Reserves (which see) to the borders of that state to assist the Indians if they should be attacked. That gallant regiment successfully guarded the railway for about one hundred miles, for the insurgents felt a wholesome fear of these Zouaves, who were often engaged in little skirmishes. Wallace had impressed thirteen horses into his service and mounted thirteen picked men of his regiment. While these were on a scout on June 26 they attacked forty-one mounted insurgents, killing eight of them, chasing the remainder two miles, and capturing seventeen of their horses. On their way back they were attacked by seventy-five mounted men (afterwards of the command of the famous Ashby). They had a terrible hand-to-hand fight that ceased only when night came on. The Zouaves had only one man killed, and the rest made their way back to camp in the darkness. For his eminent services in that region for three months Colonel Wallace was rewarded with the commission of brigadier-general. For his bravery and vigilance in guarding the Baltimore and Ohio Railway, the great line of communication with the West, Wallace was heartily commended by McClellan and others.

Wallace, SIR JAMES, British admiral, died in London, March 6, 1803. He commanded the British fleet at Newport, R. I., in 1775, where he had a laconic correspondence with Captain Whipple (which see). He bore General Vaughan's marauding land force up the Hudson River in October, 1777; and in 1779 was captured by D'Estaing. In Rodney's battle with De Grasse on April 12, 1782, he commanded the *Warrior*. In 1794 he was made rear-admiral, vice-admiral in 1795, and admiral of the blue in 1801. He was Governor of Newfoundland from 1793 to 1795.

Wallace, WILLIAM HARVEY LAMB, was born at Urbana, O., July 8, 1821; died at Savannah, Tenn., April 10, 1862, from wounds received in battle. He served in the war with Mexico, in Hardin's regiment; and was State's Attorney for the Ninth Circuit, Illinois, in 1853. In May, 1861, he became colonel of the Eleventh Illinois Regiment. He commanded a brigade in McClelland's division at the capture of Fort Donelson (which see), and was made brigadier-general of volunteers. On the first day of the battle of Shiloh (which see) he was mortally wounded.

Walloons (Flemish, *Waelen*) inhabited the southern Belgic provinces and adjoining parts of France, and numbered, at the time of their dispersion by persecution (1580), over two millions. They were of a mixed Gallic and Tontonic blood, and most of them spoke the old French dialect. When the northern provinces of the Netherlands formed their political union at Utrecht (1579), the southern provinces, whose

people were chiefly Roman Catholics, declined to join the confederation. Many of the inhabitants were Protestants, and against these the Spanish government at once began the most relentless persecution. Thousands of them fled to Hollaud, where strangers of every race and creed were welcomed and protected; and from these the Dutch gained a knowledge of many branches of manufacture. They were skilful and industrious. Having heard of the fertility of the Western Continent, some of them wished to emigrate thither, and a proposition was made to the Virginia Company to have them favor a settlement there. Negotiations to that end failed. Hearing of this, the directors of the Dutch West India Company made them satisfactory offers, and arrangements were soon made for the emigration of several families to New Netherland. In the spring of 1623 the ship *New Netherland*, of two hundred and sixty tons burden, Captain Cornelius Jacobus May, sailed from the Texel with thirty families, chiefly Walloons, for Manhattan. These landed on the rocky shore of Manhattan on a beautiful morning in May, and were welcomed by Indians and traders. They were feasted under a tent made of sails stretched between several trees, when their Christian teacher gave public thanks to God for their safety and implored blessings on their future career. May, who was to remain as governor of the colony, then read his commission and assumed the functions of his office. The emigrants soon dispersed and formed separate settlements. (See *New York, Colony of*.) Some of the Walloons settled on Long Island, on the borders of a cove at the site of the (present) Brooklyn Navy-yard, which soon became known as the "Waalbogat" (corrupted to Wallabout), or Walloons' Cove. There, in June, 1625, Sarah Rapelje was born—the first ascertained offspring of European parentage in New Netherland.

Walton, GEORGE, a signer of the Declaration of Independence, was born in Frederick County, Va., in 1740; died at Augusta, Ga., Feb. 2, 1804. He was early apprenticed to a carpenter, who would not allow him a candle to read by; but he found a substitute in pine knots. He was admitted to the bar in Georgia in 1774, and was one of four persons who called a meeting at Savannah (July 27, 1774) to consult upon measures for the defence of the liberties of their country. Mr. Walton was one of the committee who prepared a petition to the king; also patriotic resolutions adopted on that occasion. From February, 1776, to October, 1781, he was a delegate in Congress from Georgia, and warmly favored the resolution for independence. As colonel of militia, he assisted in defending Savannah in December, 1778, where he was dangerously wounded, made prisoner, and kept so until September, 1779. In October, 1779, he was chosen Governor of Georgia, and again in 1789. In 1783 he was appointed chief-justice of the state. In 1795–96 he was United States Senator.

Wampanoaga, or Pokanokets. One of the most powerful of the Massachusetts tribes of the Algonquin nation was that of the Wam-

panoaga, of which Massasoit was sachem when the English came to the New England shores. Their domain extended over nearly the whole of southern Massachusetts, from Cape Cod to Narraganset Bay, and at one time the tribe numbered thirty thousand. Just before the landing of the Pilgrims a terrible disease had reduced them to less than one thousand. While Massasoit lived the Wampanoags were friendly to the English; but a growing discontent ripened into war in 1675, led by Metacomet (King Philip), a son of Massasoit, which involved many of the New England Indians. The result was the destruction of the tribe. King Philip's son, while yet a boy, with others, was sent to the West Indies and sold as a slave. (See *King Philip's War*.)

Wampum, an Indian currency, consisting of cylindrical white, blue, and black beads, half an inch long, made from certain parts of sea-shells. The shores of Long Island Sound abounded in these shells, and the Pequods and Narragansets grew "rich and potent" by their abundance of wampum, which was much in demand, first for ornament, and afterwards as currency among the interior tribes. The settlers at Plymouth first learned the use and value of wampum from the Dutch at Manhattan, and found it profitable in trade with the Eastern Indians; for the shells of which it was made were not common north of Cape Cod. It soon became a circulating medium, first in the Indian traffic, and then among the colonists generally. Three of the black beads, or six of the white, passed for a penny. They were strung in known parcels for convenience of reckoning—a penny, three-pence, a shilling, and five shillings in white; twopence, sixpence, two-and-sixpence, and ten shillings in black. A fathom of white wampum was worth ten shillings, or two dollars and a half; a fathom of black, twice as much. Wampum was also used in the form of belts in making treaties, they being pledges of fidelity.

War, A VITAL RULE-OF. Soon after Washington took command of the army at Cambridge the Legislature of Massachusetts and the Governor of Connecticut applied to him for detachments from the army for the protection of points on their respective sea-coasts exposed to predatory attacks from British cruisers. Washington, in a letter dated July 31, 1775, answered these appeals with a refusal, after giving satisfactory reasons for his decision. He pointed out the danger to be apprehended by scattering the army in detachments. He said the matter had been debated in Congress, and that they had come to the wise conclusion that each province should defend itself from small and particular depredations. It was then established as a rule, that attacks of the enemy at isolated points along the coast "must be repelled by the militia in the vicinity," except when the Continental army was in a condition to make detachments without jeopardizing the common cause.

War Begun by the Confederates. The declaration of the Confederates, South and North.

that the Civil War was begun by the President when he called (April 15, 1861) for seventy-five thousand men to suppress the insurrection, is authoritatively denied by the utterances of the Confederate leaders. On the evening of the day when Fort Sumter was attacked (April 12, 1861), in response to a serenade given to Jefferson Davis and his Secretary of War (L. Pope Walker), at the Exchange Hotel at Montgomery, the latter said, "No man can tell when the war this day commenced will end; but I will prophesy that the flag which now flaunts to the breeze here will float over the dome of the old Capitol at Washington before the 1st of May. Let them try Southern chivalry and test the extent of Southern resources, and it may eventually float over Fanenil Hall in Boston." Hooper, the Secretary of the Montgomery Convention, replied to the question of the agent of the Associated Press at Washington—"What is the feeling there?"—by saying:

"Davis answers rough and curt,
With mortar, Paixhan, and petard,
Sumter is ours, and nobody hurt;
We tender Abe our Beau-regard."

General Pillow, of Tennessee, had offered to the "Confederate government" ten thousand volunteers from his state; and assurances had come from all parts of the border slave-labor states that ample means, in men and money, would be afforded to carry on the war. These utterances and these offers were made before the President's proclamation.

WAR, CHANGE OF THE, FROM OFFENSIVE TO DEFENSIVE. For nearly two years the Americans waged offensive war against Great Britain (1812-14), when they were compelled to change to a war of defence. The entire sea-coast from the St. Croix to the St. Mary's, and of the Gulf of Mexico to New Orleans and beyond, was menaced by British squadrons and regiments. At Portland, Boston, Providence, New Haven, New York, Baltimore, Norfolk, Charleston, and Savannah, which were exposed to attack, the people were soon busy casting up fortifications for defence.

WAR, DECLARATION OF, BETWEEN FRANCE AND ENGLAND (1756). The serious quarrel between the English and French colonists in America, which was begun in 1754 and continued by collisions of armed men, was taken up by the home governments in 1755. The French had offered to treat for reconciliation, but the terms were not acceptable to the English; and when the offer was refused, the French fitted out privateers and threatened to invade England with a fleet and army collected at Brest. To confront this menace, a body of German troops were introduced into England; and, to induce the colonies to make fresh efforts against the French in America, the Parliament voted a reimbursement of \$775,000 to those involved on account of Dieskan's invasion. Provision was also made for enlisting a Royal American regiment, composed of four battalions of one thousand men each. All hopes of reconciliation being passed, England formally declared war against France (May 18, 1756), to which the latter shortly after responded.

War Ended in Western Virginia, THE. After Lee was recalled to Richmond (see *Lee's, R. E., Campaign in Western Virginia*), Floyd and Rosecrans were competitors for the possession of the Kanawha valley. The former, late in October, took post at a place where his cannons commanded the road over which supplies for the latter passed, and it was resolved to dislodge or capture him. General Schenck was sent to gain Floyd's rear, but he was hindered by a sudden flood in New River, though the Confederates were struck (Nov. 12) in front by Kentuckians under Major Leeper. Floyd fled precipitately, strewing the way with tents, tent-poles, working utensils, and ammunition in order to lighten his wagons. General Benham, pursuing, struck Floyd's rear-guard of 400 cavalry in the flight; but the pursuit was ended after a thirty-mile race, and the fugitives escaped. Floyd soon afterwards took leave of his army. Meanwhile General Reynolds (see *Lee's, R. E., Campaign in Western Virginia*) was moving vigorously. Lee had left General H. R. Jackson, of Georgia, with about 3000 men on Greenbrier River, at the foot of Cheat Mountain, and a small force at Huntersville, to watch Reynolds. He was near a noted tavern on the Staunton pike called "Travellers' Rest." Reynolds moved about 5000 men of Ohio, Indiana, Michigan, and Virginia against Jackson at the beginning of October, 1861. On the morning of the 2d they attacked Jackson, and were repulsed, after an engagement of seven hours, with a loss of 10 men killed and 32 wounded. Jackson lost in picket-firing and in the trenches about 200 men. Reynolds fell back to Elkwater. Meanwhile General Kelley (see *Philippi, Fa., Skirmish at*), who was guarding the Baltimore and Ohio Railroad, had struck (Oct. 26) the Confederates under McDonald at Romney (which see), and, after a severe contest of two hours, routed them, capturing three cannons and a large number of prisoners. The blow given Jackson at "Travellers' Rest" paralyzed the Confederate power in western Virginia. He left his troops (about 2000 in number) with Colonel Edward Johnston, of Georgia, and returned to that state. Reynolds had left his troops in charge of General Robert H. Milroy, consisting of a single brigade, to hold the mountain passes. He scouted the hills vigorously, skirmishing here and there, and finally, on Dec. 12, moved to attack Johnston. He was at first unsuccessful, the Confederates became the aggressors, and, after losing nearly 200 men, he retired. The Confederate loss was about the same. Late in December Milroy sent some troops under Major Webster to look up a Confederate force at Huntersville. It was successful, after a weary march of fifty miles over ground covered with snow. The Confederates were dispersed, a large amount of stores burned, and their soldiers, disheartened, almost entirely disappeared from that region. This event ended the campaigns in western Virginia, and armed rebellion there was suppressed.

War Message of Madison (1812). On June 1, 1812, President Madison sent a confidential

message to Congress, in which he recapitulated the causes of complaint against Great Britain, and declared that it was the duty of the House to consider, as it was their constitutional right to decide, whether the Americans should remain passive under these progressive and accumulated wrongs. At the same time he cautioned Congress to avoid entanglements in the "contests and views of other powers," meaning France; but he refrained from proposing any definite measure in regard to that nation.

War on Long Island and the Connecticut Border. The eight men selected by the people of New Amsterdam as a council made some provision for defence against the Indians in the autumn of 1643. They equipped a large force of soldiers, of whom fifty were Englishmen, under John Underhill, the Massachusetts leader who had fought the Pequods (which see). In the succeeding winter, suffering dreadfully from the hostile Indians, some English families who had moved from Stamford, Conn., to Hempstead, L. I., were exposed to forays by the Canarsie Indians, and begged for troops to protect them. The governor and the eight men sent one hundred and twenty soldiers, who surprised and sacked the Indian villages and killed more than one hundred warriors. Two of the Indians were taken to Manhattan and cruelly tortured to death. This was soon followed by another expedition against the barbarians at Stamford and Greenwich. Underhill, with a force one hundred and fifty strong of Dutch and English, marched through deep snow in February, 1644, to attack the principal Indian village there. The moon shone brightly, but the savages had been warned, and were on the ground seven hundred in number. They were also protected by rude fortifications. Steadily the Dutch and English moved upon them, and nearly two hundred Indians were slain. After a while Underhill succeeded in setting fire to the village. The slaughter was dreadful. Only eight of the seven hundred barbarians escaped, while the assailants had only fifteen wounded. When, a few days afterwards, the victors arrived at Manhattan, a day of thanksgiving was held.

War upon the Creeks (1813). In the summer of 1813 affairs assumed a serious aspect in the Gulf region. The ever-restless Tecumtha had been among the Southern tribes in the autumn of 1812, stirring them up to make war on the white people. The powerful Creeks inhabiting Alabama and western Georgia yielded to his influence and persuasions; and at the close of August a large party of them, led by the noted chief Weathersford, surprised and captured Fort Mims, on the east side of the Alabama River. About 400 men, women, and children were massacred. This event aroused the whole Southwest. General Jackson, with General Coffee, marched into the Creek country with 2500 Tennessee militia, and prosecuted a subjugating war upon them with great vigor. On Nov. 3, 1813, General Coffee, with 900 men, surrounded the Indians at Tallushatchee and killed 200 of

them. Not a warrior escaped. Within ten weeks afterwards bloody battles had been fought at Talladega (Nov. 8), Auttose (Nov. 29), and Emucfau (Jan. 22, 1814); and several skirmishes had also taken place. The Americans were always victorious, yet they lost many brave soldiers. At length the Creeks established a fortified camp at the Great Horseshoe Bend of the Tallapoosa River, and there 1000 warriors, with their women and children, determined to make a defensive stand. The Americans surrounded them; and Jackson, with the main body of his army, attacked them on March 27, 1814. The Indians fought desperately, for they saw no future for themselves in the event of defeat. Almost 600 warriors were slain, for they disdained to surrender; only two or three were made prisoners, with about 300 women and children. This battle crushed the power and spirit of the Creek nation, and soon afterwards the chiefs of the remnant signified their submission.

War-cloud, DISPERSION OF THE (1798). Circumstances humbled the pride of the French Directory, and the wily Talleyrand began to think of reconciliation with the United States. He saw the unity of the people with Washington as leader, and paused; and, through letters to Piuchon (August and September, 1798), information was conveyed to the United States government that the Directory were ready to receive advances from the former for entering into negotiations. Anxious for peace, President Adams, without consulting his cabinet or the national dignity, nominated to the Senate William Vans Murray (then United States diplomatic agent at the Hague) as minister plenipotentiary to France. This was a concession to the insolent Directory which neither Congress nor the people approved, and the Senate refused to ratify the nomination. This advance, after unatoned insults from the Directory, seemed like cowardly cringing before a half-relenting tyrant. After a while the President consented to the appointment of three envoys extraordinary, of which Murray should be one, to settle all disputes between the two governments. Oliver Ellsworth and William R. Davie were chosen to join Murray. The latter did not proceed to Europe until assurances were received from France of their courteous reception. These were received from Talleyrand (November, 1799), and the two envoys sailed for France. The same month the Directory, which had become unpopular, was overthrown, and the government of France remodelled, with Napoleon Bonaparte as First Consul, or supreme ruler of the nation. The envoys were cordially received by Talleyrand in the name of the First Consul, and all difficulties between the two nations were speedily adjusted. A convention was signed at Paris (Sept. 30, 1800) by the three envoys and three French commissioners which was satisfactory to both parties. The convention also made a decision contrary to the doctrine avowed and practised by the English government, that *free ships make free goods*. This affirmed the doctrine of Frederick the Great enunciated fifty

years before, and denied that of England in her famous "Rule of 1756" (which see).

War-spirit Kindled (1775). When the Congress had resolved upon armed resistance in the late spring of 1775 (see *Defence, General Preparations for*), the pulpit, the bar, and the press united in encouraging the people to be firm in their opposition. The clergy of New England were a zealous, learned, numerous, and widely influential body of earnest patriots. They connected religion and patriotism, and in their prayers and sermons represented the cause of America as the cause of Heaven. The Presbyterian synods of New York and Philadelphia sent forth a pastoral letter which was publicly read in their churches. This earnestly recommended such sentiments and conduct as were suitable to the situation. Publicists and journalists followed the preachers, and exerted a powerful influence over the minds of the great mass of the colonists. The legal fraternity denied the charge of rebellion, and proved the justice of the resistance of the Americans. A distinction founded on law was drawn between the king and Parliament. They contended that the king could do no wrong, and upon the latter they charged the crime of treason for using the royal name in connection with their own unconstitutional measures. The phrase of a "ministerial war" became common, and the colonists professed loyalty to the crown until the Declaration of Independence. Thus it was that the leaders in thought bore forward the banner of resistance to British oppression.

Ward, ARTEMAS, first major-general of the Continental Army, was born at Shrewsbury, Mass., Nov. 27, 1727; died there, Oct. 27, 1800. He graduated at Harvard University in 1748, served as major in the Northern army from 1755 to 1758, and became lieutenant-colonel. Taking an active part against the ministerial measures, he was appointed a general officer by the Massachusetts Provincial Congress, and in May he became commander-in-chief of the forces gathered at Cambridge, in which position he acted until the arrival of Washington at the beginning of July, 1775. Ward was made the first major-general under Washington, which he resigned in the spring of 1776 on account of ill-health, when he was appointed chief-justice of the Court of Common Pleas for Worcester County. He was president of the Council in 1777, and in 1779 was chosen a delegate to Congress, but ill-health prevented his taking a seat in that body. For sixteen years he was in the Massachusetts Legislature, and was speaker of the Assembly in 1785. From 1791 to 1795 he was in Congress.

Ward, JAMES HARMAN, was born at Hartford, Conn., in 1806; killed in the battle at Matthias Point, Va., June 27, 1861. Educated at Norwich Military Academy and Trinity College, he entered the navy in 1823, and rose to commander in 1858. He lectured on gunnery, and urged the establishment of a naval school. In May, 1861, he was placed in command of the Potomac flotilla (see *Blockade of the Potomac*);

silenced the batteries at Aquia Creek (which see), and in an attack upon a battery upon Matthias Point was mortally wounded by a Minie-ball.

Ward, SAMUEL, Governor of Rhode Island, was born at Newport, in that state, May 27, 1725; died in Philadelphia, March 26, 1776. He was already a man of note when the Revolution occurred. He had acquired a competence in business, and had served in the Assembly of Rhode Island. In 1761 he was made chief-justice, and was twice governor (in 1762 and from 1765 to 1767). He was one of the founders of the Rhode Island College (Brown University). A firm and persistent patriot, he was regarded as a safe leader and had great influence, and, with Stephen Hopkins, was sent a delegate from Rhode Island to the First Continental Congress in 1774. He was also a member of the Second Congress in 1775, in which he usually presided when in committee of the whole.

Warner, SETH, a leader of the Green Mountain Boys, was born at Roxbury, Conn., May 17, 1743; died there, Dec. 26, 1784. He was a man of noble bearing, sound judgment, energy, and pure patriotism. With his father, Dr. Benjamin Warner, he went to Bennington in 1765, and became, with Allen, a principal leader in the disputes between New York and the New Hampshire Grants. He and Allen were outlawed by the State of New York, and a reward was offered for their arrest. He captured Ticonderoga (May 12, 1775), and on July 27 was appointed colonel of Vermont militia. He joined the Northern army and was at the siege of St. John. He defeated an attempt of General Carleton to relieve the garrison. The next year he performed signal service during the retreat of the Americans from Canada. On the retreat of the Americans from Ticonderoga (July 4) in 1777 he again performed good service. In the command of the rear-guard he fought a severe battle at Hubbardton, and was compelled to retreat. At the battle near Bennington he and his command were essential aids in obtaining a victory over the invaders, and shared in the glory of the exploit. Warner remained in the service until 1782, when his constitution gave way under the strain of fatigue and hardship, and he returned home.

Warren, GOUVERNEUR KEMBLE, was born at Cold Spring, N. Y., in 1830, graduated at West Point in 1850, entering the Topographical Engineers, and was assistant professor of mathematics at the Military Academy from 1859 to 1861, when the Civil War broke out. He was made colonel in August, 1861, and commanded a brigade in the campaign of 1862. In September he was made brigadier-general. He engaged in the battles of Manassas (or Second Bull's Run), Antietam, and Fredericksburg. After Feb. 4, 1863, he was chief of topographical engineers of the Army of the Potomac. He was engaged in the battles of Chancellorsville and Gettysburg (where he was wounded), and in the combats at Auburn and Bristow's Station. In March, 1864, he was placed in command of the Fifth Army

Corps, which position he held until April, 1865, in the campaign against Richmond, having been made major-general of volunteers in May, 1863. In that campaign he was exceedingly active and

GOUVENEUR KEMBLE WARREN.

efficient, from the battle in the Wilderness to the surrender of Lee. In March, 1865, he was breveted major-general of the United States Army. General Warren is the author of several interesting reports of explorations in the West and Northwest a few years before the Civil War.

Warren, JOSEPH, was born at Roxbury, Mass., June 11, 1741; killed in battle, June 17, 1775. He graduated at Harvard University in 1759, studied the healing art, began practice as a physician in 1752 in Boston, and by his successful treatment of small-pox patients in 1764 acquired a high reputation among the faculty.

JOSEPH WARREN.

In politics he was in advance of public opinion in general, holding the doctrine that the British Parliament had no right to levy a tax of any kind upon the colonies. When, in 1772, Samuel Adams declined to deliver the annual oration

on the anniversary of the Boston Massacre, Dr. Warren took his place, and exhibited great ability. He again delivered the anniversary oration in 1775 in the midst of the danger caused by the presence of British troops and the exasperation of the citizens. He had been made a member of the Boston Committee of Correspondence in 1772, and worked incessantly and effectively for the cause of the colonists. He was a delegate to the Suffolk County Convention, and was chairman of the committee appointed to address Governor Gage on the subject of the fortifications on Boston Neck and other grievances. He sent him two papers, written by himself, which were communicated to the Continental Congress. (See *Suffolk Resolutions*.) As delegate in the Massachusetts Provincial Congress in 1774 he was made its president; also the chairman of the Committee of Safety. The successful result to the patriots of the affair at Lexington and Concord was mainly due to the energy and vigilance of Dr. Warren. He was commissioned major-general by the Massachusetts Congress, June 14, 1775. Warren opposed the project of fortifying Charlestown Heights—Bunker's (Breed's) Hill—because of the scarcity of powder, and to this cause the defeat of the provincials is chiefly chargeable. When a majority of a council of war and the Committee of Safety decided to fortify Bunker's Hill, he resolved to take part in the enterprise. "I beg you not to expose your person, Dr. Warren," said Elbridge Gerry, "for your life is too valuable to us." "I know that I may fall," replied Warren, "but where's the man who does not think it glorious and delightful to die for his country?" Just before the battle began he went to the redoubt on Breed's Hill with a musket in his hand, and was offered the command by Colonel Prescott and General Putnam, but declined, and fought as a volunteer in the ranks. He was one of the last to leave the redoubt. As he moved

away towards Bunker's Hill an officer of the British army who knew him called out to him by name to surrender, at the same time commanding his men to cease firing. As Warren turned, attracted by the voice, a bullet penetrated his brain and he fell dead. The Continental Congress voted him a monument, and resolved to educate his infant son at the public expense. The monument was never erected by the government, but the Bunker's Hill Monument was unveiled on the famous hill, June 17, 1857. (See *Bunker's Hill Monument*.) A masonic lodge in Charlestown erected a monument in 1794 on the spot where he fell. It was composed of a brick pedestal eight feet square,

WARREN'S MONUMENT.

rising ten feet from the ground, and supporting a Tuscan column of wood eighteen feet in height. This was surmounted by a gilt cross, bearing the inscription "J. W., aged 35," entwined with masonic emblems. Upon the pedestal was an appropriate inscription. The monument stood thus forty years, when it gave way to the Bunker's Hill Monument. A beautiful model of Warren's monument stands within the base of the huge granite obelisk.

Warren, MERCY, historian, was born at Barnstable, Mass., Sept. 25, 1728; died at Plymouth, Oct. 19, 1814. Mrs. Warren was the wife of General James Warren and sister of James Otis. Her mind was as strong and active as that of her fiery brother, but she was restrained from taking public part in the politics of the day by her sex. She was a poet of much excellence, and corresponded with the leading statesmen of the day. She excelled in dramatic composition, and produced *The Group*, a political satire; *The Adulator*; and two tragedies of five acts each, called *The Sack of Rome* and *Ladies of Castile*.

MERCY WARREN.

The latter were written during the earlier years of the war for independence and published in 1778, and were full of patriotic sentiments. Her complete poetical works were published in 1790. In 1805 Mrs. Warren completed and published a *History of the Revolutionary War*, in three volumes.

Warren, SIR PETER, was born in 1702; died in Ireland, July 29, 1752. He entered the navy in 1727, and was commodore in 1745, when he commanded an expedition against Louisburg, joining the land-forces from Massachusetts under General Pepperell. He took possession of Louisburg on June 17. Afterwards he was made a rear-admiral, and, in 1747, defeated the French in an action off Cape Finisterre, capturing the greater part of their fleet. Admiral Warren married the eldest daughter of Stephen De Lancey, of New York, and became the owner of a large tract of land in the Mohawk region, in charge of which he placed his nephew, William Johnson, afterwards Sir William.

Warrington, Lewis, was born at Williamsburg, Va., Nov. 3, 1782; died in Washington,

D. C., Oct. 12, 1851. He graduated at the College of William and Mary in 1798, and entered the navy in 1800. He was an officer of the *Chesapeake* at the time of her encounter with the *Leop-*

LEWIS WARRINGTON.

ard. (See *Chesapeake* and *Leopard*.) For his capture of the *Épervier* (see *Peacock* and *Épervier*) Congress gave him the thanks of the nation and a gold medal. In June, 1815, while cruising in the East India waters, he captured the *Nautilus* (which see), the last prize of the war.

Warwick, EARL OF, GOVERNOR OF NEW ENGLAND. In 1643 the British Parliament passed an ordinance appointing the Earl of Warwick Governor-in-chief and Lord High Admiral of the American Colonies, with a council of five peers and twelve commoners. It empowered him, in conjunction with his associates, to examine the state of their affairs; to send for persons and papers; to remove governors and officers and to appoint others in their places, and to assign over to these such part of the powers that were now granted as he should think proper.

Warwick River (Va.), SKIRMISH ON. On April 16, 1862, a division of the Fourth Corps, General Smith, attacked some Confederates between the mills of Lee and Wisner, on the Warwick River. They were from McClellan's army, then besieging the Confederate lines at Yorktown. The attempt to carry the intrenchments there failed, with a loss of one hundred men. The Confederates lost seventy-five.

Washburne, CADWALLADER COLDEN, was born at Livermore, Me., April 22, 1818, and was a land-surveyor in early life. He went "West" in 1839, and finally settled at La Crosse, Wis., in 1859. He was in Congress from 1856 to 1862; a delegate to the Peace Conference in 1861; soon after the attack on Fort Sumter he raised a regiment of cavalry, of which he became colonel, and, in December, 1861, conducted a successful expedition from Helena, Ark., into the interior of

Mississippi. He was exceedingly active and efficient in the command of divisions in operations around Vicksburg in 1863, and afterwards served with distinction under Banks in Louisiana. He was made brigadier-general of volunteers in July, 1862, and major-general in November. From 1867 till 1871 he was a member of Congress, and in the latter year was chosen governor of Wisconsin.

Washburne, ELIHU BENJAMIN, diplomatist, was born at Livermore, Me., Sept. 23, 1816. He was first a printer and then a lawyer, and settled in the practice of law at Galena, Ill. He was in Congress from 1853 to 1869 continuously (excepting one term), where he was a Republican leader and chairman of the Committee on Commerce (1857-65). He was awarded the title of "Father of the House." He procured the appointment of Grant as brigadier-general, and when the latter became President he called Washburne to a seat in his cabinet as Secretary of State. He soon afterwards accepted the mission to France.

Washington Abused. The leaders of the Anti-Federal or Republican party became more and more violent in their censure of their opponents, and finally they indulged in personal abuse of Washington, charging him with venality and even with immorality. The chief vehicle of this abuse was a newspaper called the *Aurora*, published by Benjamin Franklin Bache, a grandson of Dr. Franklin. When Washington was about to retire from the Presidency in 1797 a writer in that journal said: "If ever a nation has been debauched by a man, the American nation has been debauched by Washington. If ever a nation has been deceived by a man, the American nation has been deceived by Washington. Let his conduct, then, be an example to future ages. Let it serve to be a warning that no man may be an idol. Let the history of the Federal government instruct mankind that the mask of patriotism may be worn to conceal the foulest designs against the liberties of a people." On the day when he resigned the chair of state to John Adams (March 4, 1797), a writer in the *Aurora*, after declaring that he was no longer possessed of the "power to multiply evils upon the United States," said, "When a retrospect is taken of the Washingtonian administration for eight years, it is the subject of the greatest astonishment that a single individual should have cankered the principles of republicanism in an enlightened people, just emerged from the gulf of despotism, and should have carried his designs against the public liberty so far as to put in jeopardy its very existence. Such, however, are the facts, and with them staring us in the face, this day ought to be a jubilee in the United States." They also republished spurious letters of Washington (which see). These examples will suffice to show the malignity of party spirit in the early days of the Republic, when even Washington was not spared from the lash of public abuse. It fell with even more severity on others. Both parties were guilty of the offence.

Washington a Dictator the Second Time.

On Sept. 17, 1777, the Continental Congress, expecting to be obliged to fly from Philadelphia, again invested Washington with almost dictatorial powers, to last for sixty days. He was authorized to suspend misbehaving officers; to fill all vacancies; to take provisions and other necessities for the army, wherever he could find them within seventy miles of his headquarters, paying the owners therefor, or giving certificates for the redemption of which the public faith was pledged; and to remove and secure for the benefit of the owners all goods which might prove serviceable to the public. On the 30th of December these powers were extended to the 10th of April, 1778.

Washington, ADOPTED CHILDREN OF. John Parke Custis, an only son of Mrs. Washington by a former husband, was aid to the commander-in-chief at Yorktown, at the beginning of the siege. Seized with camp-fever, he retired to Eltham, the seat of Colonel Bassett, a kinsman, where he died. At the conclusion of the ceremonies at the surrender of Cornwallis, Washington hastened to the bedside of his dying step-son. He was met at the door by Dr. Craik, who told him that all was over. The chief bowed his head, and, giving vent to his sorrow by a flood of tears, he turned to the weeping widow—mother of four children—and said: "I adopt the two younger children as my own." These were Eleanor Parke Custis and George Washington Parke Custis, the former three years of age and the latter six months.

Washington a Lieutenant-general of France. Through the exertions of General Lafayette, who went to France in 1779, arrangements were made with Louis XVI. to send to the aid of the struggling Americans a French land and naval force. The French troops were to be placed under the command of Lieutenant-general the Count de Rochambeau. In order to prevent any clashing of military authority, General Washington, who was to be supreme commander of the allied armies, was created by the king a lieutenant-general of France, that he might be on an official equality with Rochambeau, who was commanded to serve under Washington. This was a wise arrangement. The commission granted to Washington by the French monarch was brought over by Lafayette on his return to America. The ships and troops speedily followed.

Washington and Mary Phillipse. Disputes about rank caused a reference to General Shirley, then (1756) commander-in-chief of the British forces in America, and Colonel George Washington was chosen by his fellow-officers to present the matter to the general. He set out for Boston, a distance of five hundred miles, on horseback, Feb. 4, 1756, accompanied by two young officers, and stopped several days in the principal cities through which he passed. He was everywhere received with great respect, for the fame of his exploits on the field where Braddock fell (see *Braddock's Defeat*) had preceded him. In New York he was cordially en-

tertained by Beverly Robinson, son of the speaker of the Virginia Assembly. Mrs. Robinson's sister, Mary Phillipse, was then at his house, and Washington was smitten with her charms. On his return from Boston he was again entertained at the mansion of Mr. Robinson, and he lingered as long in the company of Miss Phillipse as duty would allow. He wished to take her with him to Virginia as his bride at some time in the near future, but his natural modesty did not allow him to ask the boon of a betrothal. He left the secret with a friend, who kept him informed of everything of importance concerning the rich heiress of Phillipse Manor, on the Hudson, but delayed to make the proposal of marriage. At length he was informed that he had a rival in Colonel Roger Morris, his companion-in-arms under Braddock, who won the fair lady, and the tardy lover married the pretty little Martha Custis three years afterwards.

Washington and Rochambeau. In the summer of 1780 Washington contemplated the aspect of public affairs with great anxiety and even alarm. The French fleet and army were blockaded at Newport, and the commander-in-chief was doubtful whether his own army could be kept together for another campaign. He was, therefore, exceedingly anxious to strike a decisive blow. He proposed to Rochambeau an attack on New York, but that was thought too hazardous without a superior naval force. Letters were sent to the French admiral in the West Indies, entreating assistance, and, in September, Washington proceeded to Hartford to hold an appointed personal conference there with Rochambeau. They met on Sept. 21. Rochambeau was accompanied by Admiral Ternay, commander of the French fleet at Newport. The conclusion was that the season was too far advanced for the allies to perform anything of importance, and, after making some general arrangements for the next campaign, Washington returned to West Point, on the Hudson. It was during this absence from camp that the treason of Arnold was revealed. (See *Treason of Arnold*.) Washington met Rochambeau a second

freshments, the generals and suites rode to Wethersfield, a few miles below Hartford, escorted by a few private gentlemen, and, at the house of Joseph Webb, where Washington was lodged, a conference was held. An agreement was then made for the French army to march to the Hudson River as speedily as possible.

Washington Benevolent Societies. These were political organizations, which originated in Philadelphia soon after the declaration of war, in 1812. The first organization was fully completed on the 22d of February, 1813, under the title of the "Washington Benevolent Society of Pennsylvania." Each member was required to sign the constitution and the following declaration: "We, each of us, do hereby declare that we are firmly attached to the Constitution of the United States and to that of Pennsylvania; to the principles of a free republican government, and to those which regulated the public conduct of George Washington; that we will, each of us, to the best of our ability, aid, and, so far as may be consistent with our religious principles respectively, preserve the rights and liberties of our country against all foreign and domestic violence, fraud, and usurpation; and that, as members of the Washington Benevolent Society, we will in all things comply with its regulations, support its principles, and enforce its views." It was a Federal association, and had attractive social and benevolent features. The funds of the society were used for the purposes of charity among its members and their families, and for other purposes which might be prescribed. They had anniversary dinners on Washington's birthday, so simple that men of moderate means might participate in them, the dinner, with beer and choice spirits, costing only seventy-five cents. In Philadelphia, the society built Washington Hall, on Third Street, between Walnut and Spruce. Similar societies were organized elsewhere. They rapidly multiplied during the war, but with the demise of the Federal party, during Monroe's administration, they disappeared.

Washington, BRUSHROD, LL.D., jurist, was born in Westmoreland County, Va., June 5, 1762; died in Philadelphia, Nov. 26, 1829. He was a nephew of President Washington. He graduated at the College of William and Mary in 1778, and studied law with James Wilson, in Philadelphia, becoming a successful practitioner. At Yorktown he served as a private soldier, and was a member of the Virginia Assembly in 1787; also a member of the Virginia convention that ratified the national Constitution. In December, 1798, he was appointed Associate-justice of the United States Supreme Court, which office he held until his death. He was the first president of the Colonization Society (which see).

Washington, CAPTURE OF (1814). When the battle of Bladensburg (which see) was ended in victory for the British, and the Americans were dispersed or in full retreat, President Madison, Secretary of State Monroe, and Secretary of War Armstrong, who had come out to see the fight, and, if possible, to give assistance, hastened back

THE WEBB HOUSE.

time at Hartford. It was on the 21st of May, 1781. Their meeting was celebrated by discharges of cannons. After partaking of re-

to Washington as fast as fleet horses could carry them. The race created much merriment at the time. A writer in a New York journal said: "Should some Walter Scott [his *Marmion* had recently appeared, and was then very popular], in the next century, write a poem, and call it "*Madison, or the Battle of Bladensburg*," we should suggest the following lines for the conclusion:

"Fly, Monroe, fly! run, Armstrong, run!
Were the last words of Madison."

The President and his fugitive party were the first to announce to the citizens the loss of the

to the orders of his superior, but even that was repugnant to his humane nature. Fortunately for him, he was accompanied by one who delighted in such cruelties, and Admiral Cockburn became, literally, his torch-bearer. The unfinished Capitol, the President's house (a mile distant), the Treasury buildings, the arsenal, and barracks for about three thousand troops, were soon in flames, the light of which was seen in Baltimore, forty miles distant. In the course of a few hours nothing was left of these superb edifices but their blackened walls. Of the pub-

REMAINS OF THE CAPITOL AFTER THE FIRE.

battle and the march of the victors on the capital. Up to this time the conduct of the British had been in accordance with the rules of modern warfare. Now they abandoned them. Ross left the main body within a mile and a half of the town, then containing about nine hundred buildings. The commanding general, accompanied by Cockburn, the marauder, entered the city at eight o'clock in the evening, accompanied by a guard of two hundred men. From a house near the Capitol, they were fired upon by a single musket, and the ball killed the horse on which

lie buildings, only the Patent Office was saved. The President, in a proclamation (Sept. 1, 1814), submitted the following indictment: "They wantonly destroyed the public edifices having no relation in their structure to operations of war, nor used at the time for military annoyance; some of these edifices being costly monuments of taste and of the arts, and others depositories of the public archives, not only precious to the nation as the memorials of its origin and its early transactions, but interesting to all nations as contributions to the general stock of

REMAINS OF THE PRESIDENT'S HOUSE AFTER THE FIRE.

Ross rode. The house was immediately demolished by the exasperated soldiers. Then the same fate overtook the office of the *National Intelligencer*, whose strictures upon the brutality of Cockburn had excited his fiercest anger. These and some houses on Capitol Hill, a large ropewalk and a tavern, comprised the bulk of the private property destroyed. Ross had come to destroy the public property there, in obedience

historical instruction and political science." The people of Great Britain deplored this barbarity of their troops, and their best writers denounced the act. Ross was urged to it by Cockburn, who declared that it was the wish of Sir George Prevost, governor of Canada, that further retaliation for the burning of Newark (which see) should be inflicted, he not being satisfied with the retribution of desolating the entire Niagara

frontier and the massacre of the garrison at Fort Niagara (which see). The government of England (seldom in accord with the people) thanked the actors in the scenes, caused the Tower guns to be fired in honor of the event, and on the death of Ross, not long afterwards, ordered a monument to his memory to be erected in Westminster Abbey. While the public buildings in Washington were in flames, the national shipping, stores, and other property were blazing at the navy-yard; also Long Bridge that spanned the Potomac from Washington to the Virginia shore. Commodore Tingey, who was in command at the Navy-yard, had received instructions to set the public property on fire rather than let it fall into the hands of the invaders. He applied the torch at about the same moment when Ross and his guard entered the city. Property valued at about \$1,000,000 was destroyed. The value of the entire property destroyed at Washington, by the Americans and the British, was about \$2,000,000. For these calamities the public were disposed to hold the Secretary of War responsible. The clamor against him was so great that he resigned, Sept. 3, 1814.

Washington Commander-in-chief (1798).

Washington approved the war measures of the administration, and he was appointed (July 7, 1798) lieutenant-general and commander-in-chief of all the armies of the United States—raised and to be raised. The venerated patriot, then sixty-six years of age, responded with alacrity. "You may command me without reserve," he wrote to President Adams, qualifying the remark by the expressed desire that he should not be called into active service until the public need should demand it, and requesting the appointment of his friend, Alexander Hamilton, then forty-one years of age, acting commander-in-chief. Hamilton was appointed the first major-general, and in November (1798) Washington met his general officer in Philadelphia, and made arrangements for the complete organization of the regular forces on a war-footing. Washington believed from the beginning that the war-clouds would disperse, and not gather in a tempest, and events justified his faith. War was averted.

Washington, DEATH OF. On the 13th of December, 1799, Washington, at Mount Vernon, was exposed to a storm of sleet, took cold, and was seized with a violent attack of membranous croup, when, at three o'clock on the morning of the 14th, he awoke from a troubled sleep. At daybreak he and Mrs. Washington became alarmed, and sent for Dr. Craik, the family physician. In the course of the day two other physicians were summoned. The malady defied medical skill as then practised, and before midnight the spirit of the beloved patriot took its flight. It is believed his death was really caused by excessive blood-letting. His attendants at that hour were Mrs. Washington (with whom he had lived forty years), his secretary (Mr. Lear), the three physicians, his faithful body-servant, and the equally faithful old colored nurse of the

family. Intelligence of his death reached President Adams, at Philadelphia, by a special courier, on the morning of Dec. 18. Congress was in session, and John Marshall announced the event the same day, and that body immediately adjourned. The funeral took place on Wednesday, Dec. 18, the services being conducted by Rev. Mr. Davis, of Alexandria, according to the ritual of the Protestant Episcopal Church in America. A procession was formed, consisting of horse and foot, relatives and citizens; and at the old vault, in which the body was laid, there

WASHINGTON'S OLD FAMILY VAULT.

were ceremonies according to the order of Freemasons, of which Washington was a member.

Washington, DIPLOMATIC MISSION OF. Robert Dinwiddie, Lieutenant-governor of Virginia (see *Dinwiddie and the French*), observing with anxiety and alarm the movements of the French on the frontiers of Pennsylvania (see *Western Frontiers, The French on the*), held a treaty with the Indian bands on the Monongahela River (September, 1753), from whom he gained permission to build a fort at the junction of that river and the Alleghany, now Pittsburgh. He also resolved to send a competent messenger to the nearest French post, with a letter demanding explanations, and the release and indemnification of the English traders whom the French had robbed and imprisoned. He chose for this delicate and hazardous service George Washington, a native of Westmoreland, and then, though not twenty-two years of age, a major of militia, possessed of sound judgment, courage, and enterprise. With three attendants, Washington left Williamsburg Oct. 31, 1753, and after journeying more than four hundred miles (more than half the distance through a dark wilderness), encountering incredible hardships and dangers, amid snow and icy floods and hostile Indians, he reached the French post of Venango Dec. 4, where he was politely received, and his visit was made the occasion of great conviviality by the officers of the garrison. He had been joined at Cumberland (Md.) by five others. The free use of wine disarmed the French of their prudence, and they revealed to their sober guest their design to per-

manently occupy the region they then had possession of. Washington perceived the necessity of quickly despatching his business and returning to Williamsburg; and after spending a day at Venango, he pushed forward to Le Boeuf, the headquarters of St. Pierre, the chief commander, who entertained him politely four days, and then gave him a written answer to Dinwiddie's remonstrance, enveloped and sealed. Washington retraced his perilous journey through the wilderness, and after an absence of eleven weeks he again stood in the presence of the governor (Jan. 16, 1754), with his message fulfilled to the satisfaction of all. His peculiar qualities, which fitted him for the leadership of the armies of the patriots a quarter of a century afterwards, were nobly developed in this delicate mission. They were publicly acknowledged, and were never forgotten. Washington and his attendants had made such a minute examination of Fort Le Boeuf—its form, size, construction, cannons, and barracks, and the number of canoes in the stream—that he was enabled to construct a plan of it, which was sent to the British government. Major Washington kept a journal of his diplomatic expedition, and this, to arouse the enthusiasm of the people, was published, and was copied into every newspaper in the colonies. It was reprinted in London, and was regarded as a document of great importance, as unfolding the views of the French, and the first announcement of positive proof of their hostile acts in the disputed territory.

Washington, GEORGE, was born in Westmoreland County, Va., near the banks of the Potomac, Feb. 22 (11, O. S.), 1732; died at Mount Vernon, Dec. 14, 1799. He was descended from an old and titled English family, and was the

judicious was her training that Washington, through life, remembered her affectionate care with profound gratitude. He received a common English education, and upon that foundation his naturally thoughtful and right-condi-

HOUDON'S BUST OF WASHINGTON.†

tioned mind, with the cardinal virtues of truth, integrity, and justice, was built the structure of his greatness. He was always beloved by his young companions, and was invariably chosen the leader in their military plays. He had a desire, at the age of fourteen years, to become a seaman, but was dissuaded from embarking by his mother. When he was seventeen years of age he had become one of the most accurate land-

† There were several different portraits of Washington painted from life. The first ever made was painted by Charles Wilson Peale, and is a three-quarter length, representing Washington in the costume of a Virginia colonel—a blue coat faced with red, bright metal buttons, having the number of his regiment (Twenty-second Militia) cast upon them, and dark red waistcoat and breeches. Peale painted fourteen portraits of Washington at different times, half-lengths and full-lengths, the last in the fall of 1795. It is in the gallery of the New York Historical Society. Other artists had sittings by Washington, and produced portraits of various degrees of merit, the most famous and best-known of whom was Gilbert Stuart. Stuart painted three portraits from life. The first one he rubbed out, not being satisfied with it, and the last one, the head only finished, is the property of the Boston Athenæum. This is the head most often seen, and has been accepted as the standard portrait of the patriot; yet Stuart himself regarded his own portrait, as a likeness, inferior to that of the statue by Houdon, in the Capitol at Richmond. The latter is, undoubtedly, the best likeness of Washington ever made, and should be regarded as the standard portrait. It cannot be otherwise, for it is from a plaster-cast from the living face, and a model of the rest of the bust, both made by the great sculptor himself. In another part of this work is a picture of the mask (see *Houdon, Jean Antoine*), and herewith is given a picture of the finished bust. (See *Richmond, Washington's Statue at*.)

SITE OF WASHINGTON'S BIRTH-PLACE.*

eldest child of his father's second wife, Mary Ball. His father died when George was a small child, and the task of the education and guidance of the future leader through the dangers of youthhood devolved upon his mother. So

* This stone was placed on the site of Washington's birth-place, in 1815, by George Washington Parke Custis and two others. It was the first stone erected to the memory of Washington. They gathered bricks of the ancient chimney lying around, and formed with them a foundation for the inscribed slab.

surveyors in Virginia. He was appointed public surveyor at the age of eighteen. In pursuit of his profession, he learned much of wood-craft and the topography of the country; also of the habits of the Indians in the camp and on the war-path. These were useful lessons, of great value to him in after-life. At the age of nineteen young Washington was appointed an adjutant-general of the militia of a district, with the rank of major, but soon afterwards resigned to accompany his invalid half-brother, Lawrence, to Barbadoes, where George had the small-pox. His brother soon afterwards died, and by his will George became heir to the fine estate of Mount Vernon. In 1753 he was sent on a delicate mission, by the Governor of Virginia, to the commander of the French forces making encroachments on the English domain, and performed the duties with

of the vanquished troops with great skill. At the age of twenty-seven he married the young widow Custis (see *Washington, Martha*), and they took up their abode at Mount Vernon, where he pursued the business of a farmer

RESIDENCE OF THE WASHINGTON FAMILY.*

MANSION AT MOUNT VERNON.

great credit, for which he was thanked by the Virginia Legislature. So highly were his character and services valued, that when, in 1755, General Braddock came to make war on the French, Washington was chosen his principal aide-de-camp. After the defeat of Braddock (see *Braddock's Defeat*), he directed the retreat

until 1774, when he was chosen to a seat in the Virginia Legislature. He was also chosen a delegate to the First Continental Congress (which see), and was a delegate the following year, when, in June, he was appointed commander-in-chief of the Continental armies. For eight years Washington directed the feeble armies of the revolted colonies in their struggle for independence. At the return of peace he surrendered his commission into the hands of Congress, who gave it to him, and retired to private life at Mount Vernon, at the close of 1783. During all the national perplexities after the return of peace, incident to financial embarrassments and an imperfect system of government, Washington was still regarded as the public leader; and when the convention that formed the national Constitution assembled at Philadelphia, in 1787, he was there, a delegate from Virginia, and was chosen to preside over that body. When, under that Constitution, a President of the Republic was to be chosen, all eyes were turned towards Washington as the fittest man

* Soon after Washington's birth, the family moved to an estate in Stafford County. The plain farm-house in which they lived overlooked the Rappahannock River. There Washington's father died, when the former was about ten years of age, leaving a plantation to each of his sons.

for the place, and he was elected by the unanimous voice of the people. He presided over the affairs of the new nation eight years with great wisdom and fidelity, and with great skill and sagacity assisted in laying the permanent foundations of the Republic. His administration embraced the most critical and eventful portion of our history before the late Civil War. A new government had to be organized, without any model to follow, and to guide the ship of state through dangerous seas required a loftiness of character in the pilot and commander seldom found; but Washington was equal to the requirements of his position, and he retired from public life without the least stain of merited reproach upon his intentions or his judgment. In the enjoyment of domestic happiness at Mount Vernon, for about three years, he was regarded more and more as the great and good man—the “Father of his Country.” Suddenly, late in the year 1799,

ARMS OF THE WASHINGTON FAMILY.

the nation was called upon to mourn his death, after an illness of about twenty-four hours. His last words were, “It is well.” The mother of Washington was Mary Ball—as we have observed—daughter of Colonel W. Ball, to whom his father was married in March, 1730. George was their first-born of six children. With these she was left a widow when her eldest child was little more than ten years of age. In the latter years of her life she lived in Fredericksburg, in a modest house, on the northwest corner of Charles and Lewis streets. There she died, and was buried a short distance from Fredericksburg, near a ledge of rocks, to which she often resorted for meditation, and which she had selected as her burial-

TOMB OF THE MOTHER OF WASHINGTON.

place years before her death. Over the grave stands an unfinished monument of white marble.

Washington in Supreme Command of the Army. The defeat of Gates near Camden (which see) opened the eyes of his partisans in conduct, and the real character of his pre-

tensions and those of Lee were made so apparent that there no longer existed a faction in his favor. Congress yielded to the opinions of Washington in all military matters, and appointed General Greene, on his recommendation, to the command of the Southern Department, subject to the control of the commander-in-chief. Thus Washington became supreme commander of all the forces.

Washington in the Virginia Assembly.

After the capture of Fort Duquesne (which see) Washington took leave of the army at Winchester with the intention of quitting military life. He had been chosen a member of the House of Burgesses of Virginia, and was affianced to the charming widow of Daniel Parke Custis, who was about his own age—twenty-six years. They were wedded at the “White House,” the residence of the bride, on Jan. 17 (N. S.), 1759, by Rev. David Mossom, for forty years rector of St. Peter’s Church, New Kent, near by. Then Washington took his seat in the Assembly at Williamsburg. At about the close of the honeymoon of Washington and his wife the Speaker of the Assembly (Mr. Robinson), rising from his chair, thanked Washington for his public services. The young colonel, surprised and agitated, rose to reply, but could not summon words. His face crimsoned with confusion, when the accomplished speaker adroitly relieved him by saying, “Sit down, Colonel Washington; your modesty is equal to your valor, and that surpasses the power of any language I possess.” The speaker was the father of Beverly Robinson, of New York, at whose house Washington had met and fell in love with his sister-in-law, Mary Phillipse. (See *Washington and Mary Phillipse*.)

Washington, LAWRENCE, was a half-brother of George Washington. His mother, who was

LAWRENCE WASHINGTON.

the first wife of Augustine Washington, father of George, was Jane Butler in her maidenhood.

Lawrence received by his father's will the noble estate of Hunting Creek, upon a bay and stream of that name, not far from Alexandria, and stretching for miles along the Potomac. He inherited the military spirit of his father, and engaged in an expedition against the Spaniards in South America, holding a captain's commission. He embarked for the West Indies in 1741, under General Wentworth. That officer and Admiral Vernon commanded a joint expedition against Carthage, which resulted in disaster, not less than twenty thousand British soldiers and seamen perishing, chiefly from a fatal sickness like yellow-fever. It was in the midst of that terrible pestilence that the seeds of a fatal disease were planted in the system of Lawrence Washington, against which he struggled for years. During the campaign he had gained the confidence of both Wentworth and Vernon. Lawrence intended to go to England and join the regular army, but, falling in love with the beautiful Anne Fairfax, they were married in July, 1743. He took possession of his fine estate, and named it Mount Vernon, in honor of the gallant admiral. Little George was a frequent and much-petted visitor at Mount Vernon. In 1751, when George was nineteen years of age, his brother felt compelled to go to Barbadoes in search of a renovation of his health. George went with him. But consumption was wasting the life of Lawrence, and he returned home in May, 1752, to die in July following, at the age of thirty-four years. By a provision of his will, under certain contingencies, his half-brother George became the owner of the Mount Vernon estate and other property, valued at \$200,000—a large estate at that time.

WASHINGTON, MARTHA, was born in New Kent County, Va., in May, 1732; died at Mount Vernon, Va., in May, 1802. Her maiden name was Daudridge, and at the age of seventeen years

MARTHA WASHINGTON.

she married Daniel Parke Custis, son of one of the king's council for Virginia. At his death she was left with two children and a large fort-

une, and dwelt at his mansion, known as the White House, in New Kent County, until her marriage with Colonel Washington in January, 1759. Soon after their marriage they took up their abode at Mount Vernon, on the Potomac. She was a very beautiful woman, a little below the medium size, elegant in person, her eyes dark and expressive of the most kindly good-nature, her complexion fair, and her whole face beamed with intelligence. Her temper, though quick, was sweet and placable, and her manners were extremely winning. She loved the society of her friends, always dressed with scrupulous regard to the requirements of the best fashions of the day, and was in every respect a brilliant member of the social circles which, before the Revolution, composed the vice-regal court at the old Virginia capital. During the war for independence she usually spent the winter months at the headquarters of her husband; and after the war she received with grace and dignity, as the head of the household of the great patriot, the numerous distinguished guests who thronged to Mount Vernon. One of her two children died just as she was blossoming into womanhood; the other, a son, was aide-de-camp to Washington during the war. He died in October, 1781, leaving two children—a son and a daughter—whom Washington adopted as his own. Washington died childless.

Washington, Mrs., at Cambridge. On Dec. 11, 1775, Mrs. Washington arrived at Cambridge, accompanied by her son, John Parke Custis, and his wife. She was very hospitably received and welcomed by the most distinguished families in Massachusetts. The army hailed her presence on this, as on all other occasions, with enthusiasm. She was urged to make the visit and spend some time at headquarters by two motives—one, affection for her husband; and another, because of apprehensions of danger at Mount Vernon on account of the operations of Lord Dunmore. (See *Mount Vernon Threatened*.) The practice of spending the winters in camp with her husband was kept up by Mrs. Washington during the war. Whenever active operations were to commence in the spring, she would return to Mount Vernon. At the time now mentioned she remained at Cambridge until Howe evacuated Boston. Washington's headquarters at Cambridge were in the fine mansion now (1880) and for many years the residence of Longfellow, the poet. (See page 1485.)

Washington, Mrs., RECEPTION OF, AS WIFE OF THE PRESIDENT. The people showed affectionate regard for Mrs. Washington, as the wife of the first President, when she journeyed from Mount Vernon to New York to join her husband there after the inauguration. She left Mount Vernon in her chaise on May 19, 1789, with her two grandchildren, George Washington Parke and Eleanor Parke Custis. She was clothed tidily in American textile manufactures. She lodged at Baltimore on the first night of her journey. When she approached that city she was met by a cavalcade of gentlemen and escorted into the town. Fireworks were dis-

played in her honor, and a band of music serenaded her in the evening. When she approached Philadelphia she was met, ten miles from the city, by the President of the state, the Speaker of the Assembly, a troop of dragoons, and a large cavalcade of citizens. Some distance from the city she was welcomed by a brilliant company of women in carriages. She was escorted by these gentlemen and ladies to Gray's Ferry, on the Schuylkill, where they all partook of a collation; and from that point to the city Mrs. Robert Morris occupied a seat by the side of Mrs. Washington.

When the procession entered the city the wife of the President was greeted by thirteen discharges of cannons. She journeyed on to New York. At Elizabethtown Point she was received by her husband, Robert Morris, and several distinguished gentlemen, in the splendid barge in which Washington had been conveyed from the same place to New York a month before. It was manned by thirteen sailors. When the barge approached Whitehall, the landing-place in New York, crowds of citizens were there assembled, who greeted Mrs.

Washington with cheers, and from the grand battery near by the thunders of thirteen cannons gave her a welcome. In all this there was nothing very extravagant, considering the circumstances. Yet there were sturdy republicans who viewed the pageantry with suspicion, believing that they saw in this a foreshowing of monarchical ceremonies. (See *Presidential Etiquette and Presidential Titles*.)

Washington, MONUMENT IN HONOR OF. Congress having, on hearing of the death of Washington, decreed that a monument to his memory should be erected at the capital, the subject was discussed early in the session of 1800-1. Attention was called during the debate to the resolution of Congress at the close of the Revolution to procure an equestrian statue. The bill for a mausoleum finally passed, the House appropriating \$200,000. The Senate cut it down to \$150,000, and in the hurry at the closing of the session it was overlooked. There was an overwhelming majority of the political opponents of Washington in the next Congress, and the matter was not again brought up. The resolution of Congress in December, 1799, has not been acted upon.

Washington, PARTING OF, WITH HIS OFFICERS. On Dec. 4, 1783, Washington assembled his officers who were near in the large public room of Fraunce's Tavern, corner of Broad and Pearl streets, New York, to exchange farewells with them. After the officers had assembled Washington entered the room, and, taking a glass of wine in his hand, said, "With a heart full of love and gratitude, I now take leave of you. I most devoutly wish that your latter

days may be as prosperous and happy as your former ones have been glorious and honorable." Having tasted the wine, he continued, "I cannot come to each of you to take my leave, but shall be obliged to you if each will come and take me by the hand." The scene was touching and impressive. While their cheeks were suffused with tears Washington kissed

WASHINGTON'S HEADQUARTERS AT CAMBRIDGE.

each of his beloved companions-in-arms on the forehead. Then the commander-in-chief left the room, and, passing through a corps of light infantry, walked to Whitehall (now Staten Island) Ferry, followed by a vast procession of citizens. At two o'clock in the afternoon he entered a barge and crossed the Hudson to Paulus's Hook (now Jersey City), on his way to the presence of the Congress at Annapolis.

FRAUNCE'S TAVERN.

Washington, POSTHUMOUS HONORS TO. On the 29th of December, 1799, John Marshall arose in Congress (then in session in Philadelphia) and reiterated the announcement he had made the day before of the death of Washington, accompanied by a brief speech; whereupon the national Legislature, by resolutions, decreed—1. That a marble monument should be erected to his memory at the capital; 2. That there should be "a funeral procession from Congress Hall to the German Lutheran Church," in memory of the deceased, on Thursday, the 26th inst., and

WASHINGTON'S NEW FAMILY VAULT.

that an oration be delivered on that day before both Houses; 3. That the people of the United States should be recommended to wear crape on their left arms as mourning for thirty days; 4. That the President of the United States should direct a copy of the resolutions to be transmitted to Mrs. Washington, with words of condolence, and a request that the remains of her

THE SARCOPHAGUS OF WASHINGTON.

husband might be interred at the capital of the Republic. Seven days later Congress resolved that it should be recommended to the people of the Union to assemble on the succeeding 22d of February (Washington's birthday) to testify their grief by suitable eulogies, orations, and discourses, or by public prayers. General Henry Lee, of Virginia, then a member of Congress, was chosen to deliver the funeral discourse before that body in the Lutheran Church in Philadelphia. Legislative and other public bodies, as well as private associations, testified their reverence and affection for the deceased patriot. Manifestations of esteem came from beyond the sea. On hearing of Washington's death, Lord

WASHINGTON MEDAL.

Bridport, in command of a British fleet of about sixty sail at Torbay, ordered every ship

to lower her flag to half-mast; and Bonaparte, then First Consul of France, announced his death to the army, and ordered black crape to be suspended from all the flags and standards in the French service for ten days. A funeral oration was also pronounced before the First Consul and civil authorities. The monument has never been erected at the capital; nor have Washington's remains ever been removed from his beloved Mount Vernon. They rest there, by the side of those of his wife, in a new tomb, each inclosed in a marble coffin. That is well. In the city of Baltimore a Doric column of white marble was erected to his memory by the State of Maryland, the corner-stone of which was laid in 1815. It is composed of a base of marble fifty feet square and twenty feet in height, surmounted by a Doric column one hundred and sixty feet in height. Upon the top of the capital is a statue of Washington, by Causici, sixteen feet in height, which is reached by a winding stairway in the interior. Statues of the patriot have been erected at the national capital and

WASHINGTON MONUMENT.

elsewhere, and there is an enormous unfinished obelisk in Washington to be dedicated to his memory. Among minor honors paid to his memory was the publishing of a silver medal, represented in the engraving.

Washington, PROPOSAL TO MAKE HIM KING.

With returning peace, the prospects of the Continental army, about to be disbanded, appeared very gloomy. For a long time neither officers nor private soldiers had received any pay, for the Treasury was empty, and there appeared very little assurance that its condition would be improved. There was wide-spread discontent in the army, and also wide-spread distress throughout the country. Contemplating the inherent weakness of the new government, many were inclined to consider it a normal condition of the republican form, and wished for a stronger one, like that of Great Britain. This feeling became so manifest in the army that Colonel Nicola, a foreigner by birth, and of weighty character, commanding a Pennsylvania regiment, wrote a very sensible letter to Washington in May, 1782, in which, professing to speak for the army, he urged the necessity of a monarchy to secure an efficient government and the rights of the people for the Americans. He proposed to Washington to accept the headship of such a government, with the title of king, and assured him that the army would support him. Nicola received from the patriot a stern rebuke. "If I am not deceived in the knowledge of myself," he wrote, "you could not have found a person to whom your schemes are more disagreeable." If there was then a budding conspiracy to overthrow the inchoate Republic, it was effectually crushed in the germ.

Washington, RECEPTION OF, AT NEW YORK.

From Alexandria to New York, Washington's journey exhibited a continual ovation. After his reception by the ladies of Trenton, he crossed New Jersey, and at Elizabethtown Point he was met early in the morning (April 23, 1789) by a committee of both Houses of Congress, with whom were Jay, the Secretary of State; General Knox, Secretary of War; Samuel Osgood, Arthur Lee, and Walter Livingston, Commissioners of the Treasury; and Ebenezer Hazard, Postmaster-general. A splendid barge, manned by thirteen pilots in white uniform, had been fitted up for the occasion, to convey the President-elect to New York. As the barge approached the city a large procession of boats filled with gayly dressed ladies accompanied by gentlemen, which had been swarming on the bosom of the harbor, followed. Washington was welcomed by a salute of great guns on the battery and the shipping, and was received at the ferry stairs, Whitehall (which were appropriately decked), by Governor George Clinton, with the civil officers of the state and city and a vast concourse of citizens. A large detachment of city militia formed under a salute of cannons and escorted the President-elect to a house on Franklin Square which had been fitted up for him. Washington was entertained at dinner by Governor Clinton, and the evening was closed by a brilliant display of fireworks. Even this modest display of regard for the elected chief-magistrate of the nation was regarded with suspicion by radical anti-federalists, who were jealous of every appearance of aristocracy or of hero-worship, and they appeared like ravens among white

doves on the joyous occasion, croaking their displeasure and disturbing the harmony. On the day after Washington's arrival a caricature appeared, charged with bitter feeling, in which the President was seen mounted on an ass, in the arms of Billy, his body-servant, Colonel David Humphreys, who accompanied him from Mount Vernon, leading the jack and chanting hosannas and birthday odes. The picture was full of disloyal and profane allusions. The devil appeared prominent, and from his mouth issued the words:

"The glorious time has come at last
When David shall conduct an ass."

The public reception of Mrs. Washington, who arrived about a month after the advent of her husband, and was met by the President and other officials at Elizabethtown Point, and received, as she passed the Battery, a salute of thirteen guns, and was welcomed by a crowd at the landing-place, was ill-naturedly commented upon in the opposition press.

Washington, RECEPTION OF, AT TRENTON.

Twelve years after he won the victory at Trenton (which see), Washington crossed the Delaware at that place, on his way to be inaugurated President of the United States. At the bridge spanning the Assaupik at that town (the same bridge crossed by him when pursued by Cornwallis on the eve of the battle at Princeton) he met a touching reception. A triumphal arch had been erected by the citizens, bearing the words, "The Defender of the Mothers will be the Protector of the Daughters." Beneath it was assembled a party of matrons, with little girls dressed in white, and holding baskets of flowers in their hands, standing on one side, and on the other were young ladies similarly arranged. As Washington and his suite approached the arch to pass between these matrons and maids, the little girls began to strew flowers in his way, and the whole company sang the following ode, written by Governor Howell for the occasion:

"Welcome, mighty chief, once more
Welcome to this grateful shore.
Now no mercenary foe
Aims again the fatal blow—
Aims at **THEE** the fatal blow.

"Virgins fair and matrons grave,
Those thy conquering arm did save,
Build for **THEE** triumphal bowers.
Strew, ye fair, his way with flowers—
Strew your **HERO'S** way with flowers!"

After passing the arch the general turned his horse's head towards the choir and listened to the singing with great emotion. Then he sent a note of thanks to the ladies.

Washington, RESIGNATION OF COMMISSION

OF. After parting with his officers at New York (which see), Washington proceeded to Philadelphia, where he deposited in the office of the comptroller an account of his expenses during the war, amounting to (including that spent for secret service) \$64,315. Then he went on to Annapolis, where the Congress was in session, and, at noon, Dec. 23, 1783, he entered the Senate-chamber of the Maryland State-house, accord-

ing to previous arrangements, and delivered to General Mifflin, President of that body, his commission, which he had received from it in June, 1775. In so doing, the commander-in-chief delivered a brief speech, with much feeling. Mifflin made an eloquent reply, and closed by say-

illustrations, and that he will give you that reward which the world cannot give." Washington and his wife set out for Mount Vernon on the day before Christmas, where he was welcomed back to private life by the greetings of his family and flocks of colored servants.

WASHINGTON RESIGNING HIS COMMISSION.

ing: "We join you in commending the interests of our dearest country to the protection of Almighty God, beseeching him to dispose the hearts and minds of its citizens to improve the opportunity afforded them of becoming a happy and respectable nation. And for you, we address to him our earnest prayers that a life so beloved may be fostered with all his care; that your days may be as happy as they have been

Washington Takes Command of the Army.

The commander-in-chief of the Continental army left Philadelphia on the 21st of June, and arrived at Cambridge on the 2d of July. He was everywhere greeted with enthusiasm on the way. His arrival in New York was on the same day that Governor Tryon arrived from England, and the same escort received both. On the morning of the 3d of July, at about nine o'clock, the troops were drawn up in order upon the Common, at Cambridge, to receive the commander-in-chief. Accompanied by the general officers of the army who were present, Washington walked from his headquarters to a great elm-tree, yet (1880) standing, at the north side of the Common, and, under its shadow, stepped forward a few paces, made some remarks, drew his sword, and formally took command of the Continental army.

THE STATE-HOUSE AT ANNAPOLIS.

Washington, TERRITORY OF, was originally a part of Oregon, and was the most extreme Northwestern portion of the Republic until Alaska (which see) was purchased. It is bounded on the north by the British possessions. The first American settlement in the territory was at Turnwater, in 1845, by a few families who had crossed the plains. Before that the only white dwellers were employes of the Hudson's Bay Company (which see). Washington Territory was created by act of Congress, March 2, 1853. The act of

Feb. 14, 1859, for the admission of Oregon into the Union (see *Oregon*), added to Washington Territory the region between the eastern boundary of that state and the Rocky Mountains, embracing the present territory of Idaho and parts of Montana and Wyoming. The islands in Washington Sound, formerly claimed by Great Britain, were decided, in 1872, by the arbitration of the Emperor of Germany, to belong to the United States, and, in 1873, they were formed into the county of San Juan. (See *Tribunal of Arbitration*.) Olympia is the capital of the territory.

Washington Watching the British. The American commander learned from spies in New York of the embarkation of Howe's army, but could not tell whether its destination was the Hudson or the Delaware River. Informed that Burgoyne was at the foot of Lake Champlain, he thought it possible Howe might go to

THE WASHINGTON KLM. (See p. 1488.)

WILLIAM AUGUSTINE WASHINGTON.

Boston, and so, keeping New England troops from reinforcing Schnyler, might assist Burgoyne in his invasion of the Hudson valley. With these impressions, Washington moved his forces slowly towards the Hudson, exercising the utmost vigilance at all points. But when he found that the British fleet had gone to sea, he fell back towards the Delaware, on which

Arnold, in command of Philadelphia, was busy, with General Mifflin, in casting up defences. Presently news came (June 30) that the fleet had been seen off Cape May, when Washington advanced to Germantown. There he heard that the fleet had turned eastward, perhaps to go to New York and up the Hudson, or, perhaps, to invade New England. He was soon, however, certified that Howe's destination was Philadelphia, by way of Chesapeake Bay, and he disposed his troops accordingly.

Washington, WILLIAM AUGUSTINE, a cavalry officer of the Revolution, was born in Stafford County, Va., Feb. 28, 1752; died in Charleston, S. C., March 6, 1810. His father was Baily Washington, a kinsman of the general, and he designed William for the church. He entered the military service early in the war for independence, becoming a captain in the Virginia line under Mercer. He was in the battle on Long Island, and was badly wounded at Trenton, but engaged in the battle at Princeton. Lieutenant-colonel of Baylor's dragoons (which see), he was with them when surprised at Tappan. In 1779-80 he was very active in South Carolina, in connection with General Morgan, and for his valor at the Cowpens Congress gave him thanks and a silver medal (see p. 1490). In Greene's famous retreat (which see) Colonel Washington was very efficient; so, also, was he at the battles of Hobkirk's Hill and Eutaw Springs. At the latter place he was made prisoner and remained so until the close of the war, when he married and settled in Charleston. He was tall, strong, and active in person, quiet and taciturn in deportment, and was remarkable for his generosity and benevolence.

Washington's Acceptance of the Chief Command. On June 15, 1775, George Washington, a member of Congress from Virginia, was nominated by Thomas Johnson, a member from Maryland, as commander-in-chief of the Continental army, and was chosen, unanimously, by ballot. On the opening of the Senate the next day, the President officially communicated to him a notice of his appointment. Washington immediately arose in his place and made the following reply: "Mr. President, though I am truly sensible of the high honor done me in this appointment, yet I feel great distress from a consciousness that my abilities and military experience may not be equal to the extensive and important trust. However, as the Congress desires it, I will enter upon the momentous duty, and exert every power I possess in their service and for the support of the glorious cause. I

beg they will accept my most cordial thanks for this distinguished testimony of their approbation. But, lest some unlucky event should happen, unfavorable to my reputation, I beg it may be remembered by every gentleman in the room that I this day declare, with the utmost sincerity, I do not think myself equal to the

not fail to implore the divine benediction upon it."

Washington's Birthday (1861). The Virginians were dictatorial in their intercourse with the government at Washington at the beginning of 1861. They had seen preparations made by General Scott for the security of the capital, and complained of it as an insulting distrust of the good faith of the people of that commonwealth and Maryland. Ex-President Tyler went so far as to give President Buchanan to understand that the appearance of National troops, as usual, as participants in the celebration of Washington's birthday, at that time, would be offensive to the Virginians and unfavorable to the harmony of

SILVER MEDAL AWARDED TO WILLIAM WASHINGTON. (See p. 1489.)

command I am honored with. As to pay, sir, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept the arduous employment, at the expense of domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expenses. These, I doubt not, they will discharge, and that is all I desire." The Congress, by unanimous vote, resolved that they would maintain and assist the commander-in-chief, and adhere to him, with their lives and fortunes, in the cause of American liberty.

Washington's Address to the Governors of States. On June 8, 1783, Washington addressed a circular letter to the governors of each of the United States, which was (like his Farewell Address, issued thirteen years afterwards), an earnest plea for union. In this paternal and affectionate address, the commander-in-chief of the armies stated four things which he deemed to be essential to their well-being, and even to their very existence—namely, "An indissoluble union of the states under one general head; a sacred regard to public justice; the adoption of a proper peace establishment, and the prevalence of that pacific policy and friendly disposition among the people of the United States which would induce them to forget their local prejudices and politics, to make those mutual concessions which are requisite to the general prosperity, and, in some instances, to sacrifice their individual advantages to the interests of the community." "These," he said, "are the pillars on which the glorious fabric of our independence and national character must be supported." The commander-in-chief requested each governor to whom the address was sent to lay it before his legislature at its next session, that the sentiments might be considered as "the legacy of one who ardently wished, on all occasions, to be useful to his country, and who, even in the shade of retirement, would

the Peace Congress, then in session. They *did* participate, and for this offence the President, under date of Feb. 22, 1861, wrote an apologetic letter to Tyler, saying: "I found it impossible to prevent two or three companies of the Federal troops from joining in the procession to-day, with the volunteers of the district, without giving serious offence to the tens of thousands of people who have assembled to witness the parade. . . . The troops everywhere else join such processions in honor of the birthday of the Father of his Country, and it would be hard to assign a good reason why they should be excluded from the privilege in the capital founded by himself. They are here simply as a *poese comitatus*, to aid the civil authorities in case of need. Besides, the programme was published in the *National Intelligencer* of this morning, without my personal knowledge."

Washington's Birthday, FIRST CELEBRATIONS OF. The earliest celebration of Washington's birthday found on record occurred in Richmond, Va., Feb. 11 (O. S.), 1782. The *Virginia Gazette*, or the *American Advertiser* made the following record, four days after the event: "Tuesday last, being the birthday of his Excellency, General Washington, our illustrious commander-in-chief, the same was commemorated here with the utmost demonstrations of joy." The event was celebrated at Talbot Courthouse, Md., the next year. Leading citizens assembled at Cambridge, where a public dinner was provided; at which the following regular toasts were drunk: "1. General Washington—long may he live!—the boasted hero of liberty; 2. Congress; 3. Governor and State of Maryland; 4. Louis XVI.—the protector of the rights of mankind; 5. Continental army; 6. Maryland Line; 7. May trade and navigation flourish; 8. The seven United Provinces [Holland], our allies; 9. The Count de Rochambeau and French army; 10. May the union between the powers in alliance ever continue on the basis of justice

and equality; 11. May the friends of freedom prove the sons of virtue; 12. Conversion to the unnatural sons of America; 13. May the Union of the American states be perpetual." The day was celebrated in New York in 1784. It was celebrated there and in other places on the 11th of February, each year, until 1793, when the day was changed to the 22d of February, to adapt it to the new style. (See *Style, Old and New*.) During the first term of the Presidency of Washington, his birthday began to be celebrated by visits of congratulation, and by balls, parties, and other festivities, not only in Philadelphia, but in many of the principal cities and towns in the Union. The Republican party professed to be alarmed by this "step in the direction of monarchy."

Washington's Farewell to Congress. Just before Washington's departure from Philadelphia to take command of the army at Cambridge, the members of Congress gave a farewell supper at the City Tavern in his honor, at which several distinguished citizens of Philadelphia "assisted." Members of Congress and their guests all rose, as they drank a health "to the commander-in-chief of the American army," to which Washington modestly replied. The next day (June 23) he was escorted out of the city of Philadelphia by the Massachusetts delegation and others, with music, a cavalcade of citizens, a troop of light horse in uniform, and officers of the militia.

Washington's Farewells. On the 8th of June, 1783, the commander-in-chief addressed a farewell letter to the governors of the states, in which he urged oblivion of local prejudices and policies, indissoluble union, a proper peace establishment, and a sacred regard to public justice—that is to say, provision for the payment of the public debt. In October (1783) the Congress published a proclamation for the disbanding of the Continental troops yet in the field and on furlough. On the day previous to that appointed for the disbandment (Nov. 2) Washington issued farewell orders to the army. In September, 1796, when he had determined not to accept a nomination for the Presidency of the United States for the third time, he issued that notable Farewell Address to the people of the Union, which is universally regarded as a most precious legacy for the nation.

Washington's Flight across New Jersey (1776). After the battle at White Plains (which see) New Jersey seemed to be threatened, and all the troops from states south of the Hudson were ordered to the west of that river, whither the headquarters of Washington were also transferred. To avoid the British ships in the Hudson, the Americans marched up its eastern shore to King's Ferry (now Stony Point), making a circuit of sixty miles, much of it over a broken country. General Heath's division was left in the Hudson Highlands to guard their passes and to cast up additional fortifications there, while General Lee, with the remainder of the New England regiments, was left to guard the east side of the Hudson. The term of the New

England militia—a considerable part of the army—was about to expire. Washington encamped his troops at Hackensack, N. J., whence, after the fall of Fort Washington (Nov. 16, 1776), and the passage of the Hudson by a large British force under Lord Cornwallis, he marched towards the Delaware, having first covered the retreat of the garrison of two thousand men from Fort Lee (see *Fort Lee, Capture of*), for the destination of the British was believed to be Philadelphia, the seat of the Continental government. Before his march he ordered General Lee to cross the Hudson immediately and join him, but that officer, traitorously inclined, refused to obey, and loitered so far behind as to give the commander-in-chief no strength. The "protections" held by New-Jersey men were so numerous that he could not recruit them for his army, and his march was a most fatiguing and anxious one. During the twelve days that Washington was making his way to the Delaware, he was so closely pursued by Cornwallis that often the rear-guard of the Americans could hear the music of the vanguard of the British. At New Brunswick Washington destroyed a part of the bridge over the Raritan, cannonaded the pursuers, and, pushing on towards the Delaware, left Lord Stirling at Princeton with twelve hundred troops. On reaching the Delaware, at Trenton, he sent his baggage, stores, and sick across the river into Pennsylvania, and turned back. But meeting Stirling flying before Cornwallis, who had just been reinforced, he fell back to the Delaware and crossed it with his whole force Dec. 8. His army had decreased at almost every step of the way across New Jersey. The patriotism of that state seemed to be paralyzed by the effects of the British proclamation of protection. When the British troops reached Trenton, Washington's little army had destroyed all the boats on the Delaware and its tributaries along a line of seventy miles.

Washington's Immunity from Personal Injury. During his whole military career Washington never received the slightest personal injury. In the desperate battle on the Monongahela (which see) where Braddock was mortally wounded, Washington was the only officer unhurt. To his mother he wrote: "I luckily escaped without a wound, though I had four bullets through my coat and two horses shot under me." To his brother John he wrote: "By the all-powerful dispensation of Providence I have been protected beyond all human probability or expectation. Death was levelling my companions on every side." In that battle an Indian chief singled Washington out for death by his rifle, but could not hit him. Fifteen years afterwards, when Washington was in the Ohio country, this chief travelled many miles to see the man whom he and his followers, who tried to shoot him, were satisfied was under the protection of the Great Spirit. He said he had a dozen fair shots at him, but could not hit him.

Washington's Order on Swearing. In an order-book in the handwriting of Washington, which came into the possession of Professor R.

W. Weir, instructor of drawing in the West Point Military Academy, and which he deposited in the archives of the War Department at the national capital in 1873, may be found the following order, closely written by the commander-in-chief's own hand:

confederation. Washington had taken the broad ground, from the moment of the Declaration of Independence, that the thirteen states composed a common country under the title of the United States of America; but Congress and the people were not prepared to accept this broad national

Many and pointed orders have been issued against that unmeaning and abominable custom of swearing - notwithstanding, with much regret the general observes that it prevails of possibly, more than ever. The feelings are continually wound up by the oaths and imprecations of the soldiers whenever he is in hearing of them. The name of that Being from whose bountiful goodness we are permitted to exist and enjoy the comforts of life is incontinently imprecated and profaned in a manner as wanton as it is shocking. For the sake therefore of religion, decency, and order, the General hopes and trusts that officers of every rank will use their influence and authority to check a vice which is as unprofitable as it is wicked and shameful. If officers would make it an invariable rule to reprimand and; if that does not do, punish soldiers for offences of this kind, it could not fail of having the desired effect

WASHINGTON'S ORDER AGAINST PROFANITY.

Washington's Proclamation and State Supremacy. Under the latest proclamation of the brothers Howe, 2703 persons in New Jersey, 851 in Rhode Island, and 1282 in the city of New York and the rural districts subscribed a declaration of fidelity to the British king. Just before the limited time for the operation of this proclamation expired, Lord George Germain issued orders to the Howes not to let "the undeserving escape that punishment which is due to their crimes, and which it will be expedient to inflict for the sake of example to futurity." At about the same time Washington issued a proclamation from Morristown, N. J. (Jan. 25, 1777), in the name of the United States, that those who had accepted British protection "should withdraw within the enemy's lines, or take the oath of allegiance to the United States of America." There immediately arose "a conflict of sovereignties." Clark, a representative in Congress from New Jersey, declared that an oath of allegiance to the United States was absurd before

view. Each state assumed the right only to outlaw those of its inhabitants who refused allegiance to its single self, as if the Virginian owed fealty only to Virginia, or the Marylander to Maryland.

Washington's Second Term. President Washington strongly desired to retire to private life at the close of his first term as President of the United States. The public more strongly desired his continuance in office. It was a critical time in the life of the Republic, and he patriotically yielded to what seemed to be the demands of public interests, and became a candidate for re-election. The lines between the two political parties in the nation were now (1792) distinctly drawn. Opposition to the funding system was substituted for opposition to the Constitution. Both parties were in favor of the re-election of Washington, but divided on the question of who should be Vice-President. The opposition (Republicans) concentrated their votes on George Clinton; the Federalists sup-

ported John Adams. Washington received the unanimous vote of the Electoral College, the members of that body then numbering one hundred and thirty. Adams received seventy-seven votes and Clinton fifty. The Kentucky electors voted for Jefferson for Vice-President, and one of the South Carolina votes was given to Aaron Burr.

Washington's Southern Tour. Soon after the adjournment of Congress, March, 1791, Washington started on a three months' tour through the Southern States to make himself better acquainted with the people and their wants, and to observe the workings of the new system of government. He found that the opposition to the national Constitution so strongly shown in that region had assumed the character of opposition to the administration, and his reception was not so warm as it had been during his tour in New England. He stopped a few days on the Potomac, and selected the site for the national capital. His course lay through Virginia by way of Richmond into North Carolina, and by a curved route to Charleston, S. C. He extended it to Savannah, Ga., whence he ascended the right bank of the Savannah River to Augusta; and, turning his face homeward, passed through Columbia and the interior of North Carolina and Virginia. The journey of one thousand eight hundred and eighty-seven miles was made with the same pair of horses.

Washington's Tour in New England. Soon after the adjournment of Congress, Sept. 29, 1789, Washington, who had been very ill in the summer, made a tour in New England, setting out from New York Oct. 15. Rhode Island, not having adopted the new Constitution, was not a member of the Union, and the President did not set foot on its soil, but reached Boston by way of Hartford, Springfield, and Worcester, ar-

tion to Washington, before the arrival of the latter, to lodge at his house. It was declined. After the arrival of the President, the governor sent him an invitation to dine with him and his family that day informally at the conclusion of the reception ceremonies. Washington accepted it, with a full persuasion that the governor would call upon him before the dinner-hour. The governor stood upon his dignity, and did not call. He had taken this method of asserting his superiority by having the President visit him first. The dinner-hour approached and Washington did not appear. Evidently beginning to be doubtful whether his course was correct, Hancock sent his secretary to the President with the excuse that he was too ill to call upon the President in person. The latter, divining the cause of the indisposition, dined at his own lodgings. That evening the lieutenant-governor and two of the Council called to express the governor's regret that his illness had not allowed him to call upon the President. The latter informed them that he should not see the governor except at his lodgings. The next day (Sunday) Hancock, leaving his gout at home, called on Washington, and in person gave his insufficient excuse for his foolish exhibition of personal pride. Washington extended his visit eastward as far as Portsmouth, N. H., where he sat for his portrait to a painter named Gulligher, who had followed him from Boston. From that town he took a more northerly route through New England back to Hartford, where he procured cloth, manufactured there, for a suit of clothes, and arrived at New York Nov. 13.

Wasp and Frolic, THE. The sloop-of-war *Wasp*, 18 guns, Captain Jacob Jones, thoroughly manned and equipped, carrying sixteen 32-pound carronades and two long 12-pounders, with two small brass cannons in her tops, left

GOLD MEDAL AWARDED BY CONGRESS TO CAPTAIN JONES.

iving there on Saturday, Oct. 24. John Hancock was then governor of Massachusetts, and regarded himself, in his own state at least, as the peer of the President of the United States, if not his official superior. Hancock sent an invita-

the Delaware on a cruise, Oct. 13, 1812. She was considered one of the fastest sailers in the service, and was furnished with one hundred and thirty-five men and boys. She ran off towards the West Indies, and on the night of Oct. 18

Jones saw several sail of vessels, and ran parallel with them until the dawn, when he discovered that it was a fleet of armed merchant-vessels convoyed by the British sloop-of-war *Frolic*, Captain T. Whinyates, mounting sixteen 32-pound carronades, two long 6-pounders, and two 12-pounder carronades on her forecastle. She was manned by a crew of one hundred and eight persons. It was Sunday morning, Oct. 18, in latitude 37° N., and longitude 65° W. The *Frolic* took a position for battle so as to allow the merchantmen to escape during the fight. A severe engagement began at half-past ten in the morning. Within five minutes the main topgallant-mast of the *Wasp* was shot away and fell among the rigging, rendering a portion of it unmanageable during the remainder of the action. Three minutes afterwards her gaff and main topmast were shot away, and at twenty minutes from the opening of the engagement every brace and most of the rigging were disabled. Her condition was forlorn. But while the *Wasp* was thus suffering, she had inflicted more serious injury to the hull of the *Frolic*. The two vessels gradually approached each other, fell foul, the bowsprit of the *Frolic* passing in over the quarter-deck of the *Wasp*, and forcing her bows up in the wind. This enabled the latter to give the *Frolic* a raking broadside with terrible effect. With wild shouts the crew of the *Wasp* now leaped into the entangled rigging, and made their way to the deck of the *Frolic*. But there was no one to oppose them. The last broadside had carried death and dismay into the *Frolic*, and almost cleared the deck of effective men. All who were able had escaped below to avoid the raking fire of the *Wasp*. The English officers on deck, nearly all of them bleeding from wounds, cast their swords in submission before Lieutenant Biddle, who led the boarding-party. He sprang into the rigging, and with his own hand struck the colors of the *Frolic*. The contest lasted forty-five minutes, and the aggregate loss of the *Frolic* in killed and wounded was ninety men. The *Wasp* had only five men killed and five wounded. Jones placed Lieutenant Biddle in command of the *Frolic*, with orders to take her into Charleston, S. C., and when they were about to part company the British ship-of-war *Poictiers*, 74 guns, Captain J. P. Beresford, bore down upon them. The *Wasp* and her prize were not in a condition to flee or fight, and within two hours after he had gained his victory Jones was compelled to surrender both vessels. They were taken to Bermuda, where the American prisoners were exchanged. The victory of the *Wasp* over the *Frolic* caused much exultation in the United States. Jones was lauded in speeches and songs. The authorities of New York voted him a sword and the "freedom of the city." Congress voted him thanks and a gold medal, and appropriated \$25,000 to Jones and his company as compensation for their loss of prize-money. A silver medal was given to each of his officers. The captain was promoted to the command of the frigate *Macedonian*, captured from the British by Decatur. The Legislature of Pennsylvania voted

Lieutenant Biddle thanks and a sword; and leading men of Philadelphia gave him a silver urn. He was soon afterwards appointed to the

THE BIDDLE URN.

command of the *Hornet* sloop-of-war. This victory was celebrated by songs, and also by caricatures. One of the songs became very popular, and was sung at all public gatherings. In it occurred the following lines:

"The foe bravely fought, but his arms were all broken,
And he fled from his death-wound agast and affrighted;
But the *Wasp* darted forward her death doing sting,
And full on his bosom, like lightning, alighted.
She pierced through his entrails, she maddened his brain,
And he writhed and he groaned as if torn with the colic;
And long shall John Bull rue the terrible day
He met the American *Wasp* on a *Frolic*."

Among the caricatures was one by Charles, of Philadelphia, of which a reduced copy is here given. Under it were the following words:

"A *Wasp* took a *Frolic* and met Johnny Bull.
Who always fights best when his belly is full.
The *Wasp* thought him hungry by his mouth open wide,
So, his belly to fill, put a sting in his side."

A WASP ON A FROLIC.

Wasp, CRUISE OF THE (1814). On the 1st of May, 1814, the American sloop-of-war *Wasp*, 18 guns, Captain Johnstone Blakeley, left the harbor of Portsmouth, N. H., and soon appeared in the chops of the British Channel, where she

spread terror among the British merchant-ships and the people of the seaport towns. Painful recollections of the ravages of the *Argus* were revived. On the morning of June 28, while some distance at sea, the *Wasp* was chased by two vessels. They were soon joined by a third, which displayed English colors. In the afternoon, after much manœuvring, this vessel and the *Wasp* came to an engagement, which soon became very severe. The men of the stranger several times attempted to board the *Wasp*, but were repulsed. Finally the crew of the *Wasp* boarded her antagonist, and in less than thirty minutes the latter was a prize to the American vessel. She proved to be the sloop-of-war *Reindeer*, Captain William Manners, and was terribly shattered. Her captain and twenty-four others were killed and forty-two wounded. The *Wasp* was hulled six times, and her loss was five men killed and twenty-two wounded. Blakeley put his prisoners on board a neutral vessel and burned the *Reindeer*. For this capture Congress voted him a gold medal. He arrived at L'Ori-

in command of Midshipman (late Commodore) D. Geisinger. On the 9th of October the *Wasp* was spoken by a Swedish bark making her way towards the Spanish main. She was never heard of afterwards, nor those who were then on board of her. She and all her people perished in some unknown solitude of the sea.

Watch and Clock Making. Until a very recent period Americans were supplied with watches from the workshops of England, France, and Switzerland. In 1848 Aaron Dennison, of Boston, an expert watch repairer, suggested to Edward Howard, an expert clock-maker, that watches might be made by machinery, and that thus the Americans, competing with the low wages in Europe, might establish a new industry. They joined in the undertaking, first in a small way at Roxbury, near Boston, in 1850, and, after they had made the first thousand watches, they assumed the name of the "Boston Watch Company," and removed their establishment to Waltham, Mass. There, after vicissitudes, the property passed into the possession

BLAKELEY'S MEDAL.

ent July 8, and on the 27th of August departed for another cruise in the *Wasp*. On Sept. 1 she had a sharp engagement with the *Aron*, 18 guns, Captain Arbuthnot, in intense darkness. At the end of thirty minutes the antagonist of the *Wasp* ceased firing. "Have you surrendered?" inquired Blakeley. He was answered by a few shots, when he gave the *Aron* another broadside, followed by the same question, which was answered in the affirmative, and an officer was about to leave the *Wasp* to take possession of the prize. Just then another vessel was seen astern, rapidly approaching; then another and another, and Blakeley was compelled to abandon the prize so nearly in his possession. The vessel that first came to the assistance of the *Aron* was the *Castilian*, 18 guns. The *Aron* was so much shattered in the conflict that she sank almost immediately. Her people were rescued by their friends on the other vessels. The *Wasp* continued her course, capturing several prizes. Near the Azores she captured (Sept. 21) the *Atlanta*, a prize so valuable that he sent her home

of the "Waltham Improvement Company," and by act of the Legislature the "American Watch Company" was incorporated, with a capital of \$200,000, soon increased to \$300,000. By subscriptions it was increased to \$1,500,000; and in 1876 the buildings of the company covered about two acres of ground. The total annual product of this company was about 100,000 watch-movements and 50,000 silver watch-cases. The value of the product in 1875 was nearly \$2,000,000. One of the earliest clock-makers in the United States was William Terry, who made brass clocks at the "Nine Partners," Duchess Co., N. Y., at about the close of the last century. Eli Terry began the manufacture of wooden clocks at about the same time, and in 1802 he began making them by machinery, propelled by water-power, at Plymouth, Conn. By the use of machinery brass and wooden clocks are now made with great facility. In their manufacture three men can take a sheet of brass for the wheels, press and level it under a drop and cut the teeth, and make all the wheels for 500 clocks in a day.

The cases may be made for twenty cents each. Since 1840 millions of these clocks have been sold; some as low as one dollar each, and good time-keepers. In 1870 there were in the United States twenty-six establishments for the manufacture of clocks.

Watson, ELKANAH, was born at Plymouth, Mass., Jan. 22, 1758; died at Port Kent, N. Y., Dec. 5, 1842. He was apprenticed in 1773 to John Brown, a merchant in Providence, R. I., who in 1775 sent him with a large quantity of powder to Washington for use in the siege of Boston. So trustworthy was he that, when he was only nineteen years of age, Brown sent him to Charleston and other Southern ports with more than \$50,000 to be invested in cargoes for European markets. Of this journey he wrote and published an account from his diary, the best we have of the places he visited at that time. At the age of twenty-one (1777) he was made bearer of despatches by Congress to Dr. Franklin, in Paris; and, in connection with Mr. Brown, he opened a commission-house at Nantes, France. He returned to America in 1784, having by reverses lost much of his property. Before his return he visited England, Holland, and Flanders. He published an account of his tour in Holland. After spending four years in business in North Carolina he went to Albany (1789) with a competence, and for eighteen years was an active promoter of every public enterprise, notably inland navigation by canals, of which General Schuyler was the pioneer, and the advancement of education. He travelled some years in Europe, and published while in London an account of his pioneer journey in western New York. In 1807 Mr. Watson settled at Pittsfield, Mass., and devoted himself to agriculture and its improvement. He was the founder of the Berkshire Agricultural Society, and did much for the promotion of domestic manufactures. In 1816 he returned to Albany, and founded the first agricultural society in the State of New York. He visited Michigan and explored the Lake region, and also a route to Montreal, with a view to opening some improved way for its commercial connection with New York and Boston. In 1828 Mr. Watson settled at Port Kent, on the west side of Lake Champlain, where he spent the remainder of his days. His contributions to the press on various subjects were numerous. His unfinished autobiography, completed by his son (Winslow Cossoul Watson), was published in 1855 under the title of *Men and Times of the Revolution*. That son (born in Albany, N. Y., Dec. 22, 1803) is also a careful and industrious writer. He has published a *General View of Essex County*, a *Treatise on Practical Husbandry*, a *Pioneer History of the Champlain Valley*, and a *History of Essex County*, besides numerous valuable essays in newspapers and magazines.

Watson, FORT, CAPTURE OF. Upon an ancient tumulus, almost fifty feet high, on the borders of Scott's Lake (an expansion of the Santee River), a few miles below the junction of the Congaree and Wateree (which form the Santee), the British had built Fort Watson, so

called in compliment to Colonel Watson, who built it. In April, 1781, it was garrisoned by eighty regulars and forty loyalists, under the command of Lieutenant McKay, when Marion and Lee appeared before it and demanded its surrender. Colonel Watson was on his way from Georgetown with a large force to assist McKay, and the latter promptly defied Marion and Lee. The latter had no cannons, and the stockade was too high to be seriously affected by small-arms. Lieutenant Maham, of Marion's brigade, planned and built a tower of logs sufficiently high to overlook the stockade, with a parapet at the top for the defence of sharpshooters placed therein. This work was accomplished during a dark night, and at dawn the garrison was awakened by a shower of bullets from a company of riflemen on the top of the tower. Another party ascended the mound and attacked the *abatis* with vigor. Resistance was vain. The fort, untenable, was surrendered (April 23, 1781), and, with the garrison as prisoners, Marion pushed northward to the High Hills of Santee (which see).

Watson, JOHN FANNING, annalist, was born in Burlington County, N. J., June 13, 1779; died at Germantown, Penn., Dec. 23, 1860. He was a clerk in the War Department in 1798, and afterwards went to New Orleans, where, in 1804, he was purveyor of subsistence for the United States troops stationed there. Returning to Philadelphia, he was a bookseller there for many years. From 1814 until 1847 he was cashier of a bank in Germantown, and afterwards was treasurer of a railroad company. He was an industrious delver in antiquarian lore, and in 1830 he published *Annals of Philadelphia*, in one volume, which was afterwards enlarged to two volumes. In 1846 he published *Annals of New York City and State*. He had already published *Historic Tales of the Olden Times in New York* (1832) and *Historic Tales of the Olden Times in Philadelphia* (1833). He also left MS. annals in the Philadelphia Library.

Watson, SIR BROOK, was born in Plymouth, England, Feb. 7, 1735; died Oct. 2, 1807. He entered the naval service early in life, but while bathing in the sea at Havana in 1749 a shark bit off his right leg below the knee, and he abandoned the sea and entered upon mercantile business. He was with Colonel Monckton in Nova Scotia in 1755, and was at the siege of Louisburg in 1758, having in charge Wolfe's division, as commissary. In 1759 he settled as a merchant in London, and afterwards in Montreal. Just before the war for independence he visited several of the colonies, with false professions of political friendship for them, as a Whig. A friend of Sir Guy Carleton, he was made his commissary-general in America in 1782, and from 1784 to 1793 he was member of Parliament for London. He was Sheriff of London and Middlesex, and in 1796 was Lord Mayor. For his services in America, Parliament voted his wife an annuity of \$2000 for life. From 1798 to 1806 he was commissary-general of England.

Watts, JOHN, was born in New York city,

April 5, 1715; died in Wales in August, 1789. He married a daughter of Stephen De Lancey in July, 1742. For many years he represented New York city in the Provincial Assembly, and was a member of the Council eighteen years (1757-75), when, taking sides with the crown, he went to England. His property was confiscated; but the most valuable part of it was afterwards reconveyed to his sons, Robert and John, in July, 1784.

Wauhatchie, BATTLE OF. When General Grant arrived at Chattanooga and took chief command (Oct. 23, 1863), he saw the necessity of opening a more direct way to that post for its supplies. (See *National Troops at Chattanooga*.) General Hooker, who had been sent with a large force under Howard and Slocum from Virginia, was then at Bridgeport, on the Tennessee, and Grant ordered him to cross that stream and advance to the Lookout valley and menace Bragg's left. He did so, and reached Wauhatchie, in that valley, on the 28th, after some sharp skirmishing. Being anxious to hold the road leading from Lookout valley to Kelly's Ferry, Hooker sent General Geary to encamp at Wauhatchie. Hooker's movements had been keenly watched by McLaws's division of Longstreet's corps, then holding Lookout Mountain. McLaws swept down the rugged hills and struck Geary's small force at one o'clock on the morning of Oct. 29, hoping to crush it and capture Hooker's whole army. The attack was made with great fury on three sides of the camp, while batteries on the mountain-sides sent down screaming shells. Geary was not surprised. He met the assailants with a steady, deadly fire. Hearing the noise of battle, Hooker sent General Schurz's division of Howard's corps to Geary's assistance. The Confederates were repulsed after a sharp battle for three hours. They fled, leaving one hundred and fifty of their number dead on Geary's front; also one hundred prisoners and several hundred small-arms. The National loss was four hundred and sixteen killed and wounded. This result secured a safe communication for supplies for the Nationals between Bridgeport and Chattanooga. (See *Brown's Ferry, Seizure of*.) An amusing incident occurred during the battle. When it began about two hundred mules, frightened by the noise, dashed into the ranks of Wade Hampton's Legion and produced a great panic. The Confederates supposed it to be a charge of Hooker's cavalry, and fell back at first in some confusion. The incident inspired a mock-heroic poem, in six stanzas, in imitation of Tennyson's *Charge of the Six Hundred* at Balaklava, one verse of which was as follows:

"Mules to the right of them—
Mules to the left of them—
Mules all behind them—
Pawed, neighed, and thundered;
Breaking their own confines—
Breaking through Longstreet's lines,
Testing chivalric spines,
Into the Georgia lines
Stormed the two hundred."

Wayne, ANTHONY, was born in Chester Co., Penn., Jan. 1, 1745; died at Presque Isle (Erie),

II.—45

Penn., Dec. 15, 1796. His grandfather, who came to America in 1722, was commander of a squadron of dragoons under William III. at the battle of the Boyne, in Ireland. Anthony, after re-

ANTHONY WAYNE.

ceiving a good English education in Philadelphia, was appointed a land-agent in Nova Scotia, where he remained a year. Returning, he married, and until 1774 was a farmer and surveyor in Pennsylvania. He was a member of the Pennsylvania Legislature in 1774-75; and in September of the latter year he raised a regiment, and was appointed colonel in January, 1776. He went with his regiment to Canada; was wounded in the battle at Three Rivers (which see); and in February, 1777, was made brigadier-general. In the battle of Brandywine, in September, he was distinguished; and nine days afterwards he was surprised in the night near the Paoli Tavern, on the Lancaster

WAYNE'S RESIDENCE.

Road, in Pennsylvania, when his command was much cut up, but the remainder retreated in safety. He led the right wing of the army in the attack at Germantown, and was slightly wounded. In the battle of Monmouth he was very distinguished; and his capture of Stony Point (which see), on the Hudson, in July, 1779, was one of the most brilliant achievements of the war. In that attack he was wounded in

the head, and Congress gave him a vote of thanks and a gold medal. In June, 1781, Wayne joined Lafayette in Virginia, where he performed excellent service until the capture of Cornwallis at Yorktown. He was afterwards stationed in Georgia, when he confined the British troops in Savannah until their evacuation in 1782. (See *Savannah, Evacuation of.*) In 1784-85 he served in the Pennsylvania Assembly, and in the convention that ratified the national Constitution.

surrender of Cornwallis the Pennsylvania line, under General Wayne, marched to South Carolina, and their commander, with a part of them, was sent by General Greene to Georgia. On May 21, 1782, Colonel Brown marched out of Savannah in strong force to confront rapidly-advancing Wayne. The latter got between Brown and Savannah, attacked him at midnight, and routed the whole party. This event occurred on the Ogeechee road, about four miles

GOLD MEDAL AWARDED BY CONGRESS TO GENERAL WAYNE.

In April, 1792, he was made general-in-chief of the army; and in 1795 he was engaged in hostilities with the Indians in the Northwest. He effected a peace at Greenville (which see) in August, 1795. Brave to the verge of rashness, Wayne received the name of "Mad Anthony." Yet he was discreet and cautious, fruitful in resources, and prompt in the execution of plans. After his successful campaign against the Indians, he returned to Fort Presque Isle in 1796, where he died. His body was afterwards removed by his son and buried in Radnor churchyard, in his native county. Over his remains the Pennsylvania Society of the Cincinnati

southwest of Savannah. The vanguard of the Americans was composed of sixty horsemen and twenty infantry, led by Colonel Anthony Walton White. These made a spirited charge, killing or wounding forty of the British and making twenty of them prisoners. The sword and bayonet did the work. The Americans lost five killed and two wounded. On June 24 a part of Wayne's army, lying about five miles from Savannah, was fiercely attacked by a body of Creek Indians, who first drove the troops and took two pieces of artillery; but they were soon utterly routed by a spirited charge. The brief battle was fought hand-to-hand with swords, bayonets, and tomahawks, and fourteen Indians and two white men were killed. Guristorsigo, a famous Creek chief, was killed. The royalists coming out of Savannah to assist the Indians were driven back, with the loss of a standard and one hundred and twenty-seven horses with packs. The men fled back to the city, and soon afterwards evacuated it. (See *Savannah, Evacuation of.*) Wayne took possession of the city, and of the province of Georgia, which had been held by the British military commanders about four years. It was estimated that Georgia lost in the war one thousand of its citizens and four thousand of its slaves.

WAYNE'S MONUMENT.

caused a neat marble monument to be erected in 1809. (See *Cincinnati, Society of the.*)

Wayne (GENERAL) in Georgia. After the

Wayne Surprised in Georgia. After the surrender of Cornwallis General Wayne was sent with a considerable force to strengthen the army of Greene in the Carolinas. He was sent to recover Georgia, and was successful. On the night of June 23 and 24, 1782, he was surprised by a numerous body of Creek warriors in the service of the British at Sharon, five miles from Savannah, headed by an able chief and a British officer. For a few moments they

held possession of his artillery, but, mustering his forces, they attacked the assailants so furiously, in front and flank, with sword and bayonet alone, that they soon broke and fled. With his own hand, Wayne cut down a fierce Creek chieftain; and in the morning the dead body of Guristarsigo, the principal warrior of the Creeks, and the bitterest enemy of the Americans among them, was found on the battle-field.

Wayne's Indian Campaign. The defeat of St. Clair (which see) spread alarm along the frontiers and indignation throughout the country. General Anthony Wayne was appointed his successor. Apprehending that pending negotiations with the Indians, if they failed, would be followed by immediate hostilities against the frontiers, Wayne marched into the Northwestern Territory in the autumn of 1793 with a competent force. He spent the winter at Greenville, not far from the place of St. Clair's disaster, and built a stockade, which he named Fort Recovery. The following summer he pushed on through the wilderness towards the Maumee, and at its junction with the Auglaize he built Fort Defiance. On the St. Mary's he built Fort Adams as an intermediate post; and in August he went down the Maumee with one thousand men and encamped near a British post, at the foot of the Maumee Rapids, called Fort Miami, or Maumee. Wayne, with a force ample to destroy the barbarians in spite of British influence, willing to spare bloodshed, offered them peace and tranquillity if they would lay down their weapons. They refused. Wayne then advanced to the head of the rapids, and at a place called "Fallen Timbers," not far above (present) Maumee City, he attacked and defeated the Indians on Aug. 20. Almost all the dead warriors were found with British arms. Wayne laid waste their country, and at the middle of September moved up to the junction of the St. Mary's and St. Joseph's rivers, near the (present) city of Fort Wayne, Ind., and built a strong fortification, which he named Fort Wayne. The little army wintered at Greenville. The barbarians perceived their own weakness and sued for peace. The following summer about eleven hundred sachems and warriors, representing twelve cantons, met (Aug. 3, 1795) commissioners of the United States, at Greenville, and made a treaty of peace. (See *Greenville, Treaty at*.)

Ways and Means, COMMITTEE OF. Trouble with the Barbary States brought the question before the House of Representatives whether a squadron should be sent to the Mediterranean to awe the North African pirates; and if so, how much money should be appropriated for the purpose. The latter question had hitherto been referred to the Secretary of the Treasury; now a committee was appointed (Jan. 2, 1794) to report the amount required, and also the ways and means for its support. This was the first Committee of Ways and Means ever appointed, and that committee thenceforth became one of the standing ones of the House.

Weather Signals. General Albert G. Myer,

the originator of the present signal service of the United States (see *Signals*), also invented and organized a weather signal service by means of the electro-magnetic telegraph, which is conferring great benefits upon agriculture and commerce, especially. The service is under the control of the War Department, as designed and used in the collection of information and in giving notice of any approaching danger; in time of peace, of dangers arising from storms in their progress, or other atmospheric disturbances. The system, as arranged by General Myer, was established by Congress in 1870. He assisted in drafting a bill for the purpose, and was indefatigable in procuring other legislation in favor of the service. The system permits the forecasting of atmospheric phenomena for twenty-four hours in advance, and to such perfection is the service brought that almost ninety per cent. of the predictions are verified by actual results. Simultaneous weather reports from simultaneous observations, taken at different places, are transmitted to the Signal Office at Washington. Three of these simultaneous reports are made in each twenty-four hours, at intervals of eight hours, and warnings are given by signals, maps, bulletins, and official despatches, furnished by the Signal Office, three times a day, to nearly all the newspapers in the land. So thoroughly is this work done, by means of the telegraph, the perfect organization of the system, and the discipline of the operators, that it is estimated one third of all the families in our country are in possession, each day, of the information at the Signal Office at Washington.

Weathersford and General Jackson. It was made a condition of peace with the Creeks by Jackson that they should bring to him Weathersford, their great leader, for he could not pardon him. He then knew neither the great Creek, chief nor his own plasticity. Weathersford did not wait to be caught and dragged like a felon to the feet of the leader of the pale-faces. He saw in the events at the Horseshoe Bend that all hope for his nation was gone. He mounted his fine gray horse, which had saved his life (see *Econochaca, or Holy Ground, Battle at*), and rode to Jackson's camp, where he arrived at sunset. He entered Jackson's tent and found the general alone. Drawing himself up to his full height and folding his arms, he said, "I am Weathersford, the chief who commanded at Fort Mims. I have nothing to request for myself. You can kill me if you desire. I have come to beg you to send for the women and children of the war-party, who are now starving in the woods. Their fields and cribs have been destroyed by your people, who have driven them to the woods without an ear of corn. I hope that you will send out parties who will conduct them safely here, in order that they may be fed. I exerted myself in vain to save the women and children at Fort Mims. I have come now to ask peace for my people, but not for myself." Jackson expressed astonishment that one so guilty should dare to appear in his presence and ask for peace

and protection. "I am in your power; do with me as you please," the chief haughtily replied. "I am a soldier. I have done the white people all the harm I could. I have fought them, and fought them bravely; and if I had an army I would yet fight and contend to the last. But I have none. My people are all gone. I can now do no more than to weep over the misfortunes of my nation." Here was a man after Jackson's own heart—a patriot who fought bravely for his people and his land, and fearlessly expressed his patriotism in the presence of one who had power over his life. He was told that absolute submission and the acceptance of a home beyond the Mississippi for his nation was the only wise policy for him to pursue. "If, however," said Jackson, "you desire to continue the war, and feel prepared to meet the consequences, you may depart in peace and unite yourself with the war-party if you choose." Half scornfully, half sorrowfully, Weathersford replied, "I may well be addressed in such language now. There was a time when I had a choice and could have answered you; I have none now—even hope is ended. Once I could animate my warriors to battle; but I cannot animate the dead. My warriors can no longer hear my voice. Their bones are at Talladega, Tallushatchee, Emucfan, and Tohopeka. I have not surrendered myself thoughtlessly. While there was a chance for success I never left my post nor supplicated peace. But my people are gone, and I ask it for my nation, not for myself. On the miseries and misfortunes brought upon my country I look back with deepest sorrow, and wish to avert still greater calamities. If I had been left to contend with the Georgia army [Floyd's] I would have raised my corn on one bank of the river and fought them on the other. But *your* people have destroyed my nation. You are a brave man; I rely upon your generosity. You will exact no terms of a conquered people but such as they should agree to. Whatever they may be, it would now be folly and madness to oppose. If they are opposed, you will find me among the sternest supporters of obedience. Those who would still hold out can be influenced only by a mean spirit of revenge, and to this they must not and shall not sacrifice the last remnant of their country. You have told our nation where we might go and be safe. This is good talk, and they ought to listen to it. They *shall* listen to it." Thus spoke Weathersford for his nation. Words of honor responded to words of honor, and Weathersford was allowed to go freely to the forest to search for his scattered followers and counsel peace.

WEATHERSFORD, WILLIAM, was born on the Hickory Ground, in the Creek nation; died in 1826. His father was an itinerant peddler, sordid, treacherous, and revengeful. His mother was a full-blooded Creek, of the tribe of the Seminoles. Weathersford inherited the bad qualities of each, but honor and humanity predominated in his character. He was possessed of rare eloquence and courage, and these, with his good judgment, procured for him the respect of the old among his countrymen; while his

virtues made him the idol of the young and unprincipled. He was of a commanding person—tall, straight, and well-proportioned; his eyes black, lively, and penetrating in their glance; his nose prominent and thin, but elegant in formation. Passionately devoted to wealth, he had appropriated a fine tract of land, improved and settled it, and had embellished it from the profits of his father's pack. He entered fully into the views of Tecumtha, the eminent Shawnoese; and if there had been no delay in perfecting the confederacy and opening war he might have overrun the whole Mississippi valley. (See *Tecumtha and the Prophet*.) He led in the attack upon Fort Mims (which see), and used all his power and persuasion to prevent the massacre of the women and children, but without success. That massacre aroused all the white people of the great valley against the Creek nation, and the sons of all Tennessees marched to their country and in the course of a few months destroyed the nation. Weathersford voluntarily surrendered himself to General Jackson; and in a speech of peculiar pathos he displayed such patriotism and courage that he was dismissed to perform freely the promised task of gathering up the remnant of his people and removing beyond the Mississippi River. But he was not safe in Alabama. The families of the murdered ones at Fort Mims sought his life. He fled, and remained away until the end of the War of 1812–15, when he returned and became a respected citizen of Alabama. He settled on a farm in Monroe County, well supplied with negro slaves, where he maintained the character of an honest man. Soon after his return he married, and General Sam. Dale, with whom he had several encounters, was his groomsmen. He said he could not live there, for his old comrades, the hostile Creeks, ate his cattle from starvation, the Peace party ate them for revenge, and the white squatters because he was a "damned red-skin;" so he said, "I have come to live among gentlemen." Weathersford died from the effects of fatigue caused by a desperate bear-hunt.

Webb, ALEXANDER S., was born in New York city in 1834, and graduated at West Point in 1855. He is a son of James Watson Webb, the veteran journalist. Entering the artillery, he served against the Seminoles in Florida in 1856, and, from 1857 to 1861, was assistant professor of mathematics at West Point. In May, 1861, he was made captain of infantry, and, in June, 1863, brigadier-general of volunteers. He was one of the defenders of Fort Pickens (which see); fought at Bull's Run and through the campaign on the Peninsula; was chief-of-staff of the Fifth Corps at Antietam and Chancellorsville; served with distinction at Gettysburg, and commanded a brigade in the Second Corps, in Virginia, from October, 1863, to April, 1864. He commanded a brigade in the campaign against Richmond in 1864–65, and in January, 1865, was General Meade's chief-of-staff. In March he was breveted major-general United States Army, and was discharged in 1870. In 1869 he was chosen president of the College of the City of New York.

Webb, JAMES WATSON, journalist and diplomatist, was born at Claverack, N. Y., Feb. 8, 1802. He entered the army in 1819, was first-lieutenant in 1823, and resigned in 1827, when he became a journalist, soon taking a leading position in that profession as editor and proprietor of the *New York Courier and Enquirer*. In 1850 he was appointed chargé d'affaires at the court of Vienna, but the Senate did not confirm the nomination. In 1861 he was appointed minister to Brazil, where he settled long-pending claims against that government; and he was chiefly instrumental, through his personal intimacy with Napoleon III., in procuring the withdrawal of the French troops from Mexico. For many years Mr. Webb exerted a powerful influence in the politics of the United States.

Webb, SAMUEL B., father of the preceding and step-son of Silas Deane, was born at Wethersfield, Conn., in 1753; died at Claverack, N. Y., Dec. 3, 1807. He was thanked for his gallantry in the battle of Bunker's (Breed's) Hill, where he was wounded, and in June, 1776, was appointed aide-de-camp to Washington. In the battle of White Plains he was wounded; also at Trenton. He was in the battle of Brandywine, and in 1778 raised and took command of the Third Connecticut Regiment. In 1779, he, with most of his men, were captured by the British fleet while crossing to Long Island with General Parsons, and was not released until 1780, when he took command of the light infantry, with the brevet rank of brigadier-general. He lived in New York city after the war, until 1789, when he removed to Claverack, Columbia Co., N. Y.

Webster, DANIEL, LL.D., statesman, was born at Salisbury, N. H., Jan. 18, 1782; died at Marshfield, Mass., Oct. 24, 1852. He graduated at Dartmouth College in 1801, defraying a portion of his college expenses by teaching school. After teaching school in Maine a while, he stud-

DANIEL WEBSTER.

ied law, and was admitted to the bar in 1805. He soon rose to eminence in his profession at Portsmouth, N. H., and was a member of Congress from 1813 to 1817, where he soon took a

foremost rank in debate. In 1816 he settled in Boston, and, by his services in the Dartmouth College case, which was carried to the Supreme Court (1817), he was placed in the front rank in his profession. In that court he ably argued many important cases, in which he exhibited transcendent skill and ability. In 1820 he was a member of the Massachusetts Constitutional Convention. He again entered Congress in 1823, when he made a famous speech on the Greek Revolution, and, as chairman of the Judiciary Committee, effected measures for a complete revision of the criminal law of the United States. While John Quincy Adams was President of the United States, he was the leader of the friends of the administration, first in the House and afterwards in the Senate, of which he was a member from 1827 to 1839. His celebrated speech in reply to Hayne, of South Carolina, delivered in the Senate Jan. 26-27, is considered the most correct and complete exposition ever given of the true powers and functions of the national government. In 1839 he visited Europe, and in March, 1841, President Harrison appointed him Secretary of State, which office he held until May, 1843, when he retired from President Tyler's cabinet. Again in the United States Senate in 1845, he strongly opposed the annexation of Texas and the war with Mexico, and in 1850 he supported the Compromise measure. (See *Omnibus Bill, The.*) By his concessions to the demands of the slaveholders, in a speech, March 7, 1850, he greatly weakened his influence in the free-labor states. He was called to the cabinet of Mr. Fillmore the same year as Secretary of State, which post he filled, with great distinction, until his death. Mr. Webster delivered many remarkable orations on occasions, notably on laying the corner-stone of the Bunker's Hill monument (June 17, 1825), and on the completion of the monument (June 17, 1843). He paid much attention to agriculture at Marshfield, and was fond of hunting and fishing. His last great effort in the courts was in January, 1852, when he argued an important India-rubber patent case at Trenton, N. J.

Webster, JOSEPH DANA, was born at old Hampton, N. H., Aug. 25, 1811. He graduated at Dartmouth College in 1832, and was made lieutenant of topographical engineers in July, 1838. He served with distinction through the war with Mexico, and resigned in 1854 and settled at Chicago. In April, 1861, he was placed in charge of the construction of fortifications at Cairo and Paducah, and in February, 1862, became colonel of artillery, assisting in the capture of forts Henry and Donelson (which see). He had charge of all the artillery at the battle of Shiloh, and was chief of General Grant's staff until October, 1862, when he was made a brigadier-general of volunteers. Grant sent him to make a survey of the Illinois and Michigan Canal, and afterwards he became General Sherman's chief-of-staff. General Webster was with General Thomas at the battle of Nashville (which see), and was breveted major-general in March, 1865.

Webster, NOAH, LL.D., philologist, was born

in West Hartford, Conn., Oct. 16, 1758; died in New Haven, Conn., May 28, 1843. He graduated at Yale College in 1778, and was admitted to the bar in 1781. The next year he opened a classical school at Goshen, N. Y., and in 1783 published at Hartford his *First Part of a Grammatical Institute of the English Language*, which was soon followed by the second and third parts. His *American Spelling-book* was published in 1783. In 1785 he visited the Southern States

NOAH WEBSTER.

to find aid in procuring the enactment of state copyright laws; and in 1789 he published *Dissertations on the English Language*, a series of lectures which he had delivered in various American cities in 1786. Webster was at the head of an academy at Philadelphia in 1787, and took great interest in the proceedings of the convention there that framed the national Constitution. In 1788 he published the *American Magazine* in New York, and returned to Hartford in 1789 and practised law. In 1793 he edited and published in New York a daily paper called the *Minerva*, and a semi-weekly, called the *Herald*, in support of Washington's administration. These were afterwards known as the *Commercial Advertiser* and the *New York Spectator*. In 1794 he removed to New Haven, and, in 1806, published a *Compendious Dictionary*. In 1807 he published a *Philosophical and Practical Grammar of the English Language*, and, the same year, began the great work of his life, a *Dictionary of the English Language*. The first edition appeared in 1828, in two volumes, and the second in 1840, in two volumes. While this work was in preparation he removed to Amherst, and was one of the most active founders of Amherst College. He returned to New Haven in 1828, and resided there until his death. Dr. Webster's *Elementary Spelling-book* has had an enormous sale, amounting, in 1876, to about fifty million copies. So large and steady was its sale, that the proceeds of his copyright supported himself and family while he was preparing his great Dictionary. He was a very prolific writer, and published a large number of essays in newspapers, pamphlets, and books, on political, economical, literary, and moral subjects, as well as on history, natural history, and education. It has been said of him,

"He taught millions to read, but not one to sin." Since his death his Dictionary has been revised by his son-in-law, Professor Goodrich, and others.

Wedderburne, ALEXANDER (Baron Loughborough and Earl of Rosslyn), was born in Edinburgh, Feb. 13, 1733; died at Bayles, Berkshire, Jan. 3, 1805. Admitted to the bar at the age of nineteen years, he became a very distinguished member, and was solicitor-general in 1771. As a member of Parliament he was an able supporter of the administration in the measures so obnoxious to the Americans, and in 1774 he defended Hutchinson and Oliver when a petition of the Assembly of Massachusetts for their removal was laid before the Privy Council. In his speech he grossly insulted Dr. Franklin. (See *Franklin before the Privy Council*.) In 1778 he was made attorney-general, and in 1780 Chief-justice of the Court of Common Pleas. From 1793 to 1801 he was Lord High Chancellor, under the younger Pitt. He was very much despised by honest King George III., who, when he heard of Wedderburne's death, remarked: "He has not left a greater knave behind him in my dominions."

Weed, STEPHEN H., was born in New York in 1834; killed at Gettysburg, July 2, 1863. He graduated at West Point in 1854; served against the Indians from 1857 to 1860; became captain of artillery in 1861, and served throughout the war on the Peninsula, at Manassas, South Mountain, and Antietam, and behaved gallantly at Chancellorsville, for which he was made brigadier-general, Jan. 6, 1863. He commanded the third brigade of regulars at the time of his death.

Weeden, GEORGE, was postmaster and tavern-keeper at Fredericksburg, Va., before the Revolution; was an active politician and patriot, and entered the military service early in the strife, becoming colonel of Virginia troops in the summer of 1776. He was made brigadier-general in February, 1777, leading a brigade in the battles of Brandywine and Germantown. Dissatisfaction about rank caused him to leave the service at Valley Forge, but he resumed the command of his brigade in 1780, and commanded the militia near Gloucester during the siege of Yorktown (1781).

Weems, MASON L., was born at Dumfries, Va.; died at Beaufort, S. C., May 23, 1825. He studied theology in London; was rector several years of Mount Vernon Parish (Pohick Church) at the time Washington attended there, and was for a long while a successful travelling agent for the sale of books for Matthew Cary, of Philadelphia, travelling extensively in the Southern States. He was eccentric, and, at public gatherings, would address crowds upon the merits of his books, interspersing his remarks with stories and anecdotes. He would also play the violin at dances, and preach when occasion offered. Weems wrote a pamphlet entitled "The Drunkard's Looking-glass," illustrated with rude wood-cuts. This pamphlet he sold wherever he travelled. He entered taverns, addressed the company usually assembled

in such places, imitated the foolish acts of an intoxicated person, and then offered his pamphlets for sale. His mimicry of a drunken man

MASON L. WEEMS.

was generally taken as good-natured fun. He wrote lives of Washington, William Penn, Dr. Franklin, and General Marion, and was also the author of several tracts. His *Life of Washington* has passed through nearly forty editions.

POBICK CHURCH.

Weeping Willow, INTRODUCTION OF THE, INTO THE UNITED STATES. After the South Sea bubble in England had collapsed, one of the speculators who had been ruined went to Smyrna to mend his fortunes. He was a friend of Pope, the poet, and sent him a box of figs. In the box Pope found the twig of a tree. He had just established his villa at Twickenham. He planted the twig (fortunately) by the shore of the Thames, not knowing of what tree it was. It grew, and was a weeping willow, such as the captive Jews wept under on the banks of the rivers of Babylon. That twig was planted in 1722. In 1775 one of the young British officers who came to Boston with the British army

brought a twig from Pope's then huge willow, expecting, when the "rebellion" should be crushed, in a few weeks, to settle in America on some confiscated lands of the "rebels," where he would plant his willow. The "rebellion" was not crushed. John Parke Custis, son of Mrs. Washington, and aid to General Washington, at Cambridge, going on errands to the British camp, under a flag of truce, became acquainted with the owner of the willow twig (which was wrapped in oiled silk). The disappointed subaltern gave the twig to Custis, who planted it near his home on his estate at Abingdon, Va., where it became the progenitor of all the weeping willows in America.

Weir, ROBERT WALTER, painter, was born in New Rochelle, N. Y., June 18, 1803. He studied art in Italy three years, and, returning home in 1827, opened a studio in New York city. He was then twenty-four years of age. From 1830 to 1834 he was professor of perspective in the National Academy of Design. In the latter year he was appointed instructor in drawing in the United States Military Academy at West Point, as the successor of C. R. Leslie. He held that position and performed its duties with success for a little more than forty years. Mr. Weir's paintings are not numerous, but are highly valued for the truthfulness and the delicacy of sentiment which they all exhibit. Among the most noted of his pictures are the "Embarka-

tion of the Pilgrims," painted for the rotunda of the Capitol at Washington; "The Antiquary Introducing Lovel to his Womankind;" "Red Jacket;" "Columbus before the Council at Salamanca;" "The Landing of Hendrick Hudson;" "The Greek Girl;" "Rebecca;" "Paestum by Moonlight;" "The Presentation in the Temple;" "The Dying Greek;" "The Taking of the Veil," and "The Journey of the Disciples to Emmaus."—Mr. Weir's son, JOHN FERGUSON, is also an accomplished artist, and since 1869 has been professor of painting and design in the Yale School of Fine Arts.

Weitzel, GODFREY, was born in Cincinnati, O., Nov. 1, 1835, and graduated at West Point in 1855. Early in the Civil War he was attached to the staff of General Butler in the Department of the Gulf, and became acting mayor of New Orleans after its capture. In August, 1862, he was made brigadier-general of volunteers, and did good service in Louisiana, commanding the advance of General Banks's army in operations there in 1863. He was at the capture of Port Hudson. In 1864 he commanded a division in the Army of the James, and was Butler's chief-engineer at Bermuda Hundred. He was made commander of the Twenty-fifth Corps, composed of colored troops, and was the leader of the land attack on Fort Fisher in December, 1864, in which he was second in command. Weitzel was made major-general of volunteers in November,

1864. During the spring of 1865 he was very active in operations against Richmond on the left bank of the James River, and led the troops (colored) that first entered Richmond after the flight of the Confederates from it. He was breveted major-general of the United States Army in March, 1865.

Weldon Road. On Aug. 18, 1864, there was a severe battle a few miles below Petersburg, Va., for the possession of the Weldon Railroad, which connected Richmond with the South. Warren, with the Fifth Corps, reached the railroad without opposition. Leaving Griffin to hold the point seized, Warren started for Petersburg, and soon fell in with a strong Confederate force, which captured 200 of a Maryland brigade. A sharp fight ensued. Warren held the ground he had gained, but at the cost of 1000 men killed, wounded, and prisoners. Lee then sent a heavy force under Hill to drive Warren from the road. Hill fell upon Warren's flank and rear, held by Crawford's division, and in the fierce struggle that ensued the Confederates captured 2500 of the Nationals, among them General J. Hayes. Yet the Nationals clung to the railroad; and, reinforcements coming up, Hill fled. Warren recovered the ground he had lost and intrenched. On the 21st the Confederates returned and assailed the Nationals with a cross-fire of thirty guns, and also by columns of infantry. The assaults were soon defeated, with a loss of 500 prisoners. The whole Confederate loss was full 1200 men. One of Lee's most important lines of communication was now permanently wrested from him.

Welles, GIDEON, was born at Glastonbury, Conn., in July, 1802. He studied law under Judges Williams and Ellsworth, and in 1826 became editor and a proprietor of the *Hartford Times*, advocating the election of General Jack-

son in the Navy Department, having given up his editorial duties. He became identified with the new Republican party in 1857, and was chairman of the Connecticut delegation in the convention

GIDEON WELLES.

at Chicago that nominated Mr. Lincoln for the Presidency, who in 1861 called Mr. Welles to his cabinet as Secretary of the Navy, in which capacity he served until 1869.

Wentworth, BENNING, governor of New Hampshire from 1741 to 1767, was born at Portsmouth, in that state, July 24, 1696; died there, Oct. 14, 1770. He graduated at Harvard University in 1715; became a merchant, a representative in the Assembly, and in 1734 a councillor. He began making grants of land in the region of Lake Champlain in 1747, and this was the origin of the "New Hampshire Grants" (which see). Bennington, Vt., was named in his honor. The land on which the buildings of Dartmouth

WENTWORTH MANSION.

son to the Presidency. He served in the Connecticut Legislature from 1827 to 1835; was comptroller, and from 1836 to 1841 postmaster, at Hartford. In 1846 he was chief of a bureau

College were erected (five hundred acres) was given by Governor Wentworth. The ancient seat of the Wentworths is yet well preserved at Little Harbor, not far from Portsmouth.

Wentworth, GOVERNOR, FLIGHT OF. On the assumption of all political power by the Provincial Congress of New Hampshire, Sir John Wentworth, the last royal governor, seeing his power depart, and fearing popular indignation, shut himself up in the fort at Portsmouth, and his house was pillaged by a mob. He prorogued the Assembly (July, 1775), retired to Boston, and soon afterwards sailed to England. He was a nephew of Governor Benning Wentworth, who was chief magistrate of the province from 1741 until 1767.

Wentworth, SIR JOHN, LL.D., nephew of Benning, was governor of New Hampshire from 1767 to 1775. He was born at Portsmouth, in that state, Aug. 9, 1737; died at Halifax, N. S., April 8, 1820. He graduated at Harvard University in 1755. In 1766 he was sent to England as agent of the province, when the Marquis of Rockingham procured his appointment as governor of New Hampshire. He was also appointed surveyor of the king's woods, which was a lucrative office. When the war for independence began he went to England, and remained there until 1792, when he was made lieutenant-governor of Nova Scotia.

Werden, REED, was born in Pennsylvania, Feb. 28, 1817. He entered the navy as midshipman in 1834 and the Naval School at Philadelphia in 1840, and served in the war against Mexico. At the capture of Roanoke Island (which see) he commanded the steamer *Stars and Stripes*, was fleet-captain in the East Gulf Squadron from 1864 to 1865, and commanded the *Pouchatan* when she blockaded the Confederate "ram" *Stonewall* in the harbor of Havana until she was surrendered to the Spanish government.

Wesley, JOHN, founder of the Methodist Church, was born at Epworth, Lincolnshire, June 17, 1703; died March 2, 1791. He was educated at Oxford University, and ordained dea-

JOHN WESLEY.

con in 1725. In 1730 he and his brother Charles (a poet and clergyman), with a few other students, formed a society on principles of greater

austerity and methodical religious life than then prevailed in the university. They obtained the name of Methodists, and Wesley became the leader of the association. In 1735 the celebrated Whitefield (which see) joined the society, and he and Wesley accompanied Oglethorpe to Georgia to preach the Gospel to the Indians. He stayed six months in Georgia, where his asceticism and eccentricities created a strong prejudice against him, and on his return to England he began itinerant preaching, often in the open air, and attracted many followers. The churches of the Establishment were closed against him, and he had large chapels built in London, Bristol, and other places; and he and Whitefield labored in unison in building up Methodism. Differences in doctrine finally separated them, and they labored separately for the same great end. Wesley travelled almost continually over the United Kingdom in promoting his mission, and was the most successful preacher of modern times.

Wealeys, THE, IN GEORGIA. With a company of Scotch Highlanders, who settled New Inverness, Ga., John and Charles Wesley went to that colony in 1736. Through the arts and falsehoods of two women Charles fell into temporary disgrace. Oglethorpe, satisfied with his explanation, sent Charles to England as bearer of despatches to the trustees. John (afterwards the founder of Methodism), then thirty-three years of age, remained, and became pastor of the church at Savannah. He was a strict constructionist of the rubrics of the Prayer-book; for he had not then begun his labors as the founder of a new sect. His zeal and exactions at length gave offence, and he soon got into other trouble by becoming the lover of a young woman, who, as he suggests in his journal, made pretensions to great piety to entrap him. By the advice of friends he broke the engagement. She immediately married another. Becoming less attentive to her religious duties, Wesley, according to the strict rule he had laid down, after several public reproofs, which she resented, refused to admit her to the Lord's Supper. Her husband, regarding this as an attack upon her religious character, claimed damages to the amount of \$5000. The grand-jury found two bills against Wesley, charging him with this and eight other abuses of his ecclesiastical authority, and also of speaking and writing to the woman without her husband's consent. The quarrel grew hot, and finally, by advice of the Moravians, he gave notice of his intention to go to England and lay the matter before the trustees. The magistrates demanded a bond for his appearance to answer to the suit against him. He refused to give it, and they forbade his departure. As soon as evening prayer was over he fled to Charleston, whence he returned to England, and never came back to Georgia.

Wessels, HENRY WALTON, was born at Litchfield, Conn., Feb. 20, 1809, and graduated at West Point in 1833. He was engaged in the Seminole War and in the war with Mexico, and became brigadier of volunteers in the spring of 1862,

serving in the campaign on the Peninsula, and was wounded at Fair Oaks. He was distinguished in services on the coast of North Carolina, and was in command of Plymouth in 1863-64, where he was made a prisoner in April, 1864. He was breveted brigadier-general of the United States Army.

West, BENJAMIN, painter, was born near Springfield, Penn., Oct. 10, 1738; died in London, March 10, 1820. His parents were Friends, or Quakers. He served as a private soldier under General Forbes a short time, when, having

BENJAMIN WEST.

displayed a decided talent for art, he went to Philadelphia and engaged in portrait-painting. In 1760 he visited Italy, and afterwards remained some time in France. In 1763 he went to England, and there, meeting with much encouragement in the practice of painting, made his permanent residence. He became a favorite of King George III., was a member of the Royal Academy at its foundation in 1768, and in 1792 succeeded Sir Joshua Reynolds as its president. In his picture of the "Death of General Wolfe" he first departed from custom, and depicted the characters in proper costume; and from that time forward there was more realism in historical painting. West received large prices for his paintings. For his "Christ Healing the Sick" the British Institution gave him \$15,000. One of his latest works—"Death on the Pale Horse"—is in the Academy of Fine Arts in Philadelphia.

West Florida Taken by the Spaniards. On May 9, 1781, Don Galvez, Spanish Governor of Louisiana, with a competent force, took possession of Pensacola, capturing or driving away the British there, and soon afterwards he completed the conquest of the whole of West Florida.

West Indies. It being the prevailing opinion that the lands discovered by Columbus were a part of India, Ferdinand and Isabella, by the advice of the navigator, called them West Indies.

West Point Military Academy. The necessity of a military academy was felt and expressed at the beginning of the war for inde-

pendence. Early in the autumn of 1776 a committee was appointed by the Continental Congress to inquire into the condition and wants of the army. Among other resolutions, the committee in their report submitted the following: "Resolved, That the Board of War be directed to prepare a Continental laboratory and a military academy, and provide the same with proper officers." Colonel Henry Knox, then in command of the artillery, submitted "Hints for the Improvement of the Artillery of the United States." These were submitted to the Congress, and on Oct. 1, 1776, that body appointed a committee of five to prepare and bring in a plan for a military academy. This committee never reported, and nothing more was done concerning such an institution until the close of the contest. On the return of peace (1783), plans for a peace establishment for the army were laid before Congress. General Huntington, of Connecticut, suggested West Point, in the Hudson Highlands, as an eligible spot for a safe deposit of military articles, and where, "with a small additional expense, an academy might be instituted for instruction in all the branches of the military art." Timothy Pickering, then quartermaster-general, made some elaborate suggestions, at the request of Washington, concerning the organization of a military academy at West Point. The matter slumbered until 1793, when President Washington, in his annual message (Dec. 3), suggested the propriety of establishing an institution for military education. The subject had been discussed in the cabinet. Jefferson alone opposed the measure as unconstitutional. Congress, by act (May 7, 1794), provided for a corps of artilleryists and engineers, to consist of four battalions, to each of which eight cadets were to be attached; and made it the duty of the Secretary of War to procure, at the public expense, the necessary books, instruments, and apparatus for the use and benefit of the corps. In his last annual message (December, 1796), Washington again recommended the establishment of a military academy. "However pacific," he said, "the general policy of a nation may be, it ought never to be without an adequate stock of military knowledge for emergencies." In 1798 Congress authorized the raising of an additional regiment of artilleryists and engineers, and increased the number of cadets from forty-eight to fifty-six. Provision was made for books and instruments, and the President was empowered to appoint four teachers of the arts and sciences necessary for the instruction of the corps; but no provision had yet been made for the collection of the corps at any one point, or for the erection of buildings suitable for the purpose. It was soon perceived that something more must be done for imparting systematic military instruction. Mr. McHenry, Secretary of War, reported (January, 1800) in favor of some permanent location for such an academy. Finally an act was passed (March 16, 1801) making the artilleryists and engineers distinct corps. To the former forty cadets were attached, and to the latter ten cadets. Provision was made for their being stationed at West

Point, and that the corps should "constitute a military academy." The senior engineer officer present was constituted superintendent of the academy. In February, 1803, the President was empowered to employ one teacher of the French language and one teacher of drawing. The scale on which the Academy at West Point was established becoming too limited, President Jefferson called the attention of Congress to the matter. Early in 1808 Madison also called the attention of Congress to the subject, and an act was passed (April 27, 1812) for the reorganization of the Military Academy at West Point. By that act it was provided that, in addition to the teachers of French and drawing, there should be a professor of natural and experimental philosophy, of mathematics, and of engineering, with an assistant for each. Provision was also made for a chaplain, who was required to officiate as professor of geography, ethics, and history. The number of cadets was limited to two hundred and sixty. Thus the broad basis of the Military Academy as it exists to-day was laid. After the second war for independence (1812-15) the President recommended an enlargement of the institution and the establishment of "others in sections of the Union." Some measures were proposed looking to the founding of other military academies in the United States, but nothing of that kind was done. The first commander, or superintendent, of the academy was Major Jonathan Williams (April, 1802), assisted by Captain W. A. Barron. A general order, Sept. 4, 1816, prescribed the uniform of the cadets—the same as now worn, excepting the displacement of the hat and cockade by a fatigue-cap. It was not until 1818 that the academy was placed upon a system of regularity and efficiency. This was brought about, in a great degree, by the skill and labor of Major Sylvanus Thayer, who had served with distinction in the late war, and was made superintendent July 28, 1817.

West Point Military Academy, BOARD OF VISITORS AT. This board is appointed every year to review the studies of the cadets; pronounce upon their standing in the institution; observe the condition of the academy; recommend improvements in the methods of study and in the material condition of the institution, etc. In a word, it is essentially a board of inspection, which reports the results of its labors to the government. This board is composed of twelve members, of whom seven are appointed by the President, two by the Senate, and three by the House of Representatives.

West Virginia. In the Virginia Secession Convention the members from the western or mountainous districts were nearly all Unionists. Before the adjournment of that convention the inhabitants of the mountain region had met at various places to consult upon public affairs. At the first of these, at Chickahominy, April 22, 1861, John S. Carlile, a member of the convention, offered a series of resolutions calling an assembly of delegates of the people at Wheeling, on May 13. They were adopted. Meetings

were held elsewhere. At a meeting at Kingwood, in Preston County (May 4), it was declared that the separation of western from eastern Virginia was essential to the maintenance of their liberties. They also resolved to so far defy the insurgent rulers of the state as to elect a representative in the national Congress. Similar sentiments were expressed at other meetings. The convention of delegates met at Wheeling on the appointed day. A large number of counties were represented by almost four hundred delegates. The chief topic discussed in the convention was the division of the state and the formation of a new one, composed of the forty or fifty counties of the mountain region, the inhabitants of which owned very few slaves, and were enterprising and thrifty. These counties were controlled by, and for the interests of, the great slaveholding region in eastern Virginia. There was remarkable unanimity of sentiment in the convention against longer submitting to this control, and in love for the Union. The convention was too informal to take action on the momentous question of the dismemberment of the state. By resolution, it condemned the Ordinance of Secession and called a provisional convention to assemble at the same place on the 11th of June following, if the obnoxious Ordinance of Secession should be ratified by the people. A central committee was appointed, who issued (May 22) an address to the people of northwestern Virginia. The Secessionists were thoroughly alarmed by these proceedings. Expecting an armed revolt in that section, the governor (Letcher) sent orders to a military commander of state troops at Grafton to seize arms at Wheeling, arm such men as might rally to his camp, and cut off telegraphic communication between Wheeling and Washington. He was ordered to destroy the Baltimore and Ohio Railroad if troops from Ohio or Pennsylvania should attempt to pass over it. The convention met June 11, with Arthur J. Boreman president. A committee was appointed to draw up a Bill of Rights. All allegiance to the Southern Confederacy was totally denied, and it was declared that all officers in Virginia who adhered to it were suspended and their offices vacated. They condemned the Ordinance of Secession, and called upon all citizens who had taken up arms for the Confederacy to lay them down. Measures were adopted for a provisional government and for the election of officers for a period of six months. This was not secession from Virginia, but purely revolutionary. On June 17 a declaration of independence of the old government of Virginia was adopted, and was signed by the fifty-six members present. On the 20th there was a unanimous vote in favor of the separation of western from eastern Virginia, and on that day the provisional government was organized by the appointment of Francis H. Pierpont, of Marion County, governor; Daniel Polesley, of Mason County, lieutenant-governor; and an executive council of five members. The governor immediately notified the President of the United States of insur-

rection in western Virginia, and asked aid to suppress it. He raised \$12,000 for the public use, pledging his own private fortune for the amount. A Legislature was elected and met at Wheeling on the 1st of July, and John S. Carlile and Waitman G. Willie were chosen to represent the "restored commonwealth" in the Senate of the United States. The convention reassembled on Aug. 20, and passed an ordinance for a new state, which was submitted to the people, and by them ratified. At a session of the convention on Nov. 27, the name of West Virginia was given to the new state. A new constitution was framed, which the people ratified on

STATE SEAL OF WEST VIRGINIA.

May 3, 1862. On the same day the Legislature approved all of the proceedings in the matter, and established a new commonwealth. On June 3, 1862, West Virginia was admitted into the Union as a state, by act of Congress, which was approved by the President, Dec. 31, 1862. A state seal, with an appropriate device, was adopted, inscribed, "STATE OF WEST VIRGINIA. MONTANI SEMPER LIBERI" (mountaineers are always free), and the new commonwealth took its place as the thirty-fifth state of the Union, covering an area of 23,000 square miles and having a population of 393,234.

Western Boundaries of the English-American Colonies. The narrow-minded Hillsborough, Secretary of State for the Colonies, wishing, if possible, to blot out the settlements west of the Appalachian chain of mountains, and to extend an unbroken line of Indian frontier from Georgia to Canada, had issued repeated instructions to that effect, in order to make an impassable obstruction to emigration westward. These instructions were renewed with emphasis in 1768, when John Stuart, an agent faithful to his trust, had already carried the frontier line to the northern limit of North Carolina. He was now ordered to continue it to the Ohio, at the mouth of the Kanawha. By such a line all Kentucky, as well as the entire territory northwest of the Ohio, would be severed from the jurisdiction of Virginia and confirmed to the barbarians by treaties. Virginia strenuously opposed this measure; and, to thwart the negotiations of Stuart with the Indians, sent Thomas Walker as her commissioner to the congress of the Six Nations held at Fort Stanwix (which see) late in the autumn of 1768. There about three thousand Indians were present, who were loaded with generous gifts. They complied with the wishes of the several agents present, and the western boundary-line was established at the mouth of the Kanawha to meet Stuart's line on the south. From the Kanawha northward it followed the Ohio and Alleghany rivers, a branch of the Susquehanna, and so on to the junction of Canada and Wood creeks, tributaries of the Mohawk

River. Thus the Indian frontier was defined all the way from Florida almost to Lake Ontario; but Sir William Johnson, pretending to recognize a right of the Six Nations to a larger part of Kentucky, caused the line to be continued down the Ohio to the mouth of the Tennessee River, which stream was made to constitute the western boundary of Virginia.

Western Company, THE. John Law was the successor of Crozat in a commercial scheme in Louisiana. (See *Crozat and Louisiana*.) He formed a company under the sanction of the Regent of France (August, 1717), and it was called the Western Company. The grants made to it were for twenty-five years, and the sovereignty of all Louisiana—an undefined region—was given to the company. The sole conditions were homage to the French monarch and a gold crown at the beginning of every reign. With a capital of 40,000,000 livres, Law and his associates entered upon a great scheme of commerce and colonization. Armed vessels bearing troops and colonists were soon seen upon the ocean. Law appointed Bienville governor of the domain, and he selected the site of New Orleans for its capital, where, in February, 1718, he left fifty persons to clear the ground and to build. Great prosperity was promised. The shares of the company rose in value, and in May, 1719, Law obtained from the regent power to join with it the French East India Company, having the exclusive right of trading beyond the Cape of Good Hope. Then the name of the association was changed to "The Indian Company," and it was authorized to issue 50,000 new shares. It made concessions of land to private adventurers under the control of the company, and these sent out settlers. New establishments for trade were opened on the Mississippi, the Red, and the Missouri rivers, and these plantations proved to be permanent ones. Success caused Law to venture upon the gigantic scheme of paying off a large portion of the public debt of France through the operations of the company. It was proposed to take up, by the issue of company stock, government stock to the amount of 1,500,000,000 livres, in exchange for the privilege of collecting the revenues of the kingdom. The new shares were sought for by the French people with such avidity that 300,000 new shares were applied for when there were but 50,000 to distribute. The enlargement of currency and universal confidence in Law made every form of industry prosperous. But the attempt of a company of directors in Paris to manage a colony in America, the dishonesty of agents, the reliance for profit on mines that were never found and upon tobacco that was never cultivated, together with the wild spirit of speculation that convulsed all France and made it a nation of lunatics, soon brought the operations of the company to an end. Shares had risen from the par value of 500 livres to 5000 livres. When the purchasers at the latter rate began to buy something else besides shares the bounds quickly fell. Depreciation was rapid, and widespread ruin was the consequence. (See *Law's Bubble*.)

Western Department, THE, was created July 6, 1861, and General John C. Frémont was appointed the commander of it. It comprised the state of Illinois and the states and territories west of the Mississippi River and east of the Rocky Mountains, including New Mexico. Headquarters, St. Louis.

Western Frontiers, THE FRENCH ON THE. The movements of the English towards the waters of the Ohio (see *Ohio Land Company*) determined the French to strengthen their power in that region. They enlarged and made stronger their trading-post on the Niagara; obtained leave to build a fort in the Mohawk country; built strong vessels for Lake Ontario at Frontenac (now Kingston); established friendly relations with the Delawares and Shawnoese, who had been driven from Pennsylvania by the pressure of advancing settlements; and, under the instructions of the Marquis Duquesne, the successor of Joncaire (or Jonquiere), as governor of Canada, made vigorous preparations for the defence of French dominion west of the Alleghany Mountains. They burned the Miami village at Sandusky because they would trade with the English, and seized the persons and property of the white traders. Early the next year (1753) twelve hundred men from Montreal built a fort at Presque Isle (now Erie), on the southern shores of Lake Erie, whence they crossed the tributaries of the Ohio and established military posts at Le Boeuf, on the Venango (French Creek), now the village of Waterford, and another at Venango, at the junction of French Creek and the Alleghany River, now the village of Franklin. These facts having been reported to the Board of Trade, that body implored the king to cause orders to be issued to the governors of Pennsylvania and Virginia to repel force by force whenever the French were found within the undoubted limits of their provinces.

Western Lands, DISPOSITION OF. There was a "lion in the way" of the ratification of the Articles of Confederation (which see)—namely, the vexed question of the Western lands, within vague or undefined boundaries of states. The boundaries of New Hampshire, Rhode Island, New Jersey, Pennsylvania, Delaware, and Maryland—six of the thirteen—had boundaries exactly defined. These were "non-claimant states." Massachusetts, Connecticut, Virginia, and the Carolinas extended, under their charters, to the Pacific Ocean, or to the Mississippi River since that had been established (1763) as the western boundary of British possessions in America. Georgia also claimed jurisdiction to the Mississippi; so, also, did New York, under color of certain alleged acknowledgments of her jurisdiction made during colonial times by the Six Nations, the conquerors, it was pretended, of the whole Western country between and including the Great Lakes and the Cumberland Mountains below the Ohio River. These were "claimant states." As all that vast territory was to be wrested from Great Britain by joint efforts, it was claimed that it ought to be joint property. The "claimant states" expected great revenues

from these Western lands that would pay their debts, and they strenuously adhered to their rights; while the landless, or "non-claimant, states" regarded with jealousy the prospect of the overflowing treasuries of their neighbors. The claimant states secured the insertion of a provision in the Articles of Confederation (which see) that no state should be deprived of territory for the benefit of the United States. All the non-claimant states excepting Maryland reluctantly consented to this provision; the latter steadily refused to sign the articles while that provision was retained. New York led the way towards reconciliation by giving a discretionary power to her delegates in Congress (February, 1780) to cede to the Union that portion of her claim west of a north and south line drawn through the western extremity of Lake Ontario. The other claimant states were urged by the Congress to follow this example, under a guarantee (Sept. 6, 1780) that the lands so ceded should be disposed of for the common benefit, and, as they became peopled, should be formed into republican states to be admitted into the Union as peers of the others. Connecticut offered (Oct. 10, 1780) to cede her claims to the region west of Pennsylvania, excepting a broad tract south of Lake Erie, immediately adjoining Pennsylvania. This was afterwards known as the Connecticut Reserve. Virginia ceded to the United States (Dec. 31, 1780) all claim to the territory northwest of the Ohio, provided that state should be guaranteed the right to the remaining territory east of the Mississippi and north of 30° 30' north latitude. The New York delegates executed a deed to the United States (March 1, 1781) of the territory west of the line before mentioned; and on the same day the delegates from Maryland, authorized by the Assembly immediately after the Virginia cession, signed the Articles of Confederation. This completed the ratification of that fundamental law of the Union, and henceforth it was the supreme constitution until superseded by another and a better one.

Western Reserve (CONNECTICUT), OHIO. Connecticut claimed, by the terms of its royal charter, its title to lands west of it to the Pacific Ocean; but on Dec. 31, 1781, that state ceded to the United States all soil so claimed, excepting a large tract now containing several counties in northwestern Ohio. This became known as the Connecticut Western Reserve. It was ceded to the United States May 30, 1801, but its title is perpetuated in the names of institutions in that region. The fine city of Cleveland, on Lake Erie, is within its domain. The tract contained 3,666,921 acres.

Western Reserve, TROOPS FROM THE. During the autumn of 1812, while Harrison was making his way northward, northwestern Ohio, and especially the Western Reserve (which see), was alive with excitement. General Wade-worth, part owner of the reserve, and commander of the four divisions of the Ohio militia, was active and efficient in promoting measures for the defence of the frontier. He had

been an active soldier of the Revolution, and he entered upon his new duties with great energy, although sixty-five years of age, having for his aides-de-camp the late Elisha Whittlesey, of Canfield, O., and the late Benjamin Tappen, of Steubenville, O. When intelligence of the surrender of Hull reached General Wadsworth at Canfield, and the alarm concerning the imminence of invasion stirred the people, he issued orders to the brigadiers of his division to muster the militia. They gathered with great alacrity, and marched in large numbers towards the frontier. At Cleveland they met some of Hull's paroled soldiers, who had just landed, and whose stories increased the panic, and families along the lake fled eastward or towards the Ohio River. From Cleveland Wadsworth sent word to the War Department that he had called out three thousand men of his division; but they were destitute of equipments, and he asked for a supply. Without waiting for a reply (the exigency was great), he appointed commissioners of supply, and gave receipts in the name of the government. His course was sanctioned by the department. He was joined, Aug. 26, by a large body of troops under General Simon Perkins. He sent Perkins forward, and very soon these hardy men of the Reserve and its vicinity opened a road, with great labor, to the rapids of the Maumee for the facile transportation of troops and supplies to Harrison's Army of the Northwest. This was a great public service.

Western States, MOVEMENTS IN THE (1861). Ohio took measures for the defence of the Union very early. The Legislature pledged (Jan. 14, 1861) the entire resources of the state for that purpose. That pledge was reiterated two months later, when, on the day Fort Sumter was attacked (April 12), an act for the enrolment of the militia of the state was passed and provision made for mustering troops into the service of the United States. At the end of the twenty days allowed by the President (see *President Lincoln's First Call for Troops*) a stirring order was sent forth by the adjutant-general of the state (H. B. Carrington) for the organization of 100,000 men as a reserve force. The people contributed freely of their means for fitting-out troops and providing for their families. Captain George B. McClellan (then in the Civil Service) was commissioned a major-general and made commander of all the Ohio forces, and camps for rendezvous and military instruction were formed. So Ohio prepared for a great war.—*Indiana* moved as promptly and vigorously. The vigilant governor, Morton, perceived a heavy storm approaching. All the means at command for arming his state militia when the President called for troops were five thousand second-class muskets which he had procured from Washington. The militia were unorganized, and there was no adjutant-general. There was at that time an energetic young lawyer (Lewis Wallace) residing at Crawfordsville who had served in the army in Mexico at the age of nineteen years and possessed military spirit and genius. The govern-

or called him to his aid. He promptly responded in person (April 16). "I want to appoint you adjutant-general of the state," said the governor. "The President has called for six regiments to put down a rising rebellion, and I want you to assist me." Wallace inquired for the office of the adjutant-general, for the books, and the law defining the duties. "There are none," replied the governor. "Your immediate business is the raising of six regiments." "Have you objections to giving me one of them after they are raised?" asked Wallace. "You shall have one of them," was the answer. Such was the unprepared condition for the exigency of a state which afterwards sent 200,000 troops to the field. Three days after the above conversation Wallace reported the sixty companies for the six regiments complete and in Camp Morton, adjoining Indianapolis. He reported, in addition, more than eighty companies organized and ready to move. Within the next twenty-four hours Wallace had organized his own regiment—Eleventh Regiment Indiana Volunteers (Zouaves)—ready for marching orders. Within four days after the President's call for 75,000 troops, more than 10,000 Indians were in camp.—*Illinois*, under the vigorous leadership of Governor Yates, was early upon the war-path. On receiving the President's call for troops, the governor issued a stirring appeal to the people; and in less than twenty-four hours afterwards 4000 men reported themselves ready and anxious for service. By the 20th the quota of the state (six regiments) was more than filled. Of these, 2000 were sent to Cairo, at the confluence of the Ohio and Mississippi rivers, a place of great strategic importance during the war that ensued. The state lost an able representative and advocate for suppressing the rising rebellion by the death of Senator Douglas (Jan. 3), whose last coherent utterances were exhortations to his children and his countrymen to stand by the Constitution and the government. The Legislature of Illinois appropriated \$3,000,000 for war purposes, organized its militia, and sent thousands to the field.—*Michigan* was equally aroused by the call of the President, who asked for only one regiment from that state. Within ten days five regiments were ready for the field and more were forming. Governor Blair called the Legislature together (May 7), when liberal appropriations were made for war purposes. The Legislature of Wisconsin, under the lead of Governor Randall, was equally liberal. And these patriotic examples in furnishing men and money for the war were followed by Minnesota and Iowa. Before the close of 1861 Minnesota sent more soldiers to the field than its entire population numbered eleven years before.

Western Virginia, EARLY MILITARY EVENTS IN (1861). Governor Letcher had concentrated troops at Grafton, on the Baltimore and Ohio Railway, under Colonel Porterfield. A camp of Ohio volunteers had assembled opposite Wheeling. George B. McClellan was commissioned a brigadier-general of volunteers and assigned to the Department of the Ohio, which included

western Virginia and Indiana. A regiment of loyal Virginians had been formed at Wheeling, and B. F. Kelley, a native of New Hampshire, and once a resident of Wheeling, was invited to be its leader. It rendezvoused at the camp of the volunteers. Having visited Indianapolis and assured the assembled troops there that they would soon be called upon to fight for their country, McClellan issued an address (May 26, 1861) to the Union citizens of western Virginia; and then, in obedience to orders, he proceeded with volunteers—Kelley's regiment and other Virginians—to attempt to drive the Confederate forces out of that region and advance on Harper's Ferry. He assured the people that the Ohio and Indiana troops under him should respect their rights. To his soldiers he said, "Your mission is to cross the frontier, to protect the majesty of the law, and secure our brethren from the grasp of armed traitors." Immediately afterwards Kelley and his regiment crossed over to Wheeling and marched on Grafton. Porterfield fled in alarm, with about fifteen hundred followers (one third cavalry), and took post at Philippi, about sixteen miles distant. The Ohio and Indiana troops followed Kelley, and were nearly all near Grafton on June 2. There the whole Union force was divided into two columns—one under Kelley, the other under Colonel E. Dumont, of Indiana. These marched upon Philippi by different routes, over rugged hills. Kelley and Porterfield had a severe skirmish at Philippi. The insurgents, attacked by the other column, were already flying in confusion. The Union troops captured Porterfield's official papers, baggage, and arms. Colonel Kelley was severely wounded, and Colonel Dumont assumed the command of the combined columns. They retired to Grafton, where for a while the headquarters of the National troops in northwestern Virginia were established. So the Civil War was begun in western Virginia.

Western Virginia, SERVICES OF NATIONAL TROOPS IN. After the dispersion of Garnett's forces in western Virginia (see *Rich Mountain, Battle of*, and *Carricksford, Battle at*), events seemed to prophesy that the war was ended in that region. General Cox had been successful in driving ex-Governor Wise and his followers out of the Kanawha region. He had crossed the Ohio at the mouth of the Guyandotte River, captured Barboursville, and pushed on to the Kanawha valley. Wise was there, below Charlestown. His outpost below was driven to his camp by fifteen hundred Ohio troops under Colonel Lowe. The fugitives gave such an account of Cox's numbers that the general and all the insurgents fled (July 20, 1861), and did not halt until they reached Lewisburg, the capital of Greenbrier County. The news of Garnett's disaster and Wise's incompetence so dispirited his troops that large numbers left him. He was reinforced and outranked by John B. Floyd (late United States Secretary of War), who took the chief command. McClellan regarded the war as over in western Virginia. "We have completely annihilated the enemy in western Virginia," he said in an address to

his troops. "Our loss is about thirteen killed, and not more than forty wounded; while the enemy's loss is not far from two hundred killed, and the number of prisoners we have taken will amount to at least one thousand. We have captured seven of the enemy's guns." Rosecrans succeeded McClellan in the chief command in that region, the former having been called to the command of the Army of the Potomac. But the Confederates were not willing to surrender to the Nationals the granaries that would be needful to supply the troops in eastern Virginia without a struggle, and General Robert E. Lee was placed in the chief command of the Confederate forces there, superseding the incompetents.

Weston's Colony. Mr. Weston, an active member of the Plymouth Company, sold out his interest in the affair and entered upon speculation on his own account. Sixty men, chiefly indentured servants, without women, were sent to the Plymouth colony to make a new and independent settlement not far away. They subsisted for two or three months on the bounty of the Plymouth people, and committed thefts and other crimes. Late in the year (1622) they established themselves at Wissagasset (now Weymouth), on the south shore of Massachusetts Bay, where they wasted their provisions and were reduced to great distress. They dispersed in small parties, begging or stealing from the Indians, who finally resolved to destroy the unwelcome intruders. At about that time Edward Winslow visited and healed the sick Massasoit, who, in gratitude, gave his healer warning of the plot. (See *Massasoit*.) Winslow hastened back and laid the matter before the governor, when Captain Standish was sent with eight men, under the pretext of trade, to ascertain the truth and warn the Wissagasset men of their danger. He was ordered, if the natives were hostile, to bring back the head of Wituwamut, a noted warrior, mentioned as the leader of the conspirators. Standish found the Indians full of defiance. Taking this as an evidence of their guilt, Standish, being with the obnoxious chief and three of his followers in a cabin, and having his men with him, closed the door, and at a given signal seized the knife of one of the warriors and stabbed Wituwamut to the heart. Two of the others were slain, and the third—a boy—was hanged. The Indians, alarmed, fled to the swamps, and several more of them were killed. Then the ill-favored plantation at Wissagasset was abandoned. Wituwamut's head was carried to Plymouth upon a pole and set up as a warning to the other Indians. This savage work distressed the good Robinson, who wrote to the Plymouth colonists, "Oh, how happy a thing would it have been that you had converted some before you killed any."

Weymouth, CAPTAIN GEORGE, VOYAGE OF. On March 5, 1605, Weymouth sailed from England for the coast of Maine. He came to anchor, May 17, near the Island of Monhegan, twelve miles south of Pemaquid. Then he en-

tered some of the bays and rivers of Maine, and saw (possibly) the White Mountains of New Hampshire. There was mutual distrust between Weymouth and the Indians, and the former decided to keep no faith with the latter. Five of the Indians who ventured on board the vessel were carried off to England, three of whom were given to Sir Ferdinando Gorges, at Plymouth; the other two were sent to Sir John Popham, of London. The curiosity excited by these Indians in London doubtless gave the idea expressed by Shakespeare in *The Tempest*, in which Trinculo says of the London people: "Any strange beast there makes a man: when they will not give a doit to relieve a lame beggar, they will lay out ten to see a dead Indian." Weymouth's kidnapping spread distrust and anger wide among the Indians on the Eastern coast. One of the Indians carried away came, in May, 1607, as guide and interpreter for a colony of one hundred and twenty persons, sent out in two vessels, commanded by Sir George Popham, to plant a colony in eastern New England. (See *Popham Colony*.)

Wheaton, FRANK, was born in Providence, R. I., May 8, 1833. A civil-engineer, he was employed in the Mexican boundary surveys (1850-55), and, in the latter year, became a lieutenant of United States cavalry, and was employed against the Indians. He was made captain of the First Cavalry early in 1861, and was lieutenant-colonel of the Second Rhode Island Volunteers at the battle of Bull's Run. He served through the campaign on the Peninsula, and fought in the battles of Manassas, Antietam, and Fredericksburg (which see); commanded a brigade at Gettysburg; was active in the campaign against Richmond in 1864, and commanded a division of the Sixth Corps in the Shenandoah valley under Sheridan. He went with Sheridan to the siege of Petersburg, and was at the surrender of Lee. He was breveted brigadier and major general of volunteers, and, in March, 1865, received the brevet of major-general United States Army, for "meritorious services during the rebellion." He was made lieutenant-colonel of infantry United States Army, in July, 1866, and was presented with a sword by the Legislature of Rhode Island.

Wheaton, HENRY, LL.D., diplomatist, was born in Providence, R. I., Nov. 27, 1785; died at Dorchester, Mass., March 11, 1848. He graduated at Brown University in 1802; studied law abroad, and began its practice at Providence. In 1812 he removed to New York, where he edited the *National Advocate*, in which the subject of neutral rights was discussed. From 1816 until 1827 he was reporter of the Supreme Court of the United States, and published twelve volumes of its decisions. In the New York Constitutional Convention of 1821, he was a prominent member, and was one of the commissioners to revise the statutes of the State of New York. From 1827 to 1835 he was chargé d'affaires to Denmark; resident minister at Berlin from 1835 to 1837, and, from 1837 to 1846, minister-plenipotentiary. He returned to New York in 1847,

and was made a professor of international law in Harvard University, but died before the time appointed for his installation. Mr. Wheaton was a voluminous writer upon various subjects, and as a reporter he was unrivalled. In 1843 he became a corresponding member of the French Institute, and the next year a foreign member of the Royal Academy of Sciences at Berlin. He wrote biography, history, and essays upon law. He is most widely known for his *History of the Laws of Nations in Europe and America from the Earliest Times to the Treaty of Washington* (a prize essay, written for the French Institute).

Wheeler's Raid in Tennessee. General Wheeler, Bragg's chief of cavalry, crossed the Tennessee River at Bridgeport with about 4000 mounted men, pushed up the Sequatchie valley (see *National Troops at Chattanooga*), and burned a National supply-train of nearly 1000 wagons (Oct. 2, 1863), on its way to Chattanooga. Just as he had finished his destructive work, Colonel E. M. McCook attacked him. The battle continued until night, when Wheeler, discomfited, moved off in the darkness and attacked another supply-train at McMinnville. This was captured and destroyed, and 600 men were made prisoners. Then, after the mischief was done, he was attacked (Oct. 4) by General George Crook, with 2000 cavalry. There was another sharp fight until dark, when Wheeler withdrew and pushed on towards Murfreesborough. He could do nothing, and turned southward, with his relentless pursuers at his heels, doing all the mischief in his power. At Farmington, below the Duck River, Crook struck him, cut his force in two, captured four of his guns and 1000 small-arms, with 200 of his men, besides his wounded, and drove him in confusion into northern Alabama. Wheeler made his way back to Bragg's army, with a loss of 2000 men, but had captured nearly as many and destroyed National property of the value, probably, of \$3,000,000.

Wheeler's Raid near Atlanta. Towards the close of July, 1864, Hood, commanding the Confederates at Atlanta, sent Wheeler, with the greater part of his cavalry, to capture National supplies, burn bridges, and break up railways in Sherman's rear. He moved swiftly, with about 8000 horsemen. He struck and broke the railway at Calhoun, captured 900 horses in that vicinity, and seriously menaced Sherman's depot of supplies at Allatoona, at the middle of August. This was at the time when Sherman was about to make his movement to flank Hood out of Atlanta. This movement brought Wheeler back. After the evacuation of Atlanta, Hood having crossed to the north side of the Chattahoochee, Wheeler swept around Allatoona, and, appearing before Dalton, demanded its surrender. The little garrison held out until Wheeler was driven away by General Steedman, who came down from Chattanooga. Then he pushed into East Tennessee, made a circuit around Knoxville, by way of Strawberry Plains, crossed the Clinch River, went over the Cumberland

Mountains, and appeared before McMinnsville, Murfreesborough, and Lebanon. National cavalry, under Rousseau, Steedman, and Granger, was on the alert, and soon drove the raiders into northern Alabama, by way of Florence. Although Wheeler had destroyed much property, his damage to Sherman's communications was very slight.

Wheellock, ELEAZAR, D.D., founder and first president of Dartmouth College, was born at Windham, Conn., April 22, 1711; died at Hanover, N. H., April 24, 1779. He graduated at Yale College in 1733; was pastor of a Congregational Church at Lebanon, Conn., in 1735, and remained there thirty-five years. He opened a school there in 1754, in which was a bright Indian pupil, Samson Occum. His proficiency led to the establishment of "Moore's Indian School," which eventually became Dartmouth College (which see).

Wheelwright, JOHN, was born in Lincolnshire, Eng., about 1592; died at Salisbury, Mass., Nov. 15, 1679. He was a graduate of Cambridge University, Eng., and a classmate of Cromwell. Being driven from his church by Archbishop Laud, in 1636, for nonconformity, he came to Boston and was chosen pastor of a church in (present) Braintree. Mr. Wheelwright seconded the theological views of Anne Hutchinson (which see), and publicly defended them, for which offence he was banished from the Massachusetts Bay Colony. He founded Exeter (which see), on a branch of the Piscataqua River; and when, five years later, that town was declared to be within the jurisdiction of Massachusetts, he removed, with his family, to Wells, Me. In 1646 he returned to Massachusetts, a reconciliation having been effected; and in 1657 he went to England. He returned in 1660, and became pastor of a church at Salisbury, Mass., in May, 1662.

Whigs and Tories. The word "Whig," in politics, is derived from "whig," or "whey," which the country people in the interior of England drank at their religious meetings. As these people were nonconformists, in Church and State, in the reign of Charles II. and James II., the term Whig came to be applied to all opposers of the throne and of the hierarchy. "Tory" seems to have been first applied to the wild Irish insurgents at the time of a massacre of Protestants in Ireland in 1640-41. The origin of the word is unknown. The name was applied to all High-Churchmen and royalists, and hence the name of Whig was given to all opposers of the royal government, and Tory to its supporters. This is the commonly received statement as truth concerning these political names. Another account says that the drivers of horses in certain parts of Scotland used the word "whiggamore" in driving, and were called "Whiggamores," and, shorter, "Whigs." An insurrectionary movement from that region, when about 6000 rude people marched on Edinburgh, was called the "Whiggamore inroad," and ever afterwards those who opposed the court were called Whigs. These distinctions were first

used in the English-American colonies about the year 1770.

Whipping in the Colonies was a very frequent method of punishment, especially in New England, for many of the minor offences against the good order of society. The stocks, the pillory, and the whipping-post were inherited by the colonists from England. In Massachusetts whipping was used almost daily, somewhere, as a theological argument against heretics, as well as a correction of social vices in which fines and imprisonments were inoperative. Whipping was the common punishment for Quakers in New England, without distinction of age or sex, especially after King Charles frowned upon the infiction of the death-penalty upon the Friends in Massachusetts. Whenever they found a Quaker preaching to the people the offender was lashed (often with a triple-knotted cord). Men and women were tied to the cart's tail and scourged from town to town. Three women preached in Dover, N. H., late in December, 1662, and were driven, from constable to constable, through several towns, receiving ten lashes from each, on their bared backs, though the weather was bitter cold and the snow deep. At one place, two bystanders, expressing sympathy for the poor women, were put into the stocks to suppress their humanity. In Cambridge, Mass., a woman, sixty-five years of age, was cast into jail, without food, and nothing to lie upon. A Friend brought her some milk, when he was fined £5 and put into the same jail. This old woman was whipped through three towns. She returned to Boston several times, and was whipped each time. She was last whipped there on the day when the active persecutor, John Endicott, was buried, in 1665. She attended the funeral, and was imprisoned immediately afterwards. Persecutions, in various forms—fines, stripes, imprisonments, personal mutilations, and injuries by mobs—were visited upon the Quakers everywhere; but only among the rigid Puritans of Massachusetts was the penalty of death ever inflicted upon them.

Whipple, ABRAHAM, was born at Providence, R. I., Sept. 26, 1733; died at Marietta, O., May

ABRAHAM WHIPPLE

26, 1819. He went to sea in early life, commanded a ship in the West India trade, and in

1759-60 was captain of a privateer, capturing in a single cruise twenty-six French vessels. His vessel was called the *Game Cock*. In June, 1772, Whipple commanded the volunteers who burned the *Gaspee* (which see) in Narraganset Bay. In 1775 he was put in command of two armed vessels fitted out by Rhode Island, and was given the title of commodore. With these he drove Sir James Wallace, in command of the frigate *Rose*, out of Narraganset Bay. (See *Wallace, Sir James*.) He was in command of a flotilla in the harbor of Charleston at the time of the siege and capture of that city in 1780, when he lost his vessels, was made a prisoner, and so continued during the remainder of the war. On the formation of the Ohio Company he took his family and settled at Marietta.

Whipple, AMIEL W., was born at Greenwich, Mass., in 1817; died at Washington, D. C., May 7, 1863. He graduated at West Point in 1841. Before the Civil War he was engaged, as topographical engineer, in ascertaining the northern boundary between New York and Vermont, and was an assistant of the Mexican Boundary Commission in 1849. Early in 1861 he was made chief-engineer on the staff of General McDowell, and was in the first battle of Bull's Run. In April, 1862, he was on General McClellan's staff, and was made brigadier-general of volunteers in July, 1863. From December, 1863, until the close of the war he was assistant adjutant-general of the Army of the Cumberland, and was active in the Atlanta campaign in 1864 and at the battle of Nashville (which see). He was breveted major-general of the United States Army in March, 1865.

Whiskey Insurrection, THE. Resistance to the excise on domestic spirits appeared in various places with more or less strength. In the region of the Regulators (which see) and Tory stronghold in North Carolina during the Revolution there was very strong opposition, but resistance far more formidable was made in the four counties of Pennsylvania west of the Alleghany Mountains. These counties had been chiefly settled by the Scotch-Irish, who were mostly Presbyterians, men of great energy, decision, and restive under the restraints of law and order. A lawless spirit prevailed among them. They converted their rye crops into whiskey, and when the excise laws imposed duties on domestic distilled liquors the people disregarded them. A new excise act, passed in the spring of 1794, was specially unpopular; and when, soon after the adjournment of Congress, officers were sent to enforce the act in the western districts of Pennsylvania they were resisted by the people in arms. The insurrection became general throughout all that region, stimulated by leading men in the community. In the vicinity of Pittsburgh many outrages were committed. Buildings were burned, mails were robbed, and government officers were insulted and abused. One officer was stripped of all his clothing, smeared with warm tar, and the contents of a feather bolster emptied upon him. The local militia formed a part of the armed

mob, at one time numbering between six and seven thousand men. The insurgent spirit spread into the neighboring counties of Virginia, and Washington and his cabinet perceived with alarm this imitation of the lawlessness of French politics. The situation was alarming and needed immediate attention. (See *Excise Law, Violent Opposition to the*.) He observed that the leaders in the insurrection were connected with the Democratic secret societies under the influence of the French Revolutionists. How widespread and insidious was this conspiracy against the laws of the country he knew not, but he was satisfied that only the leaders of these societies were aware of a traitorous plan; for he believed, with justice, that the great body of the insurgents were patriotic citizens. He took prompt measures to suppress the insurrection. Governor Mifflin refused to call out the militia of Pennsylvania, and Washington resolved to act with vigor. He issued a proclamation requiring the insurgents to desist; and under his authority as President of the United States (see *Militia, Organization of the*) he called upon the governors of Pennsylvania, New Jersey, Maryland, and Virginia for a body of thirteen thousand men, afterwards raised to fifteen thousand. The insurgent counties could bring sixteen thousand fighting men into the field. The troops were placed under the command of General Henry Lee, of Virginia, and their movement was fixed for Sept. 1. Meanwhile three commissioners were sent to the insurgent counties with discretionary authority to arrange for a submission to the laws. Two other commissioners were appointed by the State of Pennsylvania. The two boards crossed the mountains, and found the leading insurgents in convention at Parkinson's Ferry. Near by stood a liberty-pole, with the legend "Liberty, and no Excise! No asylum for cowards and traitors!" A committee of sixty was appointed, and a committee of fifteen met the commissioners at Pittsburgh. Among them were the leaders — Bradford, Marshall, Cook, Gallatin, and Brackenridge, a lawyer of Pittsburgh. Terms of submission were agreed to; to be ratified, however, by the votes of the people. There was still opposition, but the alacrity with which the President's call for militia was responded to settled the matter. The troops were moving, and complete submission was the result. A final convention at Parkinson's Ferry (Oct. 24, 1794) passed resolutions of submission to authority, that excise officers might safely proceed to their business, and that all excise duties would be paid. Gallatin, in the Assembly of Pennsylvania, in an able speech (December, 1794), admitted his "political sin" in the course he had taken in the insurrectionary movements. The government was strengthened by it. The cost of the insurrection to the national government was full \$1,500,000.

Whistler, GEORGE W., engineer, was born at Fort Wayne, Ind., May 19, 1800; died at St. Petersburg, April 7, 1849. He graduated at West Point in 1819, and resigned in 1833. He engaged in the construction of railroads in this country, and in 1842 became chief-engineer of the St. Pe-

tersburg and Moscow (Russia) Railroad, which he was engaged in constructing and equipping as sole superintendent. He was also employed in constructing extensive dock-yards at St. Petersburg.

White, ANTHONY WALTON, was born in Virginia in 1751; died in New Brunswick, N. J., Feb. 10, 1803. In February, 1776, he was appointed lieutenant-colonel of the Third New Jersey Regiment, and was in command of cavalry in South Carolina in 1780. He and most of his command were captured at Lanneau's Ferry in May of that year. Colonel White was greatly esteemed by Washington, who in 1798 chose him as one of his brigadiers of the Provisional Army.

White House, THE. The official residence of the President of the United States at the national capital is built of freestone and painted white, and is usually designated, particularly in political language, as "The White House." It is in the west part of the city of Washington, a mile and a half from the Capitol. It is two stories in height, one hundred and seventy feet in length, and eighty-six feet in depth. The corner-stone was laid in 1792, and it was first occupied by President Adams in the year 1800. It was burned by the British in 1814, and was restored and reoccupied in 1817.

White House, THE, IN VIRGINIA. Before the battle at Williamsburg (which see) General Franklin had been ordered, with a force from Yorktown, to flank the Confederates, but it was detained so long that it failed to effect its purpose. On the day of the battle (May 5, 1862) it moved, and arrived at the head of the York River that night, and the next day some Nationals encountered Johnston's rear-guard in the woods. After a conflict of three or four hours the Confederates were defeated. In this affair the Nationals lost one hundred and ninety-four men, mostly New-Yorkers; the loss of the Confederates was small. Near the White House—the estate that belonged to Mrs. Washington, on the Pamunkey, one of the streams that form the York River—Franklin was enabled to establish a permanent and important base of supplies for McClellan's army. The main army, meanwhile, moved up the Peninsula, and the general-in-chief and the advance of the main army arrived at the White House, about eighteen miles from Richmond, on May 16. The wife of General Robert E. Lee was a granddaughter of Mrs. Washington and owner of the White House estate. She was there, with a part of her family, when the Nationals approached, and fled towards Richmond, but was brought back. Under the impression that this was the house in which Washington resided a while after his marriage, it was carefully guarded as a pious relic of the Father of his Country; but when it was found that the white house sanctified by the presence of Washington had been burned more than thirty years before, all reverence for it was dismissed.

White, PEREGRINE, the first child of English parents born in New England, was a son of Will-

iam and Susanna White, born in the *Mayflower* while she lay in Cape Cod Bay, about Nov. 20, 1620. He died at Marshfield, Mass., July 22, 1704. He had borne civil and military offices in the colony.

White Plains, BATTLE AT. General Howe durst not attack the intrenched American camp on Harlem Heights, so he attempted to gain the rear of Washington's army, and hem them in on the upper part of Manhattan Island. To do this he landed a considerable force at Throgg's Point, Westchester County, and sent armed ships up the Hudson to cut off supplies for the Americans by water from the north and west. Perceiving the gathering of danger, Washington called a council of war at his headquarters on Harlem Heights, which was the deserted mansion of Roger Morris (yet standing in 1880), who

MORRIS'S HOUSE.

married Mary Phillipse. (See *Washington and Mary Phillipse*.) Morris espoused the cause of the crown, and had fled from his mansion with his family. At that council, held Oct. 16, 1776, it was determined to extend the army beyond the King's Bridge into Westchester County, abandoning the island, excepting the strong work known as Fort Washington, on the highest point of the island. Arranged in four divisions, under Generals Lee, Heath, Sullivan, and Lincoln, the army concentrated at the village of White Plains, and formed an intrenched camp. The two armies were each about thirteen thousand strong. On the morning of the 28th of October, after a series of skirmishes, one thousand six hundred men from Delaware and Maryland had taken post on Chatterton's Hill, a lofty eminence west of the Bronx River (a small stream), and to these General McDougall led reinforcements, with two pieces of cannon under Captain Alexander Hamilton, and took the chief command there. Washington, with the rest of the army, was on the lower ground just north of the village. The British army advanced to the attack in two divisions, the right led by Sir Henry Clinton and the left by Generals De Heister and Erskine. Howe was with the latter. He had moved with great caution since his landing. Inclining his army to the left, he planted almost twenty field-pieces on the slope south of the village, and under cover of these a bridge was constructed, and British and German troops

passed the Bronx and attacked the Americans on Chatterton's Hill. Hamilton's little battery made them recoil at first, but, being reinforced, they drove the Americans from their position. McDougall led his troops to Washington's camp, leaving the British in possession of the hill. Washington's breastworks were composed of corn-stalks covered rather hastily and lightly by earth; but they appeared so formidable that Howe durst not attack them, but waited for reinforcements. Just as they appeared a severe storm of wind and rain set in. Washington, perceiving Howe's advantage, withdrew under

orders in England in April, 1772. Returning to Philadelphia, he became assistant minister of Christ Church and St. Peter's, and in April, 1779, was chosen rector of those churches. He was elected chaplain to Congress at York, Penn., in 1778. Dr. White presided at the first convention of the Protestant Episcopal Church in America in 1785, and the constitution of that Church was written by him. The diocese of Pennsylvania elected him bishop in 1786, and he was consecrated by the Archbishop of Canterbury, Feb. 4, 1787, returning to Philadelphia on Easter-day. Bishop White was very active in the Church and

CHATTERTON'S HILL, FROM THE RAILWAY STATION, 1850.

cover of darkness, in the night of Oct. 31, behind intrenchments on the hills of North Castle, towards the Croton River. Howe did not follow; but, falling back, encamped on the heights of Fordham. The loss of the Americans in the skirmishes on the 26th of October and the battle on the 28th did not exceed, probably, three hundred men in killed, wounded, and prisoners; that of the British was about the same. Washington occupied as his headquarters while at White Plains a house on the east side of the road about two miles above the village. It was then in the deep solitude of the forest.

White, WILLIAM, D.D., Protestant bishop of the diocese of Pennsylvania, was born in Philadelphia, April 4, 1748; died there, July 17, 1836.

WILLIAM WHITE.

He graduated at Philadelphia College in 1765, studied theology, and was admitted to priest's

in society. He was president of the Philadelphia Bible Society, of the Dispensary, of the Prison Society, and of the societies for the benefit of the Deaf and Dumb and the Blind. He wrote, and published in 1820, *Memoirs of the Protestant Episcopal Church in the United States*.

Whitefield, GEORGE, was an exceedingly earnest worker for the good of souls. He was born in Gloucester, Eng., Dec. 16, 1714; died at Newburyport, Mass., Sept. 30, 1770. He was a religious enthusiast in very early life, fasting twice a week for thirty-six hours, and at the age of eighteen became a member of the club in which the denomination of Methodists took its rise. He became intimately associated in religious matters with John and Charles Wesley. In 1736 he was ordained deacon, and preached with such extraordinary effect the next Sunday that a complaint was made that he had driven fifteen persons mad. The same year the Wesleys accompanied Oglethorpe to Georgia, and in 1737 John Wesley invited Whitefield to join him in his work in America. He came in May, 1738; and after laboring four months, and perfecting plans for founding an orphan-house at Savannah, he returned to England to receive priest's orders and to collect funds for the carrying-out of his benevolent plans. With more than \$5000 collected he returned to Savannah, and there founded an orphan-house and school, laying the first brick himself for the building, March 25, 1740. He named it "Bethesda"—a house of mercy. It afterwards became eminently useful. Mr. Whitefield was early accustomed to preach to large congregations assembled in the open air. He travelled and preached much in America. On Boston Common he addressed twenty thousand people at one time, and was distinctly heard by all. Independent in his theology, he did not entirely agree with anybody. Although he was active in the establishment of the Methodist denomination, he disagreed with Wesley on points of doctrine, and was finally an evangelist without the discipline of any denomination. Whitefield crossed the Atlantic many times, and made tours in America from Georgia to New Hampshire. In September, 1769, he

started on his seventh tour there, and the day before his death he preached two hours at Exeter, N. H., and the same evening addressed a crowd in the open air at Newburyport. He died of asthma the next day, and was buried under the pulpit of the Federal Street Church in that town. In 1741 Mr. Whitefield married a widow, whose death in 1768, his friends said, "Set his mind much at rest."

Whitefield's Orphan-house. The heart of Whitefield was touched by the condition of children in Georgia who had lost their parents, and he resolved to found an orphan-asylum near Savannah. (See *Whitefield, George*.) To collect money for that purpose he took a religious tour through England and the colonies, preaching with fervid eloquence to crowds of attentive listeners. Having collected funds, the orphan-house was established (1740) about nine miles from Savannah, and was called "Bethesda"—house of mercy. The project was first proposed to Whitefield by his friend Charles Wesley, who, with his brother John, had been in Georgia for a season. While the house was being built, Whitefield, in a large house he had hired in Savannah, began the good work among the orphan children and deserving poor, opening a school for them. At one time his family consisted of between sixty and seventy. He also erected an infirmary, in which many sick people were taken care of without cost. The great orphan-house finished, the orphan children were gathered there, and in due time were installed in comfortable homes. Attached to the house was a considerable plantation, which was managed with prudence. The place was a healthy one—"Not above one," wrote the founder in 1746, "and that a little child, has died out of our family [of twenty-six] since it removed to Bethesda." "The house," he wrote, "is a noble, commodious building, and everything sweetly adapted for bringing up youth."

Whiting, WILLIAM HENRY CHASE, was born in Massachusetts in 1825; died on Governor's Island, harbor of New York, March 10, 1865. He graduated at West Point in 1845, entered the Engineer Corps, and in February, 1861, left the army and entered the Confederate service, where in he was made chief-engineer, with the rank of major, in the Army of the Shenandoah, under General Joseph E. Johnston. He was a brigadier-general in the battle of Bull's Run. In 1863 he was made a major-general. He built Fort Fisher, at the mouth of the Cape Fear River, and was in command during both attacks upon it. (See *Fort Fisher, Capture of*.) He was severely wounded, and was made prisoner by General Terry. Of these wounds he died.

Whitney, ELI, was born at Westborough, Mass., Dec. 8, 1765; died at New Haven, Conn., Jan. 8, 1825. He graduated at Yale College in 1792. Largely by the earnings of his own hands he obtained a collegiate education. In the year of his graduation he went to Georgia, became an inmate of the family of Mrs. General Greene, and there invented his cotton-gin, which gave a wonderful impulse to the cultivation of the cot-

ton-plant, rendering it an enormous item in the foreign and domestic commerce of the United States. (See *Whitney's Cotton-gin*.) By theft and injustice he was long deprived of the fruits of his labor. The Legislature of South Carolina voted him \$50,000, which, after vexatious delays and lawsuits, was finally paid. North Carolina allowed him a percentage for the use of the gin for five years. Congress, through the influence of the representatives of cotton-growing communities, having refused to renew his patent, he engaged in the manufacture of fire-arms for the government during the War of 1812-15, and finally gained a fortune. He applied his inventions to other manufactures of iron and steel. His factory was at Whitneyville, near New Haven.

Whitney's Cotton-gin. The seeds of the cotton raised in the United States adhered so firmly to the fibre that it was difficult to separate them from it. The seeds were separated from the cotton-wool by the slow process of picking by human fingers, which was chiefly performed by negro women and children. The separation of one pound of the wool from the seeds was regarded as a good day's work for one woman. So limited was the production on account of the labor that even high prices did not stimulate its cultivation, and the entire cotton crop in the United States in 1791 was only about 2,000,000 pounds. The following year Eli Whitney, a young schoolmaster of Massachusetts, accepted an invitation to teach the children of a Georgia planter. He arrived there too late, and the widow of General Greene, living near, gave the young stranger a home in her house. He displayed much inventive genius, which Mrs. Greene encouraged. One day some gentlemen at her table expressed a regret that there was no machine wherewith the cotton-wool could be readily separated from the seed. "Apply to my young friend here," said Mrs. Greene; "he can make anything." Whitney had then never seen a cotton-seed with wool adhering. He was furnished with some. With rude plantation tools, he constructed a machine that performed the work. This was the origin of the saw-gin, which, with some improvements, is universally used on American plantations. Some of Mrs. Greene's neighbors were called in to see the working of it. They were astonished and delighted. Phineas Miller, a college-mate of Whitney, had come to Georgia, and soon became the second husband of Mrs. Greene. Having some money, he formed a copartnership with Whitney in the manufacture of gins. The machine was locked from public view until a patent could be procured. Planters came from all parts of South Carolina and Georgia to see the wondrous machine which could do the work in a day of one thousand women. The workshop of the inventor was broken into and the model was carried off. Imperfect machines were made by common mechanics, which injured the fibre and defamed the machine for a while. The gin was patented (1793) before any were made. The violators of the patent were prosecuted, but packed juries gave sweeping verdicts against the owners.

Even state legislatures broke their bargains with them, or, like South Carolina, long delayed to fulfil them; and when, in 1812, Whitney asked Congress for an extension of his patent, the members from the cotton-growing states, whose constituents had been enriched by the invention, vehemently opposed the prayer of the petitioner, and it was denied. Thenceforth those who had wronged Whitney, in defiance of law and justice, were permitted to continue the wrong under the protection of law. The immediate influence of Whitney's cotton-gin upon the dying institution of slavery was most remarkable. It played an important part in the social, commercial, and political history of our country for seventy years. The increased production of cotton made an enormous demand for slave-labor in the preparation of the soil, the ingathering of the harvest, and the preparation of it for market. Its effects upon the industrial pursuits of nearly one half the nation were marvellous. Such, also, were its effects upon the moral and intellectual condition of the people in the cotton-growing states. Before 1808 (after which time the national Constitution prohibited the prosecution of the African slave-trade) enormous numbers of slaves were brought to the country. The institution had been unprofitable, and was dying. The cotton-gin revived it, made it strong and powerful, and cotton, its representative, assumed to be king of the nation, and for fifty years swayed an imperial sceptre almost unchallenged. Eli Whitney, a Yankee schoolmaster, built the throne of King Cotton, but was denied his just wages by the subjects of the monarch.

Whittaker, REV. ALEXANDER, accompanied Sir Thomas Dale to Virginia in 1611. He was comfortably settled in England, but the zeal of a missionary spirit impelled him to enter the field in Virginia. Sir Thomas had been active in planting a settlement at Henrico (see *Henrico College*), composed largely of Hollanders, and Mr. Whittaker, who was a decidedly Low Churchman, it was thought would be in sympathy with them. And so he seems to have been. He was puritanical in his proclivities. "The surplice," says Purchas, "was not even spoken of in his parish." He organized a congregation at Henrico, and there he preached until 1617, when he was drowned.

Whittemore, AMOS, inventor, was born at Cambridge, Mass., April 19, 1759; died at West Cambridge, March 27, 1828. Reared a farmer, he became a gunsmith, and then, with his brother, a manufacturer of cotton- and wool-cards, or card-cloth. He claimed to have invented a machine for puncturing the leather and setting the wires, which was patented in 1797. But there is evidence which shows that he undoubtedly used the invention of a poor man named Eleazar Smith, to whom Whittemore loaned money to enable him to perfect his invention. (For fuller information, compare *The American Centenary*, pp. 227, 228.) Before that time the work had been performed slowly by hand. The establishment of spinning machinery in New England (see *Slater, Samuel*) had made the business

of card-making profitable, and so useful was Whittemore's machine that the patent was sold for \$150,000. His brother Samuel afterwards repurchased it and carried on the business of making card-cloth.

Whittier, JOHN GREENLEAF, was born at Haverhill, Mass., Dec. 17, 1807. His parents were Quakers, and he has remained a member of the Society of Friends. Until he was eighteen years old he worked on his father's farm, and sent occasionally some verses to the local newspaper — *Haverhill Gazette*. Sometimes he worked at shoemaking. In 1829 he became editor of the *American Manufacturer*, at Berlin. The next year he was editing in Hartford, Conn.; and from 1832 to 1836 he edited the *Gazette*, at Haverhill. His first publication of any pretension was his *Legends of New England* (1831), when he was twenty-four years of age. Others soon followed. So early as 1833 he began to battle for the freedom of the slaves in our country, and he never ceased warfare against the slave system until it disappeared in 1863. He was elected Secretary of the Anti-slavery Society in 1836, and edited, in Philadelphia, the *Pennsylvania Freeman*, devoted to its principles. In 1840 Mr. Whittier removed to Amesbury, Mass., where he resided until about 1873, cultivating a small farm. In 1847 he became corresponding editor of the *National Era*, an anti-slavery paper published at Washington, D. C. He wrote a *Centennial Hymn* for the opening of the Centennial Exhibition at Philadelphia, May 10, 1876, where it was sung by a choir of one thousand voices, accompanied by Thomas's orchestra. Mr. Whittier is a thoroughly American poet, and most of his verses have been inspired by current events. The spirit of humanity, democracy, and patriotism expressed in his poems and prose writings make the public regard him with reverential affection. Mr. Whittier has never married.

Whittlesey, CHARLES, was born at Southington, Conn., Oct. 5, 1808, and went to Tallmadge, O., in 1813. He graduated at West Point in 1831, resigned the next year, and became a lawyer. Afterwards he engaged in journalism, and in geological and mineralogical surveys of Ohio at different periods from 1837 to 1860. He became Assistant Quartermaster-general of Ohio in 1861; engaged in the campaign in western Virginia in the summer of that year; and became colonel of volunteers in Kentucky and Tennessee. He was at the siege of Fort Donelson, and in the battle of Shiloh commanded a brigade in General Lew. Wallace's division, rendering important service. (See *Shiloh, Battle at*.) He resigned a few days after this event. He is the author of several biographical, historical, and scientific works. He was one of the founders and the president of the Western Reserve Historical Society, at Cleveland.

Wigfall at Fort Sumter. Senator Wigfall, when he left the halls of legislation at Washington, hastened to Charleston and became a volunteer on the staff of General Beauregard. He was on Morris Island when the bombardment of Fort Sumter began (see *Fall of Fort Sumter*),

and on Saturday, April 13, he went in a boat to Sumter, accompanied by one white man and two negroes. He carried a white handkerchief on the point of a sword as a flag of truce. Landing, he hastened to an embrasure and asked permission to enter. The soldiers would not let him. "I am General Wigfall," he said; "I wish to see Major Anderson." "Wait till I see the commander," said the soldier. "For God's sake, let me in!" cried Wigfall; "I can't stand it out here in the firing." He ran to the sally-port, and was confronted by burning timbers. He ran around the fort, waving his handkerchief to induce his fellow-insurgents to cease firing. But the missiles fell thick and fast, and he was permitted to crawl into an embrasure, after he had given up his sword to a private soldier. There he met some of the officers. Trembling with excitement, he said, "I am General Wigfall; I come from General Beauregard, who wants to stop this bloodshed. You are on fire, and your flag is down; let us stop this firing." One of the officers said, "Our flag is not down." And the senator saw it where Peter Hart had planted it. He tried to get the officers to display his handkerchief above the fort or out of the embrasure; but all refusing, he said, "May I hold it, then?" One of them coolly replied, "If you wish to." Wigfall sprang into the embrasure and waved the white flag several times. Frightened away by shots, he said to one of the officers, "If you will wave this from the ramparts they will cease firing." "It shall be done," was the reply, "if you request it for the purpose, and that alone, of holding a conference with Major Anderson." They met. Wigfall said he came from General Beauregard, who wished to stop the fighting. "Upon what terms will you evacuate the fort?" "General Beauregard knows the terms upon which I will evacuate on the 15th. Instead of noon on the 15th, I will go now." "I understand you to say," said Wigfall, eagerly, "that you will evacuate the fort now, sir, upon the same terms." Anderson answered in the affirmative. "Then," said Wigfall, inquiringly, "the fort is to be ours?" "Yes, sir." "Then I will return to Beauregard," said Wigfall, and he departed. Believing Wigfall's story, Anderson allowed a white flag to be raised over the fort. Soon afterwards several gentlemen (one of them directly from Beauregard at Fort Moultrie) came to Sumter, and, when they were informed of Wigfall's visit, assured Major Anderson that the Texan conspirator had not seen Beauregard in two days. The indignant Anderson was about to haul down the white flag, when they begged him to let it remain until they could see Beauregard. An arrangement for the evacuation was soon after made. (See *Fall of Fort Sumter*.)

Wigfall's Defiance. Unfortunately for the fair fame of Texas, its representative in the Senate of the United States at the close of Buchanan's administration was Louis T. Wigfall, a man unworthy of her people. By his coarseness of speech, vulgarity of deportment, and eagerness to display his treasonable intentions and contempt for all people outside the slave-labor

states, he did as much as any other man, excepting Toombs, to irritate the feelings of the people of a large part of the Union. He kept his seat in the Senate long after more honorable men had left theirs, because, as they averred, their respective states, like Texas, were "out of the Union." Even in the brief session of the Senate when the nominations were confirmed, Wigfall displayed his insolence in a manner that made his own political friends blush. Commenting on Mr. Lincoln's inaugural address, he said: "It is easy to talk about enforcing the laws and holding, occupying, and possessing the forts. When you come to do this, bayonets, and not words, must settle the question. . . . Fort Pickens and the administration will soon be forced to construe the inaugural. . . . The Confederate States will not leave Fort Sumter in possession of the Federal government. . . . Seven states have formed a confederation, and to tell them, as the President has done, that the acts of secession are no more than blank paper, is an insult. . . . There is no Union left. . . . The seceded states will not live under this administration. Withdraw your troops. Make no attempt to collect tribute, and enter into a treaty with those states. Do this and you will have peace. Send your flag of thirty-four stars thither and it will be fired into, and war will ensue. Divide the public property; make a fair assessment of the public debt; or will you sit stupidly and idly till there shall be a conflict of arms because you cannot compromise with traitors? Let the remaining states reform their government, and, if it is acceptable, the Confederacy will enter into a treaty of commerce and amity with them. If you want peace, you shall have it; if you want war, you shall have it. . . . No compromise or amendment to the Constitution, no arrangement you may enter into, will satisfy the South, unless you recognize slaves as property and protect it as any other species of property." The cowardice and mendacity of Wigfall displayed at Fort Sumter in less than a month afterwards was a biting commentary on the boastful speech in the safety of the Senate chamber. (See *Fall of Fort Sumter*.)

Wigwam, the name of the dwelling of the wild Indian tribes. They are constructed of a

AN INDIAN WIGWAM.

bundle of poles fastened together at the top and placed in a cone-like position. These poles

are then covered with the bark of trees or the skins of beasts. In winter a fire is built in the centre, and the inmates sleep at night with their feet towards it. The smoke escapes through the top. In migrations the wigwam is carried along.

Wilcox, ORLANDO BOLIVAR, was born in Detroit, Mich., April 16, 1823, and graduated at West Point in 1847. He served in Texas and in Florida, and resigned in 1857. In May, 1861, he became colonel of a Michigan regiment, and was the first to arrive at Washington city after the call of the President in April, 1861. With Colonel Ellaworth, he took possession of Alexandria. He commanded a brigade in the battle of Bull's Run, where he was severely wounded and made prisoner. On his exchange in 1862 he was made brigadier-general of volunteers, his commission dating from July 21, 1861. He was active in the Army of the Potomac until after the battle at Fredericksburg, and was temporarily in command of the Ninth Army Corps in Central Kentucky. In 1863-64 he was engaged in eastern Tennessee; and in the Richmond campaign, ending in the surrender of Lee, he commanded a division in the Ninth Corps. In March, 1865, he was breveted major-general United States Army.

Wilderness, BATTLE OF THE. At midnight on May 3, 1864, the Army of the Potomac, full 100,000 strong, fresh and hopeful, and with an immense army-train, began its march towards Richmond. The right was composed of the corps of Warren and Sedgwick, and the left of that of Hancock. Warren's cavalry, preceded by that of Wilson, crossed the Rapid Anna at Germania Ford on the morning of the 4th, followed by Sedgwick. The left, preceded by Gregg's cavalry, and followed by the entire army-train of wagons, four thousand in number, crossed at Ely's Ford at the same time. Burnside's Ninth Corps, left behind in anticipation of a possible move of Lee on Washington, crossed the Rapid Anna and joined the army on the 5th, when the whole force had pushed on into the region known as "The Wilderness," beyond Chancellorsville, and well on the right flank of the Confederate army lying behind strong intrenchments on Mine Run. The whole force of the National army was now about 130,000 men, of whom a little more than 100,000 were available for battle. When Lee discovered this movement he pushed forward nearly his whole army to strike the flanks of the Nationals on their march. This movement failed. On the 5th Warren, who was followed by Sedgwick, sent the divisions of Griffin and Crawford to make observations. The former was struck by Ewell's corps, and the latter by Hill's, a little later. The march was suspended. Crawford was withdrawn, and Griffin, reinforced by Wadsworth's division, with Robinson's in support, soon defeated the advance of Ewell; but, being continually reinforced, the Confederates soon defeated the Nationals. It was now past noon. Grant was satisfied that Lee's troops were near in full force. The coun-

try was so covered with shrub-oaks, bushes, and tangled vines that no observations could be made at any great distance. Grant ordered up Sedgwick's corps to the support of Warren; while Hancock, who was nearly ten miles away, on the road to the left, marched back to join Warren. Getty's division of Sedgwick's corps was posted at the junction of two roads, with orders to hold the position at all hazards until the arrival of Hancock. The fighting, where it was begun in the morning, continued fierce and sanguinary until four o'clock in the afternoon, when both armies fell back and intrenched within two hundred yards of each other. Getty held his ground against severe pressure by Hill until Hancock's advance reached him at three o'clock. He then made an aggressive movement, and fighting was kept up until dark, with heavy losses on both sides. Burnside's corps was brought up in the night and placed between Hancock and Warren. Meanwhile Lee brought up Longstreet's corps to the support of Hill. And now each party in the contest was strengthened by an addition of 20,000 men. Just before five o'clock in the morning Ewell attacked the National right, and was repulsed. A very little later Hancock advanced his force against the Confederate right; while Wadsworth, who had prepared to strike Hill's left the night before, assailed him heavily. The Confederates were driven back a mile and a half, passing Lee's headquarters in the retreat. The flight was checked by Longstreet's advancing column. Hancock, expecting to be assailed by Longstreet, had attacked with only half his force. The latter's advance having been checked, he resumed his flank movement; but at that moment he was wounded and carried from the field, and his command devolved on General R. H. Anderson. In the afternoon Lee projected the entire corps of Longstreet and Hill against Hancock, who had been reinforced and was strongly defended by breastworks. He stood firm until about four o'clock, when a fire in the woods attacked the brush and pine logs of his breastworks. The wind blew the heat and smoke in the faces of his troops and drove them from their defences, when the Confederates dashed forward and penetrated their lines. But they were almost instantly repulsed, and Lee was compelled to abandon what he intended as a decisive assault. Night came on, and after dark Lee threw Ewell's corps forward against Sedgwick. There was some hard fighting and much confusion. Ewell captured the most of two brigades, and then fell back. So ended the battle in the Wilderness, without decisive results on either side, and with a mutual heavy loss. In the two days the Nationals lost about 18,000 men, of whom 6000 were made prisoners. Generals Hayes, Wadsworth, and Webb were killed. The Confederate loss was probably about 11,000. Generals Jones, Pickett, and Jenkins were killed. Longstreet's wounds disabled him several months. The Wilderness is a wild plateau, covered with a dense growth of dwarf trees and vines and brambles, and sloping every way to cultivated fields. It is along

the south bank of the Rapid Anna River, about ten miles in width and fifteen in length.

Wilkes, CHARLES, was born in the city of New York in 1801; died in Washington, D. C., Feb. 8, 1877. He was a nephew of John Wilkes, the eminent English politician. He entered the United States Navy in 1818. In 1830 he was appointed to the Department of Charts and Instruments. He was appointed commander of a squadron of five vessels that sailed from Norfolk, Va., Aug. 18, 1838, on an exploring expedition. (See *South Sea Surveying and Exploring Expedition*.) For his discoveries during that cruise, Wilkes received a gold medal from the London Geographical Society. He returned to New York in June, 1842. In 1861 he was sent to the West Indies, in the frigate *San Jacinto*, to look after the Confederate cruiser *Sumter*, when he fell in with the British steamer *Trent* and took from her Mason and Slidell (which see) and conveyed them to Boston, for which he was thanked by Congress and received popular applause. But the President finally disapproved his act, as a stroke of state policy. In 1862 he commanded the flotilla on the James River, with the rank of commodore; and afterwards, in command of a squadron in the West Indies, captured many blockade-runners.

Wilkes, JOHN, a fearless and powerful English political writer, was born in 1727. He became a member of Parliament in 1757. In 1763 he made a severe attack on the government in his newspaper (the *North Briton*, No. 45), for which he was sent to the Tower. (See "*Ninety-two*" and "*Forty-five*.") On account of a licentious essay on woman, he was afterwards expelled from the House of Commons. After his release from the Tower, he went to Paris, and,

JOHN WILKES.

returning in 1768, sent a letter of submission to the king, and was soon afterwards elected to Parliament for Middlesex; but his seat was successfully contested and he was elected alderman of London. The same year he obtained a verdict of \$20,000 against the Secretary of State for seizing his papers. In 1771 he was sheriff of London, and in 1774 lord mayor. In 1779 he was made chamberlain, and soon afterwards retired from political life. Wilkes was always the champion of the colonists, and was regar-

ed as the defender of popular rights. He died at his seat on the Isle of Wight, in 1797.

Wilkinson, JAMES, was born near Benedict, Md., in 1757; died near the city of Mexico, Dec. 28, 1825. He was preparing for the medical profession when the war for independence broke out. He repaired to Cambridge after the bat-

JAMES WILKINSON.

tle of Bunker's (Breed's) Hill, where he was made a captain in Reed's New Hampshire regiment, in the spring of 1776. He served under Arnold in the Northern army, and in July, 1776, was appointed brigade-major. He was at the battles of Trenton and Princeton, and was made lieutenant-colonel in January, 1777. He was Gates's adjutant-general, and bore to Congress an account of the capture of Burgoyne, when he was breveted brigadier-general and made secretary to the Board of War, of which Gates was president. Being implicated in Conway's Cabal (which see), he resigned the secretaryship, and in July, 1779, was made clothier-general to the army. At the close of the war he settled in Lexington, Ky., and engaged in mercantile transactions. In 1791-92 he commanded, as lieutenant-colonel of infantry, an expedition against the Indians on the Wabash, and was made brigadier-general in 1792. He was distinguished in command of the right wing of Wayne's army on the Maumee, in 1794. From 1796 to 1798 he was general-in-chief of the army; also from 1800 to 1812. In December, 1803, as joint-commissioner with Governor Claiborne, he received Louisiana (which see) from the French; and from 1805 to 1807 he was governor of Louisiana Territory. Wilkinson remained at the head of the Southern Department until his entanglement with Burr caused him to be court-martialled in 1811, when he was honorably acquitted. In 1812 he was breveted major-general United States Army, and was made a full major-general in 1813. He reduced Mobile in April, that year, and fortified Mobile Point; and in May he was ordered to the Northern frontier, where he succeeded General Dearborn in com-

mand. His campaign against Montreal (1813-14) was totally unsuccessful, chiefly because of the conduct of General Wade Hampton. He relinquished all military command, and, on the reduction of the army in 1815, he was discharged. He had become possessed of large estates in Mexico, and removed to that country, where he died. He published *Memoirs of My Own Times*, in three volumes.

Willard, EMMA C. (Hart), teacher and author, was born near Berlin, Conn., Feb. 23, 1787; died in Troy, N. Y., April 15, 1870. She was descended from Thomas Hooker, founder of Hartford, Conn. She began teaching at sixteen years of age, and was principal, successively, of different academies. In 1809, at Middlebury, Vt., she married Dr. John Willard. In 1821 she began her famous "Troy Female Seminary," at Troy, N. Y., which she conducted until 1839. She made a tour in Europe in 1830, and published her *Journal and Letters* on her return, in 1833, and devoted her share of the profits of the work to the maintenance of a school for women in Greece, which was founded mainly by her exertions. Mrs. Willard wrote and published essays on "Female Education;" also several books, chiefly on history. She also published two books on physiology, and a volume of poems. Her ocean-hymn, *Rocked in the Cradle of the Deep*, has always been very popular.

Willard, FRANCES E., President of the Evans-ton (Ill.) College for Ladies, was born near Rochester, N. Y., Sept. 28, 1839. She graduated at the Northwestern Female College in 1858. She was for some years a school-teacher in various Western towns, and taught the natural sciences in the Northwestern College. In 1867 she became preceptress in the Genesee Wesleyan Seminary, at Lima, N. Y. On Feb. 14, 1871, she was elected president of the college which had recently been established in connection with the Northwestern University of the Methodist denomination, in deference to the popular idea of the co-education of the sexes. It was the first time such an honor was conferred upon a woman. On her return from an extended foreign tour in Europe, Syria, and Egypt, in 1871, Miss Willard lectured with success, in Chicago, on the "Educational Aspects of the Woman Question." She is the author of a touching memoir of a beloved sister, entitled *Nineteen Beautiful Years*.

Willett, MARINUS, was born at Jamaica, L. I., July 31, 1740; died in New York city, Aug. 22, 1830. He graduated at King's (now Columbia) College in 1776. As a youth, he served under Abercrombie in the attack on Ticonderoga, and was with Bradstreet in the expedition against Fort Frontenac (which see). He was one of the most eminent of the New York Sons of Liberty. In 1775 he entered McDougall's regiment as captain, and joined Montgomery in the invasion of Canada. After the capture of St. John (which see), he remained there, in command, until January, 1776, and was soon afterwards made lieutenant-colonel of the Third New York Regiment. In May, 1777, he was ordered to Fort Stanwix (which see), and assisted in its defence

in August following, making a successful sortie to effect a diversion in favor of General Herkimer. (See *Oriskany, Battle of*.) He bore a message, by stealth, to General Schuyler, which caused the expedition up the Mohawk valley,

MARINUS WILLETT.

under General Arnold, that caused the abandonment of the siege of Fort Stanwix. He joined the army under Washington in June, 1776, and was in the battle of Monmouth; and in 1779 he accompanied General Sullivan's expedition against the Indians in New York. (See *Sullivan's Campaign against the Indians*.) At the close of the war he was chosen sheriff of the city of New York, and remained so eight years (1784-92), and was mayor in 1807. In 1792 he was appointed a brigadier-general in the army intended to act against the Northwestern Indians, but declined. He published an autobiography.

William and Mary, COLLEGE OF, the second of the higher institutions of learning established in the English-American colonies. An effort was made in 1619 to establish a college in Virginia (see *Henrico College*), but the massacre in 1622 put an end to the enterprise. (See *Opechancanough*.) In 1660-61 the General Assembly of Virginia passed an act for the establishment and endowment of a college, and in 1693 a charter was obtained from the crown of England, chiefly through the efforts of Rev. James Blair and of Lieutenant-governor Nicholson. It was named William and Mary, in compliment to the ruling sovereigns, who made appropriations for its support. Buildings designed by Sir Christopher Wren were erected at the Middle Plantation, which was named Williamsburg. The first college edifice was destroyed by fire in 1705 and was rebuilt soon afterwards. The General Assembly and individuals made liberal gifts to the institution from time to time, and in 1776 it was the wealthiest college in America. Its riches were wasted during the war for independence, its resources being reduced to \$2500 and the then unproductive revenue granted by the crown. The college was closed in 1781, and

American and French troops alternately occupied it, during which time the president's house and a wing of the main building were burned. After the Revolution, the General Assembly gave lands to the college, and its organization was changed. In 1859 the college building, with the library, was consumed by fire, but was rebuilt and restored before the close of 1860. The college exercises were suspended in 1861, in consequence of the Civil War, and at one time the building was occupied as barracks and at another as a hospital. During the occupation of Williamsburg by Union troops in 1862, it was again accidentally burned. From 1861 to 1865 the losses of the college, in buildings and endowments, were about \$125,000. In 1869 the main building was substantially restored, the faculty was reorganized, and the college was reopened for students. (See *Colonial Colleges*.)

William III. (William Henry, Prince of Orange), King of England and Stadtholder of Holland, was born at the Hague, Nov. 4, 1650; died in Kensington, March 8, 1702. He was a nephew of Charles II. and James II., and married his cousin Mary, daughter of James. The union was popular in both countries. The prince, a member of whose house (of Orange) had freed his country from the Spanish yoke, was regarded as the head of the Protestant party in Europe, and his wife expected to succeed to the English throne. His policy always was to lessen the power of France, whose monarch, Louis XIV., was regarded as the most powerful enemy of Protestantism in Europe. The policy of James on the throne was to increase the papal power, and a breach between the king and his Dutch son-in-law was inevitable. The people of England finally rose in their might and invited William to invade the country. It was done in 1688. (See *English Revolution, The*.) He and his wife were made joint-monarchs of England in February, 1689, by a convention Parliament. His cause was equally triumphant in Scotland, after some trouble at the beginning, and he joined a coalition of European states in making war on France. The adherents of James in Ireland were numerous, and were supported by the French. In 1690 he took command of his own troops there, and, at the battle of the Boyne, July 1 (O. S.), James, who led the insurgents, was defeated and fled to France. The war continued until 1697, when the treaty at Ryswick ended it. Queen Mary died late in 1694, when William became sole monarch. He instituted salutary reforms in England, and the English Constitution was placed on a firm basis. He labored to check the power of France and increase that of the Netherlands, so long as he lived. His death was caused by being thrown from his horse. Having no heir, he promoted the act of settlement, calling the house of Hanover to the throne, which was adopted by Parliament in 1701, and completed the English Revolution.

Williams, ALPHEUS STARKEY, was born at Saybrook, Conn., Sept. 20, 1810, and graduated at Yale College in 1831. He practised law in De-

troit, and was editor of the *Detroit Advertiser* for a while. He served in the war with Mexico; was postmaster of Detroit (1849-53), and, made brigadier-general of volunteers in May, 1861, he organized the Michigan volunteers until September. In March, 1862, he became commander of a division in General Banks's corps, and, at the battle of Cedar Mountain (which see), one third of his division was killed or wounded. He commanded a division in Slocum's corps at Antietam, Fredericksburg, Chancellorsville, and Gettysburg. In the Atlanta campaign he was conspicuous, and in November, 1864, succeeded Slocum in command of the Twentieth Corps, leading it in the celebrated march to the sea and through the Carolinas. From 1866 to 1869 General Williams was minister to the republic of San Salvador.

Williams College was founded by Colonel Ephraim Williams, who, at the age of about forty years, was killed in an engagement near Lake George during the French and Indian War. (See *Williams, Ephraim*.) It is at Williamstown, Berkshire Co., Mass. The funds left by Colonel Williams for founding a free school were allowed to accumulate. A free school was incorporated in 1785, under the control of nine trustees, and a lottery was granted for raising funds to erect a school-house. About \$3500 was thus obtained, when the inhabitants of the town contributed about \$2000 more. A large building, four stories high (now the West College), was erected in 1790, and on Oct. 20, 1791, the free school was opened, with Rev. Ebenezer Fitch as its first principal. It was incorporated a college in 1793, under the title of "Williams's Hall." The property vested in the free school was transferred to the college, and the state appropriated \$4000 for the purchase of apparatus and a library. Mr. Fitch was its first president, and the first "commencement" was in 1795, when four students graduated. Its catalogue of students printed in 1795 is said to be the earliest production of the kind in this country. It contained the names of seventy-seven students. Several college buildings have been added. In 1875-76 it had eleven professors and one hundred and seventy students. It has a productive fund for the college use of \$300,000, and funds for the benefit of needy students amounting to \$90,000. Near the college-building is "Mills Park," on the site of and commemorating the prayer-meeting of students in 1808, out of which grew the first organization in America for foreign missionary work. The leader among the students was Samuel J. Mills, and his is the first name appended to the constitution of the society.

Williams, ELEAZAR (the "lost prince"). A dark mystery shrouds the fate of the eldest son of Louis XVI. of France and Marie Antoinette, who was eight years of age at the time his father was murdered by the Jacobins. After the downfall of Robespierre and his fellows, it was declared that the prince died in prison in 1795, while the royalists believed he had been secretly hidden away in the United States. Curious facts

and circumstances pointed to Rev. Eleazar Williams, a reputed half-breed Indian, of the Caughnawaga tribe, near Montreal, as the surviving prince, who, for almost sixty years, had been hidden from the world in that disguise. He was

ELEAZAR WILLIAMS.

a repented son of Thomas Williams, son of Ennice, the captive daughter of Rev. John Williams (which see), of Deerfield. He was educated at Long Meadow, Mass., and when the war with England broke out, in 1812, he became confidential agent of the government among the Indians in northern New York. He served in several engagements, and was severely wounded at Plattsburg, in 1814. Joining the Protestant Episcopal Church, after the war, he was for a long time a missionary, or lay-reader, among the Oneida Indians, and in 1826 he was ordained missionary presbyter, and labored in northern New York and Wisconsin. There were indications that Mr. Williams was the "lost prince" of the house of Bourbon, and it was proved, by physiological facts, that he was not possessed of Indian blood. His complexion was dark, but his hair was curly. When the writer first knew him (1855), he was sixty-eight years of age, and bore a strong resemblance to the portrait of Louis XVI. at the time of his death. The claims of Mr. Williams to identity with the dauphin of France were not put forth by himself, but by others. In *Putnam's Monthly Magazine* (1853-54), Rev. Mr. Hanson published a series of papers under the title "Have we a Bourbon among us?" and afterwards published them in book form and entitled the volume *The Lost Prince*. Mr. Hanson fortified the claim to identity by most remarkable facts and coincidences. In 1854 the Prince de Joinville, heir to the throne of Louis Philippe, visited Mr. Williams at Green Bay, Wis. The accounts of the interview, as given by the clergyman and the deeply interested prince, differed widely. The world was incredulous; the words of a prince outweighed those of a poor

Episcopal clergyman, and the public judgment was against the latter. Mr. Williams died at Hogsburg, N. Y., Aug. 28, 1858, aged about seventy-two years. He translated the Book of Common Prayer into the Mohawk language. He also prepared an Iroquois spelling-book, and a life of Thomas Williams, his reputed father.

Williams, EPHRAIM, a provincial colonel, was born at Newton, Mass., Feb. 24, 1715; killed near Lake George, Sept. 8, 1755. In early life he was a mariner, and made several voyages to Europe. From 1740 to 1748 he served against the French, in Canada, as captain of a provincial company. He joined the New York forces under General William Johnson in 1755, and, falling in an Indian ambush, was killed. (See *Crown Point, Campaign against*.) Before joining in this expedition he made his will, bequeathing his property to a township, west of Fort Massachusetts, on the condition that it should be called Williamstown, the money to be used for the establishment and maintenance of a free school. The school was opened in 1791, and was incorporated a college in 1793, under the title of Williams College (which see) — a still flourishing institution.

Williams, JAMES, was born in Granville County, N. C., and emigrated to Laurens District, S. C., in 1773, where he was an active patriot and member of the Provincial Congress in 1775. In 1779 he became colonel of militia, and commanded a detachment in the battle of Stono Ferry, June 20, 1779. At Musgrove's Mill (which see) he attacked and defeated a large body of British and Tories; and in the expedition against Ferguson, which terminated in the battle of King's Mountain (which see), he exhibited great energy and skill, but fell in the thickest of the fight, mortally wounded, and died the next day (Oct. 8, 1780).

Williams, Rev. JOHN, first minister at Deerfield, Mass., was born at Roxbury, in that state, Dec. 10, 1664; died at Deerfield, June 12, 1729. He was educated at Harvard College, and in 1686 settled as a minister at Deerfield. The village was attacked by French and Indians, March 1, 1704, and among the inhabitants carried into captivity were Mr. Williams and a part of his family. (See *Deerfield*.) Two of his children and a black servant were murdered at his door. With his wife and five children he began the toilsome journey towards Canada through the deep snow. On the second day his wife, weak from the effects of recent childbirth, fainted with fatigue, when the tomahawk of her captor cleaved her skull, and so he was relieved of the burden. Her husband and children were taken to Canada, and, after a captivity of nearly two years among the Caughnawaga Indians near Montreal, they were ransomed and returned home, excepting a daughter (Ennice), ten years of age, whom the Indians refused to part with. She grew up to womanhood with Indian habits and tastes, became a Roman Catholic, married a young Mohawk warrior there, and bore children. In after-years she visited her relations in Deerfield, but resisted all their persuasions to abandon her Indian mode of life, or leave the

church to which she was attached. After the return of the Rev. Mr. Williams to Deerfield he married a daughter of Captain Allen, of Connecticut, and in 1711 was appointed a commissary under Colonel Stoddard in the expedition against Canada.

Williams, JONATHAN, was born in Boston, in 1752; died in Philadelphia, May 16, 1815. He was engaged in mercantile and shipping business in early life. Dr. Franklin was his great uncle, and kindly received his nephew when in England (1770-73), and intrusted him with the bearing of important letters and documents to Massachusetts. Visiting France in 1777, he was appointed commercial agent of Congress, and in 1785 returned to the United States and settled with Franklin in Philadelphia. For several years he was judge of the Court of Common Pleas in Philadelphia. In 1801 he was made a major of artillery and inspector of fortifications, and was appointed the first superintendent of the military academy at West Point. He was colonel of engineers from 1808 to 1812, and general of New York militia from 1812 to 1815. He was a delegate in Congress from Philadelphia in 1814, and was made Vice-President of the American Philological Society.

Williams, OTHO HOLLAND, was born in Prince George's County, Md., in March, 1749; died July 16, 1794. His Welsh ancestors came to America in the early days of the colonial settlement of Maryland. He was left an orphan at twelve

OTHO HOLLAND WILLIAMS.

years of age. Appointed lieutenant of a rifle company at the beginning of the Revolution, he marched to the Continental camp at Cambridge. In 1776 he was appointed major of a new rifle regiment, which formed part of the garrison of Fort Washington, New York (which see), when it was captured. He gallantly opposed the Hessian column, but was wounded and made prisoner. Being soon exchanged, he was made colonel of a Maryland regiment, with which he accompanied De Kalb to South Carolina; and when Gates took command of the Southern

army Colonel Williams was made adjutant-general. In the battle near Camden (see *Sanders's Creek, S. C., Battle at*) he gained great distinction for coolness and bravery, and performed efficient service during Greene's famous retreat (which see) as commander of a light corps that formed the rear-guard. At the battle at Guilford Courthouse he was Greene's second in command; and by a brilliant charge which Williams made at Eutaw Springs he decided the victory for the Americans. (See *Eutaw Springs, Battle near.*) In May, 1782, he was made a brigadier-general, and was appointed collector of customs for Maryland, which office he held until his death.

Williams, ROGER, was born in Wales in 1599; died in Rhode Island in 1683, and was buried at Providence. Williams went to London at an early age, where he reported sermons in shorthand, and attracted the attention of the eminent Sir Edward Coke, who befriended him in his efforts to obtain a collegiate education. He was at Pembroke College in 1623, and graduated in January, 1627. He took orders in the Church of England, but imbibed dissenting ideas, and came to Boston in 1630, where he was regarded as an extreme Puritan. He was accompanied by his wife, Mary, a sweet young Englishwoman, who shared in the joys and sorrows of his long life. At Boston he became obnoxious to the authorities because he denied the right of magistrates to interfere with the consciences of men, and soon went to Salem, where he became assistant pastor of the church there. He was complained of by the Bostonians because he had refused to join with the congregation there until they should make a public declaration of their repentance for having communion with the churches of England while they lived in that town. He was a thorough separatist, and because his brethren in New England were not as radical as he was he assailed the theocracy. He did not remain long at Salem, for opposition to his views compelled him to go to Plymouth, where for two years he was assistant of the pastor, Ralph Smith. There he formed the acquaintance of leading chiefs of the tribes around him, and gained a knowledge of their language. Returning to Salem, he became pastor of the church there, and promulgated his theological views so boldly that in the autumn of 1635 the General Court of Massachusetts ordered him to quit the colony in six months. His immediate offence was his calling in question the authority of magistrates in two things—namely, relating to the right of the king to grant the land of the Indians to white settlers without purchasing it; and the other, the right of the civil power to impose faith and worship. Williams made some slight concessions, and the time for his departure was extended to the following spring. Circumstances soon made the Boston magistrates suspicious that he was preparing to found a new colony with his followers; and observing with alarm that his doctrines were spreading, it was determined to seize him and send him to England at once. A small vessel was sent to Salem to take him away; but, forewarned, he left his home and family in mid-

winter, and for fourteen weeks wandered in the snows of the wilderness to the region of Narraganset Bay. Five companions joined him on the eastern bank of the Seekonk River; but, finding they were within the bounds of New Plymouth, they went down the stream, and at a fine spring near the head of Narraganset Bay they planted the seed of a colony, and called the place "Providence," in grateful acknowledgment of divine favor. A form of government was established—a pure democracy—allowing no interference with the rights of conscience. (See *Rhode Island, Colony of*.) When Williams came to Boston he was inclined to become an Anabaptist; now he proceeded to establish a Baptist church at Providence, when several persons from Massachusetts had joined him. In March, 1639, he was baptized by immersion by a layman—Ezekiel Holliman—and then Williams baptized Holliman and ten others, and a church was organized. Williams soon doubted the validity of his own baptism and that of the others. He withdrew from the church and never re-entered it. For some years the government of the colony was a pure democracy, transacting its busi-

ness by means of town meetings, until a charter was procured in 1644 by Williams, who went to England for it. On the voyage thither he wrote *A Key into the Language of America*, together with an account of the manners and customs of the Indians. After the death of Charles I. trouble in the colony caused Williams to be sent to England again, where he remained some time, making the acquaintance of John Milton and other distinguished scholars, and wrote and published *Experiments of Spiritual Life and Health, and their Preservation*. In the autumn of 1654 Williams was elected president, or governor, of Rhode Island. There was then less toleration among the people than formerly, and they became incensed against fanatical persons calling themselves Friends, or Quakers. But Williams refused to persecute them. In 1672 he engaged in a public debate at Newport with George Fox and two other Quaker preachers, one of whom, named Burroughs, was specially pugnacious in support of his views. Afterwards Williams published a controversial work, entitled *George Fox digged out of his Burrows*. When King Philip's War broke out the venerable founder of Rhode Island watched its progress with great anxiety; and, though he was then seventy-six years old,

he accepted a captain's commission, drilled a company at Providence, and erected defences there for women and children. But Providence shared the fate of other New England towns. Notwithstanding the bad treatment Roger Williams received from Massachusetts, he was always the active friend of the people there in preventing their destruction by the Indians, over whom he had great influence. He died at Providence in the spring of 1683. Mr. Williams published several works, mostly controversial. One of them, written after he withdrew

LANDING-PLACE OF ROGER WILLIAMS, ON THE SEEKONK.

ness by means of town meetings, until a charter was procured in 1644 by Williams, who went to England for it. On the voyage thither he wrote *A Key into the Language of America*, together with an account of the manners and customs of the Indians. After the death of Charles I. trouble in the colony caused Williams to be sent to England again, where he remained some time, making the acquaintance of John Milton and other distinguished scholars, and wrote and published *Experiments of Spiritual Life and Health, and their Preservation*. In the autumn of 1654 Williams was elected president, or governor, of Rhode Island. There was then less toleration among the people than formerly, and they became incensed against fanatical persons calling themselves Friends, or Quakers. But Williams refused to persecute them. In 1672 he engaged in a public debate at Newport with George Fox and two other Quaker preachers, one of whom, named Burroughs, was specially pugnacious in support of his views. Afterwards Williams published a controversial work, entitled *George Fox digged out of his Burrows*. When King Philip's War broke out the venerable founder of Rhode Island watched its progress with great anxiety; and, though he was then seventy-six years old,

from the Baptist Church and became a "Seeker," was entitled *Hiring Ministry none of Christ*.

Williams, ROGER, MAGNANIMITY OF. The raid of Endicott and his men along the shores of the Narraganset country stirred up those Indians to preparations for war upon Massachusetts. (See *Block Island, Events at*.) Indeed, at the breaking-out of the Pequot War (which see) all the white settlements in New England were in peril. Roger Williams, living among the Narragansets, perceived the danger to the Massachusetts and Plymouth colonies; and, notwithstanding he had been cruelly banished from the former because of non-agreement with the authorities in religious doctrines, like a true Christian as he was, exerted himself to the utmost to avert from that colony the impending danger. He left Providence and hastened to the head sachem of the Narragansets in Rhode Island. Many years afterwards he wrote: "I had my share of service to the whole land in the Pequot business. The Lord helped me immediately to put my life into my hand, and, scarce acquainting my wife, to ship myself, all alone, in a poor canoe, and to cut through a stormy wind, with great seas, every minute to the hazard of my life, to the sachem's house. Three

days and nights my business forced me to lodge and mix with bloody Pequot ambassadors, whose hauds and arms, methought, reeked with the blood of my countrymen, murdered and massacred by them on Connecticut River, and from whom I could but nightly look for their bloody knives at my own throat." The love which the Narragansets bore to Roger Williams, engendered by his kind acts during his short sojourn in their country, and his great influence, not only prevented their alliance with the Pequods at the kindling of the war, but secured their co-operation with the English, and saved the New England colonies from destruction. The authorities in Church and State in Massachusetts accepted his noble service, but they never, during the long years of his afterwards useful life, had the magnanimity to revoke his sentence of banishment.

Williams, ROGER, WELCOME TO. Williams was sent to England to procure a charter for the "Providence and Rhode Island Plantations" (see *Rhode Island, Colony of*), and returned with it in the summer of 1644. He also bore a letter, signed by several members of Parliament, addressed to the authorities of Massachusetts, in favor of their banished exile, and with this he landed in Boston. The letter did not weaken the asperities of the magistrates towards Williams. With its charter, the heretical colony of Rhode Island was more than ever an object of dislike to the Church and State in Massachusetts. So Williams passed on towards Providence. As he approached he beheld a delightful spectacle. The people had heard of his coming, and had turned out to meet him. The Seekonk was covered with canoes and boats filled with his neighbors and friends. The latter vessels were decked with evergreens and wild-flowers, and the shores were covered with men, women, and children in holiday attire, who greeted him with loud huzzas, the waving of handkerchiefs, and the singing of psalms.

Williams, SETH, was born at Augusta, Me., March 21, 1822; died at Boston, March 23, 1866. He graduated at West Point in 1842, served under Scott in Mexico as aide-de-camp to General Patterson, and after the war was in the adjutant-general's department. Early in September, 1861, he was made brigadier-general of volunteers, after serving as adjutant-general of the army of General McClellan in western Virginia. He held the same position under General Meade. In May, 1864, he was made acting inspector-general on Grant's staff, and in August of that year was breveted major-general of volunteers for "meritorious services since Gettysburg;" also, in March, 1865, he was breveted major-general of the United States Army for "gallant and meritorious services during the rebellion."

Williams, THOMAS, was born in New York in 1815; killed at Baton Rouge, Aug. 5, 1863. He graduated at West Point in 1837, was assistant professor of mathematics there, and aid to General Scott from 1844 to 1850, behaving gallantly in the war with Mexico. He was made brigadier-general of volunteers in September, 1861;

commanded for a time the forts at Hatteras, and accompanied Butler in the expedition to New Orleans. He was engaged in cutting the canal in front of Vicksburg, leading the land-troops in that unsuccessful siege, and was afterwards in command at Baton Rouge. (See *Baton Rouge, Battle at*.)

Williams, WILLIAM, a signer of the Declaration of Independence, was born at Lebanon, Conn., April 18, 1731; died Aug. 2, 1811. He graduated at Harvard University in 1757, and was on the staff of his relative, Colonel Williams, when he was killed near Lake George in 1755. An active patriot and a member of the committees of Correspondence and Safety in Connecticut, he was sent to Congress in 1776. He wrote several essays to arouse the spirit of liberty in the bosoms of his countrymen, and spent nearly all his property in the cause. He had been speaker of the Connecticut Assembly in 1775, and in 1783-84 was again a member of Congress. He was also a member of the Convention of Connecticut that adopted the national Constitution. Mr. Williams married a daughter of Governor Trumbull.

Williamsburg, BATTLE AT (1862). The Confederates evacuated Yorktown, where a comparatively small force had held McClellan in check for about a month. The sick, hospital stores, ammunition, and camp equipage had been sent to Richmond, and in the night of May 3 the Confederate troops evacuated Yorktown and Gloucester and fled towards Williamsburg, vigorously pursued by horse-artillery and cavalry under General Stoneman, followed by several divisions under the chief command of General Sumner. General Joseph E. Johnston, who had hastened to the Peninsula after the evacuation of Manassas, was now in chief command in front of McClellan. Leaving a strong guard at Williamsburg to check the pursuers, Johnston fell back with his main army towards Richmond, with the intention of fighting the Nationals in full force when they should approach that city. But he was compelled to fight sooner than he expected, for gallant and energetic men—Generals Hooker, Kearney, and Hancock—attacked that rear-guard near Williamsburg on May 5. The Confederates had some months before constructed a line of strong works, thirteen in number, across the rolling plateau on which Williamsburg stands, and two miles in front of that city. These caused pursuing Stoneman to halt and fall back. Hooker pressed forward along the Hampton road; and on the morning of May 5, being in front of the Confederate works, and knowing that 30,000 troops were within supporting distance and the bulk of the Potomac Army within four hours' march of him, he began an attack with New England, New York, and New Jersey troops. Hearing of this, Johnston had sent back Longstreet's Confederate division to support the rear-guard. Other troops soon joined Hooker. At one o'clock the battle had assumed gigantic proportions. Hooker was losing heavily. Other Confederate reinforcements had arrived. Three times the Confederates had made

a fierce charge and been repulsed, and in one of these quick movements five of the National cannons were captured, with 300 prisoners. For nearly nine consecutive hours Hooker had fought almost unaided. He had called repeatedly on Sumner for help, but in vain; but between four and five o'clock the brave and dashing General Kearney came up with his division, with orders from General Heintzelman to relieve Hooker's worn and fearfully thinned regiments. They had then lost in the battle 1700 of their companions. The battle was now renewed with spirit. General Hancock, too, was successfully engaged in a flank movement. He drove the Confederates from some redoubts, but his force was too small to make their occupation by his men a prudent act. He finally made a fierce bayonet charge, when the Confederates broke and fled with precipitation, with a loss of over 500 men. Very soon the battle at Williamsburg was ended, and the victorious troops were eager to pursue their retreating foes, led by Longstreet. McClellan came upon the battle-ground after the conflict and refused to allow a pursuit. He moved leisurely forward during the next ten or twelve days, and reached the Chickahominy River when Johnston's troops were safely encamped beyond it. The entire National loss in the battle was 2223, of whom 456 were killed and 1400 wounded. The Confederates lost about 1000. They left nearly 800 behind in their hasty flight.

Williamsburg (Va.), FOUNDING OF. Governor Nicholson, successor of Andros in Virginia, removed the seat of government from Jamestown to Middle Plantation, about half-way between the York and James rivers, where he projected a large town, the streets of which were laid out in the form of a W; and in honor of the king he named it Williamsburg. There the College of William and Mary (which see) was built; and near it a large state-house was erected, which he called "the Capitol."

Williamson, HUGH, M.D., LL.D., was born at West Nottingham, Penn., Dec. 5, 1735; died in New York, May 22, 1819. He graduated at the University of Pennsylvania in 1757; studied divinity; preached a while; and became professor of mathematics in his *alma mater* (1760-63). He was one of the committee of the American Philosophical Society appointed to observe the transit of Venus in 1769, of which he published an account; also an account of the transit of Mercury the same year. Being in England to solicit aid for an academy at Newark, N. J., he was examined (1774) before the Privy Council concerning the destruction of the tea at Boston. He returned home in 1776, and engaged, with his brother, in mercantile pursuits in Charleston, S. C. Afterwards he practised medicine at Edenton, N. C.; served in the North Carolina House of Commons; also as a surgeon in the North Carolina militia (1781-82). He was a delegate in Congress (1782-85 and 1787-88), and in the convention that framed the national Constitution (which see). He was again in Congress from 1790 to 1793, and soon afterwards removed

to New York, where he assisted in forming a literary and philosophical society in 1814. In 1786 he published a series of essays on paper currency. In 1812 he published a *History of North Carolina*.

Willis, NATHANIEL PARKER, was born at Portland, Me., Jan. 20, 1807; died at Idlewild, Orange Co., N. Y., Jan. 21, 1867. He graduated at Yale College in 1827. His paternal grandfather was one of the "Boston Tea-party" (which see). While at college he wrote and published some religious verses. He edited *The Legendary*, a series of volumes of tales; and in 1828 he established the *American Monthly Magazine*, which he conducted two years, when it was merged into the *New York Mirror*, edited by George P. Morris. He travelled four years in Europe, and portions of his life there are exquisitely limned in his "Peacillings by the Way," published in the *Mirror*. He was attached to the American Legation in Paris. He married in England; returned to the United States; settled on the Susquehanna; and during his four years' residence there wrote his *Letters from Under a Bridge*. In 1839 he and Dr. Porter established *The Corsair*, in New York. He went again to England; wrote much while there; and prepared for Mr. Virtue the letter-press for two serial works, illustrated by Bartlett, on the scenery of Ireland and America. Returning in 1844, he and General Morris established the *Evening Mirror*. His health soon gave way, and he again went abroad. He returned in 1846, after which until his death he was co-editor with Morris of the *Home Journal*. His prose writings are more numerous by far than his poetry. Yet he ranks among the distinguished American poets. Willis's sacred poetry is considered his best. His poems have been published with illustrations by Lentze.

Willoughby's (SIR HUGH) *Voyage*. In 1553 Sir Hugh Willoughby sailed with a squadron of four staunch vessels to search for a northeast passage. In the Arctic waters the vessels parted company in a storm. Two of them which kept together were found, two years later, in a Lapland harbor by some Russian fishermen. In the cabin of one of them was Sir Hugh, with a pen between his fingers, his journal open before him on a table. He had been frozen as he sat. About the ship were the bodies of all his companions, who had perished with the cold. When the ships, with the dead bodies of the company, were claimed, and were sailing back to England, they both foundered and went to the bottom of the sea.

Wilmot, DAVID, author of the *Wilmot Proviso* (which see), was born at Bethany, Penn., June 20, 1814; died at Towanda, Penn., March 16, 1868. He began the practice of law in 1834; was member of Congress from 1845 to 1851; presiding judge of the Thirteenth (Pennsylvania) District from 1853 to 1861; and was in the United States Senate, to fill a vacancy, from 1861 to 1863. He was temporary chairman of the committee of the convention at Chicago that nominated Mr. Lincoln for the Presidency.

Wilmot Proviso, THE. In August, 1846.

while a bill authorizing the President of the United States to employ \$3,000,000 in negotiations for a peace with Mexico, by purchase of territory, was pending in the House of Representatives, David Wilmot, of Pennsylvania, a member of that house, moved (Aug. 8) to add an amendment, "That, as an express and fundamental condition to the acquisition of any territory from the republic of Mexico by the United States, neither slavery nor involuntary servitude should ever exist in any part of said territory." This proviso was adopted by the House, but was rejected by the Senate. It was the basis of the organization known as the Free-soil party in 1848, and of the Republican party in 1856.

Wilson, ALEXANDER, ornithologist, was born at Paisley, Scotland, July 6, 1766; died in Philadelphia, Aug. 23, 1813. For seven years he was a weaver, and wrote verses for the newspapers, and in 1789 he peddled two volumes of his poetry through the country. His *Watty and Meg*, published in 1792, and attributed to Burns, had a sale of one hundred thousand copies. Being prosecuted for a poetical lampoon, he came to America in 1794, landing at New Castle, Del. By the advice of Bartram (which see), the botanist, he turned his attention to ornithology. Late in 1804 he made a journey on foot to Niagara Falls, and wrote a poetic account of it. In 1805 he learned the art of etching. He persuaded Bradford, the Philadelphia publisher, to furnish funds for the publication of a work on American ornithology in a superb manner, but it was so expensive that it was not pecuniarily successful. His labors, day and night, upon this great work impaired his health and hastened his death. He had finished seven volumes when he laid aside his implements of labor. The eighth and ninth volumes were edited after his death, with a biography, by George Ord, who had accompanied him on some of his journeys. The work was afterwards continued by Charles Lucien Bonaparte.

Wilson, HENRY, Vice-President of the United States, was born at Farmington, N. H., Feb. 16, 1812; died in Washington, D. C., Nov. 22, 1875. He was a poor boy, brought up on a farm, and had little book-education. He became a shoemaker at Natick, and earned money enough to have instruction at an academy for a while, but resumed shoemaking at that place in 1838. He became interested in politics, and in 1840 made more than sixty speeches in favor of William H. Harrison for President of the United States. He was elected to the Massachusetts Legislature several times, and was twice a State Senator. He was an uncompromising opponent of slavery, and took an important part in organizing the Free-soil party (which see). He bought the *Boston Republican*, a daily newspaper, which he edited for two years. He labored diligently for the Free-soil party, and was its candidate for Governor of Massachusetts in 1853, but was defeated. In 1855 he was elected to the United States Senate, where he remained a conspicuous member until he was inaugurated Vice-

President of the United States with Grant in 1873. While at Boston during that year he sustained a shock of apoplexy, causing partial paralysis. He had nearly recovered, when, on Nov.

HENRY WILSON.

10, 1875, a second shock prostrated him. For twelve days he was ill in the Vice-President's room, when a third shock terminated his life. Mr. Wilson wrote a *History of the Anti-slavery Measures of the Thirty-seventh and Thirty-eighth Congresses* (1864); a *History of the Reconstruction Measures of the Thirty-ninth and Fortieth Congresses* (1868); and a *History of the Rise and Fall of the Slave-power in America* (3 vols.). The last work was nearly completed when he died.

Wilson, JAMES, LL.D., a signer of the Declaration of Independence, was born near St. Andrew's, Scotland, about 1742; died at Edenton, N. C., Aug. 23, 1798. Well educated in Scotland, he came to America, and in 1766 was tutor in the higher seminaries of learning in Philadelphia, and studied law under John Dickinson. He was in the Provincial Convention of Pennsylvania in 1774, and was a delegate in Congress the next year, where he was an advocate for independence. From 1779 to 1783 he was advocate-general for France in the United States. Mr. Wilson was a member of the convention that framed the national Constitution, and of the Pennsylvania Convention that adopted it; and was one of the first judges of the Supreme Court of the United States. He became the first Professor of Law in the University of Pennsylvania, in 1790; and, with Thomas McKean, LL.D., he published *Commentaries on the Constitution of the United States*.

Wilson, JAMES H., was born in Illinois about 1838, and graduated at West Point in 1860. He entered the Topographical Engineer Corps, and became first-lieutenant in September, 1861. He served in the Port Royal expedition, and was at the capture of Fort Pulaski, for which he was breveted major. He was aid to General McClellan at South Mountain (which see) and Antietam. In the Vicksburg campaign in 1863 he was assistant engineer and inspector-general of the Army of the Tennessee. He was active in the events near Chattanooga, and from May till August,

1864, commanded a division of cavalry in the Army of the Potomac. In August and September he was in the Shenandoah campaign; and from October, 1864, till July, 1865, he was in command of a division of cavalry in the West and Southwest, being with Thomas in his campaign against Hood, driving the cavalry of the latter across the Harpeth River during the battle of Franklin (which see). He was also distinguished at Nashville in defeating Hood and driving him across the Tennessee River. In March and April, 1865, he commanded a cavalry expedition into Alabama and Georgia; captured Selma, Montgomery, Columbus, and Macon; and on May 10, 1865, captured Jefferson Davis. (See *Davis, Jefferson, Capture of*.) In March, 1865, he was breveted major-general of the United States Army.

Wilson, WILLIAM, a Scotch poet, was born at Crieff, a village at the foot of the Grampian Hills, in Scotland. His childhood was passed in poverty, and he never entered a school as pupil; but his mother, a high-spirited Scotchwoman, who was left a widow when William was five years old, taught him to read, and by precept and example imbued him with a love and reverence for the higher Christian virtues. While yet very young he was apprenticed to a dealer in cloth, at Glasgow, and spent all the time he could spare from his work and sleep in reading and study. Through this self-culture he was elevated to a clerkship at the end of a year. At the stall of a good-natured street bookseller, he read Young's *Night Thoughts* through twice, and as soon as he got the money he bought the book for fifty cents—his first literary possession. He also so cultivated his taste for music that, when he was fifteen years of age, he chanted a solo at a grand public concert at Glasgow. The next year he was precentor of a church choir near that city. He had already written some meritorious songs which his modesty had concealed from his most intimate friends. Afterwards he became a contributor and assistant editor of the *Dundee Review* and sole editor of the *Dundee Literary Olio*. A Danish author (Feldburg), travelling in Scotland, called on the young poet, and commended him to Sir John Sinclair and others at Edinburgh. Young Wilson was invited to that city, where he became a welcome guest of the literati. Mrs. Grant, of Laggan, author of *Memoirs of an American Lady*, became his warm friend, and remained so until her death. Mr. Wilson, in after-life, wrote a brief memoir of her, which prefaces an American edition of her work. At Edinburgh he formed an intimate acquaintance with Robert and William Chambers which was kept up during his life. In 1833 Mr. Wilson emigrated to America, with a moderate capital, and in the summer of that year opened a bookstore and bookbindery at Poughkeepsie, on the Hudson, where he continued the business until his death, Aug. 25, 1860. Mr. Wilson contributed many poems to American and British periodicals, but seldom over his own name. His chosen signatures were "Alpin" and "Allan Grant." Some of these appear in a collection of Scottish poetry pub-

lished at Glasgow in 1844. Mr. Wilson left, at his death, quite a large collection of his poems, in manuscript, from which a selection was afterwards made and arranged by an intimate friend, and published by his eldest son. He also left, in manuscript, an unfinished work on the *Poets and Poetry of Scotland*, which was afterwards edited by his son, James Grant Wilson, and published by Harper & Brothers.

Wilson's Creek, BATTLE AT. After the battle at Dug Springs (which see), General Lyon fell back to Springfield, Mo. McCulloch was impressed, by the result of the battle at Dug Springs, with the opinion that Lyon's troops outnumbered the Confederates in that region. Price thought not, and favored an immediate advance upon them. McCulloch would not consent; but, receiving an order from General Polk (Aug. 4) to march against Lyon, he consented to join his forces with those of Price in attacking Lyon on condition of his (the Texan) having the chief command. Price, anxious to drive the Nationals out of Missouri, consented. McCulloch divided the Confederate forces into three columns, and at midnight, Aug. 7, 1861, their whole army, twenty thousand strong, moved towards Springfield under McCulloch, Pearce, and Price. They encamped, on the 9th, near Wilson's Creek, ten miles south of Springfield, wearied and half-famished, for they had received only half-rations for ten days, and had eaten nothing for twenty-four hours. Lyon's force was so small that there seemed great risk in accepting battle, but he feared a retreat would be more disastrous. So he proceeded to attack the Confederates before they could rest. Before daylight, Aug. 10, he marched in two columns—one led by himself, the other by Colonel Sigel. His own was to attack their front; Sigel's, composed of twelve hundred men, with six cannons, was to attack their rear. A battle began at an early hour. Lyon's column bore the brunt. Wherever the storm raged fiercest, there he appeared, encouraging his troops by words and deeds. First his horse was shot under him; then he received a wound in his leg, and another in his head, which partially stunned him. Swinging his sword over his head and ordering his men to follow, he dashed forward, but soon fell by a rifle-ball that passed through his body near his heart. On the death of Lyon, at nine o'clock, the command of his column devolved on Major Sturgis. Certain defeat seemed to await the little band. Sigel had attacked their rear with his six cannons, and was at first successful, driving the Confederates out of their camp. He was suddenly defeated by a trick. Arrayed like National soldiers, a heavy force of Confederates approached Sigel's line. Deceived, he greeted them in a friendly way, when suddenly they displayed a Confederate flag and attacked the Nationals in the most furious manner, capturing Sigel's battery and scattering all but three hundred of his men. He saved one field-piece, but lost his regimental colors. Twice afterwards during the battle the same trick was played, but the last time without success. The belligerents were fighting desper-

ately after Lyon's death. The Union column stood firm a long time against an overwhelming force. At length it began to bend, when Captain Grainger dashed forward with portions of Kansas, Iowa, and Missouri regiments, supported by Dubois's battery, and smote the Confederates so fearfully that they fled from the field in broken masses to the shelter of the woods. The battle ended, and the Confederates held the field. The Nationals fell back to Springfield, and at three o'clock the next morning, under the general command of Colonel Sigel, the entire Union force began a successful retreat, in good order, to Rolla (one hundred and twenty-five miles distant, in the direction of St. Louis), safely conducting a government train five miles in length and valued at \$1,500,000. The Confederates did not follow. The battle of Wilson's Creek had ended after raging five hours. It was very sanguinary. The Nationals lost between twelve and thirteen hundred men, and the Confederates about three thousand.

Wilson's Raid. At the close of Thomas's active campaign in Middle Tennessee (see *Hood's Invasion of Tennessee*), the cavalry of the district, numbering about 20,000 men and horses, were encamped in Lauderdale County, in northern Alabama. Well disciplined, they prepared, in March, 1865, for an expedition into Alabama to co-operate with the army in the capture of Mobile; also for the capture of Selma and other places. General James H. Wilson was in command of this cavalry. He left Chickasaw Landing, on the Tennessee River, March 22, with about 13,000 men and six batteries. His men were all mounted excepting 1500, who were used as an escort for baggage and supply-trains of two hundred and fifty wagons. There was also a pontoon train of thirty boats, conveyed by fifty-six mule wagons. This force moved on diverging routes, to perplex the Confederates. Their general course was a little east of south until they reached the Black Warrior River. In the fertile region of the Tombigbee River, the columns simultaneously menaced Columbus, in Mississippi, and Tuscaloosa and Selma, in Alabama. General Forrest, with his cavalry, was then on the Mobile and Ohio Railway, west of Columbus. But so rapid was Wilson's march that the guerilla chief could not reach him until he was far on his way towards Selma, on the Alabama River. Forrest pursued, but the movements of Wilson's troops were erratic, striking a Confederate force here and there, destroying property, and spreading great alarm. At Montevallo they destroyed iron-works, rolling-mills, and five important collieries. Near these the Nationals were attacked by Roddy and Crossland, but the Confederates, after a sharp fight, were routed. Onward the Nationals went. On April 8 they destroyed a bridge over the Cahawba at Centreville. Not far from Plantersville Wilson encountered Forrest, partially intrenched. He was straining every nerve to defend Selma, as it was one of the most important places in the Confederacy, because of its immense foundries of cannons and projectiles. In

a fight that ensued the Confederates were routed and fled towards Selma, leaving behind them twenty-nine guns and two hundred prisoners. Forrest was driven by his pursuers twenty-four miles, when the chase ended, nineteen miles from Selma. The latter place had been strongly fortified. The race was hot, and Forrest won it, Wilson closely pursuing. The latter came in sight of the city late in the afternoon and immediately assaulted its defences, carrying them without much difficulty. Although Forrest was in it with 7000 troops, it was in possession of the Nationals before sunset. Forrest was not disposed to attempt its defence, but General Taylor, who was there, ordered him to hold it at all hazards. He did his best, but, in the evening, he and one half his followers fled eastward, leaving in flames 25,000 bales of cotton stored in the city. Wilson destroyed the great foundries and other public property, and left Selma (April 10) a ghastly ruin. From Selma Wilson pushed to Montgomery, then under the military command of General Wirt Adams. This officer did not wait for Wilson's arrival, but, setting on fire 90,000 bales of cotton stored there, he fled. The Nationals entered the town unopposed. Major Weston marched northward (April 12), and, near Wetumpka, on the Coosa, he destroyed five heavily laden steamboats. Montgomery was surrendered to Wilson by the civil authorities, and after two days he crossed the Alabama and pushed on eastward to Columbus, Ga., on the east side of the Chattahoochee. He captured that city, with 1200 men, fifty-two field-pieces, and a large quantity of small-arms and stores, losing only twenty of his own men. There the Nationals destroyed the Confederate "ram" *Jackson* and burned 115,000 bales of cotton, fifteen locomotives, and two hundred and fifty cars; also a large quantity of public property—a manufactory of small-arms, an arsenal, four cotton factories, three paper-mills, military and naval foundries, a rolling-mill, and a vast amount of stores. The Confederates burned their gunboat *Chattahoochee*, lying twelve miles below Columbus. Croxton had been raiding in another portion of Alabama, while Wilson and the rest of his command were in the vicinity of the Alabama River and Chattahoochee. In the course of thirty days he had marched, skirmished, and destroyed along a line of 650 miles in extent, not once hearing of Wilson. He joined Wilson at Macon, Ga. (April 30), where the great raid ended. It had been useful in keeping Forrest and others from assisting the defenders of Mobile. During the raid Wilson's troops captured five fortified cities, 288 cannons, 23 colors, and 6820 prisoners; they destroyed a vast amount of public property of the Confederates of every kind. They lost 725 men, of whom 90 were killed.

Winchester, BATTLE AT. Banks had won a race with "Stonewall Jackson" for Winchester, but was not allowed to rest there, for the Confederates, close behind him, were 20,000 strong, while the Nationals numbered only 7000. General Ewell, who bivouacked within a mile and a half of Winchester, attacked Banks before the

dawn, May 24, 1862, and a furious battle ensued in front of Winchester. The Confederates were kept in check five hours. Meanwhile, Jackson's whole force was ordered up, when Banks, perceiving that further resistance would lead to destruction, and having sent his trains forward towards the Potomac, gave an order for a retreat in the same direction. They passed rapidly through the town, assailed in the streets by Secessionists of both sexes, firing from windows and throwing hand-grenades, hot water, and every sort of missile. Late in the afternoon the wearied and battle-worn troops reached Martinsburg, rested a few hours, and then pushed on twelve miles to the Potomac, opposite Williamsport. Before midnight a thousand camp-fires were blazing on the slopes overlooking the river. The pursuit was abandoned at Martinsburg. Within forty-eight hours after hearing of Kenly's disaster, Banks, with his little army, had marched fifty-three miles and fought several skirmishes and one severe battle. After menacing Harper's Ferry, where General Saxton was in command, Jackson beat a hasty retreat up the valley. Banks's loss during this masterly retreat was 38 killed, 155 wounded, and 711 missing. These were exclusive of Kenly's command and the sick and wounded in hospitals at Strasburg and Winchester. Only 55 of his 500 wagons were lost. Jackson's loss, including that at Front Royal, was 68 killed and 329 wounded. His gains were over 9000 small-arms and 3000 prisoners, including 700 sick and wounded.

Winchester, BATTLE OF. General Sheridan assumed the command of the Middle Division of the army (which see) on Aug. 7, with his headquarters at Harper's Ferry. He spent a month in getting his forces well in hand for an aggressive campaign. Early tried to lure him up the valley, in order that he might flank him. Sheridan was too wary for him, and kept the entrance into Maryland closely guarded against Confederate raids. General Grant visited him (Sept. 16, 1864) to view the situation. Sheridan was anxious to begin offensive operations. The lieutenant-general had confidence in Sheridan, and, after deliberation, left him, with the laconic order, "Go in!" Sheridan and Early then confronted each other at Opequan Creek, a few miles east of Winchester. Sheridan watched his antagonist closely, and when, on Sept. 18, Early weakened his lines by sending half his army on a reconnaissance to Martinsburg (which Averill repulsed), Sheridan put his forces under arms, and, at three o'clock in the morning, Sept. 19, they were in motion towards Winchester, Wilson's cavalry leading, followed by Wright's and Emory's corps. Wilson crossed the Opequan at dawn, charging upon and sweeping away all opposers, and securing a place, within two miles of Winchester, for the deployment of the army. There they formed, with Wright's corps on the left, flanked by Wilson's cavalry, Emory in the centre, and Crook's Kanawha infantry in reserve in the rear. Early had turned back towards Winchester before Sheridan was ready for battle, and strongly posted

his men in a fortified position on a series of detached hills. Averill had followed them closely from Bunker's Hill, and he and Merritt enveloped Winchester on the east and north with cavalry. Between the two armies lay a broken, wooded country. The Nationals attempted to reach Early's vulnerable left wing and centre, and, in so doing, encountered a terrible tempest of shells. They charged Early's centre furiously and carried his first line. His skilful general Rodes was killed. The assailing columns were quickly hurled back by two powerful divisions. It seemed, for a moment, as if the Nationals had lost the day. The Confederates eagerly sought to seize the only gorge in the mountains through which the Nationals might retreat, if compelled to. This was well defended by a few troops at first. Very soon the Confederates were pushed back to their lines. This was followed by the rapid rallying of the broken columns of the Nationals and re-forming of their line, which speedily advanced. There was now a most sanguinary battle until four o'clock P.M., when a loud shout was heard from beyond the woods on the Union right. It was from Crook's (Eighth) corps—the Army of Western Virginia—which, with Torbert's cavalry, pressed forward in the face of a murderous fire and fell heavily upon Early's left. At the same time there was a general charge upon the Confederate centre by the infantry, and by Wilson's cavalry on Early's right, driving the Confederates to the fortified heights. Before five o'clock the latter were carried, and Early's broken columns were flying through Winchester and up the valley towards Strasburg, in full retreat. They left behind them 2500 of their number as prisoners, with nine battle-flags and five pieces of artillery. They were pursued until dark. The Confederates lost about 1000 men besides the prisoners; Sheridan's loss was about 3000. Besides the prisoners taken in battle there were about 3000 wounded left in Winchester.

Winchester, JAMES, was born in Maryland in 1756; died in Tennessee, July 27, 1826. He was appointed a lieutenant in the Third Maryland Regiment, in May, 1776. He was made a prisoner by the British and exchanged in 1780. On the 27th of March, 1812, he was commissioned a brigadier-general and assigned to duty in the Army of the Northwest, under Harrison. He was made prisoner by General Proctor at Frenchtown (which see), Jan. 22, 1813, and, with other officers, was sent to Quebec. At Beauport, near that city, they were kept in confinement more than a year, and were exchanged in the spring of 1814. General Winchester resigned his commission in March, 1815.

Winchester, MILITARY RACE FOR. General Banks was at Strasburg, fifteen miles from Front Royal, when news of Kenly's disaster there reached him. (See *Front Royal, Battle at*.) At the same time he was astounded by the intelligence that Jackson was rapidly making his way towards Winchester, with twenty thousand men, to cut him off from reinforcements. Banks perceived his danger, and, with great energy, re-

sumed his flight down the Shenandoah valley, with his train in front, escorted by cavalry and infantry and a covering force of cavalry and six cannons, under General John P. Hatch. The train was attacked at Middletown, but the Confederates were repulsed. The vanguard was compelled to fall back to Strasburg and make a wide circuit among the mountains, with a train of thirty-two wagons. These joined Banks, who, with the main column, pushed on, skirmishing by the way, and, by midnight, May 24, had won the race to Winchester. It was a masterly retreat.

Winder, WILLIAM H., was born in Somerset County, Md., Feb. 18, 1775; died in Baltimore, May 24, 1824. He graduated at the University of Pennsylvania; studied law, and began its

WILLIAM H. WINDER.

practice in Baltimore in 1798. In March, 1812, he was appointed lieutenant-colonel of infantry, and colonel in July following. He served on the Niagara frontier, under General Smyth, and in March, 1813, was commissioned brigadier-general. Made prisoner at Stony Creek, Canada (which see), he was exchanged, and became inspector-general, May 9, 1814. Assigned to the command of the Tenth District (July 2, 1814), he was in command of the troops in the battle of Bladensburg, and engaged in the unsuccessful defence of Washington city. General Winder resumed the practice of his profession after the war, in which he was distinguished, and served with credit in the Senate of Maryland.

Winnebagoes, a tribe of the Dakota family, whose name denotes "men from the salt water." They seem to have been foremost in the eastward migration of the Dakotas, and were forced back to Green Bay, where they were numerous and powerful, and the terror of the neighboring Algonquins. Early in the seventeenth century there was a general confeder-

ation of the tribes in the Northwest against the Winnebagoes. They were driven to a place where they lost five hundred of their number, and afterwards the Illinois reduced them to a very small tribe; but they remained very turbulent. Until the conquest of Canada they were with the French, and after that with the English, until beaten by Wayne, when they became a party to the treaty at Greenville, in 1795. (See *Greenville, Treaty at*.) With Tecumtha, they helped the British in the war of 1812. Afterwards, for many years, until the conclusion of the Black Hawk War, in 1832 (which see), there were continual collisions and irritations between the Winnebagoes and white people on the frontiers. They ceded their lands in Wisconsin and became lawless and roving bands. They had reservations (from which they were removed from time to time) on the head-waters of the Mississippi, and, finally, they had begun to plant and show signs of civilization, when the Sioux War broke out, in 1862, and the people of Minnesota demanded their removal. They were disarmed in 1863, and driven into the wilderness on the Mississippi River, Dakota Territory. They were finally settled in Nebraska, where, in 1874, they numbered 1474, and had farms, cottages, and stock; they dressed like white people, and had three schools. There they were joined by about 1000 of their brethren, left in Wisconsin. (See *Dakotas* or *Sioux*.)

Winslow, EDWARD, was born at Droitwich, Eng., in 1591. He became a Puritan in his youth, married the daughter of a Dissenter, came to America from Holland, in the *Mayflower*, in 1620, and soon afterwards buried his bride here. (See *Pilgrim Fathers*.) He then married Susannah, widow of William White, and one of his fellow-passengers. Winslow offered himself to Massasoit, the Indian sachem (see *Massasoit*), as a hostage, at the first conference between the English and the natives, and won his respect and affection, especially by his curing the old ruler of an illness in 1623. He made two voyages to England (1623-24) as agent for the colony, and in 1633 he succeeded Bradford as gov-

EDWARD WINSLOW.

ernor. He again visited England, where he was imprisoned by Archbishop Laud seventeen weeks for teaching in the church and perform-

ing the marriage ceremony as a magistrate. Winslow was one of the most active men in the colony, and was governor three successive terms. On his return from England, in 1624, he brought with him several cows and a bull, the first neat-cattle seen in the colony. He went to England again in 1649, after the death of Charles I., and there proposed, and aided in forming, the Society for the Propagation of the Gospel in New England. (See *Gospel, Society for the Propagation of the*.) Cromwell so appreciated his worth that he offered him such distinctions and emoluments in England that he never returned to America. When Cromwell sent out an expedition against the Spaniards in the West Indies, Winslow was commissioned to superintend it. Before the work was done he was seized with fever, and died on shipboard Oct. 19, 1655.

Winslow, JOHN, was born at Marshfield, Mass., May 27, 1702; died at Hingham, Mass., April 17, 1774. He was the principal actor, under superior orders, in the tragedy of the expulsion of the Acadians (which see) from Nova Scotia in 1755. It is said that, twenty years afterwards, nearly every person of Winslow's lineage were refugees on the soil from which the poor Acadians were driven. In 1756 Winslow was commander-in-chief at Fort William Henry, Lake George, and a major-general in the expedition against Canada in 1758-59. In 1762 he was appointed presiding judge of the Court of Common Pleas of Plymouth, Mass., and councillor and member of the Massachusetts Legislature during the Stamp Act excitement. He was an original founder of the town of Winslow, Me., in 1766.

Winslow, JOHN A., United States Navy, was born at Wilmington, N. C., Nov. 19, 1811; died in Boston, Sept. 29, 1873. He was appointed midshipman in 1827; became lieutenant in 1839, distinguished himself in the war with Mexico,

JOHN A. WINSLOW.

and was attached to the Mississippi flotilla in 1861. In 1863 he was placed in command of the *Kearsarge*, and on June 19, 1864, he sank the *Alabama* (which see) off Cherbourg, France. For this gallant action Captain Winslow was made commodore. He was in command of the Gulf

squadron in 1866-67, in 1871 of the Pacific fleet, and at the time of his death of the navy-yard at Portsmouth.

Winalow, JOSEPH, was born in Virginia in 1746; died near Germanton, N. C., in 1814. In 1760 he joined a company of rangers, was twice wounded by Indians in battle, and in 1766 removed to North Carolina. When the Revolution began he was appointed a major, and had frequent encounters with Tories. In the battle at King's Mountain (which see) he commanded the right wing, and was voted a sword by North Carolina for his gallantry. He made a treaty with the Cherokees in 1777, served in the Legislature of North Carolina, and was member of Congress from 1793 to 1795, and again in 1803.

Winalow, JOSIAH, first native-born governor of the Plymouth colony, was a son of Edward Winslow, and born at Marshfield, Mass., in 1629; died there Dec. 18, 1680. So early as 1652 he was in command of a military company in Marshfield, and in 1675 he was general-in-chief of the forces of the United Colonies of New England, raised against King Philip. (See *King Philip's War*.) He was one of the commissioners of the united colonies for thirteen years (1658-71). He was elected governor in 1673, and filled that office at the time of his death.

Winter Quarters of the Allies (1781-82). The French army under Rochambeau remained at Williamsburg, Va., during the winter of 1781-82. The main body of the Continental army proceeded north, and took position in the vicinity of Verplanck's Point, detachments being cantoned at Pompton and Morristown, N. J. The prisoners of the army of Cornwallis were marched over the Blue Ridge into the Shenandoah valley, and encamped at Winchester, from whence a part of them were sent to Lancaster, Penn.

Winthrop, FITZ-JOHN, was born at Ipswich, Mass., March 14, 1638; died in Boston, Nov. 27, 1707. He went to England, held a commission under Richard Cromwell, and, returning to Connecticut, became a representative in the Congress of the Confederacy in 1671. He served as major in King Philip's War, and in 1686 was one of the council of Governor Andros. In 1690 he was major-general of the army designed to operate against Canada, and conducted the expedition with skill and prudence. He was agent of the colony in England; and so wisely did he conduct affairs that the Legislature of Massachusetts gave him \$2000. He was governor of Connecticut from 1698 until his death. Like his father, he was fond of scientific pursuits, and was a Fellow of the Royal Society. He was the eldest son of John Winthrop, Governor of Connecticut.

Winthrop, JOHN, was born at Groton, Suffolk Co., Eng., Jan. 11, 1588; died in Boston, Mass., March 26, 1649. He was a lawyer and a man of substance, and was elected first governor of the Massachusetts Bay Colony. He arrived at Salem, in the summer of 1630, with nine hundred emigrants, in several ships, and on the voyage employed a portion of his time in writing a work entitled *A Modell of Christian Charity*.

On his arrival, the government, administered by Endicott, was transferred to him. He was a just magistrate, and managed the affairs of the

JOHN WINTHROP.

colony with vigor and discretion until succeeded by Thomas Dudley, in 1634. Winthrop and the whole company who came with him intended to join the settlers at Charlestown, but it being sickly there, they went over to the peninsula of Shawmut, where there was a spring of pure and wholesome water, and seated themselves, and called the place Trimountain, on account of three hills. It was afterwards called Boston, and became the capital of New England. When Sir Henry Vane came, and was elected governor, Winthrop was made his deputy, and it was at that time that the controversy with Anne Hutchinson occurred. (See *Hutchinson, Anne*.) Winthrop again became governor in 1637, and from that time until his death he held the office of chief magistrate a greater part of the time. Governor Winthrop kept a journal of the transactions of the colony, which has been published—the first two books in 1790, and the third (the manuscript of which was found in 1816, in the New England Library, kept in the tower of the Old South Meeting-house, in Boston) was published with the first two, in complete form, with notes by James Savage, in 1825–26.

Winthrop, JOHN, JR., son of the preceding, was born at Groton, Eng., Feb. 12, 1606; died in Boston, Mass., April 5, 1676. Educated at Trinity College, Dublin, he entered the public service early. He was in the expedition for the relief of the Huguenots of La Rochelle, in 1627, and the next year was attached to the English embassy at Constantinople. In 1631 he came to America, but soon returned to England. He was sent back in 1635, as governor of the Connecticut colony, by Lords Say and Seal and Brook, built a fort at the mouth of the Connecticut River, and there began a village named Say-Brook. In 1645 he founded New London, on the Thames. Under the constitution of the colony (see *Connecticut, First Constitution of*), he was succeeded by John Hayne, and was elected

governor in 1657, and again in 1659. He held the office until his death. After the accession of Charles II. (1660) Winthrop went to England to obtain a charter from the king. The colonists had been sturdy republicans during the interregnum, and the king did not feel well disposed towards them, and at first he refused to grant them a charter. Finally, when Winthrop presented his majesty with a ring which Charles I. had given to his father, the heart of the monarch was touched, and he granted a charter, May 1 (N. S.), 1662. While attending the Congress of the New England Confederacy, in 1676, at Boston, as delegate from Connecticut, he was seized with illness that caused his death. (See *Connecticut, Charter of*.)

Winthrop, THEODORE, was born at New Haven, Conn., Sept. 21, 1828; killed in battle at Great Bethel, Va., June 10, 1861. He graduated at Yale College in 1848, and on his return from Europe, in 1851, he became tutor to a son of William H. Aspinwall, of New York, whose counting-house he afterwards entered. In the employ of the Pacific Steamship Company, he resided in Panama two years, and visited California, Oregon, and Vancouver's Island. He was one of the sufferers in the expedition of Lieutenant Strain to explore the Isthmus of Darien, returning in impaired health in 1854. On the fall of Sumter he joined the New York Seventh Regiment, went with it to Annapolis, became military secretary to General Butler at Fortress Monroe, with the rank of major, and fell, by the bullet of a sharpshooter, in battle.

Wirt, WILLIAM, LL.D., was born at Bladensburg, Md., Nov. 8, 1772; died at Washington, D. C., Feb. 18, 1834. His father was a Swiss, his mother a German. He was left an orphan when he was eight years of age, with a small patrimony, and was reared and educated by an uncle. He studied law, and began its practice at Culpepper Court-house, Va. In 1795 he married a daughter of Dr. George Gilmer, and settled near Charlottesville, Va., where he contracted dissipated habits, from the toils of which, it is said, he was released by hearing a sermon preached by Rev. James Waddell. In 1799 he was chosen Clerk of the Virginia House of Delegates, and in 1802 was appointed Chancellor of the Eastern District of Virginia. Very soon afterwards he resigned the office, and settled in Norfolk, in the practice of his profession. He had lately written a series of letters under the title of *The British Spy*, which were published in the *Richmond Argus*, and gave him a literary reputation. Published in collected form, they have passed through many editions. The next year he published a series of essays in the *Richmond Enquirer*, entitled *The Rainbow*. Wirt settled in Richmond in 1806, and became distinguished the following year as one of the foremost lawyers in the country in the trial of Aaron Burr for treason. In the same year he was elected to the Virginia House of Delegates, and was a prominent advocate of the chief measures of President Jefferson's administration. His chief literary production—*Life of Patrick Henry*—was

first published in 1817, at which time he was United States Attorney for the District of Virginia. The same year President Monroe appointed him (Dec. 15) Attorney-general of the United States, which office he held continually until 1829, when he removed to Baltimore. In 1832 he was the candidate of the Anti-masonic party (which see) for the Presidency of the United States. Wirt's first wife dying in 1799, he married Elizabeth Gamble, in Richmond, in 1802, who survived him, and was author of a *Floral Dictionary*.

Wisconsin, POSITION OF (1861). This state, containing 800,000 inhabitants, had a Republican majority of full 20,000 votes. Its governor (Alexander W. Randall) was thoroughly loyal. The Legislature convened at Madison, Jan. 10, 1861, and the governor, in his message, denounced the doctrine of state supremacy as a political fallacy, and intimated that the state might soon be called upon for "men and means to sustain the integrity of the Union and thwart the designs of men engaged in an organized treason." When the time came for the people to act, after the attack on Fort Sumter, it was found that the whole resources of the state were solemnly pledged to sustain the national government.

Wisconsin, THE STATE OF, was traversed by French missionaries and traders in the seventeenth century, and derives its name from the river which, in the French orthography, was written Onisconsin. It is said to mean, as an Indian word, "wild-rushing river." The Wisconsin Territory was organized in 1836, out of lands comprised in the territory of Michigan. It embraced all the lands now within the states of Wisconsin, Iowa, and Minnesota, and the Territory of Dakota. In 1838 the territory west of the Mississippi was separated from it. The first territorial government was formed at Mineral Point in July, 1836, and in October the first Legislature assembled at Belmont, in Iowa Co. In 1838 Madison was made the permanent seat of government. A state constitution was formed by a convention at Madison late in 1846, was approved by Congress in 1847, and on the 29th of May, 1848, Wisconsin was admitted into the Union as a state. In 1849 a part of the state was taken to form a part of the Territory of Minnesota. Wisconsin furnished for the national army, during the late Civil War, 96,118 troops. Of the 1,054,670 inhabitants in 1870, 25,000 were from the British Possessions, 28,192 from England, 48,479 from Ireland, 6590 from Scotland, 6550 from Wales, 40,046 from Norway, 5212 from Denmark, 2792 from Sweden, 5990 from Holland, 162,314 from Germany, and 6059 from Switzerland.

STATE SEAL OF WISCONSIN.

Wisdom in Finance, EARLY PROGRESS IN. In 1751 the people of Massachusetts had experience enough of a paper currency, and took measures to firmly establish a sound specie currency. Forgetting their former constitutional scruples, they applied for and obtained an act of Parliament prohibiting the New England assemblies, except in case of war or invasion, to issue any bills of credit for the redemption of which, within a year, provision was not made at the time of the issue; and in no case could the bills be made a legal tender.

Wise, HENRY ALEXANDER, was born in Accomac County, Va., Dec. 3, 1806; died in Richmond, same state, Sept. 12, 1876. He was admitted to the bar at Winchester, Va., in 1828,

HENRY ALEXANDER WISE.

settled in Nashville, Tenn., but soon returned to Accomac, where he was elected to Congress in 1833, and remained a member until 1843, when he was appointed minister to Brazil. He was a zealous advocate of the annexation of Texas. He was a member of the State Constitutional Convention in 1850, and from 1856 to 1860 was governor of Virginia. He approved the proslavery constitution (Lecompton) of Kansas, and in 1859 published a treatise on territorial government, containing the doctrine of the right of Congress to protect slavery. The last important act of his administration was ordering the execution of John Brown (which see) for the raid on Harper's Ferry. In the Virginia Convention, early in 1861, he advocated a peaceful settlement of difficulties with the national government; but after an ordinance of secession had been passed he took up arms against the government, became a Confederate brigadier-general, was an unsuccessful leader in western Virginia, and commanded at Roanoke Island, but was sick at the time of its capture. (See *Roanoke Island, Capture of*.) On that occasion his son, O. J. Wise, was killed.

Wistar's Raid against Richmond. The sufferings of the Union prisoners at Richmond caused efforts to be made early in 1864 to release them. For this purpose General B. F. Butler, in command of the Department of Virginia and North Carolina, planned and attempted a movement for the capture of Richmond by a sudden descent upon it. Arrangements were made for

a diversion in favor of the movement. On Feb. 5, 1864, Butler sent a column of cavalry and infantry under General Wistar, one thousand five hundred in number, who pushed rapidly northward from New Kent Court-house to the Chickahominy at Bottom's Bridge. General Kilpatrick was sent from the Army of the Potomac to co-operate with Wistar. With his cavalry and two divisions of Hancock's infantry he crossed the Rapid Anna, and skirmished sharply with the Confederates to divert their attention from Richmond, and when the time for the execution of the raid had expired these troops recrossed the Rapid Anna, with a loss of about two hundred men. Wistar's raid was fruitless. The Confederates had been apprised of his intended movement by a traitor. Wistar found the line of the Chickahominy too strongly guarded to pass it, and he returned.

Witamo, squaw-sachem of the Pokanokets, at Pocasset, near Mount Hope, was King Philip's mother-in-law, and she and her people supported him to the last and shared his disasters. Most of her people were killed or made captives, and sold into slavery. She herself was drowned while crossing a river in her flight. Her body was recovered, and the head, cut off, stuck upon a pole at Taunton, amid the jeers and scoffs of the colonial soldiers and the bitter lamentations of the Indian prisoners.

Witchcraft, SALEM. The terrible delusion of belief in witchcraft accompanied the New England settlers, and they adopted English laws against it. For a long time it was simply an undemonstrative belief, but at length it assumed an active feature in society in Massachusetts, as it was encouraged by some of the clergy, whose influence was almost omnipotent. Before the year 1688 four persons accused of witchcraft had suffered death in the vicinity of Boston. The first was Margaret Jones, of Charlestown, hanged in 1648. In 1656, Ann Hibbens, sister of Governor Bellingham, of Massachusetts, was accused of being a witch, tried by a jury, and found guilty. The magistrates refused to accept the verdict, and the case was carried to the General Court, where a majority of that body declared her guilty, and she was hanged. In 1688 a young girl in Danvers (a part of Salem) accused a maid-servant of theft. The servant's mother, a "wild Irishwoman" and a Roman Catholic, declared with vehemence that the charge was false, whereupon the accuser, out of revenge, accused the Irishwoman of having bewitched her. Some of the girl's family joined in the accusation and assisted her in her operations. They would alternately become deaf, dumb, and blind; bark like dogs and purr like cats; but none of them lost their appetite or needed sleep. Rev. Cotton Mather—a superstitious, credulous, and egotistical clergyman; a firm believer in witchcraft, and who believed America was originally peopled with "a crew of witches transported hither by the devil"—hastened to Danvers, with other clergymen as superstitious as himself, spending a whole day there in fasting and prayer, and so

controlled the devil, he said, who would allow the poor victims to "read Quaker books, the Common Prayer, and popish books," but not the Bible. Mather and his associates were satisfied that the Irishwoman was a witch, and these holy men had the satisfaction of seeing the poor creature hanged. The excited Mather (who was ridiculed by unbelievers) preached a sermon against witchcraft, crying from the pulpit, with arms extended, "Witchcraft is the most nefarious high-treason against the Majesty on high. A witch is not to be endured in heaven or on earth." His sermon was printed and scattered broadcast among the people, and bore terrible fruit not long afterwards. In 1692 an epidemic disease broke out in Danvers resembling epilepsy. The physicians could not control it, and, with Mather's sermon before them, they readily ascribed it to witchcraft. A niece and daughter of the parish clergyman were seized with convulsions and swelling of the throat, and all the symptoms produced by hysterics. Their strange actions frightened other young girls. A belief that evil spirits in the form of witches were permitted to afflict the people was soon widespread, and terror took possession of their minds, and held it for about six months. The "victims" pretended to see their tormentors with their "inner vision," and forthwith they would accuse some old or ill-favored woman of bewitching them. At length the "afflicted" and the accused became so numerous that no person was safe from suspicion and its consequences. During the prevalence of this terrible delusion, in the spring and summer of 1692, nineteen persons were hanged; one was killed by the horrible punishment of pressing to death; fifty-five were frightened or tortured into a confession of guilt; one hundred and fifty were imprisoned, and fully two hundred were named as worthy of arrest. Among those hanged was Rev. Mr. Burroughs, an exemplary clergyman, whose purity of character was conspicuous. Malice, rapacity, and revenge often impelled persons to accuse others who were innocent; and when some statement of the accused would move the court and audience in favor of the prisoner, the accuser would solemnly declare that he saw the devil standing beside his victim whispering his touching words in his or her ear. And the absurd statement would be believed by the judges on the bench. Some, terrified, and with the hope of saving their lives or avoiding the horrors of imprisonment, would falsely accuse their friends and kinsfolk; while others, moved by the same instinct and hopes, would falsely confess themselves witches. Neither age, sex, nor condition was spared. Finally Sir William Phipps (the governor of Massachusetts, who had instituted the court for the trial of witches), his lieutenant, some near relatives of Cotton Mather, and learned and distinguished men who had promoted the delusion by acquiescing in the proceedings against accused persons, became objects of suspicion. The governor's wife, Lady Phipps, one of the purest and best of women, was accused of being a witch. The sons of ex-Governor Bradstreet were compelled to flee to

avoid the perils of false accusations; near relatives of Mather were imprisoned on similar charges. When the magnates in Church and State found themselves in danger they suspected they had been acting unrighteously towards others, and cautiously expressed doubts of the policy of further proceedings against accused persons, for they remembered that they had caused a constable who had arrested many, and refused to arrest any more, to be hanged. A citizen of Andover who was accused, wiser and bolder than the magistrates and clergy, caused the arrest of his accuser on a charge of defamation of character, and laid his damages at £1000. The public mind was in sympathy with him. The spell was instantly broken, and at a convention of clergymen they declared it was not inconsistent with Scripture to believe that the devil might "assume the shape of a good man, and that so he may have deceived the afflicted." Satan, as usual, was made the scape-goat for the sins and follies of magistrates, clergy, and people. Many of the accusers came forward and published solemn recantations or denials of the truth of their testimony, which had been given, they said, to save their lives. The Legislature of Massachusetts appointed a general fast and supplication, "that God would pardon all the errors of his servants and people in a late tragedy raised among them by Satan and his instruments." And Judge Sewall, who had presided at many trials in Salem, stood up in his place in the church on that fast-day and implored the prayers of the people that the errors which he had committed "might not be visited by the judgments of an avenging God on his country, his family, and himself." The parish minister at Danvers in whose family the "affliction" started, and who was zealous in promoting the prosecutions, was compelled to leave the country. The credulous Mather still believed in witches, and wrote in support of the belief. He was thoroughly ridiculed by unbelievers, one of whom he dismissed by calling him "a coal from hell," and suing him for slander. This episode in the history of Massachusetts is known as "Salem Witchcraft." It astonished the civilized world, and made an unfavorable impression on the surrounding Indians. The Jesuit missionaries took advantage of it to contrast their own mild religious system with the cruel exhibitions of that of the Puritans, whose ministers had been so prominent in the fearful tragedy.

Witches of Salem, THE. The delusion known in history as Salem Witchcraft (which see) produced some frightful examples of ignorance, wickedness, superstition, and utter depravity. It began at the house of Mr. Parris, minister of

Salem, Mass. He had two slaves, an Indian and his wife Tituba. She was half negro and half Indian, skilled in tricks, and often entertained the children of the household and others with their performance. In the winter of 1671-72 she so entertained the children of Parris and others. The children learned many of them, and, being susceptible, some of them became hysterical, and when the doctors were called the latter declared that they were bewitched. During their strange conduct the children were asked who bewitched them. They finally named Sarah Goode, against whom there was popular dislike. She was arrested and sent to prison. A very eccentric man named Giles Corey was much suspected of various misdeeds. He was inclined to believe in witches, and attended some examinations. One day the "bewitched" children fell into convulsions in his presence. He was accused of witchcraft, found guilty, and judicially murdered by the terrible punishment of pressing him to death—the first and only time this horrible penalty was inflicted in New England. Governor Phipps instituted a special court for trying witches. It was composed of seven magistrates, among whom were Stoughton, Sewall, and Saltonstall. Some leading men wanted to resist this proceeding, declaring their disbelief in witchcraft; but they were soon overborne and silenced. Saltonstall, disgusted, withdrew from the bench, and Sewall, who sat through the trials, was afterwards crushed with sorrow and mortification because he had been made guilty of shedding innocent blood; but Stoughton, of implacable temper, and superstitious withal, carried on the trials, procured convictions, and pronounced sentences of imprisonment and death with a savage relish. The superstitious doctors were ready to find "witch marks," such as moles, or callosities of any kind. Francis Nourse and his wife Rebecca had a quar-

REBECCA NOURSE'S HOUSE.

rel with the Endicott family about the occupation of a farm. The children of the latter one day exclaimed that Rebecca had bewitched them, and hysteric fits and other manifestations immediately occurred, which were terrible to the over-

wrought feelings of ignorant spectators. Rebecca, who was a modest, sweet-mannered woman, was put upon trial. The jury were compelled from lack of convicting testimony to believe her innocent, but they were sent out by the judges until they should bring in a verdict contrary to the convictions of their consciences. Rebecca was hanged on "Witches' Hill," and her body cast into a common pit designed for those who should suffer a like fate. When, afterwards, Parris pronounced a sermon denouncing the practitioners of witchcraft, Sarah Cloyse, a sister of

And now began prosecutions originating in grudges or other equally wicked motives, and every man found a way to put his enemy into jail. The children had learned to imitate the gestures of accused persons, and this was attributed to supernatural causes. This condition extended to other children between ten and eighteen years of age—mostly girls—who were of a highly nervous temperament. Very soon these bewitched young people accused persons of distinction. They accused Mrs. Hale, the noble wife of the minister at Beverly, but her

WITCHES' HILL.

Rebecca, left the meeting, and she was denounced as an abettor of a witch. Priscilla Bishop, a gay and "worldly" woman, who wore a black cap, black hat, and red bodice, was denounced as a witch, for a woman who wore a scarlet petticoat was suspected. A witch at Portsmouth had been seen with a red petticoat and a green apron who vanished away in the shape of a cat. A woman walking from one town to another in rainy weather, and boasting that neither her shoes nor gown were wet, was denounced as a witch. Personal piques, private grudges, and long-standing feuds became the occasions of a great number of accusations. Rev. Stephen Burroughs was accused, the principal charge against him being that he possessed a "witch's trumpet," with which he could summon his weird partners to a conference. Cotton Mather and other clergymen fostered the delusion and the wickedness by engaging heartily against accused persons. Mather saw Burroughs hanged; and when from his sweet spirit lofty words were uttered by him on the scaffold, and the people were moved to pity by his words, Mather explained that Satan often transformed himself into an angel of light to deceive men's souls. And the people, reverencing the clergy for their goodness and wisdom, said Amen! When eight accused persons were executed at the same time, the Rev. Mr. Noyes, standing by, exclaimed, "What a sad thing it is to see eight firebrands of hell hanging there!" At length a Committee of Vigilance was appointed for the purpose of finding out and prosecuting witches.

character was too high to suffer suspicion from sensible people; but her husband believed in witchcraft, and so she was suspected. They accused Captain John Alden, a Duxbury man of consequence. After their usual performances before the magistrates, they were asked to point out the person who afflicted them, but could not. One standing near, whispered to a "bewitched" girl, when she cried out, "It is Alden." The magistrate asked, "Did you ever see him?" and she replied, "No; but the man just told me so." The magistrates were not to be deprived of a victim; and, instead of dismissing the case, ordered a ring to be formed in the street, when the child, instructed probably by an enemy of the captain, cried out, "There stands Alden, a bold fellow, with his hat on; sells powder and shot to the Indians." He was placed on a chair in view of all the people in a meeting-house, and then asked to "confess and give glory to God." "I hope I shall always give glory to God," boldly replied Alden; "but never will gratify the devil." He was committed to prison, and would have stood his trial, but was persuaded by friends to escape. Entering the house of a friend at Duxbury, he said he had just "come from the devil, and that the devil was after him." When, in 1693, some of the children began to utter suspicions of the guilt of the wife of Governor Phipps and relatives of the Mathers, it changed the aspect of affairs. Cotton Mather suspected the devil had become "confused," and Phipps, who had appointed a special commission to prosecute the accused, now, when his

own family was touched by suspicion, took decisive measures to allay the public feeling.

Witherspoon, JOHN, D.D., LL.D., was born in Yester, near Edinburgh, Feb. 8, 1722; died near Princetou, N. J., Nov. 15, 1794. He was a lineal descendant of John Knox. Educated at the University of Edinburgh, he was licensed to preach at twenty-one. When the Young Pretender (which see) landed in England young Witherspoon marched at the head of a corps of militia to join him. He was taken prisoner at Falkirk, and remained in Doune Castle until the battle of Culloden. While settled at Paisley he was called (1767) to the presidency of the College of New Jersey, at Princeton, and was inaugurated in August, 1768. He had already written and published several works, and had acquired a fine reputation for scholarship. Under his administration the college flourished, financially and otherwise. He was not only president, but was Professor of Divinity; also pastor of the Presbyterian Church at Princeton. At the beginning of the Revolution the college was for a time broken up, when President Witherspoon assisted in the patriotic political movements. He also assisted in framing a state constitution for New Jersey, and went as a delegate to Congress in time to advocate and sign the Declaration of Independence. For six years he was a punctual attendant of Congress, serving faithfully on important committees. He was a member of the Secret Committee (which see) and of the Board of War. In Congress he opposed the repeated issues of paper-money, and he wrote and published much on the topics of the time. In 1783 he went to England to collect funds for the college. He had a son (a major) killed in the battle of Germantown. At the age of seventy years, President Witherspoon married a young woman of twenty-three.

Wolcott, OLIVER, LL.D., a signer of the Declaration of Independence, was born at Windsor, Conn., Nov. 26, 1726; died at Litchfield, Conn., Dec. 1, 1797. He graduated at Yale College in 1747. He prepared to practise the healing art, but on being appointed sheriff of Litchfield County in 1751, he abandoned it. He was in the Council of the state twelve years (1774-86); also a major-general of militia, and Judge of the County Court of Common Pleas and of Probate. In 1775 Congress appointed him a Commissioner of Indian Affairs to secure the neutrality of the Six Nations, and he became a member of Congress in January, 1776. After the Declaration of Independence he returned to Connecticut, invested with the command of the state militia intended for the defence of New York, and in November resumed his seat in Congress. Late in the summer of 1777 he joined the army under Gates with several hundred volunteers, and assisted in the capture of Burgoyne and his army. On the field of Saratoga he was made a brigadier-general in the Continental service. In 1786 he was chosen lieutenant-governor of Connecticut, and served in that capacity ten years, when he was elected governor.

Wolcott, OLIVER, JR., LL.D., a son of the pre-

ceding, was born at Litchfield, Conn., Jan. 11, 1760; died in New York city, June 1, 1833. He graduated at Yale College in 1778, and was a volunteer to repel the British and Hessian marauders on the Connecticut coast towns in 1779. He became a volunteer aid to his father, and was afterwards a commissary officer. Admitted to the bar in 1781, he was employed in the financial affairs of Connecticut; and in 1784 was appointed a commissioner to settle its accounts with the United States. He was comptroller of national accounts in 1788-89, auditor of the United States Treasury from 1789 to 1791, comptroller from 1791 to 1795, and Secretary of the Treasury from 1795 to 1800, when he was appointed United States Circuit Judge. In 1802 he engaged in mercantile business in New York city, in which he continued until the breaking-out of the War of 1812-15, when, with his son, he established an extensive manufactory of textile goods at Wolcottville, Conn. He was governor of Connecticut nine years (1818-27). Wolcott was one of the company of wits with Hopkins, Barlow, Alsop, and Trumbull. (See *Alsop, Richard.*)

Wolcott, ROGER, was born at Windsor, Conn., Jan. 4, 1679; died there, May 17, 1767. He was not educated in school, and at the age of twelve years he was apprenticed to a mechanic. By industry and economy he afterwards acquired a competent fortune. In the expedition against Canada in 1711 he was commissary of the Connecticut forces, and had risen to major-general in 1745, when he was second in command at the capture of Louisburg. He was afterwards, successively, a legislator, county judge, Chief-justice of the Supreme Court, and governor (1751-54). In 1725 he published *Poetical Meditations*, and he left a long MS. poem descriptive of the Pequot War, which is preserved in the collections of the Connecticut Historical Society.

Wolfe, JAMES, was born at Westerham, Kent, England, Jan. 15, 1726; killed at Quebec, Sept. 13, 1759. He distinguished himself in the army when he was only twenty years of age, and was

JAMES WOLFE.

quartermaster-general in the expedition against Rochefort in 1757. At the second capture of Louisburg by the English in 1758 he acquired

such fame that Pitt placed him at the head of the expedition against Quebec in 1759, with the rank of major-general, though only thirty-three years of age. There he was confronted by the able French general the Marquis de Montcalm, and in the final engagement on the Plains of Abraham (Sept. 13, 1759) he was killed. A monument was erected to his memory in Westminster Abbey, and a fine one was erected at Quebec in honor of both Wolfe and Montcalm.

Wolfe on the Eve of the Battle at Quebec. On the evening of Sept. 12, 1759, General Wolfe, who had just recovered from a serious attack of fever, embarked with his main army on the St. Lawrence, above Point Levi, and floated up the river with the flood-tide. He was preparing for an attack upon the French the next day. The evening was warm and starlit. Wolfe was in better spirits than usual, and at the evening mess, with a glass of wine in his hand, and by the light of a lantern, he sang the little campaign song beginning:

"Why, soldiers, why
Should we be melancholy, boys?
Why, soldiers, why,
Whose business 'tis to die?"

But the cloud of a gloomy presentiment soon overcast his spirits, and at past midnight, when the heavens were hung with black clouds, and the boats were floating silently back with the tide to the intended landing-place at the chosen ascent to the Plains of Abraham, he repeated, in a low tone, to the officers around him this touching stanza of Gray's *Elegy in a Country Church-yard*:

"The boast of heraldry, the pomp of power,
And all that beauty, all that wealth e'er gave,
Await alike, the inevitable hour—
The path of glory leads but to the grave."

"Now, gentlemen," said Wolfe, "I would rather be the author of that poem than the possessor of the glory of beating the French to-morrow." He fell the next day, and expired just as the shouts of victory of the English fell upon his almost unconscious ears. (See *Quebec, Capture of*.)

"Woman Order," THE. An order issued by General Butler, in New Orleans, produced widespread indignation throughout the Confederacy. Many of the women in New Orleans, it was alleged, of the so-called higher class, openly insulted the National officers and soldiers in the street by words and actions, and would leave street-cars and church-pews whenever Union officers entered them. Finally, it was alleged, a woman of the "dominant class" spat in the faces of two officers who were walking peacefully along the street. General Butler, to arrest the growing evil, issued an order (May 15, 1862) intended to work silently, peacefully, and effectually. It was as follows: "As the officers and soldiers of the United States have been subject to repeated insults from the women (calling themselves ladies) of New Orleans, in return for the most scrupulous non-interference and courtesy on our part, it is ordered that hereafter, when any female shall, by word, gesture, or movement, insult or show contempt for any officer or soldier of the United States, she shall

be regarded and held liable to be treated as a woman of the town plying her avocation." The foolish conduct was not afterwards repeated. The "order" was misrepresented in every form, but sensible women acknowledged its justice. One of these, who had herself spurned the proffered kindness of an officer when she had fallen in the street, afterwards, says Parton, declared that the "'Woman Order' served the women right." The general received from the Confederates the name of "Butler the Beast." President Davis issued a proclamation (Dec. 26, 1862), in which he pronounced Butler to be "a felon, deserving of capital punishment," and ordered that he should not be "treated simply as a public enemy of the Confederate States of America, but as an outlaw and common enemy of mankind; and that, in the event of his capture, the officer in command of the capturing force do cause him to be immediately executed by hanging." The same treatment was ordered for all commissioned officers serving under him. A "Georgian" offered \$10,000 reward "for the infamous Butler;" and a prominent citizen of Charleston offered \$10,000 reward "for the capture and delivery of the said Benjamin F. Butler, dead or alive, to any Confederate authority."

Women in Virginia, FIRST EUROPEAN. The London Company made a great mistake in attempting to plant a colony in Virginia without women. Indeed, that corporation was more anxious to acquire sudden wealth from mines of precious metals and from traffic than to found a civilized state. The emigrants they sent over the first three or four years were totally unfit, in moral and physical character, for such a noble enterprise. They were chiefly restless soldiers, ruined spendthrifts, tradesmen broken in fortune and spirits, licentious and profligate young men sent by their friends with a hope of securing for them amendment of life or escape from prison, and vagabonds of every grade, from the idle "gentlemen" (a name then given to wealthy men who were not engaged in any industrial pursuit) to dissolute criminals. The first really valuable "emigrants" (with one exception) sent over the third year of the colony were horses, swine, goats, and sheep, and, two years later, cows. In the autumn of 1606 two women—the wife of Thomas Forrest and her maid, Anne Burrows—came over with a few emigrants. These were the first women from Europe who trod the soil of Virginia proper. Anne soon afterwards married John Laydon, a carpenter; and so the first seed of homes in Virginia was planted. In 1609 over five hundred emigrants came, and with them about twenty women. For more than ten years afterwards very few women ventured across the Atlantic. Without the family relation the colony could not acquire permanency. The emigrants looked forward to a return home after acquiring a competency. The wise and benevolent Edwin Sandys, treasurer of the company, perceived this defect in their scheme of colonization, and proposed to send one hundred "pure and uncorrupt" young women to Virginia at the expense of the corporation to become wives for

the planters, the cost of transportation to be afterwards paid by the husband of each. Ninety were sent in 1620, and at about the same time Pilgrim families were settling in New England. When the young women arrived at Jamestown they were landed in small boats. The shores were lined with expectant young men who had come to see the landing of the precious cargo. Led by the rector of the parish, the maidens walked in procession to the church, where thanksgiving was offered. The church was crowded. In the course of a few days every maiden was wooed and wedded to a young planter. "Love at first sight" was the rule. Several nuptials were celebrated in the church at the same time, and most of the couples lived happily. The young matrons sent word home for other maidens to come, and sixty more, "young and handsome," came the next year. (See *Virginia, Colony of*.) The price of a wife was at first fixed at one hundred and twenty-five pounds of tobacco (the currency of the colony), or about \$90. It finally rose to \$150. A debt incurred for a wife was considered a "confidential" one. It took precedence of all others. To encourage wedding, the company gave preference to married men in conferring employment. The salutary effects of the scheme and this policy were soon apparent. Homes, firesides, family altars—the purest and strongest elements in the foundation of a pure, stable, and prosperous state—were established. Domestic ties so created promoted personal virtue and habits of thrift. Men no longer talked of returning to England, but called Virginia their home. The utter demoralization of the colony consequent upon the sending of criminals from the jails of England to Virginia, which the king began to do in 1619, was prevented. (See *Virginia, Colony of*.) These criminals, sent over in large numbers at first, gave such a bad name to the colony, says Smith, "that some did choose to be hanged ere they would go thither, and were so." This making Virginia a penal colony was thus alluded to by Sir Thomas Wroth in *The Abortive of an Idle Hour* (1620):

"They say a new plantation is intended,
Neere or about the Amazonia River;
But sure that mannish race is now quite ended.
O that Great Jove, of all good gifts the giver,
Would move King James once more to store that clyme
With the moll cut-purses of our bad time."

At about the same time a scheme for ridding London of some of its surplus young, and sometimes unruly, population, and to benefit the colony, as they thought, was put in practice by the London Company. They sent children, from twelve years old and upwards, to be apprenticed to the colonists—the boys until they were twenty-one years of age, and the girls to the same age, or until they were married; after which these apprentices were to be tenants on public land, well provided with "houses and stock of cattle to start with." The London Company was a powerful "children's aid society."

Women's Labor in Pennsylvania, PRICE FOR. About ten years after the founding of

the province of Pennsylvania (which see) feminine hands found plenty to do at remunerative prices. A quaint writer of the time said: "One reason why women's wages are so exorbitant is that they are not very numerous, which makes them stand upon high terms for their several services; and, moreover, they are usually married before they are twenty years of age; and, when once in that noose, are, for the most part, a little uneasie, and make their husbands so, too, till they procure them a maid-servant to bear the burden of the work, as also in some measure to wait upon them, too." Such was a condition of social life in nearly all the colonies at first, for there was a scarcity of women.

Wood, ELEAZAR, was born in New York; killed in a sortie at Fort Erie, Sept. 17, 1814. He was instructed at West Point, and was one of the earlier graduates in the corps of Engineers. He was an engineer in Harrison's campaign in 1813, and was breveted major for his gallantry in the defence of Fort Meigs, of which he had been chief in its construction. In the autumn of 1813 he was General Harrison's adjutant-general, and distinguished himself in the battle of the Thames. For his services in the battle of Lundy's Lane, or Niagara, he was breveted lieutenant-colonel. He was distinguished at Fort Erie, where he lost his life. Colonel Wood was much beloved by General Brown,

WOOD'S MONUMENT AT WEST POINT.

who caused a handsome marble monument to be erected to his memory at West Point.

Wood, THOMAS JEFFERSON, was born at Mumfordsville, Ky., Sept. 25, 1825, and graduated at West Point in 1845, entering the corps of topographical engineers. He served under General Taylor in the war with Mexico, and afterwards against the Indians on the Texan frontier. In 1855 he became captain of cavalry, and lieutenant-colonel in May, 1861. In October, 1861, he was made brigadier-general of volunteers, and in February, 1862, was in command of a division in the Army of the Ohio, and took part in the

battle of Shiloh (which see). In the fall he was engaged in the battle of Perryville and in the pursuit of Bragg. In the battle of Stone's River he was wounded. He commanded a division in the battle of Chickamauga (which see) and at Missionaries' Ridge (which see). He also assisted in the relief of Knoxville, and was active in the Atlanta campaign (1864), being wounded at Lovejoy's Station. He commanded the Fourth Corps in the campaign against Hood in Tennessee. (See *Nashville, Battle of*.) He was made major-general of volunteers in January, 1865, and in March was breveted major-general in the United States Army.

Wood, WILLIAM W. W., was born in Wake County, N. C., in 1818. He acquired a thorough knowledge of engineering at the West Point Foundry, N. Y. He entered the naval service in 1845, and, during the Civil War, was general inspector of steam machinery in the navy, and had charge of the construction of the National iron-clad fleet and the machinery of the new class of vessels then introduced.

Wood-engraving in the United States. No department of art in the United States has manifested greater progress towards perfection than engraving on wood, which was introduced by Dr. Alexander Anderson (which see) in 1794. Before that time engravings to be used typographically were cut on type-metal, and were very rude. The art was in a low state in Europe, as well as in America, until Bewick, in England, almost reinvented it. A copy of his work on birds attracted the attention of Anderson, who ascertained that the beautiful pictures of the feathered tribe were engraved on boxwood. He immediately tried that material, and found it so congenial that he abandoned type-metal and thenceforward used only wood for that department of art. The demand for wood-engraving was not extensive until a comparatively late period, and, in 1830, the whole number of professional engravers on wood in the United States did not, probably, exceed twenty. As a specimen of the state of the art in the United States when Anderson introduced wood, a fac-simile is here given of the frontispiece to the fourteenth edition of Webster's *Spelling-book*, issued in 1791. It is a portrait

of Washington, then President of the United States. This was executed on type-metal. When Anderson's more beautiful works on wood appeared, he was employed by Webster's publishers to make new designs and engravings for the *Spelling-book*, and the designs then made were yet in use in that work a very few years ago. They were the first pictures seen by thousands of American children. This specimen of

FRONTISPICE TO WEBSTER'S SPELLING-BOOK.

art in 1791, compared with the exquisite engravings on wood now (1880) made, show the vast improvement in the art within ninety years. The greatest improvements have been made within fifty years.

Woodford, WILLIAM, was born in Caroline County, Va., in 1735; died in New York city, Nov. 13, 1780. He was distinguished in the French and Indian War, and in 1775 was ap-

pointed colonel of a Virginia regiment. In the battle at the Great Bridge (which see), he was in command, and afterwards was at the head of a Virginia brigade. He was wounded in the battle of Brandywine, and made a prisoner at the taking of Charleston, in 1780, and carried to New York.

Woodhull, NATHANIEL, was born at Mastic, Suffolk County, L. I., Dec. 30, 1722; died at Gravesend, L. I., Sept. 20, 1776. He served in the French and Indian War, and was colonel of a New York regiment under Amherst. In 1769 he was in the New York Assembly, and was one of the few in that body who resisted the obnoxious measures of the British Parliament. In 1776 he was President of the New York Provincial Congress. On the landing of the British on Long Island, he put himself at the head of the militia, with whom he fought in the battle of Long Island. A few days afterwards he was surprised by a party of British light-horsemen, near Jamaica, and, after surrendering his sword, he was cruelly cut with the weapons of his captors, of which wounds he died at an ancient stone-house at New Utrecht, L. I. A narrative of his

HOUSE IN WHICH WOODHULL DIED.

capture and death was published by Henry Onderdonk, Jr., in 1848. His own "Journal of the Montreal Expedition in 1760" was published in the *Historical Magazine* in September, 1861.

Woods, CHARLES, was born in Licking County, O., about 1830, and graduated at West Point in 1852. Early in 1861 he was quartermaster on General Patterson's staff, and in October became colonel of the Seventy-sixth Ohio Volunteers. He was at the capture of Fort Donelson (February, 1862), and in the battle of Shiloh in April. In the Southwest, after July, 1862, he commanded a brigade, performing gallant service at Arkansas Post (which see). He was in nearly all the battles around Vicksburg in 1863, and was made brigadier-general in August of that year. He commanded and led a brigade in the contests on Lookout Mountain (which see) and Missionaries' Ridge; and in the Atlanta campaign he was conspicuous. In the campaign through Georgia to the sea, and through the Carolinas, he led a division of Osterhans's corps. In March, 1865, he was breveted major-general United States Army; made lieutenant-colonel in July, 1866; and assigned to the Fifth Infantry in March, 1869.

Wool, JOHN ELLIS, was born in Newburgh, N. Y., in 1788; died in Troy, N. Y., Nov. 10, 1869. His early education was meagre, but before he was twenty-one he was owner of a book-store

in Troy. Losing his property by fire, he studied law, and on April 15, 1812, entered the army as captain of the Thirteenth Infantry, raising a company in Troy. At the battle of Queens-town Heights he was severely wounded; and, for gallantry in the battles at and near Plattsburg (Sept. 11, 1813), he was breveted lieutenant-colonel. In 1841 he became brigadier-general. He had been sent to Europe by the government in 1832 to examine some of the military systems on that continent, and witnessed the siege of Antwerp. In 1846 he organized and disciplined volunteers for the war with Mexico, and in less than six weeks despatched to the seat of war 12,000 men fully armed and equipped. Collecting 3000 men, he penetrated Mexico to Saltillo, after a march of 900 miles without loss. He selected the ground for the battle of Buena Vista (which see), and commanded in the early part of the action until the arrival of General Taylor. For his conduct there he was breveted major-general and received the thanks of Congress and a sword for his "services in Mexico." The New York Legislature also presented him with a sword. In 1856 he quelled Indian disturbances in Oregon, and was called to the command of the Department of the East, where he performed inestimable services in furnishing means for the salvation of the national capital (see *Union Defence Committee of New York*) and Fortress Monroe from seizure by insurgents in April, 1861. He was made commander of that fortress in August, 1861, and led the expedition that took possession of Norfolk, in May, 1862.

JOHN ELLIS WOOL.

(See *Norfolk, Evacuation of*.) In May, 1862, he was made major-general United States Army and placed at the head of the Eighth Army Corps, but did not appear in the field. He was then seventy-four years of age.

Wool, MAJOR-GENERAL, AND THE DEFENCE OF THE CAPITAL. General Wool was next in rank

to General Scott, and the commander of the Eastern Department in 1861, which comprised the whole country eastward of the Mississippi River. When, at his home in Troy, N. Y., he heard of the affair at Baltimore (see *Massachusetts Troops in Baltimore*), he hastened to Albany to confer with Governor Morgan. That official resolved to push forward troops to Washington as rapidly as possible. Wool issued orders to the United States quartermaster at New York to furnish all needful transportation, and the commissary of subsistence was directed to issue thirty days' rations to every soldier who might be ordered to Washington. Wool went to New York on the 22d, and made his headquarters at the St. Nicholas Hotel, where he was waited upon by the Union Defence Committee (which see). A plan of operations for the salvation of the capital was arranged between them. At that time all communication with the government was cut off by the Secessionists of Baltimore. The general-in-chief (Scott) could not communicate with a regiment outside of the capital, and Wool was compelled to act in conformity to the demands of the crisis, and to assume great responsibilities. Knowing General Scott's disposition, Wool said, "I shall probably be the only victim; but, under the circumstances, I am ready to make the sacrifice, if, thereby, the capital may be saved." With the tireless energy of a man of forty years he labored. Ships were chartered, supplies were furnished, and troops were forwarded to Washington with extraordinary despatch, by way of Chesapeake Bay and the Potomac River. The transports were convoyed by armed steamers, to protect them from pirates, and one of them, the *Quaker City*, was sent to Hampton Roads. To the immensely important work, Fortress Monroe, Wool sent gun-carriages, ammunition, and provisions, that it might be held to command the chief waters of Virginia. A dozen state governors applied to him, as the only superior military officer that could be reached, for advice and for munitions of war; and he assisted in arming no less than nine states. With rare vigilance, he directed Governor Yates, of Illinois, to send a force to take possession of the arsenal at St. Louis, which he believed to be in danger. The movement was timely, and 21,000 stand of small-arms, two field-pieces, and 110,000 rounds of ammunition were transferred from St. Louis to Illinois. Troops and ammunition were ordered to Cairo, Ill., and New England governors were authorized to put the coast defences within their respective states in good order. When the troops sent to Washington by Wool had opened communication with that city, the first despatch that he received from Scott was an order (April 30) to return to his headquarters at Troy for the "recovery of his health, known to be feeble." The general's health was then perfect. A month afterwards General Wool was informed by the Secretary of War that he was sent into retirement because he had issued orders, "on the application of various governors, for arms, ammunition, etc., without consultation" with the authorities at Washington.

Woolsey, MELANCTHON TAYLOR, United States Navy, was born in New York, in 1782; died at Utica, N. Y., May 18, 1838. He studied law for a while, but left the profession and entered the navy as a midshipman, April 9, 1800. He served with credit in the West Indies and the Mediterranean. In 1807 he was commissioned a lieutenant, and in 1808 was sent to Sackett's Harbor to superintend the construction of the *Oneida* (which see). He served with credit under Commodore Channcay on Lake Ontario during the War of 1812-15. Woolsey was made master-commandant in July, 1813, and captain in April, 1816. He commanded the *Constellation* in the West Indies in 1825-26; had charge of the Pensacola navy-yard in 1827, and performed his last duty, afloat, on the coast of Brazil.

Wooster, DAVID, was born at Stratford, Conn., March 2, 1710; died at Danbury, Conn., May 2, 1777. He graduated at Yale College in 1738, and was made captain of an armed vessel to protect the Connecticut coast in 1739. He commanded the sloop-of-war *Connecticut*, which convoyed troops on the expedition against Louisburg in 1745, and was sent in command of a cartel-ship, but was not permitted to land in France. Made captain in Pepperell's regiment, he afterwards received half-pay until 1774, and, as colonel and brigadier-general, served through

DAVID WOOSTER.

the French and Indian War. He served in the campaign in Canada in 1775, having been made a brigadier-general in June, that year. After the death of Montgomery, he was in chief command for some months, after which he resigned and was made major-general of Connecticut militia. While opposing the invasion of Tryon, sent to destroy stores at Danbury, he was mortally wounded (April 27, 1777), at Ridgefield, and died a few days afterwards. The State of Connecticut erected a neat monument over his grave at Danbury.

Worcester, JOSEPH EMERSON, LL.D., lexicographer, was born at Bedford, N. H., Aug. 24, 1784; died at Cambridge, Mass., Oct. 27, 1865. He graduated at Yale College in 1811. While teaching school at Salem he wrote a *Geographical Dictionary*; or, *Universal Gazetteer, Ancient and Modern*, published in 1817. In 1818 he issued a *Gazetteer of the United States*. This was follow-

ed by several elementary works on geography and history. In 1828 he issued *Johnson's English Dictionary, as Improved by Todd and Abridged by Chalmers, with Walker's Pronouncing Dictionary Combined; to which is added Walker's Key*. Dr. Worcester is best known by his series of dictionaries, of which there are six. For a complete list of his works see Allibone's *Critical Dictionary of English Literature, and British and American Authors*.

Worden, JOHN LORIMER, United States Navy, was born at Mount Pleasant, Westchester Co., N. Y., March 12, 1817. He entered the navy in 1835 as midshipman; was made lieutenant in 1846, and commander in July, 1862. In April,

JOHN LORIMER WORDEN.

1861, he was sent on a secret mission to the *Sabine*, off Fort Pickens, and, on his return, was imprisoned at Montgomery seven months. (See *Worden's Mission*.) In March, 1862, he commanded the *Monitor*, which fought the *Merrimac* (see *Monitor and Merrimac*), when he was severely injured about the head. In command of the *Montauk*, in the South Atlantic Blockading Squadron, he engaged Fort McAllister, Ga., in January and February, 1863, and attacked and destroyed the *Nashville*, under the guns of that fort, on the 28th of February. He was engaged in the attempt to capture Charleston, under the command of Dupont, in April, 1863. From 1869 to 1874 he was in charge of the naval academy at Annapolis, and in 1876 was in command of the European Station. He was afterwards commissioned rear-admiral. For his important services in encountering the *Merrimac*, Admiral Worden (then a lieutenant) received the thanks of Congress.

Worden's Mission. Lieutenant (now Admiral) John L. Worden was despatched from Washington on the morning of April 7, 1861, by the Secretary of the Navy, to carry orders to Captain Adams, of the *Sabine*, near Fort Pickens (which see). Worden arrived at Montgomery, Ala., late at night on the 9th, and departed for Pensacola early the next morning. He observed great excitement in the Gulf region, and, fearing he might be arrested, he read his de-

spatches carefully and then tore them up. On the morning of the 11th he arrived at Pensacola. There he was taken before General Bragg, and told that officer that he was a lieutenant of the United States Navy, and had been sent from Washington, under orders from the Navy Department, to communicate with the squadron under Captain Adams. Bragg immediately wrote a "pass," and, as he handed it to Worden, remarked, "I suppose you have despatches for Captain Adams?" Worden replied, "I have no written ones, but I have a verbal communication to make to him from the Navy Department." In the *Wyandot*, a flag-of-truce vessel lying in Pensacola harbor, Worden was conveyed to the *Sabine*, arriving there at about noon, April 12. His verbal despatch was to direct Captain Adams to reinforce Fort Pickens immediately. It was done that night, just in time to save it from the effects of treachery. (See *Fort Pickens, Siege of*.) Worden immediately returned to Pensacola and started for Washington, at nine o'clock that evening, by way of Montgomery, on a railway train. When Bragg found he had committed a great blunder in allowing Worden to go to the *Sabine* (a spy having informed him of the reinforcement of Fort Pickens that very night), he endeavored to shield his own stupidity by falsely accusing Worden of having practised falsehood and deception in gaining permission to visit Captain Adams. This accusation he telegraphed to Montgomery, and recommended Worden's arrest. It was done a short distance below Montgomery, and on Monday, April 15, he was cast into the common jail at the capital of Alabama. Bragg's accusation made him an object of scorn to Davis and his compeers and the citizens generally; and there, in that prison, this honorable officer, whose conduct had been governed by the nicest sense of propriety, was confined until the 11th of November following, when he was paroled and ordered to report to the Confederate Government at Richmond, and, on the 18th, was exchanged for Lieutenant Sharpe, of the Confederate Navy. Worden was the first prisoner of war held by the insurgents.

Worth, WILLIAM JENKINS, was born at Hudson, N. Y., March 1, 1794; died at San Antonio, Texas, May 7, 1849. He began life as a clerk in a store at Hudson, and entered the military service, as lieutenant of infantry, in May, 1813. He was highly distinguished in the battles of Chippewa and at Lundy's Lane, in July, 1814, and was severely wounded in the latter contest. He was in command of cadets at West Point from 1820 to 1828, and in 1838 was made colonel of infantry. He served in the Seminole War from 1840 to 1842, and was in command of the army in Florida in 1841-42. He was breveted a brigadier-general in March, 1842, commanded a brigade under General Taylor in Mexico in 1846, and was distinguished in the capture of Monterey. In 1847-48 he commanded a division, under General Scott, in the capture of Vera Cruz, and in the battles from Cerro Gordo to the assault and capture of the city of Mexico. He was breveted major-general, and was presented

with a sword by Congress, by the states of New York and Louisiana, and by his native county, Columbia. A monument was erected to his memory at the junction of Broadway and Fifth Avenue, New York, by the corporation of that city.

Wrangling in Pennsylvania. At the beginning of the eighteenth century a Church of England party had grown up in Pennsylvania, towards which the Christian Quakers (which see) gravitated. These Episcopalians jealously watched the proceedings of the Quaker magistrates of the province, and represented them as unfit to rule, especially in time of war. Penn's governor (Evans) having thrown out a hint that the proprietor "might throw off a load he had found too heavy"—the political interference of the Assembly—that body became very angry, and, headed by David Lloyd, a lawyer, and their speaker (who had been at one time Penn's attorney-general), they agreed to nine resolutions, which Lloyd embodied in a memorial addressed to the proprietary. In it Penn was charged with an evasion of the fulfilment of his original promises to the colonists, by artfully securing that negative on the Assembly which he had once yielded; with playing the part of a hard and exacting landlord; with keeping the constitution of the courts and the administration of justice in his own hands; with appointing oppressive officers; and, finally, with a downright betrayal of the colonists in his present negotiation for parting with the government—a matter in which he was charged to proceed no further, lest it should look like a "first fleecing and then selling." Penn demanded the punishment of Lloyd. The new Assembly shifted the responsibility of Lloyd's memorial upon their predecessors. The friends of Penn, headed by Logan, secured a majority the next year, which voted an affectionate address to the proprietary. But vexatious troubles soon broke out again. Complaints were sent to Penn against Evans and Logan. The former was dissipated, and had corrupted William, the eldest son of Penn, who became a companion of his revels. That son publicly renounced Quakerism. Evans was superseded by Charles Gookin. He found the Assembly in a bad humor, because Penn sustained Logan, whom they denounced as "an enemy to the welfare of the province, and abusive of the representatives of the people." Logan went to England, and, returning, brought a letter from Penn to the Assembly, giving an outline history of his efforts in settling his province, and intimating that, unless a change should take place, and quiet be restored, he might find it necessary to dispose of so troublesome a sovereignty. An entirely new Assembly was chosen at the next election, and nearly all the points in dispute were arranged. But Penn, wearied with contentions, made an arrangement to cede the sovereignty of his province to the queen for the consideration of about \$60,000, reserving to himself the quit-rents and property in the soil. The consummation of this bargain was prevented by Penn being prostrated by an attack of paraly-

sis (1712), though he lived six years afterwards. (See *Penn, William*.)

Wright, HORATIO GATES, was born in Connecticut, about 1820, and graduated at West Point in 1841, remaining two years as assistant professor of engineering. He was made brigadier-general of volunteers in September, 1861,

HORATIO GATES WRIGHT.

and major-general in July, 1862. He was chief-engineer of Heintzelman's division at the battle of Bull's Run, and in the Port Royal expedition he commanded a brigade. In February, 1862, he was in the expedition that captured Fernandina, Fla., and commanded a division in the attack on Secessionville, S. C., in June, 1862. In July he was assigned to the Department of the Ohio, and commanded a division in the Army of the Potomac at Gettysburg. In November, 1863, he was in command of an army corps, which he led in the Richmond campaign until July, 1864, when he was sent to the defence of the capital, and afterwards (August to December) was engaged in the Shenandoah campaign. He was wounded in the battle of Cedar Creek. He was in the final military operations which ended with the surrender of Lee. He was brevetted major-general United States Army in March, 1865.

Wright, SIR JAMES. (See *Georgia, Flight of the Royal Governor of*.)

Wristbands and Collars. The making of these by machinery is a comparatively new industry in the United States. The manufacture of detached collars was begun about forty years ago, first by hand. These "false wristbands," as they were called, were first manufactured (about 1850) by machinery invented for the work, and now millions are made and sold annually in this country. In 1870 there were 300,000,000 linen wristbands and collars manufactured. Within a few years they have been made of paper also, and now (1880) the value of their annual product is more than \$6,000,000.

Writs of Assistance. An illicit trade with the neutral ports of St. Thomas and Eustatius, and with the French islands—under flags of truce to the latter, granted by colonial governors, nominally for an exchange of prisoners, but

really as mere covers for commercial transactions—had been carried on some time by the northern colonies. Of this the English merchants complained, and Pitt issued strict orders for it to be stopped. It was too profitable to be easily suppressed. Francis Bernard, who was appointed governor of Massachusetts Aug. 4, 1760, attempted the strict enforcement of the laws against this trade. Strenuous opposition was aroused in Boston, and the custom-house officers there applied to the Superior Court to grant them writs of assistance, according to the English exchequer practice—that is, warrants to search, when and where they pleased, for smuggled goods, and to call in others to assist them. Thomas Hutchinson was the chief justice, and favored the measure. The merchants employed Oxenbridge Thatcher and James Otis—the former a leading law practitioner and the latter a young barrister of brilliant talents—to oppose it. The people could not brook such a system of petty oppression, and there was much excitement. Their legality was questioned before a court held in the old Town Hall in Boston. The advocate for the crown (Mr. Gridley) argued that, as Parliament was the supreme legislature for the whole British realm, and had authorized these writs, no subject had a right to complain. The fiery James Otis answered him with great power and effect. The fire of patriotism glowed in every sentence; and when he uttered the words, "To my dying-day I will oppose, with all the power and faculties God has given me, all such instruments of slavery on one hand and of villany on the other," he gave the key-note to the concerted action of the English-American colonies in opposing the obnoxious acts of the British Parliament. "Then," said John Adams, who heard Otis's speech, "the independence of the colonies was proclaimed." Very few writs of assistance were issued, and these were rendered ineffectual by the popular will.

Wyllis, SAMUEL, was born at Hartford, Jan. 15, 1739; died June 9, 1823. He graduated at Yale College in 1758, and in 1775 became lieutenant-colonel of Spencer's regiment. He commanded a regiment at the siege of Boston, was appointed colonel in the Continental army in January, 1776, and served with much reputation throughout the war. He succeeded his father as Secretary of State of Connecticut, which post he resigned in 1809. His grandfather had also been Secretary of State. The three held that office ninety-eight years in succession. He became a general of militia, and was a member of the Connecticut Academy of Arts and Sciences.

Wyoming, TERRITORY OF, was created by act of Congress, July 25, 1862, and was formed from portions of Dakota, Idaho, and Utah. The first settlements within its borders were made in 1867, during the progress of construction of the Union Pacific Railroad. Its capital, and largest and most important town, is Cheyenne, situated on the Union Pacific Railroad, five hundred and sixteen miles from Omaha. The first stake was driven at Cheyenne on July 13, 1867,

and in one month there was a town of eight hundred inhabitants there, and there a permanent city has been established.

Wyoming Valley, CIVIL WAR IN THE. At the close of the Revolution settlers from Connecticut began to pour into the Wyoming valley, under the auspices of the Susquehanna Company (which see). Pennsylvania denied the claim of Connecticut to the valley, and asked Congress to appoint a commission to hear the claimants by representatives, and determine the questions in dispute. The commissioners, sitting at Trenton, decided against the claims of Connecticut. The settlers, who believed the decision covered only the question of jurisdiction, were content, but the authorities of Pennsylvania claimed a right to the soil, and would not confirm the land-titles of the inhabitants received from the Susquehanna Company. Not only so, but measures were taken to expel the Connecticut people from the valley. The most unjust and oppressive measures were employed by civil and military officers there. These the people endured for a while; but when, in July, 1784, two promising young men were killed by soldiers in the employ of Pennsylvania, the people rose in retaliation, led by Colonel John Franklin, of Connecticut. Colonel John Armstrong was sent (August) with a considerable force to restore order in the valley. All these movements were directed by the Pennsylvania Assembly, contrary to the general sentiment of the people. The hearts of the people of Wyoming were strengthened by the sympathy of good men. The number of settlers increased, and, defying the soldiers under Armstrong, cultivated their lands, and for two years waited for justice. In 1786 they procured the formation of their district into a new county, which they named Luzerne. Colonel Timothy Pickering was sent by the authorities of Pennsylvania to harmonize affairs in that county. He succeeded in part, but restless spirits opposed him, and he became a victim to cruel ill-treatment. Quiet was restored (1788), but disputes about land-titles in the Wyoming valley continued for nearly fifteen years afterwards.

Wyoming Valley, INVASION OF THE. Among the Connecticut settlers in the Wyoming valley (see *Susquehanna Company, The*) were some Scotch and Dutch families from the Mohawk valley. About thirty of them, suspected of being Tories, were arrested at the beginning of the war, and sent to Connecticut for trial. They were released for want of evidence, returned to the Mohawk, joined the Tory partisan corps of Johnson and Butler, and waited for a chance for vengeance on their persecutors. In June, 1778, a motley host of Tories and Indians, under the general command of Colonel Butler, gathered at Tioga, on the Susquehanna River. They entered the Wyoming valley July 2. Among them were the vengeful Scotch and Dutch. Butler made his headquarters at the fortified house of Wintermoot, a Tory. Two full companies, out of three thousand inhabitants, had been raised in the valley for the Continental army, and its

only defenders were old men, brave women, tender youths, and a handful of trained soldiers. These, four hundred in number, Colonel Zebulon Butler, assisted by Colonel Denison, Lieutenant-colonel Dorrance, and Major Garratt, led up the valley (July 3) to surprise the invaders at Wintermoot's. They were terribly smitten

WINTERMOOT'S.

by Tories and savages in a sharp fight, and more than one half were killed. Very soon two hundred and twenty-five scalps were in the hands of the barbarians. A few of the smitten ones escaped, with Colonel Denison, to Forty Fort, just above Wilkes-Barre, and Butler himself fled to Wilkes-Barre Fort. In the former, families for miles around had taken shelter. The night that followed was full of horrors. Prisoners were tortured and murdered, and the fugitives were in continual fear of death. Unexpectedly to all, the leaders of the invaders offered humane terms of surrender to the inmates of Forty Fort, and they retired to their homes in fancied security, while Colonel Butler left the valley. In disobedience of his commands, the Indians spread over the valley before sunset (July 4), and when night fell they began the horrid work of plundering, murdering, and burning. The blaze of twenty dwellings lighted up the valley and the neighboring mountains at one time. In almost every house and every field the murderous work was performed. When the moon rose, the terrified survivors of the massacre fled to the Wilkes-Barre Mountains and to the morasses of the Pocono beyond. In that dreadful wilderness called the "Shades of Death" many women and children perished. Those who survived made their way eastward until they reached their native homes in Connecticut. Five miles and a half above Wilkes-Barre, near the pleasant village of Troy, stands a monument, construct-

ed of hewn blocks of granite, erected in commemoration of the slain in the battle who were buried at that spot. It is sixty-two and a half

WYOMING MONUMENT.

feet in height. Upon two marble tablets are the names of those who fell, as far as could be ascertained, and also of those who were in the battle and survived. This monument was not completed until more than sixty years after the sad event.

Wythe, GEORGE, a signer of the Declaration of Independence, was born at Elizabeth City, Va., in 1726; died at Richmond, June 8, 1806. He was educated at the College of William and Mary, after receiving excellent home instruction from his mother. Losing his parents in his youth, and having control of a large fortune, he led a dissipated and extravagant life until he was thirty years of age, when his conduct entirely changed. He studied law, and was admitted to the bar in 1757, when he soon became very eminent in his profession for learning, industry, and eloquence. For many years he was a prominent member of the Virginia House of Burgesses, as the representative of his alma mater, in which he was professor of law from 1779 to 1789. He was an influential member of Congress from 1775 to 1777, when he was chosen Speaker of the House of Delegates, and was appointed Judge of the State High Court of Chancery. On the reorganization of the Court of Equity, he was made sole chancellor, and held the office more than twenty years. Chancellor Wythe's death was occasioned by poison. A person suspected of administering it was acquitted. Late in life he emancipated his slaves, and gave them means for subsistence.

Y.

Yale College, the third of the higher institutions of learning established in the English-American colonies in the 17th century, is in New Haven, Conn. Such an institution was contemplated by the planters soon after the founding of the New Haven colony, but their means were too feeble, and the project was abandoned for a time. It was revived in 1698, and the following year ten of the principal clergymen were appointed trustees to found a college. These held a meeting at New Haven and organized an association of eleven ministers, including a rector. Not long afterwards they met, when each minister gave some books for a library, saying, "I give these books for founding a college in Connecticut." The General Assembly granted a charter (Oct. 9, 1701), and on Nov. 11 the trustees met at Saybrook (see *Saybrook, Fort*), which they had selected as the place for the college, and elected Rev. Abraham Pierson rector. The first student was Jacob Hemmingway, who entered in March, 1702, and was alone for six months, when the number of students was increased to eight, and a tutor was chosen. The site being inconvenient, in 1716 it was voted to establish the school permanently at New Haven, and the first college-building was begun soon afterwards. It was finished in 1718, and at the "commencement" in September of that year it was named Yale College, in compliment to Elihu Yale, its most eminent benefactor. (See *Yale, Elihu*.) This name was confined to that college-building, but in 1745, when a new charter was given, it was applied to the whole institution. Its laws were printed in Latin in 1748, and this was the first book printed in New Haven. The government of the college was administered by the rector, or president, and ten fellows, all of whom were clergymen, until 1792, when the governor and lieutenant-governor of the state and six senior assistants of the council were made fellows *ex-officio*, making the corporation consist of eighteen members besides the president. In 1871-72 the Legislature of Connecticut passed a law providing for the substitution of six graduates of the college for the six councillors, to be selected by the alumni. The legal title of the institution now is "The President and Fellows of Yale College in New Haven," but the immediate government is vested in the president and faculty. The college has had twelve presidents from 1701 to 1876, and is, next to Harvard, the richest college in the United States. Its numerous fine buildings occupy a square of about nine acres. It has a scientific school (Sheffield), museum of natural history, picture-gallery, extensive mineral and geological cabinets, and a library containing about one hundred and fifteen thousand volumes, exclusive of pamphlets. In Yale College particular attention is given to the Oriental languages, and its curriculum embraces nearly the whole circle of science and literature. It has received the grant from Con-

gress and is the college of industry for Connecticut. (See *Agricultural Colleges*.)

Yale, ELIHU, was born at New Haven, Conn., April 5, 1648; died in London, July 22, 1721. At the age of ten he went to England, where he was educated. About 1678 he went to the East Indies, where he remained twenty years and amassed a large estate. He was Governor of Fort George there from 1687 to 1692. Mr. Yale married a native of the East Indies, by whom he had three daughters. He passed his latter days in England, where he was made Governor of the East India Company and a Fellow of the Royal Society. He remembered his native country with affection, and when the school that grew into a college was founded he gave donations to it amounting in the aggregate to about \$2000. It was given the name of Yale in his honor.

Yancey, WILLIAM LOWNDES, was born at Ogeechee Shoals, Ga., Aug. 10, 1814; died near Montgomery, Ala., July 28, 1863. He was very young when he went to Alabama, where he studied law, and entered upon its practice at Montgomery. For a while he was engaged in journalism, and served in both branches of the Alabama Legislature. From 1844 to 1847 he was a member of Congress. A fervid and fluent speaker, he was an influential politician in the Democratic party, and became a leader of the extreme pro-slavery party in the South. So early as 1853 he advised the organization of committees of safety all over the cotton-growing states to "fire the Southern heart" in favor of disunion and the founding of a slave empire within the Golden Circle (which see). His speeches did much to bring about the insurrection in the cotton states which expanded into a wide-spread civil war. Mr. Yancey reported the Alabama Ordinance of Secession to the convention at Montgomery, which was adopted Jan. 14, 1861. In February following he was appointed a Confederate commissioner to the governments of Europe to obtain the recognition of the Confederate States. He entered the Confederate Congress early in 1862, in which he served until his death.

Yankee Doodle. The origin of this air is involved in obscurity. It seems to be older than our Republic. It is said to be the tune of an old English nursery-song called *Lucy Locket*, which was current in the time of Charles I. In New England in colonial times it was known as *Lydia Fisher's Jig*. Among other verses of the song was this:

"Lucy Locket lost her pocket,
Lydia Fisher found it;
Not a bit of money in it,
Only binding round it."

A song composed in derision of Cromwell by a loyal poet commenced with

"Nankey Doodle came in town,
Riding on a pony.
With a feather in his hat
Upon a macaroni."

A "doodle" is defined in the old English dictionaries as "a sorry, trifling fellow," and this tune was applied to Cromwell in that sense by the cavaliers. A "macaroni" was a knot in which the feather was fastened. In a satirical poem accompanying a caricature of William Pitt in 1766, in which he appears on stilts, the following verse occurs:

"Stamp Act! le diable! dat is de job, sir:
Dat is de Stiltman's nob, sir,
To be America's nabob, sir,
Doodle, noodle, do."

Kossuth, when in this country, said that when Hungarians heard the tune they recognized it as an old national dance of their own. Did *Yankee Doodle* come from Central Asia with the great migrations? A secretary of the American Legation at Madrid says a Spanish professor of music told him that *Yankee Doodle* resembled the ancient sword-dance of St. Sebastian. Did the Moors bring it into Spain many centuries ago? A Brunswick gentleman told Dr. Ritter, Professor of Music at Vassar College, that the air is that of a nursery-song traditional in the Duchy of Brunswick. A surgeon in the British army, who was with the provincial troops under Johnson at the head of Lake George, being impressed with the uncouth appearance of the provincial soldiers, composed a song to the air, which he called *Yankey*, instead of *Nankey, Doodle*, and commended it to the motley soldiers as "very elegant." They adopted it as good martial music, and it became very popular. The air seems to have been known in the British army, for it is recorded that when, in 1768, British troops arrived in Boston harbor "the *Yankee Doodle* tune" (says a writer at that time) "was the capital piece in the band of music" at Castle William. The change in the spelling of the word "Yankey" was not yet made. Trumbull, in his *McFingal*, uses the original orthography. While the British were yet in Boston after the arrival of Washington at Cambridge in the summer of 1775, some poet among them wrote the following piece in derision of the New England troops. It is the original *Yankee Doodle* song:

1. "Father and I went down to camp,
Along with Captain Goodwin,
Where we see the men and boys
As thick as hasty-pudding'.
2. "There was Captain Washington
Upon a *slapping* stallion,
A giving orders to his men:
I guess there was a million.
3. "And then the feathers on his hat,
They looked so *tarnal* fine,
I wanted *pockily* to get,
To give to my *Jemima*.
4. "And then they had a *scampin'* gun,
As large as log of maple,
On a *deuced* little cart—
A load for father's cattle.
5. "And every time they fired it off
It took a horn of powder;
It made a noise like father's gun,
Only a *nation* louder.
6. "I went as near to it myself
As Jacob's *underpinnin'*,
And father went as near *agin*—
I thought the *deuce* was in him.

7. "Cousin Simon grew so bold,
I thought he would have cocked it;
It scared me so, I shrunked off,
And hung by father's pocket.
8. "And Captain Davis had a gun,
He *kind* a clapped his hand on't,
And stuck a crooked stabbing-iron
Upon the little end on't.
9. "And there I see a pumpkin-shell
As big as mother's basin,
And every time they touched it off
They scampered *like the nation*.
10. "And there I see a little keg,
Its heads were made of leather:
They knocked upon't with little sticks,
To call the folks together.
11. "And then they'd *fly away like fun*,
And play on *cornstalk* fiddles;
And some had *ribbons* red as blood,
All wound about their middles.
12. "The troopers, too, would gallop up
And fire right in our faces;
It scared me almost half to death
To see them run such races.
13. "Old Uncle Sam come then to change
Some pancakes and some onions
For *'lasses* cakes, to carry home
To give his wife and young ones.
14. "I see another *smari* of men
A digging graves, they told me,
So *tarnal* long, so *tarnal* deep,
They *tended* they should hold me.
15. "It scared me so, I *hooked* it off,
Nor slept, as I remember,
Nor turned about till I got home,
Locked up in mother's chamber."

Yankee Doodle appears to be "a child of thirty-six fathers." It has been suggested by a witty lady that perhaps *Yankee Doodle* "composed itself," as the Germans say of folk-songs. It is accepted as our national air, and is in positive contrast in spirit to the stately *God Save the King* of Old England. The tune is so associated with the patriotic deeds of Americans that it always inspires a love of country in the heart of every good citizen. In 1861 the Legislature of South Carolina forbade the playing of *Yankee Doodle* in that state.

Yates, RICHARD, was born at Warsaw, Ky., Jan. 18, 1818. In early youth he went to Illi-

RICHARD YATES.

nois; graduated at Illinois College; studied law, and became eminent in the profession.

He was often a member of the State Legislature. He was a member of Congress from 1851 to 1855, and Governor of Illinois from 1861 to 1865—a most active “war-governor” during that exciting period. The Legislature of Illinois met on Jan. 7, 1861. The governor’s message to them was a patriotic appeal to his people; and he summed up what he rightly believed to be the public sentiment of Illinois, in the words of President Jackson’s toast, given thirty years before: “Our Federal Union: it must be preserved.” Governor Yates was elected to the United States Senate in 1865, and served therein six years.

Yates, ROBERT, was born at Schenectady, N. Y., Jan. 27, 1738; died in Albany, N. Y., Sept. 9, 1801. He was admitted to the bar in 1760, and became eminent in his profession. During the controversies preceding the war for independence he wrote several excellent essays upon the great topics of the time. He was a prominent member of the Committee of Safety at Albany; also, Chairman of the Committee on Military Operations (1776–77), member of the Provincial Congress of New York, and of the convention that framed the first state constitution. He was Judge of the Supreme Court of New York from 1777 to 1790, and Chief-justice from 1790 to 1798. Judge Yates was a member of the convention that framed the national Constitution, but left the convention before its close and opposed the instrument then adopted. He kept notes of the debates while he was in the convention. He was one of the commissioners to treat with Massachusetts and Connecticut respecting boundaries and to settle difficulties between New York and Vermont.

Yazoo, CONFEDERATE FLEET, ON THE, DESTROYED. General Herron was sent (July 12, 1863) up the Yazoo River with a considerable force in light-draft steamboats to destroy a Confederate fleet lying at Yazoo City. The transports were convoyed by the armored gunboat *De Kalb*. When they approached the town the garrison and vessels fled up the river, and were pursued. When the *De Kalb* was abreast the town she was sunk by the explosion of a torpedo. Herron’s cavalry landed and pursued the vessels up the shore, destroying a greater portion of them. The remainder were sunk or burned by the Confederates. Herron captured three hundred prisoners, six heavy guns, some small-arms, eight hundred horses, and two thousand bales of cotton.

Yazoo Lands. The first Legislature of Georgia that met after the adoption of the national Constitution undertook to sell out to three private companies the pre-emption right to tracts of wild land beyond the Chattahoochee River. Five million acres were allotted to the “South Carolina Yazoo Company” for the sum of \$66,964, seven million acres to the “Virginia Yazoo Company” for \$93,742, and three million five hundred thousand acres to the “Tennessee Yazoo Company” for \$16,876. This movement was in response to a prevailing spirit of land speculation stimulated by extensive migrations of people from the Atlantic seaboard to new lands in

consequence of pecuniary embarrassment, a result of the war for independence. In 1790 the national government, by treaty, gave much of the lands south and west of the Oconee River to the Creek Indians. This offended the Georgians, and the more violent among them proposed open resistance to the government and to settle on those lands in spite of the treaty. Sales of the lands were made to a “Georgia Yazoo Company” formed subsequent to the treaty. The sales in 1796 had amounted to \$500,000, a sum totally inadequate for the amount of land purchased. There were evidences of great corruption on the part of the Georgia Legislature, and in 1796 Congress revoked the sales as unconstitutional and void, and directed the repayment to the several companies of the amount of money which they had paid to the state, if called for within eight months. The original act authorizing the sale was burned in front of the State-house, and all records relating to it were expunged. In 1798 the constitution of Georgia was revised, and in certain provisions, having reference expressly to the Yazoo Lands, an effectual check was put to these speculations. In the organization of territories west of the Chattahoochee the subject of the Yazoo lands presented some grave questions, for there were still claimants under the original grants who were importunate. They claimed in the aggregate about \$8,000,000 as an equivalent for a relinquishment of their rights. In 1804 the “New England Mississippi Company,” successor, by purchase, to the “Georgia Yazoo Company,” appeared as claimant, by its agent, and solicited a settlement. It appeared that a great share of those original grants had passed into the hands of New England men. Their claims were violently opposed, partly on political and sectional grounds. The subject was before Congress several years, many of the Southern members, led by the implacable John Randolph, defeating every proposed measure for making an honorable settlement with the New England purchasers. The claimants turned from Congress to the courts. In 1810 the Supreme Court of the United States decided that the act of the Georgia Legislature in repudiating the original grants of the Yazoo lands was unconstitutional and void, being in violation of a solemn contract. This decision and other considerations caused Congress to make a tardy settlement with the claimants in the spring of 1814. Such was the end of a speculation out of which Southern grantees made splendid fortunes, but which proved very unprofitable to Northern speculators.

Yeamans, SIR JOHN, Governor of South Carolina from 1671 to 1674, was born in Bristol, England, and died in Barbadoes. In 1655 he went from Barbadoes and settled in “Clarendon County,” or South Carolina (see *South Carolina, Colony of*), and first introduced negro slaves there. He was made governor, and at first he ruled with mildness and justice, but, becoming violent and tyrannical, he was removed from office in 1674, and returned to England.

Yearly, SIR GEORGE, Governor of Virginia in 1616, 1619-21, and 1625, was a native of England, and first introduced representative government in Virginia. (See *Virginia, Colony of*.)

Yearnings for Peace (1779). The low state of the French finances at the beginning of 1779 made her monarch desire a termination of the war, which France was bound by treaty to wage until the independence of the United States should be secured. Early in that year the monarch of Spain (Charles IV.), uncle of the King of France, had offered his mediation between the belligerents, which Great Britain at first evaded and then rejected. Spain joined France in the war against England, but did not acknowledge the independence of the United States, for, having vast colonial possessions in America, the successful struggle of the patriots with the mother country for independence might have an unfavorable influence on the Spanish-American colonies. The French court showed its anxiety for a speedy termination of the war when its minister (M. Gerard) suggested to the Congress that the Americans ought, perhaps, to be satisfied, as the Dutch and Swiss had been, with an indirect acknowledgment of their independence; and to be moderate, also, in their other demands concerning boundaries, the Newfoundland fisheries, the navigation of the Mississippi, etc. He also suggested that the United States ought to make such concessions to Spain, on the subject of the Mississippi and the country on its banks, as would induce her to come heartily into the alliance. These suggestions were repeated by the Chevalier de Luzerne, Minister Gerard's successor. The United States yielded to these suggestions so far as to appoint commissioners to negotiate for peace—John Adams with England, Jay with Spain.

Yellow - fever, EARLY APPEARANCE OF THE. In June, 1693, the yellow-fever prevailed in Boston to a considerable extent. It was carried there by a fleet and army from the West Indies, which had been ordered to Boston to co-operate in an attack upon Canada. (See *Quebec, Expedition against*, 1690.) In 1699 this fever swept off many of the inhabitants of Philadelphia. It was carried there from the West Indies, where it had been prevailing extensively for some time.

Yellowstone Park. In 1872 Congress passed an act for setting apart a large tract of the public domain, about forty miles square, lying near the head-waters of the Yellowstone River, on the northeastern slope of the Rocky Mountains, for a public park. It is withdrawn from sale, settlement, or occupancy, and is dedicated to the "pleasure and enjoyment of the people of the United States."

Yeo, SIR JAMES LUCAS, who commanded the British naval forces on Lake Champlain in 1813-1814, was born in Southampton, England, in 1782, and died in his native country in 1819. He was an active, but very cautious officer. Just after the declaration of war (1812) a Federalist newspaper charged Captain Porter with cruelly treating an English seaman on board the *Essex* who refused to fight against his country-

men, pleading, among other reasons, that if caught he would be hung as a deserter from the royal navy. This story reached Sir James L.

JAMES LUCAS YEO.

Yeo, then a commander on the West India station, and he sent by a paroled prisoner a message to Porter, inviting the *Essex* to combat with his vessel (the *Southampton*), saying he "would be glad to have a tête-à-tête anywhere between the capes of the Delaware and the Havana, when he would have the pleasure to break his own [Porter's] sword over his d—d head, and put him down forward in irons." The challenge was accepted in more decorous terms, but the tête-à-tête never came off. Sir James was too cautious. Indeed, his conduct on two or three occasions on Lake Ontario caused the wits of the day to interpret his extreme caution as a specimen of "heart disease" known to cowards.

York (or Toronto), CAPTURE OF (1813). In the winter of 1813 the new Secretary of War (John Armstrong) conceived a new plan for an invasion of Canada. He did not think the American troops on the northern frontier sufficiently strong to attack Montreal, and he proposed instead to attack successively Kingston, York (now Toronto), and Fort George, near the mouth of the Niagara River, thus cutting off the communication between Montreal and Upper Canada. As the British had a sloop-of-war on the stocks at York, another fitting out there, and a third repairing, Dearborn and Channcey were of opinion that the surest way to secure the supremacy of Lake Ontario, and so make an invasion successful, would be to attack York first. This proposition was sanctioned by the President, and at the middle of April (1813) Channcey and Dearborn had matured a plan of operations with a combined land and naval force. It was to cross the lake and capture York, and then proceed to attack Fort George. At the same time troops were to cross the Niag-

ara River and capture Fort Erie, opposite Buffalo, and Fort Chippewa, below, join the victors at Fort George, and all proceed to capture Kingston. With seventeen hundred troops under the immediate command of Brigadier-general Zebulon M. Pike, Dearborn sailed in Chauncey's fleet from Sackett's Harbor, April 25, and on the morning of the 27th the armament appeared before York. Chauncey's fleet consisted of the

ously damaging the works. The dismayed enemy spiked the cannons, and retired to a battery nearer the town. That, too, was soon abandoned, and Sheaffe and his men fled to the garrison, near the governor's house, and then opened a fire of round and grape shot upon the Americans. The great guns of the enemy were soon silenced, and the Americans expected every moment to see a white flag displayed from

YORK IN 1813, FROM THE BLOCK-HOUSE EAST OF THE DON.

new sloop-of-war *Madison*, 24 guns, the brig *Oncida*, and eleven armed schooners. York was the capital of Upper Canada, and then the headquarters of General Sheaffe, at the head of regulars and Indians. It was intended to land at a clearing near old Fort Toronto, but a strong easterly wind drove the boats in which the troops had left the fleet farther westward, and beyond any effectual covering by the guns of the navy. Major Forsyth and his riflemen led the van in landing. When within half rifle-shot of the shore they were assailed by a deadly volley of bullets from a company of Glengary men and a party of Indians concealed in the woods. Pike, from the deck of the *Madison*, saw this, and, jumping into a boat, ordered his staff to follow. Very soon he was in the midst of a sharp fight between Forsyth's men and the party on shore. The main body soon followed, and the British were driven back to their works near the town. The Americans, led by Pike, followed closely and captured two redoubts, and at the same time Chauncey hurled deadly volleys of grape-shot on the foe from his naval cannons. Heavy guns had been landed, and these were pressed forward with great fatigue over the many ravines. The Indian allies of the British, frightened by the cannons, deserted Sheaffe, and the latter fell back to the Western Battery, mounting 24-pounders. Pike's men were about to storm it, and Chauncey's round-shot were pounding it, when the wooden magazine of the battery, which had been carelessly left open, exploded, killing some of the garrison and seri-

ously damaging the works. The dismayed enemy spiked the cannons, and retired to a battery nearer the town. That, too, was soon abandoned, and Sheaffe and his men fled to the garrison, near the governor's house, and then opened a fire of round and grape shot upon the Americans. The great guns of the enemy were soon silenced, and the Americans expected every moment to see a white flag displayed from the block-house, when a sudden and awful calamity occurred. General Pike was sitting upon a stump conversing with a huge British sergeant who had been taken prisoner, and with his staff around him, when a sudden tremor of the ground was felt, followed by a tremendous explosion near the British garrison. The enemy, despairing of holding the place, had blown up their powder-

magazine, situated upon the edge of the lake, at the mouth of a ravine. Fragments of timber and huge stones, of which the magazine walls were built, were scattered in every direction over a space of several hundred feet. By that explosion fifty-two Americans were slain and one hundred and eighty wounded. Forty of the British also lost their lives. General Pike, two of his aids, and the captive sergeant were mortally hurt. The terrified Americans scattered in dismay, but were soon rallied, the column was re-formed, and Colonel Cromwell Pearce, of Pennsylvania, assumed the command. The Americans pressed forward to the village, where they were met by the civil authorities of the town, who surrendered the place, together with two hundred and ninety

POWDER-MAGAZINE AT TORONTO.

regulars and the militia. With them were also taken the war-vessel (the *Duke of Gloucester*) and a large quantity of naval and military stores. The loss of the Americans in the capture of York, in killed and wounded on land, was two hundred and sixty-nine; and on the fleet, seventeen. The British loss, besides the prisoners, was one hundred and forty-nine. General

Pike was crushed between two stones, and was carried on board the *Pert*, then Chauncey's flagship. His benumbed ears heard the shout of victory when the British ensign was pulled down at York. He lingered several hours. Just before he expired that flag was brought to him. He made a sign for it to be placed under his head, and in that position he died. The port

York, killed seventy-five of the inhabitants, carried the same number into captivity, and destroyed most of the town. The invaders approached silently on snow-shoes.

Yorktown, JOY ON ACCOUNT OF EVENTS AT (1781). The news of the surrender of Cornwallis at Yorktown spread great joy throughout the colonies, especially at Philadelphia, the seat of

REMAINS OF THE WESTERN BATTERY IN 1860.

and village of York were abandoned by the Americans, for they were of little value to them. General Sheaffe, taking advantage of the confusion after the explosion, and the time purposely consumed in the capitulation, after destroying some vessels on the stocks and some storehouses, escaped with the larger portion of the regulars to Kingston. After the Americans left

the general government. Washington sent Lieutenant-colonel Tilghman to the Congress with the news. He rode express to Philadelphia to carry the despatches of the chief announcing the joyful event to the national Legislature. He entered the city at midnight, Oct. 23, and knocked so violently at the door of Thomas McKean, the President of Congress,

OLD FORT AT TORONTO IN 1860.

the fort at Toronto was repaired, and has been garrisoned ever since, only the barracks being kept in order. When the writer visited Toronto in 1860 there were a few soldiers there, but the old fort, as a fort, is useless. The public road then ran directly through it.

York (Me.) Destroyed. On Jan. 25, 1692, some French and Indians surprised the town of

that a watchman was disposed to arrest him. Soon the glad tidings spread over the city. The watchmen, proclaiming the hour and giving the usual cry, "All's well," added, "and Cornwallis is taken!" Thousands of citizens rushed from their beds, hastily dressed, and filled the streets. The old State-house bell that so clearly proclaimed independence (July 4, 1776) now rang

out tones of gladness. Lights were seen moving in every house. The first blush of morning was greeted with the booming of cannons, and at an early hour the Congress assembled, and

25, 1781, and on the 27th there was a besieging army there of 16,000 men, under the chief command of Washington, assisted by Rochambeau. The British force, about half as numerous, were

mostly behind intrenchments at Yorktown. On the arrival of Washington and Rochambeau at Williamsburg they proceeded to the *Ville de Paris*, De Grasse's flag-ship, to congratulate the admiral on his victory over Graves on the 5th, and to make specific arrangements for the future. Preparations for the siege were immediately begun. The allied armies, about 12,000 strong, marched from Williamsburg (Sept. 28), driving in the British outposts as they approached Yorktown and taking possession of abandoned works. The allies formed a semicircular line about two miles from the British intrenchments, each wing resting on the York River, and on the 30th the place was completely invested. The British at Gloucester, opposite, were imprisoned by French dragons under the Duke de Lauzun, Virginia militia, led by General Weedon, and 800 French marines. Only once did the imprisoned troops attempt to escape from that point. Tarleton's legion sallied out, but

with quick-beating hearts heard Charles Thomson read the despatch from Washington. At its conclusion it was resolved to go in a body to the Lutheran Church, at two o'clock in the afternoon, and "return thanks to Almighty God for crowning the allied armies of the United States and France with success." A week later that body voted the thanks of the nation and appropriate honors to Washington, Rochambeau, and De Grasse, and their respective officers and men; and appointed a day for a general thanksgiving and prayer throughout the Union on account of God's signal favors to the struggling patriots. Everywhere legislative bodies, executive councils, city corporations, and private societies, presented congratulatory addresses to the commanding generals and their officers. The Duke de Lauzun bore the glad tidings of victory to the court at Versailles, where there was great rejoicing on account of the birth of a dauphin, or heir to the throne.

Yorktown, SIEGE OF (1781). The allied armies joined Lafayette at Williamsburg, Sept.

were soon driven back by Lauzun's cavalry, who made Tarleton's horse a prisoner and came near capturing his owner. In the besieging lines before Yorktown the French troops occupied the left, the West India troops of St. Simon being on the extreme flank. The Amer-

LYNX HAVEN BAY.

icans were on the right; and the French artillery, with the quarters of the two commanders, occupied the centre. The American artillery, commanded by General Knox, was

with the right. The fleet of De Grasse was in Lynn Haven Bay to beat off any vessels that might attempt to relieve Cornwallis. On the night of Oct. 6 heavy ordnance had been brought up from the French ships, and trenches were begun at 600 yards from the British works. The first parallel was completed before the morning of the 7th, under the direction of General Lincoln; and on the afternoon of the 9th several batteries and redoubts were finished, and a general discharge of heavy guns was opened by the Americans on the right. Early on the morning of the 10th the French opened several batteries on the left. That evening the same troops hurled red-hot balls upon British vessels in the river, which caused the destruction by fire of several of them—one a 44-gun ship. The allies began the second parallel on the night of the 11th, which the British did not discover until daylight came, when they brought several heavy guns to bear upon the diggers. On the 14th it was determined to storm two of the redoubts which were most annoying, as they commanded the trenches. One on the right, near the York River, was garrisoned by 45 men; the other, on the left, was manned by about 120 men. The capture of the former was intrusted

mounted his post at Yorktown would become untenable, and he resolved to attempt an escape by abandoning the place, his baggage, and his sick, cross the York River, disperse the allies who environed Gloucester, and by rapid marches gain the forks of the Rappahannock and Potomac, and, forcing his way by weight of numbers through Maryland and Pennsylvania, join Clinton at New York. Boats for the passage of the river were prepared and a part of the troops passed over, when a furious storm suddenly arose, and made any further attempts to cross too hazardous to be undertaken. The troops were brought back, and the earl lost hope. After that the bombardment of his lines was continuous, severe, and destructive, and on the 17th he offered to make terms for surrender. On the following day Lieutenant-colonel Laurens and Viscount de Noailles (a kinsman of Madame Lafayette), as commissioners of the allies, met Lieutenant-colonel Dundas and Major Ross, of the British army, at the house of the Widow Moore (see p. 332) to arrange terms for capitulation. They were made similar to those demanded of Lincoln at Charleston eighteen months before. The capitulation was duly signed, Oct. 10, 1781, and late on the afternoon of the same

APPEARANCE OF THE BRITISH WORKS AT YORKTOWN IN 1860.

to Americans led by Lieutenant-colonel Alexander Hamilton, and that of the latter to French grenadiers led by Count Deuxponts. At a given signal Hamilton advanced in two columns—one led by Major Fish, the other by Lieutenant-colonel Gimat, Lafayette's aid; while Lieutenant-colonel John Laurens, with 80 men, proceeded to turn the redoubt to intercept a retreat of the garrison. So agile and furious was the assault that the redoubt was carried in a few minutes, with little loss on either side. Laurens was among the first to enter the redoubt, and make the commander, Major Campbell, a prisoner. The life of every man who ceased to resist was spared. Meanwhile the French, after a severe struggle, in which they lost about 100 men in killed and wounded, captured the other redoubt. Washington, with Knox and some others, had watched the movements with intense anxiety, and when the commander-in-chief saw both the redoubts in possession of his troops he turned and said to Knox, "The work is done, and well done." That night both redoubts were included in the second parallel. The situation of Cornwallis was now critical. He was surrounded by a superior force, his works were crumbling, and he saw that when the second parallel of the besiegers should be completed and the cannons on their batteries

day Cornwallis, his army, and public property were surrendered to the allies. (See *Cornwallis, Surrender of, at Yorktown.*)

YOUNG, BRIGHAM, a leader of the Mormons, was born at Whittingham, Vt., June 1, 1801; died at Salt Lake City, Utah. In 1832 he joined the Mormons at Kirtland, O., and by shrewdness and energy soon became influential among them. He was appointed one of the "apostles" sent out in 1835 to make converts; and on the death of Joseph Smith, the founder of the Mormon Church, in 1844, became its president, prophet, and high-priest. Promising his deluded followers that the region of the Great Salt Lake, in mid-continent, was the Promised Land of the Mormons, they abandoned Nauvoo in 1846, after being cannonaded by exasperated citizens of that region. The following year Brigham Young led a few persons to Great Salt Lake valley, and in May, 1848, the great body of the Mormons arrived there and founded Salt Lake City. (See *Mormons*, and *Mormonism as it Existed in 1875.*) Appointed the first territorial governor of Utah, he assumed a political independence which was offensive to the United States government, and from time to time he gave that government much trouble. Having defied the government in 1858, President Buchanan sent out a military force in

that year of two thousand five hundred men to enforce its authority. A compromise ended the disturbance. Young had twelve actual wives, besides many who were sealed to him as "spiritual wives."

Young Men's Christian Associations are powerful societies in doing good. In 1844 George Williams, of London, quietly put forth efforts in behalf of young men which led to the associations as they now abound in our country. The London Society worked quietly but efficiently, and when news of its good work reached New York in 1852 a similar society was organized there. Such societies were organized elsewhere, and they increased slowly but steadily until 1866, when a revival of these societies was manifested. The New York Association took the lead. In 1866 there were only sixty associations in the United States; in 1876 there were more than seven hundred. In 1866 they had no property; in 1876 they had in buildings and funds alone

over \$3,000,000. They primarily seek to make young men helpful to young men in the ways of usefulness, by affording them means for pleasant social enjoyment, such as wholesome reading, instructive conversation, and pleasant gathering-places; and to assist in finding employment for worthy ones.

Yucatan was discovered by Francis Hernandez Cordova, who, with three caravels and one hundred and ten men, sailed from Havana on Feb. 8, 1517. They first saw land at Cape Catoche, the eastern point of Yucatan, an Aztec name for the great peninsula. He landed at several places, but was driven off by the naked barbarians, who used bows and arrows skilfully. Cordova was afterwards mortally wounded by some natives north of Campeachy, who killed forty-seven of the Spanish intruders, only one man escaping. On his return from Yucatan, Cordova's vessel touched the coast of Florida.

Z.

Zagonyi's Charge. When on his march southward, in October, 1861, General Fremont sent the combined cavalry forces of Zagonyi, a Hungarian commanding his guard, and Major White to reconnoitre the position of the Confederates at Springfield, Mo. They were led by the former, who was instructed to attempt the capture of Springfield if circumstances should promise success. The whole force did not exceed three hundred men. As they approached the place (Oct. 24), they were informed that the Confederates in the town were full two thousand strong. Zagonyi determined to attack them. Apprised of his coming, the Confederates prepared for his reception. He addressed his own little band, saying, "The enemy is two thousand strong, and we are but one hundred and fifty. It is possible that no man will come back. If any of you would turn back, you can do so now." Not a man moved. "I will lead you!" he exclaimed. He gave the order, "Quick trot—march!" and away they dashed down a narrow lane fringed with concealed sharpshooters, while there was a terrible fire from the Confederate infantry in front. On an eminence stood the Confederate cavalry. On their centre a lieutenant, with thirty men, dashed madly, breaking their line and scattering the whole body in confusion over the neighboring cornfields. The remainder of Zagonyi's men charged, and at the same moment fifty Irish dragoons of White's command, led by Major McNaughton, fell upon the foe, and the Confederate cavalry and infantry fled in terror, pursued by a portion of Zagonyi's guard. Through the streets of Springfield they were cheered, while Union women cheered on the victors. The Confederates were utterly routed. When the fight ended, of the one hundred and fifty of the guard eighty-four were dead or wounded. The action had lasted an hour and a half, and in the dim twilight the Union flag waved in triumph.

Zealous Torpedo Fishing. So soon as Richmond was evacuated by the Confederates, in April, 1865, a notable expedition was undertaken in search of torpedoes, with which it was known a portion of that river abounded. The expedition consisted of about three hundred men in several tugs and thirty small boats, all under the command of Captain Ralph Chandler, United States Navy. On the morning of the 3d of April, Captain Chandler started from Dutch Gap, with a flotilla and his flag-ship the *Sangamon*, and before sunset he had so cleared the river of these dangerous obstructions that the passage to Richmond was made comparatively safe, and the next morning President Lincoln went up to Richmond from City Point in the *Malvern*, Admiral Porter's flag-ship. The fishing was carried on in this wise: The steam vessels were pro-

TORPEDO NET.

tected by torpedo-nets formed of ropes weighted with iron or lead, and furnished with hooks to catch the little submarine mines. These nets were hung from spars placed athwart the bowsprit in front of the vessel, and sometimes in like manner along its sides. The torpedoes to be caught were buoyed under water at such a depth that a passing vessel might touch them and explode them by percussion. They were anchored by means of a chain attached to a segment of an iron sphere called a "mushroom."

Many of them were made to be exploded by electricity. A net like that at the bow was placed off the stern, and was dragged after the vessel as a fisherman drags his net. There were also common grapnels, used on single lines as fishermen troll for fishes. When a torpedo was caught it was carefully hauled up to the surface and towed ashore by the men in small boats. When a nest of them was found that might not be removed readily, a little float was anchored above them with a small national flag upon it, by which pilots of vessels might be warned of the presence of danger. No officer in the navy was better qualified for performing this task than Captain Chandler, requiring as it did cool courage and rare judgment. "The knowledge that a simple touch will lay your ship a helpless, sinking wreck upon the water, without even the satisfaction of firing one shot in return," wrote Captain Chandler to the author, "calls for more courage than can be expressed, and a short cruise among torpedoes will sober the most intrepid disposition."

Zeisberger, DAVID, a Moravian missionary, was born at Zoetenthal, Moravia, April 11, 1721; died at Franklin, Summit Co., O., Nov. 7, 1808. He came to America in his youth, and joined his parents in Georgia, who had come before. He was one of the founders of Bethlehem, Penn., in 1740, and soon afterwards became a missionary among the Indians. During the operations of Pontiac (see *Pontiac's War*) he assisted the "Christian Indians," as the converts were called, and finally led them to Wyalusing, Bedford Co., Penn. In 1772 he founded a Christian Indian settlement on the Tuscarawas, Ohio, where he was joined by all the Moravian Indians in Pennsylvania. That settlement was destroyed in 1781. (See *Christian Indians, Massacre of*.) He founded another settlement in Huron County, near Lake Erie (1787), and on the Thames, in Canada. (See *Moravian Town*.) In 1798 the Moravians returned to their former settlements in Ohio, where grants had been made them by Congress, and established a new station, which they called Goshen, and there Zeisberger preached during the remainder of his life. He left in MS. a Delaware grammar and dictionary and an Iroquois dictionary. The former is in Harvard College Library, and the latter in the library of the Philosophical Society of Philadelphia.

Zenger's Trial. On the death of John Montgomerie, Governor of New York (July 1, 1731), Rip Van Dam, merchant, senior member of the Council, became, ex-officio, chief-magistrate of the province. William Cosby, a colonel in the royal army, was appointed governor, but did not arrive in New York until August, 1732, or thirteen months after the office became vacant. Cosby was rapacious, and came to the colony to make money. His professions made the Assembly (in session at the time of his arrival) suppose him to be a friend of the people, and they lavished upon him perquisites and presents because of his opposition to the Sugar Bill before Parliament, which threatened the ruin of the commerce of the colony. Van Dam was a Democrat, and popular with the people. Cosby de-

manded one half the salary which Van Dam had received during his presidency over the colony for thirteen months. The merchant agreed, provided the governor would divide the perquisites he had received—a much larger sum. The latter refused, and the former declined to make a division. A bitter quarrel and a lawsuit ensued. Never were party lines in the colony more defined than now, the Democratic party taking sides with Van Dam, and the Loyalist party—"men of figure"—with Cosby. At that time the venerable William Bradford was the government printer, and he published a newspaper called the *New York Weekly Gazette*. It was the organ of the governor and his party. At the same time John Peter Zenger, a former apprentice with Bradford, was publishing a paper called the *New York Weekly Journal*. It was the organ of the Van Dam, or popular party. Through its columns writers severely criticised the administration. Squibs, ballads, and serious charges that appeared in Zenger's *Journal* irritated Cosby and his Council beyond endurance. On the 2d of November, 1734, the Council ordered certain numbers of the *Journal*, containing alleged libels, to be "burned by the hands of the common hangman, or whipped near the pillory;" and a few days afterwards, by order of the same authority, Zenger was arrested and cast into prison on a charge of libel. Van Dam's counsel (William Smith, father of the historian, and William Alexander, father of Lord Stirling) took up Zenger's case with vigor. At the next term of the court (April, 1735) they filed an exception to the commissions of the chief-justice (James De Lancey) and the associate (Frederick Phillipse). This questioning of their authority made the judges very angry, and, by an order of the chief-justice, Smith and Alexander were silenced as advocates. This arbitrary act aroused public indignation, and the silenced lawyers made ample preparations for the trial, which came on in July. The grand jury had found no indictment, and he was tried on "information" by the attorney-general. Andrew Hamilton, of Pennsylvania, the most eminent lawyer in the colonies, was secretly employed to defend Zenger. To the astonishment of the court, he appeared, on the day of trial, as the champion of the freedom of the press. By keen legal weapons, he foiled the sophistry of the court, and obtained from the jury a verdict of acquittal for Zenger, on the ground that an alleged libel is justified by its truth, and that jurors are judges of both law and fact. The crowded court-room was instantly resonant with applause, and the delighted people carried the venerable advocate out of the city-hall on their shoulders. The corporation of the city of New York presented Mr. Hamilton with the freedom of the city in a gold box "for his learned and generous defence of the rights of mankind and the liberty of the press." He charged no fee for his services. Gouverneur Morris said to the late Dr. John W. Francis, "The trial of Zenger, in 1735, was the germ of American freedom—the morning-star of that liberty which subsequently revolutionized America."

Zeno, NICCOLO, a Venetian navigator, who was born about the middle of the fourteenth century, made a voyage of discovery into the Northern seas about the year 1390. He was wrecked on one of the Faroe Islands, it is supposed, and entered the service of a chief, whom he called Zichmini, as pilot of his fleet. He wrote a letter to his brother Antonio, giving an account of his voyage. Antonio joined him. Nicolo died, and Antonio remained in the service of Zichmini ten years longer, and wrote letters to his brother Carlo. Antonio returned to Venice, and died in 1405. From the letters of Nicolo and Antonio a narrative, accompanied by a map, was compiled and published in 1558, by a descendant of Antonio Zeno. It gives an account of a visit made by Nicolo to Greenland, of the colonies there, and of the voyages of fishermen to the Island of Estotiland (supposed to have been Newfoundland), and to a great country called Drogeo, conjectured to have been the mainland of America. (See *Northmen in America*.)

Zinzendorf (Count), NICOLAUS LUDWIG, the restorer of the Moravian Church, was born at Dresden, Saxony, May 26, 1700; died at Herrnhut, May 9, 1760. His father was a leading minister of the Electorate of Saxony. The son was educated at Halle and Wittenberg. When, in 1720, he received his deceased father's estate from his guardians, he purchased a lordship in Lusatia, and married a sister of the Prince of

NICOLAUS LUDWIG ZINZENDORF.

Reuss. When he was twenty-two years of age he became interested in the pure Church discipline and doctrines of the scattered Moravian Brethren, invited some of them to settle on his estate, formed statutes for their government, and finally became a bishop among them, and one of their most ardent missionaries. John Wesley passed some time at the home of Zinzen-

dorf, and from him imbibed notions of Church organization and a missionary spirit upon which he ever afterwards acted. He commended singing as a wonderful power in the Church. Zinzendorf was consecrated bishop in 1736, travelled over the Continent, visited England, and sent missionaries to every part of the world. In 1741 he came to Pennsylvania, and established several Moravian settlements. The first Indian Moravian congregation in America was established by him, at Shemoeko, Duchess Co., N. Y., in 1742, under the supervision of Gottlob Bütner. Zinzendorf returned to Europe in 1743, and spent the remainder of his life in the cause of the *Unitas Fratrum*, or United Brethren.

Zipangi (or **Cipangi**), the Island of Japan, described by Marco Polo, a Venetian traveller, who visited China early in the thirteenth century. He described Zipangi as a beautiful and wealthy island in the Eastern seas, fifteen hundred miles from land. Columbus and other early navigators made diligent search for it. (See *Cathay*.)

Zollicoffer, FELIX K., was born in Maury County, Tenn., May 19, 1812; killed in the battle of Mill Spring (which see), Jan. 19, 1862. He was a printer and newspaper publisher at Paris, Tenn. In 1832 he edited the *Nashville Banner*, the leading Whig paper in the state, and in 1835 was chosen state printer. He was Comptroller of the State Treasury from 1845 to 1849, and State Senator in 1849. From 1853 to 1859 he was in Congress, and a persistent advocate of state supremacy, and in 1861 was a member of the Peace Conference. Then he became a brigadier-general in the Confederate army, taking command of East Tennessee. In a battle at Camp Wild-cat, Kentucky (Oct. 21, 1861), he was defeated by General Schoepf.

Zook, SAMUEL KOSCIUSZKO, was born in Pennsylvania about 1823; killed at Gettysburg, July 2, 1863. He was a telegraph operator, and made some important discoveries in the science of electricity. After 1848 he resided in New York, and when the Civil War began he was made a colonel of New York State militia, and hastened to the army gathering around Washington. He was military governor of Annapolis a while, when he returned, raised a regiment, took the command of it, and did gallant service on the Peninsula, where he generally commanded a brigade. On Nov. 29, 1862, he was made brigadier-general, and distinguished himself at Chancellorsville and Gettysburg.

Zouaves. This was the title adopted by a body of French infantry, who took it from a tribe in Algeria, whose fighting-men have been noted throughout Northern Africa for generations. A body of these troops were incorporated with the French army. After 1840 the "Zouaves" were all native Frenchmen. In the Crimean War they were the *élite* of the French infantry. They retained the picturesque costume of the African Zouaves, and their peculiar dis-

cipline. Their dress consisted of a loose jacket and waistcoat of dark-blue cloth, red Turkish

ELLSWORTH ZOUAVE.

trousers, red fez with yellow tassel, green turban, sky-blue sash, yellow leather leggings, and

II.—49

white gaiters. At the beginning of the Civil War in America a few volunteer regiments were uniformed as Zouaves, and were so called; but the costume, which made a conspicuous mark for bullets, was soon exchanged for the more sober blue and gray. The first regiment of Zouaves was that of Colonel Ellsworth—"New York Fire Zouaves." Some were more picturesque in costume, more nearly imitating the African Zouaves, with bagging trousers and fez.

Zubley, JOHN JOACHIM, D.D., was born at St. Gall, Switzerland, Aug. 27, 1724; died in South Carolina, July 23, 1781. Ordained in 1744, he took charge of the First Presbyterian Church in Savannah in 1760, preaching in English, German, and French. He was an active patriot at the beginning of the Revolution, was in the Georgia Provincial Congress in 1775, and in the Continental Congress the same year. He opposed the Declaration of Independence, and after it was adopted he suddenly left Congress, returned to Georgia, took sides with the crown, and having been accused of treasonable correspondence with the royal governor, he concealed himself to avoid popular resentment.

CONSTITUTION OF THE UNITED STATES.

PREAMBLE.

We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

ARTICLE I. LEGISLATIVE DEPARTMENT.

SECTION I. *Congress in General.*

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

SECTION II. *House of Representatives.*

Clause 1. The House of Representatives shall be composed of members chosen every second year by the people of the several states; and the electors in each state shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

Clause 2. No person shall be a representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state in which he shall be chosen.

Clause 3. Representatives and direct taxes shall be apportioned among the several states which may be included within this Union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of the Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of representatives shall not exceed one for every thirty thousand, but each state shall have at least one representative; and until such enumeration shall be made, the State of New Hampshire shall be entitled to choose three, Massachusetts eight, Rhode Island and Providence Plantations one, Connecticut five, New York six, New Jersey four, Pennsylvania eight, Delaware one, Maryland six, Virginia ten, North Carolina five, South Carolina five, and Georgia three.

Clause 4. When vacancies happen in the representation from any state, the executive authority thereof shall issue writs of election to fill such vacancies.

Clause 5. The House of Representatives shall choose their speaker and other officers, and shall have the sole power of impeachment.

SECTION III. *Senate.*

Clause 1. The Senate of the United States shall be composed of two senators from each state, chosen by the Legislature thereof for six years, and each senator shall have one vote.

Clause 2. Immediately after they shall be assembled in consequence of the first election, they shall be divided, as equally as may be, into three classes. The seats of the senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth

year, so that one third may be chosen every second year; and if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any state, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

Clause 3. No person shall be a senator who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that state for which he shall be chosen.

Clause 4. The Vice-President of the United States shall be President of the Senate, but shall have no vote, unless they be equally divided.

Clause 5. The Senate shall choose their other officers, and also a president pro tempore, in the absence of the Vice-President, or when he shall exercise the office of President of the United States.

Clause 6. The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the chief justice shall preside; and no person shall be convicted without the concurrence of two thirds of the members present.

Clause 7. Judgment in case of impeachment shall not extend farther than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit under the United States; but the party convicted shall, nevertheless, be liable and subject to indictment, trial, judgment, and punishment according to law.

SECTION IV. *Both Houses.*

Clause 1. The times, places, and manner of holding elections for senators and representatives shall be prescribed in each state by the Legislature thereof; but the Congress may at any time, by law, make or alter such regulations, except as to the place of choosing senators.

Clause 2. The Congress shall assemble at least once in every year, and such meeting shall be on the first Monday in December, unless they shall, by law, appoint a different day.

SECTION V. *The Houses separately.*

Clause 1. Each house shall be the judge of the elections, returns, and qualifications of its own members, and a majority of each shall constitute a quorum to do business; but a smaller number may adjourn, from day to day, and may be authorized to compel the attendance of absent members, in such manner and under such penalties as each house may provide.

Clause 2. Each house shall determine the rules of its proceedings, punish its members for disorderly behavior, and, with the concurrence of two thirds, expel a member.

Clause 3. Each house shall keep a journal of its proceedings, and, from time to time, publish the same, excepting such parts as may in their judgment require secrecy; and the yeas and nays of the members of either house, on any question, shall, at the desire of one fifth of those present, be entered on the journal.

Clause 4. Neither house during the session of Congress shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two houses shall be sitting.

SECTION VI. *Disabilities of Members.*

Clause 1. The senators and representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the Treasury of the United States. They shall in all cases, except treason, felony, and breach of the peace, be privileged from arrest during their attendance at the session of their respective houses, and in going to or returning from the same; and for any speech or debate in either house, they shall not be questioned in any other place.

Clause 2. No senator or representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased, during such time; and no person holding any office under the United States shall be a member of either house during his continuance in office.

SECTION VII. *Mode of Passing Laws.*

Clause 1. All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments, as on other bills.

Clause 2. Every bill which shall have passed the House of Representatives and the Senate shall, before it become a law, be presented to the President of the United States; if he approve, he shall sign it; but if not, he shall return it, with his objections, to that house in which it shall have originated, who shall enter the objections at large on their journal, and proceed to reconsider it. If, after such reconsideration, two thirds of that house shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered, and if approved by two thirds of that house, it shall become a law. But in all such cases the votes of both houses shall be determined by yeas and nays, and the names of the persons voting for and against the bill shall be entered on the journal of each house respectively. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law in like manner as if he had signed it, unless the Congress by their adjournment prevent its return, in which case it shall not be a law.

Clause 3. Every order, resolution, or vote to which the concurrence of the Senate and House of Representatives may be necessary (except on a question of adjournment) shall be presented to the President of the United States; and, before the same shall take effect, shall be approved by him, or, being disapproved by him, shall be repassed by two thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.

SECTION VIII. *Powers granted to Congress.*

The Congress shall have power—

Clause 1. To lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States;

Clause 2. To borrow money on the credit of the United States;

Clause 3. To regulate commerce with foreign nations, and among the several states, and with the Indian tribes;

Clause 4. To establish a uniform rule of naturalization, and uniform laws on the subject of bankruptcies, throughout the United States;

Clause 5. To coin money, regulate the value thereof and of foreign coin, and fix the standard of weights and measures;

Clause 6. To provide for the punishment of counterfeiting the securities and current coin of the United States;

Clause 7. To establish post-offices and post-roads;

Clause 8. To promote the progress of science and

useful arts, by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries;

Clause 9. To constitute tribunals inferior to the Supreme Court;

Clause 10. To define and punish felonies committed on the high seas, and offences against the law of nations;

Clause 11. To declare war, grant letters of marque and reprisal, and make rules concerning captures on land and water;

Clause 12. To raise and support armies; but no appropriation of money to that use shall be for a longer term than two years;

Clause 13. To provide and maintain a navy;

Clause 14. To make rules for the government and regulation of the land and naval forces;

Clause 15. To provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasions;

Clause 16. To provide for organizing, arming, and disciplining the militia, and for governing such part of them as may be employed in the service of the United States, reserving to the states respectively the appointment of the officers and the authority of training the militia according to the discipline prescribed by Congress;

Clause 17. To exercise exclusive legislation, in all cases whatsoever, over such district (not exceeding ten miles square) as may, by cession of particular states and the acceptance of Congress, become the seat of government of the United States, and to exercise like authority over all places purchased, by the consent of the Legislature of the state in which the same shall be, for the erection of forts, magazines, arsenals, dock-yards, and other needful buildings; and,

Clause 18. To make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the government of the United States, or in any department or officer thereof.

SECTION IX. *Powers denied to the United States.*

Clause 1. The migration or importation of such persons as any of the states now existing shall think proper to admit shall not be prohibited by the Congress prior to the year one thousand eight hundred and eight; but a tax or duty may be imposed on such importation, not exceeding ten dollars for each person.

Clause 2. The privilege of the writ of *habeas corpus* shall not be suspended unless when, in case of rebellion or invasion, the public safety may require it.

Clause 3. No bill of attainder, or ex-post-facto law, shall be passed.

Clause 4. No capitation or other direct tax shall be laid, unless in proportion to the census or enumeration herein before directed to be taken.

Clause 5. No tax or duty shall be laid on articles exported from any state.

Clause 6. No preference shall be given by any regulation of commerce or revenue to the ports of one state over those of another; nor shall vessels bound to or from one state be obliged to enter, clear, or pay duties in another.

Clause 7. No money shall be drawn from the Treasury but in consequence of appropriations made by law; and a regular statement and account of the receipts and expenditures of all public money shall be published from time to time.

Clause 8. No title of nobility shall be granted by the United States; and no person holding any office of profit or trust under them shall, without the consent of the Congress, accept of any present, emolument, office, or title of any kind whatever from any king, prince, or foreign state.

SECTION X. *Powers denied to the States.*

Clause 1. No state shall enter into any treaty, alliance, or confederation; grant letters of marque or reprisal; coin money; emit bills of credit; make

anything but gold and silver coin a tender in payment of debts; pass any bill of attainder, ex-post-facto law, or law impairing the obligation of contracts; or grant any title of nobility.

Clause 2. No state shall, without the consent of the Congress, lay any imposts or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts laid by any state on imports or exports shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress.

Clause 3. No state shall, without the consent of Congress, lay any duty of tonnage, keep troops or ships of war in time of peace, enter into any agreement or compact with another state or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delays.

ARTICLE II. EXECUTIVE DEPARTMENT.

SECTION I. President and Vice-President.

Clause 1. The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of four years, and, together with the Vice-President, chosen for the same term, be elected as follows:

Clause 2. Each state shall appoint, in such manner as the Legislature thereof may direct, a number of electors, equal to the whole number of senators and representatives to which the state may be entitled in the Congress; but no senator or representative, or person holding an office of trust or profit under the United States, shall be appointed an elector.

Clause 3. The electors shall meet in their respective states, and vote by ballot for two persons, of whom one at least shall not be an inhabitant of the same state with themselves. And they shall make a list of all the persons voted for, and of the number of votes for each; which list they shall sign and certify, and transmit, sealed, to the seat of the government of the United States, directed to the President of the Senate. The President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted. The person having the greatest number of votes shall be the President, if such number be a majority of the whole number of electors appointed; and if there be more than one who have such majority, and have an equal number of votes, then the House of Representatives shall immediately choose by ballot one of them for President; and if no person have a majority, then, from the five highest on the list, the said House shall in like manner choose the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two thirds of the states, and a majority of all the states shall be necessary to a choice. In every case, after the choice of the President, the person having the greatest number of votes of the electors shall be the Vice-President. But if there should remain two or more who have equal votes, the Senate shall choose from them by ballot the Vice-President.*]

Clause 4. The Congress may determine the time of choosing the electors, and the day on which they shall give their votes, which day shall be the same throughout the United States.

Clause 5. No person except a natural-born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of thirty-five years, and been fourteen years a resident within the United States.

Clause 6. In case of the removal of the President

from office, or of his death, resignation, or inability to discharge the powers and duties of the said office, the same shall devolve on the Vice-President; and the Congress may by law provide for the case of removal, death, resignation, or inability, both of the President and Vice-President, declaring what officer shall then act as President; and such officer shall act accordingly, until the disability be removed or a President shall be elected.

Clause 7. The President shall, at stated times, receive for his services a compensation, which shall neither be increased nor diminished during the period for which he shall have been elected, and he shall not receive within that period any other emolument from the United States, or any of them.

Clause 8. Before he enters on the execution of his office, he shall take the following oath or affirmation:

"I do solemnly swear (or affirm) that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

SECTION II. Powers of the President.

Clause 1. The President shall be commander-in-chief of the army and navy of the United States, and of the militia of the several states when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices; and he shall have power to grant reprieves and pardons for offences against the United States, except in cases of impeachment.

Clause 2. He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two thirds of the senators present concur; and he shall nominate, and by and with the advice and consent of the Senate shall appoint, ambassadors, other public ministers and consuls, Judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for, and which shall be established by law; but the Congress may by law vest the appointment of such inferior officers as they think proper in the President alone, in the courts of law, or in the heads of departments.

Clause 3. The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions, which shall expire at the end of their next session.

SECTION III. Duties of the President.

He shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both houses, or either of them; and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed, and shall commission all the officers of the United States.

SECTION IV. Impeachment of the President.

The President, Vice-President, and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery, or other high crimes and misdemeanors.

ARTICLE III. JUDICIAL DEPARTMENT.

SECTION I. United States Courts.

The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may, from time to time, ordain and establish. The judges, both of the supreme and

* Altered by the Twelfth Amendment; see p. 1567.

inferior courts, shall hold their offices during good behavior; and shall, at stated times, receive for their services a compensation, which shall not be diminished during their continuance in office.

SECTION II. Jurisdiction of the United States Courts.

Clause 1. The judicial power shall extend to all cases in law and equity arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority; to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more states; between a state and citizens of another state; between citizens of different states; between citizens of the same state claiming lands under grants of different states; and between a state, or the citizens thereof, and foreign states, citizens, or subjects.*

Clause 2. In all cases affecting ambassadors, other public ministers and consuls, and those in which a state shall be party, the Supreme Court shall have original jurisdiction. In all the other cases before mentioned, the Supreme Court shall have appellate jurisdiction, both as to law and fact, with such exceptions, and under such regulations, as the Congress shall make.

Clause 3. The trial of all crimes, except in cases of impeachment, shall be by jury, and such trial shall be held in the state where the said crimes shall have been committed; but when not committed within any state, the trial shall be at such place or places as the Congress may by law have directed.

SECTION III. Treason.

Clause 1. Treason against the United States shall consist only in levying war against them, or in adhering to their enemies, giving them aid and comfort. No person shall be convicted of treason unless on the testimony of two witnesses to the same overt act, or on confession in open court.

Clause 2. The Congress shall have power to declare the punishment of treason; but no attainder of treason shall work corruption of blood, or forfeiture, except during the life of the person attainted.

ARTICLE IV.

SECTION I. State Records.

Full faith and credit shall be given in each state to the public acts, records, and judicial proceedings of every other state. And the Congress may, by general laws, prescribe the manner in which such acts, records, and proceedings shall be proved, and the effect thereof.

SECTION II. Privileges of Citizens, etc.

Clause 1. The citizens of each state shall be entitled to all privileges and immunities of citizens in the several states.

Clause 2. A person charged in any state with treason, felony, or other crime, who shall flee from justice and be found in another state, shall, on demand of the executive authority of the state from which he fled, be delivered up, to be removed to the state having jurisdiction of the crime.

Clause 3. No person held to service or labor in one state, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

SECTION III. New States and Territories.

Clause 1. New states may be admitted by the Congress into this Union; but no new state shall be formed or erected within the jurisdiction of any other

state; nor any state be formed by the junction of two or more states, or parts of states, without the consent of the legislatures of the states concerned, as well as of the Congress.

Clause 2. The Congress shall have power to dispose of, and make all needful rules and regulations respecting, the territory or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States or of any particular state.

SECTION IV. Guarantee to the States.

The United States shall guarantee to every state in this Union a republican form of government, and shall protect each of them against invasion; and, on application of the Legislature, or of the executive (when the Legislature cannot be convened), against domestic violence.

ARTICLE V. POWER OF AMENDMENT.

The Congress, whenever two thirds of both houses shall deem it necessary, shall propose amendments to this Constitution, or, on the application of the legislatures of two thirds of the several states, shall call a convention for proposing amendments, which, in either case, shall be valid to all intents and purposes, as part of this Constitution, when ratified by the legislatures of three fourths of the several states, or by conventions in three fourths thereof, as the one or the other mode of ratification may be proposed by Congress; provided that no amendment which may be made prior to the year one thousand eight hundred and eight shall in any manner affect the first and fourth clauses in the ninth section of the first Article; and that no state, without its consent, shall be deprived of its equal suffrage in the Senate.

ARTICLE VI. PUBLIC DEBT, SUPREMACY OF THE CONSTITUTION, OATH OF OFFICE, RELIGIOUS TEST.

Clause 1. All debts contracted and engagements entered into before the adoption of this Constitution shall be as valid against the United States under this Constitution as under the Confederation.

Clause 2. This Constitution, and the laws of the United States which shall be made in pursuance thereof, and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of the land; and the judges in every state shall be bound thereby, anything in the constitution or laws of any state to the contrary notwithstanding.

Clause 3. The senators and representatives before mentioned, and the members of the several state legislatures, and all executive and judicial officers, both of the United States and of the several states, shall be bound by oath or affirmation to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

ARTICLE VII. RATIFICATION OF THE CONSTITUTION.

The ratification of the conventions of nine states shall be sufficient for the establishment of this Constitution between the states so ratifying the same.

Done in Convention, by the unanimous consent of the states present, the seventeenth day of September, in the year of our Lord one thousand seven hundred and eighty-seven, and of the Independence of the United States of America the twelfth. In witness whereof, we have hereunto subscribed our names.

GEORGE WASHINGTON,
President and Deputy from Virginia.

New Hampshire. — John Langdon, Nicholas Gilman.

* Altered by the Eleventh Amendment; see p. 1567.

AMENDMENTS TO THE CONSTITUTION 1567 AMENDMENTS TO THE CONSTITUTION

Massachusetts.—Nathaniel Gorham, Rufus King.

New York.—Alexander Hamilton.
New Jersey.—William Livingston, William Paterson, David Brearley, Jonathan Dayton.

Pennsylvania.—Benjamin Franklin, Robert Morris, Thomas Fitzsimons, James Wilson, Thomas Mifflin, George Clymer, Jared Ingersoll, Gouverneur Morris.

Delaware.—George Read, John Dickinson, Jacob Broom, Gunning Bedford, Jr., Richard Bassett.

Maryland.—James McHenry, Daniel Carroll, Daniel of St. Thomas Jenifer.

Virginia.—John Blair, James Madison, Jr.
North Carolina.—William Blount, Hugh Williamson, Richard Dobbs Spaight.

South Carolina.—John Rutledge, Charles Cotesworth Pinckney, Pierce Butler.

Georgia.—William Few, Abraham Baldwin.
Attest, WILLIAM JACKSON, *Secretary.*

AMENDMENTS TO THE CONSTITUTION.

ARTICLE I. *Freedom of Religion, etc.*

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the government for a redress of grievances.

ARTICLE II. *Right to bear Arms.*

A well-regulated militia being necessary to the security of a free state, the right of the people to keep and bear arms shall not be infringed.

ARTICLE III. *Quartering Soldiers on Citizens.*

No soldier shall, in time of peace, be quartered in any house without the consent of the owner; nor in time of war, but in a manner to be prescribed by law.

ARTICLE IV. *Search-warrants.*

The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated; and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ARTICLE V. *Trial for Crime, etc.*

No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in active service in time of war or public danger; nor shall any person be subject for the same offence to be twice put in jeopardy of life or limb; nor shall be compelled, in any criminal case, to be a witness against himself; nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

ARTICLE VI. *Rights of Accused Persons.*

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the state and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor; and to have the assistance of counsel for his defence.

ARTICLE VII. *Suits at Common Law.*

In suits at common law, where the value in controversy shall exceed twenty dollars, the right of trial by jury shall be preserved; and no fact tried by a jury shall be otherwise re-examined in any court of the United States than according to the rules of the common law.

ARTICLE VIII. *Excessive Bail.*

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

ARTICLE IX.

The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

ARTICLE X.

The powers not granted to the United States by the Constitution, nor prohibited by it to the states, are reserved to the states respectively or to the people.

ARTICLE XI.

The judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another state, or by citizens or subjects of any foreign state.

ARTICLE XII. *Mode of Choosing the President and Vice-President.*

Clause 1. The electors shall meet in their respective states, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same state with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which list they shall sign and certify, and transmit, sealed, to the seat of government of the United States, directed to the President of the Senate; the President of the Senate shall, in the presence of the Senate and House of Representatives, open all the certificates, and the votes shall then be counted; the person having the greatest number of votes for President shall be the President, if such number be a majority of the whole number of electors appointed; and if no person have such majority, then from the persons having the highest numbers, not exceeding three, on the list of those voted for as President, the House of Representatives shall choose immediately by ballot the President. But in choosing the President, the votes shall be taken by states, the representation from each state having one vote; a quorum for this purpose shall consist of a member or members from two thirds of the states, and a majority of all the states shall be necessary to a choice. And if the House of Representatives shall not choose a President, whenever the right of choice shall devolve upon them, before the fourth day of March next following, then the Vice-President shall act as President, as in the case of death or other constitutional disability of the President.

Clause 2. The person having the greatest number of votes as Vice-President shall be the Vice-President, if such number be a majority of the whole number of electors appointed; and if no person have a majority, then from the two highest numbers on the list the Senate shall choose the Vice-President; a quorum for the purpose shall consist of two thirds of the whole number of senators, and a majority of the whole number shall be necessary to a choice.

Clause 3. But no person constitutionally ineligible

AMENDMENTS TO THE CONSTITUTION 1568 AMENDMENTS TO THE CONSTITUTION

ble to the office of President shall be eligible to that of Vice-President of the United States.

ARTICLE XIII.

Clause 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction.

Clause 2. Congress shall have power to enforce this article by appropriate legislation.

ARTICLE XIV.

Clause 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any state deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

Clause 2. Representatives shall be apportioned among the several states, according to their respective numbers, counting the whole number of persons in each state, excluding Indians not taxed. But when the right to vote at any election for the choice of electors for President and Vice-President of the United States, representatives in Congress, the executive and judicial officers of a state, or the members of the Legislature thereof, is denied to any of the male members of such state, being twenty-one years of age and citizens of the United States, or in any way abridged, except for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the

number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such state.

Clause 3. No person shall be a senator or representative in Congress, or elector of President and Vice-President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath, as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid or comfort to the enemies thereof. But Congress may, by a vote of two thirds of each house, remove such disability.

Clause 4. The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned. But neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave; but all such debts, obligations, and claims shall be held illegal and void.

Clause 5. The Congress shall have power to enforce by appropriate legislation the provisions of this article.

ARTICLE XV.

Clause 1. The right of the citizens of the United States to vote shall not be denied or abridged by the United States or any state on account of race, color, or previous condition of servitude.

Clause 2. The Congress shall have power to enforce by appropriate legislation the provisions of this article.
